

# CHAPTER 6

## Allow or Disallow Video Transcoding

---

Revised: April 4, 2012  
OL-15762-04

- [Procedures, page 6-1](#)

**Audience**

---

We prepared this material with specific expectations of you.

- ✓ You have installed a feature license to administer Cisco Show and Share.
  - ✓ Your Cisco Show and Share setup should use a Cisco Media Experience Engine (MXE) to transcode video.
- 

## Procedures

- [Enable Show and Share Use of MXE Features, page 6-1](#)
- [Disable Show and Share Use of MXE Features, page 6-2](#)

## Enable Show and Share Use of MXE Features

### Procedure

---

- Step 1** Start DMS-Admin.
- Step 2** Choose **Settings > External Servers > MXE**.

**Step 3** Click **Enabled**.

Media Experience Engine

Use of MXE \*:  Enabled  Disabled

**Step 4** Enter the fully qualified (DNS-resolvable) domain name of your MXE appliance.

General Settings

MXE FQDN \*:

**Step 5** Enter the ftp login credentials for your MXE appliance.

FTP Credentials

Username \*:

Password \*:

**Step 6** Enter the MXE-relative directory paths where MXE should:

- Find incoming video files from Show and Share (“input”).
- Save its transcoded versions of these files (“output”).

Media Locations

Input Directory:

Output Directory:

The factory-default directory locations are prepopulated for your convenience.

**Step 7** Click **Save**.

**Step 8** Stop. You have completed this procedure.

## Disable Show and Share Use of MXE Features
