

## New and Changed Information for this Release

This chapter contains the following section:

- [New and Changed Information for this Release, on page 1](#)

## New and Changed Information for this Release

The following tables provides an overview of the significant changes to this guide for this current release. The table does not provide an exhaustive list of all changes made to this guide or of all new features in this release.

*Table 1: Changes Introduced in Release 6.8(7.0)*

Feature	Description	Where Documented
Verisign Identity Protection authentication service is no longer supported.	Starting with Release 6.6, configuring an LDAP authentication preference using the Verisign Identity Protection authentication service is no longer supported.	<a href="#">Authentication and LDAP Integration</a>

*Table 2: Changes Introduced in Release 6.8(5.0)*

Feature	Description	Where Documented
Support for mandatory password reset	You can choose to make password reset mandatory for new users at first login by selecting the option <b>Force User Password Reset</b> .	<a href="#">Enabling Advanced Controls</a>

**Table 3: Changes Introduced in Release 6.8(4.0)**

Feature	Description	Where Documented
Support for deleting unused user-created files	You can delete unused user-created files using the Clean Up User Created Files task. You can configure the number of days to keep user-created files in <b>System Parameters</b> .	<a href="#">Configuring System Parameters</a>

**Table 4: Changes Introduced in Release 6.8(3.0)**

Feature	Description	Where Documented
Support for Managing System Tasks	You can modify the schedule for multiple VMware and UCSM accounts system tasks. Also, you can enable and disable system tasks for multiple VMware and UCSM accounts.	<a href="#">Configuring Inventory Data Collection Schedule for Virtual Accounts</a> <a href="#">Configuring Inventory Data Collection Schedule for Physical Accounts</a>

**Table 5: Changes Introduced in Release 6.8**

Feature	Description	Where Documented
Enhancement to Setting up Non-Secure Connection	By default, user interface launches in the secure mode. To bypass the secure mode, login to the Shell Admin and enable the <b>Enable/Disable HTTP</b> shelladmin option.	<a href="#">Setting up Non-Secure Connection to the Cisco UCS Director User Interface</a>
Enhancement of LDAP integration	Recommended version of TLS: 1.2 and above is preferred for 6.8.	<a href="#">LDAP Integration Rules and Limitations</a>
Enhancement to Bulk Archival of Service Requests	The <b>Bulk Archive</b> option is enhanced to archive large number of service requests at a time. You can archive service requests based on the Status with Range or Date with Range.	<a href="#">Bulk Archiving Service Requests</a>
Support to lock a service request	You can lock a service request to prevent archiving of the service request. You can use the <b>Lock/Unlock</b> option to lock or unlock one or more service requests.	<a href="#">Adding a Catalog</a>
