Cisco Systems, Inc. 170 West Tasman Drive San Jose, CA 95134-1706 USA http://www.cisco.com Tel: 408 526-4000

800 553-NETS (6387) Fax: 408 527-0883 THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The Cisco implementation of TCP header compression is an adaptation of a program developed by the University of California, Berkeley (UCB) as part of UCB's public domain version of the UNIX operating system. All rights reserved. Copyright © 1981, Regents of the University of California.

NOTWITHSTANDING ANY OTHER WARRANTY HEREIN, ALL DOCUMENT FILES AND SOFTWARE OF THESE SUPPLIERS ARE PROVIDED "AS IS" WITH ALL FAULTS. CISCO AND THE ABOVE-NAMED SUPPLIERS DISCLAIM ALL WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THOSE OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OR ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Any Internet Protocol (IP) addresses and phone numbers used in this document are not intended to be actual addresses and phone numbers. Any examples, command display output, network topology diagrams, and other figures included in the document are shown for illustrative purposes only. Any use of actual IP addresses or phone numbers in illustrative content is unintentional and coincidental

CHAPTER 1

New and Changed Information for this Release 1

New and Changed Information in this Release 1

CHAPTER 2

Overview 3

Overview 3

PART I

EMC Storage Systems 5

CHAPTER 3

EMC Isilon 7

Cisco UCS Director Support for EMC Isilon 7

Adding an EMC Isilon Account 8

Storage Pool Tiers 9

Creating a Storage Pool Tier 10

Storage Node Pools 10

Creating a Node Pool 11

SMB Shares 11

Creating an SMB Share 12

Creating an NFS Export 13

Viewing NFS Datastores 14

Quotas 15

CHAPTER 4

```
Configuring a Namespace Access Point 18
        Viewing the Access Zones 18
        Data Snapshots 19
            Creating a Snapshot 19
            Viewing Snapshot Schedules 20
        System Jobs 21
            Manually Running a System Job 21
            Monitoring System Jobs 22
            Modifying an Active Job 22
            Viewing System Job Results 23
        Viewing Storage Efficiency Through Deduplication Results 23
        Managing EMC Isilon System Tasks 24
EMC Unity 25
        Cisco UCS Director Support for EMC Unity 25
        Adding an EMC Unity Account 26
        Storage Pools 27
            Creating a Storage Pool 27
            Expanding a Storage Pool 28
        Hosts 29
            Creating a Host 29
            Adding a Network Address to a Host 30
            Changing the ID for a Host LUN 30
            Adding an Initiator to a Host 31
        Initiators 31
            Adding a Host Initiator 32
        iSCSI Interfaces 32
            Creating an iSCSI Portal 32
            Creating an iSCSI Route 33
        EMC Unity Block Storage 33
            Setting Up EMC Unity Block Storage 33
            LUNs 34
```

Creating a Quota 15

Manually Generating a Quota Report 16

Updating Quota Report Settings 17

CHAPTER 5

```
Creating a LUN 34
        Mapping a LUN to a Host 35
        Unmapping a LUN from a Host 36
        Starting the Creation of a LUN Snapshot 36
        Pausing the Creation of a LUN Snapshot 37
    Consistency Groups 37
        Creating a Consistency Group 37
        Adding a LUN to a Consistency Group 38
        Removing a LUN from a Consistency Group 39
        Starting the Creation of a Consistency Group Snapshot 39
        Pausing a Consistency Group Snapshot 40
        Deleting a Consistency Group 40
EMC Unity File Storage 41
    Setting Up EMC Unity File Storage 41
    NAS Servers 41
        Creating a NAS Server 42
        Creating a File Interface for a NAS Server 42
        Creating an SMB Server 43
        Creating an NFS Server 44
        Creating a DNS Server 44
        Creating an NIS Server 45
    File Systems 45
        Creating a File System 46
        Starting the Creation of a File System Snapshot 47
        Pausing a File System Snapshot 47
        Creating a User Quota for a File System 47
        Creating a Quota Tree 48
        Creating a User Quota for a Quota Tree 49
    Shares 50
        Creating an SMB Share 50
        Creating an NFS Share 51
        Mapping a Host to an NFS Share 52
        Unmapping a Host from an NFS Share 53
```

EMC Symmetrix VMAX and VMAX3 55

```
Cisco UCS Director Support for EMC Symmetrix VMAX and VMAX3 55
VMAX and VMAX3 Reports 55
EMC Solutions Enabler for VMAX Storage 57
    Windows-Based Solutions Enabler 57
        Guidelines for SSHD Server Configuration 57
       Installing a Cygwin Package 57
        Configuring the SSHD Server 58
        Configuring System Environment Variables 59
        Starting the Cygwin SSHD Service 59
        Verifying SSH Access 59
    Installing and Configuring a Linux-Based Solutions Enabler 60
Adding an EMC VMAX Account 61
VMAX Management 63
    Thin Devices 63
        Creating a Thin Device 63
    Thin Pools 64
       Creating A Thin Pool 64
        Binding Thin Devices to a Thin Pool 65
        Unbinding a Thin Devices from a Thin Pool 66
    BCV Devices 66
        Creating a BCV Device 66
    Data Devices 67
        Creating a Data Device 67
    Regular Devices 68
        Creating a Regular Device 68
    Meta Devices 69
        Meta Member Devices 69
        Creating a Meta Device 69
        Adding a Member Device to a Meta Device 71
        Removing a Member Device from a Meta Device 71
        Dissolving a Meta Device 72
        Adding a Member Device to a Meta Device (Striped Configuration) 72
    Initiator Groups 73
       Creating an Initiator Group 73
    Storage Tiers 74
```

```
Creating a Storage Tier 74
    Adding a Thin Pool to a Storage Tier 76
    Removing a Thin Pool from a Storage Tier 76
    Adding a Disk Group to a Storage Tier 77
    Renaming a Storage Tier 77
    Deleting a Storage Tier 78
Storage Groups 78
   Creating an Empty Storage Group 78
   Creating a Cascaded Storage Group 79
   Deleting a Storage Group 80
    Renaming a Storage Group 80
    Adding a Device to a Storage Group 81
    Removing a Device from a Storage Group 82
    Removing a Child Storage Group from a Cascaded Storage Group 82
    FAST Configuration for Storage Groups on VMAX3 83
        Associating a FAST Policy with a Storage Group 83
        Disassociating a FAST Policy from a Storage Group 83
        Reassociating a FAST Policy with a Storage Group 84
        Modifying the FAST Storage Group Priority 84
        Modifying FAST Settings for a Storage Group 85
Fully Automated Storage Tiering 85
    FAST Policies 85
        Creating a FAST Policy 86
        Adding Storage Tiers to a FAST Policy 86
        Removing Storage Tiers from a FAST Policy 87
        Modifying the Maximum Storage Group Capacity for a Storage Tier in a FAST
           Policy 87
        Renaming a FAST Policy 88
    FAST Controllers 88
        Modifying FAST Controller Settings 89
    FAST Status 90
        Modifying the FAST State 90
        Renaming the FAST Service Level Objective 91
Port Groups 91
    Creating a Port Group 91
```

```
Creating a Masking View 92
                                    VMAX Properties File 93
                                        Editing the VMAX Properties File 94
                        EMC VNX 95
CHAPTER 6
                                About Cisco UCS Director for EMC VNX 95
                                Installing EMC NaviSphere 96
                                    Installing and Configuring Windows-Based Navisphere 96
                                        Installing a Cygwin Package 96
                                        Guidelines for SSHD Server Configuration 97
                                        Configuring the SSHD Server 97
                                        Configuring System Environment Variables 98
                                        Starting the Cygwin SSHD Service 99
                                        Verifying SSH Access 99
                                        Configuring the Navisphere Path for Windows 99
                                    Installing and Configuring Linux Based NaviSphere 100
                                VNX Accounts 101
                                    Adding an EMC VNX File Account 101
                                    Adding an EMC VNX Block Account 103
                                    Adding an EMC VNX Unified Account 106
                                VNX Block Storage Management 110
                                    Summary of Steps 111
                                    Storage Pools 111
                                        Creating a Storage Pool 112
                                    RAID Groups 112
                                        Creating a RAID Group 113
                                    Host Initiators 114
                                        Registering a Host Initiator 114
                                    Storage Groups 115
                                        Creating a Storage Group 116
                                    LUNs 116
                                        Creating a LUN 117
                                    Adding a Host to a Storage Group 119
```

Adding a LUN to a Storage Group 119

Masking Views 92

Creating a Meta LUN 120 Associating a LUN as a Datastore 121 About VNX File Storage Management 122 Summary of Steps 123 Using CIFS 123 CIFS Servers 123 Creating a CIFS Server 124 CIFS Shares 125 Creating CIFS Shares 126 DNS Domains 126 Creating a DNS Domain 127 Using NFS Export 127 Storage Pools for Files 127 Creating a Storage Pool for Files 128 Volumes 129 Creating a Volume 129 File Systems 130 Creating an NFS File System 131 Data Mover Interfaces 131 Adding a Data Mover Interface 132 NFS Export 133 Exporting an NFS File System 133 Mounts 134 Modify a File System 134 Deleting a File System 135 VNX Unified Storage Management 135 Summary of Steps 136

CHAPTER 7 EMC VNXe 137

About Cisco UCS Director for EMC VNXe 138

Adding an EMC VNXe Account 139

Management Overview 140

System Summary Report 140

Storage Processors Report 141

Disk Groups Report 141

```
Storage Pools Report 142
    Creating a Storage Pool 142
    Modifying a Storage Pool 143
    Expanding a Storage Pool 144
File Systems Report 145
    Creating a File System 145
    Modifying a File System 147
NFS Shares Report 147
    Creating an NFS Share 148
    Modifying an NFS Share 149
    Create an NFS Datastore 150
LUNS Report 150
    Creating a LUN 151
    Modifying a LUN 152
    Creating a VMFS Datastore 153
Hosts Report 154
    Creating a Host 154
    Modifying a Host 155
Host Initiators Report 155
    Creating a Host Initiator 156
    Modifying a Host Initiator 157
    Registering a Host Initiator 157
    Unregistering a Host Initiator 158
Host Luns Report 158
Host Initiator Paths Report 159
Host IP Ports Report 159
    Creating a Host IP Port 160
    Modifying a Host IP Port 160
FC Ports Report 161
Ethernet Ports Report 161
File Interfaces Report 161
    Creating a File Interface 162
    Modifying a File Interface 163
ISCSI Nodes Report 163
ISCSI Interface Report 163
```

```
Creating an ISCSI Interface 164
    Modifying an ISCSI Interface 165
Fast Cache Report 165
Disk Report 166
Storage Pool FAST VP Report 166
    Start Data Relocation 166
    Stop Data Relocation 168
Storage Pools Storage Tiers Report 168
Jobs Report 168
FAST VP Report 169
Storage Tier Report 169
IP Interfaces Report 169
CIFS Server Report 170
    Creating a CIFS Server 170
    Modifying a CIFS Server 171
CIFS Share Report 171
    Creating a CIFS Share 172
    Modifying a CIFS Share 173
DNS Server Report 174
    Modifying a DNS Server 174
NAS Server Report 174
    Creating a NAS Server 175
    Modifying a NAS Server 176
NFS Server Report 176
    Creating an NFS Server 176
Routes Report 177
    Creating a Route 178
    Modifying a Route 178
About EMC VPLEX 181
```

CHAPTER 8 EMC VPLEX 181

cout EMC VPLEX 181

EMC VPLEX Technology 182

VPLEX Local 183

VPLEX Metro 183

VPLEX Clustering Architecture 183

```
Managing the VPLEX Storage System for a Pod 184
Adding an EMC VPLEX Account 185
System Requirements 187
Assigning a Pod to a Cluster 187
    Unassigning a Pod from a Cluster 188
Viewing VPLEX Engines 188
Rediscovering a Storage Array 189
Storage Volume Claiming 189
    Claiming a Storage Volume 189
    Unclaiming a Storage Volume 190
Extents 190
    Creating an Extent 191
    Deleting an Extent 192
VPLEX Storage Devices 192
    Creating a VPLEX Storage Device 192
    Mirroring a VPLEX Storage Device 193
    Viewing a VPLEX Storage Device 194
    Detaching a Mirror from a VPLEX Storage Device 194
    Deleting a VPLEX Storage Device 195
Consistency Groups 195
    Creating a Consistency Group 195
    Adding a Virtual Volume to an Existing Consistency Group 197
    Removing a Virtual Volume from a Consistency Group 197
    Enabling or Disabling a RecoverPoint for a Consistency Group 197
    Viewing a Consistency Group 198
    Deleting an Existing Consistency Group 199
Distributed Devices and RuleSets 199
    Viewing a RuleSet for a Distributed Device 199
    Creating a Distributed Device 200
    Deleting a Distributed Device 201
Initiators 201
    Creating an Initiator 201
    Viewing an Initiator 202
    Deleting an Initiator 202
Virtual Volumes 203
```

Creating a Virtual Volume 203 Enabling Remote Access on a Virtual Volume 203 Expanding a Virtual Volume 204 Viewing a Virtual Volume 205 Deleting a Virtual Volume 205 Viewing Target Ports 206 Storage Views 206 Creating a Storage View 206 Deleting a Storage View 207 Adding an Initiator to a Storage View 207 Removing an Initiator from a Storage View 208 Adding a Virtual Volume to a Storage View 208 Removing a Virtual Volume from a Storage View 209 Adding a Port to a Storage View 210 Removing a Port from a Storage View 210 Logging Volumes 211 Creating a Logging Volume 211 Adding a Mirror to a Logging Volume 212 Deleting a Logging Volume 212

CHAPTER 9 EMC XtremIO 215

Overview 215

XtremIO Connector in Cisco UCS Director 216

Orchestration 216

Viewing the Task Library 216

Managing VPLEX System Tasks 213

XtremIO Accounts 216

Adding an EMC XtremIO Account 216

Editing an XtremIO Account 218

XtremIO Volumes 219

Creating an XtremIO Volume 219

Modifying an XtremIO Volume 220

XtremIO Initiator Groups 220

Creating an Initiator Group 220

Renaming an Initiator Group 221

Creating an Initiator 222 Modifying an Initiator 223 Volume Mapping 223 Mapping a Volume 223 Unmapping a Volume 224 Consistency Groups 224 Adding a Consistency Group 225 Renaming a Consistency Group 225 Viewing a Consistency Group Report 226 Adding a Volume to a Consistency Group 226 Removing a Volume from a Consistency Group 227 iSCSI 227 Creating an iSCSI Portal 227 Creating an iSCSI Route 228 Snapshots 228 Creating a Snapshot Scheduler 229 Viewing Snapshot Sets 229 Creating a Snapshot Set 230 System Reports 231 Viewing System Reports 231 Other Configurations 232 Viewing the Email Notifier 232 Viewing the SNMP Notifier 232 Viewing the Syslog Notifier 233

EMC Data Protection Systems 235

XtremIO Initiators 221

EMC RecoverPoint 237 CHAPTER 10

EMC RecoverPoint Support 237

Adding an EMC RecoverPoint Account 238

RecoverPoint Appliance Clusters 239

Assigning a RecoverPoint Cluster to a Pod 240

Unassigning a RecoverPoint Cluster from a Pod 240

Replication Through Consistency Groups 240

PART II

```
Setting Up Replication 241
    Creating a Consistency Group 242
    Enabling a Consistency Group 244
    Applying a Bookmark to a Consistency Group 244
    Updating a Snapshot for a Consistency Group 245
    Consistency Group Copies 246
        Creating a Consistency Group Copy 246
        Enabling a Consistency Group Copy 248
        Enabling Image Access 248
        Editing a Consistency Group Copy Policy 250
    Replication Sets 251
        Creating a Replication Set 251
        Renaming a Replication Set 252
    User Volumes and Journal Volumes 252
        Adding a User Volume to a Consistency Group Copy 252
        Adding a Journal Volume to a Consistency Group Copy 253
    Data Transfers 254
        Adding a Link Between Consistency Group Copies 254
        Starting Data Transfer for a Consistency Group 257
        Starting a Transfer for a Consistency Group Copy 257
        Getting the Transfer Status for a Consistency Group 258
Group Sets 258
    Creating a Group Set 258
    Deleting a Group Set 259
System Tasks 260
    Assigning a Policy to a RecoverPoint System Task 260
    Viewing RecoverPoint Task History and Reports 261

Audience

This guide is intended primarily for data center administrators who use Cisco UCS Director and who have responsibilities and expertise in one or more of the following:

- Server administration
- Storage administration
- Network administration
- Network security
- Virtualization and virtual machines

Conventions

Text Type	Indication
GUI elements	GUI elements such as tab titles, area names, and field labels appear in this font . Main titles such as window, dialog box, and wizard titles appear in this font .
Document titles	Document titles appear in this font.
TUI elements	In a Text-based User Interface, text the system displays appears in this font.

Text Type	Indication
System output	Terminal sessions and information that the system displays appear in this font.
CLI commands	CLI command keywords appear in this font .
	Variables in a CLI command appear in this font.
[]	Elements in square brackets are optional.
{x y z}	Required alternative keywords are grouped in braces and separated by vertical bars.
[x y z]	Optional alternative keywords are grouped in brackets and separated by vertical bars.
string	A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.
<>	Nonprinting characters such as passwords are in angle brackets.
[]	Default responses to system prompts are in square brackets.
!,#	An exclamation point (!) or a pound sign (#) at the beginning of a line of code indicates a comment line.

Note

Means *reader take note*. Notes contain helpful suggestions or references to material not covered in the document.

Caution

Means *reader be careful*. In this situation, you might perform an action that could result in equipment damage or loss of data.

Tip

Means *the following information will help you solve a problem*. The tips information might not be troubleshooting or even an action, but could be useful information, similar to a Timesaver.

Timesaver

Means the described action saves time. You can save time by performing the action described in the paragraph.

IMPORTANT SAFETY INSTRUCTIONS

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Use the statement number provided at the end of each warning to locate its translation in the translated safety warnings that accompanied this device.

SAVE THESE INSTRUCTIONS

New and Changed Information for this Release

• New and Changed Information in this Release, page 1

New and Changed Information in this Release

The following table provides an overview of the significant changes to this guide for this current release. The table does not provide an exhaustive list of all changes made to this guide or of all new features in this release.

Table 1: New Features and Changed Behavior in Cisco UCS Director, Release 6.5

Feature	Description	Where Documented
Reorganization of EMC management guides.	All management guides for supported EMC storage systems and data protection systems have been merged into the <i>Cisco UCS Director EMC Management Guide</i> . All new features and changed behavior will be documented in this guide. The individual management guides will no longer be updated.	Cisco UCS Director EMC Management Guide
Support for EMC Unity	In this release, Cisco UCS Director provides support for orchestration automation, management, monitoring, and reporting for supported EMC Unity storage arrays.	EMC Unity, on page 25

New and Changed Information in this Release

Overview

• Overview, page 3

Overview

Cisco UCS Director supports EMC storage systems and data protection systems.

For details about the supported versions for each of these systems, see the Cisco UCS Director Compatibility Matrix for this release.

Supported EMC Storage Systems

EMC Storage System	Where Documented
EMC Isilon	EMC Isilon, on page 7
EMC Unity	EMC Unity, on page 25
EMC Symmetrix VMAX and VMAX3	EMC Symmetrix VMAX and VMAX3, on page 55
EMC VNX	EMC VNX, on page 95
EMC VNXe	EMC VNXe, on page 137
EMC VPLEX	EMC VPLEX, on page 181
EMC XtremIO	EMC XtremIO, on page 215

Supported EMC Data Protection Systems

EMC Data Protection System	Where Documented	
EMC RecoverPoint	EMC RecoverPoint, on page 237

Cisco UCS Director Support for EMC Isilon

Cisco UCS Director manages, monitors, and does reporting for the EMC Isilon system. Data is collected through the Isilon cluster platform and namespace REST API, which is connected to Cisco UCS Director through HTTP or HTTPS. This data is parsed and bound to the output as Plain Old Java Objects (POJOs), and these objects are distributed throughout the pod.

Adding an EMC Isilon Account

Procedure

- **Step 1** Choose **Administration** > **Physical Accounts**.
- **Step 2** On the **Physical Accounts** page, click **Physical Accounts**.
- Step 3 Click Add.
- **Step 4** On the Add Account screen, complete the following fields:

Name	Description
Pod drop-down list	Choose the pod for this account. The pod can be one of the following types:
	• Default Pod
	• Generic
	• VSPEX
	• Vblock
Category drop-down list	Choose Storage.
Account Type drop-down list	Choose EMC Isilon Cluster.

Step 5 Click Submit.

Step 6 On the second **Add Account** screen, complete the following fields:

Name	Description
Account Name field	A unique name for this Isilon account. For example, isilon-1.
Description field	A description of the Isilon cluster.
Server IP field	The IP address of the Isilon cluster.
Use Credential Policy check box	Check this box if you want to use a credential policy for this account rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list. This field is only displayed if you choose to use a credential policy.
Username field	The username that this account uses to access the Isilon cluster. This username must be a valid account in the Isilon cluster. This field is not displayed if you chose to use a credential policy.

Name	Description
Password field	The password associated with the username.
	This field is not displayed if you chose to use a credential policy.
Protocol drop-down list	Choose one of the following transport types that you want to use for this account:
	• http
	• https
	The default transport type protocol for this account is HTTPS.
Port field	The port used to access the Isilon cluster. Port 8080 is the default port for both HTTP and HTTPS.
API Version drop-down list	Choose the API verson that is supported on the Isilon cluster. The default is API version 1.
Connection Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait to establish a connection to the Isilon cluster before timing out.
	The default value is 30 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
Socket Read Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait for data from the Isilon cluster before timing out.
	The default value is 30 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
Contact field	The email address that you use to contact the administrator or other person responsible for this account.
Location field	The location of the contact.

Step 7 Click Submit.

Cisco UCS Director tests the connection to the EMC Isilon storage system. If that test is successful, it adds the Isilon account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

Storage Pool Tiers

Storage pool tiers are collections of node pools that you group to optimize storage according to need, such as a mission-critical high-speed tier that is best suited to data archiving. You can organize storage pool tiers, into

logical groupings by creating policies that store or move files among these groups automatically, based on a specified criteria.

The following storage pool tiers can be created for specific purposes. Older nodes can be reduced in numerical quantity and new nodes can be added as a new tier in the same cluster.

Storage Pool Tier	Description
EMC Isilon S-Series	This platform has Input/Output Operations Per Second (IOPS) for intensive applications which process large volumes of data and devote most of their processing time to input/output (I/O) and manipulation of data.
	An EMC Isilon S-Series performance tier can be combined with an archive tier (EMC Isilon NL-Series) in the same cluster.
	An EMC Isilon S-Series with Solid State Drives (SSDs) latency tier of can be added for latency-sensitive data must meet certain time constraints in order to be acceptable to a user.
EMC Isilon X-Series	This platform is used for high concurrent and sequential throughput workflows.
EMC Isilon NL-Series	This platform is used for cost-effective, scalable near line (NL) on-site storage of data on removable media.

Creating a Storage Pool Tier

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to create the storage pool tier.
- Step 5 Click View Details.
- Step 6 Click Storage Pool Tiers.
- Step 7 Click Create.
- **Step 8** On the **Create Storage Pool Tier** screen, enter a unique name for the storage pool tier and click **Submit**. These node pools are grouped to optimize storage according to need.

Storage Node Pools

Storage node pools are sets of physical nodes that are grouped by their equivalence class to optimize reliability and requested data protection settings. The OneFS operating system creates node pools automatically when

you install the system and whenever you add or remove nodes. The automatic creation of node pools is referred to as automated provisioning.

You can organize storage node pools into logical groupings and create policies that store or move files among these nodes automatically, based on a specified criteria.

Creating a Node Pool

You can use a node pool to group equivalence-class nodes.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to create the node pool.
- Step 5 Click View Details.
- Step 6 Click Node Pools.
- Step 7 Click Create.
- **Step 8** On the Create Node Pool screen, complete the following fields:

Name	Description
Node Pool Name field	A unique name for the node pool.
Nodes field	Expand the field, check one or more boxes for the nodes that you want to include in the pool.

Step 9 Click Submit.

SMB Shares

The Server Message Block (SMB) Protocol is a network file sharing protocol that was implemented by Microsoft for Windows. SMB shares provide Windows clients network access to file system resources on the cluster.

You can grant permissions to users and groups to carry out operations such as reading, writing, and setting access permissions on SMB shares.

The /ifs directory is configured as an SMB share and is enabled by default. OneFS supports both user and anonymous security modes. If the user security mode is enabled, users who connect to a share from an SMB client must provide a valid username with proper credentials.

The SMB protocol uses security identifiers (SIDs) for authorization data. All identities are converted to SIDs during retrieval and are converted back to their on-disk representation before they are stored on the cluster.

Creating an SMB Share

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to create the SMB share.
- Step 5 Click View Details.
- Step 6 Click SMB Shares.
- Step 7 Click Create.
- **Step 8** On the Create SMB Share screen, complete the following fields:

Name	Description	
SMB Share Name field	A unique name for the SMB share.	
SMB Share Description field	A description of the SMB share.	
Path field	The /ifs directory path that is configured to be an SMB share.	
Allow Variable Expansion check box	Check the box if you want to expand Isilon path variables in the share directory path. The available path variables include the following:	
	• %D—NetBIOS domain name	
	• %L—Host name of the cluster, in lowercase	
	• %u—User name	
	• %z—Zone name	
	For example, if you have a user in the CISCO domain with a username of cisco1, with path variable expansion enabled, the path /ifs/home/%D/%U expands to /ifs/home/CISCO/cisco1.	
Auto-Create Directories check box	Check the box if you want the share to automatically create directories when users access the share for the first time.	
	Note This check box is available only if you check Allow Variable Expansion.	

- **Step 9** On the **Create SMB Share** screen, expand the **User/Group Mapping** field if you want to restrict access to the SMB share.
- Step 10 On the Add Entry to User/Group Mapping screen, complete the following fields and then click Submit:

Name	Description
Type drop-down list	Choose a mapping type. This can be one of the following:
	• User—Restricts access for a specific user.
	• Group—Restricts access for a group of users.
	• Wellknown—Restricts access for a well-known security identifier (SID).
Name field	The name of the user, group, or well-known SID whose access you want to restrict.
Permission drop-down list	Choose a permission option for the user, group, or well-known SID. This can be one of the following:
	• No Access
	• Read Access
	• Read-Write Access
	• Full Access
	• Root Access

The user/group mappings display in the User/Group Mapping table on the Create SMB Share screen.

Step 11 Click Submit.

Creating an NFS Export

Network File System (NFS) exports provide UNIX clients with network access to file system resources on the cluster.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to create the NFS export.
- Step 5 Click View Details.
- Step 6 Click NFS Exports.
- Step 7 Click Create.
- **Step 8** On the Create NFS Export screen, complete the following fields:

Name	Description
Path field	The /ifs directory path that you want to export to UNIX clients.
Description field	A description that helps identify and document the purpose of the export.
Clients field	The UNIX clients that you want to have access to the NFS export.
Read-Only Clients field	The UNIX clients that you want to have read-only access to the NFS export.
Read-Write Clients field	The UNIX clients that you want to have read-write access to the NFS export, even if the NFS export is read-only.
Root Clients field	The uNIX clients that you want to have root access to the NFS export.
Enable Mount Access for Subdirectories check box	Check the box if you want all directories under the specified paths to be mountable.
Restrict Access to Read Only check box	Check the check box to make the NFS export read-only.
Mapping Access drop-down list	Choose the type of UNIX clients that will have mapping access to the export.
Specify Username field	One or more users that you want to have access to the NFS export.
Specify User Group(s) field	One or more user groups that you want to have access to the NFS export.

Step 9 Click Submit.

Viewing NFS Datastores

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to view the datastores.
- Step 5 Click View Details.
- Step 6 Click Datastores.

You can view information about each Network File System (NFS) datastore, including the datastore name, its NFS export path, ESXi host, NFS remote host, capacity, and free space.

Quotas

Storage quotas contain a set of resources and provide an accounting of each resource type for that set. You can use quotas ao manage storage in the following ways:

- Monitor disk storage.
- Define criteria to track or limit the amount of storage a user, group, or project uses.
- Write notification rules to trigger an action according to event thresholds. A rule can specify a schedule
 for executing an action or immediate notification of certain state transitions. When an event occurs, a
 notification trigger can execute one or more actions, such as sending an email or sending a cluster alert
 to the interface.

Quota types, also known as quota domains, are used to organize storage quotas. Each quota type is defined by a directory or an entity, which encapsulate the files and subdirectories to be tracked. The following identifiers are used to describe quota types:

- The directory where the quota is located
- The quota entity
- The snapshots that are to be tracked against the quota limit, if any

Creating a Quota

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to create the quota.
- Step 5 Click View Details.
- Step 6 Click Quotas.
- Step 7 Click Create.
- **Step 8** On the **Create Quota** screen, complete the following fields:

Name	Description
Type drop-down list	Choose a quota type. This can be one of the following.
	• Directory —Specifies the directory and its subdirectories where you want to locate the quota.
	• User—Defines a specific user that you want to associate with the storage quota.
	• Group —Defines a group of users that you want to associate with the storage quota.
	• All Users——Associates all users with the storage quota.
	• All Groups—Associates all user groups with the storage quota.
Path field	The /ifs directory path for the storage quota.
Include Snapshots check box	Check the box if the quota governs snapshot data and head data. If you do not check the box, the quota cannot include snapshots.
Thresholds Include Overhead check box	Check the box if the thresholds that apply to the quota include the file system overhead required to store the data for physical usage. If the check box is not checked, thresholds do not include any overhead.
Enforced check box	Check the box to have the quota provide enforcement. Once checked, you can configure additional parameters, such as a hard limit and soft limit.
	If you do not check this box, the quota is considered to be an accounting quota.

Step 9 Click Submit.

Manually Generating a Quota Report

All manually generated quota reports are stored in the directory on /ifs that you configured in the quota report settings. For information about how to specify that directory or to set up scheduled quota reports, see Updating Quota Report Settings, on page 17.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to create the quota report.
- Step 5 Click View Details.
- Step 6 Click Quota Reports.
- **Step 7** From the **More Actions** drop-down list, choose **Create**.
- Step 8 Click Submit.

Updating Quota Report Settings

The quota report settings allow you to configure the following:

- Manual reports—Directory where manual reports are stored and the maximum number of reports to be retained.
- Scheduled reports—Schedule that determines when the reports are run, the directory where the reports are stored, and the maximum number of reports to be retained.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to update the quota report settings.
- Step 5 Click View Details.
- Step 6 Click the Quota Report Settings tab.
- Step 7 Click Modify.
- **Step 8** In the **Modify Quota Report Settings** dialog box, complete the following fields:

Name	Description
Live Directory field	The directory path on /ifs where manual or live quota reports are stored.
Live Retain field	The maximum number of manual or live quota reports to keep.
Schedule field	The schedule used to generate automated quota reports. For example, this could be every Sunday at 11pm
Schedule Directory field	The directory path on /ifs where scheduled quota reports are stored.

Name	Description
Scheduled Retain field	The maximum number of scheduled quota reports to keep.

Step 9 Click Submit.

Configuring a Namespace Access Point

The Isilon One FS cluster creates a single namespace and file system that is distributed across all nodes in the cluster and is accessible by clients connecting to any node in the cluster. You can assign a name to a namespace access point and the path to its file system.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to configure the namespace access point.
- Step 5 Click View Details.
- **Step 6** Click the Namespace tab.
- Step 7 Click Create.
- **Step 8** On the Create Namespace Access Point screen, complete the following fields:

Name	Description
Namespace Access Point Name field	A unique name for the namespace access point.
Path field	The /ifs home directory path for the namespace access point.

Step 9 Click Submit.

Viewing the Access Zones

An access zone is a context that is set up through the EMC Isilon CLI to control access to the EMC Isilon cluster based on an incoming IP address. Access zones are used to define a list of authentication providers that apply only in the context of these zones.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC Isilon account where you want to view the access zones.
- Step 5 Click View Details.
- Step 6 Click Access Zones.

You can view all of the available information about the access zones, including the name, whether it's built-in, the SMB share use, authentication providers, system providers, and NetBIOS name.

Data Snapshots

You can take snapshots of specific data on the Isilon cluster. This data can also be backed up automatically and as frequently as required to meet your recovery point objectives. You can easily move directories, assign resources, and change directory names.

You can take up to 1,024 snapshots per directory to provide scalability and data protection in a large data environment.

Creating a Snapshot

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to create the NFS export.
- Step 5 Click View Details.
- Step 6 Click Snapshots.
- Step 7 Click Create.
- **Step 8** On the Create Snapshot screen, complete the following fields:

Name	Description
Snapshot Name field	The name of the snapshot.
Snapshot Path field	The /ifs directory that is contained by the snapshot.
Alias check box	Check the check box if you want to create an alias for the snapshot name.

Name	Description
Alias Name field	An alias name for the snapshot name.
	This field is only available if you check the Alias box.
Snapshot Expiration drop-down list	Choose the expiration date for the snapshot. This can be one of the following:
	• Never Expires
	• Snapshot Expires On
Snapshot Expiration Date calendar	The expiration date for the snapshot. You can configure the expiration date as follows:
	Enter the date in the field, using the MM/DD/YYYY format.
	Click the calendar and choose an expiration date.
	This field is only visible if you chose Snapshot Expires On .

Step 9 Click Submit.

The snapshot is created and appears in the list of snapshots.

Viewing Snapshot Schedules

You must create snapshot schedules in EMC Isilon. You can view only the details of the available snapshot schedules in Cisco UCS Director.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to create the NFS export.
- Step 5 Click View Details.
- Step 6 Click Snapshot Schedules.

You can view all of the available information about snapshot schedules, including the snapshot name, pattern, path, expiration, description, next run, and next scheduled snapshot.

System Jobs

System jobs are maintenance functions that use system resources and can take several hours to complete. These jobs can include running a virus scan, monitoring and optimizing performance, detecting and mitigating drive and node failures, and freeing up available space. Some system jobs may run at scheduled intervals or they may be configured to only run when you manually start them.

Cisco UCS Director enables you to do the following with system jobs:

- Collect the available system jobs when you collect inventory from the EMC Isilon cluster
- View the available system jobs
- Manually run a system job
- View the details of system job policies
- View the details of system job reports

A complete list of sytem jobs is available in your EMC Isilon documentation.

Manually Running a System Job

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to run the system job.
- Step 5 Click View Details.
- Step 6 Click System Jobs.
- **Step 7** Click the row with the system job that you want to run and then click **Start**.
- **Step 8** On the **Start System Job** screen, complete the following fields:

Name	Description
Allow Duplicate Jobs check box	Check the box if you want to allow duplicate jobs to be run at the same time as this job.
Priority drop-down list	Choose a priority for this job. This can be from 1 to 10, with 1 being the highest priority job.

Step 9 Click Submit.

Monitoring System Jobs

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to run the system job.
- Step 5 Click View Details.
- **Step 6** To view a summary of information about active jobs on the Isilon cluster, click **Job Summary**.
- **Step 7** To refresh the information available about active jobs, click **Collect Inventory**.

Modifying an Active Job

You can only modify an active running job. After the active job is complete, the job summary might not have any data and you cannot modify the job.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to modify the system job.
- Step 5 Click View Details.
- Step 6 Click Job Summary.
- **Step 7** Click the row with the job that you want to modify and click **Modify**.
- **Step 8** On the **Modify Active Job** screen, complete the following fields:

Name	Description
Impact Policy field	Check the appropriate box to choose a single Isilon policy.
	Note You can find details about the available policies on the System Job Policy tab to view specific details for each of these Isilon policies.
Priority drop-down list	Choose a priority for this job from 1 to 10, with 1 being the highest priority job.

Name	Description
State drop-down list	Choose a state for this job. This can be one of the following:
	• Run
	• Pause
	• Cancel

Step 9 Click Submit.

Viewing System Job Results

You can view all of the available information about the report, including the snapshot name, pattern, path, expiration, description, next run, and next snapshot.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to view the system job results.
- Step 5 Click View Details.
- Step 6 Click System Job Reports.
- **Step 7** Choose a report and click **View Details** to see the logged results of the system job.

Viewing Storage Efficiency Through Deduplication Results

You can use data deduplication to maximize storage efficiency by scanning the cluster for identical blocks and then eliminating the duplicates, which decreases the amount of physical storage required.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to view the deduplication results.
- Step 5 Click View Details.
- Step 6 Click Deduplication.
- **Step 7** Choose a deduplication report and click **View Details** to see the logged results of the deduplication report.

Managing EMC Isilon System Tasks

For more infomration about system tasks, see the Cisco UCS Director Administration Guide.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Isilon account where you want to manage the system tasks.
- Step 5 Click View Details.
- Step 6 Click System Tasks.
- **Step 7** Click the row with the system task and click one of the following:
 - Manage Task—Complete the fields to update the execution, schedule, and policy configuration of the task.
 - Run Now—Starts the system task immedialely.
 - View Details—View the system task history, including the results of task execution, and trending reports.

EMC Unity

- Cisco UCS Director Support for EMC Unity, page 25
- Adding an EMC Unity Account, page 26
- Storage Pools, page 27
- Hosts, page 29
- Initiators, page 31
- iSCSI Interfaces, page 32
- EMC Unity Block Storage, page 33
- EMC Unity File Storage, page 41

Cisco UCS Director Support for EMC Unity

Cisco UCS Director provides support for orchestration automation, management, monitoring, and reporting for supported EMC Unity storage arrays.

The summary reports for EMC Unity that you can add to your Cisco UCS Director dashboard provide a system overview, free vs used system capacity, and the available capacity of storage pools. In addition, the available reports for an EMC Unity storage array include inventory information and the current status of the following:

- Storage processors
- Disk groups
- Disks
- Storage pools
- Storage tiers
- LUNs
- Consistency groups
- Hosts
- Initiators

- iSCSI portals
- iSCSI routes
- Ethernet ports
- FC (Fibre Channel) ports
- · File systems
- · SMB shares
- · NFS shares
- NAS servers
- · Snapshot schedules
- System Tasks

Adding an EMC Unity Account

- **Step 1** Choose **Administration** > **Physical Accounts**.
- Step 2 On the Physical Accounts page, click Physical Accounts.
- Step 3 Click Add.
- **Step 4** On the **Add Account** screen, complete the following fields:
 - a) From the **Pod** drop-down list, choose the one of the following types of pods for this account:
 - Default Pod
 - Generic
 - Vblock
 - VSPEX
 - b) From the Category drop-down list, choose Storage.
 - c) From the **Account Type** drop-down list, choose **EMC Unity**.
- Step 5 Click Submit.
- **Step 6** On the second **Add Account** screen, complete the following fields:
 - a) Enter a unique name and description for the account.
 - b) In the **Array IP** field, enter the IP address assigned to the EMC Unity storage array.
 - c) Check the **Use Credential Policy** box if you want to use a credential policy for this account rather than enter the username and password information manually.
 - d) If you checked the Use Credential Policy box, choose a policy from the Credential Policy drop-down list.
 - You can also click **Add** and create a new credential policy for this account. See the Cisco UCS Director Administration Guide.
 - e) If you did not check Use Credential Policy, complete the following fields:

- Enter the username and password that this account uses to access the Unity storage array. This username must be a valid account in the Unity storage array.
- **Protocol**—Choose **https** as the transport type for this account.
- **Port**—Enter the port used to access the Unity storage array. Port 443 is the default port.
- **Connection Timeout (Seconds)**—Enter the length of time in seconds that Cisco UCS Director waits to establish a connection to the Unity storage array before timing out.

The default value is 60 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.

• Socket Read Timeout (Seconds)—Enter the length of time in seconds that Cisco UCS Director will wait for data from the Unity storage array before timing out.

The default value is 60 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.

f) Enter the email address and location of the administrator or other person responsible for this account.

Step 7 Click Submit.

Cisco UCS Director tests the connection to the EMC Unity storage array. If that test is successful, it adds the Unity account and discovers all infrastructure elements in the storage array that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

Storage Pools

A storage pool includes one or more drives with the same characteristics, such as the disk group, RAID type, or number of disks. An EMC Unity storage array must have at least one storage pool that you can use to create storage resources, such as LUNs and file systems.

After you create a storage pool, you can expand the pool to include additional drives and multiple drive types. However, you cannot remove drives assigned to a pool.

Creating a Storage Pool

Before You Begin

- Create at least one disk group on the EMC Unity storage array. All available disk groups are added to Cisco UCS Director during inventory collection.
- Make sure the disks that you want to include in the storage pool are free and available in the appropriate storage tier.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to create a storage pool and click **View Details**.
- Step 5 Click Storage Pools.
- Step 6 Click Create.
- **Step 7** On the Create Storage Pool screen, complete the following fields:
 - a) Enter a unique name and description for the storage pool.
 - b) Expand Disk Group and check each group that you want to use.
 - c) From the **RAID Type** drop-down list, choose the type of RAID configured for the drives in the pool.
 - d) From the **RAID Stripe Width** drop-down list, choose the number of parallel stripes that can be written to or read from simultaneously.
 - e) In the Number of Disks field, enter the number of disks in the pool.
 - f) In the **Alert Threshold** field, enter a number between 50 and 84 to specify when the system sends an email notification about the available pool capacity.
 - The alert threshold is the percentage of allocated storage from the pool. This number determines when the system sends alerts about the amount of free space remaining in the pool. For example, if you specify 84, the system sends an alert when 84% of the storage is allocated and only 16% is available.

Step 8 Click Submit.

Expanding a Storage Pool

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC Unity account where you want to expand a storage pool and click **View Details**.
- Step 5 Click Storage Pools.
- **Step 6** Click the row with the storage pool you want to expand and click **Expand**.
- Step 7 On the Expand Storage Pool screen, complete the following fields:
 - a) Expand **Disk Group** and check each group that you want to add to the pool.
 - b) From the **RAID Type** drop-down list, choose the type of RAID configured for the drives in the pool.
 - c) From the **RAID Stripe Width** drop-down list, choose the number of parallel stripes that can be written to or read from simultaneously.
 - d) In the **Number of Disks** field, enter the number of disks that you want to add to the pool.
- Step 8 Click Submit.

Hosts

Host configurations are logical connections that hosts or applications can use to access storage resources.

Note

Cisco UCS Director supports the Host configuration type only. We do not support the Subnet or Netgroup host configuration types.

Creating a Host

Note

Cisco UCS Director supports the Host configuration type only. We do not support the Subnet or Netgroup host configuration types.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to create a host and click View Details.
- Step 5 Click Hosts.
- Step 6 Click Add.
- **Step 7** On the Create Host screen, complete the following fields:
 - a) Enter a unique name and description for the host.
 - b) From the **Operating System** drop-down list, choose the operating system for the host.
- Step 8 Click Submit.

Adding a Network Address to a Host

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to update a host and click View Details.
- Step 5 Click Hosts.
- **Step 6** Click the row with the host you want to update and click **View Details**.
- Step 7 Click Network Addresses.
- Step 8 Choose Create.
- **Step 9** On the Create Host IP Port screen, complete the following fields:
 - a) In the **Network Address** field, enter the network address for the IP port. You cannot change this network address after you create the IP port.
 - b) Check Ignore Port While Granting Storage Access to NFS if you want this IP port to be ignored.
- Step 10 Click Submit.

Changing the ID for a Host LUN

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to update a host and click View Details.
- Step 5 Click Hosts.
- **Step 6** Click the row with the host you want to update and click **View Details**.
- Step 7 Click Host LUNs.
- **Step 8** Click the row with the LUN that you want to modify.
- Step 9 Choose Modify.
- **Step 10** On the **Modify LUN ID** screen, enter the new LUN ID and click **Submit**.

Adding an Initiator to a Host

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to update a host and click **View Details**.
- Step 5 Click Hosts
- Step 6 Click the row with the host you want to update and click View Details.
- Step 7 Click Initiators.
- Step 8 Choose Add.
- **Step 9** On the **Add Host Initiator** screen, complete the following fields:
 - a) From the Initiator Type drop-down list, choose either FC or iSCSI.
 - b) In the iQN or WWN field, enter the identifier for the initiator.
 - c) For an iSCSI initiator, if you want to use Challenge Handshake Authentication Protocol (CHAP), complete the following fields:
 - CHAP Username
 - CHAP Secret
 - CHAP Secret Type
 - d) Check **Ignore Storage Access** if you do not want to allow this initiator to have the same storage access granted to the host.

Step 10 Click Submit.

Initiators

Initiators are the endpoints where Fibre Channel and iSCSI sessions originate. A Fibre Channel initiator is identified by its World Wide Name (WWN), and an iSCSI initiator by its iSCSI qualified name (IQN).

After you register an initiator and associate it with a host, all paths from the initiator are given access to the storage provisioned for the host. This ensures a high availability connection between the host and storage system.

Adding a Host Initiator

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to create a host and click View Details.
- Step 5 Click Initiators.
- Step 6 Click Add.
- **Step 7** On the **Add Host Initiator** screen, complete the following fields:
 - a) Expand EMC Host Identity and check the host that you want to associate with the initiator.
 - b) From the Initiator Type drop-down list, choose either FC or iSCSI.
 - c) In the iQN or WWN field, enter the identifier for the initiator.
 - d) For an iSCSI initiator, if you want to use Challenge Handshake Authentication Protocol (CHAP), complete the following fields:
 - CHAP Username
 - CHAP Secret
 - CHAP Secret Type
 - e) Check the **Ignore Storage Access** box, if you do not want to allow this initiator to have the same storage access granted to the host.
- Step 8 Click Submit.

iSCSI Interfaces

Creating an iSCSI Portal

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to configure an iSCSI interface and click View Details.
- Step 5 Click iSCSI Portals.
- Step 6 Click Create.
- **Step 7** On the Create iSCSI Portal screen, complete the following fields:

- a) Expand EMC Unity Ethernet Port and check the port that you want to associate with the portal.
- b) Enter the IP Address, Subnet Mask or Prefix Length, VLAN ID, and Gateway Address that you want to use for the portal.

Step 8 Click Submit.

Creating an iSCSI Route

The iSCSI route defines the destination or target node for iSCSI traffic from the iSCSI portal on the EMC Unity storage array.

Before You Begin

Create an iSCSI portal.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- Step 4 Click the row with the EMC Unity account where you want to configure an iSCSI interface and click View Details.
- Step 5 Click iSCSI Routes.
- Step 6 Click Create.
- **Step 7** On the Create iSCSI Route screen, complete the following fields:
 - a) Expand the EMC Unity iSCSI Portal field, check the portal that you want to associate with the route, and click Validate.
 - b) In the **Destination** field, enter the IP address for the target node of the route. The IP address can be IPv4 or IPv6.
 - c) Enter the Subnet Mask or Prefix Length and Gateway Address that you want to use for the portal.

Step 8 Click Submit.

EMC Unity Block Storage

Setting Up EMC Unity Block Storage

Note

The following procedure outlines one of the ways in which you can set up EMC Unity block storage.

Procedure

- Step 1 Add an account for the EMC Unity storage array. See Adding an EMC Unity Account, on page 26.
- Step 2 Create at least one host. See Creating a Host, on page 29.
- Step 3 Create at least one LUN. See Creating a LUN, on page 34.
- **Step 4** Map the LUN to the host that you created. See Mapping a LUN to a Host, on page 35.
- **Step 5** (Optional) Add at least one initiator to the host. See Adding a Host Initiator, on page 32.
- **Step 6** (Optional) If the host initiator type is iSCSI, do the following:
 - a) Create an iSCSI Portal.
 See Creating an iSCSI Portal, on page 32.
 - b) Create an iSCSI Route. See Creating an iSCSI Route, on page 33.
- **Step 7** (Optional) Create a consistency group that includes the LUN you created.

 Use consistency groups if you want to group a set of LUNs and create snapshots that represent the same point in time for each LUN. See Creating a Consistency Group, on page 242.

LUNs

You can use Cisco UCS Director to create, configure, and map LUNs for an EMC Unity storage array.

Creating a LUN

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the Storage page, click Storage Accounts.
- Step 4 Click the row with the EMC Unity account where you want to create a LUN and click View Details.
- Step 5 Click LUNs.
- Step 6 Click Create.
- **Step 7** On the Create LUN screen, complete the following fields:
 - a) Expand Storage Pool, check the storage pool you want to use for the LUN, and click Validate.
 - b) Enter a unique name for the LUN.

- c) In the Size field, enter the quantity of storage to be allocated to the LUN. This value is combined with the capacity unit to determine the total allocated storage. After you create the LUN, you can only increase the size. You cannot decrease it.
- d) From the **Capacity Units** drop-down list, choose the unit of storage. The default capacity unit is MB.
- e) Enter a description for the LUN.
- f) Expand **Default Node** and check the node that you want to assign as the default.
- g) Check **Thin** if you want to create a thin provisioned LUN with on-demand storage instead of dedicated storage.
- h) Expand Snapshot Schedule and check the snapshot schedule you want to use for the LUN.
- i) Check Pause Snapshot Schedule if you want to pause the snapshot schedule when the LUN is created.
- j) Expand Access Hosts, check each host you want to be able to access the LUN, and click Validate.
- k) From the Access Type drop-down list, choose the access for the host:
 - LUN
 - Snapshot
 - LUN and Snapshot

This field is only available after you choose and validate the host that you want to map.

In the HLU field, enter the host LUN unit for the host.
 This field is only available after you choose and validate the host that you want to map.

Step 8 Click Submit.

Mapping a LUN to a Host

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- Step 4 Click the row with the EMC Unity account where you want to map a LUN and click View Details.
- Step 5 Click LUNs.
- **Step 6** Click the row with the LUN that you want to map.
- Step 7 Click Map.
- **Step 8** On the **Map LUN to Host** screen, complete the following fields:
 - a) Expand EMC Unity Host, check the host that you want to map, and then click Validate.
 - b) From the **Access Type** drop-down list, choose the access for the host:
 - LUN
 - Snapshot

• LUN and Snapshot

This field is only available after you choose the host that you want to map.

c) In the HLU field, enter the host LUN unit for the host.
 This field is only available after you choose and validate the host that you want to map.

Step 9 Click Submit.

Unmapping a LUN from a Host

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to unmap a LUN and click View Details.
- Step 5 Click LUNs.
- **Step 6** Click the row with the LUN that you want to unmap.
- Step 7 Click Unmap.
- **Step 8** On the **Unmap LUN from Host** screen, expand **EMC Unity Host** and check each host that you want to unmap.
- Step 9 Click Submit.

Starting the Creation of a LUN Snapshot

In addition to setting a schedule to automate the creation of a snapshot, you can also take a snapshot of a LUN at any time.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to start a snapshot for a LUN and click **View Details**.
- Step 5 Click LUNs.
- **Step 6** Click the row with the LUN where you want to create a snapshot.
- **Step 7** From the More Actions drop-down list, choose Start Snapshot Creation.
- Step 8 On the Start EMC Unity Snapshot Creation screen, click Submit.

Pausing the Creation of a LUN Snapshot

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC Unity account where you want to pause the snapshot creation for a LUN and click **View Details**.
- Step 5 Click LUNs.
- **Step 6** Click the row with the LUN where you want to pause the snapshot creation.
- **Step 7** From the More Actions drop-down list, choose Pause Snapshot Creation.
- Step 8 On the Pause EMC Unity Snapshot Creation screen, click Submit.

Consistency Groups

Consistency groups organize the storage allocated to a specific host or a set of hosts. Each consistency group can include one or more LUNs.

You can create a snapshot for a consistency group. These snapshots provide an image for each of the LUNs in the group at the same point in time. As a result, a consistency group can help to ensure that the data across all LUNs in the group is consistent.

Creating a Consistency Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC Unity account where you want to create a consistency group and click **View Details**.
- **Step 5** Click Consistency Groups.
- Step 6 Click Create.
- **Step 7** On the Create Consistency Group screen, complete the following fields:
 - a) Enter a unique name and description for the consistency group.
 - b) Expand **Snapshot Schedule** and check the snapshot schedule you want to use for the consistency group.
 - c) Check the **Pause Snapshot Schedule** box if you want to pause the snapshot schedule.
 - d) Expand LUN, check each LUN that you want to associate with the consistency group, and click Validate.

- e) Expand Access Hosts, check each host that you want to have access to the consistency group, and click Validate.
- f) From the Access Type drop-down list, choose the access for the host:
 - LUN
 - Snapshot
 - LUN and Snapshot

This field is only available after you choose and validate at least one access host.

Step 8 Click Submit.

Adding a LUN to a Consistency Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to update a consistency group and click **View Details**.
- **Step 5** Click Consistency Groups.
- **Step 6** Click the row for the consistency group that you want to update and click **Add LUN**.
- **Step 7** On the **Add LUN to Consistency Group** screen, check the box for each LUN that you want to add and then click **Validate**.
- Step 8 Click Submit.

Removing a LUN from a Consistency Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to update a consistency group and click **View Details**.
- **Step 5** Click Consistency Groups.
- **Step 6** Click the row for the consistency group that you want to update and click **Remove LUN**.
- **Step 7** On the **Remove LUN from Consistency Group** screen, check the box for each LUN that you want to remove and then click **Validate**.
- Step 8 Click Submit.

Starting the Creation of a Consistency Group Snapshot

In addition to setting a schedule to automate the creation of a snapshot, you can also take a snapshot of a consistency group at any time.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to create a snapshot of a consistency group and click **View Details**.
- **Step 5** Click Consistency Groups.
- **Step 6** Click the row for the consistency group where you want to take a snapshot.
- **Step 7** From the More Actions drop-down list, choose Start Snapshot Creation.
- **Step 8** On the **Start EMC Unity Snapshot Creation** screen, click **Submit**.

Pausing a Consistency Group Snapshot

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to pause a snapshot and click View Details.
- **Step 5** Click Consistency Groups.
- **Step 6** Click the row for the consistency group where you want to pause a snapshot.
- **Step 7** From the More Actions drop-down list, choose Pause Snapshot Creation.
- Step 8 On the Pause EMC Unity Snapshot Creation screen, click Submit.

Deleting a Consistency Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to delete a consistency group and click **View Details**.
- **Step 5** Click Consistency Groups.
- **Step 6** Click the row for the consistency group that you want to delete and click **Delete**.
- **Step 7** On the **Delete Consistency Group** screen, complete the following fields:
 - a) Check **Force Snap Deletion** if you want to delete all snapshots of the consistency group when you delete the consistency group.
 - b) Check **Force LUN Deletion** if you want to delete all LUNs associated with the consistency group when you delete the consistency group.
- Step 8 Click Submit.

EMC Unity File Storage

Setting Up EMC Unity File Storage

Note

The following procedure outlines one of the ways in which you can set up EMC Unity file storage.

Procedure

Step 1 Add an account for the EMC Unity storage array. See Adding an EMC Unity Account, on page 26.

Step 2 Create at least one NAS Server. See Creating a NAS Server, on page 42.

Step 3 Create a file interface for the NAS server. See Creating a File Interface for a NAS Server, on page 42.

Step 4 Create one or more servers to support the NAS server.

Make sure that these servers are consistent with the protocol that you plan to use for the file system.

If you plan to use the SMB (Windows) file protocol, create an SMB server. If your implementation includes Active Directory, you can also create a DNS server. See Creating an SMB Server, on page 43 and Creating a DNS Server, on page 44.

If you plan to use the NFS (Linux or Unix) file protocol, create an NFS server. See Creating an NFS Server, on page 44.

Step 5 Create at least one file system. See Creating a File System, on page 46.

Step 6 Create one or more shares for the file system.

The shares must be consistent with the protocol you plan to use for the file system. See Creating an SMB Share, on page 50 and Creating an NFS Share, on page 51.

- **Step 7** (Optional) Create at least one host if you want the NFS share to allow access to the host. See Creating a Host, on page 29.
- **Step 8** (Optional) Create one or more file system or directory storage quotas through user quotas or quota trees. See Creating a User Quota for a File System, on page 47, Creating a Quota Tree, on page 48, and Creating a User Quota for a Quota Tree, on page 49.

NAS Servers

A Network-Attached Storage (NAS) server is a file server that catalogs, organizes, manages, and transfers files within the designated shares in a file storage system. A NAS server requires the following:

- Storage pool to store the server's configuration data. You can create the storage pool in Cisco UCS Director.
- Storage processor where the server runs. Cisco UCS Director imports the storage processor information from the EMC Unity storage array during inventory collection.

Creating a NAS Server

Before You Begin

- Determine which storage processor you want to use for the NAS server.
- Create a storage pool.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to create a NAS server and click View Details.
- Step 5 Click NAS Servers.
- Step 6 Click Create.
- **Step 7** On the Create a NAS Server screen, complete the following fields:
 - a) Enter a unique name for the NAS server.
 - b) Expand Storage Pool, check the pool that you want to use, and then click Validate.
 - c) Expand Storage Processor, check the processor that you want to use, and then click Validate.
- Step 8 Click Submit.

Creating a File Interface for a NAS Server

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to update a NAS server and click View Details.
- Step 5 Click NAS Servers.
- **Step 6** Click the row with the NAS server you want to update and click **View Details**.
- Step 7 Click File Interfaces.
- Step 8 Click Create.
- **Step 9** On the Create File Interface screen, complete the following fields:

- a) Expand IP Port, check the box for the port that you want to use, and then click Validate.
- b) Enter the IP address, Subnet Mask or Prefix Length, Gateway address, and VLAN ID that you want to use for the file interface.

Step 10 Click Submit.

Creating an SMB Server

Create an SMB server for each NAS server that you plan to use in a Windows file system.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to update a NAS server and click View Details.
- Step 5 Click NAS Servers.
- **Step 6** Click the row with the NAS server where you want to create the SMB server and click **View Details**.
- Step 7 Click SMB Servers.
- Step 8 Click Create.
- **Step 9** On the **Create SMB Server** screen, complete the following fields:
 - a) From the **SMB Server Type** drop-down list, choose one of the following:
 - Standalone—This is the default option.
 - Active Directory—Use this option if you plan to join the NAS server to an Active Directory domain.
 - b) If you chose **Standalone** as the server type, complete the following fields:
 - NetBIOS Name
 - Description
 - Workgroup
 - · Administrator Password
 - c) If you chose **Active Directory** as the server type, complete the following fields:
 - NetBIOS Name
 - Description
 - Windows Domain
 - · Domain Administrator Name
 - Domain Administrator Password
 - Organizational Unit

Step 10 Click Submit.

What to Do Next

For an SMB server with Active Directory, create a DNS server.

Creating an NFS Server

Create an NFS server for a NAS server that you plan to use in a Linux or Unix file system.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to update a NAS server and click **View Details**.
- Step 5 Click NAS Servers.
- Step 6 Click the row with the NAS server where you want to create the NFS server and click View Details.
- Step 7 Click NFS Servers.
- Step 8 Click Create.
- **Step 9** On the **Create NFS Server** screen, check the **NFSv4 Enabled** box if you want to use NFSv4 with the NFS server.
- Step 10 Click Submit.

Creating a DNS Server

Create a DNS server for each NAS server that you plan to use in a Windows file system and join to Active Directory.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to update a NAS server and click **View Details**.
- Step 5 Click NAS Servers.
- **Step 6** Click the row with the NAS server where you want to create the DNS server and click **View Details**.
- Step 7 Click DNS Servers.
- Step 8 Click Create.
- Step 9 On the Create DNS Server screen, complete the following fields:
 - a) In the **Domain** field, enter the fully qualified domain name of the DNS server.

b) In the **IP Addresses** field, enter a prioritized list of one to three IPv4 or IPv6 addresses of DNS servers for the domain.

To enter more than one IP address, separate them with commas.

Step 10 Click Submit.

Creating an NIS Server

Network Information Service (NIS) is a unix directory service. Creating an NIS Server on a NAS Server provides ability to resolve hosts defined on NFS share access lists.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to update a NAS server and click View Details.
- Step 5 Click NAS Servers.
- **Step 6** Click the row with the NAS server where you want to create the NIS server and click **View Details**.
- Step 7 Click NIS Servers.
- Step 8 Click Create.
- **Step 9** On the Create NIS Server screen, complete the following fields:
 - a) In the **Domain** field, enter the fully qualified domain name of the NIS server.
 - b) In the IP Addresses field, enter a prioritized list of one to ten IPv4 or IPv6 addresses of NIS servers for the domain.

To enter more than one IP address, separate them with commas.

Step 10 Click Submit.

File Systems

A file system represents a set of storage resources for network files. Users or hosts can connect to the file system and use it for file-based storage.

Each file system, or container for file-based storage, has the following properties:

- A pre-determined storage capacity
- A file access protocol, such as SMB, NFS, or multi-protocol
- One or more shares that network hosts or users can use to access shared files or folders

Creating a File System

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to create a file system and click View Details.
- Step 5 Click File Systems.
- Step 6 Click Create.
- **Step 7** On the Create File System screen, complete the following fields:
 - a) From the **Protocol** drop-down list, choose one of the following:
 - Linux/UNIX Shares (NFS)

Windows Shares (SMB)

- b) Expand NAS Server, check the server that you want to use, and then click Validate.
- c) Enter a unique name for the file system.
- d) Expand Storage Pool, check the pool that you want to use, and then click Validate.
- e) In the Size field, enter the quantity of storage to be allocated to the file system. This value is combined with the capacity unit to determine the total allocated storage. After you create the file system, you can only increase the size. You cannot decrease it.
- f) From the Capacity Units drop-down list, choose the unit of storage. The default capacity unit is MB.
- g) Check **Thin** if you want to create a thin provisioned file system with on-demand storage instead of dedicated storage.
- h) Expand **Snapshot Schedule** and check the schedule that you want to use.
- Check Pause Snapshot Schedule if you want to pause the snapshot schedule when the file system is created.
- j) If you chose an SMB share for the protocol, check the Advanced box if you want to configure any of the following settings:
 - Sync Write Enabled—Enables synchronous writes for all storage operations. This option guarantees that any write to the share is done synchronously and reduces the chances of data loss or file corruption. This option is recommended only if you plan to use the share as storage for a database application.
 - Opslocks Enabled—Enables opportunistic file locking for data. This option buffers file data locally before sending it to a server. This option allows SMB clients can access the local versions of the files and communicate changes to the server periodically.
 - Notify on Write Enabled—Enables notifications when a write is made to the file system.
 - Notify on Access Enabled—Enables notifications when the file system is accessed.

Step 8 Click Submit.

Starting the Creation of a File System Snapshot

In addition to setting a schedule to automate the creation of a snapshot, you can also take a snapshot of a file system at any time.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to create a file system snapshot and click **View Details**.
- Step 5 Click File Systems.
- **Step 6** Click the row with the file system where you want to create a snapshot.
- Step 7 Click Start Snapshot Creation.
- Step 8 On the Start EMC Unity Snapshot Creation screen, click Submit.

Pausing a File System Snapshot

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to pause a file system snapshot and click **View Details**.
- Step 5 Click File Systems.
- **Step 6** Click the row with the file system where you want to pause a snapshot.
- **Step 7** From the More Actions drop-down list, choose Pause Snapshot Creation.
- Step 8 On the Pause EMC Unity Snapshot Creation screen, click Submit.

Creating a User Quota for a File System

A user quota limits or tracks the amount of storage space that individual users consume on a file system. The user quota sets default hard and soft limits at the file system level.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to create a user quota and click **View Details**.
- Step 5 Click File Systems.
- **Step 6** Click the row with the file system where you want to create the user quota and click **View Details**.
- Step 7 Click User Quotas.
- Step 8 Click Create.
- **Step 9** On the Create User Quota screen, complete the following fields:
 - a) In the User ID field, enter the ID of the user whose file system storage you want to limit.
 - b) In the **Soft Limit** field, enter the space usage limit where the storage usage enters the grace period. If you enter 0 in this field, the user has no limit on the amount of storage space available. This is the default value.
 - c) In the Capacity Units field, choose MB, GB, or TB as the capacity unit for the soft limit.
 - d) In the **Hard Limit** field, enter the space usage limit where the user no longer has any storage available. If you enter 0 in this field, the user has no limit on the amount of storage space available. This is the default value.
 - e) In the Capacity Units field, choose MB, GB, or TB as the capacity unit for the hard limit.

Step 10 Click Submit.

Creating a Quota Tree

A quota tree limits the amount of storage that can be consumed on a particular directory. You can use a quota tree to set storage limits for a project where multiple users share the same directory or to track directory usage.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to create a quota tree and click **View Details**.
- Step 5 Click File Systems.
- **Step 6** Click the row with the file system where you want to create a quota tree and click **View Details**.
- Step 7 Click Quota Trees.
- Step 8 Click Create.
- **Step 9** On the Create Tree Quota screen, complete the following fields:
 - a) In the **Path** field, enter the path to the directory.

The path is relative to the root system and must start with a forward slash ("/"). For example, /sample path1/sample path2

- b) In the **Soft Limit** field, enter the space usage limit where the storage usage on the directory enters the grace period.
 - If you enter 0 in this field, there is no limit to the amount of storage space available on the directory. This is the default value.
- c) In the Capacity Units field, choose MB, GB, or TB as the capacity unit for the soft limit.
- d) In the **Hard Limit** field, enter the space usage limit where the directory no longer has any storage available. If you enter 0 in this field, the user has no limit on the amount of storage space available. This is the default value.
- e) In the Capacity Units field, choose MB, GB, or TB as the capacity unit for the hard limit.

Step 10 Click Submit.

Creating a User Quota for a Quota Tree

This user quota limits the amount of storage available to an individual user on the directory associated with the quota tree.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC Unity account where you want to create a user quota and click **View Details**.
- Step 5 Click File Systems.
- **Step 6** Click the row with the file system where you want to create the user quota and click **View Details**.
- Step 7 Click Quota Trees.
- **Step 8** Click the row with the quota tree where you want to create the user quota.
- Step 9 Click Create User Quota.
- **Step 10** On the Create User Quota screen, complete the following fields:
 - a) In the User ID field, enter the ID of the user whose directory storage you want to limit.
 - b) In the **Soft Limit** field, enter the space usage limit where the storage usage on the directory enters the grace period.
 - If you enter 0 in this field, there is no limit to the amount of storage space available on the directory. This is the default value.
 - c) In the Capacity Units field, choose MB, GB, or TB as the capacity unit for the soft limit.
 - d) In the **Hard Limit** field, enter the space usage limit where the directory no longer has any storage available. If you enter 0 in this field, the user has no limit on the amount of storage space available. This is the default value.

e) In the Capacity Units field, choose MB, GB, or TB as the capacity unit for the hard limit.

Step 11 Click Submit.

Shares

Creating an SMB Share

An SMB share controls access to file system resources for Windows users and hosts.

Before You Begin

Ensure that the file system or snapshot you choose for the share's souce is associated with a NAS server that supports the SMB profile

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to create an SMB share and click **View Details**.
- Step 5 Click SMB Shares.
- Step 6 Click Create.
- **Step 7** On the **Create SMB Share** screen, complete the following fields:
 - a) Expand EMC Unity File System, check the file system that you want to associate with the share, and then click Validate.
 - b) For the **Use Snapshot** check box, do the following:
 - To use an SMB server to create the share, do not check the box.
 - To use a snapshot to create the share, check the box.
 - c) If you chose to use an SMB server, expand **Select SMB Server** and check the server that you want to use.
 - d) If you chose to use a snapshot, expand **Select Snapshot of File System** and check the snapshot that you want to use.
 - e) In the **Path** field, enter the absolute path of the SMB share relative to the NAS server. If you do not provide a path, the share is created in the root directory.
 - f) Enter a description for the SMB share.
 - g) Check **Access-Based Enumeration** to filter the list of available files on the share and display only those to which the user has read access.
 - h) Check **Branch Cache Enabled** to cache content at branch offices to enable users to access the content locally.
 - i) Check **Protocol Encryption** to encrypt data as it is transmitted between the array and the host.
 - Check Continuous Availability to provide continuous access to the share after a failover of the NAS server.

- k) From the Offline Availability drop-down list, choose one of the following options for client-side caching of offline files:
 - Manual—Files are cached and available offline only when caching is explicitly requested. This is the default option.
 - **Programs and files opened by users**—All files that clients open from the share are automatically cached and available offline. Clients open these files from the share when they are connected to it. This option is recommended for files with shared work.
 - Programs and files opened by users, optimize for performance—All files that clients open from the share are automatically cached and available offline. Clients open these files from the share's local cache, if possible, even if they are connected to the network. This option is recommended for executable programs.
 - None—Client-side caching of offline files is not configured.
- In the UMASK field, enter the bitmask that shows which Unix permissions are excluded for files created on the share.
 - The default value of 022 does not allow write access from groups and other non-user entities.

Step 8 Click Submit.

Creating an NFS Share

An NFS share controls access to file system resources for Linux or Unix users and hosts.

Before You Begin

Ensure that the file system or snapshot you choose for the share's souce is associated with a NAS server that supports the NFS profile

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC Unity account where you want to create an NFS share and click View Details.
- Step 5 Click NFS Shares.
- Step 6 Click Create.
- Step 7 On the Create NFS Share screen, complete the following fields:
 - a) Expand the EMC Unity File System field, check the box for the file system you want to associate with the share, and click Validate.
 - b) Check the Use Snapshot box if you want to use a snapshot for the share.
 - c) If you chose to use a snapshot, expand the **Select Snapshot of File System** field and check the box for the snapshot you want to use.
 - d) In the **Path** field, enter the absolute path of the NFS share relative to the NAS server. If you do not provide a path, the share is created in the root directory.

- e) From the **Default Access** drop-down list, choose the access that you want all hosts to have.
- f) From the Minimum Security drop-down list, choose one of the following options:
 - Sys—This is the default option.
 - Kerberos—Uses basic Kerberos user authentication.
 - **Kerberos With Integrity**—Combines Kerberos user authentication and data integrity by adding a signature to each NFS packet transmitted over the network.
 - **Kerberos with Encryption**—Combines Kerberos user authentication and data privacy by encrypting the data before sending it over the network. Data encryption requires more resources for system processing and can lead to slower performance.
- g) To customize access for hosts, expand one or more of the following fields and check the desired hosts to configure the access privileges for the share:
 - · No Access Hosts
 - · Read Only Hosts
 - Read Write Hosts
 - Root Access Hosts

Step 8 Click Submit.

Mapping a Host to an NFS Share

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- Step 4 Click the row with the EMC Unity account where you want to map an NFS share and click View Details.
- Step 5 Click NFS Shares.
- Step 6 Click Map.
- Step 7 On the Map Host to NFS Share screen, complete the following fields:
 - a) From the **Host Access Type** drop-down list, choose the access that you want the host to have.
 - b) Expand **Hosts** and check each host you want to map to the share.
- Step 8 Click Submit.

Unmapping a Host from an NFS Share

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC Unity account where you want to unmap an NFS share and click **View Details**.
- Step 5 Click NFS Shares.
- Step 6 Click Unmap.
- **Step 7** On the **Unmap Host from NFS Share** screen, complete the following fields:
 - a) From the Host Access Type drop-down list, choose the access that you do not want the host to have.
 - b) Expand Hosts and check each host you want to unmap from the share.
- Step 8 Click Submit.

EMC Unity File Storage

EMC Symmetrix VMAX and VMAX3

- Cisco UCS Director Support for EMC Symmetrix VMAX and VMAX3, page 55
- VMAX and VMAX3 Reports, page 55
- EMC Solutions Enabler for VMAX Storage, page 57
- Adding an EMC VMAX Account, page 61
- VMAX Management, page 63

Cisco UCS Director Support for EMC Symmetrix VMAX and VMAX3

Cisco UCS Director supports EMC Symmetrix VMAX and EMC Symmetrix VMAX3. Specific information on supported models, supported software, and supported management interfaces can be found in the Cisco UCS Director Compatibility Matrix for this release.

Cisco UCS Director connects to EMC VMAX using a supported EMC Solutions Enabler.

VMAX and VMAX3 Reports

Cisco UCS Director provides you with a view into the managed VMAX and VMAX3 storage systems. Some of these reports do not update automatically. You must click **Refresh** to view updated information.

VMAX Summary Reports

You can see at a glance the following VMAX summary reports:

- System capacity—Free vs. used (GB) pie chart
- System overview—Symmetrix version ID, Enginuity build version, model, Solutions Enabler IP address, and number of engines, directors, thin devices, data devices, director ports, and disks.
- Storage—Total capacity, used capacity, and free capacity

VMAX Component and Feature Reports

You can access reports and create VMAX components, such as devices, views, pools, and groups. You can drill down to view details for each component and feature, including the following:

- Thin Pools—Name.
- Data Devices—Device count, capacity (GB), emulation, configuration, and disk group. Note: This
 device is not used in VMAX3.
- Regular Devices—Device count, disk group, emulation, configuration, capacity type, capacity. Note:
 This device is not used in VMAX3.
- Thin Devices—Device count, capacity (GB), emulation, bind to thin pool (on or off), and option to preallocate 100 percent.
- Meta Devices—Device type, select regular or thin device, meta type, select member device. Note: This
 device is not used in VMAX3.
- **Initiator Groups**—Group type (standard or cascaded), group name, type (iSCSI, FCP), and initiator name. Consistent logical unit number (LUN) can be set to on or off.
- Storage Groups—Storage group, storage group count, volume count, masking view, storage capacity, isparent/isccild, parent storage, child storage, masking view, FAST managed, SRP, SLO, workload type.
- Port Groups—Group name and director port selection (all, none, or selected).
- Masking Views—View name, storage group selection, host LUN ID (specified or autogenerated), initiator group selection, and port group selection.
- Fast SRP— Has Associated Disk Group, Storage Group Demand, and SLO Demand Report as drilldown reports.
- Fast SLO—This report contains a 'Rename' action that renames the SLO name. Has FAST SLO workload report as a drilldown report
- **Tiers**—Tier name, tier type, emulation, target protection, number of ports and directors, technology, disk location, and type.
- **FAST Policies**—Policy name, tiers, number of tiers, number of storage groups, and emulation. **Note:** This object is not used in VMAX3.

VMAX Systems Reports

The read-only VMAX systems reports include the following information:

- Front-End Directors—Symmetrix ID, director module, status, type, identification, and number of ports, directors, mapped volumes, and engine ID.
- **Back-End Directors**—Symmetrix ID, director module, status, type, identification, and number of ports, directors, mapped volumes, and engine ID.
- **Director Ports**—Director module, type, port, port ID, maximum speed, node WWN, and ACLX option for each port.
- Disk Groups—Disk group name, technology, disk location, disks, total capacity, used capacity, free capacity, tags.

- Features—Name, type, capacity (GB), and Serial Advanced Technology Attachment (SATA) drive capacity (GB).
- Licenses—Feature name, license type, and capacity type.
- **Initiators**—Initiator group, Challenge Handshake Authentication Protocol (CHAP) enablement, user port name, user node name, initiator, type, iSCSI name, common serial number, SPC2 protocol, SCSI support, environment, volume set addressing, and other data.
- Memory—Slot number and capacity.

EMC Solutions Enabler for VMAX Storage

To communicate with VMAX, Cisco UCS Director uses the EMC Solutions Enabler (SE). You must install a supported Windows-based or Linux-based EMC SE before you add your VMAX or VMAX3 storage system to Cisco UCS Director.

Windows-Based Solutions Enabler

Guidelines for SSHD Server Configuration

To set up an SSHD server, we recommend that you install Cygwin version 1.7.27, and use the SSH daemon on the host. Cygwin provides a Linux-like environment on Microsoft Windows. See Installing a Cygwin Package, on page 57 for information on downloading Cygwin and additional information about the SSHD server.

After you install the SSHD server on the Windows-based SE, modify the Path variable under System Variables to include the Solutions Enabler bin folder so that whoever uses SSH to get into the Windows SE can immediately run VMAX commands. After you install and configure the SSHD server, set up the new default paths to enable the user-installed software to override the system software.

Installing a Cygwin Package

Ensure that you install the packages fir Cygwin version 1.7.27 on a Windows-based host.

- **Step 1** Download the Cygwin executable from http://www.cygwin.com/.
- **Step 2** While installing the Cygwin package on the package selection screen, select the **openssh** and **openssl** packages to install.

Configuring the SSHD Server

Procedure

Step 1 Navigate to the C:\<Cygwin-Install-Dir> directory, open the Cygwin.bat in edit mode using any editor and add the following line: set CYGWIN=binmode ntsec

The following example shows the Cygwin.bat file contents after adding the line above:

- Step 2 Configure the SSHD service by running the C:\<Cygwin-Install-Dir>\Cygwin.bat file in a command prompt and enter the following command: \$ ssh-host-config.
 - a) Answer the following questions:

Question	Recommended Response
Should privilege separation be used? <yes no=""></yes>	Select yes.
New local account 'sshd'? <yes no=""></yes>	Select yes.
Do you want to install sshd as a service? <yes no=""></yes>	Select no if SSHD is already installed as a service, otherwise select yes.
Enter the value of CYGWIN for the deamon: [] binmode ntsec	Enter the value as binmode ntsec
Do you want to use a different name? (yes/no)	Select yes.
Enter the new username: <new-username></new-username>	Enter the new username.
Reenter: <new-username></new-username>	Renter the new username.
Replace cloupia with new-username ? (yes/no)	Select yes.
Please enter the password: <password></password>	Enter the password for this account.
Reenter: <password></password>	Reenter the password for this account.

Configuring System Environment Variables

Procedure

- **Step 1** Right-click the Computer icon and select Properties.
- **Step 2** If you don't have a computer icon on your desktop:
 - a) Click the Start button.
 - b) Right-click the **Computer** option in the Start menu.
 - c) Select Properties.
- **Step 3** Click Advanced System Settings.
- **Step 4** Under the **Advanced** tab, select **Environment Variables**.
- **Step 5** Under **System Variables** select the **Path** variable and append the following two binary paths: c:\Program Files\EMC\SYMCLI\bin;c:\<Cygwin-Install-Dir>\bin

Refer to the following example:

```
Variable Name: Path
    Variable Value: <Existing Folders Path>;c:\Program Files\EMC\SYMCLI\bin;c:\cygwin
64\bin
```

Step 6 Add the following new **System Variable** name: CYGWIN and the following **Variable Value**: binmode tty ntsec

Starting the Cygwin SSHD Service

Procedure

- **Step 1** Start the Cygwin SSHD service manually under Window Services.
- **Step 2** Configure the service to start automatically on every boot.

Verifying SSH Access

Before You Begin

Ensure that you can run the SYMCLI commands without providing the absolute path at the command prompt. You can verify SSH access using any SSH client.

Procedure

Step 1 Access a different machine that has an SSH client running and execute the following command: ssh<USERNAME>@<host-ipaddress> 'date' or ssh-1<USERNAME>@<host-ipaddress> 'date'

Example:

For example, execute ssh -l pjohn@host-ipaddress 'date'

Step 2 When the command prompts you, enter the password.

After you enter the correct password, the command returns the accurate date.

Installing and Configuring a Linux-Based Solutions Enabler

Note

You can add libraries and legacy libraries, such as glibc, to the VM.

You need gatekeepers to serve as Raw Device Mappings (RDMs). Allow 6,000 to 8,000 mappings for each RDM.

Procedure

- **Step 1** Create the base Linux image for the VM you will use.
 - For the base Linux image, you can use an SMC or SPA servers that run CentOS, version 5.7 x86, or x86_64. For an SMC server, allow 20 GB of space. For an SPA server, allow at least 120 GB.
- **Step 2** Assign a few gatekeepers as RDMs.
- **Step 3** Reboot the Linux VM.
- **Step 4** From the EMC Powerlink site, download the EMC Solutions Enabler package for Linux and the Services Management Application System (SMAS) package se7310-Linux-i386-ni.tar.gz.
 - **Note** See the Cisco UCS Director Compatibility Matrix to identify which version to download and install.

Use MD5 Checksum 9809ac14ed8bfcc19789d7d5671d6015.

- **Step 5** Using SCP, transfer the tar file to your VM.
- **Step 6** At a command prompt, enter the following command to decompress the tar file: [root@smc ~] # tar xzvf se7310-Linux-i386-ni.tar.gz
- **Step 7** Install the EMC Solutions Enabler by entering the following command: [root@smc ~]# ./se7310 install.sh -install]
- **Step 8** Verify that the emc/symcli bin folder is in the Linux path, with this directory structure: <symclipath>/bin. An example is: /opt/emc/symcli/bin.
- **Step 9** To connect to the VMAX device from Cisco UCS Director, you must update the PATH variable with the SYMCLI binary dir by updating the .bashrc file for the user that logs in to VMAX.
 - a) Log in to the Solutions Enabler machine with the credentials that Cisco UCS Director will use.
 - b) Edit.bashrc using your editor of choice; for example, vi.bashrc
 - c) Add the following line to the .bashrc file: PATH=\$PATH:\$HOME/bin:<symcli binary path>/bin
 - d) Save the file and exit.

Adding an EMC VMAX Account

Before You Begin

You must install an EMC VMAX Solutions Enabler on a Linux or Windows Virtual Machine (VM).

Note

If you have Solutions Enabler 8.0 installed, when adding an EMC VMAX account, all Symmetrix device names are padded with a zero. This may cause issues with rollback operations for tasks that were executed against an older version of Solutions Enabler.

Procedure

- **Step 1** Choose **Administration** > **Physical Accounts**.
- **Step 2** On the **Physical Accounts** page, click **Physical Accounts**.
- Step 3 Click Add.
- **Step 4** On the **Add Account** screen, complete the following fields:

Name	Description
Pod drop-down list	Choose a Pod for this account.
Category drop-down list	Choose Storage.
Account Type drop-down list	Choose EMC VMAX .

Step 5 Click Submit.

Step 6 In the second **Add Account** dialog box, complete the following fields:

Name	Description
Account Name field	A unique name for the account.
Description field	The account description.
Server Address field	The Solution Enabler IP address for the VMAX device.
Use Credential Policy check box	Check this box if you want to use a credential policy for this account rather than enter the username and password information manually.

Name	Description
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list.
	This field is only displayed if you choose to use a credential policy.
User ID field	The user ID that this account uses to access the VMAX or VMAX3 storage system. This user ID must be a valid account in the storage system.
	This field is not displayed if you chose to use a credential policy.
Password field	The password associated with the user ID.
	This field is not displayed if you chose to use a credential policy.
Transport Type drop-down list	Choose SSH.
Port field	The port number. The default port is 22.
Symmetrix id field	The Symmetrix ID can be manually entered or selected from a drop-down box that is shown if the Discover Symmetrix Arrays check box is selected.
Discover Symmetrix Arrays check box	If this box is checked, selection of the Symmetrix id can be done from the drop-down list that is shown.
Symmetrix id field	The ID of the Symmetrix array.
	If you checked Discover Symmetrix Arrays , this field becomes a drop-down list of the available arrays.
Contact field	The contact's email address.
Location field	The location for this account.

Cisco UCS Director tests the connection to the EMC Symmetrix VMAX or VMAX3 storage system. If that test is successful, it adds the VMAX account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

VMAX Management

In a Cisco UCS Director EMC VMAX account, you manage the following pools, groups, devices, and views:

- Thin pools—Create or delete, expand, bind or unbind, and view details
- Devices—data devices, thin devices, regular devices, BCV devices, and meta devices
- Initiator groups—Create or delete, rename, add or remove initiator, replace initiator, set override flags, and view details
- Storage groups—Create or delete, rename, add or remove device, associate/disassociate FAST policy, and view details
- Port groups—Create or delete, rename, add or remove port, and view details
- Masking views—Create or delete, rename, and view details

Thin Devices

The maximum size of a VMAX thin device (TDEV) is approximately 240 GB.

Note

If you want to create a TDEV greater than this size, combine TDEVs to form a meta device. Each TDEV can be part of only one meta device.

There is no rename action for a TDEV. The device name is unique and remains the same even if the TDEV becomes a meta device and vice versa.

Creating a Thin Device

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a thin device.
- Step 5 Click View Details.
- Step 6 Click Thin Devices.
- Step 7 Click Create.
- **Step 8** On the Create Thin Device screen, complete the following fields:

Name	Description
Device Count field	The thin device count.
Emulation drop-down list	Choose the emulation type for the thin device.

Name	Description
Capacity Type field	Select GB, MB, or Cylinder.
Capacity field	Number of GB, MB, or Cylinders.

What to Do Next

You can select a device and click View Details to see the drill-down report.

Thin Pools

An EMC VMAX thin pool is a collection of data devices that provide storage capacity for thin devices. A new thin pool requires a unique name.

Creating A Thin Pool

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create the thin pool.
- Step 5 Click View Details.
- Step 6 Click Thin Pools.
- Step 7 Click Create.
- Step 8 On the Create Thin Pool screen, enter a name in the Thin Pool Name field and click Submit.

Binding Thin Devices to a Thin Pool

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account with the thin pool where you want to bind thin devices.
- Step 5 Click View Details.
- Step 6 Click Thin Pools.
- Step 7 Click Bind.
- **Step 8** On the **Bind Symmetrix Device** screen, complete the following fields:

Name	Description
Select Thin Devices select list	Check the box for the thin devices that you want to bind.
Pre Allocate All check box	Check this box if you want to pre-allocate all thin devices.
Capacity Type field	Select the capacity unit in GB, MB, or Cylinder. This field is only available if you checked Pre Allocate All .
Pre Allocate Size field	The pre-allocation size in GB, MB, or Cylinders. Note The Pre Allocate Size option is not available for Symmetric CLI version 8.0, it is only available for version 7.6.1.0. This field is only available if you checked Pre Allocate All .

Step 9 Click Submit.

Unbinding a Thin Devices from a Thin Pool

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account with the thin pool where you want to unbind thin devices.
- Step 5 Click View Details.
- Step 6 Click Thin Pools.
- Step 7 Click UnBind.
- **Step 8** On the UnBind Thin Device from Thin Pool screen, complete the following fields:

Name	Description
Select Thin Devices select list	Check the box for the thin devices that you want to unbind.
Force check box	Forces unbinding of the selected thin devices.

Step 9 Click Submit.

BCV Devices

A business continuity volume (BCV) is a symmetrix device with special attributes. A BCV device can function either as an additional mirror or as a separate host addresable volume.

Creating a BCV Device

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create the BCV device.
- Step 5 Click View Details.
- Step 6 Click BCV Devices.
- Step 7 Click Create.
- **Step 8** On the **Create BCV Device** screen, complete the following fields:

Name	Description
Device Count field	The BCV device count.
Emulation drop-down list	Choose the emulation type for the BCV device.
Configuration drop-down list	Choose the configuration for the BCV device.
Capacity Type field	Select GB, MB, or Cylinder.
Capacity field	Number of GB, MB, or Cylinders.

Data Devices

Data devices provide the physical space that is used by thin pools on a VMAX system.

Creating a Data Device

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a data device.
- Step 5 Click View Details.
- Step 6 Click Data Devices.
- Step 7 Click Create.
- **Step 8** On the Create Data Device screen, complete the following fields:

Name	Description
Device Count field	The data device count.
Disk Group field	The disk group name.
Emulation drop-down list	Choose the emulation type for the data device.
Configuration field	Choose the configuration for the data device.
Capacity Type field	Choose the capacity unit in GB, MB, or Cylinder.

Name	Description
Capacity field	The capacity in GB, MB, or Cylinders.

Regular Devices

The maximum size of a VMAX regular device is approximately 240 GB.

Note

If you want to create a regular device greater than this size, combine regular devices to form a meta device. Each regular device can be part of only one meta device.

There is no rename action for a regular device. The device name is unique and remains the same even if the regular device becomes a meta device and vice versa.

Creating a Regular Device

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a regular device.
- Step 5 Click View Details.
- Step 6 Click Regular Devices.
- Step 7 Click Create.
- **Step 8** On the Create Regular Device scrreen, complete the following fields:

Name	Description
Device Count field	The regular device count.
Disk Group select button	Select the Disk Group
Emulation drop-down list	Choose the emulation type for the regular device.
Configuration drop-down	Choose the configuration.
Capacity Type field	Choose GB, MB, or Cylinder.
Capacity	Number of GB, MB, or Cylinders.

Meta Devices

A meta device enables you to aggregate thin devices or regular devices to increase the device size.

You can create a meta device with a thin device as the head and create other thin devices as members, or you can create a meta device with a regular device as the head and create other regular devices as members. The total meta device size is the combination of the head size and all the member device sizes.

There is no delete action for a meta device. Removing all of the members from a meta device results in a thin device.

Meta Member Devices

A meta member device (also referred to as a Meta LUN) is a LUN that is composed of several elements (LUNs). Meta member devices are similar to private LUNs. A meta member device is used by the system and is not available directly to any host. For example, you cannot place a meta member device into a storage group.

The following are the supported types of meta member devices:

- Concatenated Meta LUN—Creates a larger LUN from several smaller LUNs. This member device is recommended when performance is not a high priority.
- Striped Meta LUN—Creates a higher performance LUN. For example, you might want to use this type of LUN for a large file system or a database.

Creating a Meta Device

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a meta device.
- Step 5 Click View Details.
- Step 6 Click Meta Devices.
- Step 7 Click Create Meta.
- **Step 8** On the Create Meta Devicescreen, complete the following fields:

Name	Description
Select Device Type drop-down list	Choose the types of devices that you want to add to the meta device. These device combinations can include the following:
	Thin devices only
	Regular devices only
	BCV devices and thin devices (BCV+TDEV)
	• BCV and regular devices (BCV+R)
	The other fields that display on this screen depend upon which types of devices you choose.
Select Thin Device field	If you chose to include thin devices only, choose the devices you want to add to the meta device.
Select Regular Device field	If you chose to include regular devices only, choose the devices you want to add to the meta device.
Select BCV Thin Device field	If you chose BCV+TDV, choose the devices you want to add to the meta device.
Select BCV Regular Device field	If you chose BCV+R, choose the devices you want to add to the meta device.
Select Meta Type drop-down list	Choose the type of meta device you want to create.
Select Member Device(s) field	Choose the device or devices to include in the meta device.

Adding a Member Device to a Meta Device

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC VMAX account where you want to update a meta device.
- Step 5 Click View Details.
- Step 6 Click Meta Devices.
- **Step 7** Click the row with the meta device to which you want to add a member device.
- Step 8 Click Add Device to Meta.
- Step 9 On the Add Device to Meta screen, choose the device that you want to add and click Submit.

Removing a Member Device from a Meta Device

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- Step 4 Click the row with the EMC VMAX account where you want to update a meta device.
- Step 5 Click View Details.
- Step 6 Click Meta Devices.
- **Step 7** Click the row with the meta device from which you want to remove a member device.
- **Step 8** Click Remove Device from Meta.
- **Step 9** On the **Remove Device from Meta** screen, choose the device that you want to remove from the meta device and click **Submit**.

Dissolving a Meta Device

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a meta device.
- Step 5 Click View Details.
- Step 6 Click Meta Devices.
- **Step 7** Click the row with the meta device that you want to dissolve.
- Step 8 Click Dissolve.
- Step 9 Click Submit.

Adding a Member Device to a Meta Device (Striped Configuration)

If the meta device has a striped configuration, you need to complete two additional fields in the configuration.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a meta device.
- Step 5 Click View Details.
- Step 6 Click Meta Devices.
- **Step 7** Click the row with the striped meta device to which you want to add a member device.
- Step 8 Click Add Device to Meta.
- Step 9 On the Add Device to Meta screen, complete the following fields:

Name	Description
Select Member Device(s) field	Choose the member device(s) that you want to add to the meta device.
Protect Data check box	Check this box if you want to enable data protection on the devices.
Select BCV Meta Devicefield	Choose a BCV meta device head node for the meta device.

Step 10 Click Submit.

Initiator Groups

A VMAX initiator group is a collection of host bus adapters (HBAs) that work together. Initiator groups that contain other initiator groups are known as cascaded initiator groups.

Creating an Initiator Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to add an initiator group.
- Step 5 Click View Details.
- **Step 6** Click **Initiator Group**.
- Step 7 Click Create.
- **Step 8** On the Create Initiator Group screen, do the following:
 - a) From the **Initiator Group Type** drop-down list, choose one of the following initiator group types:
 - Standard—if the initiator group will contain initiators. This is the default option.
 - Cascaded—if the initiator group will contain other initiator groups.
 - b) In the **Initiator Group Name** field, enter a unique name for the initiator gorup.
 - c) If you chose to create a standard initiator group, complete the following fields:

Name	Description
Initiator Type drop-down list	Choose one of the following:
	· iSCSI
	• FCP
	iSCSI is the default initiator type.
Initiator Name field	A unique name for the initiator.
Consistent LUN check box	Check this box if you want to use a consistent LUN. Unchecked is the default.

d) If you chose to create a cascaded initiator group, complete the following fields:

Name	Description
Select Parent Initiator Group field	Choose the parent initiator group from the list.
Select Child Initiator Group field	Choose a child initiator group from the list.

e) Click Submit.

Storage Tiers

Tiered storage allows you to assign different categories of data to different types of storage media to reduce your total storage cost and maintenance.

Creating a Storage Tier

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a storage tier.
- Step 5 Click View Details.
- Step 6 Click Storage Tiers.
- Step 7 Click Create.
- **Step 8** On the **Create Storage Tier** screen, complete the following fields:

Name	Description
Storage Tier Name field	A unique name for the storage tier.
Storage Tier Type drop-down list	Choose one of the following tier types: • Disk Group Provisioned • Virtual Provisioned
Include Type drop-down list	Choose one of the following include types: • Static • Dynamic

Name	Description
Configuration Type drop-down	Choose one of the following configuration types:
list	• RAID-1
	• RAID-5 (3+1)
	• RAID-5 (7+1)
	• RAID-6(6+2)
	• RAID-6(14+2)
Select Technology drop-down	Choose one of the following:
list	• EFD
	• FC
	• SATA
Select Disk Group field	Choose a disk group.
Bind to Thin Pool field	Choose the thin pool where you want to bind the storage tier.
	This option is only available if you chose Virtual Provisioned as the Storage Tier Type.
Externally Provisioned check box	Check this box if you want to be able to externally provison the storage tier.
	This option is only available if you chose Virtual Provisioned as the Storage Tier Type.

Step 9 Click Submit.

Adding a Thin Pool to a Storage Tier

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC VMAX account where you want to update the storage tier.
- Step 5 Click View Details.
- Step 6 Click Storage Tiers.
- **Step 7** Click the row with the storage tier that you want to update.
- Step 8 Click Add Thin Pool.
- Step 9 On the Add Thin Pool to Storage Tier screen, choose the thin pool that you want to add and click Submit.

Removing a Thin Pool from a Storage Tier

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update the storage tier.
- Step 5 Click View Details.
- Step 6 Click Storage Tiers.
- **Step 7** Click the row with the storage tier that you want to update.
- **Step 8** Click Remove Thin Pool.
- **Step 9** On the **Remove Thin Pool** screen, choose the thin pool that you want to remove and click **Submit**.

Adding a Disk Group to a Storage Tier

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC VMAX account where you want to update the storage tier.
- Step 5 Click View Details.
- Step 6 Click Storage Tiers.
- **Step 7** Click the row with the storage tier that you want to update.
- Step 8 Click Add Disk Group.
- **Step 9** On the **Add Disk Group** dialog box, complete the following fields:

Name	Description
Select Disk Group field	Choose a disk group to be added to the storage tier.
Propogate check box	If checked, propagates changes to all storage tiers.

Step 10 Click Submit.

Renaming a Storage Tier

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update the storage tier.
- Step 5 Click View Details.
- Step 6 Click Storage Tiers.
- **Step 7** Click the row with the storage tier that you want to rename.
- Step 8 Click Rename.
- **Step 9** On the **Rename Storage Tier** screen, enter the new name for the storage tier and click **Submit**.

Deleting a Storage Tier

You can force the deletion of a storage tier, even if that tier includes disk groups and thin pools.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC VMAX account that contains the storage tier you want to delete.
- Step 5 Click View Details.
- Step 6 Click Storage Tiers.
- **Step 7** Click the row with the storage tier that you want to delete.
- Step 8 Click Delete.
- **Step 9** On the **Delete Storage Tier** screen, check the **Force** box if you want to delete the storage tier even if it includes thin pools and disk groups, and then click **Submit**.

Storage Groups

A VMAX storage group is a collection of Symmetrix logical volumes that are used by an application, a server, or a collection of servers.

Storage groups present storage to hosts and are also used for FAST policies.

In Cisco UCS Director, you can create VMAX storage groups that are either Empty or Cascaded. A cascaded group contains other storage groups. You can contain a cascaded storage group within a masking view to present storage resources to an entire cluster.

Creating an Empty Storage Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- Step 7 Click Create.
- **Step 8** On the Create Storage Group screen, complete the following fields:

Name	Description
Storage Group Type drop-down list	Choose the default option Empty Storage Group.
Storage Group Name field	A unituq name for the storage group.
Storage Resource Pool field	Select FAST SRP to associate to storage group. This field is required for VMAX3 storage groups.
Storage Level Objective field	Select SLO to associate to storage group. This field is required for VMAX3 storage groups.

Creating a Cascaded Storage Group

Before You Begin

Create a parent storage group and one or more child storage groups.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- Step 7 Click Create.
- **Step 8** On the Create Storage Group screen, complete the following fields:

Name	Description
Storage Group Type drop-down list	Choose Cascaded Storage Group.
Select Parent Storage Group field	The parent storage group.
Child Storage Group field	The child storage group.

What to Do Next

Add devices and associate FAST policies with the storage group.

Deleting a Storage Group

You can force the deletion of a storage group, even if that group includes devices.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to delete a storage group.
- Step 5 Click Delete.
- **Step 6** On the **Delete Storage Group** dialog box, check the **Force** box if you want to delete the storage tier even if it includes devices, and then click **Submit**.

Renaming a Storage Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- Step 7 Click Rename.
- **Step 8** In the **Rename Storage Group** dialog box, enter a unique name for the storage group and click **Submit**.

Adding a Device to a Storage Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- **Step 7** Click the row with the storage group that you want to update.
- Step 8 Click Add Device.
- Step 9 On the Add Devices to Storage Group screen, complete the following fields:

Name	Description
Device Type drop-down list	Choose one of the following options:
	• Thin Device
	Regular Device—not available for VMAX3 storage groups
Select Devices field	Choose one or more devices to add to the storage group.
Host LUN ID field	If you do not specify a host LUN ID, it is auto generated in HEXA.

Step 10 Click Submit.

Removing a Device from a Storage Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- **Step 7** Clck the row with the storage group that you want to update.
- Step 8 Click Remove Device.
- **Step 9** On the **Remove Device** screen, choose the device that you want to remove from the storage groupa and click **Submit**.

Removing a Child Storage Group from a Cascaded Storage Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- **Step 7** Click the row with the cascaded storage group that you want to update.
- Step 8 Click Remove Storage Group.
- **Step 9** On the **Remove Child Storage from Parent Storage** screen, choose the child storage group that you wan tto remove and click **Submit**.

FAST Configuration for Storage Groups on VMAX3

Associating a FAST Policy with a Storage Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- **Step 7** Click the row with the storage group that you want to update.
- Step 8 ClickAssociate FAST Policy.
- Step 9 On the Associate FAST Policy to Storage Group screen, complete the following fields:

Name	Description
Select FAST Policy field	Choose the FAST policy that you want to associate with the storage group.
Storage Group Priority field	Set the priority for the storage group. The valid range for the priority is from 1 to 3.

...

Step 10 Click Submit.

Disassociating a FAST Policy from a Storage Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- **Step 7** Click the row with the storage group that you want to update.
- **Step 8** Click Disassociate FAST Policy.
- Step 9 Click Submit.

Reassociating a FAST Policy with a Storage Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- **Step 7** Click the row with the storage group that you want to update.
- **Step 8** Click Reassociate FAST Policy.
- **Step 9** On the **Reassociate FAST Policy to Storage Group** screen, choose the FAST policy that you want to reassociate with the storage group and click **Submit**.

Modifying the FAST Storage Group Priority

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- **Step 6** Click Storage Groups.
- **Step 7** Click the row with the storage group that you want to update.
- **Step 8** Click **Modify Fast Priority**.
- **Step 9** On the **Modify FAST Storage Group Priority** dialog box, choose the new FAST priority for the storage group and click **Submit**.

The valid range for the priority is from 1 to 3.

Modifying FAST Settings for a Storage Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a storage group.
- Step 5 Click View Details.
- Step 6 Click Storage Groups.
- **Step 7** Click the row with the storage group that you want to update.
- **Step 8** Click Modify Fast Settings.
- **Step 9** On the **Modify FAST Settings** screen, complete the following fields:

Name	Description
Storage Resource Pool	Select a new storage resource pool for the storage group.
Service Level Objective	Select the new service level objective for the storage group.

Step 10 Click Submit.

Fully Automated Storage Tiering

Fully Automated Storage Tiering (FAST) automatically moves data between storage tiers. For example, FAST can do the following:

- Move very active data to high-performance storage tiers
- Move inactive data to low-cost, high-capacity storage tiers

FAST policies dictate how the performance and cost are optimized for the associated storage tier while the automation of FAST means that your storage system has no added management constraints compared with slower and more expensive systems. A FAST system always monitors and identifies the current activity levels of your data and moves the active data and inactive data to the most appropriate storage tier (according to your policies).

FAST Policies

A FAST policy is a set of tier usage rules that you can apply to your storage groups. A FAST policy can include up to three tiers and assigns an upper usage limit for each tier. The usage limit specifies the maximum percentage of the storage group that the FAST controller can allocate to a particular tier. Policy settings allow you to control and manage automated activity.

Creating a FAST Policy

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a FAST policy.
- Step 5 Click View Details.
- Step 6 Click Fast Policies.
- Step 7 Click Create.
- **Step 8** On the Create FAST Policy screen, complete the following fields:

Name	Description
Fast Policy Name field	A unique name for the FAST policy.
Storage Tier Name field	Choose up to three storage tiers that you want to associate with this FAST policy.
Max Storage Group Capacity of Tier (%) field	Specify the maximum percentage of the storage group that the FAST controller can allocate to the storage tier The valid range is from 1 to 100, as a percentage of the total storage group capacity.

Step 9 Click Submit.

Adding Storage Tiers to a FAST Policy

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC VMAX account where you want to update a FAST policy.
- Step 5 Click View Details.
- Step 6 Click Fast Policies.
- **Step 7** Click the row with the FAST policy that you want to update.
- Step 8 Click Add Storage Tiers.
- Step 9 On the Add Storage Tiers to Fast Policy screen, complete the following fields:

Name	Description
Select Storage Tier field	Choose the storage tier that you want to associate with this FAST policy.

Name	Description
Max Storage Group Capacity of Tier (%) field	Specify the maximum percentage of the storage group that the FAST controller can allocate to the storage tier The valid range is from 1 to 100, as a percentage of the total storage group capacity.

Removing Storage Tiers from a FAST Policy

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a FAST policy.
- Step 5 Click View Details.
- Step 6 Click Fast Policies.
- **Step 7** Click the row with the FAST policy that you want to update.
- **Step 8** Click Remove Storage Tiers.
- **Step 9** On the **Remove Storage Tiers From Fast Policy** screen, choose the storage tier that you want to remove and click **Submit**.

Modifying the Maximum Storage Group Capacity for a Storage Tier in a FAST Policy

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update a FAST policy.
- Step 5 Click View Details.
- Step 6 Click Fast Policies.
- **Step 7** Click the row with the FAST policy that you want to update.
- Step 8 Click Modify Storage Tiers.
- Step 9 On the Modify Storage Tiers in a Fast Policy screen, complete the following fields:

Name	Description
Select Storage Tier field	Choose the storage tier that you want to modify.

Name	Description
Max Storage Group Capacity of Tier (%) field	Change the maximum percentage of the storage group that the FAST controller can allocate to the storage tier The valid range is from 1 to 100, as a percentage of the total storage group capacity.

Renaming a FAST Policy

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC VMAX account where you want to update a FAST policy.
- Step 5 Click View Details.
- Step 6 Click Fast Policies.
- **Step 7** Click the row with the FAST policy that you want to rename.
- Step 8 Click Rename.
- **Step 9** On the **Rename FAST Policy** screen, enter the new FAST policy name and click **Submit**.

FAST Controllers

FAST can be configured to operate in the following modes:

- AUTO_APPROVE mode—Configuration change plans are generated and executed at the beginning of each inclusion device movement window based on the defined policy.
- USER_APPROVE mode—Configuration change plans are generated but not executed until they have been approved by a user. All change plans and data movements must be explicitly approved prior to being executed.

Modifying FAST Controller Settings

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to modify the FAST controller settings.
- Step 5 Click View Details.
- Step 6 Click FAST Controller.
- **Step 7** Click Modify FAST Controller Setting.
- **Step 8** On the **Modify FAST Controller Setting** screen, complete the following fields:

Name	Description
Data Movement Approval Mode drop-down list	Choose one of the following to determine how data movements will be approved:
	• USER_APPROVE
	• AUTO APPROVE
	USER APPROVE is the default setting.
Max Simultaneous Device Moves field	The number of maximum simultaneous device moves permitted. The valid range is 2 to 32.
Max Devices Moves Per Dayy field	The number of maximum simultaneous device moves permitted per day. The valid range is 2 to 200.
Min Initial Workload Period (hrs) field	The minimum initial workload period (in hours). The valid range is 2 to the current value.
Workload Analysis Period (hrs) field	The workload analysis period (in hours). The valid range is 2 to 672.
Swap Not Visible Devices	Choose one of the following:
drop-down list	• Enable—Permits the FAST controller to use configured but unmasked/unapped devices that are not visible to the host for FAST swaps.
	Disable—FAST swaps can only happen between devices that belong to storage groups that are associated with a FAST policy.
Allow Only Swap drop-down list	Choose one of the following:
	• Enable the ability to swap only devices.
	• Disable

Name	Description
FAST VP Data Movement Mode drop-down list	Choose to enable or disable (None) the FAST VP Data Movement Mode. Auto is the default mode.
FAST VP Data Relocation Rate field	The FAST VP Data Relocation Rate value. The valid range is 1 to 10.
Thin Pool Reserved Capacity (%) field	The Thin Pool Reserved Capacity (%)) value. The valid range is 1 to 80.
VP Allocation By FAST policy field	Choose the Thin Pool Reserved Capacity (%) value. The default value is Enabled.
FAST VP Time to Compress (Days) field	The FAST VP Time to Compress (Days) value. The valid range is from 40 to 400 days or never.
FAST VP Compression Rate field	The FAST VP Time to Compress (Days) value. The valid range is from 1 to 10.

FAST Status

The FAST Status allows to you modify the FAST state of your storage tiers. You can choose one of the following types:

- Disk Group Provisioned
- Virtual Group Provisioned

Modifying the FAST State

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to modify the FAST state.
- Step 5 Click View Details.
- Step 6 Click FAST Status.
- Step 7 Click Modify FAST State.
- **Step 8** On the **Modify VMAX FAST State** screen, complete the following fields:

Name	Description	
FAST Type drop-down list	Choose the desired FAST Type to change the state.	
Enable check box	If checked, enables the FAST state.	

Renaming the FAST Service Level Objective

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to update the FAST SLO.
- Step 5 Click View Details.
- Step 6 Click Fast Policies.
- Step 7 Click FAST SLO.
- Step 8 Click Rename.
- Step 9 On the Rename FAST SLO Name screen, enter a new SLO name and click Submit.

Port Groups

A VMAX port group is a collection of front-end ports.

Creating a Port Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a port group.
- Step 5 Click View Details.
- Step 6 Click Port Groups.
- Step 7 Click Create.
- **Step 8** On the Create Port Group screen, complete the following fields:

Name	Description
Port Group Name field	The port group name.
Select Port Group Name pop-up	Select the port(s) you want to include in the port group.
Select Items field	Chose the director port for the port group.

Masking Views

VMAX designates three types of auto-provisioning groups: storage groups, port groups, and initiator groups. These three groups work together as a masking view.

The masking view ensures that the target initiators in an initiator group can access the target storage resources in a storage group by means of the target ports in a port group.

Masking views are also useful for making changes to how the storage is presented. Changes to groups that belong to a masking view, such as adding a device or port, are automatically reflected in the masking view.

Creating a Masking View

Before You Begin

You must create a storage group, initiator group, host LUN, and port group.

You must also attach devices to the storage group.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC VMAX account where you want to create a port group.
- Step 5 Click View Details.
- Step 6 Click Masking Views.
- Step 7 Click Create.
- **Step 8** On the Create Masking Views screen, complete the following fields:

Name	Description	
Masking View Name field	A unique name for the masking view.	
Select Storage Group Name field	Choose the storage group you want to include in the masking view.	

Name	Description	
Host LUN ID field	The host LUN ID for the storage group.	
	Note If you do not specify a LUN ID, the Host LUN ID is autogenerated.	
Select Initiator Group Name field	Choose the initiator group you want to include in the masking view.	
Select Port Group Namefield	Choose the port group you want to include in the masking view.	

VMAX Properties File

You can configure certain parameters in the VMAX properties file (vmax.properties), which is located in the /opt/infra/inframgr folder.

Action or Task Retry Parameters

By default, the VMAX properties file is configured to automatically resubmit a service request or action if a workflow fails because too many tasks or actions are being executed simultaneously. This configuration reduces the level of user intervention required in this scenario.

Parameter	Description	Default Value
emc.vmax.retryMessages	The error message that displays if a workflow fails because too many tasks or actions are being executed simultaneously. If this error message is captured for a task or action, that task or action is automatically re-executed.	Default Error Message: The SYMAPI database file is already locked by another process Note To include nore than one message, enter comma-separated messages.
emc.vmax.maxIterationCount	The maximum number of attempts to be made if the VMAX response contains the message specified in the retryMessages property.	
emc.vmax.sleepTime	The time (in ms) that the retry operation waits before it connects to the VMAX device to execute the command.	Default value: 30000 ms (30 sec)

VMAX Sym Device Inventory Collection

By default, Cisco UCS Director collects the sym device inventory for every 500 devices. You can change this default in the VMAX properties file.

Parameter	Description	Default Value
emc.vmax.inventory.symdev.count	The number of VMAX devices for which inventory is collected. This parameter can be useful to reduce the inventory time required if the VMAX system has a large number of sym devices.	Default value: 500

Editing the VMAX Properties File

- **Step 1** In a terminal, log in to Cisco UCS Director with root credentials.
- **Step 2** Type cd /opt/infra/inframgr and press Enter.
- $\textbf{Step 3} \quad \text{Type vi } \text{vmax.properties and press } Enter.$
- **Step 4** Change the desired property and save the file. Your configuration changes are applied immediately.

EMC VNX

- About Cisco UCS Director for EMC VNX, page 95
- Installing EMC NaviSphere, page 96
- VNX Accounts, page 101
- VNX Block Storage Management, page 110
- About VNX File Storage Management, page 122
- VNX Unified Storage Management, page 135

About Cisco UCS Director for EMC VNX

Cisco UCS Director supports EMC VNX block, file, and unified storage accounts. Block supports block data, file supports file data, and unified supports both block and file data. See the Compatibility Matrix for all supported EMC VNX versions.

For a VNX Block account, you can manage the following:

- Block Storage Pools
- Storage Groups
- RAID Groups
- Host Initiators
- Logical Unit Numbers (LUNs)

The reports for VNX Block accounts also include details on all of these items, and on storage processors, ports, meta LUNs, hosts, ports, and disk devices.

For a VNX File account, you can manage the following:

- Data Movers
- Storage Pools for File
- Volumes
- Filesystems

- Common Internet File Servers (CIFS) servers
- Common Internet File Servers (CIFS) shares
- Network File System (NFS) exports
- Data Mover Interfaces
- DNS Domains

The reports available for VNX File accounts include details on the above items, and system overview summaries.

For a VNX File new account, you create either Common Internet File Servers (CIFS) or Network File System (NFS) Export.

For NFS Export, you create the following:

- · Storage pools for files
- File systems
- Interfaces
- Volumes
- Mounts

For a VNX unified account, which combines VNX block and VNX file accounts, you can perform all the steps needed for both VNX block and VNX file accounts.

Installing EMC NaviSphere

To communicate with VNX, Cisco UCS Director supports Windows-based EMC NaviSphere and Linux-based EMC NaviSphere.

Before using NaviSphere, you must install and configure a Secure Shell (SSH) server on it.

Installing and Configuring Windows-Based Navisphere

Installing a Cygwin Package

Ensure that you install the openssh, openssl, and TCL Cygwin packages on a Windows host.

- **Step 1** Download the Cygwin executable from http://www.cygwin.com/.
- **Step 2** While installing the Cygwin package on the package selection screen, choose the following packages:
 - openssh
 - openssl
 - TCL

Guidelines for SSHD Server Configuration

To set up an SSHD server, we recommend that you install Cygwin version 1.7.27, and use the SSH daemon on the host. Cygwin provides a Linux-like environment on Microsoft Windows.

After you install the SSHD server on the Windows-based EMC NaviSphere, modify the Path variable under System Variables to include the NaviSphere bin folder. This update ensures that anyone who uses SSH to access Windows-based NaviSphere can execute VNX commands.

After you configure the SSHD server, set up new default paths to enable the user-installed software to override the system software.

Configuring the SSHD Server

Procedure

- **Step 1** Navigate to the C:\Cygwin-Install-Dir. directory,
- **Step 2** Open the Cygwin . bat file in edit mode, using any editor, and add the following line: set CYGWIN=binmode ntsec

The following example shows the contents of the Cygwin.bat file after adding the above line:

```
@echo off
C:
    chdir C:\<Cygwin-Install-Dir>\bin
    set CYGWIN=binmode ntsec
    bash --login -i
```

- **Step 3** Configure the SSHD service by running the C:\Cygwin-Install-Dir\Cygwin.bat file in a command prompt and enter the following command: \$ ssh-host-config.
 - a) Answer the following questions:

Question	Recommended Response
Should privilege separation be used? <yes no=""></yes>	Yes
New local account 'sshd'? <yes no=""></yes>	Yes
Do you want to install sshd as a service? <yes no=""></yes>	No if SSHD is already installed as a service. Yes if SSH has not yet been installed as a service.
Enter the value of CYGWIN for the daemon: [] binmode ntsec	Enter the value as binmode ntsec
Do you want to use a different name? (yes/no)	Yes

Question	Recommended Response
Enter the new username: <new-username></new-username>	Enter the new username.
Reenter: <new-username></new-username>	Reenter the new username.
Replace cloupia with new-username? (yes/no)	Yes
Please enter the password: <password></password>	Enter the password for this account.
Reenter: <password></password>	Reenter the password for this account.

Configuring System Environment Variables

Procedure

- **Step 1** On the Windows host, right-click the **Computer** icon on the desktop and choose **Properties**.
- **Step 2** If you don't have a computer icon on your desktop, do the following:
 - a) Click Start.
 - b) Right-click the Computer option in the Start menu.
 - c) Choose Properties.
- **Step 3** Click **Advanced System Settings**.
- **Step 4** On the **Advanced** tab, choose **Environment Variables**.
- **Step 5** Under **System Variables** choose the **Path** variable and append the following two binary paths: c:\Program Files (x86)\EMC\Navisphere CLI;c:\<Cygwin-Install-Dir>\bin.

The following is an example of the path variable with the binary paths added:

```
Variable Name: Path
     Variable Value: <Existing Folders Path>;c:\Program Files(x86)\EMC\Navisphere
CLI;c:\cygwin 64\bin
```

- **Step 6** Add the following new system variable:
 - System Variable Name: CYGWIN
 - System Variable Value: binmode tty ntsec

Starting the Cygwin SSHD Service

Procedure

- **Step 1** Start the Cygwin SSHD service manually under Window Services.
- **Step 2** Configure the Cygwin SSHD service to start automatically every time the computer is restarted.

Verifying SSH Access

Ensure that you can run the naviseccli commands without providing the absolute path at the command prompt. You can use any SSH client to verify SSH access.

Procedure

- **Step 1** In your SSH client, access another machine that has the SSH client running and execute one of the following commands:
 - ssh USERNAME@host-ipaddress 'date'
 - ssh -1 USERNAME@host-ipaddress 'date'

Example:

For example, ssh -1 user@host-ipaddress 'date'

Step 2 Enter the password for the account when prompted.

After you enter the correct password, the command returns the current date.

Configuring the Navisphere Path for Windows

By default, Cisco UCS Director executes NavisecCLI commands with an explicit path that does not exist in Windows. You must create a softlink to that path through the Cygwin shell.

Procedure

- **Step 1** Open the Cygwin shell on the Windows server where Navisphere is installed.
- **Step 2** In the Cygwin shell, create the following directory: /opt/Navisphere
- **Step 3** Create a softlink for the Navisphere directory.

Example:

For example, if you installed Navisphere in the C:\Program Files (x86)\EMC\NavisphereCLI directory, execute the following command to create a softlink:

```
ln -s /cygdrive/c/Program\ Files\ \(x86\)/EMC/NavisphereCLI /opt/Navisphere/bin cd /opt/Navisphere/bin chmod 775 NaviSECCli.exe
```

Installing and Configuring Linux Based NaviSphere

You must complete this step before you add a VNX Storage Array as an account in Cisco UCS Director.

Procedure

Step 1 Search and download the naviseccli package for VNX from EMC Support for your specific platform. For example, the package may be named:

```
NaviCLI-Linux-64-x86-en US-7.33.2.0.51-1.x86 64.rpm
```

- **Step 2** If you are not logged in as root, enter the following command to switch to the root user: su username
- Step 3 Install the naviseccli package using the rpm command.

For example, enter the following command:

```
rpm -i NaviCLI-Linux-64-x86-en_US-7.33.2.0.51-1.x86_64.rpm
```

- **Step 4** When you are prompted to enter a certificate verifying level, enter the verifying level as medium[m].
- **Step 5** Add the naviseccli bin directory, which is typically /opt/Navisphere/bin, to your system PATH:
 - a) Add the following line to ~/.bash profile & ~/.bashrc

```
PATH=$PATH:/opt/Navisphere/bin export PATH
```

- b) Execute this file to make the setting effective by running source ~/.bash profile or source ~/.bashrc.
- **Step 6** Configure this installation of naviseccli to work with each storage processor on each associated array.
 - a) For all storage processors run the following command:

```
naviseccli -user usename -password password -h sp ip -scope 0 -np getagent
```

b) When you reach the security prompt, choose option 2 to save the certificate.

Repeat these steps for each of the storage processors. You can use a script, if desired. The security prompt should not display again.

Step 7 With an SSH client, log in to Cisco UCS Director as the root user and run the following command against the Navisphere host where naviseccli is installed.

```
# ssh <navicli-user>@<navicli-host-ip> naviseccli -User sysadmin -Password <sysadmin-pass>
-Scope 0 -Address <SP-A-IP> port -list
```

Step 8 Enter the password at the login prompt (after accepting the SSH certificate)

It should list VNX Storage Array port configuration. If it first asks to save the certificate, choose option 2

Step 9 Run the same command against the SP-B IP Address to save the certificate.

```
# ssh <navicli-user>@<navicli-host-ip> naviseccli -User sysadmin -Password <sysadmin-pass>
-Scope 0 -Address <SP-B-IP> port -list
```

VNX Accounts

In Cisco UCS Director you can add the following types of VNX accounts:

- VNX file account—X-Blade enclosure, two to eight blades, configurable failover options, and flexible I/O connectivity. You can have one data mover per license.
- VNX block account—Storage or data processor enclosure, dual active storage processors, automatic failover, and flexible I/O connectivity. You can have two service providers per license.
- VNX unified account—Single platform for VNX file and VNX block. You can have two service providers per license.

Adding an EMC VNX File Account

Before You Begin

- · Configure a VM.
- Install the NaviSecCLI software so that all Navisphere features are supported (if it is not currently installed).
- Create a set of user credentials for the NaviCLI package with enough privileges to run NaviSecCLI commands to manage and configure VNX storage.

- **Step 1** Choose **Administration** > **Physical Accounts**.
- **Step 2** On the **Physical Accounts** page, click **Physical Accounts**.
- Step 3 Click Add.
- **Step 4** On the **Add Account** screen, complete the following fields:

Name	Description	
Pod drop-down list	Choose the pod for this account. The pod can be one of the following types:	
	• Default Pod	
	• Generic	
	• Vblock	
Category drop-down list	Choose Storage.	
Account Type drop-down list	Choose EMC VNX File.	

Step 6 On the second **Add Account** screen, complete the following fields:

Name	Description
Account Name field	A unique name for this account.
Description field	A description of this account.
Control Station IP Address	The IP address of the VNX control station that manages the file-side blades.
Use Credential Policy check box	Check if you want to use a credential policy for this account rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list. This field is only displayed if you choose to use a credential policy.
Control Station Username	The username that this account uses to access the VNX control station. This username must be a valid account in the control station. This field is not displayed if you chose to use a credential policy.
Password field	The password associated with the specified control station username. This field is not displayed if you chose to use a credential policy.

Name	Description
Transport Type drop-down list	Choose one of the following transport types that you want to use for this account:
	• http
	• https
	The default transport type protocol for this account is HTTPS.
	This field is not displayed if you chose to use a credential policy.
Port field	The port used to access the VNX control station. The default port is 443 for HTTPS.
	This field is not displayed if you chose to use a credential policy.
Connection Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait to establish a connection to the VNX control station before timing out.
	The default value is 40 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
	This field is not displayed if you chose to use a credential policy.
Contact Email field	The email address that you use to contact the administrator or other person responsible for this account.
Location field	The location of the contact.

Cisco UCS Director tests the connection to the VNX control station. If that test is successful, it adds the VNX file account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

The polling interval configured on the **System Tasks** screen on the **Administration** > **System** page specifies the frequency of inventory collection.

Adding an EMC VNX Block Account

Before You Begin

- · Configure a VM.
- Install the NaviSecCLI software so that all Navisphere features are supported (if it is not currently installed).
- Create a set of user credentials for the NaviCLI package with enough privileges to run NaviSecCLI commands to manage and configure VNX storage.

Procedure

- **Step 1** Choose **Administration** > **Physical Accounts**.
- **Step 2** On the Physical Accounts page, click Physical Accounts.
- Step 3 Click Add.
- **Step 4** On the Add Account screen, complete the following fields:

Name	Description
Pod drop-down list	Choose the pod for this account. The pod can be one of the following types:
	• Default Pod
	• Generic
	• Vblock
Category drop-down list	Choose Storage.
Account Type drop-down list	Choose EMC VNX Block.

Step 5 Click Submit.

Step 6 On the second **Add Account** screen, complete the following fields:

Name	Description
Account Name field	A unique name for this account.
Description field	A description of this account.
Storage Processor A IP Address field	The IP address for Storage Processor A.
Storage Processor B IP Address field	The IP address for Storage Processor B.
Use Credential Policy check box	Check if you want to use a credential policy for block access rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list. This field is only displayed if you choose to use a credential policy.
Block Access User Name field	The username that this account uses to access the storage block. This username must be a valid account in the storage block. This field is not displayed if you chose to use a credential policy.

Name	Description
Block Access Password field	The password associated with the specified storage block username.
	This field is not displayed if you chose to use a credential policy.
Protocol drop-down list	The protocol must be ssh .
	This field is not displayed if you chose to use a credential policy.
NaviSecCLI Host IP Address field	The IP address for the secure NaviSecCLI host.
Use Credential Policy check box	Check if you want to use a credential policy for NaviSec CLI access rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list.
	This field is only displayed if you choose to use a credential policy.
NaviSecCLI Host User Name field	The username that the account uses to access the specified secure NaviSecCLI host. This username must be a valid account in the host.
	This field is not displayed if you chose to use a credential policy.
NaviSecCLI Host User	The password for the specified secure NaviSecCLI host.
Password field	This field is not displayed if you chose to use a credential policy.
Block Access Port field	The port used to access the storage block.
	This field is not displayed if you chose to use a credential policy.
NaviSec CLI Path field	The path to the NaviSec CLI. For example, /opt/Navisphere/bin. You can leave this field empty if the path is already configured in the server.
	This field is not displayed if you chose to use a credential policy.
Connection Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait to establish a connection to the VNX block storage before timing out.
	The default value is 30 seconds. The valid values are from 3 to 600.
	This field is not displayed if you chose to use a credential policy.

Name	Description
Scope drop-down list	Choose one of the following scope options to limit the user access to the VNX block storage:
	• Global—Provides access to all storage systems in the domain.
	• Local—Provides access to only the storage system configured for this account.
	• LDAP—Uses LDAP authentication and provides the access configured for the username in LDAP.
	This field is not displayed if you chose to use a credential policy.
Contact field	The email address that you use to contact the administrator or other person responsible for this account.
Location field	The contact's location (user defined).

Cisco UCS Director tests the connection to the VNX block storage. If that test is successful, it adds the VNX file account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

The polling interval configured on the **System Tasks** screen on the **Administration** > **System** page specifies the frequency of inventory collection.

Adding an EMC VNX Unified Account

Before You Begin

- Install the secure NaviSecCLI software so that all Navisphere features are supported (if it is not currently installed).
- Create a set of user credentials for the NaviSecCLI package with enough privileges to run NaviSecCLI commands to manage and configure VNX storage.

- **Step 1** Choose **Administration** > **Physical Accounts**.
- **Step 2** On the **Physical Accounts** page, click **Physical Accounts**.
- Step 3 Click Add.
- **Step 4** On the **Add Account** screen, complete the following fields:

Name	Description
Pod drop-down list	Choose the pod for this account. The pod can be one of the following types:
	• Default Pod
	• Generic
	• Vblock
Category drop-down list	Choose Storage.
Account Type drop-down list	Choose EMC VNX Unified.

Step 6 On the second **Add Account** screen, complete the following fields:

Name	Description
Account Name field	A unique name for this account.
Description field	A description of this account.
File Account	
Control Station IP Address field	The IP address of the VNX control station that manages the file-side blades.
Use Credential Policy check box	Check if you want to use a credential policy for this account rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list.
	This field is only displayed if you choose to use a credential policy.
Control Station Username	The username that this account uses to access the VNX control station. This username must be a valid account in the control station.
	This field is not displayed if you chose to use a credential policy.
Password field	The password associated with the specified control station username.
	This field is not displayed if you chose to use a credential policy.

Name	Description
File Access Protocol drop-down list	Choose one of the following protocols that you want to use for this account:
	• http
	• https
	The default protocol for this account is HTTPS.
	This field is not displayed if you chose to use a credential policy.
File Access Port field	The port to be used to access the VNX control station. The default port is 443 for HTTPS.
	This field is not displayed if you chose to use a credential policy.
Connection Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait to establish a connection to the VNX control station before timing out.
	The default value is 40 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
	This field is not displayed if you chose to use a credential policy.
Block Account	
Storage Processor A IP Address field	The IP address for Storage Processor A.
Storage Processor B IP Address field	The IP address for Storage Processor B.
Use Credential Policy checkbox	Check if you want to use a credential policy for block access rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list.
	This field is only displayed if you choose to use a credential policy.
Block Access User Name field	The username that this account uses to access the storage block. This username must be a valid account in the storage block.
	This field is not displayed if you chose to use a credential policy.
Block Access Password field	The password associated with the specified storage block username.
	This field is not displayed if you chose to use a credential policy.
NaviSecCLI Host IP Address field	The IP address for the secure NaviSecCLI host.

Name	Description
Use Credential Policy check box	Check if you want to use a credential policy for NaviSec CLI access rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list.
	This field is only displayed if you choose to use a credential policy.
NaviSecCLI Host User Name field	The username that the account uses to access the specified secure NaviSecCLI host. This username must be a valid account in the host.
	This field is not displayed if you chose to use a credential policy.
NaviSecCLI Host User	The password for the specified secure NaviSecCLI host.
Password field	This field is not displayed if you chose to use a credential policy.
Block Access Port field	The port used to access the storage block. The default port is 22.
	This field is not displayed if you chose to use a credential policy.
NaviSec CLI Path field	The path to the NaviSec CLI. For example, /opt/Navisphere/bin. You can leave this field empty if the path is already configured in the server.
	This field is not displayed if you chose to use a credential policy.
Connection Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait to establish a connection to the VNX block storage before timing out.
	The default value is 30 seconds. The valid values are from 3 to 600.
	This field is not displayed if you chose to use a credential policy.
Scope drop-down list	Choose one of the following scope options to limit the user access to the VNX block storage:
	• Global—Provides access to all storage systems in the domain.
	• Local—Provides access to only the storage system configured for this account.
	• LDAP—Uses LDAP authentication and provides the access configured for the username in LDAP.
	This field is not displayed if you chose to use a credential policy.
Contact field	The email address that you use to contact the administrator or other person responsible for this account.
Location field	The location of the contact.

Cisco UCS Director tests the connection to the VNX unified storage. If that test is successful, it adds the VNX unified account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

The polling interval configured on the **System Tasks** screen on the **Administration** > **System** page specifies the frequency of inventory collection.

VNX Block Storage Management

For VNX block (and VNX unified) accounts, you manage the following pools, groups, devices, and views:

- Storage pools—Name, description, RAID type (RAID 1/0, RAID-5, RAID-6), disks, and percentage of the full threshold
- RAID groups—RAID group ID, RAID Type (RAID 1, 0, 3, or 5, disk, hot spare), expansion, or defragmentation priority, disks. You have options to automatically destroy a RAID group after the last LUN is unbound, and for power saving.
- Host initiators—Add to new or existing host, hostname, WWN/IQN, SP port, initiator type (CLARiiON Open, HP Auto Trespass, HP No Auto Trespass, SGI, Fujitsu Siemens, Compaq Tru64), and failover mode (Active-Active mode -Failover Mode 4, Active-Passive mode (PNR)-Failover Mode 1, AIX Active-Passive mode (PAR)-Failover Mode 3, Legacy Failover Mode 2, Legacy Failover Mode 0). You add hosts to the storage groups.
- Storage groups—Name
- Logical unit numbers (LUNs)—Storage pool type (pool, RAID group), RAID type (1_0, 5), storage pool for new LUN (new or existing pool), user capacity, capacity units (MB, GB, TB, Blocks), alignment offset (LBA), default owner, initial tier placement (optimize for pool performance, highest available tier, lowest available tier), and options for automatically assigning LUN IDs as LUN names, LUN ID autogeneration, and Thin or Maximum provisioning. You mount LUNs as Datastores and also add them to the storage groups.

The read-only report detail includes the following information:

- System Summary—File system allocation and system overview summary graphs
- Data Movers—Unique ID, account name, server name, and role
- Storage Processors—SP name, serial number, IP address, and faults (on or off)
- Disk Devices—Unique ID, account name, name, disk type, state, capacity (GB), and other data
- Hosts—Account name, hostname, IP address, storage group, attached to host (on or off), number of HBA ports, log in status, and status
- **Initiators**—Account name, storage group, initiator name, log in status, SP port ID, SP port type, registered (y/n), hostname, and IP address
- Ports—SP port, port IP address, port WWN, port type, storage processor, and fabric WWN

• More Reports—Tabular report for RAID groups or hosts, and instant reports for file system allocation, as well as the top five storage capacity file systems, the top five file systems file count, and the top five storage capacity volumes

Summary of Steps

Procedure

- **Step 1** Add the VNX block account (s).
- **Step 2** Create the pools, groups, hosts, and LUNs needed for block management:
 - a) Create the storage pools.
 - b) Create the RAID groups.
 - c) Create the host initiators.
 - d) Create the storage groups.
 - e) Create the LUNs and mount them as datastores.
 - f) Add hosts to the storage groups.
 - g) Add LUNs to the storage groups.
- **Step 3** Review reports.

Storage Pools

A storage pool requires the following parameters:

- Storage pool name
- Description
- RAID type—1/0, 5, or 6
- Disks
- Percent full threshold

Creating a Storage Pool

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNX pod on which you want to create a storage pool and click View details.
- Step 5 Click Block Storage Pools.
- Step 6 Click Create.
- **Step 7** On the Create Storage Pool screen, complete the following fields:

Name	Description
Storage Pool Name field	The storage pool name.
Description field	The description.
RAID Type drop-down list	Choose the RAID Type . This can be one of the following:
	1/0
	5
	8
Disks field	Choose one or more disks to use.
Percent Full Threshold field	The percentage full threshold.

- Step 8 Click Select.
- Step 9 Click Submit.

RAID Groups

A RAID group has the following parameters:

- RAID Group ID—The system can specify or you can create a group ID
- RAID type—1/0, 5, or 6
- Option to automatically destroy after last LUN is unbound
- Expansion or defragmentation priority
- Option to allow power saving
- Disks

You can perform the following actions on the **RAID Groups** screen:

Button Name	Description
Create	Creates a new RAID group.
Delete	Deletes a selected RAID group.
Assign to Group	Assigns a selected RAID group to a group.
View Details	Views details about the selected RAID group.

Creating a RAID Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX data center where you want to create a RAID group and click **View Details**.
- Step 5 Click RAID Groups.
- Step 6 Click Create.
- **Step 7** On the Create RAID Group screen, complete the following fields:

Description
Enter the RAID group ID. This can be one of the following:
1
0
3
5
disk
hot spare
Choose the RAID type. This can be one of the following:
RAID0
RAID1
RAID1/0
RAID3
RAID5
RAID6
DISK

Name	Description	
Allow Power Saving check box	If checked, the system allows power saving for this RAID group.	
Disks field	Choose one or more disks to use.	

Host Initiators

A host initiator requires the following parameters:

- Add initiator to—You can add an initiator to a new or existing host
- Host
- WWN/IQN
- SP port
- Initiator type
- Failover mode

You can perform the following actions on the **Initiators** screen:

Button Name	Description	
Register	Registers a new initiator.	
View Details	Views details about the selected initiator.	
Deregister	Deregisters a selected initiator.	

Registering a Host Initiator

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX data center where you want to register a host initiator and click **View Details**.
- Step 5 Click Initiators.
- Step 6 Click Register.
- **Step 7** On the **Register Host Initiator** screen, complete the following fields:

Name	Description	
Add Initiator to drop-down list	Choose either Existing Host or New Host.	
	If you chose New Host , you can add the initiator to a new host by specifying a Host Name , Host IP Address , and New Host WNN .	
Host field	If you chose Existing Host , choose one of the hosts to add the initiator to an existing hosts.	
WWN/IQN	The WWN/IQN for the new or existing host.	
SP Port field	Choose one of the SP ports in the list.	
Initiator Type drop-down list	Choose the Initiator Type . This can be one of the following:	
	CLARiiON Open	
	• HP Auto Trespass	
	HP No Auto Trespass	
	• SGI	
	Fujitsu Siemens	
	• Compaq Tru64	
Failover Mode drop-down list	Choose the Failover Mode . This can be one of the following:	
	Active-Active mode-Failover Mode 4	
	Active-Passive mode (PNR)-Failover Mode 1	
	AIX Active-Passive mode (PAR)-Failover Mode 3	
	• Legacy Failover Mode 2	
	• Legacy Failover Mode 0	
	- Legacy I anover would o	

Storage Groups

A storage group requires a name as a parameter.

You can perform the following actions on the **Storage Groups** screen:

Button Name	Description	
Create	Creates a new storage group.	

Button Name	Description	
View Details	Views details about the selected storage group.	
Delete	Deletes a selected storage group.	
Add LUN	Adds a LUN to a selected storage group.	
Remove LUN	Removes a LUN from a selected storage group.	
Add Host	Adds a host to a selected storage group.	
Remove Host	Removes a host from a selected storage group.	

Creating a Storage Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX data center where you want to create the storage group and click **View Details**.
- Step 5 Click Storage Groups.
- Step 6 Click Create.
- **Step 7** On the Create Storage Group screen, enter the name for the storage group in the Name field.
- Step 8 Click Submit.

What to Do Next

Add hosts and LUNs to the storage group on the Storage Groups screen.

LUNs

A LUN has the following parameters:

- Option to automatically assign LUN IDs as LUN names
- Option to allow the system to specify the LUN ID
- Storage pool type
- RAID type
- · Storage pool
- Thin or maximum provisioning
- User capacity (thin LUN only)

- Capacity units
- LUN ID
- Alignment offset (LBA)
- Default owner

You can perform the following actions on the LUNs screen:

Button Name	Description
Create	Creates a LUN.
Delete	Deletes a selected LUN.
Expand	Expands a selected LUN.
Create Meta LUN	Create a Meta LUN for a selected LUN.
Associate LUN as Datastore	Associates a LUN as a Datastore.
Assign to Group	Assigns a selected LUN to a group.
View Details	View details on a selected LUN.

Creating a LUN

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX pod where you want to create a LUN and click **View Details**.
- Step 5 Click LUNs.
- Step 6 Click Create.
- **Step 7** On the Create LUN screen, complete the following fields:

Name	Description	
Storage Pool Type drop-down	Choose the storage pool type.	
list	Restriction	If you choose RAID Group , the system automatically generates the LUN ID. Automatic LUN naming ensures that the LUN name conforms to a set of strict naming conventions. An incorrectly named LUN no longer functions properly.
		If you choose Pool , the default path is set to automatically assign LUN IDs as LUN names. However, you have the option to uncheck this option (not recommended).

Name	Description		
Automatically assign LUN IDs as LUN Names check box	If you chose Pool as the storage pool type, the default path is set to automatically assign LUN IDs as LUN names. However, you have the option to uncheck this option (not recommended).		
	If checked, LUN IDs are automatically assigned as LUN names.		
	Uncheck the check box if you do not want LUN IDs to be assigned as LUN names.		
Storage Pool for New LUN drop-down list	Choose the storage pool for the new LUN.		
Thin check box	Check if you want a thin LUN.		
Ignore Thresholds check box	Check to ignore Storage Pool threshold limits.		
User Capacity field	The user capacity (applies to Thin LUN only).		
Capacity Units drop-down list	Choose the capacity units type. This can be one of the following:		
	• GB		
	• MB		
	• TB		
	• Blocks		
Alignment Offset (LBA) field	The alignment offset (LBA) (0 to 9999).		
Default Owner drop-down list	Choose the default owner from the drop down-list:		
	• Auto		
	• SP A		
	• SP B		
Initial Tier Placement	Choose one of the following from the drop-down list:		
drop-down list	Optimize for Pool Performance		
	Highest available tier		
	• Lowest available tier		

What to Do Next

Mount the LUN as a Datastore.

Adding a Host to a Storage Group

Before You Begin

A host and a storage group must exist in the system.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX data center where you want to add a host and click **View Details**.
- Step 5 Click Storage Groups.
- Step 6 Click Add Host.
- Step 7 On the Add Host(s) to Storage Group screen, complete the following fields:

Name	Description
Show Hosts drop-down list	Choose Include Connected or Not Connected.
Hosts field	Click Select and choose a host.

Step 8 Click Submit.

Adding a LUN to a Storage Group

Before You Begin

A LUN and a storage group must exist in the system.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNX data center where you want to add a LUN and click View Details.
- **Step 5** Click **Storage Groups**.
- Step 6 Click Add LUN.
- **Step 7** On the Add LUN to Storage Group screen, complete the following fields:

Name	Description
LUN field	If you want to choose the LUN manually, click Select .
Let System Specify HLU check box	If checked, the system autogenerates the Host LUN ID (HLU).

Step 8 In the **Host LUN ID** field, enter the **Host LUN ID**.

Step 9 Click Submit.

Creating a Meta LUN

Before You Begin

Create a LUN.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with VNX Pod where you want to create a Meta LUN, and click **View Details**.
- Step 5 Click Meta LUNs.
- Step 6 Click Create Meta LUN.
- Step 7 On the Create Meta LUN screen, complete the following fields:

Name	Description
Expansion Type drop-down list	Choose an expansion type. This can be one of the following:
	Stripe Expansion
	Concatenate Expansion
Flare LUNs drop-down list	Choose a Flare LUN that is added to the base LUN.
Meta LUN Name field	The LUN name.
MAX check box	If checked, the system creates a MAX LUN size.
User Capacity field	The LUN capacity units (applies to Thin LUN only).
Capacity Units drop-down list	Choose a capacity unit.

Name	Description
Default Owner drop-down list	Choose the default owner.
Element size Multiplier field	The element size multiplier. This field displays the strip element size multiplier for the meta LUN. The default value is 4.
Alignment Offset field	The alignment offset (LBA) value. The value range is from 0 to 9999.
Enable Auto-assign check box	If checked, the system enables Auto-assign . This option enables or disables Auto-assign only to a storage system that has two service providers and a LUN that is not a hot spare.
Expansion Rate drop-down list	Choose an expansion rate for making additional LUN capacity available to the host.

What to Do Next

Associate a LUN as a Datastore.

Associating a LUN as a Datastore

Before You Begin

Create a LUN.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX Pod where you want to associate a LUN as a Datastore, and click **View Details**.
- Step 5 Click LUNs.
- **Step 6** Click the row with the LUN to associate as a Datastore
- **Step 7** Click Associate LUN As Datastore.
- **Step 8** On the **Associate LUN As Datastore** screen, complete the following fields:

Name	Description
Data store Name field	The Datastore.

Name	Description
Select Host Node field	The host node.
Initiator Type drop-down list	Choose the initiator type.
LUN Name field	The LUN name.
VDC Name drop-down list	Choose the VDC name.
Success Criteria drop-down list	Choose how to measure the association as successful from the drop-down.

What to Do Next

Verify that the Datastore is associated to the LUN. For example, you can choose **Virtual > Storage** and click **vCenter** to view the related data stores.

About VNX File Storage Management

For VNX File (and VNX Unified) accounts, you can use either Common Internet File System (CIFS) or Network File System (NFS) Export.

For CIFS, you create and manage the following:

- CIFS servers—Server type, computer, NetBIOS name, aliases, and domain. You can choose to join a
 domain, enable local users, and select interfaces.
- CIFS shares—CIFS share name, file systems, path, CIFS server, user limit, and comments.
- DNS domains—Name, DNS servers, and protocol (UDP or TCP).

For NFS Export, you create and manage the following:

- Storage pools for files—Name, description, and subnet mask for the interface. You can create from a metavolume or a storage pool. Optionally, you can slice pool volumes by default.
- Volumes—Name, type (stripe, meta, slice), stripe size (32, 64, 256), and which volumes to select. You can mount volumes to the Datastore.
- File systems—Name, storage pool, storage capacity, capacity units (GB, MB, TB). You can optionally create a file system from a storage pool or volume to contain slices. You can mount file systems to the data store.
- Data mover interfaces—Name, device name, address, subnet mask, maximum transmission unit (MTU), and VLAN ID
- NFS export—File systems, read/write hosts, root hosts, and an option to host access read-only export

• Mounts—Path, file system name, server, read-only or read/write, and access-checking policy (NT, UNIX, Secure, Native, Mixed, or Mixed and Compatible). You can choose to enable virus checking, enable CIFS oplocks, and set advanced options.

The read-only report includes the following information:

- System overview summary—Data center, account, host, role, and mode
- · CIFS server and shares detail
- DNS domain detail
- For NFS, storage pool for files, file system, NFS export, and data mover detail

Summary of Steps

Procedure

- **Step 1** Add the VNX file account(s).
- **Step 2** Choose either CIFS or NFS Export.
 - For CIFS, create the CIFS servers, CIFS shares, and DNS domains.
 - For NFS Export, create the following:
 - a) Storage pools for files
 - b) Volumes
 - c) File systems
 - d) Interfaces
 - e) NFS export information
 - f) Mounts

Step 3 Review reports.

Using CIFS

In Cisco UCS Director, you can use CIFS to export files or directories. A client can mount any server-exported directory.

To use CIFS, you create the CIFS servers, CIFS shares, and DNS domains.

CIFS Servers

A CIFS server requires the following parameters:

- Server type
- Computer name
- NetBIOS name

- Aliases
- Domain
- Option to join a domain
- Option to enable local users
- Interfaces

You can perform the following actions on the CIFS Server screen:

Button Name	Description
Add	Creates a new CIFS server.
Delete	Deletes a selected CIFS server.
Modify	Modifies attributes of a selected CIFS server.

Creating a CIFS Server

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX data center where you want to create a CIFS server and click **View Details**.
- Step 5 Click Data Movers.
- **Step 6** Click the row with the server and click **View Details**.
- Step 7 Click CIFS Servers.
- Step 8 Click Add.
- **Step 9** On the Create CIFS Server screen, complete the following fields:

Name	Description
Server Type drop-down list	Choose the server type.
Computer Name field	The computer name.
NetBIOS Name field	The NetBIOS name for this server.
Aliases field	The alias names for this server.
Domain field	The server domain name.
Join Domain check box	Check to enable the server to join another domain.
Enable Local Users check box	Check to enable local users on this server. If you checked this check box, go to Step 10.

Name	Description
Interfaces field	Click Select to choose an interface(s).
	Go to Step 11.

Step 10 If you checked **Join Domain**, complete the following additional fields:

Name	Description
Domain Admin field	The domain administrator username for this server.
Domain Password field	The server domain password.
Organizational Unit field	The server's organizational unit.

Step 11 If you checked **Enable Local Users**, complete the following additional fields:

Name	Description
Set Local Admin Password field	The local administrator password for this server.
Confirm Local Admin Password field	The confirmation of the local administrator password.

Step 12 Click Submit.

CIFS Shares

A CIFS share requires the following parameters:

- CIFS share name
- File system
- Path
- CIFS server
- User limit
- Comments

You can perform the following actions on the CIFS Share screen:

Button Name	Description
Add	Adds a new CIFS share.

Button Name	Description
Delete	Deletes a selected CIFS share.

Creating CIFS Shares

Before You Begin

A CIFS server must exist in the system.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX data center where you want to create the CIFS shares and click **View Details**.
- Step 5 Click Data Movers.
- **Step 6** Click the row with the server and click **View Details**.
- Step 7 Click CIFS Shares.
- Step 8 Click Add.
- **Step 9** In the Create CIFS Shares dialog box, complete the following fields:

Name	Description
File Systems drop-down list	Choose the File Systems type.
CIFS Share Name field	The CIFS share name.
Path field	The path.
CIFS Server field	Click Select. Choose one or more CIFS shares.
User Limit field	The alias names for this server.
Comments field	Any comments regarding CIFS shares.

Step 10 Click Submit.

DNS Domains

A DNS domain requires the following parameters:

- Name
- DNS servers

Protocol

You can perform the following actions on the **DNS Domains** screen:

Button Name	Description
Add	Adds a new DNS domain.
Delete	Deletes a selected DNS domain.

Creating a DNS Domain

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the VNX data center where you want to create a DNS Domain and click **View Details**.
- Step 5 Click Data Movers.
- **Step 6** Click the row with the server and click **View Details**.
- Step 7 Click DNS Domain.
- Step 8 Click Add.
- **Step 9** On the **Add DNS Domain** screen, complete the following fields:

Name	Description
Name field	The DNS domain name.
DNS Servers field	The DNS server names.
Protocol drop-down list	Choose the protocol.

Step 10 Click Submit.

Using NFS Export

In Cisco UCS Director, you can use NFS to export files or directories. A client can mount any server-exported directory.

To use NFS Export, you create the storage pools for files, volumes, file systems, interfaces, NFS export information, and add the mounts.

Storage Pools for Files

An NFS storage pool for files requires the following parameters:

- Name
- Create from—Metavolume or storage pool
- Description
- Volumes—Subnet mask
- Slice pool volumes by default—Checked or unchecked

You can perform the following actions on the **Storage Pools for Files** screen:

Button Name	Description
Create	Creates a new NFS storage pool for files.
View Details	Views details about the selected NFS storage pool for files.
Delete	Deletes a selected storage pool for files.

Creating a Storage Pool for Files

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX data center where you want to create a storage pool for files and click **View Details**.
- Step 5 Click Data Movers.
- **Step 6** Click the row with the server and click **View Details**.
- Step 7 Click View Details.
- Step 8 Click Storage Pools for File.
- Step 9 Click Create.
- **Step 10** On the Create Storage Pool screen, complete the following fields:

Name	Description
Name field	The storage pool name.
Create from drop-down list	Choose Meta Volume or Storage Pool.
Description field	The description for this storage pool.
Volumes drop-down list	The volumes for this storage pool.
Slice Pool Volumes by Default check box	Check to slice pool volumes by default.

Step 11 If you chose **Storage Pool**, complete the following additional fields to create this storage pool from another storage pool:

Name	Description
Template Pool drop-down list	Choose the template pool.
Minimum Pool Size (MB) field	The minimum pool size (MB).
Stripe Size (KB) field	The stripe size (KB).

Volumes

An NFS volume requires the following parameters:

- Name
- Type
- Volumes
- Stripe size—32, 64, 256

You can perform the following actions on the **Volumes** screen:

Button Name	Description
Delete	Deletes a selected volume.

Creating a Volume

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX data center where you want to create a volume and click **View Details**.
- Step 5 Click Volumes.
- Step 6 Click Create.
- **Step 7** On the Create Volume screen, complete the following fields:

Name	Description
Name field	The NFS volume name.

Name	Description
Type drop-down list	Choose one of the following volume types for this volume:
	• Stripe
	• Meta
	• Slice
Volumes field	Choose to use one or more volumes from the list of available volumes.
Stripe Size (KB) drop-down list	Choose the Stripe Size from the list (256, 32, or 64 KB).

File Systems

An NFS file system has the following parameters:

- Name
- Create from a volume or storage pool
- Storage pool
- Storage capacity
- Capacity units
- Option to contain slices

You can perform the following actions on the File Systems screen:

Button Name	Description
Create	Creates a new file system.
Extend	Extends a file system.
View Details	Views details about the selected file system.
Delete	Deletes a selected file system.

Creating an NFS File System

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX pod where you want to create an NFS File System and click **View Details**.
- Step 5 Click File Systems.
- Step 6 Click Create.
- **Step 7** On the Create File System screen, complete the following fields:

Name	Description
Name field	The NFS file system name.
Create from drop-down list	Choose either Storage Pool or Volume as the source for the file system.
Storage Pool field	Choose the storage pool for this file system.
Storage Capacity field	The storage capacity to allocate for this file system.
Capacity Units drop-down list	Choose the capacity units type. This can be one of the following: • GB • MB • TB
Contain Slices check box	Check this check box to enable the file system to contain slices.
Data Mover field	Choose the data mover account for the file system.

Step 8 Click Submit.

What to Do Next

You can mount the file system as a Datastore.

Data Mover Interfaces

An NFS data mover interface requires the following parameters:

- Name
- Device name
- Address

- Subnet mask
- MTU
- VLAN ID

You can perform the following actions on the **Interfaces** screen:

Button Name	Description
Create	Creates a data mover interface.
View Details	Views details about the selected interface.
Delete	Deletes a selected data mover interface.

Adding a Data Mover Interface

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX pod where you want to create a Data Mover Interface and click **View Details**.
- Step 5 Click Data Movers.
- **Step 6** Click the row with the server and click **View Details**.
- **Step 7** Click Mover Interfaces.
- Step 8 Click Add.
- **Step 9** On the Add Data Mover Interface screen, complete the following fields:

Name	Description
Name field	The interface name.
Device Name drop-down list	Choose the device name for this interface.
Address field	The interface address.
Subnet Mask field	The subnet mask for this interface.
MTU field	The maximum transmission unit (MTU) for this interface.
VLAN ID field	The VLAN ID for this interface.

Step 10 Click Submit.

NFS Export

NFS Export requires the following parameters:

- File system
- Read/write hosts
- Root hosts
- Option to host access read-only export

You can perform the following actions on the **NFS Export** screen:

Button Name	Description
Create	Creates an NFS export.
Edit	Edits an NFS export.
View Details	Views details about the selected NFS export.
Delete	Deletes a selected NFS export.

Exporting an NFS File System

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX pod where you want to add an NFS File System and click **View Details**.
- Step 5 Click Data Movers.
- **Step 6** Click the row with the server and click **View Details**.
- Step 7 Click NFS Exports.
- Step 8 Click Add.
- **Step 9** On the Add NFS Export screen, complete the following fields:

Name	Description
File Systems drop-down list	Choose the File Systems type for NFS Export.
Read/Write Hosts field	The read/write hosts for NFS Export.
Root Hosts field	The root hosts for NFS Export.
Host Access Read-only Export check box	Check if you want host access read-only export.

Mounts

An NFS mount requires the following parameters:

- Path
- File system name
- Mount server
- Read-only or read and write
- · Access checking policy
- · Option to enable virus checking
- Option to enable CIFS oplocks
- Option to enable advanced options

You can perform the following actions on the **Mounts** screen:

Button Name	Description
Modify	Modifies the attributes of a selected mount.
Delete	Deletes a selected mount.

Modify a File System

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX pod where the file system is located and click **View Details**.
- Step 5 Click Data Movers.
- **Step 6** Click the row with the server and click **View Details**.
- Step 7 Click Mounts.
- **Step 8** Click the row with file system and click **Modify**.
- **Step 9** On the **Modify Mount** screen, complete the following fields:

Name	Description
Path field	The path for this mount.
File System Name drop-down list	Choose the file system name for this mount.

Name	Description
Mount On drop-down list	Choose the server for this mount.
Read Only drop-down list	Choose the Read Only or Read and Write option for this mount.
Access-Checking Policy drop-down list	Choose the access-checking policy for this mount.
Virus Checking Enabled check box	Check if you want virus checking enabled.
CIFS Oplocks Enabled check box	Check if you want CIFS Oplocks enabled.
Set Advanced Options check box	Check if you want to set advanced options.

Deleting a File System

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNX pod containing the file system you want to delete and click **View Details**.
- Step 5 Click Data Movers.
- **Step 6** Click the row with the server and click **View Details**.
- Step 7 Click Mounts.
- **Step 8** Click the row with the file system and click **Delete**.

VNX Unified Storage Management

VNX unified storage combines VNX block storage with VNX file storage.

Summary of Steps

Procedure

- **Step 1** Add the VNX block account(s).
- **Step 2** Create the pools, groups, hosts, and logical unit numbers (LUNs) needed for block management:
 - a) Create the storage pools.
 - b) Create the RAID groups.
 - c) Create the host initiators.
 - d) Create the storage groups.
 - e) Create the LUNs and mount them as datastores.
 - f) Add hosts to the storage groups.
 - g) Add LUNs to the storage groups.
- **Step 3** Review VNX block storage reports.
- **Step 4** Add the VNX file account(s).
- Step 5 Choose either CIFS or NFS Export.
 - For CIFS, create the CIFS servers, CIFS shares, and DNS domains.
 - For NFS Export, create the following:
 - a) Storage pools for files
 - b) Volumes
 - c) File systems
 - d) Interfaces
 - e) NFS export information
 - f) Mounts
- **Step 6** Review VNX file storage reports.

What to Do Next

See the previous chapters on how to manage VNX block storage and VNX file storage for more details.

About Cisco UCS Director for EMC VNXe

Cisco UCS Director supports EMC VNXe storage accounts.

See the Compatibility Matrix for all supported VNXe versions.

For a VNXe account, you can manage the following:

- Storage Pools
- · Host Initiators
- Logical Unit Numbers (LUNs)

The reports for VNXe accounts also include details on all of these items, and on storage processors, ports, meta LUNs, hosts, ports, and disk devices.

For a VNXe account, you can manage the following:

- Filesystems
- Common Internet File Servers (CIFS) servers
- Common Internet File Servers (CIFS) shares
- Network File System (NFS) exports
- DNS Domains

The reports available for VNXe accounts include system overview summaries.

Adding an EMC VNXe Account

Procedure

- **Step 1** Choose **Administration** > **Physical Accounts**.
- **Step 2** On the **Physical Accounts** page, click **Physical Accounts**.
- Step 3 Click Add.
- **Step 4** On the Add Account screen, complete the following fields:

Name	Description
Pod drop-down list	Choose the pod for this account. The pod can be one of the following types:
	• Default Pod
	• Generic
	• VSPEX
	• Vblock
Category drop-down list	Choose Storage.
Account Type drop-down list	Choose EMC VNXe.

Step 5 Click Submit.

Step 6 On the second **Add Account** screen, complete the following fields:

Name	Description
Account Name field	A unique name for this account.
Description field	A description of this account.
Server IP Address field	The IP address of the VNXe server.
Use Credential Policy checkbox	Check if you want to use a credential policy for this account rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked Use Credential Policy , choose the credential policy that you want to use from this drop-down list. This field is only displayed if you choose to use a credential policy.
Username field	The username that this account uses to access the VNXe server. This username must be a valid account in the server. This field is not displayed if you chose to use a credential policy.

Name	Description
Password field	The password associated with the specified VNXe server username.
	This field is not displayed if you chose to use a credential policy.
Protocol drop-down list	The protocol must be https .
Port field	The port to be used to access the VNXe server. The default port is 443.
Connection Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait to establish a connection to the VNXe server before timing out.
	The default value is 45 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
Socket Read Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait for data from the VNXe server before timing out.
	The default value is 120 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
Contact field	The email address that you use to contact the administrator or other person responsible for this account.
Location field	The location of the contact.

Cisco UCS Director tests the connection to the VNXe server. If that test is successful, it adds the VNXe account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

The polling interval configured on the **System Tasks** screen on the **Administration** > **System** page specifies the frequency of inventory collection. For more information about configuring the polling interval, see the *Cisco UCS Director Network Devices Management Guide*.

Management Overview

VNXe is managed through the use of reports that are available within UCS Director. The following sections show how each report is used to manage each function within VNXe.

System Summary Report

The System Summary report displays the following details about the VNXe device:

- Pod Name
- · Account Name

- Server Address
- Model
- Software Version
- Name
- Serial Number
- MAC Address
- Connection Status

Storage Processors Report

A Storage Processor is a hardware component that provides the processing resources for performing storage operations, such as creating, modifying and monitoring storage resources. Every VNXe storage system has two storage processors.

The report contains the following information:

- Name
- Model
- BIOS Firmware Revision
- Post Firmware revision
- Serial Number
- Part Number
- Service Mode
- SAS Expander Version

Disk Groups Report

In VNXe, physical disks are grouped into three groups:

- Extreme Performance
- Performance
- Capacity

This report provides the following information:

- Name
- Part Number
- Useable Disk Capacity
- Total Disk Capacity
- Tier Type

- · Disk Technology
- · Total Disks
- Free Disks

Storage Pools Report

A storage pool is a homogeneous or heterogeneous grouping of physical disks with each tier being disks of similar type and speed. A homogeneous storage pool is a single tier pool using one type of disk. A heterogeneous storage pool consists of multiple tiers using different types of disks.

Creating a Storage Pool

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create a storage pool, and click **View Details**.
- Step 5 Click Storage Pools.
- Step 6 Click Create.
- **Step 7** On the Create Storage Pool screen, complete the following fields:

Name	Description
Name field	The storage pool name. If not specified, the name is autogenerated.
Description field	The description of the storage pool.
Extreme Performance Tier check box	At least one tier must be configured by selecting the check box
Performance Tier check box	
Capacity Tier check box	
RAID Type drop-down list	Choose the RAID Type . This can be one of the following:
	RAID 5
	RAID 6
	RAID 1/0

Name	Description
Stripe Width drop-down list	Choose the number of disks for the Raid Type . The options are:
	4+1
	8+1
	12+1
	Maximum Capacity
Disks Groups field	Choose a Disk Group from the list.
Number of Disks field	The number of disks to be used for this storage pool.
Alert Threshold field	Specify the alert threshold.
Enable FAST Cache check box	Check to enableFAST Cache, or else continue with disable option.
Enable FAST VP Schedule check box	Check to enable FAST VP Schedule, or else continue with disable option.

Modifying a Storage Pool

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the storage pool you want to modify, and click **View Details**.
- Step 5 Click Storage Pools.
- **Step 6** Click the row with the storage pool that you want to modify.
- Step 7 Click Modify.
- **Step 8** On the **Modify Storage Pool** screen, you can modify the following fields:

Name	Description
Name field	The storage pool name. Name can be modified. If not specified, the name is auto generated.
Description field	The description of the storage pool.
Alert Threshold field	Specify the alert threshold.

Name	Description
Enable FAST Cache check box	Check to enable FAST Cache.
Enable FAST VP Schedule check box	Check to enable FAST VP Schedule.

Expanding a Storage Pool

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the storage pool you want to expand, and click **View Details**.
- Step 5 Click Storage Pools.
- **Step 6** Click the row with the storage pool that you want to expand.
- Step 7 Click Expand.
- **Step 8** On the **Expand Storage Pool** screen, you can change the following fields to expand the storage pool capacity:

Name	Description
Extreme Performance Tier check box	At least one tier must be configured by selecting the checkbox.
Performance Tier check box	
Capacity Tier check box	
RAID Type drop-down list	Choose the RAID Type . This can be one of the following:
	RAID 5
	RAID 6
	RAID 1/0
Stripe Width drop down list	Choose the number of disks for the Raid Type . The options are:
	4+1
	8+1
	12+1
	Maximum Capacity

Name	Description
Disks Groups field	Choose a Disk Group from the list.
Number of Disks field	The number of disks to be used for this storage pool.
Enable FAST Cache check box	Check to enable FAST Cache.
Enable FAST VP Schedule check box	Check to enable FAST VP Schedule.

File Systems Report

A file system represents set of storage resources that provide network file storage. VNXe establishes a file system, either CIFS or NFS, that Windows users or Linux/UNIX hosts can connect to and use for file-based storage. Shares within the file system draw from the total storage that is allocated to the file system.

The File Systems report provides the following information:

- Name of the file system
- Storage Pool
- Type
- Total Capacity
- Used Capacity
- Protocols
- Description
- Thin Enabled
- Tiering Policy
- Deduplication

Creating a File System

Note

Before you create a file system, at least one NAS server must exist on the storage system.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, choose the pod.
- **Step 4** On the **Storage** page, click **Storage Accounts**.
- **Step 5** Click the row with the VNXe device on which you want to create a file system, and click **View Details**.
- Step 6 Click File Systems.
- Step 7 Click Create.
- **Step 8** On the Create File System screen, complete the following fields:

Name	Description
Storage Pool field	Select the storage pool from the list.
Name field	Name the file system.
Protocol drop-down list	Choose NFS or CIFS from the drop-down list.
NAS Server field	Select the NAS Server from the list.
Size field	Specify a size for the file system.
Capacity Units drop-down list	Choose MB, GB, or TB from the drop-down list.
Description field	File system description.
Tiering Policy drop-down list	Choose from the following in the drop-down list: Start High Then Auto-Tier
	Auto-Tier
	Highest Available Tier
	Lowest Available Tier
Thin check box FLR Enabled check box	Check as appropriate.
Enable Deduplication check box	

Step 9 Click Submit.

Modifying a File System

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, choose the pod.
- **Step 4** On the **Storage** page, click **Storage Accounts**.
- **Step 5** Click the row with the VNXe device on which you want to modify file system, and click **View Details**.
- Step 6 Click File Systems.
- **Step 7** Click the row with the file system that you want to modify, and choose **Modify**.
- **Step 8** On the **Modify File System** screen, the following fields can be changed:

Name	Description
Size field	Specify a size for the file system.
Capacity Units drop-down list	Choose MB, GB, or TB from the drop-down list.
Description field	File system description.
Tiering Policy drop-down list	Choose from the following in the drop-down list: Start High Then Auto-Tier Auto-Tier Highest Available Tier Lowest Available Tier
Thin check box FLR Enabled check box Enable Deduplication check box	The check boxes that were checked when the file system was created will be displayed.

Step 9 Click Submit.

NFS Shares Report

Shares represent mount points through which users or hosts can access file system resources. Each share is associated with a single file system and inherits the file system protocol (CIFS or NFS) established for that file system.

This report provides the following information:

- Name
- File System

- Path
- Default Access
- · Read Only
- No Access Hosts
- Read Only Hosts
- Read Write Hosts
- Root Access Hosts
- Description
- Tag

Creating an NFS Share

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create an NFS share, and click **View Details**.
- Step 5 Click NFS Shares.
- Step 6 Click Create.
- Step 7 On the Create NFS Share screen, complete the following fields:

Name	Description
File System field	Select the file system from the list.
Path field	Local path to a location within the file system.
Name field	Type a name for the share.
Description field	Type a description of the share.
Default Access drop-down list	Choose the default access for the share. The options are:
	No Access
	Read-Only
	Read/Write
	Read/Write, allow Root
No Access Hosts field	Choose a Host or Hosts from the list.
Read Only Access Hosts field	Choose a Host or Hosts from the list.

Name	Description
Read Write Access Hosts field	Choose a Host or Hosts from the list.
Root Access Hosts field	Choose a Host or Hosts from the list.

Modifying an NFS Share

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device on which you want to modify an NFS share, and click View Details.
- Step 5 Click NFS Shares.
- **Step 6** Click the row with the NFS share that you want to modify and choose **Modify**.
- **Step 7** On the **Modify NFS Share** screen, the following fields can be modified:

Name	Description
Description field	Type a description of the share.
Default Access drop down	Choose the default access for the share. The options are: No Access Read-Only Read/Write Read/Write, allow Root
No Access Hosts field	Choose a Host or Hosts from the list.
Read Only Access Hosts field	Choose a Host or Hosts from the list.
Read Write Access Hosts field	Choose a Host or Hosts from the list.
Root Access Hosts field	Choose a Host or Hosts from the list.

Step 8 Click Submit.

Create an NFS Datastore

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device on which you want to create an NFS datastore, and click View Details.
- Step 5 Click NFS Shares.
- **Step 6** Click the row with the NFS share on which you want to create an NFS datastore and choose **Create Datastore**.
- Step 7 On the Create NFS Datastore screen, complete the following fields:

Name	Description
Host Node field	Choose the host node or nodes from the list.
Datastore Name field	Type a name for the Datastore.
Access Modedrop-down list	Choose Read/Write or Read Only.
Success Criteria drop-down list	Choose Mount successful at least on one host or Mount successful on all the hosts.

Step 8 Click Submit.

LUNS Report

LUN storage resources provide hosts with access to general-purpose block-level storage through network-based iSCSI or Fibre Channel (FC) connections. With LUN storage, you can manage addressable partitions of block storage resources so that host systems can mount and use these resources (LUNs) over FC or IP connections.

This report provides the following information:

- Name
- Storage Pool
- Type
- Total Capacity
- Used Capacity
- WWN
- Description
- Thin Enabled

- Tiering Policy
- Default Node
- Current Node
- Tag

Creating a LUN

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create the LUN, and click **View Details**.
- Step 5 Click LUNs.
- Step 6 Click Create.
- **Step 7** On the Create LUN screen, complete the following fields:

Name	Description
Storage Pool field	Select the storage pool from the list.
Name field	Type a name for the LUN.
Size field	Specify the size of the LUN
Capacity Units drop-down list	Select from the drop-down list:
	MB
	GB
	ТВ
Description field	Type a description of the LUN.
Default Node drop-down list	Select the default node from the drop-down list:
	Auto
	SP A
	SP B
Tiering Policy drop down	Choose the tiering policy. The options are:
	Start High then Auto-Tier
	Auto-Tier
	Highest Available Tier
	Lowest Available Tier

Name	Description
Thin check box	Check to enable.
LUN Access Hosts field	Choose a Host or Hosts from the list.
Snapshot Access Hosts field	Choose a Host or Hosts from the list.
LUN and Snapshot Access Hosts field	Choose a Host or Hosts from the list.

Modifying a LUN

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device on which you want to modify a LUN, and click View Details.
- Step 5 Click LUNs.
- **Step 6** Click the row with the LUN that you want to modify, and choose **Modify**.
- Step 7 On the Modify LUN screen, the following fields can be modified:

Name	Description
Size field	Specify the size of the LUN
Capacity Units drop-down list	Select from the drop-down list:
	MB
	GB
	ТВ
Description field	Type a description of the LUN.
Default Node drop-down list	Select the default from the drop-down list:
	Auto
	SP A
	SP B

Name	Description
Tiering Policy drop-down list	Choose the tiering policy. The options are:
	Start High then Auto-Tier
	Auto-Tier
	Highest Available Tier
	Lowest Available Tier
Thin check box	Check to enable.
LUN Access Hosts field	Choose a Host or Hosts from the list.
Snapshot Access Hosts field	Choose a Host or Hosts from the list.
LUN and Snapshot Access Hosts field	Choose a Host or Hosts from the list.

Creating a VMFS Datastore

A VMFS datastore can be created from a LUN using the Associate LUN As Datastore action.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create a VMFS datastore, and click **View Details**.
- Step 5 Click LUNs.
- **Step 6** Click the row with the LUN from which you want to create a VMFS datastore, and choose **Create Datastore**.
- **Step 7** On the **Associate LUN As Datastore** screen, complete the following fields:

Name	Description
Host Node field	Choose the host node or nodes from the list.
	Note V-Center account are added under Virtual Accounts to show the Host node list.
Datastore Name field	Type a name for the datastore.
Initiator Type drop-down list	Choose ISCSI or FCP.

Name	Description
VDC Name drop-down list	Choose from list.
Success Criteria drop-down list	Choose Mount successful at least on one host or Mount successful on all the hosts.

Hosts Report

Host configurations are logical connections through which hosts or applications can access storage resources. Before a network host can access storage, define a configuration for it and associate it with a storage resource.

VNXe supports the following types of host configurations:

- Individual host configurations: Specify access to storage resources on a host-by-host basis.
- Subnet and netgroup configurations: Configure access to storage resources for multiple hosts or network segments.
- VMware host configurations: Configure access to storage resources for individual ESX server hosts or groups of ESX servers managed by a common vCenter Server.

The Hosts report provides the following information about each host:

- Name
- Type
- OS Type
- Description

Creating a Host

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device on which you want to create a host, and click View Details.
- Step 5 Click Hosts.
- Step 6 Click Create.
- **Step 7** On the Create Host screen, complete the following fields:

Name	Description
Host Type drop-down list	Select the host type from the drop-down list.
Name field	Enter the name of the host.
Description field	Enter a description of the host.
OS Type field	Enter the OS type.

Modifying a Host

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the host you want to modify, and click **View Details**.
- Step 5 Click Hosts.
- **Step 6** Click the row with the host you want to modify, and click **Modify**.
- **Step 7** On the **Modify Host** screen, the following fields can be changed:

Name	Description
Name field	Name of the host.
Description field	Enter a description of the host.
OS Type field	Enter the OS type.

Step 8 Click Submit.

Host Initiators Report

Initiators are endpoints from which iSCSI sessions originate. Any host bus adapter (HBA) can have one or more initiators registered on it. Each initiator is uniquely identified by its worldwide name (WWN or IQN).

The Host Initiators report provides the following information:

- Initiator Name
- Type

- Is Bound
- ISCSI Type
- Host
- Node WWN
- Port WWN
- CHAP Secret Enabled

The Host Initiators Report is located under the Hosts screen.

Creating a Host Initiator

VNXe supports iSCSI and FC initiators. The following information is required:

- WWN of FC Host Bus Adapter of the host
- ISCSI initiators
 - ° IQN of the iSCSI HBA on the host
 - · CHAP username and CHAP secret (optional)

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device on which you want to create the host initiator, and click View Details.
- Step 5 Click Hosts.
- **Step 6** Click the row with the host on which you want to create the host initiator, and click **View Details**.
- Step 7 Click Host Initiators.
- Step 8 Click Create.
- **Step 9** On the **Add Host Initiator** screen, complete the following fields:

Name	Description
Initiator Type drop-down list	Choose ISCSI or FC from the drop-down list.
IQN or WWN field	Specify the IQN for ICSCI access or the WWN for FC access.
CHAP User Name field	Specify the Chap User Name.
CHAP Secret field	Specify the Chap Secret.

Step 10 Click Submit.

Modifying a Host Initiator

For ISCSI initiators, CHAP information can be modified.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device that contains the host intiator you want to modify, and click View Details.
- Step 5 Click Hosts.
- **Step 6** Click the row with the host that contains the host intiator you want to modify, and click **View Details**.
- Step 7 Click Host Initiators.
- **Step 8** Click the row with the host intiator you want to modify.
- Step 9 Click Modify.
- **Step 10** On the **Modify Host Initiator** screen, the following fields can be modified:

Name	Description
CHAP User Name field	Specify the Chap User Name.
CHAP Secret field	Specify the Chap Secret.

Step 11 Click Submit.

Registering a Host Initiator

The "Register" action can be used to manually connect an initiator to its host.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the host intiator you want to register, and click **View Details**.
- Step 5 Click Hosts.
- **Step 6** Click the row with the host that contains the host intiator you want to register, and click **View Details**.
- Step 7 Click Host Initiators.
- **Step 8** Click the row with the host intiator you want to register.
- Step 9 Click Register.
- Step 10 On the Register Host Initiator screen, click Submit.

Unregistering a Host Initiator

The "Unregister" action can be used to remove connected initiator paths.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the host intiator you want to unregister, and click **View Details**.
- Step 5 Click Hosts.
- Step 6 Click the row with the host that contains the host intiator you want to unregister, and click View Details.
- Step 7 Click Host Initiators.
- **Step 8** Click the row with the host intiator you want to unregister.
- Step 9 Click Unregister.
- Step 10 On the Unregister Host Initiator screen, click Submit.

Host Luns Report

The Host Luns report shows information about the relationship between the LUNs and the hosts.

The Host Luns report contains the following information:

- LUN Name
- Host

- Host LUN Identifier (HLU)
- Type
- · Read Only
- Snapshot

The Host Luns Report is located under the Hosts screen.

Host Initiator Paths Report

The Host Initiator Paths report shows initiator available paths.

The Host Initiator Paths report contains the following information:

- Initiator Name
- Is Logged On
- Registration Type
- Ethernet Port
- FC Port

The Host Initiators Paths Report is located under the Hosts screen.

Host IP Ports Report

The Host IP Ports report shows the information about host connections.

The report contains the following information:

- Address
- Type
- Subnet Mask
- Host

The **Host IP Ports Report** is located under the **Hosts** screen.

Creating a Host IP Port

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create the host IP port, and click View Details.
- Step 5 Click Hosts.
- **Step 6** Click the row with the host on which you want to create the host IP port, and click **View Details**.
- Step 7 Click Host IP Ports.
- Step 8 Click Create.
- **Step 9** On the Create Host IP Port screen, complete the following fields:

Name	Description
Network Address field	Enter the IP address or network name for the port.

Step 10 Click Submit.

Modifying a Host IP Port

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device contains the host IP port you want to modify, and click View Details.
- Step 5 Click Hosts.
- **Step 6** Click the row with the host that contains the host IP port you want to modify, and click **View Details**.
- Step 7 Click Host IP Ports.
- **Step 8** Click the row with the host IP port you want to modify.
- Step 9 Click Modify.
- **Step 10** On the **Modify Host IP Port** screen, the following fields can be changed:

Name	Description
Network Address field	Enter the new IP address or network name for the port.

Step 11 Click Submit.

FC Ports Report

The FC ports report shows the available Fiber Channel ports information.

The report contains the following information:

- Name
- Storage Processor
- WWN
- Current Speed
- · Requested Speed
- Available Speeds
- SFP Supported Speeds

Ethernet Ports Report

The Ethernet Ports report shows Ethernet port configuration information.

The report contains the following information:

- Name
- Storage Processor
- Current Speed
- · Requested Speed
- · Supported Speeds
- Port Number
- MAC Address

File Interfaces Report

The File Interfaces report contains information about network interfaces in the VNXe system. These interfaces control access to Windows (CIFS) and UNIX/Linux (NFS) file storage.

Creating a File Interface

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create a file interface and click **View Details**.
- **Step 5** Click File Interfaces.
- Step 6 Click Create.
- **Step 7** On the Create File Interface screen, complete the following fields:

Name	Description
Select NAS Server field	Select the NAS Server from the list.
Ethernet Port field	Select the Ethernet Port from the list.
IP Address field	Specify an IP Address.
Gateway field	Specify a Gateway.
Net Mask field	Specify a Net Mask.
Prefix Length field	Specify a Prefix length.
VLAN ID field	Specify a VLAN ID.
Configuration drop-down list	Choose one of the following options from the drop-down list:
	• Global
	Override
	• Local

Step 8 Click Submit.

Modifying a File Interface

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the file interface you want to modify and click **View Details**.
- Step 5 Click File Interfaces.
- **Step 6** Click the row with the file interface you want to modify.
- Step 7 Click Modify.
- **Step 8** On the **Modify File Interface** screen, the following fields can be modified:

Name	Description
Ethernet Port field	Select the Ethernet Port from the list.
IP Address field	Specify an IP Address.
Gateway field	Specify a Gateway.
Net Mask field	Specify a Net Mask.
Prefix Length field	Specify a Prefix Length.
vlan ID field	Specify a vlan ID.

Step 9 Click Submit.

ISCSI Nodes Report

The ISCSI nodes report shows information about available Ethernet ports that can be used for creating a ISCSI interface.

The report contains the following information:

- Name
- Ethernet Port
- Alias

ISCSI Interface Report

The ISCSI interface is necessary in order to access LUNs from Hosts through ISCSI access.

The report contains the following information:

- Port
- Port IQN
- IP Address
- Subnet Mask
- IP Protocol Version
- Prefix Length
- VLAN ID

Creating an ISCSI Interface

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create the ISCSI interface and click **View Details**.
- Step 5 Click ISCSI Interfaces.
- Step 6 Click Create.
- **Step 7** On the Create ISCSI Interface screen, complete the following fields:

Name	Description
ISCSI Node field	Select the ISCSI Node from the list.
IP Address field	Specify the IP address.
Subnet Mask field	Specify the Subnet Mask.
IPv6 Prefix Length field	Specify the IPv6 Prefix Length.
Gateway field	Specify the Gateway.
VLAN ID field	Specify the VLAN ID.

Step 8 Click Submit.

Modifying an ISCSI Interface

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the ISCSI interface you want to modify, and click **View Details**.
- Step 5 Click ISCSI Interfaces.
- **Step 6** Click the row with the ISCSI interface you want to modify.
- Step 7 Click Modify.
- **Step 8** On the **Modify ISCSI Interface** screen, the following fields can be modified:

Name	Description
IP Address field	Specify the IP address.
Subnet Mask field	Specify the Subnet Mask.
IPv6 Prefix Length field	Specify the IIPV6 Prefix Length.
Gateway field	Specify the Gateway.
VLAN ID field	Specify the VLAN ID.

Step 9 Click Submit.

Fast Cache Report

The FAST Cache is a large capacity secondary cache that uses SAS Flash disks to improve system performance by extending the storage system's existing caching capacity. You can configure individual storage pools to use the FAST Cache. When you do this, all storage resources created in those pools use the FAST Cache.

The report contains the following information:

- Name
- Description
- Number of Disks
- Free Capacity (GB)
- Total Capacity (GB)
- · Raid Level
- Disk Type

Disk Report

Disks report shows the following information about available disks:

- Name
- Usuable Capacity (GB)
- Total Capacity (GB)
- Model
- Tier Type
- Disk Group
- Storage Pool
- WWN
- Manufacturer
- · Disk Technology

Storage Pool FAST VP Report

The Storage Pool FAST VP report shows information about FAST VP settings for the selected storage pool.

The report contains the following information:

- Storage Pool
- · Schedule Enabled
- Data Relocation State
- Data Relocation Type
- Data Relocation Rate
- Data Relocated (GB)
- Data Moving Up (GB)
- Data Moving Down (GB)
- Data Moving Within Tier (GB)
- Last Start Time
- Last End Time

Start Data Relocation

Data can be relocated using the "Start relocation" action.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device with the storage pool on which you want to start data relocation and click **View Details**.
- Step 5 Click Storage Pools.
- **Step 6** Click the row with the storage pool on which you want to start data relocation and click **View Details**.
- Step 7 Click Fast VP.
- **Step 8** Click the row with the storage pool.
- Step 9 Click Start Relocation.
- **Step 10** On the **Start Data Relocation** screen, complete the following fields:

Name	Description
1	Choose one of the following from the drop-down list:
list	• High
	• Medium
	• Low

Step 11 Click Submit.

Stop Data Relocation

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device with the storage pool on which you want to stop data relocation and click **View Details**.
- Step 5 Click Storage Pools.
- **Step 6** Click the row with the storage pool on which you want to stop data relocation and click **View Details**.
- Step 7 Click Fast VP.
- **Step 8** Click the row with the storage pool.
- **Step 9** Click **Stop Relocation**.
- Step 10 On the Stop Data Relocation screen, click Submit .

Storage Pools Storage Tiers Report

The Storage pool Tiers report shows information about tiering configurations of selected storage pools.

The report contains the following information:

- Name
- Storage Pool
- Raid Type
- · Stripe Width
- Free Capacity (GB)
- Total Capacity
- Used Capacity
- Data Moving Up (GB)
- Data Moving Down (GB)
- Data Moving Within Tier (GB)

Jobs Report

The Jobs Report lists all requests initiated in the system. It's used to check the progress of the request and the results.

The report contains the following information:

- ID
- Job Name
- · Method Name
- Start Time
- Elapsed Time
- State Change
- Submit Time
- Progress%
- Current State

FAST VP Report

Fully Automated Storage Tiering for Virtual Pools (FAST VP) enables the system to retain the most frequently accessed or important data on fast, high-performance disks. FAST VP moves the less frequently accessed and less important data to lower-performance, cost-effective disks.

The report shows the details about FAST VP settings such as its Status, scheduled days, amount of data moved to high performance/capacity tiers, amount of data within the tier, etc.

Storage Tier Report

If FAST VP is installed on your system, you can create tiered storage pools, which consist of multiple disk types, such as Flash disks and SAS disks. Using a tiered pool optimizes disk utilization.

The report contains the following information:

- ID
- Tier Type
- Total Space (GB)
- Free Space (GB)
- Total Disks
- Unused Disks
- Tag

IP Interfaces Report

This report shows the IP Interfaces available and their IP Address, Subnet Mask, and what Ethernet Port on which each interface is running.

The report contains the following information:

• ID

- IP Address
- Netmask
- IP Protocol
- Prefix Length
- Ethernet PortID
- Tag

CIFS Server Report

It shows the details about the CIFS Server such as the file interface associated with it and its domain.

The report contains the following information:

- Name
- NAS Server
- WorkGroup
- File Interface
- NetBIOS Name
- Domain
- Organization
- SMBCA Support
- SMB MultiChannel
- SMB Protocol
- Tag

Creating a CIFS Server

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device on which you want to create the CIFS server, and click View Details.
- Step 5 Click CIFS Server.
- Step 6 Click Create.
- **Step 7** On the Create CIFS Server screen, complete the following fields:

Name	Description
Select NAS Server field	Select the NAS from the list.
NetBios Name field	Specify the NetBios name.
WorkGroup field	Specify a workgroup.
Local Admin Password field	Enter the Local Admin password.

Step 8 Click Submit.

Modifying a CIFS Server

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the CIFS server you want to modify, and click **View Details**.
- Step 5 Click CIFS Server.
- **Step 6** Click the row with the CIFS server you want to modify.
- Step 7 Click Modify.
- **Step 8** On the **Modify CIFS Server** screen, you can modify the following fields:

Name	Description
NetBios Name field	Specify the NetBIOS name.
WorkGroup field	Specify a workgroup.
Local Admin Password check box	Enter the Local Admin password.

Step 9 Click Submit.

CIFS Share Report

The report provides information about Common Internet File System (CIFS) shares in the storage system. The system uses Active Directory to authenticate user and user group access to the share.

The report contains the following information:

- ID
- CIFS Share Name
- Type
- Path
- Creation Time
- Continuous Availability
- CIFS Encrypted
- Read-Only?
- Modified Time
- File System
- CIFS Share Description

Creating a CIFS Share

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create the CIFS share, and click **View Details**.
- Step 5 Click CIFS Share.
- Step 6 Click Create.
- **Step 7** On the Create CIFS Share screen, complete the following fields:

Name	Description
File System field	Select the File System from the list.
Path field	Specify a path to a location in the file system.
Name field	Specify a name for the share.
Description field	Specify a description for the share.
CIFS Server field	Select a server from the list.
Is Read Only check box	When checked, enables read-only.
Is Encryption Enabled check box	When checked, enables CIFS encryption.
Is Continuous Availability Enabled check box	When checked, enables Continuous Availability.

Name	Description
Is Access Entry Enabled check box	When checked, enables Access Level Permissions.

Step 8 In the Create CIFS Shares dialog box, click Submit.

Modifying a CIFS Share

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device that contains the CIFS share you want to modify, and click View Details.
- Step 5 Click CIFS Share.
- **Step 6** Click the row with the CIFS share you want to modify.
- Step 7 Click Modify.
- **Step 8** On the **Modify CIFS Share** screen, the following fields can be changed:

Name	Description
Description field	Specify a description for the share.
Is Read Only check box	When checked, enables read-only.
Is Encryption Enabled check box	When checked, enables CIFS encryption.
Is Continuous Availability Enabled check box	When checked, enables Continuous Availability.
Is Access Entry Enabled check box	When checked, enables Access Level Permissions.

Step 9 Click Submit.

DNS Server Report

The DNS Server Report shows the DNS Configuration and list of IP addresses that correspond to the name servers in the domain.

The report contains the following information:

- ID
- DNS Domain Name
- Origin
- Addresses
- Tag

Modifying a DNS Server

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the DNS server you want to modify, and click **View Details**.
- Step 5 Click DNS Server.
- **Step 6** Click the row with the DNS server.
- Step 7 Click Modify.
- **Step 8** On the **Modify DNS Server** screen, the following fields can be changed:

Name	Description
Addresses field	Specify an address.
Origin drop-down list	Choose the DNS IP origin.

Step 9 Click Submit

NAS Server Report

This report contains the following information:

Storage Pool

Name

Mode

Used Space (GB)

Home Node

Current Node

Replication Enabled

Default Unix User

Default Windows User

MultiProtocol Enabled

Current Unix Directory

Creating a NAS Server

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create the NAS server, and click **View Details**.
- Step 5 Click NAS Server.
- Step 6 Click Create.
- **Step 7** On the Create NAS Server screen, complete the following fields:

Name	Description
Storage Pool field	Select the storage pool from the list.
Name field	Name the file system.
Mode drop-down list	Choose Normal or Destination from the drop-down list.
Storage Processor field	Select the storage processor from the list.

Step 8 Click Submit.

Modifying a NAS Server

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device that contains the NAS server you want to modify, and click **View Details**.
- Step 5 Click NAS Server.
- **Step 6** Click the row with the NAS server you want to modify.
- Step 7 Click Modify.
- **Step 8** In the **Modify NAS Server** dialog box, the following fields can be changed:

Name	Description
Name field	Enter a new name for the server.

Step 9 Click Submit.

NFS Server Report

The NFS Server report shows the details about NAS Server instance with NFS protocol and file interfaces supporting it.

The report includes:

- Name
- NAS Server
- File Interface
- File Interface Name

Creating an NFS Server

You create the NFS server by specifying NAS Server running NFS protocol.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create the NFS server, and click **View Details**.
- Step 5 Click NFS Server.
- Step 6 Click Create.
- **Step 7** On the Create NFS Server screen, complete the following fields:

Name	Description
Select the NAS Server field	Select the NAS server from the list.

Step 8 Click Submit.

Routes Report

The Routes report contains details about the Static IP Routes.

The report shows the following information:

- ID
- Destination
- Netmask
- Gateway
- Prefix Length
- IP Interface ID
- Interface IP Address

Creating a Route

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the VNXe device on which you want to create the route, and click **View Details**.
- Step 5 Click Routes.
- Step 6 Click Create.
- **Step 7** On the **Create Route** screen, complete the following fields:

Name	Description
IP Interface field	Select the IP interface from the list.
Type drop-down list	Choose Default, Host, or Subnet from the drop-down list.
Destination field	Specify the destination to be connected.
Gateway field	Enter the gateway address if it is a default route.
Net Mask field	Enter the net mask.

Step 8 Click Submit.

Modifying a Route

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the VNXe device that contains the route you want to modify, and click View Details.
- Step 5 Click Routes.
- **Step 6** Click the row with the route you want to modify.
- Step 7 Click Modify.
- **Step 8** On the **Modify Route** screen, you can modify the following fields:

Name	Description
Type drop-down list	Choose Default, Host, or Subnet from the drop-down list.
Destination field	Specify the destination to be connected.

Name	Description
Gateway field	Enter the gateway address if it is a default route.
Net Mask field	Enter the net mask.

Step 9 Click Submit.

About EMC VPLEX

VPLEX is an EMC technology that provides a virtual storage system and access to data in the private cloud. A VPLEX can be implemented on Cisco UCS Director through a pod deployment such as Vblock, or as a standalone device. VPLEX has the following capabilities:

• Uses a single interface for a multi-vendor high-availability storage and compute infrastructure to dynamically move applications and data across different compute and storage locations in real time,

with no outage required. VPLEX combines scaled clustering with distributed cache coherence intelligence within the same data center, across a campus, or within a specific geographical region. Cache coherency manages the cache so that data is not lost, corrupted, or overwritten.

- Dynamically makes data available for organizations. For example, a business can be sustained through a failure that would have traditionally required outages or manual restore procedures.
- Presents and maintains the same data consistently within and between sites, and enables distributed data collaboration.
- Establishes itself between ESX hosts that act as servers for virtual machines (VMs) and storage in a storage area network (SAN) where data can be extended within, between, and across pods.

EMC VPLEX Technology

EMC VPLEX encapsulates traditional physical storage array devices and applies three layers of logical abstraction to them. The logical relationships of each layer are shown in the Figure below.

Registered initiators

Ports

Storage View

Virtual Volume

Device

Extent

Storage

Figure 1: VPLEX Logical Storage Structures

VPLEX uses extents to divide storage volumes. Extents can be all or part of the underlying storage volume. VPLEX aggregates extents and applies RAID protection in the device layer. Devices are constructed using one or more extents.

Volume

At the top layer of the VPLEX storage structures are virtual volumes, which are created by underlying devices and inherit their size. A virtual volume can be a single contiguous volume that is distributed over two or more storage volumes.

VPLEX exposes virtual volumes to hosts that need to use them with its front-end (FE) ports, which are visible to hosts. Access to virtual volumes is controlled through storage views. Storage views act as logical containers that determine host initiator access to VPLEX FE ports and virtual volumes.

VPLEX can use a Local or Metro external hardware interface depending on the network implementation described in the following sections. For more information on VPLEX solutions for VPLEX Local or Metro see the Data Center Interconnect Design Guide for Virtualized Workload Mobility with Cisco, EMC, and VMware.

VPLEX Local

Use VPLEX Local when homogeneous or heterogeneous storage systems are integrated into a pod and data mobility is managed between the physical data storage entities.

VPLEX Local has the following attributes:

- Up to four engines
- Up to 8000 logical unit numbers (LUNs)
- Single site
- Single pod

VPLEX Metro

Use VPLEX Metro when access and data mobility is required between two locations that are separated by synchronous distances. VPLEX Metro allows a remote site to present logical unit numbers (LUNs) without needing physical storage for them. VPLEX Metro configurations help users to transparently move and share workloads, consolidate a pod, and optimize resource utilization across pods.

VPLEX Metro has the following attributes:

- One to eight engines
- Up to 16,000 LUNs
- Two sites
- Up to 100 kilometers

VPLEX Clustering Architecture

VPLEX uses clusters to break the boundaries of the pod and allow servers of multiple pods to have concurrent read and write access to shared block storage devices. The VPLEX cluster, shown in the Figure below is scalable. You can add up to four engines and connect multiple clusters to form a VPLEX Metro configuration. The engine is responsible for virtualizing the input and output stream and for connecting to hosts and storage using Fibre Channel connections to transfer data. VPLEX Metro currently supports up to two clusters in the

same pod to provide nondisruptive data mobility, heterogeneous storage management, and improved application availability.

Figure 2: VPLEX Cluster Configuration

Managing the VPLEX Storage System for a Pod

The VPLEX virtual storage system technology for accessing data in the private cloud is associated with and supported by a pod. Cisco UCS Director collects data through the VPLEX Element Manager API and connects to the VPLEX server through HTTPS. After you establish a VPLEX account and associate a pod with a VPLEX cluster (made up of one, two, or four engines in a physical cabinet), you can configure, manage, and monitor the following VPLEX features in Cisco UCS Director:

- Cluster inventory of ESX hosts and reports for two or more VPLEX directors that form a single fault-tolerant cluster and that are deployed as one to four engines.
- VPLEX engine inventory and reports for an engine that contains two directors, management modules, and redundant power.

- Director inventory and reports for the CPU module(s) that run GeoSynchrony, the core VPLEX software. Two directors are in each engine; each has dedicated resources that can function independently.
- Port inventory and reports for Fast Ethernet ports and initiator ports.
- VPLEX (local, metro, or global) data cache report for the temporary storage of recent writes and recently accessed data.
- Storage volume inventory and reports for a logical unit number (LUN) exported from an array.
- Extent management (create, delete, report) for a slice (range of blocks) of a storage volume.
- Device management (create, delete, attach/detach mirror, report) for a RAID 1 device whose mirrors are in geographically separate locations.
- Virtual volume management (create, modify, delete, report) for a virtual volume that can be distributed over two or more storage volumes that are presented to ESX hosts.
- Storage views management (create, modify, delete, report) for a combination of registered initiators (hosts), front-end ports, and virtual volumes that are used to control host access to storage.
- Recovery point for determining the amount of data that can be lost before a given failure event.

For more information about VPLEX use cases, see the EMC VPLEX Metro Functional Overview section of the Cisco Virtualized Workload Mobility Design Considerations chapter in the Data Center Interconnect Design Guide for Virtualized Workload Mobility with Cisco, EMC, and VMware.

Adding an EMC VPLEX Account

- **Step 1** Choose **Administration** > **Physical Accounts**.
- **Step 2** On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Click Add.
- Step 4 On the Add Account screen, choose EMC VPLEX from the Account Type drop-down list and click Submit.
- **Step 5** On the second **Add Account** screen, complete the following fields:

Name	Description
Account Name field	A unique name that you assign to this account.
Description field	A description of this account.
Server IP field	The IP address of the VPLEX server.
Use Credential Policy checkbox	Check this check box if you want to use a credential policy for this account rather than enter the username and password information manually.

Name	Description
Credential Policy drop-down list	If you checked the Use Credential Policy check box, choose the credential policy that you want to use from this drop-down list.
	This field is only displayed if you choose to use a credential policy.
Username field	The username that this account uses to access the VPLEX server. This username must be a valid account in the VPLEX server.
	This field is not displayed if you chose to use a credential policy.
Password field	The password associated with the username.
	This field is not displayed if you chose to use a credential policy.
Protocol drop-down list	You must use the https transport type protocol.
Port field	The port used to access the VPLEX server. Port 443 is the default secure HTTPS port.
Connection Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait to establish a connection to the VPLEX server before timing out.
	The default value is 30 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
Socket Read Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait for data from the VPLEX server before timing out.
	The default value is 30 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
Contact field	The email address that you use to contact the administrator or other person responsible for this account.
Location field	The location of the contact.

Step 6 Click Submit.

Cisco UCS Director tests the connection to the EMC VPLEX server. If that test is successful, it adds the VPLEX account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

The polling interval configured on the **System Tasks** tab on the **Administration** > **System** window specifies the frequency of inventory collection. For more information about configuring the polling interval, see the *Cisco UCS Director Network Devices Management Guide*.

System Requirements

Component	Requirement
Networking	Two Cisco Nexus 5000/5500 or 7000 Series switches
	Two Cisco UCS 6100 or 6200 Series Fabric Interconnects
	Cisco Nexus 1000V switch
Computing	One or multiple Cisco UCS chassis with modules that have two Fabric Extenders per chassis
Storage	EMC VNX, VMAX, Vblock, or VSPEX storage systems
Cisco UCS Director	See the Compatibility Matrix for all supported versions.
Cisco UCS Director Bare Metal Agent	See the Compatibility Matrix for all supported versions.
Cisco UCS Director—resource reservation	2 GB memory and minimum 3000-GHz CPU
Cisco UCS Director Bare Metal Agent—resource reservation	2 GB memory and minimum 2000-GHz CPU
VMware (vCenter Server/ESXI/ESXi/vSphere, or Microsoft Hyper-V Manager) server	See the Compatibility Matrix for all supported versions.

Assigning a Pod to a Cluster

You must also create a pod with each VPLEX cluster (1 and 2).

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device that you want.
- **Step 4** Choose Clusters and click the cluster that you want to assign to the pod.
- Step 5 Click Assign to Pod.
- **Step 6** In the **Assign Pod to Cluster** page, complete the required field:

Name	Description
Select Pod drop-down list	Choose a pod type. This can be one of the following:
	• Default Pod
	• VSPEX
	• Generic
	• Vblock

- Step 7 Click Submit.
- **Step 8** Repeat the previous steps to assign a pod to the other cluster.

Unassigning a Pod from a Cluster

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and click the cluster you want.
- Step 5 Click Unassign Pod.
- **Step 6** In the **Unassign Pod from Cluster** page, click **Submit** to unassign the pod from the cluster.

Viewing VPLEX Engines

The duel VPLEX engines provide cache and processing power with redundant directors that each include two input and output (I/O) modules per director and one optional WAN COM I/O module for use in a VPLEX Metro configuration.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- Step 4 Choose Engines.
 - Information displays for the VPLEX engines, such as the serial numbers, engine IDs, and operational status.
- **Step 5** To view specific information about a specific engine, click on the engine and click **View Details**.

Information about the director, director ID, port, hostname, cluster, and so on, is displayed.

Rediscovering a Storage Array

Rediscover a storage array to view recently zoned and masked storage that has been presented to VPLEX.

Procedure

Click Rediscover.

- Step 1 Choose Physical > Storage.
 Step 2 On the Storage page, choose the account under Multi-Domain Managers.
 Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
 Step 4 Choose Clusters and double-click the cluster you want to expand.
 Step 5 Choose Storage Arrays.
 Step 6 Click on a storage array.
- Step 8 In the Rediscover Storage Array screen, click Submit.

Storage Volume Claiming

Step 7

Storage volumes are logical unit numbers (LUNs) that are exported from an array. The claim process ensures that only relevant storage volumes can be processed when presented to the VPLEX cluster.

Claiming a Storage Volume

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Storage Volumes.
- Step 6 Click Claim.
- **Step 7** In the Claim Storage Volume screen, complete the required fields, including the following:

Name	Description
New name field	The user-defined name to be applied to the storage volume.

Name	Description	
Thin Rebuild check box	Check the check box to set the LUN to thin provisioning upon rebuilding Thin provisioning allocates what is needed while taking advantage of the dynamic thin allocation capabilities of the back-end storage volume.	
	Note The actual storage allocated on a back-end storage volume is a function of the written portions of the storage volume, rather than the advertised capacity of the storage volume.	
Application Consistent check box	Check the check box to allow the importation of existing LUNs that are one-to-one representations of existing storage volumes. These volumes can be easily imported by a host after removing VPLEX from the data path. The ability to easily move from virtualized to nonvirtualized disk storage is the main advantage to this approach. This approach limits the usable extent size to that of the underlying storage volume and imposes upper level limits on device layout and construction.	

Step 8 Click Submit.

Unclaiming a Storage Volume

Storage volumes are logical unit numbers (LUNs) that are exported from an array. Unclaim storage volumes that are no longer relevant for processing by the VSPEX cluster.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose **Storage Volumes**.
- **Step 6** Choose the storage volume that you want to unclaim.
- Step 7 Click Unclaim.
- **Step 8** In the **Unclaim Storage Volume** screen, click **Submit** to unclaim the storage volume.

Extents

VPLEX uses extents to divide storage volumes. Extents can be all or part of the underlying storage volume. VPLEX aggregates extents and applies RAID protection in the device layer. Devices are constructed using one or more extents and can be combined into more complex RAID schemes and device structures as wanted.

Extents should be sized to match the desired capacity of the virtual volume. If the storage volume that you want to use for an extent is larger than the desired virtual volume, you should create an extent that is the size of the desired virtual volume.

Note

Do not create smaller extents and then use devices to concatenate or stripe the extents.

Creating an Extent

You can create an extent for a storage volume and specify its capacity.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose Extents.
- Step 6 Click Create.
- **Step 7** In the Create Extent screen, complete the required fields, including the following:

Name	Description
Storage Volume field	Click Select . In the Select dialog box, chose a storage volume name and click Select .
Size (GB) field	The size of the extent in gigabytes.
Extent Count field	The number of extents for this storage volume.

Step 8 Click Submit.

Deleting an Extent

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Extents.
- **Step 6** Choose the appropriate extent to delete.
- Step 7 Click Delete.
- **Step 8** In the **Delete Extent** screen, click **Submit** to confirm your deletion.

VPLEX Storage Devices

A VPLEX storage device is made up of a single block storage device that uses storage from the VPLEX cluster. The following types of VPLEX devices are available:

- RAID-0—Provides a performance-oriented striped or dispersed data mapping technique.
- RAID-1—Provides a mirroring data mapping technique to keep two (or more) devices in an identical state at all times. If one device fails, the operating system (OS) can continue, using the remaining disk(s).
- Concatenated RAID—Shows that data is concatenated across a linear collection of disks.

Creating a VPLEX Storage Device

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Devices.
- Step 6 Click Create.
- **Step 7** In the Create Device screen, complete the required fields, including the following:

Name	Description
Type of Device drop-down list	Choose the type of storage device:
	• RAID-0
	• RAID-1
	• Concatenated RAID
Select Extents field	Click the Select button. In the Select screen, choose one or more extents to create this local device and click Select . An extent is a slice (range of blocks) of a storage volume.
Device Name field	The name of this single block storage device that is unique across all clusters.
Stripe Depth drop-down list	Choose how large you would like the stripe depth to be. The block size is 4 kilobytes.

Step 8 Click Submit.

Mirroring a VPLEX Storage Device

When a VPLEX storage device is mirrored, it creates a single view of storage data and makes this data accessible immediately to the host. This process eliminates the need for host-based mirroring, which saves the host CPU processing resources and increases high availability for critical applications.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Devices.
- Step 6 Click Attach Mirror.
- Step 7 In the Attach Local/Remote Mirror screen, complete the required fields, including the following:

Name	Description
Mirror Type drop-down list	Choose the type of storage device:
	• Local—Local storage device.
	• Remote—Remote storage device.

Name	Description
Mirror Device button	Click the Select . In the Select dialog box, choose the device that is to be attached to the VPLEX storage device as a mirror and click Select .

Step 8 Click Submit.

Viewing a VPLEX Storage Device

You can view VPLEX storage device information such as its total capacity in gigabytes, whether it is local or global (remote), if a rebuild is allowed, and whether it is RAID 1, RAID 0, or RAID C (concatenated).

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Devices.
- Step 6 Click View Details.
- Step 7 Click Submit.

Detaching a Mirror from a VPLEX Storage Device

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Devices.
- Step 6 Click Detach Mirror icon.
- **Step 7** In the **Detach Local/Remote Mirror** dialog box, click **Select**. In the **Select** dialog box, choose the name of the mirrored device and click **Submit** to remove it from the VPLEX storage device.

Deleting a VPLEX Storage Device

You can delete a single block storage device that uses storage from the cluster.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose **Clusters** and double-click the cluster you want to expand.
- **Step 5** Choose **Devices**.
- **Step 6** Choose the appropriate device to delete.
- Step 7 Click Delete.
- **Step 8** In the **Delete Device** dialog box, click **Submit** to confirm your deletion.

Consistency Groups

Volumes are protected by consistency groups. If two data sets are dependent on one another (such as a database and a database log), they should be part of the same consistency group.

Virtual volumes are added to a consistency group when a consistency group is created. A consistency group ensures that there is application-dependent write consistency of application data on distributed virtual volumes within the system if a disaster occurs. The properties of the consistency group are then immediately applied to the added volumes.

Use the following guidelines for consistency groups:

- Only volumes with visibility and storage-at-cluster properties that match those properties of the consistency group can be added to the consistency group.
- The maximum number of volumes in a consistency group is 1000.
- You should group together volumes used by the same application or host in a consistency group.
- Only volumes with storage at both clusters (distributed volumes) are allowed in remote consistency groups.
- If any of the specified volumes are already in the consistency group, these volumes are skipped.
- When you initiate a detach rule for a consistency group, it takes 5 seconds to suspend the nonpreferred cluster and maintain input and output functions on the preferred cluster.

Creating a Consistency Group

Consistency groups allow you to group volumes together and apply a set of properties to the entire group.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose Consistency Groups.
- Step 6 Click Create.
- **Step 7** In the Create Consistency Group page, complete the required fields, including the following:

Name	Description
Group Name field	The group name, which is unique among all clusters.
Type drop-down list	Choose the type of virtual volumes that need to be added to the consistency group. This can be one of the following:
	• Local:cluster-1
	• Global: All clusters
Global Visibility check box	Check the check box to synchronize and make all global consistency groups visible to clusters.
Detach Rule drop-down list	Choose from the following detach (win) rules for each volume (cluster):
	• cluster 1 detaches—In any failure scenario, the preferred cluster for that volume is declared as cluster 1.
	• cluster 2 detaches—In any failure scenario, the preferred cluster for that volume is declared as cluster 2.
	• no automatic winner—The input/output (I/O) operation suspends at both VPLEX clusters if either the link partitions or an entire VPLEX cluster fails.
Delay field	The number of seconds after an inter-cluster link fails before the winning cluster detaches.
Virtual volume(s) field	Click Select . In the Select dialog box, choose the virtual volume(s) to add to the consistency group and click Select .

Step 8 Click Submit.

Adding a Virtual Volume to an Existing Consistency Group

You can add one or more virtual volumes to an existing consistency group.

Note

You can also add virtual volumes when you create a consistency group.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose Consistency Groups.
- Step 6 Choose Add Virtual Volumes.
- Step 7 In the Add Virtual Volume(s) to Consistency Groups page, click Select.
- Step 8 In the Select dialog box, choose the virtual volume(s) to add to the consistency group and click Select.
- Step 9 Click Submit.

Removing a Virtual Volume from a Consistency Group

You can remove one or more virtual volumes from an existing consistency group.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose Consistency Groups.
- **Step 6** Click Remove Virtual Volumes.
- Step 7 In the Remove Virtual Volume(s) from Consistency Groups page, click Select.
- **Step 8** In the **Select** dialog box, choose the virtual volume(s) to add to the consistency group and click **Select**.
- Step 9 Click Submit.

Enabling or Disabling a RecoverPoint for a Consistency Group

A RecoverPoint can be enabled for a consistency group to provide any-point-in-time recovery for diversified storage environments both within and across pods to provide continuous data protection for operational and

disaster recovery on VPLEX distributed virtual volumes within the VPLEX system. RecoverPoint can also be disabled for a consistency group.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose Consistency Groups.
- **Step 6** Click Enable/Disable Recoverpoint.
- **Step 7** In the **Enable/Disable Recoverpoint on Consistency Group** page, choose either **Enable** or **Disable** from the **Select Option** drop-down list.
- Step 8 Click Submit.

Viewing a Consistency Group

You can view the virtual volumes that belong to a consistency group.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose Consistency Groups.
- **Step 6** Choose the consistency group that you want to view.

Note In the **Virtual Volumes** tab, you can see a list of the virtual volumes that belong to the consistency group.

Deleting an Existing Consistency Group

Procedure

Step 1 Choose Physical > Storage.
 Step 2 On the Storage page, choose the account under Multi-Domain Managers.
 Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
 Step 4 Choose Clusters and double-click the cluster you want to expand.
 Step 5 Choose Consistency Groups.
 Step 6 Choose the consistency group that you want to delete.
 Step 7 Click Delete.

In the **Delete Consistency Groups** confirmation dialog box, click **Submit**.

Distributed Devices and RuleSets

Step 8

Creating a distributed device allows you to use storage from both clusters in a single VPLEX cluster (plex).

Each distributed device that spans two VPLEX clusters must have a RuleSet assigned to it. The RuleSet defines which cluster is declared a preferred cluster that maintains access to the volume and which cluster should be declared the nonpreferred cluster in a failure event. Once these roles are declared, the clusters' distributed devices detach so that they can resume normal input and output operations (I/O).

Viewing a RuleSet for a Distributed Device

Procedure

Step 1 Choose Physical > Storage.
 Step 2 On the Storage page, choose the account under Multi-Domain Managers.
 Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
 Step 4 Choose RuleSets.

Creating a Distributed Device

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose **Distributed Devices**.
- Step 5 Click Create.
- **Step 6** In the Create Distributed Device screen, complete the required fields, including the following:

Name	Description
Souce Cluster	Click Select . In the Select dialog box, choose the source cluster to display source devices and click Select .
Souce Device	Click Select . In the Select dialog box, choose a local device as a source to create a distributed device and click Select .
Target Device field	Click Select . In the Select dialog box, choose a local device that you want to add as target to create as a distributed device and click Select .
Logging Volume(s) field	Click Select . In the Select dialog box, choose one or more logging volumes that you want to add to this distributed device and click Select .
Device Name field	The new device name that is unique across VPLEX.
RuleSet field	Click Select . In the Select dialog box, choose the RuleSet name that you previously configured and want to add to this distributed device and click Select .

Step 7 Click Submit.

Deleting a Distributed Device

Procedure

- Step 1 Choose Physical > Storage.
 Step 2 On the Storage page, choose the account under Multi-Domain Managers.
 Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
 Step 4 Choose Distributed Devices.
- **Step 5** Choose the distributed device that you want to delete.
- Step 6 Click Delete.
- **Step 7** In the **Delete Distributed Device** screen, click **Submit** to confirm your deletion.

Initiators

An initiator is a host that is registered with a port so that it can access the VPLEX storage network.

Creating an Initiator

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose **Clusters** and double-click the cluster you want to expand.
- **Step 5** Choose **Initiators**.
- Step 6 Click Register.
- Step 7 In the Register Host Initiator screen, complete the required fields, including the following:

Name	Description
Type drop-down list	Choose the type of intiator:
	• default—
	Other software initiator.
	• hpux— HP (Hewlett Packard)-UX iSCSI software initiator
	• sun-vcs—Sun Microsystems, Inc and Veritas Cluster Server (VCS) software initiator
	• aix—IBM AIX software initiator
	• recoverpoint—EMC RecoverPoint initiator

Name	Description
Initiator Name field	The initiator hostname that is assigned to the registered port.
Port WWN	The worldwide name (WWN) in a Fibre Channel fabric that is a unique port identifier in the storage network.
Node WWN field	The WWN in a Fibre Channel fabric that is a unique node identifier in the storage network.

Step 8 Click Submit.

Viewing an Initiator

You can view an initiator host that has access to VPLEX storage:

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose **Initiators**.
- **Step 6** Click the initiator you want and click **View Details**.

Deleting an Initiator

You can delete an initiator that currently has VPLEX storage access.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Initiators.
- **Step 6** Choose the name of the initiator host and click **Delete**.
- **Step 7** In the **Deregister Initiator Port** confirmation screen, click **Submit**.
 - **Note** Optionally, check **Force** to delete the initiator port if the initiator host attached to the port.

Virtual Volumes

VPLEX uses extents to divide storage volumes. Extents can be all or part of the underlying storage volume. VPLEX aggregates extents and applies RAID protection in the device layer. Devices are constructed using one or more extents.

At the top layer of the VPLEX storage structures are virtual volumes, which are created by underlying devices and inherit their size. A virtual volume can be a single contiguous volume that is distributed over two or more storage volumes.

VPLEX exposes virtual volumes to hosts that need to use them with its front-end (FE) ports, which are visible to hosts. Access to virtual volumes is controlled through storage views. Storage views act as logical containers that determine host initiator access to VPLEX FE ports and virtual volumes.

Creating a Virtual Volume

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Virtual Volumes.
- Step 6 Click Create.
- **Step 7** In the Create Virtual Volume screen, complete the required fields, including the following:

Name	Description
Select Local Device Name field	Click Select . In the Select dialog box, choose a local storage device and click Select .
Storage Tier ID field	The storage tier number that is used to manage the local storage volume as a single unit. Storage tiers are used to manage arrays based on price, performance, capacity and other attributes.

Step 8 Click Submit.

Enabling Remote Access on a Virtual Volume

You can allow remote access to a virtual volume for a host that needs to use it.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Virtual Volumes.
- **Step 6** Choose a virtual volume name from the list.
- Step 7 Click Remote Access.
- Step 8 In the Remote Access on Virtual Volume screen, complete the following required field:

Name	Description
Select Access Type drop-down	Choose from the following:
list	• Enable—Activates remote access to this virtual volume.
	• Disable—Removes remote access to this virtual volume.

Step 9 Click Submit.

Expanding a Virtual Volume

A virtual volume is presented to a host that needs to use it.

Note

A virtual volume can be expanded to include either extents or local devices.

- Step 1 Choose Physical > Storage.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Virtual Volumes.
- Step 6 Click Expand.
- Step 7 In the Expand Virtual Volume screen, complete the required fields, including the following:

Name	Description
Device Type drop-down list	Choose from the following:
	• Extent—A slice (range of blocks) of a storage volume.
	• Local Device—One or more extents that have additional specific RAID properties. The local device must come from a cluster.
Select Extent field	This parameter is available if Extent was chosen as the device type. Click Select . In the Select dialog box, choose the extent that you want and click Select .
Select Local Device field	This parameter is available if Local Device was chosen as the device type. Click Select . In the Select dialog box, choose the local device that you want and click Select .

Step 8 Click Submit.

Viewing a Virtual Volume

You can view a single virtual volume from the cluster.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose **Virtual Volumes**.
- **Step 6** Choose the appropriate virtual volume to view.
- Step 7 Click View.

Information about the virtual volume appears in a new view that describes the virtual volume attributes.

Deleting a Virtual Volume

You can delete a single block storage device that uses storage from the cluster.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Virtual Volumes.
- **Step 6** Choose the appropriate virtual volume to delete.
- Step 7 Click Delete.
- **Step 8** In the **Delete Virtual Volume** screen, click **Submit** to confirm your deletion.

Viewing Target Ports

Target ports are front-end (FE) ports where the director port is connected to host initiators. These ports are visible to hosts and contain such information as their name, node worldwide number (WWN), port WWN, whether they are enabled, their Director IDs, and so on.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose **Target Ports**.
- **Step 6** Click View Details to see more detailed information about an individual target port.

Storage Views

VPLEX allows host access to virtual volumes through storage views. Storage views act as logical containers that determine host initiator access to VPLEX front-end (FE) ports and virtual volumes.

Creating a Storage View

You can create a storage view that includes virtual volumes, and VPLEX ports to control host access to the virtual volumes.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Storage Views.
- Step 6 Click Create.
- **Step 7** In the Create Storage View screen, complete the following fields:

Name	Description
Select Target Port field	Click Select . In the Select dialog box, choose one or more target ports to add to the storage view and click Select .
Storage View Name field	The storage view that is unique across all clusters.

Step 8 Click Submit.

Deleting a Storage View

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Storage Views.
- Step 6 Click Delete.
- **Step 7** In the **Delete Storage View** confirmation screen, click **Submit**.

Note Optionally, check **Force** to delete the storage view if hosts are attached to this view.

Step 8 Click Submit.

Adding an Initiator to a Storage View

You can create a storage view that includes one or more initiator ports.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Storage Views.
- **Step 6** Choose the storage view you want from the **Storage Views** panel.
- Step 7 Click Add Initiator.
- Step 8 In the Add Initiators to Storage View screen, click Select.
- Step 9 In the Select screen, choose one or more initiator host accounts to add to the storage view and click Select.
- Step 10 Click Submit.

Removing an Initiator from a Storage View

You can remove one or more initiator ports from a storage view.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Storage Views.
- **Step 6** Choose the storage view you want from the **Storage Views** panel.
- **Step 7** Click Remove Initiator.
- **Step 8** In the Remove Initiators from Storage View screen, click Select.
- **Step 9** In the **Select** screen, choose one or more initiator host accounts to remove from the storage view and click **Select**.
- Step 10 Click Submit.

Adding a Virtual Volume to a Storage View

You can create a storage view that includes virtual volumes.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choos Storage Views.
- **Step 6** Choose the storage view you want from the **Storage Views** panel.
- Step 7 Click Add Virtual Volume.
- **Step 8** In the Add Virtual Volume to Storage View screen, complete the required fields, including the following:

Name	Description
Virtual Volume field	Click Select . In the Select dialog box, choose a virtual volume (see the Name column) and click Select .
LUN ID field	(Optional) enter the logical unit number (LUN) identifier.

Step 9 Click Submit.

Removing a Virtual Volume from a Storage View

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose **Clusters** and double-click the cluster you want to expand.
- **Step 5** Choose **Storage Views**.
- **Step 6** Choose the storage view you want from the **Storage Views** panel.
- Step 7 Click Remove Virtual Volume.
- Step 8 In the Remove Virtual Volume from Storage View screen, click Select from the Virtual volume field.
- **Step 9** In the **Select** screen, choose a virtual volume and click **Select**.
- Step 10 Click Submit.

Adding a Port to a Storage View

You can create a storage view that includes target ports. Target ports are front-end (FE) ports where the director port is connected to host initiators. These ports are visible to hosts and contain such information as their name, node worldwide number (WWN), port WWN, whether they are enabled, their Director IDs, and so on.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Storage Views.
- **Step 6** Choose the storage view you want from the **Storage Views** panel.
- Step 7 Click Add Port.
- Step 8 In the Add Target Ports to Storage View screen, click Select.
- **Step 9** In the **Select** screen, choose one or more target ports to add to the storage view and click **Select**.
- Step 10 Click Submit.

Removing a Port from a Storage View

You can remove target port(s) from a storage view.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Storage Views.
- **Step 6** Choose the storage view you want from the **Storage Views** panel.
- Step 7 Click Remove Port.
- Step 8 In the Remove Target Ports from Storage View screen, click Select.
- **Step 9** In the **Select** screen, choose one or more target ports to remove from the storage view and click **Select**.
- Step 10 Click Submit.

Logging Volumes

VPLEX uses logging volumes to track changes during a loss of connectivity or loss of a volume (mirror in a distributed device). You should create a logging volume on each cluster. Each logging volume must be large enough to contain one bit for every page of distributed storage space (approximately 10 gigabytes of logging volume space for every 320 terrabytes of distributed devices). The logging volumes can experience a lot of input and output during and after-link outages, so each logging volume should be striped across many disks for speed, and have a mirror on another fast disk to secure this information.

Creating a Logging Volume

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- **Step 3** Choose **EMC VPLEX** to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose **Clusters** and double-click the cluster you want to expand.
- Step 5 Choose Logging Volumes.
- Step 6 Click Create.
- **Step 7** In the Create Logging Volume screen, complete the required fields, including the following:

Name	Description
Type of Device drop-down list	Choose the type of storage device:
	• RAID-0—Performance-oriented striped or dispersed data mapping technique.
	• RAID-1—Mirroring data mapping technique that keeps two (or more) devices in an identical state at all times.
Select Extents field	Click the Select button. In the Select dialog box, choose one or more extents for this device and click Select . An extent is a slice (range of blocks) of a storage volume.
Volume Name field	The volume name that is unique across all clusters.
Stripe Depth field	The stripe depth for a RAID-0 device.

Step 8 Click Submit.

Adding a Mirror to a Logging Volume

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- **Step 5** Choose Logging Volumes.
- **Step 6** Choose a logging volume from the list.
- Step 7 Click Add Mirror.
- **Step 8** In the **Select** screen, choose a storage volume and click **Select**.
- Step 9 Click Submit

The mirror is added to the logging storage volume.

Deleting a Logging Volume

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the account under **Multi-Domain Managers**.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- **Step 4** Choose Clusters and double-click the cluster you want to expand.
- Step 5 Choose Logging Volumes.
- **Step 6** Choose the appropriate logging volume to delete.
- Step 7 Click Delete.
- **Step 8** In the **Delete Logging Volume** screen, click **Submit** to confirm your deletion.

Managing VPLEX System Tasks

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Storage page, choose the account under Multi-Domain Managers.
- Step 3 Choose EMC VPLEX to expand the connected VPLEX device(s) and click the VPLEX device you want.
- Step 4 Choose System Tasks.
- **Step 5** Double-click the EMC VPLEX Tasks folder icon.
- **Step 6** Choose a VPLEX task and click **Manage Task**.
- **Step 7** In the **Manage Task** screen, complete the following fields:

Name	Description
Task Execution drop-down list	Choose Enable or Disable to enable or disable this VPLEX task.
System Task Policy drop-down list	Choose either the default-system-task-policy or the local-run-policy assigned to this VPLEX task.
Minutes drop-down list	Choose the frequency in minutes for how often the VPLEX task is executed.

- Step 8 Click Submit.
- **Step 9** If you want to run this VPLEX task, click **Run Now**.
- **Step 10** If you want to view this VPLEX task, click **View Details**.

Overview

The XtremIO Storage Array is an all-flash system, based on a scale-out architecture. The system uses building blocks, called X-Bricks, which can be clustered together. The system operation, controlled by a stand-alone dedicated Linux-based server, is called the **XtremIO Management Server (XMS)**. Each XtremIO cluster requires an XMS host, which can be either a physical or a virtual server. A single XMS host can manage multiple clusters, so a single cluster may not require its own XMS host. The array continues operating if it is disconnected from the XMS, but cannot be configured or monitored.

XtremIO array architecture is designed to deliver the full performance potential of flash. Linear scaling of all resources, such as CPU, RAM, SSDs, and host ports, is done in a balanced manner. This allows the array to achieve any desired performance level, while maintaining consistency of performance that is critical to predictable application behavior. The XtremIO Storage Array provides a high level of performance that is consistent over time, system conditions, and access patterns. It is designed for high-granularity true random I/O.

Cluster performance level is not affected by capacity utilization level, number of volumes, or aging effects. Moreover, performance is not based on a "shared cache" architecture and is not affected by the data set size or data access pattern. Due to its content-aware storage architecture, XtremIO provides:

- Even distribution of data blocks, inherently leading to maximum performance and minimal flash wear
- Even distribution of metadata
- Freedom from hotspots in data or metadata
- · Easy setup and no tuning
- Advanced storage functionality, including Inline Data Deduplication and Compression, thin provisioning, advanced data protection (XDP), snapshots, and more

XtremIO Connector in Cisco UCS Director

The XtremIO connector allows you to monitor and manage the XtremIO volumes, initiator groups, LUN mappings, snapshots, and basic network configurations. It connects through the HTTPS protocol. In order to manage XtremIO in Cisco UCS Director, the XMS Host IP is used when adding a physical account in Cisco UCS Director.

Orchestration

Viewing the Task Library

The Task Library contains Cisco UCS Director tasks related to Cisco EMC XtremIO. You can view the Task Library using the following steps.

Procedure

- Step 1 Choose Orchestration.
- **Step 2** On the **Orchestration** page, click **Workflows**.
- Step 3 Click Task Library.
- **Step 4** On the **Task Library** screen, click **Submit** to launch the Task Library documentation.
- **Step 5** Scroll down the list to EMC XtremIO tasks.
- **Step 6** Clicking on any of the listed tasks takes you to the specifics of the task.

XtremIO Accounts

Adding an EMC XtremIO Account

To manage EMC XtremIO, Cisco UCS Director uses the XMS Host IP.

- **Step 1** Choose Administration > Physical Accounts.
- **Step 2** On the **Physical Accounts** page, click **Physical Accounts**.
- Step 3 Click Add.
- **Step 4** On the Add Account screen, complete the following fields:
 - a) **Pod**—Choose a pod for the account from the drop-down list.
 - b) Category—Choose Storage.
 - c) Account Type—Choose EMC XtremIO from the drop-down list.
- Step 5 Click Submit.
- **Step 6** On the second **Add Account** screen, complete the following fields:
 - a) Account Name—A unique name that you assign to this account.
 - b) **Description**—A description of this account.
 - c) Management Server Address—This can be an IPv4 or IPv6 address or the host address.
 - d) Use Credential Policy—Check this box if you want to use a credential policy for this account rather than enter the username and password information manually.
 - e) **Credential Policy** drop-down list—Choose the credential policy that you want to use from this drop-down list.
 - This field is only displayed if you choose to use a credential policy.
 - f) **Username**—The username that this account uses to access the XtremIO storage system. This username must be a valid account in the storage system.
 - This field is not displayed if you chose to use a credential policy.
 - g) **Password**—The password associated with the specified XtremIO username. This field is not displayed if you chose to use a credential policy.
 - h) Protocol
 - Both HTTP and HTTPS are supported.
 - Port—The port used to access the XtremIO storage system.
 Must not be Port 7225. Port number varies depending on implementation.
 - j) **Discover XtremIO Clusters**—Check this box if you want Cisco UCS Director to discover the available XtremIO clusters now so that you can choose the one you want to manage with this account. If you check this box, the **Cluster Name** field becomes a drop-down list of the clusters managed by the
 - XMS host. If you do not check this box, you must manually enter the information in the **Cluster Name** field.
 - k) Cluster Name—A valid name for the XtremIO cluster that you want to discover and manage with this account.
 - You must enter a valid name for an XtremIO cluster in this field if you did not check **Discover XtremIO Clusters**.
 - 1) **Connection Timeout (Seconds)**—The length of time in seconds that Cisco UCS Director will wait to establish a connection to the XMS host before timing out.
 - The default value is 60 seconds The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.

- m) **Socket Read Timeout (Seconds)**—The length of time in seconds that Cisco UCS Director will wait for data from the XMS host before timing out.
 - The default value is 50 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
- n) **API Version**—Choose the API verson that is supported on the XtremIO storage system. The default value is API version v2.
- Contact—The email address that you use to contact the administrator or other person responsible for this
 account.
- p) **Location**—The location of the contact.

Step 7 Click Submit.

Cisco UCS Director tests the connection to the EMC XtremIO storage system and XMS host. If that test is successful, it adds the XtremIO account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

The polling interval configured on the **System Tasks** tab on the **Administration** > **System** window specifies the frequency of inventory collection. For more information about configuring the polling interval, see the *Cisco UCS Director Network Devices Management Guide*.

Editing an XtremIO Account

Procedure

- **Step 1** Choose Administration > Physical Accounts.
- **Step 2** On the **Physical Accounts** page, click **Physical Accounts**.
- **Step 3** Click the XtremIO account that you wish to edit.
- Step 4 Click Edit.
- **Step 5** On the **Edit Account** screen, you can edit the following fields:
 - a) Description
 - b) Management Server Address
 - c) Use Credential Policy
 If checked, the Credential Policy drop-down list is shown.
 - d) User Name
 - e) Password
 - f) Protocol

Both HTTP and HTTPS are supported.

- g) Port
 - Must not be 7225. Port number varies depending on implementation.
- h) **Discover XtremIO Clusters** check box If checked, a drop-down list of all of the XMS clusters is shown. You can choose the cluster to be managed.
- i) Cluster Name

If the **Discover XtremIO** Clusters check box is not checked, enter a valid name of the cluster managed by the XMS host.

- j) Contact
- k) Location
- Step 6 Click Submit.
- **Step 7** On the **Physical Accounts** page, choose the account.
- **Step 8** Click Test Connection.

XtremIO Volumes

A Volume is a set of blocks, presented to the operating environment as a range of consecutive logical blocks with disk-like storage and I/O semantics. It is possible to define various percentages of disk space as Volumes in an active cluster.

Creating an XtremIO Volume

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC XtremIO account for which you want to create a volume.
- Step 5 Click View Details.
- Step 6 Click Volumes.
- Step 7 Click Create.
- **Step 8** On the Create Volume screen, complete the following:
 - a) Enter the volume name.
 - b) Enter the volume size.
 - c) From the Capacity Type drop-down list, choose the type of the device capacity.
 - d) From the **Logical Block Size** drop-down list, choose the block size of the volume. The size cannot be mofified later.
 - e) From the **Small Input/Output Alerts** drop-down list, choose **Enabled** to send alerts for higher number of small input or output.
 - f) From the **Unaligned Input/Output Alerts** drop-down list, choose **Enabled** to send alerts for higher number of unaligned input or output.
 - g) From the VAAI TP Alerts drop-down list, choose Enabled to send VAAI TP alerts.

Step 9 Click Submit.

Modifying an XtremIO Volume

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to modify the volume.
- Step 5 Click View Details.
- Step 6 Click Volumes.
- **Step 7** Click the row with the volume that you wish to modify.
- Step 8 Click Modify.
- **Step 9** On the **Modify Volume** screen, you can modify any or all of the following:
 - a) Volume Name
 - b) Volume Size
 - c) Capacity Type
 - d) Enable or disable the small input/output alerts.
 - e) Enable or disable the unaligned input/output alerts.
 - f) Enable or disable VAAI TP alerts.

Step 10 Click Submit.

XtremIO Initiator Groups

The XtremIO Storage Array uses the term "Initiators" to refer to ports that can access a Volume. Initiators are managed in the XtremIO Storage Array by assigning them to an Initiator Group. The Initiators within an Initiator Group share access to one or more of the cluster's Volumes.

Creating an Initiator Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to create an initiator group.
- Step 5 Click View Details.
- Step 6 Click Initiator Groups.
- **Step 7** On the **Initiator Groups** page, click **Create**.
- **Step 8** On the Create Initiator Group screen, complete the following fields:

- a) Enter the initiator group name.
- b) Enter the initiator name in the following format: <i nitiator name > @ <port address > . If there are multiple initiators, enter the comma separated initiator names in the specified format.

Step 9 Click Submit.

Renaming an Initiator Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC XtremIO account for which you want to rename the initiator group.
- Step 5 Click View Details.
- Step 6 Click Initiator Groups.
- **Step 7** Click the row with the initiator group that you wish to rename.
- Step 8 Click Rename.
- **Step 9** On the **Rename Initiator Group** screen, type in a new name for the Initiator
- Step 10 Click Submit

XtremIO Initiators

Initiators are added to the cluster by defining them in an Initiator Group. You can define Initiators when adding a group, or later define them by using the Edit Initiator Group option. To remove an Initiator, edit the group and delete the Initiator's properties.

Creating an Initiator

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- Step 4 Click the row with the EMC XtremIO account for which you want to create an initiator.
- Step 5 Click View Details.
- Step 6 Click Initiators.
- **Step 7** On the **Initiators** page, click **Create**.
- **Step 8** On the **Create Initiator** screen, complete the following fields:
 - a) Expand Initiator Group Name field and choose the group name where you wantto create an initiator.
 - b) Enter the initiator name.
 - c) Enter the initiator name in the following format: <i nitiator name > @ <port address > . If there are multiple initiators, enter the comma separated intiator names in the specified format.
 - d) From the **OS** drop-down list, choose one of the following:
 - Other
 - · Windows
 - Linux
 - ESX
 - Solaris
 - AIX
 - HP-UX

Step 9 Click Submit.

Modifying an Initiator

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to modify the initiator.
- Step 5 Click Initiators.
- **Step 6** Click the row with the initiator that you want to modify.
- Step 7 Click Modify.
- **Step 8** On the **Modify Initiator** screen, you can modify any or all of the following:
 - a) Initiator Name
 - b) Port address
 - c) From the **OS** drop-down list, choose one of the following:
 - Other
 - Windows
 - Linux
 - ESX
 - Solaris
 - AIX
 - HP-UX

Step 9 Click Submit.

Volume Mapping

When you map a volume to an initiator group, a Logical Unit Number (LUN) is assigned to that volume.

You can map multiple volumes to an initiator group. The initiator group's first mapped volume is assigned a LUN of 1. Additional mapped volumes are assigned LUNs in sequential order. You can also manually enter a LUN ID during mapping. These numbers cannot be changed later so any change must be specified during LUN creation.

Mapping a Volume

Note

You cannot change a LUN ID after a volume is mapped to an initiator group.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to map a volume.
- Step 5 Click View Details.
- Step 6 Click Volume Mapping.
- Step 7 Click Map Volume.
- **Step 8** On the **Map Volume** screen, do the following:
 - a) Expand the **Volume** field and choose the volume that you want to map.
 - b) Expand the **Initiator Group** and choose the initiator group where you want to map the volume.
 - c) In the LUN ID field, do one of the following:
 - Enter a unique LUN ID to specify the LUN ID that you want to assign to the mapped volume.
 - Leave the field empty to have the EMC XtremIO system automatically assign a LUN ID to the mapped volume.
 - d) Click Submit.

Unmapping a Volume

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to unmap a volume.
- Step 5 Click View Details.
- Step 6 Click Volume Mapping.
- **Step 7** Click the row with the volume that you want to unmap.
- Step 8 Click UnMap Volume.
- Step 9 Click Submit.

Consistency Groups

Consistency Groups (CG) are used to create a consistent image of a set of Volumes, usually used by a single application, such as a database. With XtremIO CGs, you can create a Snapshot of all Volumes in a group,

using a single command. This ensures that all Volumes are created at the same time. Many operations that are applied on a single Volume can also be applied on a CG.

Adding a Consistency Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account to which you want to add a consistency group.
- Step 5 Click View Details.
- Step 6 Click Consistency Group.
- Step 7 Click Create.
- Step 8 On the Create EMC XtremIO Consistency Group screen, complete the following fields:
 - a) Enter the consistency group name.
 - b) Expand the Volume field and check the volumes that you want to use for the Consistency Group.
- Step 9 Click Submit.

Renaming a Consistency Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to rename the consistency group.
- Step 5 Click View Details.
- Step 6 Click Consistency Group.
- **Step 7** Click the row with the consistency group that you want to rename.
- Step 8 Click Rename.
- **Step 9** On the **Rename Consistency Group** screen, enter the consistency group name.
- Step 10 Click Submit.

Viewing a Consistency Group Report

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to view the consistency group report.
- Step 5 Click View Details.
- Step 6 Click Consistency Group.

A list of Consistency Groups available under the EMC XtremIO account is displayed.

Adding a Volume to a Consistency Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account.
- Step 5 Click View Details.
- Step 6 Click Consistency Group.
- **Step 7** Click the row with the consistency group to which you want to add a volume.
- Step 8 Click Add Volume.
- **Step 9** On the **Add Volume to Consistency Group** screen, expand **Volume** and check a volume that you want to add to the consistency group.
- Step 10 Click Submit.

Removing a Volume from a Consistency Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account.
- Step 5 Click View Details.
- Step 6 Click Consistency Group.
- **Step 7** Click the row with the consistency group from which you to remove the volume.
- Step 8 Click Remove Volume.
- **Step 9** On the **Remove Volume from Consistency Group** screen, expand **Volume** and check the volumes that you want to remove from the consistency group.
- Step 10 Click Submit.

iSCSI

To establish an iSCSI connection for transferring data, first define an iSCSI portal. An iSCSI portal is an IPv4 address and port associated with a Target port. Each iSCSI Target can be associated with multiple portals. If an IP connection requires routing to remote networks, you can define routing rules that apply to the iSCSI Target ports only.

Creating an iSCSI Portal

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC XtremIO account for which you want to create an iSCSI portal.
- Step 5 Click View Details.
- Step 6 Click iSCSI Portals.
- Step 7 Click Create.
- **Step 8** On the Create iSCSI Portal screen, complete the following fields:
 - a) Enter the IPv4 address with the CIDR notation (XX.XX.XX.XX/XX).
 - b) Enter the VLAN number for the iSCSI portal in the range of 0 to 4094.

- c) Expand iSCSI Target and check the target that you want to use.
- Step 9 Click Submit.

Creating an iSCSI Route

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- Step 4 Click the row with the EMC XtremIO account for which you want to create an iSCSI route.
- Step 5 Click View Details.
- Step 6 Click iSCSI Routes.
- Step 7 Click Create.
- **Step 8** On the Create iSCSI Routes screen, complete the following fields:
 - a) Enter the name of the iSCSI route.
 - b) Enter the destination network address of the iSCSI route with the CIDR notation.
 - c) Enter the gateway IP address.
- Step 9 Click Submit.

Snapshots

Snapshots are instantaneous copy images of Volume data. The state of the data captured is exactly as it appeared at the specific point in time that the Snapshot was created. This enables you to save the Volume data state and then access the specific Volume data whenever needed, including after the source Volume has changed.

A Snapshot can be taken either directly from a source Volume or from other Snapshots within a source Volume's group (Volume Snapshot Group). XtremIO Snapshots are by default read-write, but can be created as read-only to maintain immutability.

The source data remains available without interruption, while the Snapshot can be used to perform other functions on the data. Changes made to the Snapshot's source do not affect the Snapshot data.

XtremIO Snapshots are space-efficient both in terms of metadata consumed and physical capacity. Snapshots are implemented using redirect-on-write methodology. New writes to the source Volume (or Snapshot) are redirected to new locations, and only metadata is updated to point to the new data location. This method guarantees that there is no performance degradation while Snapshots are created.

Creating a Snapshot Scheduler

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to create a snapshot scheduler.
- Step 5 Click View Details.
- Step 6 Click Schedulers.
- Step 7 Click Create.
- **Step 8** On the Create Snapshot Scheduler screen, complete the following fields:
 - a) From the **Scheduler to be created on** drop-down list, choose **Volumes**, **Consitency Group**, or **Snapshot Set** and then do one of the following:
 - Expand **Volume** and check the volume that you want to use.
 - Expand Consitency Group and check the consistency group that you want to use.
 - Expand **Snapshot Set** and check the snapshot set that you want to use.
 - b) From the **Schedule** drop-down list, choose either **Fixed Interval** or **Explicit Time** and then do one of the following.
 - In the **Snapshot Fixed Schedule** field, enter the desired time in the following format: hh:mm:ss.
 - Enter the snapshot explicit schedule and choose the snapshot explicit schedule day.
 - c) In the **Number of Snapshots to Keep** field, enter a number of snapshots to be saved.
 - d) If a suffix is required for the scheduler, enter it in the **Suffix** field.
 - e) From the Snapshot Type drop-down list, choose Read/Write or Read Only.

Step 9 Click Submit.

Viewing Snapshot Sets

A Snapshot Set is a group of Snapshots that were taken using a single command and represents a point in time of a group. A Snapshot Set can be the result of a Snapshot taken on a CG, on another Snapshot Set, or on a set of Volumes that were selected manually. A Snapshot Set maintains a relationship with the ancestor from which it was created.

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account.
- Step 5 Click View Details.
- Step 6 Click Snapshot Sets.

A list of Snapshot Sets is displayed. You can also click **Snapshots** and see more information about the Snapshot Sets.

Creating a Snapshot Set

Note

The **Create Snapshot Set** feature is also available under the **Snapshots** tab. The steps used to create a Snapshot Set are identical.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to create a snapshot set.
- Step 5 Click View Details.
- Step 6 Click Snapshot Sets.
- Step 7 Click Create.
- **Step 8** On the Create Snapshot Set screen, complete the following fields:
 - a) Enter a name in the **Snapshot Set Name** field.
 - b) (Optional). Enter a suffix for the snapshot name in the **Snapshot Suffix** field. (Optional)
 - c) From the **Type** drop-down list, choose **Read/Write** or **Read Only**.
 - d) From the **Snapshot Origin Type** drop-down list, choose **Volumes**, **Consitency Group**, or **Snapshot Set** and then do one of the following:
 - Expand Volume and check the volumes that you want to use.
 - Expand Consitency Group and check the consistency group that you want to use.
 - Expand **Snapshot Set** and check the snapshot set that you want to use.

Step 9 Click Submit.

System Reports

Cisco UCS Director XtremIO provides the following System Reports:

• Clusters Report

The following reports are displayed as child reports under the Clusters Report.

- Bricks Report
- Storage Controllers Report
- SSDs Report
- Data Protection Report
- X-Env Report
- Targets Report

Viewing System Reports

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account for which you want to view system reports.
- Step 5 Click View Details.
- Step 6 Click Clusters.
- **Step 7** Click the row with the cluster for which you want to view system reports.
- Step 8 Click View Details.

The child reports are available as separate tabs. Clicking the desired tab displays the details of the report.

Other Configurations

Viewing the Email Notifier

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- Step 3 On the Storage page, click Storage Accounts.
- **Step 4** Click the row with the EMC XtremIO account.
- Step 5 Click View Details.
- Step 6 Click Clusters.
- **Step 7** Click the row with the cluster for which you want to view the email notifier.
- Step 8 Click View Details.
- Step 9 Click Email Notifier.

Details about the Email Notifier are displayed.

Viewing the SNMP Notifier

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Storage** page, choose the pod.
- **Step 3** On the **Storage** page, click **Storage Accounts**.
- **Step 4** Click the row with the EMC XtremIO account.
- Step 5 Click View Details.
- Step 6 Click Clusters.
- **Step 7** Click the row with the cluster for which you want to view the SNMP notifier.
- Step 8 Click View Details.
- Step 9 Click SMTP Notifier.

Details about the SMTP Notifier are displayed.

Viewing the Syslog Notifier

Step 1	Choose Physical > Storage.
Step 2	On the Storage page, choose the pod.
Step 3	On the Storage page, click Storage Accounts.
Step 4	Click the row with the EMC XtremIO account.
Step 5	Click View Details.
Step 6	Click Clusters tab.
Step 7	Click the row with the cluster for which you want to view the syslog notifier.
Step 8	Click View Details.
Step 9	Click Syslog Notifier. Details about the Syslog Notifier are displayed.

- Replication Through Consistency Groups, page 240
- Group Sets, page 258
- System Tasks, page 260

EMC RecoverPoint Support

EMC RecoverPoint protects storage array logical unit numbers (LUNs) and provides concurrent local and remote data replication. RecoverPoint also provides continuous data protection for operational and disaster recovery by enabling any point-in-time recovery (PITR) for diversified storage environments both within and across pods.

RecoverPoint secures data by providing synchronous and asynchronous replication across heterogeneous arrays for block-based storage protocols. Replication improves reliability, fault-tolerance, and accessibility to data. If data becomes compromised or lost, you can look at data back in time and recover it by extending the vCenter VMware Site Recovery Manager (SRM) functionality with PITR capabilities.

RecoverPoint provides the ability to do the following:

- Enable continuous data protection for any PITR to optimize the recovery point objective (RPO) and recovery time objective (RTO).
- Ensure recovery consistency for inter-dependent applications.
- Provide synchronous or asynchronous replication policies.
- Reduce WAN bandwidth consumption and utilize available bandwidth optimally.

In Cisco UCS Director, you can access the following EMC RecoverPoint reports for Vblock clusters:

- Consistency groups that ensure that there is application-dependent write consistency of application data on VPLEX distributed virtual volumes within the VPLEX system in the event of a disaster.
- Consistency group copies of the initial consistency groups.

• Replication sets that consist of a production source volume and its local or local and remote replica volumes. One or more replication sets makes up a consistency group.

For more details about scalability and configuration options, see the EMC RecoverPoint documentation.

Adding an EMC RecoverPoint Account

- **Step 1** Choose **Administration** > **Physical Accounts**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Click Add.
- **Step 4** On the Add Account screen, do the following:
 - a) From the Account Type drop-down list, choose EMC RecoverPoint.
 - b) Click Submit.
- **Step 5** On the next **Add Account** screen, complete the following fields:

Name	Description
Account Name field	A unique name for this RecoverPoint account.
Description field	A description of this account.
Server IP field	The IP address of the RecoverPoint system.
Use Credential Policy checkbox	Check this check box if you want to use a credential policy for this account rather than enter the username and password information manually.
Credential Policy drop-down list	If you checked the Use Credential Policy check box, choose the credential policy that you want to use from this drop-down list. This field is only displayed if you choose to use a credential policy.
Username field	The username that this account uses to access the RecoverPoint system. This username must be a valid account in the RecoverPoint system. This field is not displayed if you chose to use a credential policy.
Password field	The password associated with the username. This field is not displayed if you chose to use a credential policy.

Name	Description
Protocol drop-down list	Choose one of the following transport types that you want to use for this account:
	• http
	• https
	The default transport type protocol for this account is HTTPS.
Port field	The port used to access the RecoverPoint system. Port 7225 is the default secure HTTPS port through which Cisco UCS Director connects to the RecoverPoint system to obtain data.
API Version drop-down list	Choose the API verson that is supported on the RecoverPoint server. The default is API version 4_0.
Connection Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait to establish a connection to the RecoverPoint server before timing out.
	The default value is 60 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
Socket Read Timeout (Seconds) field	The length of time in seconds that Cisco UCS Director will wait for data from the RecoverPoint server before timing out.
	The default value is 60 seconds. The valid values are from 0 to 1800. An empty field or a value of 0 is interpreted as an infinite timeout.
Contact field	The email address that you use to contact the administrator or other person responsible for this account.
Location field	The location of the contact.

Step 6 Click Submit.

Cisco UCS Director tests the connection to the EMC RecoverPoint server. If that test is successful, it adds the RecoverPoint account and discovers all infrastructure elements in the storage system that are associated with that account. This discovery process and inventory collection cycle takes few minutes to complete.

The polling interval configured on the **System Tasks** tab on the **Administration** > **System** window specifies the frequency of inventory collection. For more information about configuring the polling interval, see the *Cisco UCS Director Network Devices Management Guide*.

RecoverPoint Appliance Clusters

RecoverPoint Appliance (RPA) clusters are a group of two to eight physical (or virtual) RPAs at the same geographic location. These clusters work together to replicate and protect data.

Assigning a RecoverPoint Cluster to a Pod

You can assign a RecoverPoint cluster to a pod in Cisco UCS Director. This configuration is optional.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint
- **Step 4** Click the row with the EMC RecoverPoint account that contains the cluster you want to assign to a pod.
- Step 5 Click View Details.
- Step 6 Click Clusters.
- Step 7 Click the row with the cluster that you want to assign and then click Assign to Pod.
- **Step 8** On the **Assign Pod to Cluster** screen, choose a pod type from the **Select Pod** drop-down list and click **Submit**. Repeat the previous steps if you need to assign another cluster to a pod.

What to Do Next

You can double-click a RecoverPoint cluster to view the cluster summary, cluster gateway, splitters, RPAs, VMware vCenter servers and filters, the repository volume, and other cluster volume information.

Unassigning a RecoverPoint Cluster from a Pod

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account that contains the cluster you want to unassign.
- Step 5 Click Clusters.
- **Step 6** Click the row with the cluster that you want to unassign.
- **Step 7** Click **Unassign from Pod** and then click **Submit**.

Replication Through Consistency Groups

In EMC RecoverPoint, volumes are protected by consistency groups. A consistency group ensures that updates to production volumes are also written to copies in a consistent and correct write-order. This configuration ensures that the copy can always be used to continue working from, or to restore the production source. The volumes must be replicated together in one consistency group to guarantee that at any point in time, the saved

data is in true form. If two data sets are dependent on each other (such as a database and a database log), they should be part of the same consistency group.

EMC RecoverPoint also supports simultaneous bidirectional replication. With this type of replication, the same RecoverPoint appliance (RPA) can serve as the source RPA for one consistency group and the target RPA for another consistency group.

For more detailed guidelines about RecoverPoint consistency groups, see the *EMC RecoverPoint Administrator's Guide*, which can be obtained from EMC.

Setting Up Replication

This procedure provides an overview of how to set up replication with a RecoverPoint consistency group in Cisco UCS Director.

- **Step 1** Create a consistency group with a production copy. See Creating a Consistency Group, on page 242.
- **Step 2** Create a consistency group copy to act as the replica for the production copy. See Creating a Consistency Group Copy, on page 246.
- **Step 3** Create a replication set for each production volume that you want to replicate. See Creating a Replication Set, on page 251.
- **Step 4** Add one or more user volumes to the consistency group copy in a replication set.

 The user volume is the primary volume in a replication set that contains the data you want to protect. See Adding a User Volume to a Consistency Group Copy, on page 252.
- **Step 5** Add one or more journal volumes to the consistency group copy in a replication set Journal volumes hold system information or point in time history and can be either a copy journal or a production journal. See Adding a Journal Volume to a Consistency Group Copy, on page 253.
- Step 6 Add a link to a consistency group copy.

 This link is used to transfer data between the production copy and the replication copies. See Adding a Link Between Consistency Group Copies, on page 254.
- **Step 7** Enable the consistency group. See Enabling a Consistency Group, on page 244.
- **Step 8** Enable the consistency group copy.

 See Enabling a Consistency Group Copy, on page 248.
- Step 9 Start the data transfer.
 You must initiate the first data transfer. It does not start automatically. See Starting Data Transfer for a Consistency Group, on page 257 and Starting a Transfer for a Consistency Group Copy, on page 257.

Creating a Consistency Group

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Physical Accounts** page, click **Multi-Domain Managers**.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to create the consistency group.
- Step 5 Click View Details.
- **Step 6** Click Consistency Groups.
- Step 7 Click Create.
- **Step 8** On the **Create Consistency Group** screen, complete the following fields:

Name	Description
Consistency Group Name	A group name that is unique among all clusters.
Production Name	A descriptive name for the production copy.
Cluster	Choose the RecoverPoint cluster where you want to create the group and then click Validate .
Modify Group Policy check box	(Optional) Check this check box if you want to modify the default group policy options and choose the primary and secondary RPAs for the consistency group.
Modify Copy Policy check box	(Optional) Check this check box if you want to modify the default production copy policy options.
Group Policy—Displayed only if you check	xed the Modify Group Policy check box.
Primary RPA	Choose the primary RecoverPoint appliance for this group.
Priority drop-down list	Choose the priority for the consistency group.
Distribute Group check box	Check this box if you want to create a group that can write across multiple RPAs.
	Each RecoverPoint system allows a maximum of eight distributed consistency groups.
Secondary RPAs	If you checked the Distribute Group check box, choose one or more secondary RPAs that you want to distribute data writes to.
Copy Policy—Displayed only if you checked	ed the Modify Copy Policy check box.

Name	Description
Host OS drop-down list	Choose the host operating system.
Journal Policy—Displayed only if you checked the	Modify Copy Policy check box.
Journal Compression drop-down list	Choose the journal compression level.
Maximum Journal Lag drop-down list	Choose the maximum journal lag.
Required Protection Window check box	Check this check box if you want to enable a protection window.
Protection Window	If you checked the Required Protection Window check box, enter the length of time for the protection window.
Window unit drop-down list	If you checked the Required Protection Window check box, choose the window time unit.
Enable Snapshot Consolidation check box	Check this box if you want to enable snapshot consolidation.
Do not consolidate snapshots for at least below period	If you checked the Enable Snapshot Consolidation check box, enter the length of time for which snapshot consolidation should not be performed.
Unit (Consolidation Period) drop-down list	If you checked the Enable Snapshot Consolidation check box, choose the consolidation period unit.
consolidate to one snapshot per day	If you checked the Enable Snapshot Consolidation check box, enter the number of days to consolidate snapshots that are older than the consolidation period.
Indefinitely check box	If you checked the Enable Snapshot Consolidation check box, check this check box if you want to consolidate snapshots for an indefinite number of days.
consolidate to one snapshot per week	If you checked the Enable Snapshot Consolidation check box, enter the number of weeks to consolidate snapshots that are older than the consolidation period.
Indefinitely check box	If you checked the Enable Snapshot Consolidation check box, check this check box if you want to consolidate snapshots for an indefinite number of weeks.

Step 9 Click Submit.

Enabling a Consistency Group

Enable each consistency group after you add the links between the consistency group copies.

Before You Begin

Add the links between the consistency group copies. See Adding a Link Between Consistency Group Copies, on page 254.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- **Step 3** Choose **EMC RecoverPoint**.
- **Step 4** Click the row with the EMC RecoverPoint account with the consistency group that you want to enable.
- Step 5 Click Consistency Groups.
- **Step 6** Click the row with the consistency group that you want to enable.
- **Step 7** From the More Actions drop-down list, choose Enable.
- Step 8 On the Enable Consistency Group screen, click Submit.

Applying a Bookmark to a Consistency Group

A bookmark is a text label that uniquely identifies a consistency group. You can bookmark a consistency group at any time. However, you cannot bookmark a disabled consistency group. Bookmarks are useful to mark particular points in time, such as an event in an application, or a point in time to fail over.

- **Step 1** Choose Physical > Storage.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- **Step 3** Choose **EMC RecoverPoint**.
- **Step 4** Click the row with the EMC RecoverPoint account with the consistency group you want to bookmark.
- Step 5 Click View Details.
- Step 6 Click Consistency Groups.
- **Step 7** Click the row with the consistency group that you want to bookmark.
- Step 8 From the More Actions drop-down list, choose Apply Bookmark.
- **Step 9** On the **Apply Bookmark** screen, complete the following fields:

Name	Description
Bookmark Name field	A unique name for the bookmark.
Consistency Type drop-down list	Choose one of the following consistency types:
	• Crash-Consistent—Creates snapshots (points in time) that are crash-consistent for data files, control files, and logs that are in the same RecoverPoint consistency group. This is the default type.
	• Application-Consistent—Used to bookmark Microsoft Volume Shadow Copy Service (VSS)-aware applications in many consistency groups. VSS guarantees that the applications are in a consistent state at the point-in-time when each bookmark is applied to an image. As a result, recovery using an image with a KVSS bookmark is faster than recovering from normal RecoverPoint images.
	The RecoverPoint KVSS utility is a command-line utility that enables applying bookmarks to Windows 2003 and 2008-based applications that support Microsoft Volume Shadow Copy Service (VSS).
Consistency Policy drop-down	Choose from the following consistency policies applied to this snapshot:
list	Never Consolidate—The snapshot is never consolidated.
	• Daily—The snapshot policy is applied daily.
	Weekly—The snapshot policy is applied weekly.
	Monthly—The snapshot policy is applied monthly.
	• (Default) Always Consolidate—The snapshot is consolidated the next time that the consolidation process runs.

Step 10 Click Submit.

Updating a Snapshot for a Consistency Group

You can collect the latest snapshot image for a consistency group.

A snapshot is a point in time marked by the system for recovery purposes. A snapshot includes only the data that has changed from the previous snapshot. Once the system distributes the snapshot to the remote storage system, the snapshot creates a new current image on the remote storage system. A snapshot is the difference between one consistent image of stored data and the next consistent image of stored data.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to update the snapshots for a consistency group.
- Step 5 Click View Details.
- Step 6 Click Consistency Groups.
- **Step 7** Click the row with the consistency group where you want to update the snapshots.
- Step 8 From the More Actions drop-down list, choose Update Snapshots.
- **Step 9** On the **Update Snapshots** screen, click **Submit**.

Consistency Group Copies

A consistency group copy includes all volumes in a consistency group. The volumes can be one of the following types:

- Production copy—A volume that is the source of the data you want to replicate.
- Local copy—A volume that is the target for the data replication.

Creating a Consistency Group Copy

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to create the consistency group copy.
- **Step 5** Click Consistency Groups Copies.
- Step 6 Click Create.
- **Step 7** On the **Create Consistency Group Copy** screen, complete the following fields:

Name	Description
Consistency Group field	Expand the field, check the box for the consistency group that you want to copy, and click Validate .
Copy Name field	A unique name for the consistency group copy.

Name	Description	
Cluster field	Expand the field, check the box for the cluster where the consistency group copy will be created, and click Validate .	
	The consistency group copy does not need to be on the same cluster as the production copy.	
Copy Policy		
Host OS drop-down list	Choose the host operating system.	
Journal Policy		
Journal Compression drop-down list	Choose the journal compression level.	
Maximum Journal Lag drop-down list	Choose the maximum journal lag.	
Required Protection Window check box	Check this check box if you want to enable a protection window.	
Protection Window	If you checked the Required Protection Window check box, enter the value of time for the protection window.	
Window unit drop-down list	If you checked the Required Protection Window check box, choose the window time unit.	
Enable Snapshot Consolidation check box	Check this check box if you want to enable snapshot consolidation.	
Do not consolidate snapshots for at least below period	If you checked the Enable Snapshot Consolidation check box, enter the value of time for which snapshot consolidation should not be performed.	
Unit (Consolidation Period) drop-down list	If you checked the Enable Snapshot Consolidation check box, choose the consolidation period unit.	
consolidate to one snapshot per day	If you checked the Enable Snapshot Consolidation check box, enter the number of days to consolidate snapshots that are older than the consolidation period.	
Indefinitely check box	If you checked the Enable Snapshot Consolidation check box, check this check box if you want to consolidate snapshots for an indefinite number of days.	
consolidate to one snapshot per week	If you checked the Enable Snapshot Consolidation check box, enter the number of weeks to consolidate snapshots that are older than the consolidation period.	

Name	Description	
Indefinitely check box	If you checked the Enable Snapshot Consolidation check box, check this check box if you want to consolidate snapshots for an indefinite number of weeks.	

Step 8 Click Submit.

Enabling a Consistency Group Copy

Enable each consistency group copy after you add the links between the consistency group copies.

Before You Begin

Add the links between the consistency group copies. See Adding a Link Between Consistency Group Copies, on page 254.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account with the consistency group copy that you want to enable.
- **Step 5** Click Consistency Groups Copies.
- **Step 6** Click the row with the consistency group copy that you want to enable.
- Step 7 Click Enable or Disable.
- **Step 8** From the More Actions drop-down list, choose Enable.
- **Step 9** On the **Enable Consistency Group Copy** screen, click **Submit**.

Enabling Image Access

You can enable image access to verify, backup, clone, or analyze data in a consistency group copy before failover or production recovery.

Note

You cannot enable image access on production copies.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- **Step 3** Choose **EMC RecoverPoint**.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to enable image access.
- Step 5 Click View Details.
- **Step 6** Click Consistency Groups Copies.
- **Step 7** From the More Actions drop-down list, choose Enable Image Access.
- **Step 8** On the **Enable Image Access** screen, complete the following fields:

Description
Choose an image to access: • The latest image—The last snapshot that was created at the production copy and transferred to the copy journal. This image is at the top of the image list and is the most current snapshot sent from production. • An image from the image list—Choose one of the images from the list of images in the copy journal. • A specific point in time or bookmark—This option displays advanced search criteria and lets you specify the image based on one of the following: • Point in Time, including date, time, and seconds. • Bookmark with the option of Exact text, Image Type, Max Range, and Max Range Units.

Name	Description
Select Image Access Mode drop-down list	Choose the image access mode by selecting one of the following options: • Logged Access—After disabling image access, any writes made to the copy while image access is enabled are undone. The distribution of images from the copy journal to the copy storage continues from the accessed image forward. The state of the copy storage is restored to No access.
	• Virtual Access—After disabling image access, the virtual volume and any writes made to it are undone faster than in logged access mode. The distribution of images from the copy journal to the copy storage continues from the last image that was distributed before image access was enabled. The state of the copy storage is restored to No access.
	• Virtual Access With Roll—After disabling image access, the virtual volume, any changes to it, and any writes made directly to the copy are discarded. The distribution of images from the copy journal to the copy storage continues from the image which the system has rolled to. The state of the copy storage is restored to No access.

Step 9 Click Submit.

Note Choose **Disable Image Access** to disable image access on the selected consistency group copy.

Editing a Consistency Group Copy Policy

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the Physical Accounts page, click Multi-Domain Managers.
- **Step 3** Choose **EMC RecoverPoint**.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to update a consistency group copy.
- Step 5 Click View Details.
- **Step 6** Click Consistency Groups Copies.
- Step 7 Click the row with the consistency group copy that you want to update and click View Details.
- Step 8 Click Copy Policy.
- **Step 9** From the More Actions drop-down list, choose Edit Copy Policy.
- **Step 10** On the **Edit Consistency Group Copy Policy** dialog box, update the **Copy Policy** and **Journal Policy** fields as needed.

For information about the fields, see Creating a Consistency Group Copy, on page 246.

Step 11 Click Submit.

Replication Sets

Consistency groups include one or more replication sets. Each replication set contains a production volume and the local or remote copy volumes (LUNs) where the production volume is replicated.

The number of replication sets in your system must be equal to the number of production volumes being replicated.

Creating a Replication Set

The number of replication sets in your system must be equal to the number of production volumes being replicated.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the **Physical Accounts** page, click **Multi-Domain Managers**.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to create the replication set.
- **Step 5** Click Replication Sets.
- Step 6 Click Create.
- **Step 7** In the Create Replication Set dialog box, complete the following fields:

Name	Description
Consistency Group Name field	Expand the field, check the box for the consistency group where you want to create the replication set, and click Validate .
Replication Set Name field	A unique name for the replication set.

Step 8 Click Submit.

Renaming a Replication Set

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- Step 4 Click the row with the EMC RecoverPoint account where you want to rename the replication set.
- Step 5 Click Replication Sets.
- **Step 6** Click the row with the replication set that you want to rename.
- Step 7 Click Edit.
- **Step 8** On the Edit Replication Set screen, enter the new name for the replication set.
- Step 9 Click Submit.

User Volumes and Journal Volumes

The consistency group copy in a replication set contains at least one user volume and one journal volume. These volumes hold the data for replication.

User Volumes

The user volume is the primary volume in a replication set. This volume contains the data you want to protect.

Journal Volumes

Each consistency group copy must include one or more journal volumes that are dedicated to holding system information or point in time history. The type of information contained in a journal volume depends upon the journal type.

You can add one of the following types of journals:

- Copy journal—Copy journals are dedicated to holding point-in-time information for each image on the production storage. They also hold bookmarks for significant points in time. The copy journals hold all changes to data, so that the copy storage can be rolled back to a previous point in time (PIT).
- Production journal—Production journals are dedicated to storing information about the replication process. This marking information makes synchronization between the production and copy volumes more efficient. A production journal does not contain snapshots. Since this volume is used for failover, we recommend that you configure journal protection policies for the production journal.

Adding a User Volume to a Consistency Group Copy

The user volume is the primary volume in a replication set. This volume contains the data you want to protect.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account that contains the consistency group copy and replication set.
- **Step 5** Click Replication Sets.
- **Step 6** Click the row with the replication set where you want to add the user volume.
- **Step 7** From the More Actions drop-down list, choose Add User Volume.
- **Step 8** On the Add User Volume to Group Copy screen, complete the following fields:

Name	Description
Consistency Group Copy field	Expand the field, check the box for the consistency group copy that includes the replication set where you want to add the user volume, and click Validate .
User Volume field	Expand the field, check the box for the user volume that you want to add to the replication set, and click Validate .

Step 9 Click Submit.

Adding a Journal Volume to a Consistency Group Copy

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- **Step 3** Choose **EMC RecoverPoint**.
- **Step 4** Click the row with the EMC RecoverPoint account that contains the consistency group copy where you want to add the volume.
- **Step 5** Click Consistency Groups Copies.
- **Step 6** Click the row with the consistency group copy where you want to add the volume.
- **Step 7** From the More Actions drop-down list, choose Add Journal Volume.
- **Step 8** On the **Add Journal Volume to Group Copy** screen, do the following:
 - a) Expand the **Journal Volume** field and choose the journal volume that you want to add to the group copy.
 - b) Click Submit.

Data Transfers

EMC RecoverPoint transfers data across a communication connection between the production copy and the replication copies in the replication set of a consistency group. When the link is open, data can be transferred between consistency group copies.

You can start the transfer of data from a production copy to all other replication copies in a consistency group within a RecoverPoint appliance (RPA) cluster.

When you configure the link for the data transfer, you choose the replication mode that you want to use for the transfer. This mode can be one of the following:

- Asynchronous—Replication in asynchronous mode creates a data copy that is synchronized automatically at specified intervals. The Recoverry Point Objective (RPO) that you configure for the link determines the length of these intervals. The default RPO is 25 seconds. In this mode, the host application initiates the data transfer, but does not wait for an acknowledgment from the remote vRPA before it initiates the next write. This is the default replication mode.
- Synchronous—Replication in synchronous mode creates a data copy that is always in sync with the production source. In this mode, the host application initiates the data transfer, then it waits for acknowledgment from the remote vRPA before starting the next transfer.

Adding a Link Between Consistency Group Copies

- **Step 1** Choose **Physical** > **Storage**.
- **Step 2** On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account with the consistency group copy where you want to add the link.
- **Step 5** Click Consistency Groups Copies.
- Step 6 Click Add Link.
- Step 7 On the Add Link Between Consistency Group Copies screen, complete the following fields:

Name	Description
First Copy field	Expand the field, check the box for the first consistency group copy to be linked.
Second Copy field	Expand the field, check the box for the second consistency group copy to be linked, and click Validate .

Name	Description
Replication Mode drop-down list	Choose the replication mode by selecting one of the following options:
	• Asynchronous —Use this mode when you want the data between the production volume and the copy to be synchronized automatically at specified intervals, based on the recovery point objective (RPO). This is the default mode.
	• Synchronous—Use this mode when you want the data between the production volume and the copy to always be in sync.
Protection Settings for Synchron	nous Mode
Dynamic by Latency check box	If you check this box, RecoverPoint alternates between synchronous and asynchronous replication modes, as necessary. The latency conditions determine when this occurs.
	If you enable this option, you must configure the RPO values for asynchronous mode.
Start Async Replication Above in Milliseconds field	When the specified latency limit is reached, RecoverPoint starts replicating asynchronously. The default is 5 milliseconds.
	This field is only displayed if you enable dynamic replication by latency.
Resume Sync Replication Below in Milliseconds field	When the specified latency limit is reached, RecoverPoint resumes synchronous replication. The default is 3 milliseconds.
	This field is only displayed if you enable dynamic replication by latency.
Dynamic by Throughput check box	If you check this box, RecoverPoint alternates between synchronous and asynchronous replication modes, as necessary. The throughput conditions determine when this occurs.
	If you enable this option, you must configure the RPO values for asynchronous mode.
Start async replication above Throughput	When the specified throughput limit is reached, RecoverPoint starts replicating asynchronously. The throughput limit is a combination of this value and the throughput unit.
	This field is only displayed if you enable dynamic replication by throughput.
Throughput Unit	The unit of measure for the throughput limit.
	This field is only displayed if you enable dynamic replication by throughput.

Name	Description
Resume sync replication below	When the specified throughput limit is reached, RecoverPoint resumes synchronous replication. The throughput limit is a combination of this value and the throughput unit in the field below.
	This field is only displayed if you enable dynamic replication by throughput.
Throughput Unit	The unit of measure for the throughput limit.
	This field is only displayed if you enable dynamic replication by throughput.
	onous Mode—These fields are also displayed if you choose to enable throughput in synchronous mode.
RPO	The recovery point objective defines the maximum time period over which you can tolerate data loss or corruption. The RPO determines the interval between data transfers across the link
	The default value is 25, which combined with the default value for the RPO Unit of seconds, configures an interval of 25 seconds.
RPO Unit drop-down list	The RPO unit can be one of the following:
	• Bytes
	• KB
	• MB
	• GB
	• TB
	• Writes
	• Seconds
	• Minutes
	• Hours
Protection Settings for Both Mod	des
Snapshot Granularity drop-down list	Choose the following snapshot granularity for the link:
	• Dynamic - The system determines the snapshot granularity of a specific (local or remote) link, according to the available resources.
	• Fixed (per second) - Creates one snapshot per second, over a specific (local or remote) link.
	• Fixed (per write) - Creates a snapshot for every write operation, over a specific (local or remote) link.

Step 8 Click Submit.

Starting Data Transfer for a Consistency Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account with the consistency group where you want to start a data transfer.
- **Step 5** Click Consistency Groups.
- **Step 6** Click the row with the consistency group for which you want to transfer data.
- **Step 7** From the **More Actions** drop-down list, choose **Start Transfer** and then click **Submit**. The message on the **Submit Result** screen tells you whether the data transfer was successful.

Note Click Pause Transfer to temporarily pause the transfer of data from the production host. If you pause transfers to copies of a lower-priority consistency group when WAN bandwidth is limited, you can make more bandwidth available for a higher-priority transfer.

Starting a Transfer for a Consistency Group Copy

You can transfer data in a consistency group copy only if it is a replication copy and not a production copy. The production copy consists of a single consistency group.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account with the consistency group copy where you want to start a data transfer.
- **Step 5** Click Consistency Groups Copies.
- **Step 6** Click the row with the consistency group copy for which you want to transfer data.
- **Step 7** From the **More Actions** drop-down list, choose **Start Transfer** and then click **Submit**. The message on the **Submit Result** screen tells you whether the data transfer was successful.

Note

Click **Pause Transfer** to temporarily pause the transfer of data from the production host. If you pause transfers to copies of a lower-priority consistency group when WAN bandwidth is limited, you can make more bandwidth available for a higher-priority transfer.

Getting the Transfer Status for a Consistency Group

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- **Step 3** Choose **EMC RecoverPoint**.
- **Step 4** Click the row with the EMC RecoverPoint account with the consistency group where you want to get the transfer status.
- Step 5 Click Consistency Groups.
- **Step 6** Click the row with the consistency group for which you need the transfer status.
- **Step 7** From the More Actions drop-down list, choose Get Transfer Status.
- **Step 8** On the **Get Transfer Status** screen, click **Submit**.

The message on the **Submit Result** screen tells you whether or not the data transfer was successful.

Group Sets

In RecoverPoint, group sets let you automatically bookmark a set of consistency groups at pre-defined intervals to manage consistency. The bookmark represents the same recovery point in each consistency group in the group set. It allows you to define consistent recovery points for consistency groups that are distributed across different RecoverPoint appliances. Group sets provide automatic management of consistent points in time across consistency groups that are dependent on each other, or that must work together.

For more detailed guidelines about group sets, see the *EMC RecoverPoint Administrator's Guide*, which can be obtained from EMC.

Creating a Group Set

Before You Begin

Before you create a group set, note the following:

- All consistency groups in the group set must be replicating in the same direction, from the same source.
- All consistency groups in the group set must be enabled.
- The interval between automatic bookmarks should not be less than 30 seconds.

Procedure

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to create the group set.
- Step 5 Click View Details.
- Step 6 Click Group Sets.
- Step 7 Click Create.
- **Step 8** On the Create RecoverPoint Group Set screen, complete the following fields:

Name	Description
Group Set Name field	A unique name for the group set.
Consistency Group Name	Expand the field, choose one or more consistency groups to add to the group set, and then click Validate .
Frequency field	The frequency that the bookmark is added to the consistency groups in the group set.
Unit drop-down list	The unit of time for the bookmark frequency. This unit can be minutes or seconds.

Step 9 Click Submit.

Deleting a Group Set

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- Step 4 Click the row with the EMC RecoverPoint account where you want to create the group set.
- Step 5 Click View Details.
- Step 6 Click Group Sets.
- **Step 7** Click the row with the group set that you want to delete.
- Step 8 Click Delete.
- **Step 9** On the **Delete RecoverPoint Group Set** screen, click **Submit**.

System Tasks

Assigning a Policy to a RecoverPoint System Task

For more information about system tasks, see the Cisco UCS Director Administration Guide.

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- Step 3 Choose EMC RecoverPoint.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to update the system task.
- Step 5 Click View Details.
- Step 6 Click System Tasks.
- **Step 7** Expand the **EMC RecoverPoint Tasks** folder.
- **Step 8** Click the EMC RecoverPoint system task (EMCRecoverPointCollector).
- **Step 9** From the More Actions drop-down list, choose Manage Task.
- Step 10 On the Manage Task screen, complete the following fields:

Name	Description
Task Execution drop-down list	Choose Enable or Disable to enable or disable this RecoverPoint system task.
System Task Policy drop-down list	Choose either the default-system-task-policy or the local-run-policy to assign to this RecoverPoint system task.
Minutes drop-down list	Choose the frequency in minutes to determine how often this RecoverPoint system task is executed.

- Step 11 Click Submit.
- **Step 12** If you want to run this RecoverPoint task, click **Run Now**.
- **Step 13** If you want to view this RecoverPoint task, click **View Details**.

Viewing RecoverPoint Task History and Reports

- **Step 1** Choose **Physical** > **Storage**.
- Step 2 On the Physical Accounts page, click Multi-Domain Managers.
- **Step 3** Choose **EMC RecoverPoint**.
- **Step 4** Click the row with the EMC RecoverPoint account where you want to view the system task information.
- Step 5 Click View Details.
- Step 6 Click System Tasks.
- **Step 7** In the System Tasks panel, click the **EMC RecoverPoint Tasks** folder icon to expand the folder.
- **Step 8** Expand the EMC RecoverPoint Tasks folder.
- **Step 9** Double-click the EMC RecoverPoint system task (EMCRecoverPointCollector).
- **Step 10** Click one of the following to view reporting information for this system task:
 - System Task History
 - More Reports

System Tasks
