Deployment Scheduling Options

Creating a Schedule

Procedure

	Command or Action	Purpose
Step 1	UCS-A# scope system	Enters system mode.
Step 2	UCS-A /system # create scheduler sched-name	Creates a scheduler and enters scheduler mode.
Step 3	UCS-A /system/scheduler # commit-buffer	Commits the transaction to the system configuration.

Example

The following example creates a scheduler named maintenancesched and commits the transaction:

```
UCS-A# scope system
UCS-A /system # create scheduler maintenancesched
UCS-A /system/scheduler* # commit-buffer
UCS-A /system/scheduler #
```

What to do next

Create a one time occurrence or recurring occurrence for the schedule.

Creating a One Time Occurrence for a Schedule

Procedure

	Command or Action	Purpose
Step 1	UCS-A# scope system	Enters system mode.
Step 2	UCS-A /system # scope schedule sched-name	Enters scheduler system mode.
Step 3	UCS-A /system/scheduler# create occurrence one-time occurrence-name	Creates a one-time occurrence.
Step 4	UCS-A /system/scheduler/one-time # set date month day-of-month year hour minute	Sets the date and time this occurrence should run.
Step 5	(Optional) UCS-A /system/scheduler/one-time # set concur-tasks {unlimited max-num-concur-tasks	Sets the maximum number of tasks that can run concurrently during this occurrence. If the maximum number of tasks is reached, the scheduler waits for the amount of time set in the minimum interval property before scheduling new tasks.
Step 6	(Optional) UCS-A /system/scheduler/one-time # set max-duration {none num-of-days num-of-hours num-of-minutes num-of-seconds}	Sets the maximum length of time that this schedule occurrence can run. Cisco UCS completes as many scheduled tasks as possible within the specified time.
Step 7	(Optional) UCS-A /system/scheduler/one-time # set min-interval {none num-of-days num-of-hours num-of-minutes num-of-seconds}	Sets the minimum length of time that the system should wait before starting a new task.
Step 8	(Optional) UCS-A /system/scheduler/one-time # set proc-cap {unlimited max-num-of-tasks}	Sets the maximum number of scheduled tasks that can be run during this occurrence.
Step 9	UCS-A /system/scheduler/one-time # commit-buffer	Commits the transaction to the system configuration.

Example

The following example creates a one time occurrence named one timemaint for a scheduler named maintsched, sets the maximum number of concurrent tasks to 5, sets the start date to April 1, 2011 at 11:00, and commits the transaction:

```
UCS-A# scope system

UCS-A /system # scope scheduler maintsched

UCS-A /system/scheduler # create occurrence one-time onetimemaint

UCS-A /system/scheduler/one-time* # set date apr 1 2011 11 00

UCS-A /system/scheduler/one-time* # set concur-tasks 5

UCS-A /system/scheduler/one-time* # commit-buffer

UCS-A /system/scheduler/one-time #
```

Creating a Recurring Occurrence for a Schedule

Procedure

	Command or Action	Purpose
Step 1	UCS-A# scope system	Enters system mode.
Step 2	UCS-A /system # scope schedule sched-name	Enters scheduler system mode.
Step 3	UCS-A /system/scheduler # create occurrence recurring occurrence-name	Creates a recurring occurrence.
Step 4	(Optional) UCS-A /system/scheduler/recurring # set day {even-day every-day friday monday never odd-day saturday sunday thursday tuesday wednesday}	Specifies the day on which Cisco UCS runs an occurrence of this schedule. By default, this property is set to never.
Step 5	(Optional) UCS-A/system/scheduler/recurring # set hour hour	Specifies the hour at which this occurrence starts.
		Note Cisco UCS ends all recurring occurrences on the same day in which they start, even if the maximum duration has not been reached. For example, if you specify a start time of 11 p.m. and a maximum duration of 3 hours, Cisco UCS starts the occurrence at 11 p.m. but ends it at 11:59 p.m. after only 59 minutes.
Step 6	(Optional) UCS-A /system/scheduler/recurring # set minute minute	Specifies the minute at which this occurrence starts.
Step 7	(Optional) UCS-A /system/scheduler/recurring # set concur-tasks {unlimited max-num-concur-tasks	Sets the maximum number of tasks that can run concurrently during this occurrence. If the maximum number of tasks is reached, the scheduler waits for the amount of time set in the minimum interval property before scheduling new tasks.
Step 8	(Optional) UCS-A /system/scheduler/recurring # set max-duration {none num-of-hours num-of-minutes num-of-seconds}	Sets the maximum length of time that this schedule occurrence can run. Cisco UCS completes as many scheduled tasks as possible within the specified time.
Step 9	(Optional) UCS-A /system/scheduler/recurring # set min-interval {none num-of-days num-of-hours num-of-minutes num-of-seconds}	Sets the minimum length of time that the system should wait before starting a new task.

	Command or Action	Purpose
Step 10	(Optional) UCS-A/system/scheduler/recurring # set proc-cap {unlimited max-num-of-tasks}	Sets the maximum number of scheduled tasks that can be run during this occurrence.
Step 11	UCS-A /system/scheduler/recurring # commit-buffer	Commits the transaction to the system configuration.

Example

The following example creates a recurring occurrence called recurringmaint for a scheduler called maintsched, sets the maximum number of concurrent tasks to 5, sets the day this occurrence will run to even days, sets the time it will start to 11:05, and commits the transaction:

```
UCS-A# scope system

UCS-A /system # scope scheduler maintsched

UCS-A /system/scheduler # create occurrence recurring recurringmaint

UCS-A /system/scheduler/recurring* # set day even-day

UCS-A /system/scheduler/recurring* # set hour 11

UCS-A /system/scheduler/recurring* # set minute 5

UCS-A /system/scheduler/recurring* # set concur-tasks 5

UCS-A /system/scheduler/recurring* # commit-buffer

UCS-A /system/scheduler/recurring #
```

Deleting a One Time Occurrence from a Schedule

If this is the only occurrence in a schedule, that schedule is reconfigured with no occurrences. If the schedule is included in a maintenance policy and that policy is assigned to a service profile, any pending activities related to the server associated with the service profile cannot be deployed. You must add a one time occurrence or a recurring occurrence to the schedule to deploy the pending activity.

Procedure

	Command or Action	Purpose
Step 1	UCS-A# scope system	Enters system mode.
Step 2	UCS-A /system # scope scheduler sched-name	Enters scheduler system mode.
Step 3	UCS-A /system/scheduler # delete occurrence one-time occurrence-name	Deletes the specified one-time occurrence.
Step 4	UCS-A /system/scheduler # commit-buffer	Commits the transaction to the system configuration.

Example

The following example deletes a one time occurrence called one timemaint from scheduler maintsched and commits the transaction:

```
UCS-A# scope system
UCS-A /system # scope scheduler maintsched
UCS-A /system/scheduler # delete occurrence one-time onetimemaint
UCS-A /system/scheduler* # commit-buffer
UCS-A /system/scheduler #
```

Deleting a Recurring Occurrence from a Schedule

If this is the only occurrence in a schedule, that schedule is reconfigured with no occurrences. If the schedule is included in a maintenance policy and that policy is assigned to a service profile, any pending activities related to the server associated with the service profile cannot be deployed. You must add a one time occurrence or a recurring occurrence to the schedule to deploy the pending activity.

Procedure

	Command or Action	Purpose
Step 1	UCS-A# scope system	Enters system mode.
Step 2	UCS-A /system # scope scheduler sched-name	Enters scheduler system mode.
Step 3	UCS-A /system/scheduler# delete occurrence recurring occurrence-name	Deletes the specified recurring occurrence.
Step 4	UCS-A /system/scheduler # commit-buffer	Commits the transaction to the system configuration.

Example

The following example deletes a recurring occurrence named one timemaint from scheduler maintsched and commits the transaction:

```
UCS-A# scope system
UCS-A /system # scope scheduler maintsched
UCS-A /system/scheduler # delete occurrence recurring onetimemaint
UCS-A /system/scheduler* # commit-buffer
UCS-A /system/scheduler #
```

Deleting a Schedule

If this schedule is included in a maintenance policy, the policy is reconfigured with no schedule. If that policy is assigned to a service profile, any pending activities related to the server associated with the service profile cannot be deployed. You must add a schedule to the maintenance policy to deploy the pending activity.

Procedure

	Command or Action	Purpose
Step 1	UCS-A# scope system	Enters system mode.

	Command or Action	Purpose
Step 2	UCS-A /system # delete scheduler sched-name	Deletes a scheduler and enters scheduler mode.
Step 3	UCS-A /system # commit-buffer	Commits the transaction to the system configuration.

Example

The following example deletes a scheduler named maintenancesched and commits the transaction:

```
UCS-A# scope system
UCS-A /system # delete scheduler maintenancesched
UCS-A /system* # commit-buffer
UCS-A /system #
```
