

# Procedural Tasks

---

This chapter contains the following sections:

- [Acquire lock on a named Resource, on page 2](#)
- [Clone Workflow, on page 3](#)
- [Conditional Task, on page 4](#)
- [End Loop, on page 5](#)
- [If Else, on page 6](#)
- [Release lock on a named Resource, on page 7](#)
- [Resume Task, on page 8](#)
- [Start Loop, on page 9](#)

# Acquire lock on a named Resource

## Summary

Acquire a lock on a named resource.

## Description

This task acquires a lock on any named resource. If the named resource is free, meaning no other task holds a lock on it, then the acquisition of the resource succeeds and the task completes successfully. If another task holds a lock on the named resource, then the calling task is suspended until the other task releases the lock. Re-entrant acquisition is permitted and is always successful. A lock can be acquired by a sub-task within a compound task. If the lock is already held by the compound task (or its parent workflow, or a parent's parent), the acquisition is considered re-entrant and always succeeds. For example: Workflow WF-A acquires a lock L1 and spawns a Compound Task CT1. If a sub-task in CT1 tries to acquire L1, then the acquisition succeeds. Similarly, suppose workflow WF-B acquires a lock L2 and spawns CT2, which in turn spawns CT3. If a sub-task in CT3 tries to acquire L2, it will succeed because WF-B is an (indirect) parent of CT2. A workflow should relinquish the lock on the resource (using the Release Resource Lock task) as soon as it is done using the resource. Behavior during Rollback of an SR When a workflow is rolled back, the tasks are executed in reverse order of normal execution. When a workflow containing an AcquireLock followed by a ReleaseLock task is subjected to Rollback, the roles of AcquireLock and ReleaseLock are reversed. For example, consider this workflow: AcquireLock(R1) -> Task1 -> Task2 -> ReleaseLock(R1) In this example, AcquireLock(R1) acquires lock on resource R1 and ReleaseLock(R1) relinquishes the lock on R1. As part of a rollback, the ReleaseLock(R1) task is executed first. But since the intent is ensure safe access to resource R1, this ReleaseLock behaves like an AcquireLock(R1) task and acquires the lock on R1. Subsequently, when the AcquireLock(R1) task is invoked it executes the ReleaseLock(R1) operation, relinquishing the lock on resource R1.

## Inputs

| Input         | Description                          | Mappable To Type | Mandatory |
|---------------|--------------------------------------|------------------|-----------|
| Resource name | Name of resource that must be locked | gen_text_input   | Y         |

## Outputs

| Output       | Description   | Type           |
|--------------|---|----------------|
| ResourceName | Name of the Resource that was acquired for exclusive access | gen_text_input |

# Clone Workflow

**Summary**  
**Description**  
**Inputs**

| Input                | Description                      | Mappable To Type | Mandatory |
|----------------------|----------------------------------|------------------|-----------|
| Workflow             | Workflow to clone                | workflowSelector | Y         |
| Cloned Workflow Name | Workflow Version to clone        | gen_text_input   | Y         |
| New Folder           | Select to give a new Folder name | Boolean          |           |
| Folder Name          | Folder Name                      | gen_text_input   |           |
| New Folder Name      | Folder Name                      | gen_text_input   | Y         |

**Outputs**

| Output                | Description    | Type           |
|-----------------------|----------------|----------------|
| OUTPUT_SOURCE_WF_NAME | Source WF Name | gen_text_input |
| OUTPUT_SOURCE_WF_ID   | Source WF ID   | gen_text_input |
| OUTPUT_CLONE_WF_NAME  | Source WF Name | gen_text_input |
| OUTPUT_CLONE_WF_ID    | Source WF Name | gen_text_input |

# Conditional Task

## Summary

Select the next Task based on the evaluation of Boolean statements, similar to a "switch" statement in most programming languages.

## Description

This task takes as input two or more conditions and associated labels. The labels are mapped to other tasks. At runtime, the conditions are evaluated in order and control is passed to the task associated with the first condition that evaluates to True. If no condition evaluates to True, the Conditional Task fails.

## Inputs

| Input              | Description            | Mappable To Type | Mandatory |
|--------------------|------------------------|------------------|-----------|
| List of Conditions | Add List of Conditions |                  |           |

## Outputs

|            |
|------------|
| No Outputs |
|------------|

# End Loop

**Summary**

End a loop.

**Description**

This task marks the end of a loop in the workflow.

**Inputs**

| Input     | Description | Mappable To Type | Mandatory |
|-----------|-------------|------------------|-----------|
| No Inputs |             |                  |           |

**Outputs**

|            |
|------------|
| No Outputs |
|------------|

# If Else

**Summary**

If Else Conditional Task.

**Description**

This task evaluates the condition given as input. Depending on the result, it passes control to a different task.

**Inputs**

| Input                 | Description           | Mappable To Type | Mandatory |
|-----------------------|-----------------------|------------------|-----------|
| Specify the condition | Specify the condition |                  | Y         |

**Outputs**

No Outputs

# Release lock on a named Resource

## Summary

Release a lock held on a named resource.

## Description

This task releases a lock held on a named resource. Lock acquisition is described in the Acquire Resource Lock task. Acquired locks must be released when the acquiring task is done with the resource. This implies that, within a workflow, the number of Acquire operations should equal the number of Release operations. A spurious Release (release of a lock that was never held) is ignored. A workflow should only release a lock that it successfully acquired using the Acquire Resource Lock task. For behavior of locks during rollback, please see AcquireLock task

## Inputs

| Input         | Description                            | Mappable To Type | Mandatory |
|---------------|--|------------------|-----------|
| Resource name | Name of resource that must be unlocked | gen_text_input   | Y         |

## Outputs

| Output       | Description  | Type           |
|--------------|--|----------------|
| ResourceName | Name of the Resource that was released from exclusive access | gen_text_input |

# Resume Task

**Summary**

Wait until a date and time.

**Description**

This task pauses the workflow execution until the date and time specified in the input.

**Inputs**

| Input | Description     | Mappable To Type | Mandatory |
|-------|-----------------|------------------|-----------|
| Time  | Time to execute | date_time        | Y         |

**Outputs**

No Outputs

# Start Loop

## Summary

Start a loop.

## Description

This task begins a loop in the workflow based on the input condition.

## Inputs

| Input                                | Description                          | Mappable To Type | Mandatory |
|--------------------------------------|--------------------------------------|------------------|-----------|
| List based iteration                 | List based iteration                 |                  |           |
| Input for list based iteration       | Input for list based iteration       | gen_text_input   | Y         |
| User Input to assign iterated values | User Input to assign iterated values |                  |           |
| Count based iteration                | Count based iteration                |                  |           |
| Number of times to loop              | Number of times to loop              | gen_text_input   | Y         |

## Outputs

| Output            | Description          | Type           |
|-------------------|----------------------|----------------|
| START_LOOP_OUTPUT | Each Iteration Value | gen_text_input |
