

# Introduction

---

This chapter contains the following sections:

- [Key Features, on page 1](#)

## Key Features

The Cisco UCS Central Management Pack comprises the following key features. The subsequent chapters in this document elaborate these features further.

### **Rule(s) per UcsCentral Fault**

This management pack implements one rule per Cisco UcsCentral domain fault. This provides improved power of customization at the fault level. You can override parameters, such as changing the priority and severity, enabling or disabling rules from the Operations Manager console interface. Apart from the console interface, all these customizations can also be applied using Operations Manager cmdlets. PowerShell scripts could be developed to operate on multiple rules at a time. The rules can be pre configured. You can either enable or disable these rules before adding any UcsCentral templates.

### **Modularized Management Pack Design**

Added common modules and workflows in the Cisco UCS Core Library Management Pack to optimize the Cisco UCS Central Management Pack.

### **Additional Features**

- Verified on System Center Operations Manager 2019 and 2019 UR2
- Support for System Center Operations Manager 1801 and 1807
- Support for System Center Operations Manager 2016
- Support for monitoring with IPv6 addresses
- Support for C3260/S3260 server
