Restarting Cisco UCS Director

This chapter contains the following sections:

Restarting

If you see errors after installing , log in to the Secure Shell (SSH) client and verify whether services are running or not.

Step 1 Log in to the VM console with the shelladmin user credentials:

If this is the first time you have logged into the ShellAdmin after deployment, you will be prompted to change the default password.

Step 2 To display the status of all services, choose `Display services status`.

If this option is not available, you can use SSH to restart the services.

Step 3 Verify that the following services appear:

```
 1. broker
 2. controller
 3. eventmgr
 4. idaccessmgr
 5. inframgr
 6. websock
 7. connectormgr
 8. tomcat
 9. flashpolicy
10. mysqld
```

Note Services that start in the background do not appear in the window.

Step 4 Choose `Stop services`.

Step 5 To verify that all services are stopped, choose `Display services status`.

Step 6 To restart services, choose `Start services`.
