

# Restarting Cisco UCS Director

---

This chapter contains the following sections:

- [Restarting](#) , on page 1

## Restarting

If you see errors after installing , log in to the Secure Shell (SSH) client and verify whether services are running or not.

---

**Step 1** Log in to the VM console with the shelladmin user credentials:

If this is the first time you have logged into the ShellAdmin after deployment, you will be prompted to change the default password.

**Step 2** To display the status of all services, choose `Display services status`.

If this option is not available, you can use SSH to restart the services.

**Step 3** Verify that the following services appear:

1. broker
2. controller
3. eventmgr
4. idaccessmgr
5. inframgr
6. websocket
7. connectormgr
8. tomcat
9. flashpolicy
10. mariadb

**Note** Services that start in the background do not appear in the window.

**Step 4** Choose `Stop services`.

**Step 5** To verify that all services are stopped, choose `Display services status`.

**Step 6** To restart services, choose `Start services`.
