- [Managing Server Status and Ports in a Cisco Unity Connection Cluster](#), on page 1

## Managing Server Status and Ports in a Cisco Unity Connection Cluster

The Cluster Management page in Cisco Unity Connection Serviceability lets you change the status of servers in a Unity Connection cluster, stop all ports on a server from taking new calls, and restart all ports on a server to take calls.

For the applicable procedures, see the “[Configuring Cisco Unity Connection Cluster](#)” chapter of the *Install, Upgrade, and Maintenance Guide for Cisco Unity Connection, Release 12.x*, available at

[https://www.cisco.com/c/en/us/td/docs/voice\\_ip\\_comm/connection/12x/install\\_upgrade/guide/b\\_12xcuciumg.html](https://www.cisco.com/c/en/us/td/docs/voice_ip_comm/connection/12x/install_upgrade/guide/b_12xcuciumg.html).

---

**Note** The Unity Connection cluster feature is not supported for use with Cisco Business Edition.
