Configuring Hadoop Cluster Profile Templates

This chapter contains the following sections:

- Hadoop Cluster Profile Templates, page 1
- Creating a Hadoop Cluster Profile Template, page 2
- Cloning a Hadoop Cluster Profile Template, page 16

Hadoop Cluster Profile Templates

The Hadoop cluster profile template specifies the number of nodes in the cluster and takes care of provisioning and configuring the Hadoop cluster services. Numerous Apache Software Foundation projects develop and comprise the services required to deploy, integrate, and work with Hadoop. Some Hadoop distributions support only a subset of these services, or may have their own distribution-specific services.

Each of the following has been developed to deliver an explicit function:

- HDFS
- CLDB
- YARN
- ZooKeeper
- HBase
- Hive
- Oozie
- Hue
- Spark
- Key-Value Store Indexer
- Solr
- Sqoop
- Impala
• Flume
• PIG
• MAHOUT
• Falcon
• Tez
• Storm
• Ganglia

Note: You are not allowed to deselect some of the services because to create a Hadoop cluster, it is necessary to have these services enabled.

Creating a Hadoop Cluster Profile Template

Step 1: On the menu bar, choose Solutions > Big Data Containers.
Step 2: Click the Hadoop Cluster Profile Templates tab.
Step 3: Click Add (+).
Step 4: On the Hadoop Cluster Profile Template page of the Create Hadoop Cluster Profile Template wizard, complete the following fields:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Template Name field</td>
<td>A unique name for the template.</td>
</tr>
<tr>
<td>Template Description field</td>
<td>A short description for the template.</td>
</tr>
<tr>
<td>Enter Node Count field</td>
<td>The number of nodes in the cluster. The default is four nodes.</td>
</tr>
<tr>
<td>Distribution drop-down list</td>
<td>Choose the type of Hadoop distribution.</td>
</tr>
<tr>
<td>Hadoop Distribution Version</td>
<td>Choose the Hadoop Distribution Version.</td>
</tr>
</tbody>
</table>

Step 5: Click Next.

What to Do Next
Create a Services Selection policy.
Creating a Services Selection Policy

The cluster policy contains the Hadoop cluster services that you want to enable in the Hadoop cluster.

Note

The Service Selection Page displays the Hadoop cluster services depending on the Hadoop distribution that you select before on the Hadoop Cluster Profile Template page.

Step 1

On the Services Selection Policy page of the Create Hadoop Cluster Profile Template wizard, check the check box for the optional Hadoop cluster services that you want to enable in your cluster.

Some Hadoop cluster services are required for the distribution and cannot be disabled. The available Hadoop cluster services include the following:

- **HDFS**—A file system that spans all nodes in a Hadoop cluster for data storage. This service replicates data across multiple nodes to avoid data loss.
- **CLDB**—A MapR specific management service that keeps track of container locations and the root of volumes.
- **YARN**—A resource-management platform responsible for managing compute resources in clusters and using them for scheduling users' applications.
- **ZooKeeper**—An infrastructure for cross-node synchronization that can be used by applications to ensure that tasks across the cluster are serialized or synchronized.
- **HBase**—A high speed read and write column-oriented database.
- **Hive**—The query engine framework for Hadoop that facilitates easy data summarization, ad-hoc queries, and the analysis of large datasets stored in HDFS and HBase. With SQL-like semantics, Hive makes it easy for RDBMS users to transition into querying unstructured data in Hadoop.
- **Oozie**—A workflow environment for coordinating complex data processing operations.
- **Hue**—An interface that aggregates the most common Hadoop components to improve user experience and to enable users to avoid the underlying complexity and the command line interface.
- **Spark**—An open-source data analytics cluster computing framework.
- **Key-Value Store Indexer**—A method for indexing data across the cluster.
- **SOLR**—A method for searching data across the cluster.
- **Sqoop**—A client-server tool that transfers bulk data between Hadoop and structured datastores, such as relational databases.
- **Impala**—A massively parallel processing (MPP) SQL query engine that runs natively in Apache Hadoop.
- **Flume**—A distributed, reliable, and available service for efficiently collecting, aggregating, and moving large amounts of streaming data into the Hadoop Distributed File System (HDFS).
- **PIG**—A platform for analyzing large data sets that consists of a high-level language for expressing data analysis programs. It allows developers to write complex MapReduce transformations using a simple scripting language.
- **MAHOUT**—A library of scalable machine learning algorithms that provide the data science tools for clustering, classification, and collaborative filtering to automatically find meaningful patterns.
- **Falcon**—Simplifies the development and management of data processing and provides out-of-the-box data management services.
- **Tez**—An extensible framework for building high performance batch and interactive data processing applications, coordinated by YARN in Apache Hadoop.
- **Storm**—A distributed real-time computation system for processing large volumes of high-velocity data.
- **Ganglia**—A scalable distributed system monitoring tool for high-performance computing systems such as clusters and grids.

**Step 2**
Click Next.

---

**What to Do Next**
Configure the Rack Assignment policy.

### Configuring the Rack Assignment Policy

**Step 1**
On the **Rack Assignment Policy** page of the **Create Hadoop Cluster Profile Template** wizard, do one of the following:

- To create one or more custom Hadoop node configure policies, click **Add (+)** and continue with Step 2.
- To modify the default Hadoop node configure policy, choose the policy in the table and click **Edit**. For information about the fields in the **Edit Hadoop Node Configure Policy Entry** dialog box, see Step 2.

**Step 2**
In the **Add Entry to Hadoop Node Configure Policy** dialog box, do the following:

a) In the **Rack Name** field, enter the name of the rack server.

b) In the **DataNodes** field, click **Select** and check the checkbox for each node that you want to configure on that server.

   **Note** Some Hadoop cluster services require a minimum number of nodes. For example, Zookeeper requires a minimum of 3 nodes.

c) Click **Submit**.

**Step 3**
Click Next.

---

**What to Do Next**
Configure the HDFS policy.

### Configuring the HDFS Policy

**Step 1**
On the **HDFS Policy** page of the **Create Hadoop Cluster Profile Template** wizard, click the row in the table with the node for which you want to change the HDFS policy configuration and click **Edit**.
If you do not see a node you need for HDFS on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

**Step 2**

In the **Edit HDFS Policy Entry** dialog box, review and, if required, change the following fields:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DataNode</strong> drop-down list</td>
<td>Choose Yes if you want the node to act as the DataNode for HDFS. Otherwise, choose No. The data nodes store and retrieve data on request by the name node or by the client.</td>
</tr>
<tr>
<td><strong>Primary NameNode</strong> drop-down list</td>
<td>Choose Yes if you want the node to act as the primary name node for HDFS. Otherwise, choose No. All operations of the HDFS cluster are maintained by the primary name node. There can be only one primary name node for the HDFS Cluster.</td>
</tr>
<tr>
<td><strong>Secondary NameNode</strong> drop-down list</td>
<td>Choose Yes if you want the node to act as a secondary name node for HDFS. Otherwise, choose No. The secondary name node is not a direct replacement for the primary name node. The main role of a secondary name node is to periodically merge the FSImage and edit log, to prevent the edit log from becoming too large. A secondary name node runs on a separate physical system because it requires a lot of memory to merge two files. It keeps a copy of the merged file in its local file system so that it is available for use if the primary name node fails.</td>
</tr>
<tr>
<td><strong>Balancer</strong> drop-down list</td>
<td>Choose Yes if you want the node to act as a balancer for HDFS. Otherwise, choose No.</td>
</tr>
<tr>
<td><strong>HTTPFS</strong> drop-down list</td>
<td>Choose Yes if you want the node to act as HTTPFS for HDFS. Otherwise, choose No. Note: This service provides HTTP access to HDFS.</td>
</tr>
<tr>
<td><strong>Fail Over Controller</strong> drop-down list</td>
<td>Choose Yes if you want the node to act as Fail Over Controller for HDFS. Otherwise, choose No.</td>
</tr>
<tr>
<td><strong>Gateway</strong> drop-down list</td>
<td>Choose Yes if you want the node to act as Gateway for HDFS. Otherwise, choose No.</td>
</tr>
<tr>
<td><strong>Journal Node</strong> drop-down list</td>
<td>Choose Yes if you want the node to act as Journal node for HDFS. Otherwise, choose No.</td>
</tr>
</tbody>
</table>
Configuring the CLDB Policy

Step 1
On the CLDB Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the CLDB policy configuration and click Edit. If you do not see a node you need for CLDB on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2
In the Edit CLDB Policy Entry dialog box, choose Yes if you want the node to act as a CLDB agent.

Step 3
Click Submit.

Step 4
Repeat Steps 1 and 2 to configure the other nodes for CLDB.

Step 5
Click Next.

What to Do Next
Configure the CLDB policy.

Configuring the YARN Policy

Step 1
On the YARN Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the YARN policy configuration and click Edit. If you do not see a node you need for the YARN policy on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2
In the Edit YARN Policy Entry dialog box, review and, if required, change the following fields:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resource Manager</td>
<td>Choose Yes if you want the node to act as a Resource Manager. Otherwise, choose No. The Resource Manager is the ultimate authority that allocates resources among all the applications in the system.</td>
</tr>
</tbody>
</table>
Choose **Yes** if you want the node to act as a task Node Manager. Otherwise, choose **No**.

The Node Manager is responsible for launching the applications' containers, monitoring their resource usage (CPU, memory, disk, network), and reporting to the Resource Manager.

Choose **Yes** if you want the node to act as a Gateway. Otherwise, choose **No**.

Choose **Yes** if you want the node to preserve the JobHistory. Otherwise, choose **No**.

---

### Configuring the ZooKeeper Policy

**Note**

You must configure a minimum of three nodes for ZooKeeper.

---

**Step 1**

On the **ZooKeeper Policy** page of the **Create Hadoop Cluster Profile Template** wizard, click the row in the table with the node for which you want to change the ZooKeeper policy configuration and click **Edit**.

If you do not see a node you need for ZooKeeper on this page, click **Back** to return to the **Select Nodes for Rack Server** page and add the node there.

**Step 2**

In the **Edit ZooKeeper Policy Entry** dialog box, choose **Yes** to make the node to act as a ZooKeeper.

**Step 3**

Click **Submit**.

**Step 4**

Repeat Steps 1 and 2 to configure the other nodes for ZooKeeper.

**Step 5**

Click **Next**.

---

**What to Do Next**

Configure the HBase policy.
Configuring the HBase Policy

Step 1
On the HBase Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the HBase policy configuration and click Edit. If you do not see a node you need for HBase on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2
In the Edit HBase Policy Entry dialog box, review and, if required, change the following fields:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HBase Master drop-down list</td>
<td>Choose Yes if you want the node to act as the HBase master. Otherwise, choose No.</td>
</tr>
<tr>
<td>Region Server drop-down list</td>
<td>Choose Yes if you want the node to act as a region server. Otherwise, choose No.</td>
</tr>
<tr>
<td>HBase Thrift Server drop-down list</td>
<td>Choose Yes if you want the node to host HBase Thrift. Otherwise, choose No.</td>
</tr>
</tbody>
</table>

Step 3
Click Submit.

Step 4
Repeat Steps 1 and 2 to configure the other nodes for HBase.

Step 5
Click Next.

What to Do Next
Configure the Hive policy.

Configuring the Hive Policy

Step 1
On the Hive Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the Hive policy configuration and click Edit. If you do not see a node you need for Hive on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2
In the Edit Hive Policy Entry dialog box, review and, if required, change the following fields:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HiveServer2 drop-down list</td>
<td>Choose Yes if you want the node to host HiveServer2. Otherwise, choose No.</td>
</tr>
</tbody>
</table>
### Configuring Hadoop Cluster Profile Templates

#### Configuring the Oozie Policy

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Hive Metastore Server</strong> drop-down list</td>
<td>Choose <strong>Yes</strong> if you want the node to act as a Hive metastore. Otherwise, choose <strong>No</strong>.</td>
</tr>
<tr>
<td><strong>WebHCat</strong> drop-down list</td>
<td>Choose <strong>Yes</strong> if you want the node to act as a WebHCat. Otherwise, choose <strong>No</strong>. WebHCat is the REST API for HCatalog, a table and storage management layer for Hadoop.</td>
</tr>
<tr>
<td><strong>Gateway</strong> drop-down list</td>
<td>Choose <strong>Yes</strong> if you want the node to act as a Gateway for Hive. Otherwise, choose <strong>No</strong>.</td>
</tr>
</tbody>
</table>

**Step 3**
Click **Submit**.

**Step 4**
Repeat Steps 1 and 2 to configure the other nodes for Hive.

**Step 5**
Click **Next**.

**What to Do Next**
Configure the Oozie policy.

### Configuring the Oozie Policy

**Step 1**
On the **Oozie Policy** page of the **Create Hadoop Cluster Profile Template** wizard, click the row in the table with the node for which you want to change the Oozie policy configuration and click **Edit**. If you do not see a node you need for Oozie on this page, click **Back** to return to the **Select Nodes for Rack Server** page and add the node there.

**Step 2**
In the **Edit Oozie Policy Entry** dialog box, click **Yes** to make the node to act as an Oozie server.

**Step 3**
Repeat Steps 1 and 2 to configure the other nodes for Oozie.

**Step 4**
Click **Next**.

**What to Do Next**
Configure the Hue policy.
Configuring the Hue Policy

**Step 1**
On the **Hue Policy** page of the *Create Hadoop Cluster Profile Template* wizard, click the row in the table with the node for which you want to change the Hue policy configuration and click **Edit**. If you do not see a node you need for Hue on this page, click **Back** to return to the **Select Nodes for Rack Server** page and add the node there.

**Step 2**
In the **Edit Hue Policy Entry** dialog box, do the following:

a) From the **Hue Server** drop-down list, choose **Yes** if you want the node to act as a Hue server.

b) From the **BeesWax Server** drop-down list, choose **Yes** if you want the node to act as a BeesWax server.

c) From the **Kt Renewer** drop-down list, choose **Yes** if you want the node to act as a Kt Renewer.

d) Click **Submit**.

**Step 3**
Repeat Steps 1 and 2 to configure the other nodes for Hue.

**Step 4**
Click **Next**.

**What to Do Next**
Configure the Spark policy.

Configuring the Spark Policy

**Step 1**
On the **Spark Policy** page of the *Create Hadoop Cluster Profile Template* wizard, click the row in the table with the node for which you want to change the Spark policy configuration and click **Edit**. If you do not see a node you need for Spark on this page, click **Back** to return to the **Select Nodes for Rack Server** page and add the node there.

**Step 2**
In the **Edit Spark Policy Entry** dialog box, review and, if required, change the following fields:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spark Master drop-down list</td>
<td>Choose <strong>Yes</strong> if you want the node to act as a Spark master. Otherwise, choose <strong>No</strong>.</td>
</tr>
<tr>
<td>Spark Worker drop-down list</td>
<td>Choose <strong>Yes</strong> if you want the node to act as a Spark worker. Otherwise, choose <strong>No</strong>.</td>
</tr>
</tbody>
</table>

**Step 3**
Click **Submit**.

**Step 4**
Repeat Steps 1 and 2 to configure the other nodes for Spark.

**Step 5**
Click **Next**.
Configuring the Key-Value Store Indexer Policy

**What to Do Next**
Configure the KSIndexer policy.

**Step 1**
On the **Key-Value Store Indexer Policy** page of the **Create Hadoop Cluster Profile Template** wizard, click the row in the table with the node for which you want to change the Key-Value Store Indexer policy configuration and click **Edit**.
If you do not see a node you need for KSIndexer on this page, click **Back** to return to the **Select Nodes for Rack Server** page and add the node there.

**Step 2**
In the **Edit KSIndexer Policy Entry** dialog box, choose **Yes** if you want the node to act as a KSIndexer server.

**Step 3**
Click **Submit**.

**Step 4**
Repeat Steps 1 and 2 to configure the other nodes for KSIndexer.

**Step 5**
Click **Next**.

Configuring the Solr Policy

**What to Do Next**
Configure the Solr policy.

**Step 1**
On the **Solr Policy** page of the **Create Hadoop Cluster Profile Template** wizard, click the row in the table with the node for which you want to change the Solr policy configuration and click **Edit**.
If you do not see a node you need for Solr on this page, click **Back** to return to the **Select Nodes for Rack Server** page and add the node there.

**Step 2**
In the **Edit Solr Policy Entry** dialog box, choose **Yes** if you want the node to act as a Solr server.

**Step 3**
Click **Submit**.

**Step 4**
Repeat Steps 1 and 2 to configure the other nodes for Solr.

**Step 5**
Click **Next**.

Configuring the Sqoop policy.
Configuring the Sqoop Policy

**Step 1**
On the **Sqoop Policy** page of the **Create Hadoop Cluster Profile Template** wizard, click the row in the table with the node for which you want to change the Sqoop policy configuration and click **Edit**.

If you do not see a node you need for Sqoop on this page, click **Back** to return to the **Select Nodes for Rack Server** page and add the node there.

**Step 2**
In the **Edit Sqoop Policy Entry** dialog box, choose **Yes** if you want the node to act as a Sqoop server.

**Step 3**
Click **Submit**.

**Step 4**
Repeat Steps 1 and 2 to configure the other nodes for Sqoop.

**Step 5**
Click **Next**.

**What to Do Next**
Configure the Impala policy.

Configuring the Impala Policy

**Step 1**
On the **Impala Policy** page of the **Create Hadoop Cluster Profile Template** wizard, click the row in the table with the node for which you want to change the Impala policy configuration and click **Edit**.

If you do not see a node you need for Impala on this page, click **Back** to return to the **Select Nodes for Rack Server** page and add the node there.

**Step 2**
In the **Edit Impala Policy Entry** dialog box, do the following:

a) from the **Impala StateStore** drop-down list, choose **Yes** if you want the node to act as an Impala Statestore.

b) From the **Impala Catalog Server** drop-down list, choose **Yes** if you want the node to act as an Impala catalog server.

The other fields in this dialog box are for your information only.

c) Click **Submit**.

**Step 3**
Repeat Steps 1 and 2 to configure the other nodes for Impala.

**Step 4**
Click **Submit**.

**What to Do Next**
Configure the Flume policy.
Configuring the Flume Policy

Step 1  On the Flume Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the Flume policy configuration and click Edit. If you do not see a node you need for Flume on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2  In the Edit Flume Policy Entry dialog box, choose Yes if you want the node to act as a Flume agent.

Step 3  Click Submit.

Step 4  Repeat Steps 1 and 2 to configure the other nodes for Flume.

Step 5  Click Next.

What to Do Next
Configure the PIG Policy.

Configuring the PIG Policy

Step 1  On the Pig Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the Pig policy configuration and click Edit. If you do not see a node you need for Pig on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2  In the Edit Pig Policy Entry dialog box, choose Yes if you want the node to act as a Pig agent.

Step 3  Click Submit.

Step 4  Repeat Steps 1 and 2 to configure the other nodes for Pig.

Step 5  Click Next.

What to Do Next
Configure the MAHOUT Policy.

Configuring the MAHOUT Policy

Step 1  On the MAHOUT Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the MAHOUT policy configuration and click Edit. If you do not see a node you need for MAHOUT on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.
Step 2  In the Edit MAHOUT Policy Entry dialog box, choose Yes if you want the node to act as a MAHOUT agent.

Step 3  Click Submit.

Step 4  Repeat Steps 1 and 2 to configure the other nodes for MAHOUT.

Step 5  Click Submit.

What to Do Next
Configure a Falcon Policy.

Configuring the Falcon Policy

Step 1  On the Falcon Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the Falcon policy configuration and click Edit. If you do not see a node you need for Falcon on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2  In the Edit Falcon Policy Entry dialog box, choose Yes if you want the node to act as a Falcon server and as the Falcon client from the Falcon Server and Falcon Client drop-down lists.

Step 3  Click Submit.

Step 4  Repeat Steps 1 and 2 to configure the other nodes for Falcon.

Step 5  Click Submit.

What to Do Next
Configure the Tez Policy.

Configuring the Tez Policy

Step 1  On the Tez Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the Tez policy configuration and click Edit. If you do not see a node you need for Tez on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2  In the Edit Tez Policy Entry dialog box, choose Yes if you want the node to act as a Tez agent.

Step 3  Click Submit.

Step 4  Repeat Steps 1 and 2 to configure the other nodes for Tez.

Step 5  Click Submit.
What to Do Next
Configure the Storm Policy.

Configuring the Storm Policy

Step 1  On the Storm Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the Storm policy configuration and click Edit.
If you do not see a node you need for Storm on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2  In the Edit Storm Policy Entry dialog box, do the following:
a) In the DRPC Server drop-down list, choose Yes if you want the node to act as a DRPC server.
b) In the Nimbus drop-down list, choose Yes if you want the node to act as a Nimbus server.
c) In the Storm REST API Server drop-down list, choose Yes if you want the node to act as a Storm REST API server.
d) In the Storm UI Server drop-down list, choose Yes if you want the node to act as a Storm UI server.
e) In the Supervisor drop-down list, choose Yes if you want the node to act as a supervisor.

Step 3  Click Submit.

Step 4  Repeat Steps 1 and 2 to configure the other nodes for Storm.

Step 5  Click Submit.

What to Do Next
Configure the Ganglia Policy.

Configuring the Ganglia Policy

Step 1  On the Ganglia Policy page of the Create Hadoop Cluster Profile Template wizard, click the row in the table with the node for which you want to change the Ganglia policy configuration and click Edit.
If you do not see a node you need for Ganglia on this page, click Back to return to the Select Nodes for Rack Server page and add the node there.

Step 2  In the Edit Ganglia Policy Entry dialog box, choose Yes if you want the node to act as a Ganglia server and as Ganglia monitor from the Ganglia Server and Ganglia Monitor drop-down lists.

Step 3  Click Submit.

Step 4  Repeat Steps 1 and 2 to configure the other nodes for Ganglia.

Step 5  Click Submit.
## Cloning a Hadoop Cluster Profile Template

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>On the menu bar, choose <strong>Solutions &gt; Big Data Containers</strong>.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Click the <strong>Hadoop Cluster Profile Template</strong> tab.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Click the row for the template that you want to clone.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Click <strong>Clone</strong>.</td>
</tr>
<tr>
<td>Step 5</td>
<td>In the <strong>Clone Hadoop Cluster Profile Template</strong> dialog box, do the following:&lt;br&gt;a) Enter a unique name and description for the new Hadoop cluster profile template.&lt;br&gt;b) Click <strong>Next</strong>, review the information on each page, and modify, if required.&lt;br&gt;c) Click <strong>Submit</strong>.</td>
</tr>
</tbody>
</table>
