fltVnicEtherIfVlanAccessFault

Fault Code:F10000390

Message

The named VLAN [name] for vNIC [name] cannot be accessed from org [name].

Explanation

This fault typically occurs when a Service Profile's vnic interface (LAN) is resolvable but the service profile does not have access to the vlan.

Recommended Action

This fault will be removed if you perform one of the following actions:

- 1 Change the vNIC's interface name to a VLAN that you have access to.
- 2 Configure access to the named VLAN by creating a vlan permit or vlan group permit in the service profile's org (or a parent org).

Cause: inaccessible-vlan-referenced

mibFaultCode: 10000390

mibFaultName: fltVnicEtherIfVlanAccessFault

fltVnicEtherIfVlanSyncFault

Fault Code:F10000391

Message

The named vlan [name] for vNIC [name] cannot be pushed to Cisco UCS Manager

Explanation

The vlan was unable to be pushed down to Cisco UCS Manager. This fault typically occurs if a vlan with the same name already exists on the Cisco UCS Manager do main or the vlan id cannot be set because it is already taken.

Recommended Action

If you see this fault, take the following actions:

- 1 If the VLAN already exists on the Cisco UCS Manager domain, delete the local VLAN.
- 2 If the VLAN ID is already taken, change the VLAN ID. If the VLAN ID is already taken, change the VLAN ID.
- 3 If the above action did not resolve the issue, create a **show tech-support file** and contact Cisco TAC.

fltVnicFclVsanSyncFault

Fault Code:F10000392

Message

The named vsan [name] for vHBA [name] cannot be pushed to Cisco UCS Manager

Explanation

The vsan was unable to be pushed down to Cisco UCS Manager. This fault typically occurs if a vsan with the same name already exists on the Cisco UCS Manager domain or the vsan id cannot be set because it is already taken.

Recommended Action

If you see this fault, take the following actions:

- 1 If the vsan already exists on the Cisco UCS Manager domain, delete the local vsan.
- 2 If the vsan id is already taken, change the vsan id.
- 3 If the vsan does not exist, delete the vhba reference.
- 4 If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltLsServerConfigFailure

Fault Code:F10000399

Message

Service profile [name] configuration failed due to [configQualifier]

Explanation

The named configuration qualifier is not available. This fault typically occurs because Cisco UCS Manager cannot successfully deploy the service profile due to a lack of resources that meet the named qualifier. For example, this fault can occur if the following occurs:

- 1 The service profile is configured for a server adapter with vHBAs, and the adapter on the server does not support vHBAs.
- 2 The service profile is created from a template which includes a server pool, and the server pool is empty.
- 3 The local disk configuration policy in the service profile specifies the No Local Storage mode, but the server contains local disks.

Recommended Action

If you see this fault, take the following actions:

- 1 Check the status of the server pool associated with the service profile. If the pool is empty, add more blade servers to it.
- 2 Check the state of the server and ensure that it is in either the discovered or unassociated state.
- 3 Discover the server and disassociate the server from the current service profile.
- 4 If the server is associated or undiscovered, do one of the following:
 - a Select another server to associate with the service profile.
 - b Review each policy in the service profile and verify that the selected server meets the requirements in the policy. If the server does not meet the requirements of the service profile, do one of the following:
 - a Modify the service profile to match the server.
 - b Select another server that does meet the requirements to associate with the service profile.
- 5 If you cannot verify that the server meets the requirements of the service profile, create a **show tech-support** file and contact Cisco TAC.

fltVnicMgmtIfVlanAccessFault

Fault Code:F10000574

Message

The named vlan [name] for vNIC [name] cannot be accessed from org [name]

Explanation

This fault typically occurs when a Service Profile's vnic interface (LAN) is resolvable but the service profile does not have access to the vlan.

Recommended Action

This fault will be removed if you perform one of the following actions: Change the vnic's interface name to a VLAN that you have access to. Configure access to the named vlan by creating a vlan permit or vlan group permit in the service profile's org (or a parent org).

fltVnicMgmtIfVlanSyncFault

Fault Code:F10000575

Message

The named vlan [name] for vNIC [name] cannot be pushed to Cisco UCS Manager

Explanation

The vlan was unable to be pushed down to Cisco UCS Manager. This fault typically occurs if a vlan with the same name already exists on the Cisco UCS Manager domain or the vlan id cannot be set because it is already taken.

Recommended Action

If you see this fault, take the following actions: If the vlan already exists on the Cisco UCS Manager domain, delete the local vlan. If the vlan id is already taken, change the vlan id. If the vlan does not exist, delete the vnic reference. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Code:F10000795

Message

Primary Vlan can not be resolved for isolated vlan [name]

Explanation

This fault typically occurs when UCS Central encounters a problem resolving the primary VLAN ID corresponding to a particular isolated VLAN.

Recommended Action

If you see this fault, take the following actions: Associate the isolated VLAN with a valid primary VLAN. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltVnicEtherIfPrimaryVlanAccessFaultForIsolated

Fault Code:F10000797

Message

Primary vlan cannot be accessed from org [name] for isolated vlan [name]

Explanation

This fault typically occurs when a Service Profile's vnic interface (LAN) is resolvable but the service profile does not have access to the vlan.

Recommended Action

This fault will be removed if you perform one of the following actions: Change the vnic's interface name to a VLAN that you have access to. Configure access to the named vlan by creating a vlan permit or vlan group permit in the service profile's org (or a parent org).

fltVnicEtherIfPrimaryVlanAccessFaultForCommunity

Fault Code:F10000798

Message

Primary vlan cannot be accessed from org [name] for community vlan [name]

Explanation

This fault typically occurs when a Service Profile's vnic interface (LAN) is resolvable but the service profile does not have access to the vlan.

Recommended Action

This fault will be removed if you perform one of the following actions: Change the vnic's interface name to a VLAN that you have access to. Configure access to the named vlan by creating a vlan permit or vlan group permit in the service profile's org (or a parent org).
