# **Server Groups in Cluster**

The Emergency Responder Server Groups in Cluster page appears when you choose **System > CiscoEmergency Responder Groups in Cluster**.

#### **Authorization Requirements**

You must have system administrator, ERL administrator, or network administrator authority to access this page.

## Description

Use the Emergency Responder Server Groups in Cluster page to view the Emergency Responder groups that form an Emergency Responder cluster. You can view which Emergency Responder servers belong to each Emergency Responder group within the cluster. You can click on the link for the remote server groups in an Emergency Responder cluster (select either the primary server or the backup server) to go directly to the Emergency Responder interface for these servers.

The following table describes the Emergency Responder Server Groups in Cluster page.

Table 1: Cisco Emergency Responder Server Groups in Cluster Page

| Field                              | Description   | Notes  |
|------------------------------------|---|--|
| Emergency Responder (              | Groups  | I  |
| Emergency Responder<br>Groups list | A list of the Emergency Responder server groups<br>that are pointing to the same cluster database host.<br>Click a group name to view the servers in the group. | The Emergency Responder cluster consists<br>set of Emergency Responder groups. You<br>the cluster when installing Emergency Re-<br>servers. See Installation on a New System |
| Servergroup Details                |   |  |

#### Description

Use the Emergency Responder Group Settings page to define the operational characteristics of an Emergency Responder server group.

The following table describes the Emergency Responder Server Group Settings page.

### Table 2: Cisco Emergency Responder Group Settings Page

| Field                             | Description   | Notes                       |
|-----------------------------------|---|-----------------------------|
| Emergency Responder<br>Group Name | The name of the server group. This name is used<br>for your information only, so create a name you<br>find useful.  |                             |
| Peer TCP Port                     | The TCP port used for communications between<br>Emergency Responder servers within the server<br>group. If you don't want to use the default port,<br>ensure you select an unused port. | The range is 1024 to 65535. |

| Field                           | Description   | Notes  |
|---------------------------------|---|--|
| Heartbeat Count                 | The number of counts an Emergency Responder<br>server should wait before declaring an<br>unresponsive Emergency Responder server<br>unavailable.  | The default number of counts is 3. The ran<br>is 3 to 10.<br>The time between counts is defined in<br>Heartbeat Interval.  |
| Heartbeat Interval (in sec)     | The number of seconds between sending heartbeat messages to the other Emergency Responder server in the server group.   | The default is 30 seconds. The range is 30 300 seconds.  |
| Active Call Timeout (in min)    | How long to maintain a call route mapping so the PSAP can call back the emergency caller.   | The default is 180 minutes (3 hours). The range is 30 to 1440 minutes.   |
| SMTP Mail Server                | The IP address or fully qualified name of the mail<br>server (for example, email.domain.com).<br>Check the <b>Enable Secured connection</b> check box<br>to send mails from the SMTP Mail Server in a<br>secure mode. | <ul> <li>Configure an email server if you want<br/>Emergency Responder to send email or<br/>email-based pages to security officers whet<br/>an emergency call is made.</li> <li>Ensure to configure the SMTP Mail Server<br/>a secure mode and the SMTP server certificat<br/>is added to the Tomcat trust store of the Ciss<br/>Emergency Responder before enabling the<br/>check box. Failing to do so may result in ema<br/>alert delivery failure.</li> <li>The Port number for enabling Secure SMT<br/>connection is 587. To set up a Secure SMT<br/>connection, perform the following:</li> <li>Exchange Cisco Emergency Responde<br/>Tomcat certificate chain to SMTP serve<br/>root certificate directory.</li> <li>Upload SMTP server certificate chain a<br/>tomcat-trust certificates on Cisco<br/>Emergency Responder.</li> <li>Restart Cisco Tomcat service on Cisco<br/>Emergency Responder servers using th<br/>CLI command utils service restart Cist<br/>Tomcat.</li> </ul> |
| Source Mail ID                  | If you configure a mail server, you must enter an<br>email account on that server that can be used for<br>sending email.  | Emails or pages sent to security come from this email account.   |
| System Administrator<br>Mail ID | Mail account where Emergency Responder sends critical information about the system.   | Emails or pages sent to the system<br>administrator by Emergency Responder cor<br>to this email account.   |

| Description   | Notes  |  |
|---|--|--|
| Dynamic modification of the calling party number.<br>Allows you to reduce the number of route patterns<br>by configuring multiple ELIN numbers for a<br>single route pattern. ELIN numbers must still be<br>unique. | You must set this flag if you enabled C<br>Party Modification when you created<br>Emergency Responder as a Unified CM  |  |
| Select from the drop-down list that enables and disables the writing of log messages.   |  |  |
| The name of the server that has the log messages.<br>Enter the fully qualified DNS name of the server,<br>for example, cw2k.domain.com.   | Enter the hostname or IP address of the s<br>server to accept syslog messages. This<br>handles the logging of all the Cisco<br>Emergency Responder application<br>event-related information.   |  |
|   | 514 is the default port used to commun   |  |
|   | Note You can only enter a serve name if you choose Enabl Syslog.   |  |
| Any notes you want to enter to help you<br>understand the use of the server group.  |  |  |
| Dynamically updates a LAN switch's IP address<br>if it is configured with hostname in Emergency<br>Responder.   | This action is not applicable to LAN sw<br>that are added to Emergency Responder<br>an IP address.   |  |
| Pulldown menu allows you to select the language<br>that is displayed on the users web page—English<br>(US), French (Canada), or Spanish (Spain).  | After you change the language, you mu<br>complete the following before the lang<br>is displayed on the users web page:   |  |
|   | <ul> <li>Restart Emergency Responder Ser<br/>in Emergency Responder Servicea<br/>by choosing Tools &gt; Control Cen</li> </ul>   |  |
|   | <ul> <li>Restart Cisco Tomcat service usin<br/>CLI command utils service restan<br/>Cisco Tomcat.</li> </ul>   |  |
|   | • Refresh the current Emergency Responder User webpage.  |  |
| Limits the number of concurrent sessions per user.  | Selecting or deselecting this check box er<br>or disables the Max. number of concur-<br>sessions drop-down list.   |  |
|   | Dynamic modification of the calling party number.         Allows you to reduce the number of route patterns by configuring multiple ELIN numbers for a single route pattern. ELIN numbers must still be unique.         Select from the drop-down list that enables and disables the writing of log messages.         The name of the server that has the log messages.         Enter the fully qualified DNS name of the server, for example, cw2k.domain.com.         Any notes you want to enter to help you understand the use of the server group.         Dynamically updates a LAN switch's IP address if it is configured with hostname in Emergency Responder.         Pulldown menu allows you to select the language that is displayed on the users web page—English (US), French (Canada), or Spanish (Spain). |  |

| Field                                      | Description  | Notes   |
|--|--|---|
| Max. number of concurrent sessions         | If Limit Concurrent Sessions is enabled, this limit is applicable for all the users.           | The limit is imposed separately for each<br>Emergency Responder website:  |

Set Up a Server Group Collect Information From Syslog Restrict Maximum Number of Concurrent Sessions Track Change of Switch IP Address Dynamically E911 and Cisco Emergency Responder Terminology

# **Telephony Settings**

The Telephony Settings page appears when you choose System > Telephony Settings.

# **Authorization Requirements**

You must have system administrator authority to access this page.

# Description

Use the Telephony Settings page to define the telephone numbers and telephony ports used by the Emergency Responder group.

The following table describes the Telephony Settings page.

| Field  | Description  | Notes  |
|--|--|--|
| Specify telephony attrib                                 | utes   | I  |
| Route Point for Primary<br>Emergency Responder<br>Server | The CTI route point that the primary server should use, such as 911.   | See Create Emergency Call Ro<br>more information.  |
| Route Point for Standby<br>Emergency Responder<br>Server | The CTI route point that the standby server should use,<br>such as 912. Configure this number as the call forward<br>number for the primary emergency number.  | See Create Emergency Call Ro<br>more information.  |
| PSAP Callback Route<br>Point Pattern                     | CTI route point that you defined to receive calls from the public safety answering point (PSAP). For example, 913XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX  | For more information, see Crea<br>Call Route Points.   |
|  | The number can only consist of numbers and Xs.   |  |
| ELIN Digit Strip Pattern                                 | Digits to strip from the beginning of the PSAP Callback<br>Route Point Pattern, for example, 913. The number that<br>results from stripping the pattern should be the ELIN<br>numbers that the PSAP can use to call into your network. | This string must be part of the P<br>Route Point Pattern.  |
| Default ELIN Digit<br>Translation                        | ELIN number obtained after stripping 913 is matched to<br>a callers extension. If the mapping is not found, Emergency<br>Responder will translate ELIN to Default ELIN Digit<br>Translation number and complete the PSAP Call-back.    | The number could be a dialable<br>number or a route pattern. If the<br>reachable the PSAP Call-back<br>reorder tone. |
| UDP Port Begin   | Port numbers that are used by CTI ports during their registration.   | The range is 1024 to 65535.  |
| Inter-Emergency<br>Responder Group Route<br>Pattern      | Route pattern that other Emergency Responder groups use<br>to route emergency calls to this group, for example,<br>1000.911.   | For a more detailed explanation<br>number, see "Create route patter<br>Inter-Cisco Emergency Respor                  |
| I  | The pattern can only consist of numbers and dots.  | Communications".   |
| IP Type of service<br>(00-FF)                            | Value of the type of service (ToS) byte in the IP header.<br>The default 0xB8 implies a ToS class of Priority Queue.<br>It is recommended that this default value be used for<br>Emergency Responder.                                  | The ToS value entered here on<br>the RTP packets sent by Emerg<br>Responder for the onsite audio                     |
| Onsite Alert Prompt<br>Repeat Count                      | Number of times the prompt is played on the onsite alert phone.  |  |

# Table 3: Telephony Settings Page

| Field                                | Description   | Notes   |
|--------------------------------------|---|---|
| Use IP Address from call signaling   | If this parameter is enabled, Emergency Responder obtains<br>the IP address of the phone from JTAPI. This parameter<br>is used to route the call. If an IP subnet is configured for<br>the phone, this parameter setting takes precedence over<br>any other manual configuration.   | This field is applicable only if Em<br>Responder is configured with Cisc<br>Communications Manager 6.x and      |
|                                      | If this parameter is disabled, Emergency Responder uses<br>the manual configuration of the phone to route the call.   |   |
|                                      | <b>Note</b> The feature is mainly for Analog Phones (which are manually defined). This option can be tracked behind IP Gateways and receive IP Subnet treatment.  |   |
| Update Settings button               | Click <b>Update Settings</b> to save and activate your changes.   |   |

Set Up Group Telephony Settings for Server

E911 and Cisco Emergency Responder Terminology

# Server Settings for Emergency ResponderServerGroup

The Server Settings for Emergency ResponderServerGroup page appears when you choose **System > Server Settings**.

# **Authorization Requirements**

You must have system administrator authority to access this page.

# Description

Emergency Responder servers are inserted in the Emergency Responder group when the Emergency Responder services are started. (See Installation on a New System.)

Use the Server Settings for Emergency ResponderServerGroup page to update server settings, for example, to change the server name or to change the trace and debug settings, or to delete servers.

**Note** You cannot modify the host name of the server.

The following table describes the Server Settings Emergency ResponderServerGroup page.

| Field                  | Description   | Notes  |
|------------------------|---|--|
| Status                 | Displays the status of the Server Settings Emergency<br>ResponderServerGroup page.  |  |
| Select Server          |   | l  |
| Server                 | List of servers you have already created. Click on a server name to see the settings for that server.   | You can configure a maximu servers per server group.     |
| Modify Server Settings |   | L  |
| Server Name            | The name of the server.   | Change this server name field desired value.             |
| Host Name              | The DNS name of the Emergency Responder server.   | This field cannot be modifie                             |
| Debug Package List     | A selection of subsystems for which you must collect<br>detailed debug information. Debug information includes<br>trace messages as well as more detailed messages. Only<br>select subsystems at the request of Cisco Technical<br>Support; the debug information is for Cisco's use to help<br>resolve problems that you cannot solve yourself.            | See Trace and Debug Inform<br>explanation of each field. |
| Select All button      | Selects all subsystems in the Debug Package List.   |  |
| Clear All button       | Clears all selected subsystems in the Debug Package List.   |  |
| Trace Package List     | <ul> <li>A selection of subsystems for which you must collect brief trace information. Only select subsystems at the request of Cisco Technical Support; the trace information is for Cisco's use to help resolve problems that you cannot solve yourself.</li> <li>If you select a subsystem for debug, you do not have to select it for trace.</li> </ul> | See Trace and Debug Inform<br>explanation of each field. |
| Select All button      | Selects all subsystems in the Trace Package List.   |  |
| Clear All button       | Clears all selected subsystems in the Trace Package List.   |  |

| Field                  | Description  | Notes  |
|------------------------|--|--|
| Update Settings button | Click <b>Update</b> when viewing an existing server's settings to save changes you make to the settings. | Only available when viewing the of an existing server. |
| Cancel Changes button  | Click <b>Cancel Changes</b> to change the fields on this page back to the last saved settings.           |  |

Configure Servers Trace and Debug Information E911 and Cisco Emergency Responder Terminology

# **License Manager**

The License Manager page appears when you choose System > License Manager.

# **Authorization Requirements**

You must have the system administrator authority to access the License Manager page.

# Description

The **License Manager** page provides the summary and detailed information on the system license usage, as it is reported to the Cisco Smart Software Manager or Cisco Smart Software Manager satellite. Licenses are assigned to the company Smart Account and are not node locked to a device.

# Table 5: License Manager Page

| Description   |
|---|
| Displays the steps to register with Cisco Smart<br>Software Manager or Cisco Smart Software Manage<br>satellite and the current license registration mode.<br>For information on alarms or licensing alerts and<br>compliance, see License Manager Status Messages<br>and License Compliance. |
| <b>Note</b> For Specific License Reservation status message displays current license status.  |
| ensing Status   |

| Field                        | Description  |
|------------------------------|--|
| Registration Status          | Displays the current registration status of the product.<br>The different statuses are:  |
|                              | • Registered—For the product which is registered.  |
|                              | • Unregistered or Unidentified—For the product which is unregistered.  |
|                              | • Unregistered-Registration Expired—For the product whose registration has expired.  |
|                              | • Registered-Specific License Reservation—For product which is registered in SLR mode.   |
|                              | • Reservation In Progress—For product whose License Reservation is in progress.  |
| License Authorization Status | Displays the overall authorization status of the product. The different statuses are:  |
|                              | • Authorized—Product in authorized or in compliance state.   |
|                              | • Authorization Expired—Authorization is expired<br>for the product. This usually happens when the<br>product has not communicated with Cisco for 90<br>continuous days. |
|                              | • Out of Compliance—Product is in out of compliance state because of insufficient licenses.  |
|                              | • No Licenses in Use—Product does not consume any licenses.  |
|                              | • Evaluation Mode—Product is in evaluation mode and not yet registered with Cisco.   |
|                              | • Evaluation Period Expired—Evaluation period has expired.   |
|                              | • Not Applicable—Unable to determine current registration status.  |
|                              | • Authorized-Reserved—Product in authorized or in compliance status for the reserved licenses.   |
|                              | • Not Authorized-Reserved—Product is not in authorized state because of insufficient licenses reserved.  |
|                              | • Export Control Not Allowed—Product in eval mode.   |

| Field              |   | Description |
|--------------------|---|-------------|
| Transport Settings |   |             |
| Note               | This section will not be available when<br>Specific License Reservation is enabled. |             |

| Field | Description  |
|-------|--|
|       | The different settings through which Cisco Emergency<br>Responder can connect to Cisco Smart Software<br>Manager or Smart Software Manager satellite are:  |
|       | • Direct—Cisco Emergency Responder sends<br>usage information directly over the internet. No<br>additional components are needed.  |
|       | Cisco Smart Software Manager satellite—Cisco<br>Emergency Responder sends license usage<br>information to an on-premises collector called<br>Cisco Smart Software Manager Satellite which<br>requires a periodic exchange of information with<br>Cisco Smart Software Manager cloud service.   |
|       | • If you are using HTTP, go to the URL:<br>http://Satellite-ip/Transportgateway.   |
|       | • If you are using HTTPS, go to the URL:<br>https://SatelliteFQDN-OR-IP-address/<br>TransportGateway.  |
|       | For more information on how to register your<br>devices using Cisco Smart Software Manager<br>satellite, see https://community.cisco.com/t5/<br>cisco-software-documents/<br>how-to-register-your-device-using-https-to-satellite-smart/   |
|       | ta-p/3747976.<br>For more information on installation or<br>configuration of the Smart Software Manager<br>satellite, go to this URL: https://www.cisco.com/<br>c/en/us/buy/smart-accounts/<br>software-manager-satellite.html.  |
|       | • Proxy Server—Cisco Emergency Responder sends usage information over the internet through a proxy server.   |
|       | Enter the details in the following fields:   |
|       | Host Name/IP Address   |
|       | • Port   |
|       | • Check the <b>Do not share my hostname or IP</b><br>address with Cisco check box to allow the<br>administrator to restrict the exchange of IP<br>Address and hostname of the Cisco Emergency<br>Responder during the registration and<br>synchronization to Cisco Smart Software<br>Manager or Cisco Smart Software Manager<br>Satellite. |

| Field         Description |   | n   |  |
|---------------------------|---|---|--|
|                           |   | Note  | When the check box is selected,<br>Cisco Emergency Responder will<br>not share the IP Address or<br>hostname information from being<br>sent through registration and<br>regular license compliance<br>synchronization activities. A<br>unique identifier is generated for<br>the Cisco Emergency Responder<br>Product Instance and must be used<br>for cross-referencing in Cisco<br>Smart Software Manager. |
|                           |   | Note  | If you choose to use direct connection,<br>then you must configure Domain Name<br>System (DNS) on Cisco Emergency<br>Responder that can resolve<br>tools.cisco.com.  |
|                           |   | Note  | If you choose not to configure the<br>domain and Domain Name System<br>(DNS) on Cisco Emergency Responder,<br>then you can select the transport gateway<br>or proxy server. In such case, DNS that<br>can resolve tools.cisco.com has to be<br>configured on either on the proxy server.   |
|                           |   | Note  | If you choose not to use the DNS server<br>in your deployment and not connect to<br>the internet, then you can select the<br>Cisco Smart Software Manager satellite<br>with manual synchronization in<br>disconnected mode.  |
| Smart Acc                 | ount Name   |   | nformation of the customer Smart Account.  |
| Note                      | This section will not be available when<br>Specific License Reservation is enabled. | option und<br>https://soft<br>created to<br>a company | d from the <b>Request a Smart Account</b><br>ler Administration section of the<br>ware.cisco.com/. # **Smart Software Licensing Product Registration**

The **Smart Software Licensing Product Registration** window is displayed when you click the **Register** button on the **License Manager** page. See License Manager, on page 10 page for more information on the system license usage.

| Field  | Description  |
|--|--|
| Status   | Displays the product registration status.  |
| Product Instance Registration Token                          | Displays a text area where you can enter the product<br>registration token generated from the Cisco Smart<br>Software Manager or Cisco Smart Software Manager<br>satellite.  |
| Reregister this product instance if it is already registered | Check the <b>Reregister this product instance if it is</b><br><b>already registered</b> check box to enable a force<br>registration of the product with Cisco Smart Software<br>Manager or Cisco Smart Software Manager satellite. |
| Register   | Click the <b>Register</b> button to register Cisco Emergency<br>Responder with Cisco Smart Software Manager or<br>Cisco Smart Software Manager satellite.  |

Table 6: Smart Software Licensing Product Registration Page

V

Note The Register button gets disabled after a successful registration with Cisco Smart Software Manager or Cisco Smart Software Manager satellite.

# **Transport Setting**

The **Transport Setting** window is displayed when you click **View/Edit** link from the **License Manager** page. For more information on system license usage, see License Manager, on page 10 page.

In **Transport Setting** window, you can configure how the product communicates with Cisco Smart Software Manager or Cisco Smart Software Manager satellite. You can click the radio button to select one of the options. The available Transport Setting options are tabulated.

### Table 7: Transport Setting Window

| Field   | Description   |  |
|---|---|--|
| Status  | Displays the current configuration status of the Smart Call Home.   |  |
| Transport Settings  |   |  |
| Direct  | Product sends usage information directly over the internet. No additional components are needed. This is the default communication mode.  |  |
| Transport Gateway or<br>Smart Software Manager<br>satellite | Cisco Emergency Responder sends license usage information to an on-premises collector called Cisco Smart Software Manager Satellite which requires a periodic exchange of information with Cisco Smart Software Manager cloud service.  |  |
|   | • If you are using HTTP, go to the URL: http://Satellite-ip/Transportgateway.   |  |
|   | • If you are using HTTPS, go to the URL:<br>https://SatelliteFQDN-OR-IP-address/TransportGateway.   |  |
|   | For more information on how to register your devices using Cisco Smart Software Manager satellite, see https://community.cisco.com/t5/cisco-software-documents/ how-to-register-your-device-using-https-to-satellite-smart/ta-p/3747976.  |  |
| HTTP or HTTPS Proxy<br>Server                               | Product sends usage information over the internet through a proxy server (such as Cisco Transport Gateway or Apache).   |  |
|   | Enter the details in the following fields:  |  |
|   | Host Name/IP Address  |  |
|   | • Port  |  |
| Do not share my<br>hostname or IP address<br>with Cisco     | Check the check box to allow the administrator to restrict the exchange of IP<br>Address and hostname of the Cisco Emergency Responder during the registration<br>and synchronization to Cisco Smart Software Manager or Cisco Smart Software<br>Manager Satellite.   |  |
|   | Note When the check box is selected, Cisco Emergency Responder will<br>not share the IP Address or hostname information from being sent<br>through registration and regular license compliance synchronization<br>activities. A unique identifier is generated for the Cisco Emergency<br>Responder Product Instance and will need to be used for<br>cross-referencing in Cisco Smart Software Manager. |  |

Note Transport settings are shared with Smart Call Home, so any changes made in the Transport Setting window applies to other features using this service.

# **Smart Software Licensing Product Re-registration**

The **Smart Software Licensing Product Re-registration** window is displayed when you select the **Reregister** option from the **Actions** drop-down list box on the **License Manager** page. See License Manager, on page 10 page for more information on the system license usage.

Table 8: Smart Software Licensing Product Re-registration Page

| Field                               | Description   |
|-------------------------------------|---|
| Status                              | Displays the product re-registration status.  |
| Product Instance Registration Token | Displays a text area where you can enter the product<br>registration token generated from the Cisco Smart<br>Software Manager or Cisco Smart Software Manager<br>satellite. |
| Re-register                         | Click the <b>Re-register</b> button to re-register the product<br>with Cisco Smart Software Manager or Cisco Smart<br>Software Manager satellite.                           |

# **Email Alert Settings**

The Email Alert Settings page appears when you choose System > Mail Alert Configurations.

# **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Email Alert Settings page to specify the parameters under which Emergency Responder sends email alerts. Use the check box to the right of each parameter to enable (check) or disable (uncheck) email alerts for that parameter. Check the Include event viewer contents in mail check box if you want to include the details from the event viewer in the email message.

The following table describes the Email Alert Settings page.

#### Table 9: Email Alert Settings Page

| Field                                | An email alert is sent when:           |
|--------------------------------------|--|
| Discovery Parameters                 |  |
| Discovery Engine Registration Failed | The Discovery Engine fails to register |

| Field   | An email alert is sent when:  |
|---|---|
| Discovery Engine goes out of connection                     | The Discovery Engine loses connection   |
| For unreachable devices during recovery                     | Devices such as switches and CiscoUnified<br>CommunicationsManagers become unreachable  |
| Emergency Call Routing Parameters                           |   |
| Call information  | A 911 call is placed  |
| Call routing session ended due to problems                  | Call routing is stopped due to any of these reasons:<br>• Invalid CMC<br>• Invalid FAC<br>• FAC and CMC needed<br>• CMC needed<br>• FAC needed<br>• RESOURCE_BUSY |
| Rerouting of call   | An emergency call is rerouted   |
| Routing failure   | Call routing fails  |
| Route Point out of Service                                  | The route point goes out of service   |
| Cluster Parameters  |   |
| Cluster DB Failure  | The server cannot communicate with the cluster database host  |
| Intra Cluster Failure                                       | The intra-cluster communication to a server group in the cluster fails  |
| Misc Parameters   |   |
| Subscriber becomes active                                   | The Subscriber becomes active   |
| Publisher comes back online                                 | The Publisher comes back online   |
| Not able to get the JTAPI Provider                          | When Emergency Responder cannot get the JTAPI provider  |
| Available user licenses get exhausted during phone tracking | When the number of user licenses are exhausted during phone tracking  |
| Switch Port location change reporting                       | When you enable switch port change reporting for phones   |
| Suppress IP Communicator location change reporting          | When you filter CiscoUnifiedIP Communicator from the location change reporting email alerts   |
| DRF Alert   | Enable or Disable DRF backup or restore mail alerts   |
| Update Settings button                                      | Updates the email alert settings  |
|   | J   |

| Field                 | An email alert is sent when:  |  |
|-----------------------|---|--|
| Cancel Changes button | Cancels changes made to the email alert settings  |  |
| Customized Parameters |   |  |
| Notes                 | Enables you to provide any additional information as<br>Admin Notes and the information is available in the<br>email alerts that are received during a 911 call   |  |
| Discard DN Digits     | Enables you to specify the total digits of the extension<br>number to discard and only the remaining numbers are<br>displayed in the email alert. For example, if the<br>extension number is 1100775 and you specify 4 in the<br><b>Discard DN Digits</b> field, then only 775 is displayed in<br>the email alert |  |

# **Add Subscriber**

The Add Subscriber page appears when you choose System > Add Subscriber.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

# Description

Use the Add Subscriber page to add a subscriber server to an Emergency Responder server group. After adding the subscriber information, you must enter the correct publisher server information when prompted during installation.

# **Before You Begin**

You must first configure a publisher server before configuring a subscriber server.

The following table describes the Add Subscriber page.

# Table 10: Add Subscriber Page

| Field                 | Description   |
|-----------------------|---|
| Add Subscriber        |   |
| HostName              | Host name of the subscriber server.                   |
| Insert button         | Click <b>Insert</b> to add the new subscriber server. |
| Cancel Changes button | Removes input from the Add Subscriber page.           |

| Field              | Description  |
|--------------------|--|
| Configured Servers | A list of all currently configured servers, showing the host name and IP address of each server. |

Install Emergency Responder Publisher Install Emergency Responder Subscriber

# **Intrado VUI Settings**

The Intrado VUI Settings page appears when you choose System > Intrado VUI Settings.

### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

### Description

Use the Intrado VUI Settings page to enter the account information that is required for Emergency Responder to interoperate with Intrado Validation and Update Interface. After entering the required information, you can test the connectivity to Intrado from this page.

The following table describes the Intrado VUI Settings page.

#### Table 11: Intrado VUI Settings

| Field                           | Description   |  |
|---------------------------------|---|--|
| Status                          | Displays status messages.   |  |
| Intrado VUI Settings            |   |  |
| Upload Certificate              | Uploads the certificate from your local drive to the<br>Emergency Responder server.     |  |
|                                 | To upload a certificate, follow these steps:  |  |
|                                 | 1. Click Upload Certificate   |  |
|                                 | An Upload Certificate window appears.   |  |
|                                 | 2. Click the <b>Browse</b> button to locate the certificate file on your local machine. |  |
|                                 | <b>3.</b> Click the <b>Upload</b> button to upload the certificate file.                |  |
| Validate Certificate            |   |  |
| Intrado Certificate<br>Password | The password that was generated with this certificate.                                  |  |
| VUI URL                         | VUI URL is provided by Intrado.   |  |

| Field                            | Description   |  |
|----------------------------------|---|--|
| Test and Validate<br>Certificate | Use this button to test the validity of your certificate.   |  |
| Configure Account Deta           | ails  |  |
| VUI Schema URL                   | The VUI Schema URL provided by Intrado.   |  |
| Intrado Account ID               | Your Intrado Account ID provided by Intrado.  |  |
| Max VUI Connections              | The maximum number of simultaneous VUI connections that Emergency Responder allows across the Server group. |  |
| Test Connectivity                | Use this link to verify whether Emergency Responder can successfully connect to Intrado VUI.                |  |
| Delete Account                   | Deletes an existing Intrado account from the Emergency Responder database.                                  |  |
| Update                           | Click <b>Update</b> to save the changes you made on this page.  |  |
| Cancel                           | Click <b>Cancel</b> to change the fields on this page back to the last saved settings.                      |  |

Configure Emergency Responder and Intrado V9-1-1 Enterprise Services

# **Onsite Alert Settings**

The Onsite Alert Settings page appears when you choose ERL > Onsite Alert Settings.

# **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Onsite Alert Settings page to add information about your onsite alert personnel. When you configure ERLs, you assign these personnel to them. Emergency Responder alerts the assigned personnel when an emergency call is made within the zone.

**Note** Sometimes the prompts do not get played at the onsite alert phone when the call is initiated from the CTI ports. To avoid this problem, configure only one line per CTI port in the Unified CM that is configured for Emergency Responder.

Note

In case a user configures an onsite alert for a call (not for email), the calling party displays as the Emergency Responder CTI port. The following table describes the Onsite Alert Settings page.

# Table 12: Onsite Alert Settings Page

| Field                         | Description   | Notes   |
|-------------------------------|---|---|
| Add New Onsite Alert C        | ontact  |   |
| Onsite Alert ID               | The identifier for the onsite alert contact. The<br>identifiers you use should be based on your site<br>identification strategy (for example, security ID or<br>badge number). This field is used throughout<br>Emergency Responder to identify the contact; for<br>example, you select from Onsite Alert IDs when<br>assigning contacts to zones. The Onsite Alert ID<br>cannot be modified after you have saved it. | Use a naming strategy meaningful to you<br>organization, but which is also useful wh<br>configuring zones in Emergency Respond  |
| Onsite Alert Name             | The name of the onsite alert contact.   |   |
| Onsite Alert Number           | The telephone number for the onsite alert contact.<br>This number must be a voice telephone number; do<br>not enter the number of a voice-mail system or an<br>automated attendant.   | When Emergency Responder gets an eme<br>call from an ERL, it calls the onsite alert<br>of the contact for the ERL and plays a pre<br>message that includes the phone number fro<br>the emergency call was placed.   |
| Onsite Alert Email<br>Address | The email address for the onsite alert contact, for example, email@domain.com.  | When Emergency Responder gets an eme<br>call from an ERL, it emails the onsite ale<br>associated with the ERL. If the email ID<br>email paging system, the contact receives<br>instead of an email. The email or page inc<br>phone number from which the emergency<br>placed. |
|                               |   | Note You can add multiple email a<br>by separating each address w<br>comma (,). Avoid extra space<br>between the email addresses  |
| Onsite Alert Pager<br>Address | The pager email address for the onsite alert contact, for example, <pager_number>@domain.com.</pager_number>  | You can limit the size of the message that<br>to the pager by configuring the fields on t<br>Alert Setting Page. See Pager Alert Settin<br>page 27.   |
| Available User Group          | The User Group which will receive the specific web<br>alert from the associated ERL. By default<br>Emergency Responder User Group is selected,<br>which has all users.  | The users can view all alerts in the system selecting <b>ALL</b> on the Web Alert page.   |
| Insert                        | Click the <b>Insert</b> button to add the contact to the list<br>of contacts. The contact is then listed in the<br><b>Available Onsite Alerts</b> section of the page.  |   |
| Cancel Changes                | Click the <b>Cancel Changes</b> button to cancel any changes made to this page.   |   |

| Field                   | Description  | Notes   |
|-------------------------|--|---|
| Available Onsite Alerts | Section of the page that displays onsite alert contacts that have already been configured. For   | If no contacts have previously been co section is blank.                    |
|                         | configured onsite alert contacts, the following information is displayed:  | You cannot modify a contact's Onsite  |
|                         | • Onsite Alert ID  | Before you can delete the entry, you the ERLs to which the person is assign |
|                         | Onsite Alert Name  | the person from the ERL.  |
|                         | Onsite Alert Number  |   |
|                         | Onsite Alert Email Address   |   |
|                         | • Onsite User Group  |   |
|                         | To change an entry, click the entry or click the <b>Edit</b><br>icon; the person's contact information is loaded in<br>the edit boxes. Make your changes and click<br><b>Update</b> .        |   |
|                         | To delete an entry, click the <b>Delete</b> icon on the same line as the entry.  |   |
| Add New                 | Click the Add New button to add another contact.   |   |
| Update                  | Click the <b>Update</b> button when viewing an existing contact's information to save changes you make to the information.   | Only available when viewing the info<br>an existing contact.                |
| Export                  | Click the <b>Export</b> button to export the onsite alert<br>settings to another file. For more information, see<br>Export OnsiteAlert Data, on page 25.                                     |   |
| Import                  | Click the <b>Import</b> button to import the onsite alert<br>settings to your Cisco Emergency Responder<br>configuration. For more information, see Import<br>OnsiteAlert Data , on page 26. |   |

# **Export OnsiteAlert Data**

The **Export OnsiteAlert Data** window appears when you click **Export** on the **Onsite Alert Settings** page (opened when you choose **ERL** > **Onsite Alert Settings**).

# **Authorization Requirements**

You must have the system administrator or ERL administrator authority to access this window.

### Description

Use the Export OnsiteAlert Data window to perform the following:

- Create a file containing the Emergency Responder Export OnsiteAlert Data.
- Use the **Download** option to download a file containing the Emergency Responder Export OnsiteAlert Data. For more information, see Download File.

The following table describes the fields found on the **Export OnsiteAlert Data** window.

#### Table 13: Export OnsiteAlert Data Window

| Field                     | Description  |  |
|---------------------------|--|--|
| Export OnsiteAlert Data   |  |  |
| Select Export Format      | Select the file format from the drop-down list that matches the file being imported.                                   |  |
| Enter Export File Name    | Enter the name of the file that you want to create. Do not include the file extension.                                 |  |
| Export                    | Click the <b>Export</b> button to add data from the import<br>file to your Cisco Emergency Responder<br>configuration. |  |
| Close                     | Click the <b>Close</b> button to close the window.   |  |
| Export Status             | This text box displays status information.   |  |
| Download                  |  |  |
| Select a File to Download | Select a file from the drop-down list and click the <b>Download</b> button to download the file to your machine.       |  |

# **Import OnsiteAlert Data**

The **Import OnsiteAlert Data** window appears when you click **Import** on the **Onsite Alert Settings** page (opened when you choose **ERL** > **Onsite Alert Settings**).

#### **Authorization Requirements**

You must have the system administrator or ERL administrator authority to access this window.

#### Description

Use the **Import OnsiteAlert Data** window to create or update several OnsiteAlert Data details at once from the file in which you have defined their data. You can create this file using a spreadsheet and save the information in the required formats. The **View sample file** link provides the sample information to create or update your import file.

You can import a previously exported file or you can upload a file that you created on your local system using the **Upload** option. For more information, see **Upload** File.

**Note** Ensure that you restart the Cisco Emergency Responder service after using the Import feature to update the Emergency Responder onsite alerts in bulk, for the changes to take effect.

The following table describes the fields found on the Import OnsiteAlert Data window.

#### Table 14: Import OnsiteAlert Data Window

| Field                   | Description  |  |
|-------------------------|--|--|
| Import OnsiteAlert Data |  |  |
| Select Import Format    | Select the file format from the drop-down list that matches the file being imported.   |  |
|                         | Click <b>View sample file</b> link to view an example of<br>the expected format and sequence of values. Use this<br>sample information to create your import file in a<br>spreadsheet. |  |
| Select File to Import   | Select the file from the drop-down list from which you want to import data.  |  |
| Import                  | Click the <b>Import</b> button to add data from the import<br>file to your Cisco Emergency Responder<br>configuration.   |  |
| Upload                  | Click the <b>Upload</b> button to upload the file from your machine. For more information, see Upload File.  |  |
| Close                   | Click the <b>Close</b> button to close the window.   |  |
| Import Status           | This text box displays status information.   |  |

Onsite Alert Settings, on page 23 Emergency Responder Onsite Alert Personnel Preparations

# **Conventional ERL**

The Conventional ERL page appears when you choose **ERL** >Conventional ERL.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Conventional ERL Data page to define the emergency response locations (ERLs) for your company. An ERL might be a whole building (if it is small), the floor of a building, or an area on a floor. Each community can have different laws concerning the size of an ERL, so consult your local ordinances and with your service provider before deciding on your ERLs. The ERLs you create are used by emergency response teams to locate the emergency, so the ERL should be small enough that these teams can locate the caller within a reasonable time.

The following table describes the Find and List ERLs page.

| Field                       | Description   | Notes  |
|-----------------------------|---|--|
| ERL Search Parameters       | 5   |  |
| Find Conventional ERL where | Select search criteria and click Find to list existing ERLs.<br>To list all ERLs, click <b>Find</b> without entering any criteria.<br>From the drop-down menu, you can select the number of<br>records that display per page for each search. | When copying an ERL, inform<br>must be unique in an ERL is n<br>See Add New ERL, on page 3<br>information. |
|                             | From the search results list, you can:  |  |
|                             | <ul> <li>Click an entry to view and update its characteristics.</li> <li>Click the Copy icon to create a new ERL with the same ALI data.</li> </ul>   |  |
|                             | <ul> <li>Click the Delete icon to remove the ERL.</li> <li>Click view in the Audit Trail column to view a history of changes made to that ERL. See ERL Audit Trail, on page 107 for more information.</li> </ul>                              |  |
| Configure Default ERL       | You must configure the Default ERL before configuring any other ERLs.   | See Add New ERL , on page 3 information.   |
|                             | The default ERL is the system-defined ERL that is used to route calls if no other ERL configuration is found.   |  |
|                             | <b>Note</b> During the migration of data in an upgrade scenario, if any manually configured phone is assigned to the Default ERL, it remains there until it is modified.  |  |
| Add New ERL                 | Click Add New ERL to create a new ERL.  | See Add New ERL , on page 3 information.   |
| Configure Default ERL       | Click Configure Default ERL to configure a default ERL  |  |
| Export                      | Click the <b>Export</b> link to create a file containing your ERL configuration.  | See Export ERL Data, on page<br>information about exporting E  |
| Import                      | Click the <b>Import</b> link to create or update ERLs using information stored in a separate file. By importing ERL data, you can create or update many ERLs at one time.   | See Import ERL Data, on page<br>information about importing E  |

# Table 16: Find and List ERLs Page

# **Related Topics**

Export PS-ALI Records, on page 108 ERL Creation ERLs ERL Management E911 and Cisco Emergency Responder Terminology

# Add New ERL

Note On the ERL Information for ERL Name page, the ERL Name variable is replaced with the name of the ERL associated with the page. For example, if you click the Default ERL, the page that appears is titled ERL Information for Default. If the ERL name is First Floor, the page that appears is titled ERL Information for First Floor.

The Add New ERL and ERL Information for ERL Name pages are essentially the same, as follows:

- The Add New ERL page appears when you select **Add New ERL** on the Find ERL Data page (opened when you choose **ERL** > **Conventional ERL**). The page also appears if you click **Copy** for an existing ERL.
- The ERL Information for Default page opens when you click Configure Default ERL on the Find ERL Data page. The ERL Information for ERL Name page also appears when you click any of the links associated with an existing ERL in the list on the Find ERL Data page (opened when you choose ERL > Conventional ERL).

**Note** You cannot use default ERLs as a Test ERL. The Test ERL check box is not available on the ERL Information for Default page.

#### Authorization Requirements

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Add New ERL page to create a new emergency response location (ERL). Alternatively, you can create or update many ERLs at once by importing predefined ERL information from a separate file.

Emergency Responder allows you to select the ERL as a Test ERL.

Use the Find ERL Data page to view or update an existing ERL.

See ELIN Numbers Emergency Calls and PSAP Callbacks for information about configuring the ELIN numbers in Cisco Unified Communications Manager.

If you want to route emergency calls to onsite security instead of the PSAP, see Set Up ERLs for Non-PSAP Deployment for the Route and Translation Pattern and ELIN settings.

**Note** If you are upgrading Emergency Responder from any source version prior to Release 12.5.1, ensure that you check the Local Call Time check box to receive the local call time via emails and pager alerts in the upgraded version.

The following table describes the Add New ERL and ERL Information pages.

| Field                                    | Description   | Notes   |

ERLs ERL Management Set Up Default ERL Set Up Individual ERL and Automatic Location Information (ALI) Set Up Test ERLs E911 and Cisco Emergency Responder Terminology

# **ALI Information**

**Note** On the **ALI Information** (for ERL Name) page, the ERL Name variable is replaced with the appropriate ERL name. For example, if you click on ALI Details on the ERL Information for Default page, the page that appears is titled **ALI Information for Default**. If the ERL name is First Floor, the page that appears is titled **ALI Information for First Floor**.

The ALI Information (for ERL Name) page appears when you do one of these:

• Click Add/Edit ALI in the ERL Address section on the Add New ERL page.

**Note** The Add New ERL page appears when you choose **Add New ERL** on the Find ERL Data page (opened when you choose **ERL** > **Conventional ERL**).

• Click Add/Edit ALI on the ERL Information for ERL Name page. The ERL Information for ERL Name page appears when you click on an existing ERL name or on **Configure Default ERL** on the Find ERL Data page (opened when you choose **ERL > Details**).

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Enter ALI Information page to enter the automatic location information (ALI) for an emergency response location (ERL). Send this information to your service provider, who will ensure it gets into the required database so that calls from your ELINs are routed to the local PSAP and public safety answering points (PSAPs) can locate an emergency caller.

The data requirements for these fields might differ from service provider to service provider. Contact your service provider to determine their requirements. The descriptions of the fields in are based on the National Emergency Number Association (NENA) Version 2 standards (USA).

**Caution** The quality of the information you enter here is critical. This information is displayed to emergency call operators and to your local response team. They use this information to locate emergency callers. If the data is incorrect or difficult to understand, emergency response can be delayed, which might result in casualties that could have been prevented.

| Field  | Description   | Notes   |
|--|---|---|
| Find all prevalidated fields from validation file by selecting a tag |   |   |
| Select a Tag   | Select the tag whose associated ALI data you want to<br>load into the window. You can then edit the<br>information for this specific ALI. | You can simplify the entry of ALI data<br>up tags in a file called validate.txt. Thi<br>explains where to place the file, and whe<br>the samplevalidate.txt file, which explains<br>format of the file.<br>When you create a tag, you enter inform<br>is common between several ALIs, such<br>company name, city, state, and so forth<br>example, if you have a 25-story building<br>are creating an ERL for each floor, you<br>create a tag called "25story." Then, ins<br>retyping the information for the building<br>you select a tag and the ALI data is load<br>the data you defined for the tag. |

#### Table 18: Enter ALI Information Page

| Field               | Description  | Value Type   |  |

For example, ERL Import<br>require that you enter anything in the R<br>field. You can give an empty string in ea<br>ERL records and Emergency Responde<br>this file for importing. However, you m<br>delete the field itself from the file. The fi<br>be there in the record; it can be an emp<br>delimited with a comma. |

Set Up Default ERL Set Up Individual ERL and Automatic Location Information (ALI) Import Several ERLs Export PS-ALI Records, on page 108 ERLs ERL Management E911 and Cisco Emergency Responder Terminology

## **Export ERL Data**

The Export ERL Data page appears when you click the **Export** link on the Find ERL Data page (opened when you choose **ERL** > **Conventional ERL**).

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Export ERL Data page to create ERL export files for your own use only; do not submit ERL export files to your service provider. For example, use an ERL export file to back up your configuration or to move it to another Emergency Responder server.

To create a file to send to your service provider to update their ALI data, see Export PS-ALI Records, on page 108.

The following table describes the Export ERL Data page.

#### Table 19: Export ERL Data Page

| Field                  | Description   |
|------------------------|---|
| Select Export Format   | The file format to be used in the export file. For ERL data, either csv (comma-separated va |
| Enter Export File Name | The name of the file you want to create. Do not include a file extension.                   |
| Export button          | Click <b>Export</b> to create the export file.  |
| Close button           | Click <b>Close</b> to close the window.   |

#### **Related Topics**

## **Import ERL Data**

The Import ERL Data page appears when you click the **Import** link on the Find ERL Data page (opened when you choose **ERL** > **Conventional ERL**).

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Import ERL Data page to create or update many ERLs at once from a file in which you have defined the ERL data. Create this file using a spreadsheet that can save the information in one of the required formats (CSV or XML). View the samples from this page before attempting to create an import file.

**Note** Import ERL Data does not support configuring E.164 number with a leading plus sign (+). Ensure that you remove the leading plus sign before importing onsite alert details.

If you must update many ERLs, you can export the ERL data, update the export file, and reimport the file.

You can also use the Upload utility to upload a file containing ERL data from your local system; you can then import the ERL data. See Upload File for more information.

The following table describes the Import ERL Data page.

| Field                 | Description  |  |
|-----------------------|--|--|
| Select Import Format  | Select the format used in the file you are importing.  |  |
|                       | After you select the format, click <b>View sample file</b> to see an example of the expected format and sequence of values. Use this sample information to create your import file in a spreadsheet. |  |
| Select File to Import | Select the file from which you want to import ERL data.  |  |
| Upload button         | Click Upload to upload a file from your local system. See Upload File for more information.  |  |
| Import button         | Click <b>Import</b> to add ERL data from the import file to the Emergency Responder database.  |  |
|                       | Note The imported ERL data overwrites conflicting data in the Emergency Responder database.  |  |
| Close button          | Click <b>Close</b> to close the window.  |  |

# **Off-Premises ERL**

The Find Off-Premises ERL Data page appears when you choose **ERL** > **Off-Premise ERL** > **Search And List**.

## **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

### Description

Use the Off-Premise ERL Data page to define the emergency response locations (ERLs) for individuals with phones that are located outside of the corporate network.

The following table describes the Find and List Off-Premise ERLs page.

| Field                       | Description   | Notes  |
|-----------------------------|---|--|
| ERL Search Parameter        | 5   | 1  |
| Find Off-Premises ERL where | Select search criteria and click <b>Find</b> to list existing Off-Premise ERLs. To list all ERLs, click <b>Find</b> without entering any criteria. From the drop-down list, you can select the number of records that display per page for each search. | When copyi<br>information<br>unique in an<br>copied. |
|                             | From the search results list, you can:  |  |
|                             | • Click an entry to view and update its characteristics.  |  |
|                             | • Click the <b>Copy</b> icon to create a new ERL with the same ALI data.  |  |
|                             | • Click the <b>Delete</b> icon to remove the ERL.   |  |
|                             | • Click <b>view</b> in the Audit Trail column to view a history of changes made to that ERL. See ERL Audit Trail, on page 107 for more information.   |  |
| Add New ERL                 | Click Add New ERL to create a new ERL.  |  |

#### Table 21: Find Intrado ERL Data (Off-Premise)

## **Related Topics**

Add New ERL , on page 41 Off-Premise ERL - Secondary Status, on page 43 Set Up Emergency Responder to Support Off-Premise Users

## **Add New ERL**

The Add New ERL (Off-Premise phones) page appears when you choose **Add New ERL** on the Find Intrado ERL Data page (opened when you choose **ERL** > **Off-Premise ERL** > **Search and List**).

### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

### Description

Use the Add New ERL page to create a new emergency response location (ERL) for Off-Premise phones. Alternatively, you can create or update many ERLs at once by importing predefined ERL information from a separate file.

Use the Find ERL Data page to view or update an existing ERL.

The following table describes the Add New ERL (Off-Premise Phones) page.

Table 22: Add New ERL (Off-Premise Phones)

| Field        | Description | Note |
|--------------|-------------|------|
| ERL Settings |             |      |

| Field                         | Description  | Note   |
|-------------------------------|--|--|
| ERL Name                      | The name of the ERL. The naming strategy you use is<br>critical. The ERL name is one of the primary pieces of<br>information your security team sees when alerted to an<br>emergency call. If the name is easy to understand and very<br>descriptive, it can help your team respond quickly to a<br>call.  | You cannot change the name of an ERL. To change an ERL name, cre ERL, then delete the old ERL.<br>Any leading and trailing spaces is |
|                               | Work with your security team to develop an ERL naming strategy.  |  |
| Description                   | Enter a description of the new ERL (optional).   |  |
| Route/Translation Patter      | rn Settings  |  |
| Route/Translation Pattern     | The phone number, defined as a route pattern in Cisco<br>Unified Communications Manager, that is configured to<br>use the gateway the call should be routed through to get<br>to the correct PSAP. This number must include the external<br>emergency number, such as 911 in the USA. For example,<br>10.911 or 10911. The pattern can only contain numbers<br>and dots. |  |
| Add button                    | To add a route point, choose a route point from the drop-down list and click <b>Add</b> .  |  |
| Remove button                 | To remove a combination, select it in the list and click <b>Remove</b> .   |  |
| Onsite Alert Settings         |  |  |
| Available Onsite Alert<br>IDs | Text box that displays the IDs of all available onsite alert personnel.  | You must first add the contact to the onsite alert personnel.  |
| Add button                    | Select the onsite alert (security) contacts to be assigned to<br>the ERL. These contacts are notified when an emergency<br>call is made from the ERL. To add a contact, select an<br>Onsite Alert ID from the Available Onsite Alert IDs list<br>and click <b>Add</b> . The contact ID then appears in the Onsite<br>Alert IDs for the ERL text box.                     |  |
| Remove button                 | To remove a contact for the ERL, select the appropriate ID in the Onsite Alert IDs for the ERL text box and click <b>Remove</b> .  |  |
| ERL Address                   | 1  | 1  |
| ALI Details button            | Click ALI Details to view or change the automatic location<br>information (ALI) of an ERL. The ALI provides detailed<br>information about the location of the ERL, such as street<br>address and phone number.   |  |

| Field                 | Description  | Note  |
|-----------------------|--|---|
| Time Zone             | Select a time zone for the ERL. The time zone provides the list of all available time zones.   | When you dial 911, the selecte<br>is set as the local call time in P<br>Emergency alert. If a time zone<br>selected, then the local call tim<br>the system call time. |
| Insert button         | Click <b>Insert</b> to save your changes to the new ERL.   | The Insert button is only availa creating a new ERL.  |
| Cancel Changes button | Click <b>Cancel Changes</b> to change the fields on this page back to the last saved settings.   |   |
| Update button         | Click <b>Update</b> to save your changes to the ERL.   | The Update button is only avai changing an existing ERL.  |
| Close button          | Click <b>Close</b> to close the window. You must click <b>Update</b> or <b>Insert</b> to save your changes before you click <b>Close</b> . |   |

## **SNMP v2 Settings Page**

Use the information in the following table to configure the SNMPv2 Settings.

#### Table 31: SNMP v2 Settings Page

| Field              | Description | Notes |
|--------------------|-------------|-------|
| Add SNMPv2 Communi | ty Setting  |       |

| Field                  | Description  | Notes   |
|------------------------|--|---|
| IP Address/Host Name   | <ul> <li>The IP address or hostname of a switch whose SNMP read community string you are defining.</li> <li>If you use the same read community string for all switches, you only need to define one entry: *.*.*.</li> <li>If you use different read community strings for sets of switches, you can define each set, using variables and ranges. For example, if you have 10 switches from 10.1.115.0 to 10.1.125.0, you can use 10.1.115-125.0 as the IP address. You can also mix ranges and variables, such as *.*.115-125.*.</li> <li>Note If you are using IPv6 address, then wildcard characters are not supported. Enter the details for each switch.</li> </ul> | You are not defining your switch<br>page, you are only associating I<br>patterns to read community strin<br>Emergency Responder only tries<br>string with the specific switches<br>on the LAN Switch Details page<br>Switch Details, on page 66 for r<br>information.<br>If two or more patterns match an<br>Emergency Responder uses the<br>associated with the most closely<br>pattern. |
| Timeout                | The time, in seconds, in which Emergency Responder<br>should consider an attempted SNMP connection to a<br>switch to have failed. See the explanation of Retries for<br>more information.  | Default is 10 seconds. The optin to 15 seconds.   |
| Maximum Retry Attempts | The number of times Emergency Responder should<br>attempt to contact a switch.<br>With each retry, the previous timeout is multiplied by 2,<br>to ensure that the switch has enough time to respond. For<br>example, if you specify 10 for timeout, the first attempt<br>times out in 10 seconds, the second attempt times out in<br>20 seconds, the third attempt times out in 40 seconds,<br>and so forth.   | Default is 2 retries. This number<br>include the initial attempt; that is<br>2, Emergency Responder attemp<br>a switch up to 3 times (the initia<br>2 retries).<br>The optimal value is 2 to 3 retrie   |
| Read Community         | The SNMPv2 read community string for the switch.<br>Note Community string does not support special characters like angle brackets (<>), backslash (\), colon (:), quotation marks (""), and tilde (~).   | Default is public for any IP addre<br>in the SNMPv2 settings list.  |
| Insert                 | Click the <b>Insert</b> button to add the entry to the list of SNMP settings.  |   |
| Cancel Changes         | Click the <b>Cancel Changes</b> button to change the fields<br>on this page back to the last saved settings.   |   |
| SNMPv2 Settings        | A list of SNMPv2 settings that you have already defined.<br>To change an entry, click any of the links associated with<br>the entry to load the details into the edit boxes at the top<br>of the page. Then make your changes and click <b>Update</b> .<br>To delete an entry, click the <b>Delete</b> icon for the entry.   |   |

| Field   | Description   | Notes   |
|---------|---|---|
| Add New | Click the <b>Add New</b> button to add another SNMPv2 setting.  |   |
| Update  | Click the <b>Update</b> button to save changes you make to an existing SNMPv2 setting.  | Only available when viewing an existence setting. |
| Export  | Click the <b>Export</b> button to export the SNMPv2 data<br>settings to another file. For more information, see Export<br>SNMPv2 Data, on page 54.                                    |   |
| Import  | Click the <b>Import</b> button to import the SNMPv2 data<br>settings to your Cisco Emergency Responder<br>configuration. For more information, see Import SNMPv2<br>Data, on page 55. |   |

## **Export SNMPv2 Data**

The **Export SNMPv2 Data** window appears when you click **Export** on the **SNMPv2 Settings** page (opened when you choose **Phone Tracking** > **SNMPv2 Settings**).

#### **Authorization Requirements**

You must have the system administrator or ERL administrator authority to access this window.

#### Description

Use the Export SNMPv2 Data window to perform the following:

- Create a file containing the Emergency Responder Export SNMPv2 Data.
- Use the **Download** option to download a file containing the Emergency Responder Export SNMPv2 Data. For more information, see Download File.

The following table describes the fields found on the Export SNMPv2 Data window.

#### Table 32: Export SNMPv2 Data Window

| Field                  | Description  |
|------------------------|--|
| Export SNMPv2 Data     |  |
| Select Export Format   | Select the file format from the drop-down list that matches the file being imported.                                   |
| Enter Export File Name | Enter the name of the file that you want to create. Do not include the file extension.                                 |
| Export                 | Click the <b>Export</b> button to add data from the import<br>file to your Cisco Emergency Responder<br>configuration. |
| Close                  | Click the <b>Close</b> button to close the window.   |

# **Phone Tracking Schedule**

The Phone Tracking Schedule page appears when you choose Phone Tracking > Schedule.

#### Authorization Requirements

You must have system administrator or network administrator authority to access this page.

### Description

Use the Phone Tracking Schedule page to define the CiscoEmergencyResponder (Emergency Responder) schedule for updating phone and switch information from the network. Emergency Responder updates network information using two processes:

- Phone Tracking—A periodic comparison of the phones registered with CiscoUnifiedCommunicationsManager to the location information obtained from the switches. If a phone moves, Emergency Responder updates the phone ERL.
- Switch Port and Phone Update—The phone tracking process plus a more extensive check of the network switches, which can identify new or changed switch modules (additional or removed ports). Ensure that your ERL administrator updates the ERL assignment for new ports.

The following table describes the Phone Tracking Schedule page.

#### Table 36: Phone Tracking Schedule Page

| Field                                  | Description  | Notes  |

# **Cisco Unified Communications Manager Clusters**

The Cisco Unified Communications Manager Clusters page appears when you choose **Phone Tracking** > **Cisco Unified Communications Manager**.

#### **Authorization Requirements**

You must have system administrator or network administrator authority to access this page.

#### Description

Use the Cisco Unified Communications Manager Clusters page to identify the Cisco Unified Communications Manager clusters whose emergency calls this Emergency Responder group handles. Only assign a Cisco Unified Communications Manager cluster to a single Emergency Responder group. Emergency Responder gets the list of phones registered with these Cisco Unified Communications Manager servers and tracks the movements of these phones.

The following table describes the Cisco Unified Communications Manager Clusters page.

| Field   | Description   | Notes   |
|---|---|---|
| Add New Cisco Unified Communications<br>Manager Cluster |   |   |
| Cisco Unified<br>Communications<br>Manager              | The IP address or DNS<br>name of a Cisco Unified<br>Communications<br>Manager server that is<br>running Cisco Unified<br>Communications<br>Manager and SNMP<br>services.<br>Only add one server per<br>Cisco Unified<br>Communications<br>Manager<br>cluster—Emergency<br>Responder can identify<br>the other servers in the<br>cluster. The Cisco<br>Unified Communications<br>Manager server you<br>specify represents the<br>cluster in which it is a<br>member. | When viewing a previously<br>defined Cisco Unified<br>Communications Manager<br>server, Emergency Responder<br>displays a CCM List link. Click<br>CCM List to view a list of the<br>Cisco Unified Communications<br>Manager servers that belong to<br>the same cluster as the selected<br>server.NoteThe Cisco Unified<br>Communications<br>Manager servers<br>should have run<br>the CCM service<br>at least once.After the IP address or DNS<br>name has been configured, it<br>cannot be modified. |
| CTI Manager   | The IP address or DNS<br>name of the CTI<br>Manager used by the<br>specified Cisco Unified<br>Communications<br>Manager server.   |   |
| CTI Manager User<br>Name                                | The name of the user<br>created in the Cisco<br>Unified Communications<br>Manager server for<br>Emergency Responder<br>use.   | This user must have specific<br>characteristics and device<br>assignments. See Create<br>Emergency Responder Cisco<br>Unified Communications<br>Manager User for specific<br>information.   |
| CTI Manager Password                                    | The password for the user.  |   |

#### Table 37: Cisco Unified Communications Manager Clusters Page

| Field                                 | Description   | Notes  |
|---------------------------------------|---|--|
| Backup CTI Manager 1                  | The IP address or DNS<br>name of the backup CTI<br>Manager used by the<br>specified Cisco Unified<br>Communications<br>Manager server.  |  |
| Backup CTI Manager 2                  | The IP address or DNS<br>name of the backup CTI<br>Manager used by the<br>specified Cisco Unified<br>Communications<br>Manager server.  |  |
| Telephony Port Begin<br>Address       | The number of the first<br>CTI port to use for<br>calling onsite alert<br>(security) personnel.<br>When an emergency call<br>is made, Emergency<br>Responder calls the<br>onsite alert personnel for<br>the originating ERL<br>using the telephony ports<br>you configure here. | You must first create this port<br>in Cisco Unified<br>Communications Manager. See<br>Create Required CTI Ports for<br>more information.   |
| Number of Telephony<br>Ports          | The number of CTI ports.<br>Enter the number of CTI<br>ports you created in<br>Cisco Unified<br>Communications<br>Manager. The number of<br>ports is the number of<br>concurrent calls<br>Emergency Responder<br>can make to onsite alert<br>personnel.                         | The ports used are in sequence<br>from the beginning port. For<br>example, if you enter 3000 for<br>the begin port, and 4 for number<br>of ports, Emergency Responder<br>uses 3000, 3001, 3002, and<br>3003. |
| Enable Secure Connection              |   |  |
| Enable Secure<br>Connection check box | Check this check box to<br>enable a secure<br>connection. You can<br>enter data in the other<br>fields of this section only<br>if you have enabled<br>Secure Connection.  |  |
| TFTP Server IP<br>Address             | The IP address of the TFTP server.  |  |

| Field  | Description   | Notes |
|--|---|-------|
| TFTP Server Port                               | The port of the TFTP server.  |       |
| Backup TFTP Server IP<br>Address               | The IP address of the<br>backup TFTP server, for<br>the Unified CM node<br>being added. |       |
| CAPF Server IP<br>Address                      | The IP address of the CAPF server.  |       |
| CAPF Server Port                               | The port of the CAPF server.  |       |
| Instance ID for<br>Publisher                   | The instance ID for the Publisher node.   |       |
| Secure Authentication<br>String for Publisher  | The secure authentication string for the Publisher node.                                |       |
| Instance ID for<br>Subscriber                  | The instance ID for the Subscriber node.  |       |
| Secure Authentication<br>String for Subscriber | The secure authentication string for the Subscriber node.                               |       |
| AXL Settings                                   |   |       |

| Field        | Description   | Notes |   |
|--------------|---|-------|---|
| AXL Username | The username for the<br>application user on Cisco<br>Unified Communications<br>Manager with privileges<br>to perform AXL queries. | Note  | The selected user<br>in the Cisco<br>Emergency<br>Responder<br>Location<br>Management<br>application server<br>in Unified CM<br>should match the<br>user in the Cisco<br>Emergency<br>Responder page:<br>Phone Tracking<br>> CUCM > AXL<br>Username.<br>Though, the<br>Emergency<br>Responder AXL<br>username and CTI<br>username have the<br>required<br>permissions, the<br>username selected<br>in the application<br>server must match<br>the AXL |
|              |   |       | username.<br>After updating the<br>application server<br>username, you<br>must also restart<br>the CUCM Cisco<br>E911 network<br>service on all the<br>nodes in the<br>cluster. This<br>service restart<br>causes the Unified<br>CM 911 to use the<br>new userID and<br>establish the<br>connection<br>between the two<br>servers.  |

| Field   | Description  | Notes   |  |
|---|--|---|--|
| AXL Password                                  | The password for the<br>application user on Cisco<br>Unified Communications<br>Manager with privileges<br>to perform AXL queries.                                      |   |  |
| AXL Port Number                               | The port number that is<br>used by the application<br>on Cisco Unified<br>Communications<br>Manger. The default<br>value is 8443.                                      |   |  |

Identify Cisco Unified Communications Manager Clusters Create Emergency Responder Cisco Unified Communications Manager User Create Required CTI Ports E911 and Cisco Emergency Responder Terminology

## **LAN Switch Details**

The LAN Switch Details page appears when you choose Phone Tracking > LAN Switch Details.

Note

Cisco Emergency Responder supports SNMP Version 1, Version 2, Version 2C, and Version 3 of a LAN switch.

#### **Authorization Requirements**

You must have system administrator or network administrator authority to access this page.

## Description

Use the LAN Switch Details page to add, remove, or change the switches that Emergency Responder manages. Ensure that you identify all switches that might have phones attached to them. You can only assign switch ports to ERLs if you enter the switches on this page. Any phones attached to unidentified switches or ports are listed as unlocated phones in Emergency Responder, and are assigned to the Default ERL.

## **Note** Switches should not be configured with Static Engine ID.

The following table describes the LAN Switch Details page.

#### Table 38: LAN Switch Details Page

| Field                                 | Description   |
|---------------------------------------|---|
| LAN Switch Details                    |   |
| Switch Host Name/IP<br>Address        | The IP address or DNS name of the switch.<br>For more information on standardized valid IPv4 or IPv6 address formats, see<br>the following:<br>• https://docs.oracle.com/javame/config/cdc/ref-impl/pbp1.1.2/jsr217/java/<br>net/Inet4Address.html                                  |
| Description                           | https://docs.oracle.com/javame/config/cdc/ref-impl/pbp1.1.2/jsr217/java/<br>net/Inet6Address.html     Description of this switch.   |
| Enable CAM-based Phone                | Check this check box if there might be phones attached to this switch that do not   |
| Tracking                              | use the Cisco Discovery Protocol (CDP) to announce themselves to the network.<br>For non-CDP phones, Emergency Responder must use the Content Addressable<br>Memory (CAM) information about the switch to identify phones.  |
| Use port description as port location | Check this check box if you want to display the switch port description that is configured on the switch in the Location Field.   |
| Use SNMPv3 for<br>Discovery           | Select this check box if the switch has SNMPv3 enabled and Emergency Responder should discover it using SNMPv3.   |
| Insert button                         | Check <b>Insert</b> to add the switch to the list of switches.  |
|                                       | When you click Insert, Emergency Responder asks if you want to run the switch port and phone update process on the switch right away. Click <b>OK</b> to run the process now, or click <b>Cancel</b> to add the switch to the configuration without running the process right away. |
|                                       | <b>Note</b> See Manually Run the Switch-Port and Phone Update Process for information about running the process if you select not to run it immediately.  |
| Update button                         | Click <b>Update</b> when viewing an existing switch to save changes that you make to the switch.  |
| Cancel Changes button                 | Click <b>Cancel Changes</b> to change the fields on this page back to the last saved settings.  |
| LAN Switches                          | 1   |

| Field                 | Description  |  |
|-----------------------|--|--|
| LAN Switch list       | A list of the switches you have already defined. Click the IP address/DNS name of the switch or click the <b>Edit</b> icon to view and modify settings for the switch. Click the <b>Delete</b> icon to delete the switch.        |  |
| Add LAN Switch button | Click Add LAN Switch to add another switch.  |  |
| Export                | Click the <b>Export</b> link to export the switch definitions to another file. See Export LAN Switch , on page 68 for more information.  |  |
| Import                | Click the <b>Import</b> link to import a list of switches into the Emergency Responder configuration. This list might be exported from your network management software. See Import LAN Switch, on page 69 for more information. |  |

## **Export LAN Switch**

The Export LAN Switch page appears when you click Export in the LAN Switch Details page (opened when you choose **Phone Tracking > LAN Switch Details**).

#### **Authorization Requirements**

You must have system administrator or network administrator authority to access this page.

#### Description

Use the Export LAN Switch page to create a file containing the Emergency Responder switch configuration.

If you must update several switch entries in Emergency Responder, you can export the switch information, make your changes in the export file using a spreadsheet, then reimport the file.

You can also download a file to your local system using the Download utility. See Download File for more information.

The following table describes the Export LAN Switch page.

#### Table 39: Export LAN Switch Page

| Field                  | Description   |
|------------------------|---|
| Select Export Format   | The format to use for the file, such as CSV (comma- separated values).                      |
| Enter Export File Name | The name of the file you want to create. Do not include the file extension.                 |
| Export button          | Click <b>Export</b> to create the file. The Status box shows the status of the exportation. |
| Close button           | Click <b>Close</b> to close the window.   |

# **Run Switch-Port and Phone Update**

When you choose **Phone Tracking/Run Switch-Port & Phone Update**, a dialog box appears that prompts you to "Press Okay to run Switch-Port and Phone update process on Emergency Responder."

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Run Switch-Port and Phone Update page to run manually the switch port and phone update process.

### **Related Topics**

Manually Run the Switch-Port and Phone Update Process Define Phone Tracking and Switch Update Schedules Identify Unlocated Phones

# **Switch Port Details**

The Switch Port Details page appears when you choose ERL Membership > Switch Ports.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

### Description

Use the Switch Port Details page to assign switch ports to ERLs. This assignment allows Emergency Responder to assign the correct ERL to phones that connect to the network through the configured ports.

**Note** If the IOS software on the switch needs to be upgraded to the latest version, execute the **snmp-server ifindex persist** command before the upgrade. Failure in executing this command leads to change of port indexes. In that scenario, Emergency Responder treats the existing port as a new port and turns the assigned ERL to Blank (no ERL).

To support switches such as the CiscoCatalyst 3750 switch, which has ports that can be uniquely identified by Switch ID, Module ID and Port ID combination, Emergency Responder uses the following port-naming convention:

- IfName—New field display name for port as given for the switch CLI (for example, Fa1/5 or Gi2/0/1).
  - Port Identifier—Replaces the Module ID/Port ID.
  - It contains {optional} <<Switch ID (for stackable switches like the CiscoCatalyst3750)>>/ {optional} <<relative position of the module in switch>> / <<relative position of port in the module>> .
- Search on Port IfName replaces the Module ID/Port ID search.

The following table describes the Switch Port Details page.

| Table 41: S | witch Port | <b>Details Page</b> |

### **Import Switch Ports**

The Import Switch Ports page appears when you click **Import** in the Switch Port Details page (opened when you choose **ERL Membership** > **Switch Ports**).

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Import Switch Ports page to add or update several switch port configurations at once to the Emergency Responder configuration. Switch port configurations are mappings of ports to ERLs.

To create the switch port import file, follow these steps:

- 1. Export the switch port details.
- 2. Modify the ERK field of these records and save the file.

3. Import the file using switch port import.

You can also create the import file on your local system and then upload the file using the Upload utility. See Upload File for more information.

The following table describes the Import Switch Ports page.

Table 43: Import Switch Ports Page

| Field                 | Description   |
|-----------------------|---|
| Select Import Format  | Select the format used in the file you are importing.   |
|                       | After you select the format, click <b>view sample file</b> to see an example of the expected format and of values. You can use this sample information to create your import file in a spreadsheet, but i to export the switch port information from Emergency Responder, modify the export file usir spreadsheet program, and then import the modified file. |
|                       | <b>Note</b> See Export Switch Port Information for information about exporting switch port info   |
| Select File to Import | Select the file from which you want to import data.   |
| Upload button         | Click <b>Upload</b> to upload a file from your local system. See <b>Upload</b> File for more information.   |
| Import button         | Click <b>Import</b> to add data from the information in the import file to your Emergency Respond<br>configuration. ERL assignments in the import file override assignments that already exist in t<br>Emergency Responder configuration.   |
|                       | <b>Note</b> Port ERL configurations are only updated if Emergency Responder has discover port before you import the port configuration.   |
| Close button          | Click <b>Close</b> to close the window.   |
| Import Status         | Text box that displays status information.  |

# **Access Point Details**

The Access Point Details page appears when you chooseERL Membership > Access Points.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

The Access Point Details page lists all the Access Points configured in the corresponding Cisco Unified Communications Manager.

You can assign Access Points to ERLs on the Access Point Details page. This assignment allows Cisco Emergency Responder to assign the correct ERL to phones that connect to the network through the configured Access Point.

The following table describes the Access Point Details page.

#### Table 44: Access Point Details Page

| It displays various status messages based on the action performed in the Access point page: |  |
|---|--|
|   |  |
| • Ready—Displays when the Access Point page is loaded successfully.                         |  |
| • Update successful—Displays when an ERL assignment is made successfully.                   |  |
| • ERL Not Found—Displays when trying to assign an ERL which is not available.               |  |
| -   | <ul><li>successfully.</li><li>ERL Not Found—Displays when trying to assign an ERL which is not</li></ul> |

| Field | Description   | Notes |
|-------|---|-------|
| Find  | Enter search criteria to select the Access Points that you want to view or configure.   |       |
|       | To view all Access Points, click Find without entering any criteria.  |       |
|       | To narrow your search:  |       |
|       | • From the first <b>Find</b> drop-down list, choose one of the following criteria:  |       |
|       | Access Point Name   |       |
|       | • Bssid   |       |
|       | • ERL Name  |       |
|       | • From the second <b>where</b> drop-down list, choose one of the following criteria:  |       |
|       | • contains  |       |
|       | • is not Empty  |       |
|       | • starts with   |       |
|       | • Ends with   |       |
|       | • is Empty  |       |
|       | • is Exactly  |       |
|       | • Enter the required search string in next empty field.   |       |
|       | • From the <b>and show items per page</b> drop-down list, choose the appropriate number of results to be displayed on the page. |       |
|       | • Click <b>Find</b> when you have entered all the search parameters.  |       |

| Field         | Description   | Notes   |
|---------------|---|---|
| Access Points | The following list displays the "Find" status information:  |   |
|               | • Last discovery was done at—Displays the time and date of the last major/AXL discovery if the find result is successful.   |   |
|               | • No active query—This is displayed if you click the Access Point page without clicking the <b>Find</b> button.   |   |
|               | • No matching records—This is displayed when <b>Find</b> is unable to retrieve the matching records.  |   |
|               | • Phone Location tables are being modified. Please wait and try again—This is displayed when the Cisco Emergency Recorder server is not loaded completely.  |   |
|               | • Phone Location details are not populated as phone tracking is still in progress. Try after some time—This is displayed when the phone tracking engine is still running.   |   |
|               | • Cisco Emergency Responder server is not yet initialized completely.<br>Please wait—This is displayed when the Cisco Emergency Responder<br>service is restarted.  |   |
|               | • Cisco Emergency Responder is not running: Failed to contact Cisco Emergency Responder—This is displayed when the Cisco Emergency Responder service is restarted.  |   |

### **Access Point Phones**

The Access Point Phones page appears when you choose **ERL Membership** > **Access Points** and click **View Phones** on any one of the records returned by the Access Point search.

#### **Authorization Requirements**

You must have a system administrator or ERL administrator authority to access this page.

#### Description

Use the Access Point Phones page to view the Access Point Name, the Bssid for each Access Point, and the list of phones tracked in that Access point.

### **Export Access Points**

The Export Access Points page appears when you click **Export** on the Access Point Details page (opened when you choose **ERL Membership** > **Access Points**).

#### **Authorization Requirements**

You must have a system administrator or ERL administrator authority to access this page.

#### Description

Use the Export Access Points page to create a file containing the Cisco Emergency Responder access point configuration.

You can export a file and download the exported file using the Download utility. See Download File for more information.

The following table describes the Export Access Points page.

#### Table 45: Export Access Points Page

| Field                     | Description   |  |
|---------------------------|---|--|
| Select Export Format      | The format to use for the file, such as CSV (comma-separated values).                                 |  |
| Enter Export File Name    | The name of the file you want to create. Do not include the file extension.                           |  |
| Export button             | Click <b>Export</b> to create the file. The Status box shows the status of the exportation.           |  |
| Close button              | Click <b>Close</b> to close the window.   |  |
| Download                  |   |  |
| Select a File to Download | Use the drop-down menu to select a file and click Download to download the file to your local system. |  |

# **Find and List IP Subnets**

The Find and List IP Subnets page appears when you choose **ERL Membership** > **IP Subnets**.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Find and List IP Subnets page to locate and view IP subnets that you would like to modify or delete. You can also navigate to add new IP Subnets from this page.

The following table describes the Find and List IP Subnets page.

#### Table 46: Find and List IP Subnets Page

| Field                  | Description  |
|------------------------|--|
| IP Subnet Search Param | eters  |
| Find IP Subnets where  | To list specific IP subnets, select the search criteria and click <b>Find</b> . To list all IP subnet without entering any criteria.   |
| IP Subnets             |  |
| IP Subnets list        | Displays results of the IP subnet search. For IP subnet found, the system displays the Subn Mask, ERL Name, and Location.  |
|                        | Click on one of the preceding records or click the <b>Edit</b> icon to modify that IP subnet. T IP Subnets page appears. Change the Location field or the ERL Name field.  |
|                        | Note When modifying an existing IP subnet, you cannot change the Subnet ID of Mask.  |
|                        | Click Update to save your changes to the IP Subnet.  |
|                        | Click the <b>View Phones</b> icon in any record to view all of the IP subnet phones. The IP S page displays a list of the discovered phones in the IP subnet. See IP Subnet Phones, or   |
|                        | Click the <b>Delete</b> icon to remove an IP subnet. When you click <b>Delete</b> , Cisco Emergenc asks if you want to run the switch port and phone update process right away. Click <b>OK</b> process immediately or click <b>Cancel</b> to delete the IP subnet without running the process |
| Cancel Changes button  | Click Cancel Changes to cancel any changes made on the Configure IP Subnets page.  |
|                        | Note The Cancel Changes button is viewable only on the Configure IP Subnet   |
| Export                 | Click <b>Export</b> to create a file containing the IP subnets configuration information. The Expage appears. See Export IP Subnets, on page 81 for more information.  |
| Import                 | Click <b>Import</b> to import IP subnet configuration information from a file. The Import IP appears. See Import IP Subnets, on page 82 for more information.  |
|                        |  |

### **Configure IP Subnet**

To reach the Configure IP Subnet page, choose **ERL** > **Membership** > **IP** Subnets and click on the Add New IP Subnet link. The Configure IP Subnet page appears.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Configure IP Subnet page to manually define an IP subnet and its ERL. You must manually define an IP Subnet if Emergency Responder cannot automatically track the type of phone. One example is if the phone is wireless. See Network Hardware and Software Requirements for information about phone support.

You can choose not to track the phones in an IP Subnet by checking the check box **Do not track phones under this IP subnet**. If you do not track the phones in an IP subnet, then you do not need the Emergency Responder User Licenses for these phones.

The following table describes the Configure IP Subnet page.

#### Table 47: Configure IP Subnet Page

| Field                                       | Description  |  |
|---|--|--|
| Add New IP Subnet                           |  |  |
| Subnet ID                                   | The IP address of the subnet you want to define.   |  |
| Subnet Mask                                 | The mask of the subnet you want to define.   |  |
| Do not track phones under<br>this IP subnet | Check this check box if you do not want this IP subnet and the underlying phones tracked by Cisco Emergency Responder. If you do not track the phones in an IP subnet, then you do not need the Emergency Responder User Licenses for these phones.                                      |  |
| Location (optional)                         | The location of the new IP subnet.   |  |
| ERL Name                                    | The ERL to assign to the subnet. Type in a valid ERL name or click <b>Search ERL</b> to find and select the ERL.   |  |
| Insert button                               | Click <b>Insert</b> to add the subnet.   |  |
|   | When you click Insert, Emergency Responder asks if you want to run the switch port and phone update process on the switch immediately. Click <b>OK</b> to run the process now, or click <b>Cancel</b> to add the IP subnet to the configuration without running the process immediately. |  |
| Cancel Changes button                       | Click <b>Cancel Changes</b> to change the fields on this page back to the last saved settings.   |  |

Set Up IP Subnet-based ERLs Synthetic Phones

#### E911 and Cisco Emergency Responder Terminology

### **IP Subnet Phones**

The IP Subnet Phones page appears when you choose **ERLMembership**/ **IPSubnets** and click the **View Phones** icon in any records returned by the IPSubnet Search.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the IP subnet Phones page to view all the IP subnet phones discovered by Emergency Responder.

The IP subnet phones page displays the subnet ID, the subnet mask for each IP subnet and lists all the phones tracked in that IP subnet, and when the last phone was tracked.

#### **Related Topics**

Find and List IP Subnets, on page 79 Configure IP Subnet, on page 80

### **Export IP Subnets**

To reach the Export IP Subnets page, choose **ERL Membership** > **IPSubnets**. On the Find and List IP Subnets page, click the **Export** link. The Export IP Subnets page appears.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Export IP Subnets page to create a file containing the Emergency Responder Export IP Subnet configurations.

If you must update a large number of Export IP Subnets, you can export the phone data, make your changes in the file using a spreadsheet, and then reimport the file.

You can also download a file using the Download utility, modify it on your local system, then upload it using the Upload utility. See Download File for more information.

The following table describes the Export IP Subnets page.

#### Table 48: Export IP Subnets Page

| Field                | Description  |
|----------------------|--|
| Select Export Format | Select the format used in the file that you are importing.   |
|                      | After you select the format, click <b>view sample file</b> to see an example of the expected format and sequence of values. Use this sample information to create your import file in a spreadsheet. |

| Field                     | Description  |
|---------------------------|--|
| Enter Export File Name    | The name of the file you want to create. Do not include the file extension                                   |
| Export button             | Click <b>Export</b> to add data from the import file to your Emergency Responder configuration.              |
| Close button              | Click <b>Close</b> to close the window.  |
| Download                  |  |
| Select a File to Download | Use the pull-down menu to select a file and click <b>Download</b> to download the file to your local system. |

Download File Find and List IP Subnets, on page 79 Import IP Subnets, on page 82

### **Import IP Subnets**

To reach the Import IP Subnets page, choose **ERL Membership** > **IPSubnets**. On the Find and List IP Subnets page, click the **Import** link. The Import IP Subnets page appears.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Import IP Subnet page to create or update many IP subnet phones at once from a file in which you have defined their data. Create this file using a spreadsheet that can save the information in one of the required formats. View the samples from this page before attempting to create or update an import file.

If you must update many IP subnet phones, you can export the phone data, update the export file, and reimport the file.

You can also upload a previously downloaded file that you have modified on your local system. See Upload File for more information.

The following table describes the Import IP Subnets page.

#### Table 49: Import IP Subnets Page

| Field                 | Description  |
|-----------------------|--|
| Select Import Format  | Select the format used in the file you are importing.  |
|                       | After you select the format, click <b>view sample file</b> to see an example of the expected format and sequence of values. Use this sample information to create or update your import file in a spreadsheet. |
| Select File to Import | Select the file from which you want to import data.  |

| Field         | Description   |
|---------------|---|
| Upload button | Click <b>Upload</b> to upload a file from your local system. See <b>Upload</b> File for more information. |
| Import button | Click <b>Import</b> to add data from the import file to your Emergency Responder configuration.           |
| Close button  | Click <b>Close</b> to close the window.   |
| Import Status | Text box that displays status information.  |

Find and List IP Subnets, on page 79 Export IP Subnets, on page 81 Upload File

## **Unlocated Phones**

The Unlocated Phones page appears when you choose ERLMembership > Unlocated Phones.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Unlocated Phones page to identify phones that are registered with CiscoUnifiedCommunicationsManager, but which Emergency Responder cannot locate. A phone can become unlocated for several reasons:

- The phone is attached to a switch that is not defined in Emergency Responder.
- The phone is connected to an unsupported device, such as a router port, a hub connected to a router, or an unsupported switch.
- The switch to which the phone is connected is currently unreachable; for example, it does not respond to SNMP queries.
- The phone is not found under any configured IP subnet and the phone is not configured as a synthetic phone.
- The phone that was manually assigned.
- The phone that was previously identified as an unlocated phone and assigned an ERL.

Because Emergency Responder cannot assign an unlocated phone to the appropriate ERL, try to identify and resolve all problems that are preventing Emergency Responder from locating these phones on your network. If you cannot resolve the problems by defining switches in Emergency Responder, or by moving phones to supported switch ports, you might have to manually assign a phone to an ERL on this page. See Unlocated Phones for troubleshooting information.

The following table describes the Unlocated Phones page.

#### Table 50: Unlocated Phones Page

| Field                    | Description   |  |  |
|--------------------------|---|--|--|
| Unlocated Phone Search   | Parameters  |  |  |
| Find phones where        | Enter search criteria to select the unlocated phones you want to find.  |  |  |
|                          | To find all unlocated phones, click <b>Find</b> without entering any criteria.  |  |  |
|                          | To narrow your search:  |  |  |
|                          | • Select <b>All</b> to indicate that only phones that match every criteria be selected (an AND sear <b>Any</b> to indicate that phones that match any search criteria be selected (an OR search). Full-down menu, select the field you want to search on (Phone Extension, Phone MAC and so on), select the search relationship (is Exactly, Starts with, and so on), and enter the string. |  |  |
|                          | • To search on a combination of fields, click the <b>Plus</b> icon (+) to add additional search part (Click the <b>Minus</b> icon to (–) remove search parameters.)   |  |  |
|                          | • Click <b>Find</b> when you have entered all of the search parameters.   |  |  |
| Assign ERL               | To assign the ERL, select the phones by checking the check box next to the phones, click <b>Se</b> to find and select the ERL, and click <b>Assign ERL</b> .  |  |  |
| Unassign ERL             | To unassign a ERL, select the phones and click on <b>Unassign ERL</b> button.   |  |  |
| List of unlocated phones | A list of the phones Emergency Responder could not assign to a specific ERL. The following in is displayed:   |  |  |
|                          | Emergency Responder Group   |  |  |
|                          | Phone IPv4 Address  |  |  |
|                          | Phone IPv6 Address     Phone Mag Address  |  |  |
|                          | Phone Mac Address     Phone Extension   |  |  |
|                          | Assigned ERL  |  |  |
|                          | • Effective ERL   |  |  |
|                          | • ERL Rule  |  |  |
|                          | If the phone has moved to a switch served by a different Emergency Responder group, the Er Responder group name is shown for the phone in the list.   |  |  |
|                          | <b>Note</b> If there are a lot of unlocated phones, Emergency Responder uses more than one list them. You can only assign phones to ERLs from one page at a time. Use the the bottom of the list to move from page to page.   |  |  |
|                          |   |  |  |

### **Add New Manual Phone**

To reach the Add New Manual Phone page, choose **ERL Membership** > **Manually Configured Phones**. On the Find and List Manually Configured Phones page, click the **Add new Manual Phone** link. The Add New Manual Phone page appears.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Add New Manual Phone page to manually define a phone ERL. You must manually define a phone if any of these conditions apply:

- Emergency Responder cannot automatically track the type of phone, for example, if the phone is analog. See Network Hardware and Software Requirements for information about phone support.
- The phone is hosted on an unsupported port, such as a router port, a hub connected to a router, or a port on an unsupported switch.

For manually defined phones, Emergency Responder cannot automatically locate and update ERL information. You should regularly review manual phone configurations to ensure that they are correct.

The following table describes the Add New Manual Phone page.

#### Table 53: Add New Manual Phone Page

| Field                | Description   |  |
|----------------------|---|--|
| Add New Manual Phone |   |  |
| Line Number          | The extension of the phone you want to define.  |  |
| MAC Address          | The MAC address of the phone, if it is an IP phone.   |  |
| IPv4 Address         | The IPv4 address of the phone, if it is an IP phone.  |  |
| IPv6 Address         | The IPv6 address of the phone, if it is an IP phone.  |  |
| Phone Type           | The type of phone, such as analog. This field is for your information only.                         |  |
| Version              | The version of the phone software, if any. This field is for your information only.                 |  |
| Location             | The location of the phone.  |  |
| ERL Name             | The ERL that you want to assign to the phone. To find and select the ERL, click <b>Search ERL</b> . |  |

| Field                 | Description  |  |  |
|-----------------------|--|--|--|
| Insert button         | Click <b>Insert</b> to add the phone to the list of phones.                                    |  |  |
|                       | <b>Note</b> The Insert button only appears when you are adding a phone.                        |  |  |
| Cancel Changes button | Click <b>Cancel Changes</b> to change the fields on this page back to the last saved settings. |  |  |

Manually Define Phones Import Manual Phones, on page 89 Export Manual Phones, on page 88 E911 and Cisco Emergency Responder Terminology

### **Export Manual Phones**

To reach the Export Manual Phones page, choose **ERL Membership > Manually Configured Phones**. On the Find and List Manually Configured Phones page, click the **Export** link. The Export Manual Phones page appears.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Export Manual Phones page to create a file containing the Emergency Responder manual phone configurations.

If you must update a large number of manually configured phones, you can export the phone data, make your changes in the file using a spreadsheet, and then reimport the file.

You can also download a file to your local system using the Download utility, modify the file, and then upload it using the Upload utility. See Download File for more information.

The following table describes the Export Manual Phones page.

#### Table 54: Export Manual Phones Page

| Field                  | Description  |  |  |
|------------------------|--|--|--|
| Export Manual Phones   | Export Manual Phones   |  |  |
| Select Export Format   | Select the format used in the file you are importing.  |  |  |
|                        | After you select the format, click <b>view sample file</b> to see an example of the expected format and sequence of values. Use this sample information to create your import file in a spreadsheet. |  |  |
| Enter Export File Name | The name of the file that you want to create. Do not include the file extension.   |  |  |
| Export button          | Click <b>Export</b> to export the file to a file.  |  |  |

L

| Field                     | Description   |  |  |
|---------------------------|---|--|--|
| Close button              | Click <b>Close</b> to close the window.   |  |  |
| Download                  |   |  |  |
| Select a file to download | Use the pull-down menu to select a file and then click <b>Download</b> to download the file to your local system. |  |  |

#### **Related Topics**

Manually Define Phones Download File Import Manual Phones, on page 89 Find and List Synthetic Phones, on page 90

### **Import Manual Phones**

To reach the Import Manual Phones page, choose **ERL Membership > Manually Configured Phones**. On the Find and List Manually Configured Phones page, click the **Import** link. The Import Manual Phones page appears.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Import Manual Phones page to create or update many manually configured phones at once from a file in which you have defined their data. Create this file using a spreadsheet that can save the information in one of the required formats. View the samples from this page before attempting to create or update an import file.

If you must update a lot of manually configured phones, you can export the phone data, update the export file, and reimport the file.

You can also upload a file from a local system using the Upload utility and then import the data in the file. See Upload File for more details.

The following table describes the Import Manual Phones page.

#### Table 55: Import Manual Phones Page

| Field                 | Description  |  |
|-----------------------|--|--|
| Select Import Format  | Select the format used in the file you are importing.  |  |
|                       | After you select the format, click <b>view sample file</b> to see an example of the expected format and sequence of values. Use this sample information to create your import file in a spreadsheet. |  |
| Select File to Import | Select the file from which you want to import data.  |  |
| Upload                | Click <b>Upload</b> to upload a file from a local system. The Upload File page appears.<br>See Upload File for more details.   |  |

| Field         | Description   |
|---------------|---|
| Import button | Click <b>Import</b> to add data from the import file to your Emergency Responder configuration. |
| Close button  | Click <b>Close</b> to close the window.   |
| Import Status | Displays status messages.   |

Manually Define Phones Upload File Find and List Synthetic Phones, on page 90

# **Find and List Synthetic Phones**

The Find and List Synthetic Phones page appears when you choose ERL Membership > Synthetic Phones.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Find and List Synthetic Phones page to locate and view phones that you would like to modify or delete. You can also navigate to add new synthetic phones from this page.

The following table describes the Find and List Synthetic Phones page.

#### Table 56: Find and List Synthetic Phones Page

| Field                                      | Description  |  |
|--|--|--|
| Synthetic Phone Search Parameters          |  |  |
| Find Synthetic phones<br>where MAC Address | Enter search criteria to select the synthetic phones you want to find.<br>To find all synthetic phones, click <b>Find</b> without entering any criteria.<br>To narrow your search, use the pull-down menu to select the search condition<br>(contains, Starts with, and so on) and enter the MAC address in the text box. You<br>can also select how many results per page are displayed from the pull-down menu.<br>When you have specified your search criteria, click <b>Find</b> . |  |
| Synthetic Phones                           | (contains, Starts with, and so on) and enter the MAC address in the text<br>can also select how many results per page are displayed from the pull-do   |  |

L

| Field                   | Description  |  |
|-------------------------|--|--|
| Synthetic Phones list   | Displays the search results. For each phone found, the system displays the Line<br>Number, ERL Name, IP Address, and Location. Click on one of these records<br>or click the <b>Edit</b> icon to view and modify the information for that phone. The<br>Modify Synthetic Phone page appears. You can change the MAC Address, IP<br>Address, Phone Type, Version, Location, and ERL Name. |  |
|                         | NoteWhen modifying a synthetic phone, you cannot change the Subnet<br>ID or the Line Number.Click Update to save your changes.   |  |
| Add new Synthetic Phone | <ul> <li>Click Add new Synthetic Phone to add a synthetic phone. The Add New Synthetic Phone page appears. See Add New Synthetic Phone, on page 91 for more information.</li> </ul>  |  |
|                         | <b>Note</b> The <b>Add new Synthetic Phone</b> button is also available from the Modify Synthetic Phone page.  |  |

### Add New Synthetic Phone

To reach the Add New Synthetic Phone page, choose **ERL Membership** > **Synthetic Phones**. On the Find and List Synthetic Phones page, click the **Add new Synthetic Phone** link. The Add New Synthetic Phone page appears.

Note

You cannot configure test ERLs for off-premise ERLs and Intrado ERLs.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Add New Synthetic Phone page to manually define a synthetic phone ERL. You must configure synthetic phones in the subnet for testing ERL configurations.

For synthetic phones, Emergency Responder cannot automatically locate and update ERL information. You should regularly review synthetic phone configurations to ensure that they are correct.

The following table describes the Add New Synthetic Phone page.

#### Table 57: Add New Synthetic Phone Page

| Field       | Description  | Notes   |
|-------------|--|---|
| MAC Address | The MAC address of the synthetic phone, or a range of MAC addresses. | The synthetic MAC address must range 00059a3b7700 - 0059a3b8  |
|             |  | Enter the MAC address in this fo xx-xx-xx-xx-xx-xx or xxxxxxx |

| Field                 | Description   | Notes  |
|-----------------------|---|--|
| ERL Name              | The ERL to assign to the synthetic phone. Type in a valid ERL name or select the ERL from the drop-down list. |  |
| Insert button         | Click <b>Insert</b> to add the synthetic phone to the list of phones.   | The <b>Insert</b> button only appears when adding a phone.           |
| New button            | Click <b>New</b> to add another phone.  | The <b>New</b> button only appears when y viewing an existing phone. |
| Update button         | Click <b>Update</b> when viewing an existing phone to save changes you make to the phone.                     | The <b>Update</b> button only appears whe viewing an existing phone. |
| Cancel Changes button | Click <b>Cancel Changes</b> to change the fields on this page back to the last saved settings.                |  |

Synthetic Phones E911 and Cisco Emergency Responder Terminology

# **Find and List Users**

The Find and List Users page appears when you choose User Management > User.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the Find and List Users page to find and list current users, to add new users, and to modify and delete current users.

The following table describes the Find and List Users page.

#### Table 58: Find and List Users Page

| Fie                    | ld | Description |
|------------------------|----|-------------|
| User Search Parameters |    |             |

| Field                         | Description  |
|-------------------------------|--|
| Find User where User          | Enter search criteria to select the users that you want to find.   |
| Name                          | To find all users, click <b>Find</b> without entering any criteria.  |
|                               | To narrow your search:   |
|                               | <ul> <li>Select All to indicate that only users that match the selected criteria be displayed (an A</li> <li>Select Any to indicate that users that match any search criteria be selected (an OR se</li> <li>From the pull down menu, select the field that you want to search, select its corresponding relationship and select how many results per page are displayed. The search fields ar corresponding relationships are:</li> </ul> |
|                               | Authentication Mode—Both, Remote or Local  |
|                               | • User Name— Ends with, Starts with, contains or Exactly.  |
|                               | • Unified CM Cluster—Ends with, Starts with, contains or Exactly.  |

### **Modify User**

The Modify User page appears when you choose User Management > User, search for a user, and then click a user name or on the Edit icon associated with the user on the Find and List Users page.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the Modify User page to change a current user's password.

The following table describes the Modify User page.

#### Table 60: Modify User Page

| Field                     | Description   |  |
|---------------------------|---|--|
| User Name                 | Displays the name of the user whose information is being modified.  |  |
|                           | <b>Note</b> You cannot change the username on the Modify User page.   |  |
| Authentication Mode       | Change the authentication mode for a user. You can change a local user to a remote user and a remote user to local user.  |  |
| Password                  | Enter the new password for the user.  |  |
| Reset on Next Logon       | Check the <b>Reset on Next Logon</b> check box to reset or change the password after a successful sign-in.  |  |
|                           | This field is enabled only for the local users.   |  |
| Confirm Password          | Reenter the new password for the user.  |  |
| Unified CM Cluster        | Select a Unified CM cluster. This is required when you change a local user to remote user. You can also change the Unified CM cluster of an existing remote user to another Unified CM Cluster. |  |
|                           | <b>Note</b> The Unified CM Cluster drop down box are enabled only when the authentication mode is selected as remote.   |  |
| Update button             | Applies changes made from the Modify User page.   |  |
|                           | <b>Note</b> User authentication at passphrase change is valid only for the Cisco ER Administration page. Active sessions of the user in any of the other navigation pages do not get cancelled. |  |
| Cancel Changes button     | Cancels changes made to the Modify User page.   |  |
| Add new User              | Click this button to add a new user. The Add User, on page 94 page appears.<br>See Table 59: Add User Page , on page 94 for more information.   |  |
| Activate User             | Click Activate User to activate the user account.   |  |
|                           | The option is enabled only when that particular user is inactive.   |  |
|                           | The option is always disabled for remote users.   |  |
| Unlock User               | Click <b>Unlock User</b> to unlock the account.   |  |
|                           | The option is enabled only when that particular user account is locked.   |  |
|                           | The option is always disabled for remote users.   |  |
| User Groups for this user | Displays the groups to which the user is assigned.  |  |

| [ | Field                    | Description                                       |
|---|--------------------------|---|
|   | User Roles for this user | Displays the roles to which the user is assigned. |

### **Change to Remote User**

The Change to Remote Users page appears when you choose User Management > User and click Change to Remote Users on the Find and List Users page.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the Change to Remote Users page to change the authentication mode of the local user to remote user.

The following table describes the Remote User page.

#### Table 61: Change to Remote Users Page

| Field              | Description   |
|--------------------|---|
| Unified CM Cluster | Select the Unified CM Cluster from the drop-down box to remotely authenticate the selected users. |
| Selected Users     | Displays the local users that change to remote users.   |
| Update button      | Applies changes made from the Change to Remote Users page.  |
| Close button       | Closes the window.  |

# **Find and List Roles**

The Find and List Roles page appears when you choose User Management > Role.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the Find and List Role page to find, list, modify, and delete current roles, and to add new roles.

The following table describes the Find and List Roles page.

#### Table 62: Find and List Roles Page

|                        | Field | Description |
|------------------------|-------|-------------|
| Role Search Parameters |       |             |

| Field                | Description  |
|----------------------|--|
| Find Role where Role | Enter search criteria to select the role you want to find.   |
| Name is              | To find all roles, click <b>Find</b> without entering any criteria.  |
|                      | To narrow your search, use the pull-down menu to select the search condition (contains, S so on) and enter the role in the text box. You can also select how many results per page as from the pull-down menu. When you have specified your search criteria, click <b>Find</b> . |
| Roles                | Section of the page in which the search results are displayed. These default roles are crea installation:  |
|                      | Emergency Responder System Admin   |
|                      | Emergency Responder ERL Admin  |
|                      | Emergency Responder Network Admin  |
|                      | • Emergency Responder User   |
|                      | When you click on the Role Name link or the Description link for any of the default roles<br>Role page for that role displays, which displays the following information:   |
|                      | • Role Name  |
|                      | Description  |
|                      | • List of resources assigned to that role  |
|                      | <b>Note</b> You cannot modify any of the information for default roles. You can only modif for roles that you create.  |
|                      | After you create additional roles, they are listed along with the default roles. When you cliname, description, or Edit icon for a role that you have created, the Modify Role page appe<br>64: Modify Role Page, on page 99 for more information about the Modify Role page.    |
| Edit icon            | Click the Edit icon to display the Modify Role page. See Table 64: Modify Role Page, or information about the Modify Role page.  |
| Delete icon          | Click the <b>Delete</b> icon to delete the role from the system.   |
|                      | <b>Note</b> You cannot delete any of the default roles.  |
| Add New Role button  | Click <b>Add New Role</b> to display the Add Role page. This button is also available on the N and Add Role pages. See Table 63: Add Role Page , on page 98 for information about the page.  |

### Add Role

The Add Role page appears when you choose **User Management > Role** and click **Add new Role** on the Find and List Roles page. You can also access the Add Role page from the Modify Role and Standard Role pages. See Modify Role, on page 98 for more information.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the Add Role page to add a new role to the system.

The following table describes the Add Role page.

#### Table 63: Add Role Page

| Field                 | Description  |  |
|-----------------------|--|--|
| Add Role              | Add Role   |  |
| Role Name             | The name of the new role you are adding.   |  |
| Description           | A description of the new role.   |  |
| Resource Permissions  | This section of the page displays a list of all available resources. The check boxes to the left of each resource allow you to select or deselect the resource to be assigned to the new role. |  |
| Select All button     | Click Select All to select all the listed resources.   |  |
| Clear All button      | Click <b>Clear All</b> to deselect all currently selected resources.   |  |
| Insert button         | Click <b>Insert</b> to add the new role.   |  |
| Cancel Changes button | Click <b>Cancel Changes</b> to cancel the Add Role operation.  |  |

#### Table 64: Modify Role Page

# **Find and List User Groups**

The Find and List User Groups page appears when you choose User Management > User Group.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the Find and List User Groups page to find, list, modify, and delete current user groups, and to add new user groups.

The following table describes the Find and List User Groups page.

#### Table 65: Find and List User Groups Page

| Field                                    | Description  |
|--|--|
| User Group Search Para                   | imeters  |
| Find User Group where<br>User Group Name | Enter search criteria to select the user group you want to find.<br>To find all user groups, click <b>Find</b> without entering any criteria.<br>To narrow your search, use the pull-down menu to select the search condition (contains, St<br>so on) and enter the user group in the text box. You can also select how many results per<br>displayed from the pull-down menu. When you have specified your search criteria, click |

| Field                        | Description   |  |
|------------------------------|---|--|
| User Groups                  | Section of the page in which the search results are displayed. When you click on the User G link, the Description link, or the Edit icon, the Modify User Group page appears. See Modify on page 101 for information. |  |
| Edit icon                    | Click the <b>Edit</b> icon to display the Modify User Group page. See Modify User Group, on page information.   |  |
| Delete icon                  | Click the <b>Delete</b> icon to delete the user group from the system.  |  |
|                              | <b>Note</b> You cannot delete default user groups that were created during installation.  |  |
| Add New User Group<br>button | Click the <b>Add New User Group</b> button to display the Add User Group page. See Table 66: A Group Page, on page 100 for information about the Add User Group page.   |  |

## **Add User Group**

The Add User Group page appears when you choose User Management > User Group and click Add new User Group on the Find and List User Groups page. You can also access the Add User Group page from the Modify User Group page. See Modify User Group, on page 101 for more information.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the Add User Group page to add a new user group to the system.

The following table describes the Add User Group page.

#### Table 66: Add User Group Page

| Field                  | Description  |
|------------------------|--|
| Add User Group         |  |
| User Group Name        | The name of the new user group you are adding.   |
| Description            | A description of the new user group.   |
| Add Users to the Group | This section of the page has a text box that displays the names of the users you add to the use  |
| Add Users button       | Allows you to add users to the new group. When you click <b>Add Users</b> , the Add Users page ap Add User, on page 94 for more information.     |
| Remove Users button    | Allows you to remove users from the group. To do so, highlight the username in the text box <b>Remove Users</b> .                                |
| Assign Roles to Group  | This section of the page has a text box that displays the roles you assign to the new user grou  |
| Add Roles button       | Allows you to assign roles to the new group. When you click <b>Add Roles</b> , the Add Roles page See Add Role, on page 97 for more information. |

| Field               | Description  |
|---------------------|--|
| Remove Roles button | Allows you to remove roles from the group. To do so, highlight the role name in the text <b>Remove Roles</b> . |
| Insert button       | Click <b>Insert</b> to add the new role.   |

Role-Based User Management Find and List Users, on page 92 Find and List Roles, on page 96

### **Modify User Group**

The Modify User Group page appears when you choose User Management > User Group, search for a user group, and then click a user group name, description, or the Edit icon associated with the user group on the Find and List User Groups page.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the Modify Role page to modify information for an existing user group.

The following table describes the Modify User Group page.

#### Table 67: Modify User Group Page

| Field                  | Description  |
|------------------------|--|
| Modify User Group      |  |
| User Group Name        | The name of the user group you are modifying.  |
|                        | <b>Note</b> The User Group Name cannot be changed.   |
| Description            | A description of the User Group you are modifying. Modify the description by adding or c<br>in the text box.                             |
| Add Users to the Group | This section of the page has a text box that displays the names of the users currently in the  |
| Add Users button       | Allows you to add more users to the group. When you click <b>Add User</b> , the Add User page Add User, on page 94 for more information. |
| Remove Users button    | Allows you to remove users from the group. To do so, highlight the username in the text b <b>Remove Users</b> .                          |
| Assign Roles to Group  | This section of the page has a text box that displays the roles currently assigned to the use  |

| Field                        | Description  |   |  |
|------------------------------|--|---|--|
| Add Roles button             | Allows you to assign more roles to the group. When you click <b>Add Roles</b> , the Add Role page See Add Role, on page 97 for more information. |   |  |
|                              | Note   | You cannot add roles to the default roles that were assigned to a default user group installation. If the user group that you are modifying is a default user group, then <b>Roles</b> button is not visible. |  |
| Remove Roles button          | Allows<br>Remove   | you to remove roles from the group. To do so, highlight the role name in the text box e <b>Roles</b> .  |  |
|                              | Note   | You cannot remove the default roles that were assigned to a default user group d installation. If the user group you are modifying is a default user group, then the <b>Roles</b> button is not visible.      |  |
| Update button                | Click U  | pdate to save the changes made to the Modify User Group page.   |  |
| Add New User Group<br>button | Allows   | you to add a new user group. See Add User Group, on page 100 for information.   |  |

# **Credential Policy Page**

The Credential Policy page appears when you choose User Management > User Settings > Credential Policy or EnhancedSecurityMode Credential Policy.

#### Note

• The Credential Policy option is enabled when the system is in the normal mode.

- The EnhancedSecurityMode Credential Policy option is enabled when the system is in Enhanced Security Mode.
- Local administrator accounts will never expire as they are always configured as standard users. Hence, if you update any credential policy or EnhancedSecurityMode credential policy for a local administrator the changes won't take effect.

#### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

Use the **Credential Policy** page to update policy values in the EnhancedSecurityMode or in the normal mode depending on the security level required.

The following table describes the Credential Policy field settings.

| Field                                       | Description   |
|---|---|
| Display Name                                | Credential Policy or EnhancedSecurityMode<br>Credential Policy name is displayed based on the<br>option selected by you.  |
| Failed Logon                                | Specify the number of failed sign-in attempts allowed.  |
|   | You can enter a number between 0 to100.   |
|   | To allow unlimited failed sign-ins, enter 0 or check the <b>No Failed Logon</b> check box.  |
|   | NoteThe default setting specified for Cisco<br>Emergency Responder (Emergency<br>Responder) in a normal mode is set to 0<br>(if Emergency Responder is upgraded<br>from pre 11.5 version) or 5 (if<br>Emergency Responder 11.5 is a fresh<br>installation) or 3 (if Emergency<br> |
| Reset Failed Logon Attempts Every (minutes) | Specify the number of minutes after which the counter<br>is reset for failed sign-in attempts. You can log in<br>again after the counter is reset.  |
|   | Enter a number between 1 to120.   |
|   | The default setting specified for Emergency<br>Responder in normal mode is 1 (if Emergency<br>Responder is upgraded from pre 11.5 version) or 30<br>(if Emergency Responder 11.5 is a fresh installation)<br>or 30 (if Emergency Responder is in Enhanced<br>Security Mode).      |
| Credential Expires After (days)             | Specify the number of days after which the credential or password expires.  |
|   | Enter a number between 0 to 365.  |
|   | To allow credentials to never expire, enter 0 or check the <b>Never Expires</b> check box.  |
|   | The default setting is 0. <b>Never Expires</b> check box is<br>checked if Emergency Responder is in normal mode<br>(for both upgrade and fresh installation) and 180 if<br>Emergency Responder is in Enhanced Security Mode.  |

#### Table 68: Credential Policy Page

| Field  | Description  |
|--|--|
| Minimum Credential Length  | Specify the minimum length for user credentials (password).  |
|  | Do not enter 0 as blank passwords are not allowed.<br>Enter a number between1 to 64.   |
|  | Validation of, one uppercase, one lowercase, one<br>numeric, and one special character on password<br>happens only when the value is greater than or equal<br>to four.                     |
|  | The default setting is 1 if Emergency Responder is in<br>normal mode (for both upgrade and fresh installation)<br>and 14 if the Emergency Responder is in Enhanced<br>Security Mode.       |
| Minimum number of character changes between successive credentials | Specify the minimum characters that should be changed while updating a new password.   |
|  | Enter a number between of 0 to 64. The value should<br>never be greater than the <b>Minimum Credential</b><br><b>Length</b> field value.   |
|  | The default setting specified is 1 if Emergency<br>Responder is in normal mode (for both upgrade and<br>fresh installation) and 4 if Emergency Responder is<br>in Enhanced Security Mode.  |
| Stored Number of Previous Credentials                              | Specify the number of previous user credentials to<br>store. This setting prevents a user from configuring a<br>recently used credential that is saved in the user list.                   |
|  | Enter a number between 0 to 25. If you do not want to save any old credentials, enter 0.   |
|  | The default setting specified is 0 if Emergency<br>Responder is in normal mode (for both upgrade and<br>fresh installation) and 12 if Emergency Responder is<br>in Enhanced Security Mode. |
| Inactive Days Allowed  | Specify the number of days that an account can remain inactive before the account gets deactivated.  |
|  | Enter a number between 0 to 5000. If you never want the account to be inactive, enter 0.   |
|  | The default setting specified is 0 for Emergency<br>Responder both in the normal mode (for both upgrade<br>and fresh installation) and in the Enhanced Security<br>Mode.                   |

| Field               | Description  |
|---------------------|--|
| Expiry Warning Days | Enter a number between 0 to 90 to specify the number<br>of days before a user password expires and to start<br>receiving warning notifications.                          |
|                     | The value should never be greater than the <b>Credential Expires After (days)</b> field.   |
|                     | The default setting specified is 0 for Emergency<br>Responder both in the normal mode (for both upgrade<br>and fresh installation) and in the Enhanced Security<br>Mode. |
| Save                | Click the <b>Save</b> button to save the changes.  |
| Clear Changes       | Click the <b>Clear Changes</b> button to clear any change done in the fields and to restore the last saved information.  |
| Set to Default      | Click the <b>Set to Default</b> button to restore the default<br>values settings depending on the Cisco Emergency<br>Responder mode.                                     |

# **Call History**

The Call History page appears when you choose **Reports > Call History**.

#### **Authorization Requirements**

You must have system administrator, ERL administrator, network administrator, or user authority to access this page.

#### Description

Use the Call History page to view the history of emergency calls made from your network. Emergency Responder maintains the most recent 10,000 call history records. There is no restriction on when these calls were placed.

The following table describes the Call History page.

#### Table 69: Call History Page

| Field                          | Description |
|--------------------------------|-------------|
| Call History Search Parameters |             |

| Field                 | Description  |  |
|-----------------------|--|--|
| Search criteria       | Enter search criteria to select the calls you want to find.  |  |
|                       | To find all calls, click <b>Find</b> without entering any criteria.  |  |
|                       | To narrow your search:   |  |
|                       | <ul> <li>Select All to indicate that only calls that match every criteria be selected (an AND search Any to indicate that calls that match any search criteria be selected (an OR search). From down menu, select the field that you want to search on (ERL Name, Caller Extension, ar select the search relationship (contains, begins with, and so on), and enter the search striit.</li> <li>To search on a combination of fields, click the Plus icon (+) to add additional search part Click the Minus icon (-) to remove search parameters.</li> <li>When you have entered all of the search parameters, click Find.</li> </ul>  |  |
| Call History Matching | A list of emergency calls that match your search criteria is displayed with the following infor  |  |
| Records               | <ul> <li>A list of emergency calls that match your search criteria is displayed with the following infor</li> <li>ERL Name—Click the name to view details about the ERL and its ALI information. # **Export PS-ALI Records**

The Export PS-ALI Records page appears when you choose Tools > Export PS-ALI Records.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Export PS-ALI Records page to create a file in a NENA format that you can send to your service provider. Your service provider uses this file to update their ALI data for your organization. Your service provider needs this information so that emergency calls from your ERLs can be routed to the correct public safety answering point (PSAP).

Always submit an export file to your service provider. If you do not submit an export file, subsequent export files might not have correct command information for the database update, and you must manually edit the export file to make it uploadable. Your service provider can provide you with error information if the database upload fails.

**Note** If you change the customer code in your ALI record, Emergency Responder generates two records when exporting ALI: a Delete record to remove the ALI with the old code, and an Insert record to add the ALI with the new code. This Delete and Insert sequence is only generated the first time you export ALI after changing the code. You must ensure that you submit this export file to the service provider.

You can also use export files to back up your ERL configuration. ELIN must be associated to an ERL while exporting PS-ALI records.

The following table describes the Export RS-ALI Records page.

# Table 71: Export PS-ALI Records Page

| Field                                | Description  |
|--------------------------------------|--|
| Export PS-ALI Records                |  |
| Select NENA Format                   | The file format to be used in the export file, NENA formats 3.0, 2.1, or 2.0.  |
| File to Export                       | The name of the file you want to create. Do not include a file extension.  |
| Company Name (NENA                   | The name of your company. You cannot have spaces in the name.  |
| Header field)                        | <b>Note</b> The data complies with NENA requirements.  |
| Cycle Counter (NENA<br>Header field) | The sequence in which this export is created. This field is automatically increased each tim data. You can change it if it becomes unsynchronized with the sequence submitted to you provider. However, changing the sequence number does not affect the data placed in the fi redoing an export, you must manually edit the export file to change the record status field <b>Note</b> The data complies with NENA requirements. |
| End of Line Format                   | Allows you to select the end-of-line format for the PS-ALI records that is exported for do<br>can select from the following two formats:<br>• Windows style (\r\n)<br>• Unix/Linux style (\n)  |
| Export button                        | Click <b>Export</b> to create the export file.   |
| Download File                        | Click <b>Download File</b> to download an exported PS-ALI file.  |
| Cancel button                        | Click <b>Cancel</b> to cancel the export operation.  |

# **PS-ALI** Converter

The PS-ALI Converter page appears when you choose Tools > PS-ALI Converter.

# **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

# Description

Use the PS-ALI Converter tool to generate an ERL file that can be accepted by the Emergency Responder ERL. The PS-ALI Converter tool converts ALI files from a NENA 2.0 format into a csv (comma-separated value) text file. You can then modify the csv file (for example, to add or change an ERL name) and save the modified ERL details by importing the file into Emergency Responder.

Note

If you change the customer code in your ALI record, Emergency Responder generates two records when exporting ALI: a Delete record to remove the ALI with the old code, and an Insert record to add the ALI with the new code. This Delete and Insert sequence is only generated the first time you export ALI after changing the code. You must ensure you submit this export file to the service provider.

# **ALI Formatting Tool**

The ALI Formatting Tool page appears when you choose **Tools > ALI Formatting Tool**.

#### **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the ALI Formatting Tool page to customize the format of PS-ALI records to facilitate error-free PS-ALI record transactions with service providers.

The ALI Formatting Tool (AFT) reads the NENA file generation by the Emergency Responder and displays all ELIN records. You can then do one or more of the following:

- View the details of the ALI records
- · Select a record and update the value for ALI fields, which can be edited using the AFT
- · Perform a bulk update operation on multiple ALI records
- Selectively export ALI records based on area code, city code, and so on

The following table describes the ALI Formatting Tool page.

#### Table 76: ALI Formatting Tool Page

| Field  | Description   |
|--|---|
| Select a Service Provider  | Use the pull-down menu to select a service provider   |
| Select an Input File for the ALI<br>Formatting Tool from the List<br>Below | Use the pull-down menu to select an input file  |
| Submit button  | Click the <b>Submit</b> button to display the Search for ELINs page, which is described in Table 77: Search for ELINs Page , on page 113. |

The following table describes the Search for ELINs page.

### Table 77: Search for ELINs Page

| Field   | Description  |
|---|--|
| Use Search to Filter-out ELINs<br>on Area, City and Local<br>Code(last 4-digits). | Allows you to search ELINs by Local Code, Area Code, or City Code. |
| Add (+) button  | Adds more search parameters  |
| Remove (-) button   | Removes search parameters  |

The following table describes the Bulk Update page.

### Table 78: Bulk Update Page

| Field                                     | Description                                 |
|---|---|
| Remove<br>Changes/Generate File<br>button | Shows all the ELINs that have been changed. |
| Search for ELIN                           | Displays the ELIN search page.              |

The following table describes the Review Changes/Generate File page.

#### Table 79: Review Changes/Generate File Page

| Field                | Description  |
|----------------------|--|
| Add More ELIN        | Displays the remaining ELINs that have not been changed. |
| Remove ELIN          | Removes the selected ELINs from the list                 |
| Search for ELIN      | Displays the ELIN search screen                          |
| Generate File button | Generates the formatted file.                            |

The following table describes the Download Formatted File page.

#### Table 80: Download Formatted File Page

| Field | Description   |

# **Purge Call History**

The Purge Utility for Call History page appears when you choose **Tools > Purge Utility**.

# **Authorization Requirements**

You must have system administrator or ERL administrator authority to access this page.

#### Description

Use the Purge Call History Utility to delete call history records that are older than an age that you specify. You can use this utility to purge records immediately or schedule daily purging of call history records. Emergency Responder logs the results of the purge in the Emergency Responder Administration logs.

The following table describes the purge utility page.

# Table 82: Purge Utility for Call History

| Field                 | Description   |  |
|-----------------------|---|--|
| Status                | Displays status messages  |  |
| Purge Now             |   |  |
| Purge Data older than | Specify the age of record that you want to delete.                    |  |
| Schedule Purge        |   |  |
| Daily Purge at        | Specify a time (UTC) during the day at which old records are deleted. |  |
| Purge Data older than | Specify the age of record that you want to delete.                    |  |

# SAML Single Sign-On

The SAML Single Sign-On page appears when you choose **Cisco ER Administration** > **System** > **SAML Single Sign-On**.

### **Authorization Requirements**

You must have system administrator authority to access this page.

#### Description

**SAML Single Sign-On** (SSO) page is used to enable or disable Single Sign-On, on Cisco Emergency Responder. It also allows you to import IdP metadata and export Cisco Emergency Responder metadata. You cannot access the**Disaster Recovery System** and **Cisco OS Unified Administration** pages, when Single Sign-On is enabled onCisco Emergency Responder, you need to have the normal admin credentials to access these pages. For more information on the configuration settings, see "SAML Single Sign-On" chapter in *Cisco Emergency Responder Administration Guide* at http://www.cisco.com/c/en/us/support/unified-communications/ emergency-responder/products-maintenance-guides-list.html

The following table describes the SAML Single Sign-On Page.

#### Table 83: SAML Single Sign-On Page

| Field       | Description  |
|-------------|--|
| Status      | Displays status messages.  |
| Server Name | Specifies the names of all the servers in the server group.      |
| SSO Status  | Displays one of the following statuses:                          |
|             | Enabled  |
|             | Indicates that the SAML Single Sign-On is enabled on the server. |
|             | Disabled   |
|             | Indicates that SAML Single Sign-On is disabled on the server.    |

| Field                | Description  |
|----------------------|--|
| Re-Import Metadata   | <b>Re-import Metadata</b> field is enabled only when<br>Single Sign-On is successfully enabled on the<br>subscriber. Click the <b>Re-import Metadata</b> icon to<br>import IdP metadata file from the publisher to the<br>subscribers.   |
|                      | NoteThis option is displayed as N/A (Not<br>Applicable) for the publisher node.  |
| Last Metadata Import | Specifies the time when the IdP metadata was last<br>imported on the server. This field displays "Never"<br>if you are running the SAML Single Sign-On setup<br>for the first time.  |
| Export Metadata      | <b>Export Metadata</b> field is enabled only when Single Sign-On is successfully enabled on both publisher and the subscriber. Click the <b>Export Metadata</b> icon to download the server metadata file. A SAML metadata file must be generated for the specified server, and downloaded using the browser. You must then import this metadata file to the IdP server. |
|                      | <b>Important</b> If you change the hostname or domain of a node, ensure that you download the metadata from that node and upload the file to the IdP server again.   |
|                      | The <b>Export All Metadata</b> button is enabled by default, regardless of whether the SAML Single Sign-On state set to active.  |
| Last Metadata Export | Specifies the time when the SAML metadata file of<br>the specified server was last exported. This field<br>displays "Never" if you are running the SAML Single<br>Sign-On setup for the first time.  |

| Field                    | Description   |
|--------------------------|---|
| SSO Test                 | Displays the test results of the SAML configuration<br>with the IdP. The test ensures that the specified server<br>trusts the IdP, and that the IdP trusts the specified<br>server. The trust relationship between the server and<br>the IdP depends on the success of exporting and<br>importing of SAML metadata files.   |
|                          | Displays one of the following values:   |
|                          | Never   |
|                          | Indicates that a test has not been performed on this server.  |
|                          | Passed  |
|                          | Indicates that a test has been successfully run on<br>this server, and that the server and the IdP trust<br>one another.  |
|                          | Failed  |
|                          | Indicates that a test was attempted on the specified<br>server, but that either the server does not trust the<br>IdP, or the IdP does not trust the server, or some<br>other network or IdP issue prevented the test from<br>passing.   |
| Run SSO Test             | Click <b>Run SSO Test</b> to run the Single Sign-On test.<br>You must run this test before enabling SAML Single<br>Sign-On. The SAML Single Sign-On setup cannot be<br>completed until this test is successful. To run this test,<br>there must be at least one LDAP synchronized user<br>with administrator rights. You must also know the<br>password for that user ID. |
|                          | <b>Note</b> You cannot run this test until the IdP metadata file is imported to the server, and the server metadata file is exported to the IdP server.   |
| Enable SAML SSO          | Click <b>Enable SAML SSO</b> to start the SAML Single Sign-On configuration.  |
| Export All Metadata      | Click <b>Export All Metadata</b> to export the SAML metadata files from each server. These files are converted to a compressed file (.zip) for easy download. You must extract the file and then import each file to the IdP.   |
| Update IdP Metadata File | Click <b>Update IdP Metadata File</b> to update IdP metadata on all the servers in the cluster.   |

| Field                        | Description   |
|------------------------------|---|
| Fix All Disabled Servers     | Click <b>Fix All Disabled Servers</b> to enable SAML<br>Single Sign-On, on the servers on which it is disabled. |
| View IdP Trust Metadata File | Click <b>View IdP Trust Metadata File</b> to download a copy of the IdP metadata file.                          |
