

Cisco UCS Director Release Notes for Powershell Connector Pack, Release 6.7

First Published: 2019-12-06

Cisco UCS Director Release Notes for PowerShell Agent

Cisco UCS Director

Cisco UCS Director delivers unified, highly secure management for supported compute, network, storage, and virtualization platforms and for the industry's leading converged infrastructure solutions, which are based on the Cisco Unified Computing System (Cisco UCS) and Cisco Nexus platforms. Cisco UCS Director extends the unification of computing and network layers through Cisco UCS to provide data center administrators with comprehensive visibility and management capabilities for compute, network, storage, and virtualization. For more information, see [Cisco UCS Director on Cisco.com](#).

Revision History

Release	Date	Description
6.7.3.1	December 6, 2019	Created for Release 6.7.3.1

Connector Packs

Connector packs help you perform connector level upgrade in Cisco UCS Director without impacting other connectors and without having to upgrade the entire software version. After claiming Cisco UCS Director in Cisco Intersight, as a system administrator, you can view information on new versions of connector packs that are available for upgrade. The top header pane of the user interface displays a Download icon indicating that new connector pack versions are available. You can select and upgrade the connector packs in Cisco UCS Director.

PowerShell Connector Pack

The PowerShell connector pack provides support for new versions of PowerShell Agent. Cisco UCS Director PowerShell Agent is a lightweight Microsoft Windows service application that acts as an interface layer between Cisco UCS Director and the Windows machine.

Upgrading Connector Packs

Before you begin

- You must have system administrator privileges in Cisco UCS Director.

- Cisco UCS Director has been claimed in Cisco Intersight. For information on claiming a device, see the integrated guided walkthrough titled *Learn How to Claim a Device* available within the **Online Help** menu in the Cisco Intersight user interface.
- Cisco UCS Director is successfully connected to Cisco Intersight.
- Take a snapshot of Cisco UCS Director before you initiate the upgrade.

Procedure

Step 1 On the header, click **New Upgrades Available**.

The **Available System Upgrades** screen appears and will display all available connector packs for upgrade along with version information. Upon login, if you clicked **Yes** to the pop-up message, then the very same upgrade screen appears.

Note The **New Upgrades Available** icon is visible on the header only when new versions of the current running connector packs are available for upgrade.

Step 2 Check the check box of a connector pack from the list.

You can check the check boxes of multiple connector packs.

Step 3 Click **Upgrade**.

Step 4 In the **Confirm Upgrade** dialog box, click **Yes**.

After you confirm that the connector version must be upgraded, the validation process is initiated. If the validation process completes successfully, the upgrade process is initiated and the **System Upgrade Status** screen displays the upgrade status. After the upgrade process is successful, the **Logout** option is enabled.

Step 5 Click **Logout**.

While upgrading a base platform pack that includes changes to all infrastructure components, all Cisco UCS Director services are restarted. As a result, after clicking **Logout**, the screen could appear to be unresponsive for a few minutes. After all the services are restarted, and the upgrade process is complete, you can login to Cisco UCS Director .

What to do next

You can view the upgrade reports by choosing **Administration > System > System Updates**. From this screen, you can double-click on a report, and view additional details on the upgrade process. For more information, see [Viewing Connector Pack Upgrade Information](#).

Viewing Connector Pack Upgrade Information

Procedure

Step 1 Choose **Administration > System**.

Step 2 On the **System** page, click **System Updates**.

Information such as upgrade request ID, user that initiated the upgrade, upgrade start time and end time, and the upgrade status are displayed.

- Step 3** Select a connector pack and choose **View Details** to view details such as connector pack name, upgraded version, and prior version.
- Step 4** Click **State History** to view the various states of the connector pack upgrade process. For example, upgrade request received, upgrade process initiated or upgrade process completed.
- Step 5** Click **Stages** to view the entire lifecycle of the connector pack upgrade request.

New Features in Release 6.7.3.1

This release includes only defect fixes. See [Resolved Bugs in Release 6.7.3.1, on page 3](#).

Open Bugs in Release 6.7.3.1

There are no open bugs in this release.

Resolved Bugs in Release 6.7.3.1

The following table lists the defect resolved in this release.

Defect ID	Headline
CSCvr86620	UCSD 6.7.2.0 Powershell XML output suffered with additional string
