THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The Cisco implementation of TCP header compression is an adaptation of a program developed by the University of California, Berkeley (UCB) as part of UCB's public domain version of the UNIX operating system. All rights reserved. Copyright © 1981, Regents of the University of California.

NOTWITHSTANDING ANY OTHER WARRANTY HEREIN, ALL DOCUMENT FILES AND SOFTWARE OF THESE SUPPLIERS ARE PROVIDED "AS IS" WITH ALL FAULTS. CISCO AND THE ABOVE-NAMED SUPPLIERS DISCLAIM ALL WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THOSE OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OR ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Any Internet Protocol (IP) addresses and phone numbers used in this document are not intended to be actual addresses and phone numbers. Any examples, command display output, network topology diagrams, and other figures included in the document are shown for illustrative purposes only. Any use of actual IP addresses or phone numbers in illustrative content is unintentional and coincidental.

# CONTENTS

## PART I  Getting Started  1

### CHAPTER 1  Feature Configuration Overview  3
- About the Feature Configuration Guide  3
- Feature Quick Reference  3
- Generate a Phone Feature List  7

## Configuration Tools  9

### CHAPTER 2  Configuration Tools  9
- Configuration Tools Overview  9
- Cisco Unified Communications Manager Administration  9
  - Log In to Cisco Unified CM Administration  9
- Cisco Unified Communications Manager Serviceability  10
  - Log into Cisco Unified Communications Manager Serviceability  11

## PART II  Remote Worker Features  13

### CHAPTER 3  Cisco Unified Mobility  15
- Cisco Unified Mobility Overview  15
- Cisco Unified Mobility Prerequisites  15
- Cisco Unified Mobility Configuration Task Flow  16
  - Activate the Cisco Unified Mobile Voice Access Service  18
  - Configure a Softkey Template for Mobility  18
- Configure Feature Control Policy  19
  - Create a Feature Control Policy  20
  - Apply Feature Control Policy to a Phone  21
  - Apply Feature Control Policy to a Common Phone Profile  21
  - Apply Feature Control Policy to All Phones  22
- Configure Single Number Reach  22
Configure a User for Mobility 23
Configure IP Phone for Mobility 24
Configure a Remote Destination Profile 25
Configure a Remote Destination 25
Configure an Access List 26
Configure Cisco Jabber Clients for Mobility 27
Configure a Mobility Profile 27
Configure a Dual-Mode Device 28
   Dual-Mode Device Configuration Fields 29
Configure a Mobility Identity 29
Configure Mobile Voice Access 30
   Configure Service Parameters for Mobile Voice Access 31
   Configure Directory Number for Mobile Voice Access 31
   Configure an Existing H.323 or SIP Gateway for Remote Access 32
   Configure a New H.323 Gateway for Remote Access 34
Configure Enterprise Feature Access 35
Configure Handoff Mobility 36
Configure the Mobility Service Parameters 37
Cisco Unified Mobility Interactions and Restrictions 37
   Cisco Unified Mobility Interactions 37
   Cisco Unified Mobility Restrictions 39
Cisco Unified Mobility Troubleshooting 42
   Cannot Resume Call on Desktop Phone 42

CHAPTER 4 Device Mobility 43
   Device Mobility Overview 43
   Device Mobility Prerequisites 43
   Device Mobility Configuration Task Flow 43
      Enable Device Mobility 45
         Activate Device Mobility for Your Cluster 45
         Configure Device Mobility Settings for Individual Devices 46
      Configure a Physical Location 46
      Configure a Device Mobility Group 47
      Configure Device Mobility Information 47
      Configure a Device Pool for Device Mobility 48
CHAPTER 11  Recording  103

Recording Overview  103

Recording Media Source Selection  104

Recording Prerequisites  105

Recording Configuration Task Flow  105

Create a Recording Profile  106

Configure SIP Profile with Conference Bridge Identifier for Recording  106

Configure SIP Trunks for Recording  107

Configure Route Pattern for Recording  108

Configure Agent Phone Line for Recording  108

Enable Built in Bridge for Cluster  109

Enable Built in Bridge for a Phone  109

Enable Gateway for Recording  110

Configure Recording Notification Tones  111

Configure Recording Redundancy Using Route Groups  111

Add Recording Servers to Route Group  112

Add Route Group to Route List  112

Configure a Record Feature Button  113

Configure a Phone Button Template for Recording  113

Associate a Phone Button Template with a Phone  114

Configure a Record Softkey  115
CHAPTER 14

Manager Assistant 137

Cisco Unified Communications Manager Assistant Overview 137
Manager Assistant Shared Line Overview 138
Manager Assistant Proxy Line Overview 139
Manager Assistant Prerequisites 139
Manager Assistant Task Flow for Proxy Lines 139
  Run the Cisco Unified CM Assistant Configuration Wizard 140
  Manager Assistant Service Parameters for Proxy Line 142
  Configure Manager And Assign Assistant For Proxy Line 146
  Configure Assistant Line Appearances for Proxy Line 147
Manager Assistant Task Flow for Shared Lines 148
  Configure Partitions for Manager Assistant Shared Line Support 150
    Partition Name Guidelines for Manager Assistant Shared Line Support 151
  Configure Calling Search Spaces for Manager Assistant Shared Line Support 151
  Configure Cisco IP Manager Assistant Service Parameters 152
  Configure Intercom Settings 152
    Configure an Intercom Partition 153
    Configure an Intercom Calling Search Space 154
    Configure an Intercom Directory Number 154
    Configure an Intercom Translation Pattern 155
  Configure Multiple Manager Assistant Pool 155
  Configure Secure TLS Connection to CTI for Manager Assistant 156
    Configure IPMASecureSysUser Application User 157
    Configure CAPF Profile 157
      CAPF Profile Settings 158
    Configure Cisco IP Manager Assistant 159
  Configure CTI Route Point 160
  Configure IP Phone Services for Manager and Assistant 160
    Cisco IP Phone Services Configuration Fields 161
  Configure Phone Button Templates for Manager, Assistant, and Everyone 164
    Configure a Phone Button Template for Manager Assistant 164
    Associate a Manager Assistant Button Template with a Phone 165
  Configure Manager and Assign Assistant for Shared Line Mode 166
  Configure Assistant Line Appearances for Shared Line 167
Install Assistant Console Plugin 168
Manager Assistant Interactions and Restrictions 169
  Manager Assistant Interactions 169
  Manager Assistant Restrictions 171
Cisco Unified Communications Manager Assistant Troubleshooting 172
  Calling Party Gets Reorder Tone 173
  Calls Do Not Get Routed When Filtering Is On or Off 174
  Cisco IP Manager Assistant Service Unreachable 174
  Cannot Initialize Cisco IP Manager Assistant Service 176
  Assistant Console Installation from Web Fails 176
  HTTP Status 503—This Application Is Not Currently Available 176
  Manager Is Logged Out While the Service Is Still Running 177
  Manager Cannot Intercept Calls That Are Ringing on the Assistant Proxy Line 177
  No Page Found Error 178
  System Error - Contact System Administrator 178
  Unable to Call Manager When Cisco IP Manager Assistant Service is Down 179
  User Authentication Fails 180

PART VI Voice Messaging Features 181

CHAPTER 15 Audible Message Waiting Indicator 183
  Audible Message Waiting Indicator Overview 183
  Audible Message Waiting Indicator Prerequisites 183
  Audible Message Waiting Indicator Configuration Task Flow 183
    Configure Audible Message Waiting Indicator Configuration Task Flow 184
      Configure Audible Message Waiting Indicator Service Parameters 184
      Configure Audible Message Waiting Indicator for a Directory Number 184
      Configure Audible Message Waiting Indicator for a SIP Profile 185
  Audible Message Waiting Indicator Troubleshooting 186
    Audible Message Waiting Indicator Is Not Heard on the Phone 186
    Localized AMWI Tone Is Not Played in a Specific Locale 186

CHAPTER 16 Immediate Divert 187
  Immediate Divert Overview 187
  Immediate Divert Prerequisites 188
  Immediate Divert Configuration Task Flow 188
Configure a Softkey Template for Meet-Me Conferencing 216
Associate a Softkey Template with a Common Device Configuration 217
Add a Softkey Template to a Common Device Configuration 218
Associate a Common Device Configuration with a Phone 218
Associate a Softkey Template with a Phone 219
Configure a Meet-Me Conferencing Number 219
Meet-Me Number and Pattern Settings 220
Meet-Me Conferencing Restrictions 221

CHAPTER 19 Conference Now 223
Conference Now Overview 223
Conference Now Prerequisites 223
Conference Now Task Flow 224
Enable End User to Host Conference Now 224
Add a Quick User/Phone 225
Configure End User to Host Conference Now 225
Configure Conference Now 226
Conference Now Settings 226
Conference Now Interactions and Restrictions 228
Conference Now Interactions 228
Conference Now Restrictions 229

PART VIII Placing Calls 231

CHAPTER 20 Call Back 233
Call Back Overview 233
Call Back Prerequisites 233
Call Back Configuration Task Flow 234
Configure Softkey Template for CallBack 235
Associate CallBack Softkey Template with a Common Device Configuration 236
Add CallBack Softkey Template to the Common Device Configuration 237
Associate a Common Device Configuration with a Phone 237
Associate CallBack Softkey Template with Phone 238
Configure CallBack Button 238
Configure Phone Button Template for Call Back 238
CHAPTER 21  

Hotline 245

Hotline Overview 245
System Requirements for Hotline 246
Hotline Configuration Task Flow 246
Create Custom Softkey Template 247
Configure Hotline on Phones 247
Configure Route Class Signaling Task Flow 248
Enable Route Class Signaling in the Cluster 249
Enable Route Class Signaling on Trunks 249
Enable Route Class Signaling on Gateways 250
Configure Signaling Labels for the Hotline Route Class 250
Configure the Route Class on Hotline Route Patterns 251
Configure the Route Class on Hotline Translation Patterns 252
Configure Hotline to Call Only or Receive Only Task Flow 252
Configure Partitions for Hotline Call Only Receive Only 252
Configure Calling Search Space for Hotline Call Only Receive Only 253
Configure Call Only on Hotline Phone 254
Configure Receive Only on Hotline Phone 254
Configure Call Screening with a Calling Search Space 254
Configure Partitions for Hotline Call Screening 255
Create Calling Search Space for Hotline Call Screening 256
Configure Hotline Phones for Call Screening 257
Contents

CHAPTER 22

Speed Dial and Abbreviated Dial 259
- Speed Dial and Abbreviated Dial Overview 259
- Pause In Speed Dial 259
- Speed Dial and Abbreviated Dial Configuration Task Flow 260
  - Configure Speed Dial and Abbreviated Dial 260

CHAPTER 23

WebDialer 263
- WebDialer Overview 263
- WebDialer Prerequisites 263
- WebDialer Configuration Task Flow 263
  - Activate WebDialer 265
  - Enable WebDialer Tracing 265
  - Configure WebDialer Servlet 266
  - Configure Redirector Servlet 266
  - Configure WebDialer Application Server 267
  - Configure Secure TLS Connection to CTI 267
    - Configure WDSecureSysUser Application User 268
  - Configure CAPF Profile 268
    - CAPF Profile Settings 269
    - Configure Cisco IP Manager Assistant 270
  - Configure Language Locale for WebDialer 271
  - Configure WebDialer Alarms 271
  - Configure Application Dial Rules 272
  - Add Users to Standard CCM End User Group 273
  - Configure Proxy User 273
    - Add a WebDialer End User 274
    - Assign Authentication Proxy Rights 274
  - WebDialer Interactions and Restrictions 275
    - WebDialer Interactions 275
    - WebDialer Restrictions 275
  - WebDialer Troubleshooting 276
    - Authentication Error 276
    - Service Temporarily Unavailable 276
Directory Service Down 276
Cisco CTIManager Down 277
Session Expired, Please Login Again 277
User Not Logged In on Any Device 277
Failed to Open Device/Line 278
Destination Not Reachable 278

CHAPTER 24 Paging 279
Paging Overview 279
InformaCast Basic Paging 279
InformaCast Advanced Notification 279
InformaCast Mobile 280
Paging Prerequisites 280
Basic Paging Configuration Task Flow 280
Advanced Notification Paging Task Flow 281
Configure SNMP for Paging 283
   Enable SNMP Service 284
      Create an InformaCast SNMP Community String 284
Configure Media Resources for Legacy Paging 285
   Create a Media Resource Group 285
   Create a Media Resource Group List 286
Configure Region for Paging 286
   Set Default Codec to G.711 287
   Configure a Device Pool for Paging 287
Configure Partitions and Calling Search Spaces for Paging 288
   Configure Route Partition for InformaCast Paging 289
   Configure Calling Search Space for InformaCast Paging 289
   Configure Route Partitions for CallAware 290
   Configure Calling Search Spaces for CallAware 291
Configure CTI Route Points for CallAware 291
Enable Built in Bridge for Cluster 292
Enable Built in Bridge for a Phone 293
Configure CTI Ports for Paging 294
Configure SIP Trunk for Legacy Paging Devices 295
Configure Access Control Group with AXL Access 296
Configure Application User for Paging 296
Enable Web Access for a Phone 297
Enable Web Access for Common Phone Profile 298
Configure Authentication URL 298
  Set Authentication URL 299
  Reset Your Phones 299
  Test Your Phones 300
Configure PushToTalk Service Integration 301
  Create a PushToTalk Service Definition 301
    Configure Phone Group Parameter for PushToTalk 302
    Configure SkipConfirm Parameter for PushToTalk 303
    Configure Directory Number Parameter for PushToTalk 304
  Assign Phones to PushToTalk Service 305
  Configure Wireless Phones for PushToTalk 306
  Install Audio Files for PushToTalk 307
  Assign a Directory URI to a Phone 308

CHAPTER 25  Intercom 311

Intercom Overview 311
  Intercom and Default Devices 311
Intercom Prerequisites 312
Intercom Configuration Task Flow 312
  Configure Intercom Partition 312
    Intercom Partition Configuration Fields 313
  Configure an Intercom Calling Search Space 314
    Intercom Calling Search Space Configuration Fields 314
  Configure an Intercom Translation Pattern 315
    Intercom Translation Pattern Configuration Fields 316
  Configure an Intercom Directory Number 320
    Intercom Directory Number Configuration Fields 321
  Intercom Line and Speed Dial Configuration 325
Intercom Interactions and Restrictions 326
  Intercom Interactions 326
  Intercom Restrictions 328
  Intercom Troubleshooting 329
PART IX

Receiving Calls 333

CHAPTER 26

Prime Line Support 335

Prime Line Support Overview 335
Prime Line Support Prerequisites 335
Prime Line Support Configuration Task Flow 335
Configure Clusterwide Prime Line Support 336
Configure Prime Line Support for Devices 337
Prime Line Support Interactions 337
Prime Line Support Troubleshooting 338
Prime Line Support Does Not Work When Set To True 338
Unable To Answer Inbound Calls 338
Inbound Calls Are Answered Automatically 338

CHAPTER 27

Call Forwarding 341

Call Forwarding Overview 341
Call Forward All, Including CFA Loop Prevention and CFA Loop Breakout 342
Call Forwarding Configuration Task Flow 343
Configure Partitions for Call Forwarding 343
Partition Name Guidelines for Call Forwarding 344
Configure Calling Search Space for Call Forwarding 345
Configure Call Forwarding when Hunt List is Exhausted or Hunt Timer Expires 346
Hunt Call Treatment Fields for Call Forwarding 347
Configure Call Forward No Bandwidth 348

Busy Tone When Dialing Out of Intercom Line 329
Intercom Calls cannot use Talkback with Speaker, Handset or Headset 329
Troubleshooting SCCP 330
Intercom Lines Not Showing Up on Phone 330
Intercom Lines Not Showing Up When Phone Falls Back to SRST 330
Troubleshooting SIP 330
Debug Phones That Are Running SIP 330
Configuration of Phones That Are Running SIP 331
Cisco Extension Mobility User Is Logged In But Intercom Line Does Not Display 331
Intercom Line Fails to Display on Phone 331
CHAPTER 28

Call Park and Directed Call Park 357

Call Park Overview 357
Call Park Prerequisites 358
Call Park Configuration Task Flow 359

Configure Clusterwide Call Park 360
Configure a Partition for Call Park 360
Configure a Call Park Number 361

Call Park Configuration Fields 363
Configure a Softkey Template for Call Park 364
Associate a Softkey Template with a Common Device Configuration 365
Add a Softkey Template to a Common Device Configuration 366
Associate a Common Device Configuration with a Phone 366

Associate a Softkey with a Phone 367
Configure Call Park Button 367

Configure a Phone Button Template for Call Park 367
Associate a Button Template with a Phone 368

Configure Park Monitoring 368
Configure Park Monitoring System Timers 369
Configure Park Monitoring for Hunt Pilots 370
Configure Park Monitoring for a Directory Number 371
Configure Park Monitoring via Universal Line Template 372

Park Monitoring Settings for Universal Line Templates 372

Call Park Interactions and Restrictions 374
Call Park Interactions 374
Call Park Restrictions 375
Troubleshooting Call Park 376
  User Cannot Park Calls 376
  Call Park Number is Not Displayed Long Enough 377
Directed Call Park Overview 377
Directed Call Park Prerequisites 377
Directed Call Park Configuration Task Flow 377
  Configure ClusterWide Directed Call Park 378
  Configure a Directed Call Park Number 378
    Directed Call Park Configuration Settings 379
  Configure BLF/Directed Call Park Buttons 380
    BLF/Directed Call Park Configuration Fields 381
  Synchronize Directed Call Park with Affected Devices 381
Directed Call Park Interactions and Restrictions 382
  Directed Call Park Interactions 382
  Directed Call Park Restrictions 383
Troubleshooting Directed Call Park 384
  User Cannot Retrieve Parked Calls 384
  User Cannot Park Calls 384
  User Receives a Reorder Tone After the Reversion Timer Expires 385
  User Receives a Reorder Tone or Announcement 385
  User Cannot Park a Call at a Number Within The Range 385
  Parked Calls Revert Too Quickly 385
  Park Slot Unavailable 386
  Parked Calls Do Not Revert to the Parked Call Number 386
  Number or Range Cannot Be Deleted Because It Is in Use 386

CHAPTER 29  Call Pickup 387

Call Pickup Overview 387
  Group Call Pickup Overview 387
  Other Group Pickup Overview 387
  Directed Call Pickup Overview 388
  BLF Call Pickup Overview 388
Call Pickup Configuration Task Flow 389
  Configure a Call Pickup Group 391
  Assign a Call Pickup Group to Directory Numbers 391
Configure Partitions for Call Pickup 392
Configure Calling Search Space 393
Assign a Call Pickup Group to Hunt Pilots 394
Configure Call Pickup Notification 394
  Configure BLF Call Pickup Notification 395
    Service Parameter Fields for BLF Call Pickup Notification 395
  Configure Call Pickup Notification for a Call Pickup Group 396
    Call Pickup Notification Fields for Call Pickup 397
  Configure Call Pickup Notification for a Directory Number 397
Configure Directed Call Pickup 398
  Configure a Time Period 398
  Configure Time Schedule 399
  Associate a Time Schedule with a Partition 399
Configure Automatic Call Answering 400
  Configure Auto Call Pickup 400
  Configure BLF Auto Pickup 401
Configure Call Pickup Phone Buttons 401
  Configure Call Pickup Phone Button Template 402
  Associate Call Pickup Button Template with Phone 403
  Configure BLF Speed Dial Number for the BLF Call Pickup Initiator 403
Configure Softkeys for Call Pickup 404
  Configure a Softkey Template for Call Pickup 404
  Associate a Softkey Template with a Common Device Configuration 406
    Add a Softkey Template to Common Device Configuration 406
    Associate a Common Device Configuration with a Phone 407
  Associate a Softkey Template with a Phone 407
Call Pickup Interactions and Restrictions 408
  Call Pickup Interactions 408
  Call Pickup Restrictions 409

CHAPTER 30  Extension Mobility 411
  Extension Mobility Overview 411
  Extension Mobility Prerequisites 411
  Extension Mobility Configuration Task Flow 411
  Activate Extension Mobility Services 412
Configure the Cisco Extension Mobility Phone Service 413
Create an Extension Mobility Device Profile for Users 414
Device Profile Fields for Extension Mobility 414
Associate a Device Profile to a User 420
Subscribe to Extension Mobility 420
Configure the Change Credential IP Phone Service 421
Configure Service Parameters for Extension Mobility 422
Extension Mobility Service Parameters 423
Extension Mobility Interactions and Restrictions 425
Cisco Extension Mobility Interactions 425
Cisco Extension Mobility Restrictions 427
Extension Mobility Troubleshooting 427
Troubleshoot Extension Mobility 427
Authentication Error 428
Blank User ID or PIN 428
Busy Please Try Again 428
Database Error 428
Dev Logon Disabled 429
Device Name Empty 429
EM Service Connection Error 429
Host Not Found 429
HTTP Error 429
Phone Resets 429
Phone Services Unavailable After Login 430
Phone Services Unavailable After Logout 430
User Logged in Elsewhere 430
User Profile Absent 430

CHAPTER 31 Extension Mobility Cross Cluster 431
Extension Mobility Cross Cluster Overview 431
Extension Mobility Cross Cluster Prerequisites 431
Extension Mobility Cross Cluster Configuration Task Flow 431
Configure Extension Mobility 433
Activate Services for Extension Mobility Cross Cluster 434
Configure the Extension Mobility Phone Service 434
Configure a Device Profile for Extension Mobility Cross Cluster 435
  Device Profile Fields for Extension Mobility Cross Cluster 436
Enable Extension Mobility Cross Cluster for a User 441
Subscribe Devices to Extension Mobility 442
Configure Certificates for Extension Mobility Cross Cluster 442
  Activate the Bulk Provisioning Service 443
  Configure Bulk Certificate Management and Export Certificates 443
  Consolidate the Certificates 444
Import the Certificates into the Clusters 445
Configure Extension Mobility Cross Cluster Devices and Templates 445
  Create a Common Device Configuration 446
  Configure an Extension Mobility Cross Cluster Template 447
  Set the Default Template 447
Add Extension Mobility Cross Cluster Devices 448
Configure a Geolocation Filter for Extension Mobility Cross Cluster 448
Configure Feature Parameters for Extension Mobility Cross Cluster 448
  Feature Parameter Fields for Extension Mobility Cross Cluster 449
Configure Intercluster SIP Trunk for Extension Mobility Cross Cluster 452
Configure an Intercluster Service Profile for Extension Mobility Cross Cluster 453
Configure Remote Cluster Services 453
Extension Mobility Cross Cluster Interactions and Restrictions 454
  Extension Mobility Cross Cluster Interactions 454
  Extension Mobility Cross Cluster Restrictions 455
  Extension Mobility Cross Cluster and Security Mode for Different Cluster Versions 456
Extension Mobility Cross Cluster Troubleshooting 458
  Extension Mobility Application Error Codes 458
  Extension Mobility Service Error Codes 459

CHAPTER 32 Hold Reversion 465
  Hold Reversion Overview 465
  Hold Reversion Prerequisites 466
  Hold Reversion Configuration Task Flow 466
  Configure Call Focus Priority for Hold Reversion 467
  Configure Hold Reversion Timer Defaults for Cluster 467
CHAPTER 33  Accessing Hunt Groups 473

Hunt Group Overview 473
Hunt Group Prerequisites 474
Hunt Group Configuration Task Flow 474

  Configure a Softkey Template for Hunt Group 475
  Associate a Softkey Template with a Common Device Configuration 476
  Add a Softkey Template to a Common Device Configuration 476
  Associate a Common Device Configuration with a Phone 477
  Associate a Softkey Template with a Phone 477
  Configure Phones for Hunt Group 478
  Configure Hunt Group Service Parameter 479
Hunt Group Interactions and Restrictions 479
  Hunt Group Interactions 479
  Hunt Group Restrictions 480

CHAPTER 34  Malicious Call Identification 483

Malicious Call Identification Overview 483
Malicious Call Identification Prerequisites 483
Malicious Call Identification Configuration Task Flow 484

  Set Malicious Call ID Service Parameter 485
  Configure Malicious Call ID Alarms 485
  Configure a Softkey Template for Malicious Call Identification 486
  Associate a Softkey Template with a Common Device Configuration 487
  Add a Softkey Template to a Common Device Configuration 487
  Associate a Common Device Configuration with a Phone 488
  Associate a Softkey Template with a Phone 489
  Configure Malicious Call Identification Button 489
  Configure Malicious Call ID Phone Button Template 489
  Associate a Button Template with a Phone 490
Malicious Call Identification Interactions and Restrictions 491
Malicious Call Identification Interactions 491
Malicious Call Identification Restrictions 493
Malicious Call ID Troubleshooting 493

CHAPTER 35  
Call Transfer 495
Call Transfer Overview 495
Call Transfer Configuration Task Flow 496
Configure Consult and Blind Transfer 496
Configure a Softkey Template for Transfer 496
Associate Transfer Softkey Template with a Common Device Configuration 497
Add Transfer Softkey Template to the Common Device Configuration 498
Associate a Common Device Configuration with a Phone 499
Associate Transfer Softkey Template with a Phone 499
Configure Transfer Button 500
Configure a Phone Button Template for Transfer 500
Associate Transfer Button Template with a Phone 501
Configure Transfer On-Hook 501
Configure Direct Transfer 502
Configure a Softkey Template for Direct Transfer 502
Associate Direct Transfer Softkey Template with a Common Device Configuration 503
Add Direct Transfer Softkey Template to the Common Device Configuration 504
Associate a Common Device Configuration with a Phone 504
Associate Direct Transfer Softkey Template with a Phone 505
Configure Direct Transfer Button 505
Configure Phone Button Template for Direct Transfer 505
Associate Direct Transfer Button Template with a Phone 506
Call Transfer Interactions and Restrictions 507
Call Transfer Interactions 507
Call Transfer Restrictions 508

CHAPTER 36  
External Call Transfer Restrictions 509
External Call Transfer Restrictions Overview 509
Configure External Call Transfer Restrictions Task Flow 510
Configure the Service Parameter for Call Transfer Restrictions 510
Configure Incoming Calls Task Flow 511
  Configure the Clusterwide Service Parameter 512
  Configure Gateways for Call Transfer Restrictions 512
  Configure Trunks for Call Transfer Restrictions 513
Configure Outgoing Calls 514
External Call Transfer Interactions and Restrictions 514
External Call Transfer Restrictions Interactions 514
External Call Transfer Restrictions Restrictions 515

PART X
Presence and Privacy Features 517

CHAPTER 37
Barge 519
  Barge Overview 519
    Built-In Conference 520
    Shared Conference 520
    Built-In and Shared Conference Differences 520
  Barge Configuration Task Flow 521
    Configure Softkey Template for Built-In Conferencing 522
    Configure Softkey Template for Shared Conferencing 523
    Associate Softkey Template with Phone 524
    Associate a Softkey Template with Common Device Configuration 525
      Add a Softkey Template to Common Device Configuration 525
      Associate Common Device Configuration with Phone 526
    Configure Barge for Built-In Conferencing 527
    Configure Barge for Shared Conferencing 527
    Associate User with Device 527
  Barge Interactions and Restrictions 528

About the Feature Configuration Guide

This guide provides information about the tasks that you need to complete in order to configure features on the Cisco Unified Communications Manager system. Use this guide after you have configured the call control system, which includes "day 1" configurations such as inbound and outbound calling, dial plans, and network resources. For information about configuring the call control system, see the Cisco Unified Communications Manager System Configuration Guide.

Feature Quick Reference

The following table provides an alphabetical list of the features described in this document, and lists the sections in this guide where you can find full configuration information about each of them.

For information about how to determine which features are supported by your phones, see the Related Topics section below.

<table>
<thead>
<tr>

<td>Configure speed dial buttons and abbreviated dialing.</td>
<td>Placing Calls</td>
</tr>
<tr>
<td><strong>VPN Client Configuration Task Flow</strong></td>
<td>Configure a secure VPN connection for employees who telecommute.</td>
<td>Remote Network Access</td>
</tr>
</tbody>
</table>
Generate a Phone Feature List

Generate a phone feature list report to determine which devices support the feature that you want to configure.

Procedure

**Step 1** From Cisco Unified Reporting Administration, choose System Reports.

**Step 2** From the list of reports, click Unified CM Phone Feature List.

**Step 3** Perform one of the following steps:

- Choose Generate New Report (the bar chart icon) to generate a new report.
- Choose Unified CM Phone Feature List if a report already exists.

**Step 4** From the Product drop-down list, choose All.

**Step 5** Click the name of the feature that you want to configure.

**Step 6** Click Submit.
The report is generated.

---

Configuration Tools

- Configuration Tools Overview, page 9
- Cisco Unified Communications Manager Administration, page 9
- Cisco Unified Communications Manager Serviceability, page 10

Configuration Tools Overview

The procedures in this guide require you to use the following two configuration tools:

- Cisco Unified Communications Manager Administration
- Cisco Unified Serviceability

This chapter provides a brief description of the tools and how to access them.

Cisco Unified Communications Manager Administration

Cisco Unified Communications Manager Administration is a web-based application that allows you to make individual, manual configuration changes to the Unified Communications Manager nodes. The procedures in this guide describe how to configure features using this application.

If you need to perform bulk configuration tasks and want to automate the configuration process, you can use the Cisco Unified Communications Manager Bulk Administration Tool (BAT) to make a large number of configuration changes at the same time. For more information, see Cisco Unified Communications Manager Bulk Administration Guide at http://www.cisco.com/c/en/us/support/unified-communications/unified-communications-manager-callmanager/products-maintenance-guides-list.html.

Log In to Cisco Unified CM Administration

Use the following procedure to log in to Cisco Unified Communications Manager Administration. After you log in to Cisco Unified Communications Manager Administration, messages may display that indicate the current state of licenses for Cisco Unified Communications Manager in the main window. For example, Cisco Unified Communications Manager may identify the following situations:
• Cisco Unified Communications Manager currently operates with starter (demo) licenses, so upload the appropriate license files.
• Cisco Unified Communications Manager currently operates with an insufficient number of licenses, so upload additional license files.
• Cisco Unified Communications Manager does not currently use the correct software feature license. In this case, the Cisco CallManager service stops and does not start until you upload the appropriate software version license and restart the Cisco CallManager service.

Use the following procedure to browse into the server and log in to Cisco Unified Communications Manager Administration.

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Start your preferred operating system browser.</td>
</tr>
</tbody>
</table>
| Step 2 | In the address bar of the web browser, enter the following case-sensitive URL: https://<Unified CM-server-name>:{8443}/ccmadmin/showHome.do  
where: <Unified CM-server-name> equals the name or IP address of the server 
Note You can optionally specify a port number. |
| Step 3 | A Security Alert dialog box displays. Click the appropriate button. |
| Step 4 | At the main Cisco Unified Communications Manager Administration window, enter the username and password that you specified during Cisco Unified Communications Manager installation and click Login.  
(If you want to clear the content of both fields, click Reset.) 
Note For security purposes, Cisco Unified Communications Manager Administration logs you out after 30 minutes of inactivity, and you must log back in. |

Cisco Unified Communications Manager Serviceability

Some procedures in this guide require you to use the Cisco Unified Serviceability application to start or restart services on the Cisco Unified Communications Manager nodes.

Cisco Unified Serviceability is a web-based troubleshooting tool that provides the following functionality:

• Saves alarms and events for troubleshooting and provides alarm message definitions.
• Saves trace information to log files for troubleshooting.
• Monitors real-time behavior of components through the Cisco Unified Real-Time Monitoring Tool (Unified RTMT).
• Provides audit capability by logging configuration changes to the system by a user or as a result of the user action. This functionality supports the Information Assurance feature of Cisco Unified Communications Manager and Cisco Unity Connection.
• Provides feature services that you can activate, deactivate, and view through the Service Activation window.
• Generates and archives daily reports; for example, alert summary or server statistic reports.
- Allows Cisco Unified Communications Manager, IM and Presence Service and Cisco Unity Connection to work as a managed device for Simple Network Management Protocol (SNMP) remote management and troubleshooting.

- Monitors the disk usage of the log partition on a node (or all nodes in the cluster).

- Monitors the number of threads and processes in the system; uses cache to enhance the performance.

- Cisco Unified Communications Manager only: Generates Cisco Unified Communications Manager reports for Quality of Service, traffic, and billing information through Cisco Unified Communications Manager CDR Analysis and Reporting.

Log into Cisco Unified Communications Manager Serviceability

Use the following procedure to log in to Cisco Unified Serviceability.

Procedure

Step 1
Start your preferred operating system browser.

Step 2
In the address bar of the web browser, enter the following case-sensitive URL:
https://<Unified CM-server-name>:{8443}/ccmadmin/showHome.do

where: <Unified CM-server-name> equals the name or IP address of the server

Step 3
A Security Alert dialog box displays. Click the appropriate button.

Step 4
At the main Cisco Unified Communications Manager Administration window, choose Cisco Unified Serviceability from the Navigation menu.

Step 5
Enter the username and password that you specified during Cisco Unified Communications Manager installation and click Login.

Note For security purposes, the system logs you out after 30 minutes of inactivity, and you must log back in.
PART II

Remote Worker Features

- Cisco Unified Mobility, page 15
- Device Mobility, page 43
- Extend and Connect, page 53
- Remote Worker Emergency Calling, page 63
Cisco Unified Mobility

- Cisco Unified Mobility Overview, page 15
- Cisco Unified Mobility Prerequisites, page 15
- Cisco Unified Mobility Configuration Task Flow, page 16
- Cisco Unified Mobility Interactions and Restrictions, page 37
- Cisco Unified Mobility Troubleshooting, page 42

Cisco Unified Mobility Overview

With Cisco Unified Mobility, your users can answer incoming calls on their desk phone or mobile phone, and pick up in-progress calls on the desk phone or mobile phone without losing the connection. A single enterprise phone number can be used to reach the user's desk phone, mobile phone, soft phone and more—up to ten devices. Through Mobile Voice Access and Enterprise Feature Access, your users can also make enterprise calls from their mobile phone.

Cisco Unified Mobility Prerequisites

Cisco Unified Communications Manager locale installer (if you want to use non-English phone locales or country-specific tones).

⚠️ Caution

The Cisco mobility solution is verified with only Cisco equipment. This solution may also work with other third-party PSTN gateways and Session Border Controllers (SBCs), but the features might not work as described here. If you are using this solution with third-party PSTN gateways or SBCs, Cisco technical support may not be able to resolve problems that you encounter.
## Cisco Unified Mobility Configuration Task Flow

### Before You Begin

- Review [Cisco Unified Mobility Prerequisites](#), on page 15.

### Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td><strong>Generate a Phone Feature List, on page 7</strong></td>
<td>Generate a report to identify devices that support the Cisco Unified Mobility feature.</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td><strong>Activate the Cisco Unified Mobile Voice Access Service, on page 18</strong></td>
<td>Activate this service on your publisher node.</td>
</tr>
</tbody>
</table>
| **Step 3** | Configure a mobility template by performing one of the following tasks:  
- **Configure a Softkey Template for Mobility, on page 18**  
- **Configure Feature Control Policy, on page 19** | Configure a mobility softkey to associate to mobility users so they can use mobility features from their deskphone. The call states that you must configure are on hook and connected. Use the feature control policy procedure as an alternative to configuring softkey templates. Configure feature control policies to enable or disable a particular feature and thereby control the appearance of softkeys that display on the phone. You can create a feature control policy for a group of users that wants to use a common set of features. For example, call park and call Pickup features are typically used by the employees from the sales group and not all the employees in a company. You can create a feature control policy that enables only these two features and assign that policy to the sales group. After you create a feature control policy, you can associate that policy with an individual phone, a group of phones, or with all phones in the system. |
| **Step 4** | **To Configure Single Number Reach, on page 22,** perform the following subtasks:  
- **Configure a User for Mobility, on page 23**  
- **Configure IP Phone for Mobility, on page 24**  
- **Configure a Remote Destination Profile, on page 25**  
- **Configure a Remote Destination, on page 25**  
- **Configure an Access List, on page 26** | Configure single number reach (SNR) for users to allow deskphones to extend calls to mobile devices. |
<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 5</strong></td>
<td>Configure Jabber for mobility so your users can access enterprise communications features through a Jabber client on their smartphone.</td>
</tr>
<tr>
<td>To Configure Cisco Jabber Clients for Mobility, on page 27, perform the following subtasks:</td>
<td></td>
</tr>
<tr>
<td>• Configure a Mobility Profile, on page 27</td>
<td></td>
</tr>
<tr>
<td>• Configure a Dual-Mode Device, on page 28</td>
<td></td>
</tr>
<tr>
<td>• Configure a Mobility Identity, on page 29</td>
<td></td>
</tr>
<tr>
<td><strong>Step 6</strong></td>
<td>Configure mobile voice access (MVA) so users calling from a mobile device are provided an interactive voice response (IVR) system and can make a calls through the enterprise as if dialing from a desk phone.</td>
</tr>
<tr>
<td>To Configure Mobile Voice Access, on page 30, perform the following subtasks:</td>
<td></td>
</tr>
<tr>
<td>• Configure Service Parameters for Mobile Voice Access, on page 31</td>
<td></td>
</tr>
<tr>
<td>• Configure Directory Number for Mobile Voice Access, on page 31</td>
<td></td>
</tr>
<tr>
<td>• Configure a gateway for mobile voice access by performing one of the following tasks:</td>
<td></td>
</tr>
<tr>
<td>◦ Configure an Existing H.323 or SIP Gateway for Remote Access, on page 32</td>
<td></td>
</tr>
<tr>
<td>◦ Configure a New H.323 Gateway for Remote Access, on page 34</td>
<td></td>
</tr>
<tr>
<td><strong>Step 7</strong></td>
<td>Configure enterprise feature access (EFA) if you want your users to access mid-call features such as hold, resume, transfer, and conference features from remote destinations. Unlike MVA, this two-stage dialing feature is DTMF-based, so users must enter a PIN and number without being prompted to gain access to enterprise features and mid-call features.</td>
</tr>
<tr>
<td>Configure Enterprise Feature Access, on page 35</td>
<td></td>
</tr>
<tr>
<td><strong>Step 8</strong></td>
<td>Configure handoff mobility for dual-mode phones if you want your system to preserve a call while the user moves out of the enterprise. Even when a user's device disconnects from the enterprise WiFi network and reconnects to the mobile voice or cellular network, an in-progress call is maintained without interruption.</td>
</tr>
<tr>
<td>Configure Handoff Mobility, on page 36</td>
<td></td>
</tr>
</tbody>
</table>
Purpose

Command or Action | Purpose
--- | ---
Step 9 Configure the Mobility Service Parameters, on page 37 | (Optional) If you want to change the behavior of Cisco Unified Mobility, configure the service parameters.

Activate the Cisco Unified Mobile Voice Access Service

Activate this service on your publisher node.

Procedure

Step 1 From Cisco Unified Serviceability, choose **Tools > Service Activation**.
Step 2 From the **Server** drop-down list, choose the publisher node.
Step 3 Click **Go**.
Step 4 Under **CM Services**, check the **Cisco Unified Mobile Voice Access Service** check box.
Step 5 Click **Save**.

What to Do Next

**Configure a Softkey Template for Mobility**, on page 18

Configure a Softkey Template for Mobility

Configure a mobility softkey to associate to mobility users so they can use mobility features from their deskphone. The call states that you must configure are on hook and connected.

Tip

Do not configure both the mobility softkey and the MOVE softkey on the same template. For more information about which softkey your device uses, see your phone configuration guide.

Before You Begin

**Activate the Cisco Unified Mobile Voice Access Service**, on page 18

Procedure

Step 1 From Cisco Unified CM Administration, choose **Device > Device Settings > Softkey Template**. The **Softkey Template Configuration** window appears.
Step 2 Perform this step to create a new sofkey template; otherwise, proceed to the next step.
   a) Click **Add New**.
   b) Select a default template and click **Copy**.
   c) In the **Softkey Template Name** field, enter a new name for the template.
d) Click **Save**.

**Step 3** Perform this step to add softkeys to an existing template.
- a) Enter search criteria and click **Find**.
- b) Choose an existing template.
  The Softkey Template Configuration window appears.

**Step 4** Check the **Default Softkey Template** check box to designate this softkey template as the default softkey template.

**Note** If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.

**Step 5** Choose **Configure Softkey Layout** from the **Related Links** drop-down list in the upper right corner and click **Go**.

**Step 6** From the **Select a Call State to Configure** drop-down list, choose the call state for which you want the softkey to display.

**Step 7** From the **Unselected Softkeys** list, choose the softkey to add and click the right arrow to move the softkey to the **Selected Softkeys** list. Use the up and down arrows to change the position of the new softkey.

**Step 8** To display the softkey in additional call states, repeat the previous step.

**Step 9** Click **Save**.

**Step 10** Perform one of the following tasks:

- If you modified a template that is already associated with devices, click **Apply Config** to restart the devices.
- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

**What to Do Next**
Perform one of the following task flows, depending on your configuration requirements.

- **Configure Single Number Reach**, on page 22
- **Configure Cisco Jabber Clients for Mobility**, on page 27

### Configure Feature Control Policy

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Generate a Phone Feature List, on page 7</td>
<td>Log in to Cisco Unified Reporting and run a phone feature list report to determine which phones support Feature Control Policy.</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Create a Feature Control Policy, on page 20</td>
<td>Create a Feature Control Policy for Cisco Unified IP Phones.</td>
</tr>
</tbody>
</table>
Create a Feature Control Policy

Follow these steps to create a feature control policy. You can configure multiple feature control policies on Cisco Unified Communications Manager.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 3</strong></td>
<td>Perform one of the following tasks:</td>
</tr>
<tr>
<td></td>
<td>• Apply Feature Control Policy to a Phone, on page 21</td>
</tr>
<tr>
<td></td>
<td>• Apply Feature Control Policy to a Common Phone Profile, on page 21</td>
</tr>
<tr>
<td></td>
<td>• Apply Feature Control Policy to All Phones, on page 22</td>
</tr>
<tr>
<td></td>
<td>After you create a Feature Control Policy, you must associate that policy to an individual phone, a group of phones, or to all phones in the system. The feature control policy for an individual phone overrides the clusterwide feature control policy.</td>
</tr>
<tr>
<td><strong>Note</strong></td>
<td>For information on how to apply feature control policy on multiple phones by using the Bulk Administration Tool, see the Cisco Unified Communications Manager Bulk Administration Guide.</td>
</tr>
</tbody>
</table>

| Step 1 | From Cisco Unified CM Administration, choose Device > Device Settings > Feature Control Policy. |
| Step 2 | Perform one of the following tasks: |
| | • To modify the settings for an existing policy, enter search criteria, click Find and choose the policy from the resulting list. |
| | • To add a new policy, click Add New. |
| | The Feature Control Policy Configuration window is displayed. |
| Step 3 | In the Name field, enter a name for the feature control policy. The name can include up to 50 alphanumeric characters and can contain any combination of spaces, periods (.), hyphens (-), and underscore characters (_). Ensure that each feature control policy name is unique to the system. |
| Step 4 | In the Description field, enter a brief description for the feature control policy. The description can include up to 50 alphanumeric characters and can contain any combination of spaces, periods (.), hyphens (-), and underscore characters (_). |
| Step 5 | In the Feature Control Section, for each feature listed, choose whether you want to override the system default and enable or disable the setting: |
| | • If the feature is enabled by default and you want to disable the setting, check the check box under Override Default and uncheck the check box under Enable Setting. |
| | • If the feature is disabled by default and you want to enable the setting, check the check box under Override Default and check the check box under Enable Setting. |
| Step 6 | Click Save. |
What to Do Next

Perform one of the following:

- **Apply Feature Control Policy to a Phone**, on page 21
- **Apply Feature Control Policy to a Common Phone Profile**, on page 21
- **Apply Feature Control Policy to All Phones**, on page 22

Apply Feature Control Policy to a Phone

**Before You Begin**

- Ensure that the phone model supports Feature Control Policy. For more information, see [Generate a Phone Feature List](#) on page 7.
- Create a Feature Control Policy, on page 20

**Procedure**

| Step 1 | From Cisco Unified CM Administration, choose Device > Phone. |
| Step 2 | Enter the search criteria and click Find. A list of phones that are configured on the Cisco Unified Communications Manager is displayed. |
| Step 3 | Choose a phone to which you want to apply a feature control policy. |
| Step 4 | From the Feature Control Policy drop-down list, choose the required feature control policy. |
| Step 5 | Click Save. |
| Step 6 | Click Apply Config. |
| Step 7 | Click OK. |

Apply Feature Control Policy to a Common Phone Profile

Common Phone Profiles allow you to configure Feature Control Policy settings and then apply those settings to all of the phones in your network that use that profile.

**Before You Begin**

Create a Feature Control Policy, on page 20
Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Common Phone Profile.
Step 2  Enter the search criteria and click Find.
Step 3  Choose a common phone profile to which you want to apply a feature control policy.
Step 4  From the Feature Control Policy drop-down list, choose the required feature control policy.
Step 5  Click Save.
Step 6  Click Apply Config.
Step 7  Click OK.

Apply Feature Control Policy to All Phones

Before You Begin
Create a Feature Control Policy, on page 20

Procedure

Step 1  From Cisco Unified CM Administration, choose System > Enterprise Parameters.
Step 2  From the Feature Control Policy drop-down list, choose the required feature control policy.
Step 3  Click Save.
Step 4  Click Apply Config.
Step 5  Click OK.

Configure Single Number Reach

Configure single number reach (SNR) for users to allow deskphones to extend calls to mobile devices.

Before You Begin

• Activate the Cisco Unified Mobile Voice Access Service, on page 18
• Configure a Softkey Template for Mobility, on page 18

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure a User for Mobility, on page 23</td>
</tr>
</tbody>
</table>
Configure a User for Mobility

Configure users for mobility to specify which features they can use and the number of remote destinations they can use.

**Before You Begin**

Configure a Softkey Template for Mobility, on page 18

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose User Management > End User.

**Step 2**
Perform one of the following tasks:

- To modify the settings for an existing user, enter search criteria, click Find and choose an existing user from the resulting list.

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 2</strong> Configure IP Phone for Mobility, on page 24</td>
<td>Configure an IP phone for mobility so that incoming calls can reach a user's remote destination.</td>
</tr>
<tr>
<td><strong>Step 3</strong> Configure a Remote Destination Profile, on page 25</td>
<td>Configure remote destination profiles to apply settings to all of the numbers that you add as remote destinations for the user.</td>
</tr>
</tbody>
</table>
| **Step 4** Configure a Remote Destination, on page 25 | Configure remote destinations which are phones that are available for mobility call answer, call pickup, and can use mobile voice access and enterprise feature access for two-stage dialing. Remote destinations are numbers that correspond to phones. Remote destinations can include any of the following devices:  
  - Mobile phones (single-mode and dual-mode)  
  - Enterprise numbers that are not on the same cluster as the desk phone  
  - Phone numbers on the PSTN |
| **Step 5** Configure an Access List, on page 26 | (Optional) Configure an access list if you want to allow or block certain calls to a user's remote destination. |
To add a new user, click Add New.

Step 3 Check the Enable Mobility check box.
Step 4 Check the Enable Mobile Voice Access check box.
Step 5 In the Maximum Wait Time for Desk Pickup field, enter the maximum time in milliseconds that can pass before the user must pick up a call that is transferred from the mobile phone to the desk phone. Enter 0 to disable the desk phone transfer behavior.
Step 6 In the Remote Destination Limit field, enter the number of remote numbers that a user is permitted to have for single number reach (SNR) targets.
Step 7 Click Save.

What to Do Next
Configure IP Phone for Mobility, on page 24

Configure IP Phone for Mobility
Configure an IP phone for mobility so that incoming calls can reach a user's remote destination.

Before You Begin
• Configure a Softkey Template for Mobility, on page 18
• Configure a User for Mobility, on page 23

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone.
Step 2 Perform one of the following tasks:
   • To modify the settings for an existing phone, enter search criteria, click Find, and choose an existing phone from the resulting list.
   • To add a new phone, click Add New and choose the phone from the Phone Type drop-down list.
Step 3 Click Next.
Step 4 From the SoftKey Template drop-down list, choose the mobility softkey template that you configured.
Step 5 From the Owner User ID drop-down list, choose the user account on which you enabled mobility.
Step 6 Click Save.

What to Do Next
Configure a Remote Destination Profile, on page 25
Configure a Remote Destination Profile

Configure remote destination profiles to apply settings to all of the numbers that you add as remote destinations for the user.

Before You Begin
Configure IP Phone for Mobility, on page 24

Procedure

Step 1
From Cisco Unified CM Administration, choose Device > Device Profile > Remote Destination Profile.

Step 2
Click Add New.

Step 3
Configure the fields in the Remote Destination Profile Configuration window. See the online help for more information about the fields and their configuration options.

Step 4
Click Save.

Step 5
Under Association Information, click Add a New DN.

Step 6
In the Directory Number field, add the directory number of the user's desk phone.

What to Do Next
Configure a Remote Destination, on page 25

Configure a Remote Destination

Configure remote destinations which are phones that are available for mobility call answer, call pickup, and can use mobile voice access and enterprise feature access for two-stage dialing. Remote destinations are numbers that correspond to phones. Remote destinations can include any of the following devices:

- Mobile phones (single-mode and dual-mode)
- Enterprise numbers that are not on the same cluster as the desk phone
- Phone numbers on the PSTN

When an enterprise user initiates a call from a remote destination to Cisco Jabber, Cisco Unified Communications Manager tries to establish a data call with Cisco Jabber by sending an INVITE message to Cisco TelePresence Video Communication Server (VCS). The call is established regardless of receiving a response from VCS.

Before You Begin
Configure a Remote Destination Profile, on page 25
**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Remote Destination**.

**Step 2** Click **Add New**.

**Step 3** Configure the fields on the **Remote Destination Configuration** window. See the online help for more information about the fields and their configuration options.

**Step 4** Click **Save**.

**What to Do Next**

(Optional) **Configure an Access List, on page 26**

**Configure an Access List**

Configure an access list if you want to allow or block certain calls to a user's remote destination.

**Before You Begin**

**Configure Single Number Reach, on page 22**

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Access List**.

**Step 2** Enter a name and description to identify the new access list.

**Step 3** Associate the access list to a user by choosing an ID from the **Owner** drop-down list.

**Step 4** Choose one of the following options:

- **Allowed**—All numbers in the access list are allowed.
- **Blocked**—All numbers in the access list are blocked.

**Step 5** Click **Save**.

**Step 6** Click **Add Member**.

**Step 7** From the **Filter Mask** drop-down list, choose the filters that you want to apply to the access list:

- **Not Available**—All callers that advertise a not available status are added to the access list.
- **Private**—All callers that advertise a private status are added to the access list.
- **Directory Number**—All directory numbers or directory strings that you specify are added to the access list. If you choose this option, add a number or number string in the **DN Mask** field.

**Step 8** Choose **Save**.

**Step 9** From Cisco Unified CM Administration, choose **Device > Remote Destination** and reopen the remote destination that you created.

**Step 10** Perform one of the following steps:
• If you created an allowed access list, click the **Ring this destination only if caller is in** radio button and choose the access list that you created from the drop-down list.

• If you created a blocked access list, click the **Do not ring this destination if caller is in** radio button and choose the access list that you created from the drop-down list.

---

**Configure Cisco Jabber Clients for Mobility**

Configure Jabber for mobility so your users can access enterprise communications features through a Jabber client on their smartphone.

**Before You Begin**

- Activate the Cisco Unified Mobile Voice Access Service, on page 18
- Configure a Softkey Template for Mobility, on page 18

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure a Mobility Profile, on page 27</td>
<td>Configure a mobility profile if you want your system to send a consistent caller ID to Jabber client devices. From a technical standpoint, this caller ID is sent during the dial via office reverse (DVO-R) callback portion of a call to the mobility identity or alternate callback number. DVO-R call feature uses enbloc dialing. If no mobility profile is assigned to the mobility identity or if the Callback Caller ID field is left blank, the system sends the default enterprise feature access number.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Configure a Dual-Mode Device, on page 28</td>
<td>Configure a dual-mode device to enable dial via office (DVO) so that users can make calls from their mobile device as if they were dialing from their desk phone, as well as receive calls from the enterprise.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Configure a Mobility Identity, on page 29</td>
<td>Integrate mobility features with iPhone or Android devices by configuring the device numbers as mobility identities. After the mobile number is configured as a mobility identity within the system, mobile connect allows incoming calls to the user’s enterprise number to extend to the iPhone or Android dual-mode device through the mobile voice network. The mobility identity is the mobile phone number of the iPhone or Android device. If needed, you can also set the voicemail policy behavior.</td>
</tr>
</tbody>
</table>

**Configure a Mobility Profile**

Configure a mobility profile if you want your system to send a consistent caller ID to Jabber client devices. From a technical standpoint, this caller ID is sent during the dial via office reverse (DVO-R) callback portion of a call to the mobility identity or alternate callback number. DVO-R call feature uses enbloc dialing. If no
mobility profile is assigned to the mobility identity or if the Callback Caller ID field is left blank, the system sends the default enterprise feature access number.

**Before You Begin**

- Activate the Cisco Unified Mobile Voice Access Service, on page 18
- Configure a Softkey Template for Mobility, on page 18

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Call Routing > Mobility > Mobility Profile**.

**Step 2** Click **Add New**.

**Step 3** Configure the fields in the **Mobility Profile Configuration** window. See the online help for more information about the fields and their configuration options.

**Step 4** Click **Save**.

Configure a Mobility Identity

Integrate mobility features with iPhone or Android devices by configuring the device numbers as mobility identities. After the mobile number is configured as a mobility identity within the system, mobile connect allows incoming calls to the user's enterprise number to extend to the iPhone or Android dual-mode device through the mobile voice network. The mobility identity is the mobile phone number of the iPhone or Android device. If needed, you can also set the voicemail policy behavior.

Before You Begin
Configure a Dual-Mode Device, on page 28
Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Phone.
Step 2  Enter search criteria if needed, click Find, and choose the dual-mode device that you created.
Step 3  Click Add New Mobility Identity.
Step 4  Configure the fields on the Mobility Identity Configuration window. See the online help for more information about the fields and their configuration options.
Step 5  Click Save.

Configure Mobile Voice Access

Configure mobile voice access (MVA) so users calling from a mobile device are provided an interactive voice response (IVR) system and can make a calls through the enterprise as if dialing from a desk phone.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Configure Service Parameters for Mobile Voice Access, on page 31</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Configure Directory Number for Mobile Voice Access, on page 31</td>
</tr>
<tr>
<td><strong>Step 3</strong></td>
<td>Configure a gateway for MVA or enterprise feature access (EFA) by performing one of the following tasks:</td>
</tr>
<tr>
<td></td>
<td>• Configure an Existing H.323 or SIP Gateway for Remote Access, on page 32</td>
</tr>
<tr>
<td></td>
<td>• Configure a New H.323 Gateway for Remote Access, on page 34</td>
</tr>
</tbody>
</table>
Configure Service Parameters for Mobile Voice Access

Enable service parameters to activate mobile voice access (MVA) and specify a directory number that users can dial to reach the enterprise.

**Before You Begin**
Configure a User for Mobility, on page 23

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose System > Service Parameters.

**Step 2** From the Server drop-down list, choose the publisher node.

**Step 3** From the Service drop-down list, choose Cisco CallManager.

**Step 4** Set the Enable Mobile Voice Access service parameter to True.

**Step 5** For the Mobile Voice Access Number service parameter, enter the access number that you want users to dial when they access the enterprise.

**Step 6** Click Save.

**What to Do Next**
Configure Directory Number for Mobile Voice Access, on page 31

Configure Directory Number for Mobile Voice Access

Configure mobile voice access (MVA) to assign sets of localized prompts for users who dial in from outside the enterprise. After the gateway collects the required digits from the user to make a call, the call is transferred to the DN that is configured in this window. This DN can be internal. You must configure a dial-peer so that the MVA service can transfer the call from the gateway to this DN. This DN should be also be placed in a partition where the inbound calling search space (CSS) of the gateway or the remote destination profile CSS can reach the DN.

**Before You Begin**
Configure Service Parameters for Mobile Voice Access, on page 31
Procedure

Step 1  From Cisco Unified CM Administration, choose Media Resources > Mobile Voice Access.

Step 2  In the Mobile Voice Access Directory Number, enter the internal directory number (DN) to receive Mobile Voice Access calls from the gateway.
        Enter a value between 1 and 24 digits in length. Valid values are 0 to 9.

Step 3  In the Localization pane, use the arrows to move the locales that you want to select to or from this pane.  
        Note  Mobile Voice Access uses the first locale that appears in the Selected Locales pane in the Mobile Voice Access window. For example, if English United States appears first in the Selected Locales pane, the Cisco Unified Mobility user hears English when the IVR is used during a call.

Step 4  Click Save.

What to Do Next

Perform one of the following tasks:

- Configure an Existing H.323 or SIP Gateway for Remote Access, on page 32
- Configure a New H.323 Gateway for Remote Access, on page 34

Configure an Existing H.323 or SIP Gateway for Remote Access

If you have an existing H.323 or SIP PSTN gateway in your system, you can configure it for MVA. This function is accessed by calling a system-configured DID number that is answered and handled by an H.323 or SIP VoiceXML (VXML) gateway. After you configure your gateway, it uses a vxml script on the publisher node to pull the interactive voice response (IVR) prompts that are played to the MVA users. These prompts request user authentication and input of a number that users must dial on their phone keypad.

Before You Begin

Configure Directory Number for Mobile Voice Access, on page 31

Procedure

Step 1  Configure the T1/E1 controller for PRI from the PSTN.

Example:
controller T1 1/0
framing esf
linecode b8zs
pri-group timeslots 1-24

Step 2  Configure the serial interface for the PRI (T1/E1).

Example:
interface Serial 1/0:23
ip address none
logging event link-status none
isdn switch-type primary 4ess
isdn incoming-voice voice
Step 3. Load the VXML application from the publisher node.

Example:
Sample configuration for IOS Version 12.3 (13) and later:
application service CCM
http://<Unified CM Publisher IP Addr>:8080/ccmivr/pages/IVRMainpage.vxml

Example:
Sample configuration before IOS Version 12.3(12):
call application voice Unified CCM
http://<Unified CM Publisher IP Addr>:8080/ccmivr/pages/IVRMainpage.vxml

Caution. Although VXML was added in Version 12.2(11), other versions such as 12.3(8), 12.3(9), 12.3(14)T1, and 12.2(15) have VXML issues.

Step 4. Configure the dial peer to associate the Cisco Unified Mobility application with system remote access.

Example:
Sample configuration for IOS 12.3(13) and later:
dial-peer voice 58888 pots
service CCM (Cisco Unified Mobility VXML application)
incoming called-number 58888

Example:
Sample configuration for IOS 12.3(12) and earlier:
dial-peer voice 100 pots
application CCM (Cisco Unified Mobility VXML application)
incoming called-number 58888
(58888 represents the mobile voice access (MVA) number)

Step 5. Add a dial peer to transfer the calls to the MVA DN.

Example:
Sample configuration for primary Cisco Unified Communications Manager:
dial-peer voice 101 voip
preference 1
destination-pattern <Mobile Voice Access DN>
session target ipv4:10.1.30.3
codec g711u
dtmf-relay h245-alphanumeric
no vad

Example:
Sample configuration for secondary Unified Communications Manager (if needed):
dial-peer voice 102 voip
preference 2
destination-pattern <Mobile Voice Access DN>
session target ipv4:10.1.30.4
codec g711u
dtmf-relay h245-alphanumeric
no vad

Note: If a generic dial peer is already configured to terminate the calls and is consistent with the MVA DN, you do not need to perform this step.

Example:
Sample configuration for SIP gateway voip dial-peer:

dial-peer voice 80 voip
destination-pattern <Mobile Voice Access DN>
rtp payload-type nse 99
session protocol sipv2
session target ipv4:10.194.107.80
incoming called-number .T
dtmf-relay rtp-nte
codecg711ulaw

Configure a New H.323 Gateway for Remote Access

If you do not have an existing H.323 or SIP PSTN gateway and you want to configure mobile voice access, you must add a new H.323 gateway and configure it for MVA functionality by using the hairpinning method. From a technical standpoint, this method refers to using a second gateway to receive the inbound call, apply the MVA service and then the inbound call leg returns to the PSTN gateway (original source) after the system applies the MVA service.

Note

If you use Mobile Voice Access with hairpinning, users calling into your system will not be identified automatically by their caller ID. Instead, users must enter their remote destination number manually before they enter their PIN. The reason is that the PSTN gateway must first route the call to Unified Communications Manager to reach the hairpinned Mobile Voice Access gateway. Because of this route path, the conversion of the calling number from a mobile number to an enterprise directory number occurs before the Mobile Voice Access gateway handles the call. As a result, the gateway is unable to match the calling number with a configured remote destination, and therefore the system prompts users to enter their remote destination number.

Before You Begin

Configure Directory Number for Mobile Voice Access, on page 31

Procedure

Step 1  Load the VXML application from the publisher node.

Example:

Sample configuration for IOS Version 12.3 (13) and later:

```xml
application service CCM
http://<Unified CM Publisher IP Addr>:8080/ccmivr/pages/IVRMainpage.vxml
```

Sample configuration before IOS Version 12.3(12):

```xml
call application voice CCM
http://<Unified CM Publisher IP Addr>:8080/ccmivr/pages/IVRMainpage.vxml
```

Caution Although VXML was added in Version 12.2(11), other versions such as 12.3(8), 12.3(9), 12.3(14)T1, and 12.2(15) have VXML issues.

Step 2  Configure the dial-peer to associate the Cisco Unified Mobility application with system remote access.

Example:
Sample configuration for IOS 12.3(13) and later:

```
dial-peer voice 1234567 voip
  service CCM
  incoming called-number 1234567
  codec g711u
  session target ipv4:<ip_address of call manager>
```

Example:
Sample configuration for IOS 12.3(12) and earlier:

```
dial-peer voice 1234567 voip
  application CCM
  incoming called-number 1234567
  codec g711u
  session target ipv4:<ip_address of call manager>
```

Step 3 Add a dial-peer for transferring calls to the Mobile Voice Access (MVA) DN.

Example:
Sample configuration for primary Unified Communications Manager:

```
dial-peer voice 101 voip
  preference 1
  destination-pattern <Mobile Voice Access DN>
  session target ipv4:10.1.30.3
  voice-class h323 1
  codec g711ulaw
  dtmf-relay h245-alphanumeric
  novad
```

Example:
Sample configuration for secondary Unified Communications Manager (if needed):

```
dial-peer voice 102 voip
  preference 2
  destination-pattern <Mobile Voice Access DN>
  session target ipv4:10.1.30.4
  voice-class h323 1
  codec g711ulaw
  dtmf-relay h245-alphanumeric
  novad
```

Note If a generic dial peer is already configured to terminate the calls and is consistent with the MVA DN, you do not need to perform this step.

Step 4 Configure hairpin.

```
voice service voip
  allow-connections h323 to h323
```

Step 5 On the Unified Communications Manager, create a new route pattern to redirect the incoming MVA number to the H.323 gateway that has the vxml script loaded. Ensure that the incoming CSS of the gateway can access the partition in which the new route pattern is created.

Configure Enterprise Feature Access

Configure enterprise feature access (EFA) if you want your users to access mid-call features such as hold, resume, transfer, and conference features from remote destinations. Unlike MVA, this two-stage dialing feature is DTMF-based, so users must enter a PIN and number without being prompted to gain access to enterprise features and mid-call features.
Procedure

Step 1 From Cisco Unified CM Administration, choose **System > Service Parameters**.

Step 2 From the **Server** drop-down list, choose the publisher node.

Step 3 From the **Service** drop-down list, choose **Cisco CallManager**.

Step 4 Set the **Enable Enterprise Feature Access** service parameter to **True**.

Step 5 (Optional) Modify the enterprise feature access (EFA) codes. The default values are as follows:

- Hold: *81
- Exclusive Hold: *82
- Resume: *83
- Transfer: *84
- Conference: *85
- Session Handoff: *74
- Starting Selective Recording: *86
- Stopping Selective Recording: *87

Step 6 From Cisco Unified CM Administration, choose **Call Routing > Mobility > Enterprise Feature Access**.

Step 7 In the **Number** field, enter a unique DID number that is required for EFA. This number supports transfer, conference, resume, and two-stage dialing from remote destinations.

Step 8 From the **Route Partition** drop-down list, choose the partition of the DID that is required for EFA.

Step 9 (Optional) In the **Description** field, enter a description to identify the EFA number.

Step 10 (Optional) Check the **Default Enterprise Feature Access Number** check box to make this EFA number the default for this system.

Step 11 Click **Save**.

Configure Handoff Mobility

Configure handoff mobility for dual-mode phones if you want your system to preserve a call while the user moves out of the enterprise. Even when a user's device disconnects from the enterprise WiFi network and reconnects to the mobile voice or cellular network, an in-progress call is maintained without interruption.

Procedure

Step 1 From Cisco Unified CM Administration, choose **Call Routing > Mobility > Handoff Configuration**.

Step 2 In the **Handoff Number** field, enter the direct inward dialing (DID) number for handoff between the Wi-Fi and mobile voice or cellular network. For numbers that start with the international escape character (+), you must precede the + with a backslash (\). Example: \+15551234.
Step 3 From the Route Partition drop-down list, choose the partition to which the handoff DID number belongs.

Step 4 Click Save.

Configure the Mobility Service Parameters

If you want to change the behavior of Cisco Unified Mobility, configure the service parameters.

Procedure

Step 1 From Cisco Unified CM Administration, choose System > Service Parameters.

Step 2 From the Server drop-down list, choose the publisher node.

Step 3 From the Service drop-down list, choose Cisco CallManager.

Step 4 Configure the service parameters that are listed under Clusterwide Parameters (System - Mobility). Click the name of the service parameter, which provides a hyperlink to a complete definition of the service parameter and its configuration options.

Step 5 Click Save.

Cisco Unified Mobility Interactions and Restrictions

Cisco Unified Mobility Interactions

Table 2: Cisco Unified Mobility Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto Call Pickup</td>
<td>Cisco Unified Mobility interacts with auto call pickup depending on how you configured the service parameter. When the Auto Call Pickup Enabled service parameter is set to True, users must press only the PickUp softkey to pick up a call. If the service parameter is set to False, users must press the PickUp, GPickUp, or OPickUp softkey and then the Answer softkey.</td>
</tr>
<tr>
<td>Automatic Alternate Routing</td>
<td>Cisco Unified Mobility supports automatic alternate routing (AAR) as follows:</td>
</tr>
<tr>
<td></td>
<td>• If a rejection occurs because of a lack of bandwidth for the location-based service, the rejection triggers AAR and reroutes the call through the PSTN so the caller does not need to hang up and redial.</td>
</tr>
<tr>
<td></td>
<td>• If a rejection occurs because of resource reservation protocol (RSVP), however, AAR is not triggered for calls to remote destinations and the call stops.</td>
</tr>
</tbody>
</table>
### Feature Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extend and Connect</td>
<td>Users who need the capabilities of both Cisco Unified Mobility and Extend and Connect can configure the same remote destination on the remote device profile and CTI remote device types when the owner ID of both device types is the same. This configuration allows Cisco Unified Mobility features to be used concurrently with Extend and Connect. For more information, see the “Extend and Connect” chapter.</td>
</tr>
</tbody>
</table>
| External Call Control         | If external call control is configured, Cisco Unified Communications Manager follows the route decision from the adjunct route server for these Cisco Unified Mobility features:  
  - Cisco Unified Mobility  
  - Mobile voice access  
  - Enterprise feature access  
  - Dial via office  
  
  Cisco Unified Communications Manager does not send a routing query for the following Cisco Unified Mobility features:  
  - Cell pickup  
  - Desk pickup  
  - Session handoff |
| Intelligent Session Control and Session Handoff | For direct calls to remote destinations that are anchored to the enterprise number, mobile users can use the session handoff feature to hand off the call to their deskphones. You must enable Cisco Unified Mobility before you implement intelligent session control. |
| Licensing                     | Cisco Unified Mobility is included in all user-based licenses from basic to professional.                                                                                                                                                                                                                                              |
| Local Route Groups            | For single number reach calls to a remote destination, the device pool of the originating calling party determines the selection of the standard local route group.                                                                                                                                                                           |
| Number of Supported Calls     | Each remote destination supports a maximum of two active calls. For Cisco Unified Mobility, each remote destination supports a maximum of two active calls through Cisco Unified Communications Manager. Using the enterprise feature access directory number (DID number) to transfer or conference with DTMF is one call. When a Cisco Unified Mobility user receives a call while the user has two active calls for the remote destination or while the user is using DTMF to transfer or conference a call from the remote destination, the received call does not reach the remote destination. Instead, the call goes to the enterprise voicemail, if call forward no answer (CFNA) is configured or if the call is not answered on a shared line.     |
Cisco Unified Mobility Interactions and Restrictions

Table 3: Cisco Unified Mobility Interactions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto Answer</td>
<td>A remote destination call does not work when auto answer is enabled.</td>
</tr>
<tr>
<td>Call Forwarding</td>
<td>You do not need to configure settings for call forward unregistered (CFUR) if you configured remote destinations for users. Call forwarding is handled as part of the Cisco Unified Mobility process. CFUR settings for mobile devices is not supported. Use Call Forward Busy and Call Forward No Answer rules instead. CFUR is supported for Jabber mobile devices when remote destination and Mobile Identity are not configured for a mobile device</td>
</tr>
<tr>
<td>Call Queuing</td>
<td>Cisco Unified Communications Manager does not support call queuing with Cisco Unified Mobility.</td>
</tr>
<tr>
<td>Conferencing</td>
<td>Users cannot initiate a meet-me conference as conference controller by using mobile voice access, but they can join a meet-me conference. If an existing conference call is initiated from a shared-line IP phone or dual-mode phone or smartphone that is a remote destination, no new conference party can be added to the existing conference after the call is sent to a mobile phone or a dual-mode handoff action occurs. To permit the addition of new conference parties, use the Advanced Ad Hoc Conference Enabled service parameter. See the Related Topic section for more information.</td>
</tr>
<tr>
<td>Dialing + Character</td>
<td>Users can dial a + sign through dual-tone multifrequency (DTMF) on a mobile phone to specify the international escape character. Cisco Unified Mobility does not support + dialing through DTMF for IVR to make an outgoing call from a mobile phone to an enterprise IP phone for which the directory number contains the + character. Cisco Unified Mobility does not support + dialing through DTMF for two-stage dialing to make an outgoing call from a mobile phone to an enterprise IP phone for which the directory number contains the + character. from Mobile Phones</td>
</tr>
</tbody>
</table>
### Restriction | Description
--- | ---
Do Not Disturb on the Desk Phone and Direct Calls to Remote Destination | If do not disturb (DND) is enabled on a desk phone, the desk phone cannot be placed in the remote In use state and the call is not anchored in the following scenarios:

- DND is enabled with the call reject option.
- DND is activated by pressing the DND softkey on the desk phone.

If DND is enabled with the ring off option, however, the call is anchored.

#### Dual-Mode Phones

**Dual-Mode Handoff and Caller ID**

The handoff DN method of dual-mode handoff requires a caller ID in the cellular network. The mobility softkey method does not require caller ID.

**Dual-Mode Phones and CTI Applications**

While a dual-mode phone is in Wi-Fi enterprise mode, no CTI applications control it nor monitor it.

The **In Use Remote** indicator for dual-mode phones on a shared line call in the WLAN disappears if the dual-mode phone goes out of WLAN range.

**Dual-Mode Phones and SIP Registration Period**

For dual-mode phones, Cisco Unified Communications Manager determines the registration period by using the value in the **Timer Register Expires (seconds)** field of the SIP profile that associates with the phone, not the value that the **SIP Station KeepAlive Interval** service parameter specifies. The standard SIP profile for mobile devices determines the registration period as defined by the **Time Register Expires** field in that profile.

#### Enterprise Features From Cellular Networks

Enterprise features from cellular networks require out-of-band DTMF.

When using intercluster DNAs as remote destinations for an IP phone over a SIP trunk (either intercluster trunk or gateway), check the **Require DTMF Reception** check box when configuring the IP phone. This allows DTMF digits to be received out of band, which is crucial for enterprise feature access midcall features.

#### Gateways and Ports

Both H.323 and SIP VoIP gateways are supported for mobile voice access.

Cisco Unified Mobility features are not supported for T1 CAS, FXO, FXS and BRI.

#### Jabber Devices

When initially configured, Jabber devices count as registered devices. These devices increase the count of registered devices in a node, set by the **Maximum Number of Registered Devices** service parameter.

#### Locales

Cisco Unified Mobility supports a maximum of nine locales. If more than nine locales are installed, they appear in the Available Locales pane, but you can only save up to nine locales in the Selected Locales pane.

If you attempt to configure more than nine locales for Cisco Unified Mobility, the following message appears: "Update failed. Check constraint (informix.cc_iivruserlocale_orderindex) failed."
<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum Wait Timer for Desktop Call Pickup</td>
<td>If a user presses the *8 DTMF code from a remote destination (either a smartphone or any other phone) to put a call on hold, the user desk phone displays the Resume softkey. However, the desk phone does not apply a timer for Desktop Call Pickup. The Resume key continues to be displayed even after the timeout that is configured for the end user to pick up the call elapses and the call is not dropped. Instead, users should hang up the call on the remote phone, which triggers the desk phone to apply the timer for desktop call pickup. (Use the Maximum Wait Time for Desk Pickup field on the End User Configuration window to change this setting.)</td>
</tr>
<tr>
<td>Multilevel Precedence and Preemption</td>
<td>Cisco Unified Mobility does not work with multilevel precedence and preemption (MLPP). If a call is preempted with MLPP, Cisco Unified Mobility features are disabled for that call.</td>
</tr>
<tr>
<td>Overlap Sending</td>
<td>Overlap sending patterns are not supported for the Intelligent Session Control feature.</td>
</tr>
<tr>
<td>Q Signaling</td>
<td>Mobility does not support Q signaling (QSIG).</td>
</tr>
<tr>
<td>QSIG Path Replacement</td>
<td>QSIG path replacement is not supported.</td>
</tr>
<tr>
<td>Service Parameters</td>
<td>Enterprise feature access service parameters apply to standard phones and smartphones; however, smartphones generally use one-touch keys to send the appropriate codes. You must configure any smartphones that will be used with Cisco Unified Mobility to use either the default codes for enterprise feature access or the codes that are specified in the smartphone documentation.</td>
</tr>
<tr>
<td>Session Handoff</td>
<td>The following limitations apply to the session handoff feature:</td>
</tr>
<tr>
<td></td>
<td>• Session handoff can take place only from mobile phone to desk phone. For session handoff from desk phone to mobile phone, the current remote destination pickup method specifies that you must use send call to mobile phone.</td>
</tr>
<tr>
<td></td>
<td>• Only audio call session handoff is supported.</td>
</tr>
<tr>
<td>SIP Trunks</td>
<td>The Cisco Unified Mobility feature is supported only for primary rate interface (PRI) public switched telephone network (PSTN) connections. For SIP trunks, Cisco Unified Mobility is supported over IOS gateways or intercluster trunks.</td>
</tr>
<tr>
<td>SIP URI and Direct Calls to Remote Destination</td>
<td>The Intelligent session control feature does not support direct URI dialing. Therefore, calls that are made to a SIP URI cannot be anchored to an enterprise number.</td>
</tr>
<tr>
<td>Restriction</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Unified Communications Manager publisher dependent</td>
<td>In a cluster environment, the publisher must be reachable in order to enable or disable Single Number Reach. Some features may not function if the publisher is not actively running. Mobile voice access is not available when the publisher node is not reachable; IVR prompts for Mobile Voice Access are stored only on the publisher.</td>
</tr>
<tr>
<td>Video Calls</td>
<td>Cisco Unified Mobility services do not extend to video calls. A video call that is received at the desk phone cannot be picked up on the mobile phone.</td>
</tr>
<tr>
<td>Mobile Voice Access (MVA)</td>
<td>Cisco 4000 Series Integrated Services Routers do not support Voice XML (VXML). Hence, when these routers function as Unified Communications gateways with Cisco Unified Communications Manager, they do not support Mobile Voice Access (MVA) application.</td>
</tr>

## Cisco Unified Mobility Troubleshooting

### Cannot Resume Call on Desktop Phone

**Problem** When a remote destination (mobile phone) is not a smartphone and a call to this mobile phone is anchored through Cisco Unified Communications Manager, the user can hang up the mobile phone and expect to see a Resume softkey on the user desktop phone to resume the call. The user cannot resume this call on the user desktop phone.

**Possible Cause** If the calling party receives a busy, reorder, or disconnect tone when the mobile phone hangs up, the mobile phone provider probably did not disconnect the media. No disconnect signals came from the provider. To verify this possibility, let the calling party wait for 45 seconds. After this wait, the service provider will time out and send disconnect signals, at which time Cisco Unified Communications Manager can provide a Resume softkey to resume the call.

**Solution**

- Add the following command to the gateway:
  ```plaintext
  voice call disc-pi-off
  ```
- For the Cisco CallManager service, set the Retain Media on Disconnect with PI for Active Call service parameter to False.
Device Mobility

• Device Mobility Overview, page 43
• Device Mobility Prerequisites, page 43
• Device Mobility Configuration Task Flow, page 43
• Device Mobility Interactions and Restrictions, page 50

Device Mobility Overview

Device mobility allows devices to assume settings based on their location. Your system uses the device IP subnets to determine the exact location of the device. By enabling device mobility within a cluster, you allow mobile users to roam from one site to another and acquire the site-specific settings. Your system then uses these dynamically allocated settings for functions such as call routing, codec selection, and media resource selection.

Device Mobility Prerequisites

• Cisco Database Layer Monitor service running on the same node as the Cisco CallManager service
• Cisco TFTP service running on at least one node in the cluster
• Cisco Unified Communications Manager locale Installer (if you want to use non-English phone locales or country-specific tones)
• Any phone that runs either SCCP or SIP

Device Mobility Configuration Task Flow

Before You Begin

• Review Device Mobility Prerequisites, on page 43.
# Device Mobility Configuration Task Flow

## Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** | To [Enable Device Mobility](#), on page 45, perform one or both of the following subtasks:  
- [Activate Device Mobility for Your Cluster](#), on page 45  
- [Configure Device Mobility Settings for Individual Devices](#), on page 46 | Perform these procedures as needed for your configuration. You can configure Device Mobility to be enabled across your cluster, for individual devices, or a combination of enabled and disabled for devices. |
| **Step 2** | [Configure a Physical Location](#), on page 46 | Configure the geographic location so that your system can determine which network resources to assign to a device. If a user moves away from the home location, the system ensures that the device uses local media resources and the correct bandwidth for the call. |
| **Step 3** | [Configure a Device Mobility Group](#), on page 47 | Configure the device mobility group to define a logical group of sites with similar dialing patterns (for example, US_dmg and EUR_dmg). Depending on the network size and scope, your device mobility groups can represent countries, regions, states, provinces, or cities. For example, an enterprise with a worldwide network can choose device mobility groups that represent individual countries, whereas an enterprise with a national or regional network can define device mobility groups that represent states, provinces, or cities. |
| **Step 4** | [Configure Device Mobility Information](#), on page 47 | Configure device mobility information such as the subnets and device pools that are used for device mobility. When a phone registers, your system compares the IP address of the device to the subnets that are configured device mobility in the Device Mobility Info Configuration window. The best match uses the largest number of bits in the IP subnet mask (longest match rule). For example, the IP address 9.9.8.2 matches the subnet 9.9.8.0/24 rather than the subnet 9.9.0.0/16. |
| **Step 5** | [Configure a Device Pool for Device Mobility](#), on page 48 | Unified Communications Manager assigns a device pool to an IP phone based on the device's IP subnet. The following steps describe the behavior:  
- The IP phone tries to register to Unified Communications Manager by sending its IP address in the registration message.  
- Unified Communications Manager derives the device's IP subnet and matches it with the subnet configured as part of the device mobility information. |
If the subnet matches, Unified Communications Manager provides the device with a new configuration based on the device pool configuration.

(Optional)
Follow this procedure if you want to view and verify the current device mobility settings for a device.

Enable Device Mobility

Perform these procedures as needed for your configuration. You can configure Device Mobility to be enabled across your cluster, for individual devices, or a combination of enabled and disabled for devices.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Activate Device Mobility for Your Cluster, on page 45</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Configure Device Mobility Settings for Individual Devices, on page 46</td>
</tr>
</tbody>
</table>

Activate Device Mobility for Your Cluster

Activate a service parameter if you want to enable device mobility on all devices in the cluster.

Procedure

1. From Cisco Unified CM Administration, choose **System > Service Parameters**.
2. From the **Server** drop-down list, choose the node that is running the Cisco CallManager service.
3. From the **Service** drop-down list, choose **Cisco CallManager Service**.
4. To enable the **Device Mobility Mode** service parameter for all devices in the cluster, choose **On**.
5. Click **Save**.

What to Do Next

- Configure Device Mobility Settings for Individual Devices, on page 46
- Configure a Physical Location, on page 46
Configure Device Mobility Settings for Individual Devices

Follow this procedure if you want to enable device mobility for an individual device or if you want to specify a different value for individual devices.

When you enable Device Mobility mode in the Phone Configuration window, the Device Mobility Mode phone settings take priority over the Device Mobility Mode service parameter setting.

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose **Device > Phone**.

**Step 2**
Perform one of the following tasks:

- To modify the settings for an existing device, enter search criteria, click **Find**, and choose an existing device from the resulting list.
- To add a new device, click **Add New**, and choose a device from the **Phone Type** drop-down list.

**Step 3**
From the **Device Mobility Mode** drop-down list, choose a value.

**Step 4**
Click **Save**.

**What to Do Next**
Configure a Physical Location, on page 46

Configure a Physical Location

Configure the geographic location so that your system can determine which network resources to assign to a device. If a user moves away from the home location, the system ensures that the device uses local media resources and the correct bandwidth for the call.

**Before You Begin**
Enable Device Mobility, on page 45

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose **System > Physical Location**.

**Step 2**
Click **Add New**.

**Step 3**
In the **Name** field, enter a name to identify the physical location.
The name can contain up to 50 alphanumeric characters with any combination of spaces, periods (.), hyphens (-), and underscores (_).

**Step 4**
In the **Description** field, enter a description of the physical location.
The description can include up to 50 characters in any language, but it cannot include double quotation marks ("), percentage sign (%), ampersand (&), or angle brackets (<>).

**Step 5**
Click **Save**.
Configure a Device Mobility Group

Configure the device mobility group to define a logical group of sites with similar dialing patterns (for example, US_dmg and EUR_dmg). Depending on the network size and scope, your device mobility groups can represent countries, regions, states, provinces, or cities. For example, an enterprise with a worldwide network can choose device mobility groups that represent individual countries, whereas an enterprise with a national or regional network can define device mobility groups that represent states, provinces, or cities.

Before You Begin

Configure a Physical Location, on page 46

Procedure

Step 1 From Cisco Unified CM Administration, choose System > Device Mobility > Device Mobility Group.
Step 2 Click Add New.
Step 3 In the Name field, enter a name to identify the device mobility group.
Step 4 In the Description field, enter the description of the profile. The description can include up to 50 characters in any language, but it cannot include double quotation marks ("), percentage signs (%), ampersands (&), or angle brackets (<>).
Step 5 Click Save.

What to Do Next

Configure Device Mobility Information, on page 47

Configure Device Mobility Information

Configure device mobility information such as the subnets and device pools that are used for device mobility. When a phone registers, your system compares the IP address of the device to the subnets that are configured device mobility in the Device Mobility Info Configuration window. The best match uses the largest number of bits in the IP subnet mask (longest match rule). For example, the IP address 9.9.8.2 matches the subnet 9.9.8.0/24 rather than the subnet 9.9.0.0/16.

If the device pool in the phone record matches the device pool in the matching subnet, the system detects the phone as in its home location, and the phone retains the parameters of its home device pool.

If the device pool in the phone record does not match the device pools in the matching subnet, the system detects the phone as roaming.

Before You Begin

Configure a Device Mobility Group, on page 47
Procedure

Step 1  From Cisco Unified CM Administration, choose System > Device Mobility > Device Mobility Info.
Step 2  Click Add New.
Step 3  Configure the fields on the Device Mobility Info Configuration window. See the online help for more information about the fields and their configuration options.
Step 4  Click Save.

What to Do Next
Configure a Device Pool for Device Mobility, on page 48

Configure a Device Pool for Device Mobility

Unified Communications Manager assigns a device pool to an IP phone based on the device's IP subnet. The following steps describe the behavior:

- The IP phone tries to register to Unified Communications Manager by sending its IP address in the registration message.
- Unified Communications Manager derives the device's IP subnet and matches it with the subnet configured as part of the device mobility information.
- If the subnet matches, Unified Communications Manager provides the device with a new configuration based on the device pool configuration.

Before You Begin
Configure Device Mobility Information, on page 47

Procedure

Step 1  From Cisco Unified CM Administration, choose System > Device Pool.
Step 2  Perform one of the following steps:
- To modify the settings for an existing device pool, enter search criteria, click Find, and choose an existing device pool from the resulting list.
- Click Add New.
Step 3  Configure the fields in the Device Pool Configuration window. See the Related Topics section for more information about the fields and their configuration options.
Step 4  Click Save.

**Device Mobility Interactions and Restrictions**

**Device Mobility Interactions**

*Table 4: Device Mobility Interactions*

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calling Party Normalization</td>
<td>Calling party normalization enhances the dialing capabilities of some phones and improves call-back functionality when a call is routed to multiple geographical locations; that is, the feature ensures that the called party can return a call without the need to modify the directory number in the call log directories on the phone. Additionally, calling party normalization allows you to globalize and localize phone numbers, so the appropriate calling number presentation is displayed on the phone.</td>
</tr>
</tbody>
</table>
| Roaming                  | When a device is roaming in the same device mobility group, Cisco Unified Communications Manager uses the device mobility CSS to reach the local gateway. If a user sets call forward all (CFA) at the phone, the CFA CSS is set to None, and the CFA CSS activation policy is set to With Activating Device/Line CSS, then the following behaviors will occur, depending on the device location:  

  - The Device CSS and Line CSS are used as the CFA CSS when the device is in its home location.  
  - If the device is roaming within the same device mobility group, the device mobility CSS from the roaming device pool and the line CSS are used as the CFA CSS.  
  - If the device is roaming within a different device mobility group, the Device CSS and Line CSS are used as the CFA CSS. |
Device Mobility Restrictions

Table 5: Device Mobility Restrictions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
</table>
| IP Address  | The device mobility feature depends on the IPv4 address of the device that registers with Cisco Unified Communications Manager.  
• The phone must have a dynamic IPv4 address to use the device mobility.  
• If the device is assigned an IP address by using network address translation (NAT) or port address translation (PAT), the IP address that is provided during registration may not match the actual IP address of the device. |
| IPv6        | Device mobility supports only IPv4 addresses, so you cannot use phones with an IP addressing mode of IPv6 only with the device mobility. |
Extend and Connect Overview

The Extend and Connect feature allows administrators to deploy Unified Communications (UC) Computer Telephony Integration (CTI) applications that interoperate with any endpoint. With Extend and Connect, users can access UC applications from any location using any device.

The Extend and Connect feature for Unified Communications Manager provides the following UC features:

- Receive incoming enterprise calls
- Make Call
- Disconnect
- Hold and Retrieve
- Redirect and Forward
- Call Forward All
- Call Forward Busy
- Call Forward No Answer
- Do Not Disturb
- Play Dual Tone Multi Frequency (DTMF) (out-of-band and in-band)
- Consult Transfer, Conference
- Add, edit, and delete remote destinations
- Set remote destination as Active or Inactive
- Persistent Connection
Extend and Connect Prerequisites

- Cisco Jabber, Release 9.1(1) or later
- Cisco Unified Workspace License (CUWL) Standard, CUWL Professional, or Cisco User Connect License (UCL) - Enhanced

Extend and Connect Configuration Task Flow

Before You Begin

- Review Extend and Connect Prerequisites, on page 54.

Procedure

<table>
<thead>

</table>
**Configure User Account**

For a new or existing users in Unified Communications Manager, you must enable user mobility so that they can use CTI remote devices. If you do not enable mobility for users, you cannot assign those users as owners of CTI remote devices.

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose User Management > End User. The Find and List Users window appears.

**Step 2** Perform one of the following:
- To configure a new user, click Add New.
- To select an existing user, specify the appropriate filters in the Find User Where field, select Find to retrieve a list of users, and then select the user from the list.

*Note* You may add the new end user account through LDAP integration or local configuration. The End User Configuration window appears.

**Step 3** Locate the Mobility Information section.

**Step 4** Check the Enable Mobility check box.

**Step 5** Click Save.

**What to Do Next**

Add User Permissions, on page 55

**Add User Permissions**

After the end user is active in Unified Communications Manager, add access control group permissions.

**Before You Begin**

Configure User Account, on page 55

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose User Management > End User. The Find and List Users window appears.

**Step 2** Specify the appropriate filters in the Find User Where field, and then select Find to retrieve a list of users.

**Step 3** Select the user from the list. The End User Configuration window appears.

**Step 4** Locate the Permissions Information section.

**Step 5** Click Add to Access Control Group.
The **Find and List Access Control Groups** window appears.

**Step 6**  
Click **Find**.  
The Access Control Group list for Standard Users appears.

**Step 7**  
Check the check boxes next to the following permissions:  
  - Standard CCM End-Users  
  - Standard CTI Enabled

**Step 8**  
Click **Add Selected**.  
The window closes and the access control groups are added to the user account.

**Step 9**  
Click **Save**.

---

### What to Do Next

Create CTI Remote Devices, on page 56

---

### Create CTI Remote Devices

A CTI remote device is a device type that represents off-cluster phones that users can use with Cisco UC applications. The device type is configured with one or more lines (directory numbers) and one or more remote destinations.

Unified Communications Manager provides Extend and Connect capabilities to control calls on devices such as public switched telephone network (PSTN) phones and private branch exchange (PBX) devices.

### Before You Begin

Add User Permissions, on page 55

---

### Procedure

**Step 1**  
From Cisco Unified CM Administration, choose **Device > Phone**.  
The **Find and List Phone** window appears.

**Step 2**  
Click **Add New**.

**Step 3**  
Select **CTI Remote Device** from the **Phone Type** drop-down list and then click **Next**.  
The **Phone Configuration** window appears.

**Step 4**  
Select the appropriate user ID from the **Owner User ID** drop-down list.  
**Note** Only users for whom you enable mobility are available from the **Owner User ID** drop-down list.

Unified Communications Manager populates the **Device Name** field with the user ID and a CTRID prefix, for example, *CTRIDusername*.

**Step 5**  
Enter the default value in the **Device Name** field, if appropriate.

**Step 6**  
Enter a meaningful description in the **Description** field.
Note Cisco Jabber displays device descriptions to users. If Cisco Jabber users have multiple devices of the same model, the descriptions from Unified Communications Manager help users tell the difference between them.

Step 7 Ensure that you select an appropriate option from the Rerouting Calling Search Space drop-down list in the Protocol Specific Information section. The Rerouting Calling Search Space drop-down list defines the calling search space for rerouting and ensures that users can send and receive calls from the CTI remote device.

Step 8 Configure the remaining fields in the Phone Configuration window. See the online help for more information about the fields and their configuration options.

Step 9 Click Save. The fields to associate directory numbers and add remote destinations are displayed in the Phone Configuration window.

What to Do Next
Perform the following tasks:
- Add Remote Destination, on page 58
- Add Directory Number to a Device, on page 57

Add Directory Number to a Device
A directory number (DN) is a numerical address that is configured as a line on the CTI remote device. A DN typically represents the primary work number of a user (for example, 2000 or +1 408 200 2000).

Note The Calling Search Space (CSS) and partition of DN are mandatory on devices.

Note The CTI Remote Device should not block its own DN. The CSS is important for the CTIRD device to reach its own DN.

Follow these steps to add a directory number to a CTI remote device.

Procedure

Step 1 Locate the Association Information section in the Phone Configuration window.
Step 2 Click Add a new DN. The Directory Number Configuration window appears.
Step 3 Specify a directory number in the Directory Number field.
Step 4 Configure all other required fields. See the online help for more information about the fields and their configuration options.
Step 5 Click Save.
Add Remote Destination

A remote destination is a numerical address or directory URI that represents the other phones that the user owns (for example, a home office line or other PBX phone). A remote destination may be any off-cluster device. Unified Communications Manager automatically applies application dial rules to all remote destination numbers for CTI remote devices. By default, four remote destinations are supported per device. You can set the maximum number to 10 remote destinations per device in End User Configuration window.

**Note**

- You can determine which remote destination the Jabber client has set as Active by opening the Phone Configuration window from the Cisco Unified Communications Manager Administration interface.

**Note**

- Unified Communications Manager automatically verifies whether it can route calls to remote destinations that Cisco Jabber users add through the client interface.
- Unified Communications Manager does not verify whether it can route calls to remote destinations that you add through the Cisco Unified Communications Manager Administration interface.

**Procedure**

**Step 1**

From Cisco Unified Communications Manager Administration, choose Device > Phone. The Find and List Phones window appears.

**Step 2**

Specify the appropriate filters in the Find Phone Where field to and then select Find to retrieve a list of phones.

**Step 3**

Select the CTI remote device from the list. The Phone Configuration window appears.

**Step 4**

Locate the Associated Remote Destinations section.

**Step 5**

Click Add a New Remote Destination. The Remote Destination Information window appears.

**Step 6**

Enter the destination number in the Destination Number field. To use the remote destination with Cisco Jabber clients, you must configure the destination name as JabberRD.

**Step 7**

Configure the remaining fields in the Remote Destination Information window. See the online help for more information about the fields and their configuration options.

**Step 8**

Click Save.
Verify Remote Destination

Perform these steps to verify if the remote destination is successfully added for a user.

Procedure

</tbody>
</table>
Extend and Connect Interactions and Restrictions

Extend and Connect Interactions

Table 6: Extend and Connect Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory URI</td>
<td>Configure a Directory URI as the DN, remote destination, or both for the CTI device.</td>
</tr>
<tr>
<td>Dialing</td>
<td></td>
</tr>
<tr>
<td>Unified Mobility</td>
<td>Extend and Support does not support moving active calls between a Cisco Unified IP Phone and a remote destination. If you want the capabilities of both Unified Mobility and Extend and Connect, you can configure the same remote destination on the Remote Device Profile and CTI Remote Device types when the Owner ID of both device types is the same. This configuration allows Cisco Mobility features to be used concurrently with Extend and Connect. The ability to configure the same remote destination on both device types is supported using Cisco Unified Communications Manager Release 10.0(1) or later. Do not configure remote destinations that are used with the Cisco Extend and Connect feature on Cisco Dual-mode for iPhone, Cisco Dual-mode for Android, and Carrier-integrated Mobile device types. Do not use prefixes to differentiate the same remote destination address. For example, 91-4085555555 and +1-4085555555 are treated as the same number.</td>
</tr>
<tr>
<td>Hunt List</td>
<td>The Extend and Connect feature allows users to receive hunt calls on remote destination phones under the following conditions: • The user has a Cisco Unified IP Phone. • The Cisco Unified P Phone is available to answer hunt calls (logged-in/HLog). • Cisco Jabber is running in Extend and Connect mode.</td>
</tr>
</tbody>
</table>
Interaction

- The incoming caller ID information (name and number) is displayed on the Jabber client.
- This information may also be displayed on the device, depending on your carrier and trunk configuration.
- Outbound Dial Via Office calls to the remote destination display Voice Connect as the name and the trunk DID as the number.
- Configure the trunk DID in the Unified CM Trunk Pattern, Route Pattern, or Cisco Gateway. This configuration may also be assigned by the carrier. The number field may display as blank if the trunk DID is not configured.
- Outbound calls to the desired party display the CTI Remote Device Display Name and Directory Number (DN) as configured in Unified Communications Manager.
- Remote destination numbers are never displayed to the called party.

</table>
Remote Worker Emergency Calling Overview

The Remote Worker Emergency Calling feature enables customers to provide reliable emergency calling support to remote workers by using remote Virtual Private Network (VPN) connections. Emergency calls from off-premises users are routed to the Public Safety Answering Point (PSAP), and user-provided location information is delivered with each call.

To use this feature, remote workers must confirm or update their location whenever their device registration is interrupted. A customizable disclaimer notice is first displayed on the devices that are designated for off-premises (connected remotely to the customer network), which advises the users to provide correct location information. After the location information is provided, the off-premises location that is currently associated with the designated device is displayed. Users can confirm their current location or select another previously stored location from their device display; if their location is new, they are directed to the Cisco Emergency Responder Off-Premises User web page to create a new location.

Before completing this process, the administrator may restrict the device to calling a single configured destination. This action ensures that the device user has acknowledged the disclaimer and provided current location information before the device is enabled for normal use.

Remote Worker Emergency Calling Prerequisites

Remote Worker Emergency Calling Configuration Task Flow

Before You Begin

- Review Remote Worker Emergency Calling Prerequisites, on page 63.

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure User As a Remote Worker, on page 64</td>
<td>Associate the off-premises device with the owner of the device.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Specify Alternate Routing for Emergency Calling, on page 65</td>
<td>These parameters specify the calling search space and destination number that are used to restrict the routing of any call made from a registered off-premises device where the user chose not to set a location. If these parameters are not configured, calls are routed normally.</td>
</tr>

</tbody>
</table>

Configure User As a Remote Worker

Before You Begin

Procedure

Step 1 From Cisco Unified Communications Manager Administration, choose Device > Phone. The Find and List Phones window is displayed.
Step 2 Enter the appropriate search criteria to find the phone and click Find. A list of phones that match the search criteria is displayed.
Step 3 Choose the phone for which you want to configure Remote Worker Emergency Calling. The Phone Configuration window is displayed.
Step 4 From the Device Information section, select the appropriate user ID from the Owner User ID drop-down list and check the Remote Device check box.
Step 5 Click Save.
Specify Alternate Routing for Emergency Calling

Perform the following steps to configure calling search space and destination number. These parameters are used to restrict the routing of any call made from a registered off-premises device where the user has not set a location. If you do not configure these parameters, the calls are routed normally.

**Before You Begin**
Configure User As a Remote Worker, on page 64

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>From Cisco Unified Communications Manager Administration, choose System &gt; Service Parameters.</td>
</tr>
<tr>

</tr>
<tr>
<td>3</td>
<td>From the Service drop-down list, choose Cisco CallManager. The Service Parameter Configuration window is displayed.</td>
</tr>
<tr>
<td>4</td>
<td>In the Clusterwide Parameters (Emergency Calling for Required Off-premise Location) section, specify Alternate Destination for Emergency Call.</td>
</tr>
<tr>
<td>5</td>
<td>Specify Alternate Calling Search Space for Emergency Call.</td>
</tr>
<tr>
<td>6</td>
<td>Click Save.</td>
</tr>
</tbody>
</table>

**What to Do Next**
Configure the Application Server, on page 65

Configure the Application Server

You must configure the application server to enable the E911 Proxy to communicate with the Cisco Emergency Responder. E911 proxy is used to direct the users to the application server where they enter the location of the device.

**Before You Begin**
Specify Alternate Routing for Emergency Calling, on page 65

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>In Cisco Unified CM Administration, choose System &gt; Application Server. The Find and List Application Servers window is displayed.</td>
</tr>
<tr>
<td>2</td>
<td>Click Add New.</td>
</tr>
</tbody>
</table>
The Application Server window is displayed.

**Step 3** From the Application Server Type drop-down list, select CER Location Management.

**Step 4** Click Next.

**Step 5** In the Name field, specify a name to identify the application server that you are configuring.

**Step 6** In the IP address field, specify the IP address of the server that you are configuring.

**Step 7** From the list of Available Application Users, select the application user and click the Down arrow.

**Step 8** In the End User URL field, enter a URL for the end users that are associated with this application server.

**Step 9** Click Save.

---

**What to Do Next**

Configure E911 Messages, on page 66

---

**Configure E911 Messages**

Use the following procedure to select and edit E911 messages for off-premises devices.

**Procedure**

**Step 1** In Cisco Unified Communications Manager Administration, choose System > E911 Messages.

**Step 2** Select the required language link of the E911 messages.

The E911 Messages Configuration page displays the Agreement, Disclaimer, and Error messages.

**Step 3** Optionally, you can edit the E911 messages to be displayed on off-premises devices.

**Step 4** Click Save.
Remote Network Access

- Wireless LAN, page 69
- Wi-Fi Hotspot, page 73
- VPN Client, page 75
Wireless LAN Overview

This feature removes the need for users to configure Wi-Fi parameters on their phones. You can configure Wi-Fi profiles for them. Devices can then automatically download and apply the Wi-Fi configuration from your system. You can configure a network access profile, which contains further security layers related to VPN connectivity and HTTP proxy settings.

Wireless LAN Configuration Task Flow

Link a Wireless LAN Profile Group to a Device

Before You Begin
Configure a Wireless LAN Profile Group, on page 71
**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Phone**.

**Step 2** Perform one of the following tasks:

- To modify the settings for an existing device, enter search criteria, click **Find**, and choose an existing device from the resulting list.
- To add a new device, click **Add New**, and choose the device type from the **Phone Type** drop-down list.

**Step 3** From the **Wireless LAN Profile Group** drop-down list, choose a wireless LAN profile group that you created.

**Step 4** Click **Save**.

**What to Do Next**

*Link a Wireless LAN Profile Group to a Device Pool*, on page 72

**Link a Wireless LAN Profile Group to a Device Pool**

If you link a wireless LAN profile group at the device and device pool level, your system uses the device pool setting.

**Before You Begin**

*Configure a Wireless LAN Profile Group*, on page 71

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **System > Device Pool**.

**Step 2** Perform one of the following tasks:

- To modify the settings for an existing device pool, enter search criteria, click **Find**, and choose an existing device pool from the resulting list.
- To add a new device pool, click **Add New**.

**Step 3** From the **Wireless LAN Profile Group** drop-down list, choose a wireless LAN profile group that you created.

**Step 4** Click **Save**.
Wi-Fi Hotspot Overview

This feature allows users to use their desk phones to provide a Wi-Fi Hotspot, so that they can connect a Wi-Fi device such as a tablet or a smartphone to the network through the desk phone. The desk phones can automatically download the Wi-Fi Hotspot configuration from Cisco Unified Communications Manager, and the configuration is then applied to these devices.

Configure Wi-Fi Hotspot Profile

Procedure

- **Step 1**: From Cisco Unified Communications Manager Administration, select Device > Device Settings > Wi-Fi Hotspot Profile.
- **Step 2**: Click Add New.
- **Step 3**: Configure the fields in the **Wi-Fi Hotspot Profile Configuration** window. See the online help for more information about the fields and their configuration options.
- **Step 4**: Click Save.
Configure Wi-Fi Hotspot Profile
VPN Client

• VPN Client Overview, page 75
• VPN Client Prerequisites, page 75
• VPN Client Configuration Task Flow, page 75

VPN Client Overview

The Cisco VPN Client for Cisco Unified IP Phones creates a secure VPN connection for employees who telecommute. All settings of the Cisco VPN Client are configured through Cisco Unified CM Administration. After the phone is configured within the Enterprise, the users can plug it into their broadband router for instant connectivity.

Note

The VPN menu and its options are not available in the U.S. export unrestricted version of Cisco Unified Communications Manager.

VPN Client Prerequisites

Pre-provision the phone and establish the initial connection inside the corporate network to retrieve the phone configuration. You can make subsequent connections using VPN, as the configuration is already retrieved on the phone.

VPN Client Configuration Task Flow

Before You Begin

• Review VPN Client Prerequisites, on page 75.

Complete Cisco IOS Prerequisites
Before you create Cisco IOS configuration for VPN client on an IP Phone, complete the following steps:

Procedure

**Step 1**
Install Cisco IOS Software version 15.1(2)T or later.
Feature Set/License: Universal (Data & Security & UC) for IOS ISR-G2
Feature Set/License: Advanced Security for IOS ISR

**Step 2**
Activate the SSL VPN License.

What to Do Next
Configure Cisco IOS SSL VPN to Support IP Phones, on page 77

Configure Cisco IOS SSL VPN to Support IP Phones

Before You Begin
Complete Cisco IOS Prerequisites, on page 77

Procedure

**Step 1**
Configure Cisco IOS locally.

a) Configure the Network Interface.
   Example:
   
   router(config)# interface GigabitEthernet0/0
   router(config-if)# description "outside interface"
   router(config-if)# ip address 10.1.1.1 255.255.255.0
   router(config-if)# duplex auto
   router(config-if)# speed auto
   router(config-if)# no shutdown
   router#show ip interface brief (shows interfaces summary)

b) Configure static and default routes by using this command:
   router(config)# ip route <dest_ip> <mask> <gateway_ip>
   Example:
   
   router(config)# ip route 10.10.10.0 255.255.255.0 192.168.1.1

**Step 2**
Generate and register the CAPF certificate to authenticate the IP phones with an LSC.

**Step 3**
Import the CAPF certificate from Cisco Unified Communications Manager:

a) From the Cisco Unified OS Administration, choose Security > Certificate Management.
   
   **Note** This location may change based on the Unified Communications Manager version.

b) Find the Cisco_Manufacturing_CA and CAPF certificates. Download the .pem file and save as .txt file.
c) Create trustpoint on the Cisco IOS software.

```
hostname(config)# crypto pki trustpoint trustpoint_name
hostname(config-ca-trustpoint)# enrollment terminal
hostname(config)# crypto pki authenticate trustpoint
```

When prompted for the base64-encoded CA certificate, copy and paste the text in the downloaded .pem file along with the BEGIN and END lines. Repeat the procedure for the other certificates.

d) Generate the following Cisco IOS self-signed certificates and register them with Cisco Unified Communications Manager, or replace with a certificate that you import from a CA.

- Generate a self-signed certificate.

```
Router> enable
Router# configure terminal
Router(config)# crypto key generate rsa general-keys label <name> <exportable -optional>
Router(config)# crypto pki trustpoint <name> enrollment selfsigned
Router(config-ca-trustpoint)# rsakeypair <name> 1024 1024
Router(config-ca-trustpoint)# authorization username subjectname commonname
Router(config-ca-trustpoint)# crypto pki enroll <name>
Router(config-ca-trustpoint)# end
```

- Generate a self-signed certificate with Host-id check enabled on the VPN profile in Cisco Unified Communications Manager.

Example:

```
Router> enable
Router# configure terminal
Router(config)# crypto key generate rsa general-keys label <name> <exportable -optional>
Router(config)# crypto pki trustpoint <name> enrollment selfsigned
Router(config-ca-trustpoint)# fqdn <full domain name>
Router(config-ca-trustpoint)# subject-name CN=<full domain name>, CN=<IP>
Router(config-ca-trustpoint)# authorization username subjectname commonname
Router(config-ca-trustpoint)# crypto pki enroll <name>
Router(config-ca-trustpoint)# end
```

- Register the generated certificate with Cisco Unified Communications Manager.

Example:

```
Router(config)# crypto pki export <name> pem terminal
```

Copy the text from the terminal and save it as a .pem file and upload it to the Cisco Unified Communications Manager using the Cisco Unified OS Administration.

**Step 4** Install AnyConnect on Cisco IOS.

Download the Anyconnect package from cisco.com and install to flash.

Example:

```
router(config)#webvpn install svc
flash:/webvpn/anyconnect-win-2.3.2016-k9.pkg
```

**Step 5** Configure the VPN feature.

**Note** To use the phone with both certificate and password authentication, create a user with the phone MAC address. Username matching is case sensitive. For example:

```
username CP-7975G-SEP001AE28C16CB password k1kLGGIoxyCO4ti9 encrypted
```
What to Do Next

Configure VPN concentrators for each VPN gateway.

Complete ASA Prerequisites for AnyConnect

Before you create an ASA configuration for VPN client on an IP phone, complete the following steps:

Procedure

Step 1  Install ASA software (version 8.0.4 or later) and a compatible ASDM.

Step 2  Install a compatible AnyConnect package.

Step 3  Activate License.
   a) Check features of the current license by executing the following command:
   show activation-key detail
   b) If necessary, obtain a new license with additional SSL VPN sessions and Linksys phone enabled.

Step 4  Ensure that you configure a tunnel-group with a non-default URL as follows:
   tunnel-group phonevpn type remote-access
   tunnel-group phonevpn general-attribute
      address-pool vpnpool
   tunnel-group phonevpn webvpn-attributes
      group-url https://172.18.254.172/phonevpn enable

Consider the following when configuring non-default URL:

- If the IP address of the ASA has a public DNS entry, you can replace it with a Fully Qualified Domain Name (FQDN).
- You can only use a single URL (FQDN or IP address) on the VPN gateway in Cisco Unified Communications Manager.
- If it preferred to have the certificate CN or subject alternate name match the FQDN or IP address in the group-url.
- If the ASA certificate CN or SAN does not match with the FQDN or IP address, then disable host id check on Cisco Unified Communications Manager.

Configure ASA for VPN Client on IP Phone

Note

Replacing ASA certificates results in non-availability of Cisco Unified Communications Manager.

Perform the following steps to configure ASA for VPN client on IP phone.
Procedure

Step 1  Local configuration

a) Configure network interface.
Example:

ciscoasa(config)# interface Ethernet0/0
ciscoasa(config-if)# nameif outside
ciscoasa(config-if)# ip address 10.89.79.135 255.255.255.0
ciscoasa(config-if)# duplex auto
ciscoasa(config-if)# speed auto
ciscoasa(config-if)# no shutdown

ciscoasa# show interface ip brief (shows interfaces summary)

b) Configure static routes and default routes.

ciscoasa(config)# route <interface_name> <ip_address> <netmask> <gateway_ip>

Example:

ciscoasa(config)# route outside 0.0.0.0 0.0.0.0 10.89.79.129

c) Configure the DNS.
Example:

ciscoasa(config)# dns domain-lookup inside

ciscoasa(config)# dns server-group DefaultDNS

ciscoasa(config-dns-server-group)# name-server 10.1.1.5 192.168.1.67 209.165.201.6

Step 2  Generate and register the necessary certificates for Cisco Unified Communications Manager and ASA.
Import the following certificates from the Cisco Unified Communications Manager.

- CallManager - Authenticating the Cisco UCM during TLS handshake (Only required for mixed-mode clusters).
- Cisco_Manufacturing_CA - Authenticating IP phones with a Manufacturer Installed Certificate (MIC).
- CAPF - Authenticating IP phones with an LSC.

To import these Cisco Unified Communications Manager certificates, do the following:

a) From the Cisco Unified OS Administration, choose Security > Certificate Management.
b) Locate the certificates Cisco_Manufacturing_CA and CAPF. Download the .pem file and save as a .txt file.
c) Create trustpoint on the ASA.
Example:

ciscoasa(config)# crypto ca trustpoint trustpoint_name

ciscoasa(ca-trustpoint)# enrollment terminal

ciscoasa(config)# crypto ca authenticate trustpoint_name

When prompted for base 64 encoded CA Certificate, copy-paste the text in the downloaded .pem file along with the BEGIN and END lines. Repeat the procedure for the other certificates.
d) Generate the following ASA self-signed certificates and register them with Cisco Unified Communications Manager, or replace with a certificate that you import from a CA.

- Generate a self-signed certificate.
Example:

ciscoasa> enable

ciscoasa# configure terminal

ciscoasa(config)# crypto key generate rsa general-keys label <name>

ciscoasa(config)# crypto ca trustpoint <name>

ciscoasa(ca-trustpoint)# enrollment self

ciscoasa(ca-trustpoint)# keypair <name>

ciscoasa(config)# crypto ca enroll <name>

ciscoasa(config)# end

• Generate a self-signed certificate with Host-id check enabled on the VPN profile in Cisco Unified Communications Manager.

Example:

ciscoasa> enable

ciscoasa# configure terminal

ciscoasa(config)# crypto key generate rsa general-keys label <name>

ciscoasa(config)# crypto ca trustpoint <name>

ciscoasa(ca-trustpoint)# enrollment self

ciscoasa(ca-trustpoint)# fqdn <full domain name>

ciscoasa(config-ca-trustpoint)# subject-name CN=<full domain name>,CN=<IP>

ciscoasa(config)# crypto ca enroll <name>

ciscoasa(config)# end

• Register the generated certificate with Cisco Unified Communications Manager.

Example:

ciscoasa(config)# crypto ca export <name> identity-certificate

Copy the text from the terminal and save it as a .pem file and upload it to Cisco Unified Communications Manager.

Step 3 Configure the VPN feature. You can use the Sample ASA configuration summary below to guide you with the configuration.

Note To use the phone with both certificate and password authentication, create a user with the phone MAC address. Username matching is case sensitive. For example:

ciscoasa(config)# username CP-7975G-SEP001AE2BC16CB password k1kLGQIoxyCO4ti9 encrypted

ciscoasa(config)# username CP-7975G-SEP001AE2BC16CB attributes

ciscoasa(config-username)# vpn-group-policy GroupPhoneWebvpn

ciscoasa(config-username)# service-type remote-access

ASA Certificate Configuration

For more information on ASA certificate configuration, refer to  http://www.cisco.com/en/US/products/sw/voicesw/ps556/products_configuration_example09186a0080bef910.shtml

Upload VPN Concentrator Certificates

Generate a certificate on the ASA when you set it up to support the VPN feature. Download the generated certificate to your PC or workstation and then upload it to Cisco Unified Communications Manager using the
procedure in this section. Cisco Unified Communications Manager saves the certificate in the Phone-VPN-trust list.

The ASA sends this certificate during the SSL handshake, and the Cisco Unified IP Phone compares it against the values stored in the Phone-VPN-trust list.

The Cisco Unified IP Phone sends its Manufacturer Installed Certificate (MIC) by default. If you configure the CAPF service, the Cisco Unified IP Phone sends its Locally Significant Certificate (LSC).

To use device level certificate authentication, install the root MIC or CAPF certificate in the ASA, so that the Cisco Unified IP Phones are trusted.

To upload certificates to Cisco Unified Communications Manager, use the Cisco Unified OS Administration.

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>

<td>Enter a description of the VPN gateway.</td>
</tr>
<tr>
<td>VPN Gateway URL</td>
<td>Enter the URL for the main VPN concentrator in the gateway.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> You must configure the VPN concentrator with a group URL and use this URL as the gateway URL. For configuration information, refer to the documentation for the VPN concentrator, such as the following:</td>
</tr>
<tr>
<td></td>
<td>• <strong>SSL VPN Client (SVC) on ASA with ASDM Configuration Example</strong></td>
</tr>
<tr>
<td>VPN Certificates in this Gateway</td>
<td>Use the up and down arrow keys to assign certificates to the gateway. If you do not assign a certificate for the gateway, the VPN client will fail to connect to that concentrator.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> You can assign up to 10 certificates to a VPN gateway, and you must assign at least one certificate to each gateway. Only certificates that are associated with the Phone-VPN-trust role appear in the available VPN certificates list.</td>
</tr>
</tbody>
</table>
Configure VPN Group

To add, update, or copy a VPN group, perform the following procedure:

Before You Begin

Configure VPN Gateway, on page 82

Procedure

Step 1
In Cisco Unified Communications Manager Administration, choose Advanced Features > VPN > VPN Group.

Step 2
Perform one of the following tasks:
   a) To add a new profile, click Add New.
   b) To copy an existing VPN group, locate the appropriate profile, click the Copy button next to the VPN group that you want to copy.
   c) To update an existing profile, locate the appropriate VPN group and modify the settings.

When you click Add New, the configuration window appears with the default settings for each field. When you click Copy, the configuration window appears with the copied settings.

Step 3
Configure the fields in the VPN Group Configuration window. See the Related Topics section for more information about the fields and their configuration options.

Step 4
Click Save.

What to Do Next

Perform one of the following tasks:

   • Configure VPN Profile, on page 85
   • Configure VPN Feature Parameters, on page 86

<td>Scroll to see all available VPN gateways.</td>
</tr>
</tbody>
</table>
Select and move available VPNgateways into and out of this VPN group. If the VPN client encounters a critical error and cannot connect to a particular VPNgateway, it will attempt to move to the next VPNgateway in the list.

You can add up to a maximum of three VPNgateways to a VPN group. Also, the total number of certificates in the VPN group cannot exceed 10.

### Configure VPN Profile

To add, update, or copy a VPN profile, perform the following procedure:

**Procedure**

**Step 1** In Cisco Unified Communications Manager Administration, choose Advanced Features > VPN > VPN Profile.

**Step 2** Perform one of the following tasks:

a) To add a new profile, click Add New.

b) To copy an existing profile, locate the appropriate profile and click the Copy button next to the VPN profile that you want to copy.

c) To update an existing profile, specify the appropriate filters in the Find VPN Profile Where, click Find, and modify the settings.

When you click Add New, the configuration window appears with the default settings for each field. When you click Copy, the configuration window appears with the copied settings.

**Step 3** Configure the fields in the VPN Profile Configuration window. See the Related Topics section for more information about the fields and their configuration options.

**Step 4** Click Save.

<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Enter a name for the VPN profile.</td>
</tr>
<tr>
<td>Description</td>
<td>Enter a description for the VPN profile.</td>
</tr>
</tbody>
</table>
### Field | Definition
--- | ---
Enable Auto Network Detect | When you check this check box, the VPN client can only run when it detects that it is out of the corporate network. Default: Disabled.
MTU | Enter the size, in bytes, for the Maximum Transmission Unit (MTU). Default: 1290 bytes.
Fail to Connect | This field specifies the amount of time to wait for login or connect operations to complete while the system creates the VPN tunnel. Default: 30 seconds
Enable Host ID Check | When you check this check box, the gateway certificate subjectAltName or CN must match the URL to which the VPN client is connected. Default: Enabled
Client Authentication Method | From the drop-down list, choose the client authentication method:
  - User and password
  - Password only
  - Certificate (LSC or MIC)
Enable Password Persistence | When you check this check box, a user password gets saved in the phone until either a failed login attempt occurs, a user manually clears the password, or the phone resets or loses power.

### Configure VPN Feature Parameters

#### Procedure

**Step 1**  
In Cisco Unified Communications Manager Administration, choose **Advanced Features > VPN > VPN Feature Configuration**.

**Step 2**  
Configure the fields in the **VPN Feature Configuration** window. See the Related Topics section for more information about the fields and their configuration options.

**Step 3**  
Click **Save**.

#### What to Do Next

Perform the following tasks:
- Upgrade the firmware for Cisco Unified IP Phones to a version that supports VPN. For more information about upgrading the firmware, see the *Cisco Unified IP Phone Administration Guide* for your Cisco Unified IP Phone model.

- Using a supported Cisco Unified IP Phone, establish the VPN connection.

What to Do Next

Perform the following tasks:

- Upgrade the firmware for Cisco Unified IP Phones to a version that supports VPN. For more information about upgrading the firmware, see the Cisco Unified IP Phone Administration Guide for your Cisco Unified IP Phone model.

- Using a supported Cisco Unified IP Phone, establish the VPN connection.
PART IV

Monitoring and Recording

- Silent Monitoring, page 93
- Recording, page 103
Silent Monitoring Overview

Silent call monitoring allows a supervisor to eavesdrop on a phone conversation. The most common scenario is in a call center where a call agent is speaking with a customer. Call centers need to be able to guarantee the quality of customer service that an agent in a call center provides. With silent monitoring, the supervisor can hear both call participants, but neither of the call participants can hear the supervisor.

Silent monitoring can only be invoked by a CTI application via the JTAPI or TAPI interfaces. Many Cisco applications, such as Cisco Unified Contact Center Enterprise and Cisco Unified Contact Center Express have the ability to use silent monitoring. Any CTI application that monitors calls must have the corresponding monitoring privileges enabled for the application-user or end-user account.

Silent monitoring is call based. When a supervisor invokes a silent monitoring session, the following occurs:

- The supervisor selects a specific call to be monitored.
- The start-monitoring request from the application triggers the supervisor phone to go off hook and automatically triggers a monitoring call to the agent.
- The agent phone automatically answers the monitoring call. The monitoring call does not get presented to the agent.

Secure Silent Monitoring

You can also configure secure silent monitoring. Secure silent monitoring allows encrypted media (sRTP) calls to be monitored. Monitoring calls are always established using the highest level of security determined by the capabilities of the agent phone regardless of the security status of the call being observed. The highest level of security is maintained by exchanging the secure media key in any call between the customer, agent, and supervisor. Monitoring calls using secured media carries approximately 4000 bits per second of additional bandwidth overhead, same as standard secure media (sRTP) calls.
If the agent phone has encryption enabled, the supervisor phone must also have encryption enabled in order to allow secure silent monitoring. If the agent phone has encryption enabled, but the supervisor phone does not, the monitoring request fails.

**Whisper Coaching**
Cisco Unified Communications Manager also supports whisper coaching, a CTI enhancement on silent monitoring whereby a supervisor can speak to the agent while the monitoring session is underway without the customer hearing. Whisper coaching can only be initiated by a CTI application. If silent monitoring is already configured then no additional configuration of Cisco Unified Communications Manager is required for whisper coaching.

**Silent Monitoring Prerequisites**
Silent monitoring can only be invoked by an external CTI application. Cisco applications such as Cisco Unified Contact Center Enterprise or Cisco Unified Contact Center Express can initiate silent monitoring sessions. For details, see the following:

**Configure Silent Monitoring Task Flow**
This task flow describes the tasks that you must perform within Cisco Unified Communications Manager to allow CTI applications to use the monitoring feature.

**Before You Begin**
- Review *Silent Monitoring Prerequisites*, on page 94.

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>

| **Step 2** | Perform one of the following procedures:  
  - Enable Built in Bridge for Phones Clusterwide, on page 95 | Turn on the Built in Bridge on agent phones. You can use a service parameter to configure the clusterwide default setting or you can enable the Built in Bridge for individual phones. |
Enable Built in Bridge for Phones Clusterwide

When you set the Built-in-Bridge clusterwide service parameter to enabled, the Built-in-Bridge default setting for all phones in the cluster is changed to enabled. However, the Built-in-Bridge setting in the Phone Configuration window for individual phones overrides the clusterwide service parameter.

Procedure

Step 1 In Cisco Unified CM Administration, choose **System** > **Service Parameters**.

Step 2 From the **Server** drop-down list, choose the server on which the CallManager service is running.

Step 3 From the **Service** drop-down list, choose **Cisco CallManager**.

Step 4 Set the **BuiltIn Bridge Enable** service parameter to **On**.

Step 5 Click **Save**.

What to Do Next

If you want to set the Built in Bridge for an individual phone, refer to **Enable Built in Bridge for a Phone**, on page 95

Otherwise, see **Enable Monitoring Privileges for Supervisor**, on page 96

Enable Built in Bridge for a Phone

Use this procedure to enable the Built in Bridge on an individual phone. The Built in Bridge setting on an individual phone overrides the clusterwide service parameter.

<table>
<thead>
<tr>

Feature Configuration Guide for Cisco Unified Communications Manager, Release 11.0(1)
Before You Begin

Use a service parameter to set the Built in Bridge defaults for all phones in the cluster. For details, see Enable Built in Bridge for Phones Clusterwide, on page 95.

Procedure

Step 1 In Cisco Unified CM Administration, choose **Device** &gt; **Phone**.
Step 2 Click **Find**.
Step 3 Select the agent phone.
Step 4 From the **Built in Bridge** drop-down list, choose one of the following options:

  - **On**—The Built in Bridge is enabled.
  - **Off**—The Built in Bridge is disabled.
  - **Default**—The setting of the clusterwide **Built in Bridge Enable** service parameter is used.

Step 5 Click **Save**.

What to Do Next

Enable Monitoring Privileges for Supervisor, on page 96

Enable Monitoring Privileges for Supervisor

In order for a supervisor to be able to monitor agent conversations, the supervisor must be part of a group that allows monitoring.

Before You Begin

Perform one of the following procedures to enable the Built in Bridge on agent phones:

  - **Enable Built in Bridge for Phones Clusterwide**, on page 95
  - **Enable Built in Bridge for a Phone**, on page 95

Procedure

Step 1 In Cisco Unified CM Administration, choose **User Management** &gt; **End User**.
Step 2 Select the supervisor from the list of users.
Step 3 In the Permissions Information section, click **Add to Access Control Group**.
Step 4 Add the **Standard CTI Allow Call Monitoring** and **Standard CTI Enabled** user groups.
Step 5 Click **Save**.
Assign a Monitoring Calling Search Space

For monitoring to work, you must assign a Monitoring Calling Search Space to the supervisor phone line. The Monitoring Calling Search Space must include both the supervisor phone line and the agent phone line.

Before You Begin
Enable Monitoring Privileges for Supervisor, on page 96

Procedure

Step 1 In Cisco Unified CM Administration, choose Device > Phone.
Step 2 Click Find and select the supervisor phone. The left navigation pane displays the available phone lines for the supervisor's phone.
Step 3 For each of the supervisor's phone lines that will be used for monitoring, perform the following steps:
   a) Click the phone line. The Directory Number Configuration window displays configuration information for that phone line.
   b) From the Monitoring Calling Search Space drop-down list box, choose a calling search space that includes both the supervisor phone line and the agent phone line.
   c) Click Save.

Configure Silent Monitoring Notification Tones

In certain jurisdictions, a notification tone must be played to either the agent, the customer, or both, that indicates that the call is being monitored. By default, Cisco Unified Communications Manager does not play notification tones. You must configure a service parameter to allow notification tones.

Before You Begin
Assign a Monitoring Calling Search Space, on page 97

Procedure

Step 1 In Cisco Unified CM Administration, choose System > Service Parameters.
Step 2 From the Server drop-down list box, choose the server one which the CallManager service is running.
Step 3 From the Service drop-down list box, choose Cisco CallManager.
Step 4 Configure values for the following service parameters:
Configure Silent Monitoring Task Flow

- If you want to play a notification tone to the agent, change the value of the Play Monitoring Notification Tone To Observed Target service parameter to True.

- If you want to play a notification tone to the customer, change the value of the Play Monitoring Notification Tone To Observed Connected Parties service parameter to True.

Step 5  Click Save.
Step 6  If you changed the service parameter configuration, reset the agent phone.

What to Do Next

If you want to monitor secure calls that use sRTP, refer to the following procedure:

Configure Secure Silent Monitoring, on page 98

Configure Secure Silent Monitoring

To configure secure silent monitoring using sRTP you must configure phone security profiles that include encryption and apply them to the supervisor phone and to any agent phones that are being monitored.

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure an Encrypted Phone Security Profile, on page 98</td>
<td>Configure phone security profiles that include encryption for the agent phone and supervisor phone.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Assign Security Profile to Phone, on page 99</td>
<td>Apply the encrypted phone security profile to the agent phone and the supervisor phone.</td>
</tr>
</tbody>
</table>

Configure an Encrypted Phone Security Profile

To configure secure silent monitoring, you must configure the phone security profile for your supervisor phone and any agent phones to specify Encrypted as the Device Security Mode.

Procedure

Step 1  In Cisco Unified CM Administration, choose System > Security > Phone Security Profile.
Step 2  Perform either of the following steps:

- Click Add New to create a new phone security profile.
• Click Find and select an existing phone security profile.

Step 3 If you have created a new phone security profile, select your phone model from the Phone Security Profile Type drop-down list box.

Step 4 Enter a Name for the Phone Security Profile.

Step 5 From the Device Security Mode drop-down list box, choose Encrypted.

Step 6 Click Save.

Step 7 Repeat the above steps to configure phone security profiles for your supervisor phone and any agent phones.

What to Do Next
Assign Security Profile to Phone, on page 99

Assign Security Profile to Phone
Perform the following steps to assign a phone security profile to a phone. For secure silent monitoring to work, you must assign the phone security profile to both the agent phone and the supervisor phone.

Before You Begin
Configure an Encrypted Phone Security Profile, on page 98

Procedure

Step 1 In Cisco Unified CM Administration, choose Device > Phone.

Step 2 Click Find and select the agent phone on which you want to configure a phone security profile.

Step 3 From the Device Security Profile drop-down list box, choose the phone security profile that you have set up.

Step 4 Click Save.

Step 5 Repeat the previous steps for the supervisor phone.

What to Do Next
Go to the Configure Silent Monitoring Task Flow, on page 94 to determine the next task.

Recording

• Recording Overview, page 103
• Recording Prerequisites, page 105
• Recording Configuration Task Flow, page 105
• Recording Call Flow Examples, page 118
• Recording Interactions and Restrictions, page 118

Recording Overview

Call recording is a Cisco Unified Communications Manager feature that enables a recording server to archive agent conversations. Call recording is one of the essential features in call centers, financial institutions and other enterprises. The call recording feature sends copies of the agent and customer RTP media streams to the recording server over a SIP trunk. Each media stream is sent separately in an effort to best support a wide range of voice analytic applications.

Cisco Unified Communications Manager offers IP phone-based or network-based recording.

• In IP phone based recording, recording media is sourced from the phone. The phone forks two media streams to the recording server.

• In network-based recording, recording media can be sourced from either the phone or the gateway. When you implement network-based recording, the gateway in your network must connect to Cisco Unified Communications Manager over a SIP trunk.

Cisco Unified Communications Manager supports call recording in both single cluster and multi-cluster environments and offers three different recording modes:

• **Automatic Silent Recording**—Automatic silent recording records all calls on a line appearance automatically. Cisco Unified Communications Manager invokes the recording session automatically with no visual indication on the phone that an active recording session is established.

• **Selective Silent Recording**—A supervisor can start or stop the recording session via CTI-enabled desktop. Alternatively, a recording server can invoke the session based on predefined business rules and events. There is no visual indication on the phone that an active recording session is established.
• **Selective User Call Recording**—An agent can choose which calls to record. The agent invokes the recording session via CTI-enabled desktop, or by a softkey or programmable line key. When selective user call recording is used, the Cisco IP phone displays recording session status messages.

## Recording Media Source Selection

When you configure network-based recording, you must configure either the phone or the gateway as your preferred source of recording media for the agent phone line. However, depending on your deployment, Cisco Unified Communications Manager may not select your preferred choice as the recording media source. The following table displays the logic Cisco Unified Communications Manager uses to select the recording media source.

<table>
<thead>
<tr>
<th>Preferred Media Source</th>
<th>Media Type</th>
<th>Gateway in call path?</th>
<th>Selected Media Source</th>
</tr>

### Alternate Recording Media Source if the First Choice is Unavailable

If the recording media source that Cisco Unified Communications Manager selects is unavailable, Cisco Unified Communications Manager attempts to use an alternate source. The following table shows the logic Cisco Unified Communications Manager uses to select an alternate source for recording media.

<table>
<thead>
<tr>
<th>Selected Media Source</th>
<th>Gateway Preferred</th>
<th>Phone Preferred</th>
</tr>
</thead>
<tbody>
<tr>
<td>First attempt</td>

</table>
**Recording Prerequisites**

- Cisco IP Phone support—To view a list of the Cisco Unified IP phones that support recording, log in to Cisco Unified Reporting and run the Unified CM Phone Feature List report, selecting **Record** as the feature. For a detailed procedure, see Generate a Phone Feature List, on page 7.

- Gateway support—For details on which gateways support recording, see https://developer.cisco.com/web/sip/wiki/-/wiki/Main/Unified+CM+Recording+Gateway+Requirements.

**Recording Configuration Task Flow**

**Before You Begin**

- Review Recording Prerequisites, on page 105.

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>

<td>Step 9 Optional. Configure Recording Redundancy Using Route Groups, on page 111</td>
<td>Configure redundancy for your recording servers. There are many methods for configuring</td>
</tr>
</tbody>
</table>
Create a Recording Profile

Procedure

Step 1 In Cisco Unified CM Administration, choose Device > Device Settings > Recording Profile.
Step 2 Click Add New.
Step 3 In the Name field, enter a name for your recording profile.
Step 4 In the Recording Calling Search Space field, select the calling search space that contains the partition with the route pattern that is configured for the recording server.
Step 5 In the Recording Destination Address field, enter the directory number or the URL of the recorder that contains the partition with the route pattern that is configured for the recording server.
Step 6 Click Save.

What to Do Next
Configure SIP Profile with Conference Bridge Identifier for Recording, on page 106

Configure SIP Profile with Conference Bridge Identifier for Recording

If you want Cisco Unified Communications Manager to deliver the conference bridge identifier to the recorder, configure the SIP Profile by performing the following steps:

Before You Begin
Create a Recording Profile, on page 106
Procedure

Step 1 In Cisco Unified CM Administration, choose Device > Device Settings > SIP Profiles.
Step 2 Select the SIP profile that you want to use for your network.
Step 3 Check the Deliver Conference Bridge Identifier check box.
Step 4 Click Save.

What to Do Next
Configure SIP Trunks for Recording, on page 107

Configure SIP Trunks for Recording

Assign the recording server information in the SIP Trunk Configuration window by performing the following steps:

Before You Begin
Configure SIP Profile with Conference Bridge Identifier for Recording, on page 106

Procedure

Step 1 In Cisco Unified CM Administration, choose Device > Trunk.
Step 2 From the Trunk Type drop-down list, choose SIP Trunk.
Step 3 From the Protocol drop-down list, choose None.
Step 4 From the SIP Profile drop-down list, select the SIP profile that you want to use in your network.
Step 5 In the Destination Address field of the SIP Information pane, enter an IP address, fully qualified domain name, or DNS SRV record for the recording server.
Step 6 From the Recording Information pane, select one of the following options:
   • None—This trunk is not used for recording.
   • This trunk connects to a recording-enabled gateway
   • This trunk connects to other clusters with recording-enabled gateways
Step 7 Click Save.

What to Do Next
Perform one of the following procedures, depending on whether you are configuring your main recording server, or multiple recording servers for redundancy:
   • Configure Route Pattern for Recording, on page 108
   • Add Recording Servers to Route Group, on page 112
Configure Route Pattern for Recording

This procedure describes the route pattern configurations that are specific to recorders. You must configure a route pattern that routes to the recording server.

Before You Begin

Configure SIP Trunks for Recording, on page 107

Procedure

Step 1 In Cisco Unified CM Administration, choose Call Routing > Route/Hunt > Route Pattern.

Step 2 Click Add New to create a new route pattern.

Step 3 Complete the fields in the Route Pattern Configuration window. For detailed field descriptions, refer to the online help system.

Step 4 For call recording, complete the following fields:

- **Pattern**—Enter a pattern that matches the recording destination address from the recording profile.
- **Gateway/Route List**—Choose the SIP trunk or route list that points to the recording server.

Step 5 Click Save.

What to Do Next

Configure Agent Phone Line for Recording, on page 108

Configure Agent Phone Line for Recording

Before You Begin

Configure Route Pattern for Recording, on page 108

Procedure

Step 1 In Cisco Unified CM Administration, choose Device > Phone.

Step 2 Click Find.

Step 3 Select the agent's phone.
The Phone Configuration window appears.

Step 4 In the left Association pane, click the phone line for the agent.
The Directory Number Configuration window opens, displaying settings for the agent's phone line.

Step 5 From the Recording Option drop-down list, choose one of the following options:

- **Call Recording Disabled**—Calls on this phone line are not recorded.
- **Automatic Call Recording Enabled**—All calls on this phone line are recorded.
• **Selective Call Recording Enabled**—Only selected calls on this phone line are recorded.

**Step 6**  
From the **Recording Profile** drop-down list, choose the recording profile that is configured for the agent.

**Step 7**  
From the **Recording Media Source** drop-down list, choose whether you want to use the gateway or the phone as the preferred source of recording media.

**Step 8**  
If you also have Multilevel Precedence and Preemption (MLPP) configured, set the **Busy Trigger** field to a minimum of 3.

**Step 9**  
Click Save.

---

**What to Do Next**

Enable the Built in Bridge on the phone by performing one of the following procedures:

- Enable Built in Bridge for Cluster, on page 109
- Enable Built in Bridge for a Phone, on page 109

---

**Enable Built in Bridge for Cluster**

When you set the Built-in-Bridge clusterwide service parameter to enabled, the Built-in-Bridge default setting for all phones in the cluster is changed to enabled. However, the Built-in-Bridge setting in the **Phone Configuration** window for an individual phone overrides the clusterwide service parameter setting if the default option is not selected for that phone.

**Before You Begin**

Configure Agent Phone Line for Recording, on page 108

**Procedure**

**Step 1**  
In Cisco Unified CM Administration, choose **System > Service Parameters**.

**Step 2**  
From the **Server** drop-down list, choose the server on which the CallManager service is running.

**Step 3**  
From the **Service** drop-down list, choose **Cisco CallManager**.

**Step 4**  
Set the **Built in Bridge Enable** service parameter to **On**.

**Step 5**  
Click **Save**.

**What to Do Next**

If you want to configure the Built in Bridge on an individual phone, see Enable Built in Bridge for a Phone, on page 109

Otherwise, see Enable Gateway for Recording, on page 110

---

**Enable Built in Bridge for a Phone**

Use this procedure to enable the Built in Bridge for an individual phone. If the default option is not selected, the Built in Bridge setting in the **Phone Configuration** window overrides the clusterwide service parameter.
Before You Begin

Refer to Configure Agent Phone Line for Recording, on page 108
Optionally, use a service parameter to set the Built in Bridge defaults across the cluster. For details, see Enable Built in Bridge for Cluster, on page 109

Procedure

**Step 1** In Cisco Unified CM Administration, choose Device > Phone.

**Step 2** Click Find.

**Step 3** Select the agent phone.

**Step 4** From the Built in Bridge drop-down list, choose one of the following options:

- **On**—The Built in Bridge is enabled.
- **Off**—The Built in Bridge is disabled.
- **Default**—The setting of the clusterwide Built in Bridge Enable service parameter is used.

**Step 5** Click Save.

What to Do Next

Enable Gateway for Recording, on page 110

Enable Gateway for Recording

To configure the gateway for recording, you must enable Unified Communications Gateway Services. The following task flow contains the high-level process to enable Unified Communications Gateway Services.

**Before You Begin**

Enable Built in Bridge for a Phone, on page 109

**Procedure**

**Step 1** Configure Cisco Unified Communications Manager IOS Services on the Device.

**Step 2** Configure the XMF Provider.

**Step 3** Verify Unified Communications Gateway Services.

For detailed configuration steps, including examples, refer to the Cisco Unified Communications Gateway Services chapter for either of the following documents:

What to Do Next
Configure Recording Notification Tones, on page 111

Configure Recording Notification Tones

For legal compliance, an explicit notification in the form of a periodic tone can be made audible to the agent, the caller, or both, to indicate that a recording session is in progress. This tone can also be disabled.

Note
Recording tone settings override monitoring tone settings when both are enabled for the same call.

Before You Begin
Enable Gateway for Recording, on page 110

Procedure

Step 1
In Cisco Unified CM Administration, choose System > Service Parameters.

Step 2
From the Server drop-down list, choose the server on which the Cisco CallManager service is running.

Step 3
From the Service drop-down list, choose Cisco CallManager.

Step 4
If you want a notification tone to be played to the agent, set the Play Recording Notification Tone to Observed Target (agent) service parameter to True.

Step 5
If you want a notification tone to be played to the customer, set the value of the Play Recording Notification Tone To Observed Connected Parties (customer) service parameter to True.

Step 6
Click Save.

What to Do Next
Optional. Configure Recording Redundancy Using Route Groups, on page 111

Configure Recording Redundancy Using Route Groups

This task flow describes how to configure recording redundancy using route groups. For the preferred method of configuring recording redundancy for your deployment, refer to your vendor.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Configure SIP Trunks for Recording, on page 107</td>
<td>Configure a separate SIP trunk for each recording server.</td>
</tr>
</tbody>
</table>
### Add Recording Servers to Route Group

**Configure SIP Trunks for Recording, on page 107**

**Procedure**

*Step 1* In Cisco Unified CM Administration, choose **Call Route > Route Hunt/List > Route Group**.

*Step 2* Perform one of the following steps:

- Click **Find** and select an existing route group.
- Click **Add New** to create a new route group.

*Step 3* Complete the fields in the Route Group Configuration window. See the online help for more information on the fields and their options.

*Step 4* In the Available Devices pane, for each SIP trunk on which you configured a recording server, select the SIP trunk and click **Add to Route Group** until each recording server appears in the Selected Devices pane.

*Step 5* Use the up and down arrows to adjust the priority setting for each recording server.

*Step 6* Click **Save**.

**What to Do Next**

Add Route Group to Route List, on page 112

### Add Route Group to Route List

**Before You Begin**

Add Recording Servers to Route Group, on page 112

**Procedure**

*Step 1* In Cisco Unified CM Administration, choose **Call Routing > Route/Hunt > Route List**.

*Step 2* Perform one of the following options:

- Click **Find** and select an existing route list.
• Click Add New to create a new route list.

**Step 3** Click Add Route Group.
The Route List Details Configuration window opens.

**Step 4** From the Route Group drop-down list, select the route group that you created for your recording servers.

**Step 5** Click Save.

**Step 6** Complete the remaining fields in the Route List Configuration window. See the online help for more information on the fields.

**Step 7** Click Save.

**What to Do Next**
Configure Route Pattern for Recording, on page 108

**Configure a Record Feature Button**
If your phone uses feature buttons, use the following procedure to assign the Record feature button to your phone.

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Configure a Phone Button Template for Recording, on page 113</td>
<td>Configure a phone button template that includes the Record button.</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Associate a Phone Button Template with a Phone, on page 114</td>
<td>Associate the phone button template that you set up for recording to the phone.</td>
</tr>
</tbody>
</table>

**Configure a Phone Button Template for Recording**
Create a phone button template that includes the Record feature button.

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose Device > Device Settings > Phone Button Template. The Find and List Phone Button Templates window appears.

**Step 2** Click Find. The window displays a list of templates for the supported phones.

**Step 3** Perform this step if you want to create a new phone button template; otherwise, proceed to the next step.
   a) Select a default template for the model of phone and click Copy.
   b) In the Phone Button Template Information field, enter a new name for the template.
c) Click **Save**.

**Step 4** Perform this step if you want to add phone buttons to an existing template.

a) Enter search criteria and click **Find**.
b) Choose an existing template.

The **Phone Button Template Configuration** window appears.

**Step 5** From the **Line** drop-down list, choose feature that you want to add to the template.

**Step 6** Click **Save**.

**Step 7** Perform one of the following tasks:

- If you modified a template that is already associated with devices, click **Apply Config** to restart the devices.
- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

---

**What to Do Next**

*Associate a Phone Button Template with a Phone*, on page 114

---

**Associate a Phone Button Template with a Phone**

Associate the phone button template that you created for the Record button to the phone.

**Before You Begin**

*Configure a Phone Button Template for Recording*, on page 113

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Phone**. The **Find and List Phones** window is displayed.

**Step 2** From the **Find and List Phones** window, click **Find**. A list of phones that are configured on the Cisco Unified Communications Manager is displayed.

**Step 3** Choose the phone to which you want to add the phone button template. The **Phone Configuration** window appears.

**Step 4** In the **Phone Button Template** drop-down list, choose the phone button template that contains the new feature button.

**Step 5** Click **Save**. A dialog box is displayed with a message to press **Reset** to update the phone settings.
### Configure a Record Softkey

If your phone uses softkeys, perform the following tasks to add a Record softkey to the phone. The Record softkey is only available in the Connected call state for the Cisco Chaperone Phone with Feature Hardkeys template.

#### Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Configure a softkey template that includes the Record softkey.</td>
</tr>
<tr>
<td>Configure a Softkey Template for Recording, on page 115</td>
<td></td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Associate the softkey template to a phone directly, or to a Common Device Configuration. You can then associate the Common Device Configuration to a group of phones.</td>
</tr>
<tr>
<td>Perform either of the following procedures:</td>
<td></td>
</tr>
<tr>
<td>• Associate a Softkey Template with a Phone, on page 116</td>
<td></td>
</tr>
<tr>
<td>• Associate a Softkey Template with a Common Device Configuration, on page 117</td>
<td></td>
</tr>
</tbody>
</table>

#### Configure a Softkey Template for Recording

**Procedure**

1. From Cisco Unified CM Administration, choose **Device > Device Settings > Softkey Template**. The Softkey Template Configuration window appears.
2. Perform this step to create a new softkey template; otherwise, proceed to the next step.
   a) Click **Add New**.
   b) Select a default template and click **Copy**.
   c) In the **Softkey Template Name** field, enter a new name for the template.
   d) Click **Save**.
3. Perform this step to add softkeys to an existing template.
   a) Enter search criteria and click **Find**.
   b) Choose an existing template.
   The Softkey Template Configuration window appears.
4. Check the **Default Softkey Template** check box to designate this softkey template as the default softkey template.

**Note** If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.
**Step 5** Choose **Configure Softkey Layout** from the **Related Links** drop-down list in the upper right corner and click **Go**.

**Step 6** From the **Select a Call State to Configure** drop-down list, choose the call state for which you want the softkey to display.

**Step 7** From the **Unselected Softkeys** list, choose the softkey to add and click the right arrow to move the softkey to the **Selected Softkeys** list. Use the up and down arrows to change the position of the new softkey.

**Step 8** To display the softkey in additional call states, repeat the previous step.

**Step 9** Click **Save**.

**Step 10** Perform one of the following tasks:

- If you modified a template that is already associated with devices, click **Apply Config** to restart the devices.

- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

---

**What to Do Next**

Perform either of the following tasks:

- **Associate a Softkey Template with a Phone**, on page 116

- **Associate a Softkey Template with a Common Device Configuration**, on page 117

---

### Associate a Softkey Template with a Phone

You can assign the Record softkey to the phone by associating the softkey template that includes the Record softkey directly to a phone.

**Before You Begin**

**Configure a Softkey Template for Recording**, on page 115

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Phone**. The **Find and List Phones** window appears.

**Step 2** Choose the phone to which you want to add the softkey template. The **Phone Configuration** window appears.

**Step 3** From the **Softkey Template** drop-down list, choose the template that contains the new softkey.

**Step 4** Click **Save**.

**Step 5** Press **Reset** to update the phone settings.
**Associate a Softkey Template with a Common Device Configuration**

This task flow describes how to add a Record softkey to the phone by associating the softkey template to a Common Device Configuration.

**Before You Begin**

Configure a Softkey Template for Recording, on page 115

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Add a Softkey Template to a Common Device Configuration, on page 204</td>

<td></td>
</tr>
</tbody>
</table>

**Add a Softkey Template to the Common Device Configuration**

**Before You Begin**

Configure a Softkey Template for Recording, on page 115

**Procedure**

**Step 1**

From Cisco Unified CM Administration, choose **Device > Device Settings > Common Device Configuration**. The **Find and List Common Device Configuration** window appears.

**Step 2**

Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.

a) Click **Add New**.

b) In the **Name** field, enter a name for the Common Device Configuration.

c) Click **Save**.

**Step 3**

Perform this step to add the softkey template to an existing Common Device Configuration.

a) Enter search criteria and click **Find**.

b) Choose an existing Common Device Configuration.

The **Common Device Configuration** window appears.

**Step 4**

In the **Softkey Template** drop-down list, choose the softkey template that contains the softkey that you want to make available.

**Step 5**

Click **Save**.

**Step 6**

Perform one of the following tasks:

- If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.

- If you modified a Common Device Configuration that is already associated with devices, click **Apply Config** to restart the devices.
What to Do Next
Add Common Device Configuration to Phone, on page 118

Add Common Device Configuration to Phone

Before You Begin
Associate a Softkey Template with a Common Device Configuration, on page 117

Procedure

• Auto-Attendant, page 127
• Manager Assistant, page 137
Agent Greeting

Agent Greeting Overview

Agent Greeting enables Cisco Unified Communications Manager to automatically play a prerecorded announcement following a successful media connection to the agent device. Agent Greeting is audible for the agent and the customer.

The process of recording a greeting is similar to recording a message for voicemail. Depending on how your contact center is set up, you can record different greetings that play for different types of callers (for example, an English greeting for English speakers or an Italian greeting for Italian speakers).

By default, agent greeting is enabled when you log in to your agent desktop but you can turn it off and on as necessary.

Agent Greeting Prerequisites

- Ensure that you enable Built In Bridge. To view the details, see Configure Built In Bridge, on page 125.
### Agent Greeting Configuration Task Flow

**Before You Begin**
- Review *Agent Greeting Prerequisites, on page 123*

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Configure a media server for Agent Greeting.</td>
<td>Agent Greeting uses the Unified CVP media server to store and serve prompt and greeting files.</td>
</tr>
<tr>
<td>• Configure a server to act as a media server.</td>
<td></td>
</tr>
<tr>
<td>• Add the media server in Unified CVP.</td>
<td></td>
</tr>
<tr>
<td>• Configure the media server to write files.</td>
<td></td>
</tr>
<tr>
<td><strong>Step 2</strong> Republish .tcl scripts to Voice Extensible Markup Language (VXML) Gateway.</td>
<td>The .tcl script files that ship with Unified CVP Release 9.0(1) include updates to support Agent Greeting. You must republish these updated files to your VXML Gateway. Republishing scripts to the VXML Gateways is a standard task in Unified CVP upgrades. If you did not upgrade Unified CVP and republish the scripts, you must republish the scripts before you can use Agent Greeting.</td>
</tr>
<tr>
<td><strong>Step 3</strong> Set the cache size on the VXML Gateway.</td>
<td>To ensure adequate performance, set the size of the cache on the VXML Gateway to the maximum allowed. The maximum size is 100 megabytes; the default is 15 kilobytes. Failure to set the VXML Gateway cache to its maximum can result in slowed performance to increased traffic to the media server.</td>
</tr>
<tr>
<td><strong>Step 4</strong> Create voice prompts to record greetings.</td>
<td>Create audio files for each of the voice prompts that agents hear as they record a greeting.</td>
</tr>
<tr>
<td><strong>Step 5</strong> Configure call types.</td>
<td>Complete to record and play agent greetings.</td>
</tr>
<tr>
<td><strong>Step 6</strong> Configure a dialed number.</td>
<td>Complete to record and play agent greetings.</td>
</tr>
<tr>
<td><strong>Step 7</strong> Schedule the script.</td>
<td></td>
</tr>
</tbody>
</table>
Purpose

Command or Action | Purpose
------------------|----------------------------------
**Step 8** | Define network VRU scripts. For Agent Greeting record and play scripts to interact with Unified CVP, Network VRU scripts are required.
**Step 9** | (Optional) Import sample Agent Greeting scripts.
**Step 10** | Modify the Unified CCE call routing scripts. Modify the Unified CCE call routing scripts to use the Play Agent Greeting script.

### Configure Built In Bridge

The **Built in Bridge** field setting in the **Phone Configuration** window for an individual phone overrides the setting for the **Built In Bridge Enable** clusterwide service parameter.

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose **Device > Phone**.
**Step 2** Click **Find**.
**Step 3** Select the agent phone.
**Step 4** From the **Built in Bridge** drop-down list, choose one of the following options:
- **On**—The Built in Bridge is enabled.
- **Off**—The Built in Bridge is disabled.
- **Default**—The setting of the clusterwide **Built In Bridge Enable** service parameter is used.
**Step 5** Click **Save**.

### Agent Greeting Troubleshooting

Auto-Attendant Overview

Auto-Attendant allows callers to locate people in your organization without talking to a receptionist. You can customize the prompts that are played for the caller.

Auto-Attendant works with Cisco Unified Communications Manager to receive calls on specific telephone extensions. The software interacts with the caller and allows the caller to search for and select the extension of the party (in your organization) that the caller is trying to reach.

Auto-Attendant provides the following functions:

- Answers a call
- Plays a user-configurable welcome prompt
- Plays a main menu prompt that asks the caller to perform one of three actions:
  - Press 0 for the operator
  - Press 1 to enter an extension number
  - Press 2 to spell by name

If the caller chooses to spell by name (by pressing 2), the system compares the letters that are entered with the names that are configured to the available extensions. One of the following results can occur:

- If a match exists, the system announces a transfer to the matched user and waits for up to 2 seconds for the caller to press any Dual Tone Multifrequency (DTMF) key to stop the transfer. If the caller does not stop the transfer, the system performs an explicit confirmation: it prompts the user for confirmation of the name and transfers the call to the primary extension of that user.
• If more than one match occurs, the system prompts the caller to choose the correct extension.
• If too many matches occur, the system prompts the caller to enter more characters.
• If no match occurs, that is, if the user presses wrong options, the system prompts that the user pressed the wrong options and prompts the user to press the correct options.

• When the caller specifies the destination, the system transfers the call.
• If the line is busy or not in service, the system informs the caller accordingly and replays the main menu prompt.

Auto-Attendant solution can be deployed in three different ways as follows using different Cisco products that can provide interactive voice response functionality.

• Auto-Attendant using Cisco Unity Connection (CUC); the most widely used Auto-Attendant solution configuration by customers
• Auto-Attendant using Cisco Unified Contact Center Express (Unified CCX)
• Auto-Attendant using Cisco Unity Express (CUE)

Cisco Unity Connection Configuration

The Cisco Unity Connection server provides Automated-Attendant functionality for both external and internal callers. An Auto-Attendant allows callers to be automatically transferred to an extension without the intervention of an operator or receptionist.

Auto-Attendants offer a menu system; it may also allow a caller to reach a live operator by dialing a number, usually "0". Multiple Auto-Attendants may be implemented to support individual site locations. Within Cisco Unity Connection, an Auto-Attendant is a customized application tree structure that is built by creating and linking multiple Call Handlers together. The Auto-Attendant is defined by entry and exit points, and intermediate routing decisions based upon the callers DTMF input choices.

Cisco Unity Connection Configuration Task Flow

You can use this task flow to configure auto-attendant using Cisco Unity Connection:

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Configure CTI Route Point, on page 129</td>
<td>Perform this task on the Cisco Unified CM Administration. Create a CTI Route Point which maps to the Direct-Inward Dial (DID) number of the company (board number).</td>
</tr>
</tbody>
</table>
### Command or Action | Purpose
--- | ---
**Step 2** | Configure Auto-Attendant System Call Handler, on page 130  
Call handlers answer calls, greet callers with recorded prompts, provide callers with information and options, route calls, and take messages.  

**Step 3** | Configure Caller Input Option, on page 130  
Caller input options enables you to designate a single digit to represent a user extension, alternate contact number, call handler, interview handler, or directory handler. The caller presses a single key during a call handler greeting instead of entering the full extension, and Cisco Unity Connection responds accordingly. Several different keys configured as caller input options offers the callers a menu of choices in the call handler greeting.

**Step 4** | Configure Extension for Operator Call Handler, on page 131  
Configure an extension for the operator to allow callers to speak to an operator during a call handler greeting.

**Step 5** | Modify Standard Call Transfer Rule for Operator, on page 132  
Modify the Standard Call Transfer Rule to enable the call to be transferred to the operator when the caller presses 0 to speak to an operator.

**Step 6** | Update Default System Transfer Restriction Table, on page 132  
Update the Default System Transfer restriction table. The Default System Transfer restriction table restricts numbers that can be used for Caller system transfers, which allow unidentified callers to transfer to a number that they specify.

### Configure CTI Route Point

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose Device > CTI Route Point.  
The Find and List CTI Route Points window is displayed.

**Step 2** Click Add New.  
The CTI Route Point Configuration window is displayed.

**Step 3** In the Device Name field, enter a device name for the route point.

**Step 4** From the Device Pool drop-down list, choose Default.

**Step 5** Click Save.  
The Add successful message is displayed.

**Step 6** From the Association area, click Line [1] - Add a new DN.
The **Directory Number Configuration** window is displayed.

**Step 7**  
In the **Directory Number** field, enter the directory number that matches with the DID of the company.

**Step 8**  
From the **Route Partition** drop-down list, choose the required route partition.

**Step 9**  
From the **Call Forward and Call Pickup Settings** area, for **Forward All**, choose the appropriate calling search space and check the **Voice Mail** check box.

**Step 10**  
Click **Save**.

---

**What to Do Next**

Configure Auto-Attendant System Call Handler, on page 130

---

**Configure Auto-Attendant System Call Handler**

**Before You Begin**

Ensure that you Configure CTI Route Point, on page 129

**Procedure**

**Step 1**  
From Cisco Unity Connection Administration, from the Cisco Unity Connection tree on the left, navigate to **Call Management** and choose **System Call Handlers**. 
The **Search Call Handlers** window is displayed.

**Step 2**  
Click **Add New**.

The **New Call Handler** window is displayed.

**Step 3**  
In the **Display Name** field, enter **AutoAttendant**.

**Step 4**  
In the **Extension** field, enter the same extension that you provided for the CTI Route Point.

**Step 5**  
Click **Save**.

The **Edit Call Handler Basics (AutoAttendant)** window is displayed.

**Step 6**  
Edit the required fields and click **Save**.

---

**What to Do Next**

Configure Caller Input Option, on page 130

---

**Configure Caller Input Option**

**Before You Begin**

Ensure that you:

- Configure CTI Route Point, on page 129
- Configure Auto-Attendant System Call Handler, on page 130
Procedure

Step 1  From Cisco Unity Connection Administration, from the Cisco Unity Connection tree on the left, navigate to Call Management and choose System Call Handlers. The Search Call Handlers window is displayed.

Step 2  Click AutoAttendant. The Edit Call Handler Basics (AutoAttendant) window is displayed.

Step 3  Choose Edit > Caller Inputs. The Caller Input window is displayed.

Step 4  In the Key column, click 0. The Edit Caller Input (0) window is displayed.

Step 5  Click the Call Handler radio button, choose Operator from the drop-down list, and click the Attempt Transfer radio button.

Step 6  Click Save. The Updated Caller Input status message is displayed.

Step 7  Choose Edit > Caller Inputs. The Caller Input window is displayed.

Step 8  In the Key column, click 1. The Edit Caller Input (0) window is displayed.

Step 9  In the Conversation radio button, choose Caller System Transfer from the drop-down list.

Step 10  Click Save. The Updated Caller Input status message is displayed.

What to Do Next

Configure Extension for Operator Call Handler, on page 131

Configure Extension for Operator Call Handler

Before You Begin

Ensure that you:

- Configure CTI Route Point, on page 129
- Configure Auto-Attendant System Call Handler, on page 130
- Configure Caller Input Option, on page 130

Procedure

Step 1  From Cisco Unity Connection Administration, from the Cisco Unity Connection tree on the left, navigate to Call Management and choose System Call Handlers. The Search Call Handlers window is displayed.

Step 2  Click Operator.
The **Edit Call Handler Basics (Operator)** window is displayed.

**Step 3**
Enter the extension of the operator in the **Extension** field and click **Save**.
The *Updated Caller Input* status message is displayed.

**What to Do Next**

Modify Standard Call Transfer Rule for Operator, on page 132

---

**Modify Standard Call Transfer Rule for Operator**

**Before You Begin**

Ensure that you:

- Configure CTI Route Point, on page 129
- Configure Auto-Attendant System Call Handler, on page 130
- Configure Caller Input Option, on page 130
- Configure Extension for Operator Call Handler, on page 131

**Procedure**

**Step 1**
From Cisco Unity Connection Administration, from the Cisco Unity Connection tree on the left, navigate to **Call Management** and choose **System Call Handlers**.
The *Search Call Handlers* window is displayed.

**Step 2**
Click **Operator**.
The **Edit Call Handler Basics (Operator)** window is displayed.

**Step 3**
From the **Edit** menu, choose **Transfer Rules**.
The **Transfer Rules** window is displayed.

**Step 4**
Click **Standard**.
The **Edit Transfer Rule (Standard)** window is displayed.

**Step 5**
In the **Transfer Calls to** option, click the **Extension** radio button and enter the configured operator extension number.

**Step 6**
Click **Save**.

**What to Do Next**

Update Default System Transfer Restriction Table, on page 132

---

**Update Default System Transfer Restriction Table**

**Before You Begin**

Ensure that you:

- Configure CTI Route Point, on page 129
Procedure

Step 1  From Cisco Unity Connection Administration, from the Cisco Unity Connection tree on the left, navigate to System Settings and choose Restriction Tables. The Search Restriction Tables window is displayed.

Step 2  Click Default System Transfer. The Edit Restriction Table Basics (Default System Transfer) window is displayed.

Step 3  Uncheck the checkbox in the Blocked column for 6 in the Order column.

Step 4  Click Save.

Cisco Unity Connection Auto-Attendant Troubleshooting

For information about troubleshooting Auto-Attendant using Cisco Unity Connection, see the following:

Cisco Unified CCX Configuration

Auto-Attendant comes standard with the five-seat bundle of Cisco Unified Contact Center Express (Unified CCX).

Note  For information about the supported versions of Cisco Unified CCX with Cisco Unified Communications Manager, see http://www.cisco.com/en/US/docs/voice_ip_comm/uc_system/unified/communications/system/versions/IPTMtrix.html.

Cisco Unified CCX Prerequisites

- Install and configure Cisco Unified CCX before you can use Auto-Attendant. Cisco Unified CCX controls the software and its connection to the telephony system.
- Configure users on Cisco Unified Communications Manager.

Cisco Unified CCX Auto-Attendant Task Flow

Before You Begin

- Learn more about the Auto-Attendant feature by reviewing Auto-Attendant Overview, on page 127.
- Learn more about Cisco UCCX with Auto-Attendant functionality by reviewing Cisco Unified CCX Configuration, on page 133
- Review Cisco Unified CCX Prerequisites, on page 134.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Configure Unified CM Telephony call control groups.</td>
<td>The Unified CCX system uses Unified CM Telephony call control groups to pool together a series of CTI ports, which the system uses to serve calls as they arrive or depart from the Unified CCX server.</td>
</tr>
<tr>
<td><strong>Step 2</strong> Add a Cisco Media Termination (CMT) dialog control group.</td>
<td>The Cisco Media subsystem is a subsystem of the Unified CCX Engine. The Cisco Media subsystem manages the CMT media resource. CMT channels are required for Unified CCX to be able to play or record media. The Cisco Media subsystem uses dialog groups to organize and share resources among applications. A dialog group is a pool of dialog channels in which each channel is used to perform dialog interactions with a caller, during which the caller responds to automated prompts by pressing buttons on a touch-tone phone. <strong>Caution</strong> All media termination strings begin with “auto” and contain the same ID as the call control group—not the CMT dialog group. Perform this procedure if the default media termination is configured and the ID differs.</td>
</tr>
<tr>
<td><strong>Step 3</strong> Configure a Cisco script application.</td>
<td>The Unified CCX script applications are applications that are based on scripts created in the Unified CCX Editor. These applications come with every Unified CCX system and executes scripts that are created in the Unified CCX Editor.</td>
</tr>
<tr>
<td>Command or Action</td>
<td>Purpose</td>
</tr>
<tr>
<td>-------------------</td>
<td>---------</td>
</tr>
<tr>
<td><strong>Step 4</strong> Provision a Unified CM Telephony trigger.</td>
<td>A Unified CM Telephony trigger responds to calls that arrive on a specific route point by selecting telephony and media resources to serve the call and invoking an application script to handle the call.</td>
</tr>
<tr>
<td><strong>Step 5</strong> Customize Auto-Attendant.</td>
<td>The Cisco Unified CCX Administration page allows you to modify any existing Auto-Attendant instance as necessary.</td>
</tr>
<tr>
<td>- Modify an existing Auto-Attendant instance</td>
<td>Cisco Unified CCX allows you to customize the Auto-Attendant prompts from the Cisco Unified CCX Administration Media Configuration window. It allows you to record the welcome prompt, configure the welcome prompt, and upload a spoken name.</td>
</tr>
<tr>
<td>- Configure the Auto-Attendant prompts</td>
<td></td>
</tr>
</tbody>
</table>

**What to Do Next**

If you have any problems configuring Cisco Unified CCX, see Cisco Unified CCX Auto-Attendant Troubleshooting, on page 135.

**Cisco Unified CCX Auto-Attendant Troubleshooting**

For information about troubleshooting Auto-Attendant using Cisco Unified CCX, see http://docwiki.cisco.com/wiki/List_of_Troubleshooting_Tips_for_Unified_CCX_7.0#Cisco_Unified_Communications_Manager_Automated_Attendant (applicable only for Windows version).

**Cisco Unity Express Configuration**

Cisco Unity Express Auto-Attendant Troubleshooting

Manager Assistant

- Cisco Unified Communications Manager Assistant Overview, page 137
- Manager Assistant Prerequisites, page 139
- Manager Assistant Task Flow for Proxy Lines, page 139
- Manager Assistant Task Flow for Shared Lines, page 148
- Manager Assistant Interactions and Restrictions, page 169
- Cisco Unified Communications Manager Assistant Troubleshooting, page 172

Cisco Unified Communications Manager Assistant Overview

The Cisco Unified Communications Manager Assistant feature is a plug-in that an assistant can use to handle calls on behalf of a manager, intercept manager calls, and route them appropriately.

Manager Assistant supports up to 3500 managers and 3500 assistants. To accommodate this number of users, you can configure up to three Manager Assistant applications in one Cisco Unified Communications Manager cluster and assign managers and assistants to each instance of the application.

Manager Assistant supports shared line support and proxy line support.

Manager Assistant Architecture

The Manager Assistant architecture comprises the following:

- **Cisco IP Manager Assistant service**—After you install Cisco Unified Communications Manager, activate this service from the Cisco Unified Serviceability interface.

- **Assistant Console interface**—Allows assistants to access the Manager Assistant features on their computer to handle calls for managers. The Manager Assistant handles calls for an assistant and for as many as 33 managers.

- **Cisco Unified IP Phone interface**: Managers and assistants use softkeys and the Cisco Unified IP Phone Services button to access the Manager Assistant features.

For more information about the Manager Assistant, see the Cisco Unified Communications Manager Assistant User Guide for Cisco Unified Communications Manager.
Manager Assistant Database Access Architecture

The database stores all Manager Assistant configuration information. When the manager or assistant logs in, the Cisco IP Manager Assistant service retrieves all data that is related to the manager or assistant from the database and stores it in memory. The database includes two interfaces:

- **Manager interface**—The manager phone makes available the manager features with the exception of Manager Configuration. Manager Assistant automatically logs a manager into the Cisco IP Manager Assistant service when the Cisco IP Manager Assistant service starts.

  Note Managers also have access to Cisco Unified Communications Manager features such as Do Not Disturb and Immediate Divert.

- **Assistant interface**—The assistant accesses the Manager Assistant features by using the Assistant Console application and the Cisco Unified IP Phone. The Assistant Console, an application, provides call-control functions such as answer, divert, transfer, and hold. The assistant uses the Assistant Console to log in and log out, to set up assistant preferences, and to display the Manager Configuration window that is used to configure manager preferences.

For more information about the Manager Assistant, see the Cisco Unified Communications Manager Assistant User Guide for Cisco Unified Communications Manager.

**Softkeys**

Manager Assistant supports the following softkeys:

- Redirect
- Transfer to VoiceMail
- Do Not Disturb

Manager Assistant supports the following softkey templates:

- Standard Manager—Supports manager for proxy mode
- Standard Shared Mode Manager—Supports manager for shared mode
- Standard Assistant—Supports assistant in proxy or shared mode
- Standard User—The system makes call-processing (such as Hold and Dial) softkeys available with the Standard User template.

**Manager Assistant Shared Line Overview**

When you configure Manager Assistant in shared line mode, the manager and assistant share a directory number, for example, 8001. The assistant handles calls for a manager on the shared directory number. When a manager receives a call on 8001, both the manager phone and the assistant phone ring.

The Manager Assistant features that do not apply to shared line mode include Default Assistant Selection, Assistant Watch, Call Filtering, and Divert All Calls. An assistant cannot see or access these features on the Assistant Console application.
Manager Assistant Proxy Line Overview

When you configure Manager Assistant in proxy line mode, the assistant handles calls for a manager using a proxy number. The proxy number is not the directory number for the manager, but is an alternate number chosen by the system that an assistant uses to handle manager calls. In proxy line mode, a manager and an assistant have access to all features that are available in Manager Assistant, which include Default Assistant Selection, Assistant Watch, Call Filtering, and Divert All Calls.

Manager Assistant Prerequisites

- Manager Assistant supports the following browsers and platform:
  - Cisco Unified Communications Manager Assistant Administration and the Assistant Console are supported on Microsoft Internet Explorer 7.0 or later, Firefox 3.x or later, and Safari 4.x or later.
  - On a computer running Windows XP, Windows Vista, Windows 7, or Apple MAC OS X, customers can open one of the browsers specified above.

- To display Manager Assistant features in other languages, install the locale installer before you configure the Manager Assistant.

- The Assistant Console application is supported on computers that run Windows 7, Windows XP, or Windows Vista. It requires that the JRE 1.4.2_05 exist in Program Files\Cisco\Cisco Unified Communications Manager.

- You must configure the phones and users, and associated the devices to the users. In addition, for shared line appearances between managers and assistants, you must configure the same directory number on the manager primary line and assistant secondary line.

- To add managers and assistants in bulk, install the Cisco Unified Communications Manager Bulk Administration Tool. For more information, see the Cisco Unified Communications Manager Bulk Administration Guide.

Manager Assistant Task Flow for Proxy Lines

Before You Begin

- Review Manager Assistant Prerequisites, on page 139.

Procedure

<table>

**Run the Cisco Unified CM Assistant Configuration Wizard**

You can run the Cisco Unified CM Assistant Configuration Wizard to automatically create partitions, calling search spaces, and route points. The wizard also creates Bulk Administration Tool (BAT) templates for the manager phones, the assistant phones, and all other user phones. You can use the BAT templates to configure the managers, assistants, and all other users. For more information about BAT, see the *Cisco Unified Communications Manager Bulk Administration Guide*.

**Before You Begin**

Ensure that the configuration wizard runs on the same server (the Cisco Unified Communications Manager server) as the Bulk Administration Tool.

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Application > Cisco Unified CM Assistant Configuration Wizard**.

**Step 2** Click **Next** to begin the Cisco Unified CM Assistant Configuration wizard process.

**Step 3** In the **Partition for Managers** window, enter a name, provide a description, and then click **Next**. Alternatively, you can accept the default partition name and description.

**Step 4** In the **Partition for CTI Route Point** window, enter a name, provide a description, and then click **Next**. Alternatively, you can accept the default CTI route point name.

**Step 5** In the **Partition for All Users** window, enter a name, provide a description and then click **Next**. Alternatively, you can accept the default partition name and description for all users.

**Step 6** In the **Intercom Partition** window, enter a name, provide a description, and then click **Next**. Alternatively, you can accept the default intercom partition name.

**Step 7** In the **Assistant Calling Search Space** window, enter a name, and provide a description. Alternatively, you can use the default calling search space name and description.
The Available Partitions and Selected Partitions boxes under the Route Partitions for this Calling Search Space automatically list Partitions for the Assistant Calling Search Space. You can accept the default values or you can choose the applicable partition from the Available Partitions box. Use the up and down arrows to move partitions from one box to the other.

Step 8 Click Next.

Step 9 In the Everyone Calling Search Space window, enter a name, and provide a description. Alternatively, you can accept the default calling search space name and description for everyone.

The Available Partitions and Selected Partitions boxes under the Route Partitions for this Calling Search Space automatically list Partitions for the Assistant Calling Search Space. You can accept the default values or you can choose the applicable partition from the Available Partitions box. Use the up and down arrows to move partitions from one box to the other.

Step 10 Click Next.

If you have existing calling search spaces that are configured on the system, the Existing Calling Search Spaces window is displayed; otherwise, proceed to the next step.

Manager Assistant requires that the existing calling search spaces add the prefix Generated_Route Point and Generated_Everyone partitions. The Available Calling Search Spaces and Selected Calling Search Spaces boxes automatically list these partitions. Use the up and down arrows to move partitions from one box to the other.

Note The prefix that is added to the existing calling search spaces may change if the administrator has changed the names of the partitions.

Step 11 Click Next.

Step 12 In the CTI Route Point window, enter a name in the CTI route point name field; otherwise, use the default CTI route point name.

Step 13 From the drop-down list, choose the appropriate device pool.

Step 14 Enter a route point directory number; otherwise, use the default route point directory number.

Step 15 From the drop-down list, choose the appropriate numbering plan and then click Next.

Step 16 In the Phone Services window, enter the primary phone service name; otherwise, use the default Phone Service name.

Step 17 From the drop-down list, choose the primary Cisco Unified Communications Manager Assistant server or enter a server name or IP address.

Step 18 Enter the secondary phone service name; otherwise, use the default phone service name.

Step 19 From the drop-down list, choose the secondary Cisco Unified Communications Manager Assistant server or enter a server name or IP address and then click Next. The Confirmation window is displayed. It provides all the information that you chose. If the information is not correct, you can cancel the configuration process or return to the previous configuration windows.

Step 20 Click Finish.

Upon completion, a final status window is displayed.

Any errors that the configuration wizard generates is sent to a trace file. Access this file by using the following CLI command: file get activelog tomcat/logs/ccmadmin/log4j

What to Do Next

The Cisco Unified CM Assistant Configuration Wizard only creates the Cisco IP Manager Assistant service parameters. You must enter the remaining service parameters manually. For service parameter information, see the Manager Assistant Service Parameters for Proxy Line, on page 142.
Manager Assistant Task Flow for Proxy Lines

Manager Assistant Service Parameters for Proxy Line

From Cisco Unified CM Administration, choose System > Service Parameters. Choose the server on which the Cisco IP Manager Assistant service is active and click ? for detailed descriptions.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Cisco IP Manager Assistant (Active) Parameters</strong></td>
<td></td>
</tr>
<tr>
<td>CTIManager (Primary) IP Address</td>
<td>This parameter specifies the IP address of the primary CTIManager that this Cisco IPMA server uses to process calls. No default value.</td>
</tr>
<tr>
<td>CTIManager (Backup) IP Address</td>
<td>This parameter specifies the IP address of the backup CTIManager that this Cisco IPMA server uses to process calls when primary CTIManager is down. No default value.</td>
</tr>
<tr>
<td>Route Point Device Name for Proxy Mode</td>
<td>This parameter specifies the device name of the CTI route point that this Cisco IPMA server uses to intercept all calls to managers' primary lines for intelligent call routing. Cisco recommends that you use same CTI route point device for all servers running the IPMA service. You must configure the CTI route point device name if any manager or assistant will be configured to use proxy mode.</td>
</tr>
<tr>
<td>CAPF Profile Instance Id for Secure Connection to CTIManager</td>
<td>This service parameter specifies the Instance ID of the Application CAPF Profile for the application user IPMASecureSysUser that this Manager Assistant will use to open a secure connection to CTIManager. Configure this parameter if CTIManager Connection Security Flag is enabled.</td>
</tr>

</table>

**Clusterwide Parameters (Parameters that apply to all servers)**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Important</td>
<td>Click Advanced to view the hidden parameters.</td>
</tr>
<tr>
<td>Cisco IPMA Server (Primary) IP Address</td>
<td>This parameter specifies the IP address of the primary Cisco IPMA server. No default value.</td>
</tr>
<tr>
<td>Cisco IPMA Server (Backup) IP Address</td>
<td>This parameter specifies the IP address of the backup Cisco IPMA server. The backup server provides IPMA service when the primary IPMA server fails. No default value.</td>
</tr>
<tr>
<td>Cisco IPMA Server Port</td>
<td>This parameter specifies the TCP/IP port on the Cisco IPMA servers to which the IPMA Assistant Consoles will open socket connections. You may change the parameter if a port conflict exists. Default value: 2912</td>
</tr>
<tr>
<td>Setting</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Cisco IPMA Assistant Console Heartbeat Interval</td>
<td>This parameter specifies the interval, in seconds, at which the Cisco IPMA server sends keepalive messages (commonly referred to as heartbeat) to the IPMA Assistant Consoles. The IPMA Assistant Consoles initiate failover when they fail to receive heartbeat from the server before the time that is specified in this parameter expires. Default value: 30 seconds</td>
</tr>
<tr>
<td>Cisco IPMA Assistant Console Request Timeout</td>
<td>This parameter specifies the time, in seconds, that the IPMA Assistant Consoles wait to receive a response from the Cisco IPMA server. Default value: 30 seconds</td>
</tr>
<tr>
<td>Cisco IPMA RNA Forward Calls</td>
<td>This parameter determines whether Cisco IPMA Ring No Answer (RNA) forwarding is enabled. Valid values are True (Cisco IPMA forwards unanswered calls to next available assistant) or False (Cisco IPMA does not forward calls). This parameter works in conjunction with the Cisco IPMA RNA Timeout parameter; calls are forwarded after the time that is specified in the Cisco IPMA RNA Timeout parameter. If a voicemail profile is specified for the line, unanswered calls that cannot be forwarded to an assistant are sent to voicemail when this timer expires. Default value: False</td>
</tr>
<tr>
<td>Alpha Numeric UserID</td>
<td>This parameter determines whether Cisco IPMA Assistant Phone uses an alphanumeric user ID or a numeric user ID. Default value: True</td>
</tr>
<tr>
<td>Cisco IPMA RNA Timeout</td>
<td>This parameter specifies the time, in seconds, that the Cisco IPMA server waits before forwarding an unanswered call to the next available assistant. This parameter works in conjunction with the Cisco IPMA RNA Forward Calls parameter; forwarding occurs only if the Cisco IPMA RNA Forward Calls parameter is set to True. Default value: 10 seconds</td>
</tr>
<tr>
<td>CTIManager Connection Security Flag</td>
<td>This parameter determines whether security for the Cisco IP Manager Assistant service CTIManager connection is enabled. If it is enabled, Cisco IPMA opens a secure connection to CTIManager using the CAPF profile that is configured for the instance ID (as specified in the CAPF Profile Instance ID for Secure Connection to CTIManager service parameter) for the application user IPMASecureSysUser. Default value: Non Secure To enable security, you must select an instance ID in the CAPF Profile Instance ID for Secure Connection to CTIManager service parameter.</td>
</tr>
<tr>
<td>Redirect call to Manager upon failure to reach Assistant</td>
<td>This parameter determines whether the Cisco Unified IP Manager Assistant application redirects the call back to the intended manager if the call fails to reach the selected proxy assistant. Default value: False</td>
</tr>
</tbody>
</table>
### Advanced Clusterwide parameters

**Important** Configure unique IP addresses for each pool so that the same Cisco IPMA server IP address does not appear in more than one pool.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Multiple Active Mode</td>
<td>This parameter determines whether multiple instances of the Cisco IP Manager Assistant service must be run for scalability. If it is enabled, Cisco IPMA can run on the other nodes as configured in the Pool 2 and Pool 3 parameters. To enable multiple active mode, you must enter the IP addresses of the nodes on which you want to run the additional instances of Cisco IPMA. Configure the Cisco IP Manager Assistant service parameters on those nodes. Default value: False</td>
</tr>
<tr>
<td>Pool 2: Cisco IPMA Server (Primary) IP Address</td>
<td>If multiple active mode is enabled, this parameter specifies the IP address of the primary Cisco IPMA server of the second instance of Cisco IPMA. Configure the Cisco IP Manager Assistant service parameters on this node.</td>
</tr>
<tr>
<td>Pool 2: Cisco IPMA Server (Backup) IP Address</td>
<td>If multiple active mode is enabled, this parameter specifies the IP address of the backup Cisco IPMA server of the second instance of Cisco IPMA. The backup server provides IPMA service when the primary IPMA server fails. Configure the Cisco IP Manager Assistant service parameters on this node.</td>
</tr>
<tr>
<td>Pool 3: Cisco IPMA Server (Primary) IP Address</td>
<td>If multiple active mode is enabled, this parameter specifies the IP address of the primary Cisco IPMA server of the third instance of Cisco IPMA. Configure the Cisco IP Manager Assistant service parameters on this node.</td>
</tr>
<tr>
<td>Pool 3: Cisco IPMA Server (Backup) IP Address</td>
<td>If multiple active mode is enabled, this parameter specifies the IP address of the primary Cisco IPMA server of the third instance of Cisco IPMA. The backup server provides IPMA service when the primary IPMA server fails. Configure the Cisco IP Manager Assistant service parameters on this node.</td>
</tr>
</tbody>
</table>

### Clusterwide Parameters (Softkey Templates)

**Important** Configure these parameters if you want to use the Manager Assistant automatic configuration for managers and assistants.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assistant Softkey Template</td>
<td>This parameter specifies the assistant softkey template that is assigned to assistant devices during Automatic Configuration. The value that is specified in this parameter is used when the <strong>Automatic Configuration</strong> check box is checked on the Cisco IPMA Assistant Configuration page.</td>
</tr>
<tr>
<td>Manager Softkey Template for Proxy Mode</td>
<td>This parameter specifies the manager softkey template for proxy mode that is assigned to manager devices during Automatic Configuration. This parameter applies only for managers that use proxy mode.</td>
</tr>
</tbody>
</table>

### Clusterwide Parameters (IPMA Device Configuration Defaults for Proxy Mode)
### Setting | Description
--- | ---
**Manager Partition** | This parameter defines the partition that is assigned to manager lines that IPMA handles on manager devices during Automatic Configuration. Make sure the partition you want to use has already been added to Cisco Unified CM Administration. If the Cisco IPMA Configuration Wizard is run, it will populate this value. This parameter applies only for managers that use proxy mode.

**All User Partition** | This parameter specifies the partition that is configured on all proxy lines and the intercom line on assistant devices, as well as the intercom line on manager devices, during Automatic Configuration. Make sure the partition you want to use has already been added to Cisco Unified CM Administration. If the Cisco IPMA Configuration Wizard is run, it will populate this value. This parameter applies only for managers or assistants that use proxy mode.

**IPMA Calling Search Space** | This parameter specifies the calling search space that is configured for manager lines on manager devices that IPMA handles and the intercom line, as well as the assistant intercom line on assistant devices during Automatic Configuration. Make sure the calling search space you want to use has already been added to Cisco Unified CM Administration. If Cisco IPMA Configuration Wizard is run, it will populate this value. This parameter applies only for managers or assistants that use proxy mode.

**Manager Calling Search Space** | This parameter defines the manager calling search space that is configured on proxy lines on assistant devices during Automatic Configuration. This calling search space must be a calling search space that already exists in the system. If Cisco IPMA Configuration Wizard is run, it will populate this value. This parameter applies only for assistants that use proxy mode.

**Cisco IPMA Primary Phone Service** | This parameter defines the IP phone service to which manager/assistant devices will be subscribed during Automatic Configuration. If Cisco IPMA Configuration Wizard is run, it will populate this value. This parameter applies only for managers or assistants that use proxy mode.

**Cisco IPMA Secondary Phone Service** | This parameter defines the secondary IP phone service to which manager or assistant devices will be subscribed during Automatic Configuration. If Cisco IPMA Configuration Wizard is run, it will populate this value. This parameter applies only for managers or assistants that use proxy mode.

### Clusterwide Parameters (Proxy Directory Number Range for Proxy Mode)

**Starting Directory Number** | This parameter specifies the starting directory number that is used as the starting number for automatic generation of proxy directory numbers during IPMA assistant configuration. After an auto-generated proxy line number is used for an assistant, the next number will be generated for the next assistant, and so on. This parameter applies only for assistants that use proxy mode.

**Ending Directory Number** | This parameter specifies the ending directory number for automatic generation of proxy directory numbers during IPMA assistant configuration. Configuration will stop at this number. This parameter applies only for assistants that use proxy mode.
### Setting

<table>
<thead>
<tr>
<th>Description</th>
<th>Clusterwide Parameters (Proxy Directory Number Range for Proxy Mode)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Number of Characters to be Stripped from Manager DN</strong></td>
<td>This parameter specifies the number of characters to be stripped from the manager directory number (DN) in the process of generating the proxy DN. Generating a proxy DN may involve stripping some number of digits and adding a prefix. Digits are stripped starting from the left. This parameter applies only for assistants that use proxy mode.</td>
</tr>
<tr>
<td><strong>Prefix for Manager DN</strong></td>
<td>This parameter specifies the prefix to be added to a manager DN in the process of generating the proxy DN. Generating a proxy DN may involve some stripping of digits and adding a prefix. This parameter applies only for assistants that use proxy mode.</td>
</tr>
</tbody>
</table>

### Configure Manager And Assign Assistant For Proxy Line

For information about configuring a new user and associating a device to the user, see [http://www.cisco.com/c/en/us/td/docs/voice_ip_comm/cucm/admin/10_0_1/ccmefg/CUCM_BK_C95ABA82_00_admin-guide-100.html](http://www.cisco.com/c/en/us/td/docs/voice_ip_comm/cucm/admin/10_0_1/ccmefg/CUCM_BK_C95ABA82_00_admin-guide-100.html).

**Note**

Make sure you configure manager information before you configure assistant information for an assistant.

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **User Management > End User**. The **Find and List Users** window is displayed.

**Step 2** Click **Find**.
The search result displays all the end users that are configured in Cisco Unified Communications Manager.

**Step 3** From the **Related Links** drop-down list, choose **Manager Configuration** and click **Go**.

**Tip** To view existing assistant configuration information, click the assistant name in the Associated Assistants list and click **View Details**. The **Cisco Unified CM Assistant - Assistant Configuration** window is displayed. To return to the manager configuration information, click the manager name in the Associated Managers list and click **View Details**.

**Step 4** From the **Device Name/Profile** drop-down list, choose the device name or device profile to associate a device name or device profile with a manager. For more information about Extension Mobility with Manager Assistant, see Manager Assistant Interactions, on page 169.

**Note** If the manager telecommutes, click the **Mobile Manager** check box and optionally choose a device profile from the **Device Name/Profile** drop-down list. After you choose a device profile, the manager must log in to the phone by using extension mobility before accessing Manager Assistant.

**Step 5** From the **Intercom Line** drop-down list, choose the intercom line appearance for the manager, if applicable.

**Note** The chosen intercom line applies to the Manager Assistant and Cisco Unified Communications Manager intercom features.
Step 6 From the Assistant Pool drop-down list, choose the appropriate pool number (1 to 3).

Step 7 From the Available Lines selection box, choose a line that you want Manager Assistant to control and click the down arrow to make the line display in the Selected Lines selection box. Configure up to five Manager Assistant—controlled lines.

Tip To remove a line from the Selected Lines selection box and from Manager Assistant control, click the up arrow.

Step 8 Check the Automatic Configuration check box to automatically configure the softkey template, subscribe to the Manager Assistant phone service, calling search space, and partition for Manager Assistant—Controlled selected lines and intercom line; and Auto Answer with Speakerphone for intercom line for the manager phone based on the Cisco IP Manager Assistant service parameters.

Note Automatic Configuration for intercom applies only when using the Manager Assistant intercom feature for the Cisco Unified IP Phones 7940 and 7960.

Step 9 Click Save.
If you checked the Automatic Configuration check box and the service parameters are invalid, a message displays. Ensure that the service parameters are valid. Upon successful completion of the automatic configuration, the manager device resets. If you configured a device profile, the manager must log out and log in to the device for settings to take effect.

What to Do Next
Configure Assistant Line Appearances for Proxy Line, on page 147.

Configure Assistant Line Appearances for Proxy Line
A proxy line specifies a phone line that appears on the assistant Cisco Unified IP Phone. Manager Assistant uses proxy lines to manage calls that are intended for a manager. The administrators can manually configure a line on the assistant phone to serve as the proxy line, or you can enable the Automatic Configuration check box to generate a DN and to add the line to the assistant phone.

Note Make sure you configure manager information and assign an assistant to the manager before you configure assistant information for an assistant.

Note If you want to automatically configure proxy line on the assistant phone, configure the service parameters in Proxy Directory Number Range and Proxy Directory Number Prefix sections.

Before You Begin
- Configure Manager And Assign Assistant For Proxy Line, on page 146

Procedure

Step 1 From Cisco Unified CM Administration, choose User Management > End User. The Find and List Users window is displayed.

Step 2 Click Find.
The search result displays all the end users that are configured in Cisco Unified Communications Manager.

**Step 3**
Click on the username to display user information for the chosen assistant.

The **End User Configuration** window is displayed.

**Step 4**
From the **Related Links** drop-down list, choose **Assistant Configuration** and click **Go**.

*Note*  
The system automatically sets the softkey template and intercom line on the basis of the Cisco IP Manager Assistant service parameter settings when the **Automatic Configuration** check box is checked. In addition, the system also sets Auto Answer with Speakerphone for intercom line.

The **Assistant Configuration** window is displayed.

**Step 5**
From the **Device Name** drop-down list, choose the device name to associate with the assistant.

**Step 6**
From the **Intercom Line** drop-down list, choose the incoming intercom line appearance for the assistant.

**Step 7**
From the **Primary Line** drop-down list, choose the primary line for the assistant.

**Step 8**
To associate the manager line to the assistant line, perform the following steps from the Manager Association to Assistant Line selection box:

a) From the **Available Lines** drop-down list, choose the assistant line that will be associated with the manager line.

b) From the **Manager Names** drop-down list, choose the preconfigured manager name for whom this proxy line will apply.

c) From the **Manager Lines** drop-down list, choose the manager line for which this proxy line will apply.

**Step 9**
Click **Save**.

The update takes effect immediately. If you chose **Automatic Configuration**, the assistant device automatically resets.

</tr>
<tr>
<td>• Configure an Intercom Directory Number, on page 320</td>
<td></td>
</tr>
<tr>
<td>• Configure an Intercom Translation Pattern, on page 315</td>
<td>Configure multiple pools if you need to support a large number of managers and assistants. You can configure up to three active Cisco IP Manager Assistant servers, with each managing up to 2500 pairs of managers and assistants.</td>
</tr>
</tbody>
</table>

**Step 5**

(Optional) Configure Multiple Manager Assistant Pool, on page 155

**Step 6**

(Optional) Configure Secure TLS Connection to CTI for Manager Assistant

- Configure IPMASSecureSysUser Application User, on page 157
- Configure CAPF Profile, on page 157
- Configure Cisco IP Manager Assistant, on page 159

Follow these procedures if your system is running in mixed mode.

**Step 7**

Configure CTI Route Point, on page 160

Cisco Unified Communications Manager Assistant requires creation of CTI route point to intercept and route calls from managers.

**Step 8**

Configure IP Phone Services for Manager and Assistant, on page 160

**Step 9**

Configure Phone Button Templates for Manager, Assistant, and Everyone, on page 164

**Step 10**

Configure Manager and Assign Assistant for Shared Line Mode, on page 166

**Step 11**

Configure Assistant Line Appearances for Shared Line, on page 167

**Step 12**

Install Assistant Console Plugin, on page 168

The assistant accesses the Cisco Unified Communications Manager Assistant features by using the Assistant Console application and the Cisco Unified IP Phone. The Assistant Console provides call-control functions such as answer, divert, transfer, and hold.
Configure Partitions for Manager Assistant Shared Line Support

You must create three partitions: Generated_Everyone, Generated_Managers, and Generated_Route_Point.

Procedure

**Step 1** From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Partition.**

**Step 2** Click **Add New** to create a new partition.

**Step 3** In the **Partition Name, Description** field, enter a name for the partition that is unique to the route plan. Partition names can contain alphanumeric characters, as well as spaces, hyphens (-), and underscore characters (_). See the online help for guidelines about partition names.

**Step 4** Enter a comma (,) after the partition name and enter a description of the partition on the same line. The description can contain up to 50 characters in any language, but it cannot include double quotes ("), percentage sign (%), ampersand (&), backslash (\), angle brackets (<>), or square brackets ([ ]). If you do not enter a description, Cisco Unified Communications Manager automatically enters the partition name in this field.

**Step 5** To create multiple partitions, use one line for each partition entry.

**Step 6** From the **Time Schedule** drop-down list, choose a time schedule to associate with this partition. The time schedule specifies when the partition is available to receive incoming calls. If you choose **None**, the partition remains active at all times.

**Step 7** Select one of the following radio buttons to configure the **Time Zone**:

• **Originating Device**—When you select this radio button, the system compares the time zone of the calling device to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

• **Specific Time Zone**—After you select this radio button, choose a time zone from the drop-down list. The system compares the chosen time zone to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

**Step 8** Click **Save**.

**What to Do Next**

Configure Calling Search Spaces for Manager Assistant Shared Line Support, on page 151
Partition Name Guidelines for Manager Assistant Shared Line Support

The list of partitions in a calling search space is limited to a maximum of 1024 characters. This means that the maximum number of partitions in a CSS varies depending on the length of the partition names. Use the following table to determine the maximum number of partitions that you can add to a calling search space if partition names are of fixed length.

Table 10: Partition Name Guidelines

<table>
<thead>
<tr>
<th>Partition Name Length</th>

</tbody>
</table>

Configure Calling Search Spaces for Manager Assistant Shared Line Support

A calling search space is an ordered list of route partitions that are typically assigned to devices. Calling search spaces determine the partitions that calling devices can search when they are attempting to complete a call.

You must create two calling search spaces: Generated_CSS_I_E and Generated_CSS_M_E.

Procedure

Step 1 From Cisco Unified CM Administration, choose Call Routing > Class of Control > Calling Search Space.
Step 2 Click Add New.
Step 3 In the Name field, enter a name. Ensure that each calling search space name is unique to the system. The name can include up to 50 alphanumeric characters and can contain any combination of spaces, periods (.), hyphens (-), and underscore characters (_).
Step 4 In the Description field, enter a description. The description can include up to 50 characters in any language, but it cannot include double-quotes ("), percentage sign (%), ampersand (&), back-slash (\), or angle brackets (<>).
Step 5 From the Available Partitions drop-down list, perform one of the following steps:
Configure Cisco IP Manager Assistant Service Parameters

Configure Cisco IP Manager Assistant service parameters if you want to use the Manager Assistant automatic configuration for managers and assistants. You must specify the cluster-wide parameters once for all Cisco IP Manager Assistant services and general parameters for each Cisco IP Manager Assistant service that is installed.

Before You Begin

- Configure Calling Search Spaces for Manager Assistant Shared Line Support, on page 151

Procedure

Step 1 From Cisco Unified CM Administration, choose System > Service Parameters. The Service Parameter Configuration window is displayed.

Step 2 From the Server drop-down list, choose the server on which the Cisco IP Manager Assistant service is active.

Step 3 From the Service drop-down list, choose Cisco IP Manager Assistant service. The Service Parameter Configuration window, which lists the parameters, is displayed.

Step 4 Configure the Cisco IP Manager Assistant Parameters, Clusterwide Parameters (Parameters that apply to all servers), and Clusterwide Parameters (Softkey Templates). For detailed descriptions, see the online help.

Step 5 Click Save.

What to Do Next

Refer to the Manager Assistant Task Flow for Shared Lines, on page 148 to determine the next task to complete.

Configure Intercom Settings

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure an Intercom Partition, on page 153</td>
</tr>
</tbody>
</table>
Configure an Intercom Partition

procedure

step 1 in the cisco unified communications manager administration window, choose call routing > intercom
> intercom route partition.
the find and list intercom partitions window appears.

step 2 click the add new button.
an add new intercom partition window appears.

step 3 under the intercom partition information section, in the name box, enter the name and description of the
intercom partition that you want to add.

note to enter multiple partitions, use one line for each partition entry. you can enter up to 75 partitions;
the names and descriptions can have up to a total of 1475 characters. the partition name cannot
exceed 50 characters. use a comma (,) to separate the partition name and description on each line.
if a description is not entered, cisco unified communications manager uses the partition name as
the description.

step 4 click save.

step 5 locate the partition that you want to configure.
intercom partition configuration window is displayed.

step 6 configure the fields in the intercom partition configuration field area. see the online help for more information
about the fields and their configuration options.

step 7 click save.
the intercom partition configuration window appears.

step 8 enter the appropriate settings. for detailed information about the intercom partition configuration parameters,
see online help.

step 9 click save.

step 10 click apply config.

what to do next
configure an intercom calling search space, on page 154
Configure an Intercom Calling Search Space

**Before You Begin**
Configure an Intercom Partition, on page 153

**Procedure**

---

**Step 1** In the menu bar, choose *Call Routing > Intercom > Intercom Calling Search Space.*

**Step 2** Click the *Add New* button.

**Step 3** Configure the fields in the Intercom Calling Search Space field area. See the online help for more information about the fields and their configuration options.

**Step 4** Click *Save.*

---

**What to Do Next**
Configure an Intercom Directory Number, on page 154

Configure an Intercom Directory Number

**Before You Begin**
Configure an Intercom Calling Search Space, on page 154

**Procedure**

---

**Step 1** Choose *Call Routing > Intercom > Intercom Directory Number.*
The *Find and List Intercom Directory Numbers* window is displayed.

**Step 2** To locate a specific intercom directory number, enter search criteria and click *Find.*
A list of intercom directory numbers that match the search criteria displayed.

**Step 3** Perform one of the followings tasks:
   a) To add an intercom directory number, click the *Add New* button.
   b) To update an intercom directory number, click the intercom directory number to update.
   The *Intercom Directory Number Configuration* window displayed.

**Step 4** Configure the fields in the Intercom Directory Number Configuration field area. See the online help for more information about the fields and their configuration options.

**Step 5** Click *Save.*

**Step 6** Click *Apply Config.*

**Step 7** Click *Reset Phone.*

**Step 8** Restart devices.
During the restart, the system may drop calls on gateways.
Configure an Intercom Translation Pattern

Before You Begin

Configure an Intercom Directory Number, on page 154

Procedure

Step 1
Choose Call Routing > Intercom > Intercom Translation Pattern. The Find and List Intercom Translation Patterns window appears.

Step 2
Perform one of the followings tasks:

a) To copy an existing intercom translation pattern, locate the partition to configure, click the Copy button beside the intercom translation pattern to copy.

b) To add a new intercom translation pattern, click the Add New button.

Step 3
Configure the fields in the Intercom Translation Pattern Configuration field area. See the online help for more information about the fields and their configuration options.

Step 4
Click Save. Ensure that the intercom translation pattern that uses the selected partition, route filter, and numbering plan combination is unique. If you receive an error that indicates duplicate entries, check the route pattern or hunt pilot, translation pattern, directory number, call park number, call pickup number, or meet-me number configuration windows.

The Intercom Translation Pattern Configuration window displays the newly configured intercom translation pattern.

What to Do Next

Refer to the Manager Assistant Task Flow for Shared Lines, on page 148 to determine the next task to complete.

Configure Multiple Manager Assistant Pool

Procedure

Step 1
From Cisco Unified CM Administration, choose System > Service Parameters. The Service Parameter Configuration window is displayed.

Step 2
From the Server drop-down list, choose the server on which the Cisco IP Manager Assistant service is active.

Step 3
From the Service drop-down list, choose the Cisco IP Manager Assistant service. The Service Parameter Configuration window, which lists the parameters, is displayed.

Step 4
Click Advanced.
The advanced parameters for **Clusterwide Parameters (Parameters that apply to all servers)** are displayed.

**Step 5** Configure the following parameters to add multiple manager assistant pools in **Clusterwide Parameters (Parameters that apply to all servers)**:

a) **Enable Multiple Active Mode**—The default is False. When this parameter is set to True, the administrator can configure up to 7000 managers and assistants by using multiple pools.

b) **Pool 2: Cisco IPMA Server (Primary) IP Address**—No default. The administrator must manually enter this IP address. Administrator can assign up to 2500 managers and assistants to this address.

c) **Pool 2: Cisco IPMA Server (Backup) IP Address**—No default. The administrator must manually enter this IP address.

d) **Pool 3: Cisco IPMA Server (Primary) IP Address**—No default. The administrator must manually enter this IP address and can assign up to 2500 managers and assistants to this address.

e) **Pool 3: Cisco IPMA Server (Backup) IP Address**—No default. The administrator must manually enter this IP address.

For detailed descriptions, see the online help.

**Step 6** Click Save.

---

**What to Do Next**

Refer to the Manager Assistant Task Flow for Shared Lines, on page 148 to determine the next task to complete.

---

**Configure Secure TLS Connection to CTI for Manager Assistant**

Manager Assistant uses WDSecureSysUser application user credentials to establish a secure TLS connection to CTI to make calls.

To configure the WDSecureSysUser application user to establish a secure TLS connection, complete the following tasks.

**Before You Begin**

- Install and configure the Cisco CTL Client.
  
  For more information about CTL Client, see the Cisco Unified Communications Manager Security Guide.

- Verify that the Cluster Security Mode in the **Enterprise Parameters Configuration** window is 1 (mixed mode). Operating the system in mixed mode impacts other security functions in your system. If your system is not currently running in mixed mode, do not switch to mixed mode until you understand these interactions. For more information, see the Cisco Unified Communications Manager Security Guide.

- Activate the Cisco Certificate Authority Proxy Function (CAPF) service on the first node.

**Procedure**

<table>

### CAPF Profile Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application User</td>
<td>From the drop-down list, choose the application user for the CAPF operation. This setting displays configured application users.</td>
</tr>
<tr>
<td></td>
<td>This setting does not appear in the <strong>End User CAPF Profile</strong> window.</td>
</tr>
<tr>
<td>End User ID</td>
<td>From the drop-down list, choose the end user for the CAPF operation. This setting displays configured end users.</td>
</tr>
<tr>
<td></td>
<td>This setting does not appear in the <strong>Application User CAPF Profile</strong> window.</td>
</tr>
<tr>
<td>Instance ID</td>
<td>Enter 1 to 128 alphanumeric characters (a-z, A-Z, 0-9). The Instance ID identifies the user for the certificate operation.</td>
</tr>
<tr>
<td></td>
<td>You can configure multiple connections (instances) of an application. To secure the connection between the application and CTIManager, ensure that each instance that runs on the application PC (for end users) or server (for application users) has a unique certificate.</td>
</tr>
<tr>
<td></td>
<td>This field relates to the CAPF Profile Instance ID for Secure Connection to CTIManager service parameter that supports web services and applications.</td>
</tr>
<tr>
<td>Certificate Operation</td>
<td>From the drop-down list, choose one of the following options:</td>
</tr>
<tr>
<td></td>
<td>• <strong>No Pending Operation</strong>—This message is displayed when no certificate operation is occurring. (default setting)</td>
</tr>
<tr>
<td></td>
<td>• <strong>Install/Upgrade</strong>—This option installs a new certificate or upgrades an existing locally significant certificate for the application.</td>
</tr>
<tr>
<td>Authentication Mode</td>
<td>The authentication mode for the Install/Upgrade certificate operation specifies <strong>By Authentication String</strong>, which means CAPF installs, upgrades, or troubleshoots a locally significant certificate only when the user or administrator enters the CAPF authentication string in the <strong>JTAPI/TSP Preferences</strong> window.</td>
</tr>
</tbody>
</table>
### Setting | Description
--- | ---
Authentication String | To create your own authentication string, enter a unique string. Each string must contain 4 to 10 digits.
To install or upgrade a locally significant certificate, the administrator must enter the authentication string in the JTAPI/TSP preferences GUI on the application PC. This string supports one-time use only; after you use the string for the instance, you cannot use it again.

Generate String | To automatically generate an authentication string, click this button. The 4- to 10-digit authentication string appears in the Authentication String field.

Key Size (bits) | From the drop-down list, choose the key size for the certificate. The default setting is 1024. The other option for key size is 512.
Key generation, which is set at low priority, allows the application to function while the action occurs. Key generation may take up to 30 or more minutes.

Operation Completes by | This field, which supports all certificate operations, specifies the date and time by which you must complete the operation.
The values that are displayed apply for the first node.
Use this setting with the CAPF Operation Expires in (days) enterprise parameter, which specifies the default number of days in which the certificate operation must be completed. You can update this parameter at any time.

Certificate Operation Status | This field displays the progress of the certificate operation, such as pending, failed, or successful.
You cannot change the information that is displayed in this field.

### Configure Cisco IP Manager Assistant

**Before You Begin**
Configure CAPF Profile, on page 157

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose **System > Service Parameters**.

**Step 2** From the **Server** drop-down list, choose the server on which the Cisco IP Manager Assistant service is active.

**Step 3** From the **Service** drop-down list, choose the **Cisco IP Manager Assistant** service.
A list of parameters appears.

**Step 4** Navigate to and update the CTIManager Connection Security Flag and CAPF Profile Instance ID for Secure Connection to CTIManager parameters.
To view parameter descriptions, click the parameter name link.
Step 5  Click Save.
Step 6  Repeat the procedure on each server on which the service is active.

What to Do Next
Refer to the Manager Assistant Task Flow for Shared Lines, on page 148 to determine the next task to complete.

Configure CTI Route Point

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > CTI Route Point. The Find and List CTI Route Points window is displayed.
Step 2  Click Add New. The CTI Route Point Configuration window is displayed.
Step 3  In the Device Name field, enter the device name.
Step 4  From the Device Pool drop-down list, choose Default.
Step 5  From the Calling Search Space drop-down list, choose Generated_CSS_M_E.
Step 6  Check the Use Device Pool Calling Party Transformation CSS check box.
Step 7  Click Save. The Add successful status message is displayed.
Step 8  From the Association area, click Line [1] - Add a new DN. The Directory Number Configuration window is displayed.
Step 9  Enter a directory number in the Directory Number field.
Step 10 From the Route Partition drop-down list, choose Generated_Route_Point.
Step 11 Click Save.

What to Do Next
Configure IP Phone Services for Manager and Assistant, on page 160

Configure IP Phone Services for Manager and Assistant

Before You Begin
Configure CTI Route Point, on page 160

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Phone Services. The Find and List IP Phone Services window is displayed.
Step 2  Click Add New.
The **IP Phone Services Configuration** window is displayed.

**Step 3**  
For each supported phone for managers and assistants, enter the required fields and click **Save**. See the Related Topics section for more information about the fields and their configuration options.  
The **Update successful** message is displayed.

### Cisco IP Phone Services Configuration Fields

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Service Information</strong></td>
<td></td>
</tr>
</tbody>
</table>
| Service Name           | Enter the name of the service. If the service is not marked as an enterprise subscription, the service name will display in areas where you can subscribe to a service, for example, under Cisco Unified Communications Self Care Portal.  
Enter up to 128 characters for the service name.  
For Java MIDlet services, the service name must exactly match the name that is defined in the Java Application Descriptor (JAD) file.  

**Note**  
Cisco Unified Communications Manager allows you to create two or more IP phone services with identical names. Cisco recommends that you do not do so unless most or all phone users are advanced, or unless an administrator always configures the IP phone services.  
Be aware that if AXL or any third-party tool accesses the list of IP phone services for configuration, you must use unique names for IP phone services.  
When the service URL points to an external customized URL, you cannot localize the service name according to the device locale of the phone. The service name gets displayed in English alphabets only. |
<p>| ASCII Service Name     | Enter the name of the service to display if the phone cannot display Unicode.                                                                   |
| Service Description    | Enter a description of the content that the service provides. The description can include up to 50 characters in any language, but it cannot include double quotation marks (&quot;) or single quotation marks ('). |</p>
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Service URL</td>
<td>Enter the URL of the server where the IP phone services application is located. Make sure that this server remains independent of the servers in your Cisco Unified Communications Manager cluster. Do not specify a Cisco Unified Communications Manager server or any server that is associated with Cisco Unified Communications Manager (such as a TFTP server or directory database publisher server). For the services to be available, the phones in the Cisco Unified Communications Manager cluster must have network connectivity to the server. For Cisco-signed Java MIDlets, enter the location where the JAD file can be downloaded; for example, a web server or the back-end application server to which the Java MIDlet communicates. For Cisco-provided default services, the service URL is displayed as Application:Cisco/\langle name of service\rangle by default; for example, Application:Cisco/CorporateDirectory. If you modify the service URL for Cisco-provided default services, verify that you configured both for the Service Provisioning setting, which displays in the Phone, Enterprise Parameter, and Common Phone Profile Configuration windows. For example, you use a custom corporate directory, so you change Application:Cisco/CorporateDirectory to the external service URL for your custom directory; in this case, change the Service Provisioning value to Both.</td>
</tr>
<tr>
<td>Secure-Service URL</td>
<td>Enter the secure URL of the server where the Cisco Unified IP Phone services application is located. Make sure that this server remains independent of the servers in your Cisco Unified Communications Manager cluster. Do not specify a Cisco Unified Communications Manager server or any server that is associated with Cisco Unified Communications Manager (such as a TFTP server or publisher database server). For the services to be available, the phones in the Cisco Unified Communications Manager cluster must have network connectivity to the server. <strong>Note</strong> If you do not provide a Secure-Service URL, the device uses the nonsecure URL. If you provide both a secure URL and a nonsecure URL, the device chooses the appropriate URL, based on its capabilities.</td>
</tr>
<tr>
<td>Service Category</td>
<td>Choose a service application type (XML or Java MIDlet). If you choose Java MIDlet, when the phone receives the updated configuration file, the phone retrieves the Cisco-signed MIDlet application (JAD and JAR) from the specified Service URL and installs the application.</td>
</tr>
<tr>
<td>Service Type</td>
<td>Choose whether the service is provisioned to the Services, Directories, or Messages button or option on the phone; that is, if the phone has these buttons or options. To determine whether your phone supports these buttons or options, see the Cisco Unified IP Phone Administration Guide that supports your phone model.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Service Vendor</td>
<td>This field allows you to specify the vendor or manufacturer for the service. This field is optional for XML applications, but it is required for Cisco-signed Java MIDlets. For Cisco-signed Java MIDlets, the value that you enter in this field must exactly match the vendor that is defined in the MIDlet JAD file. This field displays as blank for Cisco-provided default services. You can enter up to 64 characters.</td>
</tr>
</tbody>
</table>
| Service Version    | Enter the version number for the application. For XML applications, this field is optional and is informational only. For Cisco-signed Java MIDlets, consider the following information:  
  • If you enter a version, the service version must exactly match the version that is defined in the JAD file. If you enter a version, the phone attempts to upgrade or downgrade the MIDlet if the version is different than what is installed on the phone.  
  • If the field is blank, the version gets retrieved from the Service URL. Leaving the field blank ensures that the phone attempts to download the JAD file every time that the phone reregisters to Cisco Unified Communications Manager as well as every time that the Cisco-signed Java MIDlet is launched; this ensures that the phone always runs the latest version of the Cisco-signed Java MIDlet without you having to manually update the Service Version field.  
This field displays as blank for Cisco-provided default services. You can enter numbers and periods in this field (up to 16 ASCII characters). |
| Enable             | This check box allows you to enable or disable the service without removing the configuration from Cisco Unified CM Administration (and without removing the service from the database). Uncheck the check box to remove the service from the phone configuration file and the phone.                                                                                                                  |
Configure Phone Button Templates for Manager, Assistant, and Everyone

The procedures in this section describe how to configure phone button for manager and assistant.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| Step 1
Configure a Phone Button Template for Manager Assistant, on page 164 | Perform this step to assign manager and assistant button features to line or speed dial keys. |
| Step 2
Associate a Manager Assistant Button Template with a Phone, on page 165 | Perform this step to configure the manager and assistant button for a phone. |

Configure a Phone Button Template for Manager Assistant

Use this procedure to configure a phone button template for the Manager Assistant feature.

Before You Begin

Configure IP Phone Services for Manager and Assistant, on page 160

Procedure

Step 1
From Cisco Unified CM Administration, choose Device > Device Settings > Phone Button Template. The Find and List Phone Button Templates window appears.

Step 2
Click Find. The window displays a list of templates for the supported phones.

Step 3
Perform this step if you want to create a new phone button template; otherwise, proceed to the next step.
a) Select a default template for the model of phone and click **Copy**.
b) In the **Phone Button Template Information** field, enter a new name for the template.
c) Click **Save**.

**Step 4**
Perform this step if you want to add phone buttons to an existing template.
a) Enter search criteria and click **Find**.
b) Choose an existing template.
The **Phone Button Template Configuration** window appears.

**Step 5**
From the **Line** drop-down list, choose feature that you want to add to the template.

**Step 6**
Click **Save**.

**Step 7**
Perform one of the following tasks:

- If you modified a template that is already associated with devices, click **Apply Config** to restart the devices.
- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

---

**What to Do Next**

Associate a Manager Assistant Button Template with a Phone, on page 165

---

**Associate a Manager Assistant Button Template with a Phone**

**Before You Begin**

Configure a Phone Button Template for Manager Assistant, on page 164

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose **Device > Phone**.
The **Find and List Phones** window is displayed.

**Step 2**
From the **Find and List Phones** window, click **Find**.
A list of phones that are configured on the Cisco Unified Communications Manager is displayed.

**Step 3**
Choose the phone to which you want to add the phone button template.
The **Phone Configuration** window appears.

**Step 4**
In the **Phone Button Template** drop-down list, choose the phone button template that contains the new feature button.

**Step 5**
Click **Save**.
A dialog box is displayed with a message to press **Reset** to update the phone settings.

---

**What to Do Next**

Configure Manager and Assign Assistant for Shared Line Mode, on page 166
Configure Manager and Assign Assistant for Shared Line Mode

Before You Begin

Associate a Manager Assistant Button Template with a Phone, on page 165

Procedure

Step 1 From Cisco Unified CM Administration, choose User Management > End User. The Find and List Users window is displayed.

Step 2 Click Find. The search result displays all the end users that are configured in Cisco Unified Communications Manager.

Step 3 From the Related Links drop-down list, choose Manager Configuration and click Go. The Manager Configuration window is displayed.

Step 4 Check the Automatic Configuration check box to automatically configure the softkey template and Auto Answer with Speakerphone for intercom line for the manager phone based on the Cisco IP Manager Assistant service parameters.

Note Automatic Configuration for intercom applies only when the Cisco Unified Communications Manager Assistant intercom feature is used for the Cisco Unified IP Phones 7940 and 7960.

Step 5 Check Uses Shared Lines check box.

Step 6 From the Device Name/Profile drop-down list, choose the device name or device profile to associate a device name or device profile with a manager.

Note If the manager telecommutes, check the Mobile Manager check box and optionally choose a device profile from the Device Name/Profile drop-down list. When device profile is chosen, the manager must log in to the phone by using Cisco Extension Mobility before accessing Manager Assistant. See the related topics for more information about Extension Mobility with Manager Assistant.

Step 7 From the Intercom Line drop-down list, choose the intercom line appearance for the manager, if applicable. The chosen intercom line applies to the Manager Assistant and Cisco Unified Communications Manager intercom features.

Step 8 From the Assistant Pool drop-down list, choose the appropriate pool number (1 to 3).

Step 9 Choose the name of the assistant from the Available Assistants selection box and move it to the Associated Assistants selection box by clicking the down arrow to assign an assistant to the manager. You can go to the Assistant Configuration window by highlighting the assistant name and clicking the View Details link.

Step 10 Choose the appropriate line from the Available Lines list box and move it to the Selected Lines list box by clicking the down arrow to configure the Manager Assistant controlled lines. Make sure that the controlled line is always the shared line DN.

Step 11 Click Save. If you checked the Automatic Configuration check box and the service parameters are invalid, a message is displayed. Ensure that the service parameters are valid. After successful completion of the automatic configuration, the manager device resets. If you configured a device profile, the manager must log out and log in to the device for the changes to take effect.

What to Do Next

Configure Assistant Line Appearances for Shared Line, on page 167
Configure Assistant Line Appearances for Shared Line

Administrators can set up one or more lines with a shared line appearance. The Cisco Unified Communications Manager system considers a directory number to be a shared line if it appears on more than one device in the same partition.

Before You Begin
Configure Manager and Assign Assistant for Shared Line Mode, on page 166

Procedure

Step 1 From Cisco Unified CM Administration, choose User Management > End User. The Find and List Users window is displayed.

Step 2 Click Find. The search result displays all the end users that are configured in Cisco Unified Communications Manager.

Step 3 Click on the username to display user information for the chosen assistant. The End User Configuration window is displayed.

Step 4 From the Related Links drop-down list, choose Assistant Configuration and click Go. The Assistant Configuration window is displayed. The system automatically sets the softkey template and intercom line on the basis of the Cisco IP Manager Assistant service parameter settings when you check the Automatic Configuration check box. In addition, the system also sets Auto Answer with Speakerphone for intercom line.

Step 5 From the Device Name drop-down list, choose the device name to associate with the assistant.

Step 6 From the Intercom Line drop-down list, choose the incoming intercom line appearance for the assistant.

Step 7 From the Primary Line drop-down list, choose the primary line for the assistant.

a) To view existing manager configuration information, highlight the manager name in the Associated Managers list and click View Details. The Manager Configuration window is displayed.

b) To return to the Assistant Configuration window, highlight the assistant name and click View Details link in the Manager Configuration window.

In the Associated Manager selection list box, the name of the previously configured manager is displayed.

Step 8 To associate the manager line to the assistant line, perform the following steps from the Manager Association to Assistant Line selection box:

a) From the Available Lines drop-down list, choose the assistant line that will be associated with the manager line.

b) From the Manager Names drop-down list, choose the preconfigured manager name for whom this proxy line will apply.

c) From the Manager Lines drop-down list, choose the manager line for which this proxy line will apply.

Step 9 Click Save. The update takes effect immediately. If you chose Automatic Configuration, the assistant device automatically resets.
Install Assistant Console Plugin

Procedure

Step 1 From Cisco Unified CM Administration, choose Application > Plugins. The Find and List Plugins window is displayed.

Step 2 Click Find. A list of installable application plug-ins is displayed.

Step 3 Click on the Download link for Cisco Unified CM Assistant Console and save the executable to a location.

Step 4 Run the executable file. Note If you install the application on a Windows Vista PC, a security window may be displayed. Allow the installation to continue. The Cisco Unified CallManager Assistant Console installation wizard is displayed.

Step 5 In the Introduction window, click Next.

Step 6 In the License Agreement window, click Next.

Step 7 Choose a location where you want the application to install and click Next. Note By default, the application installs in C:\Program Files\Cisco\Unified CallManager Assistant Console.

Step 8 In the Pre-installation Summary window, review the summary and click Install. The installation begins.

Step 9 After the installation is complete, click Finish.

Step 10 Provide the assistant the username and password that is required to log in to the console.

Step 11 To launch the Assistant Console, click the desktop icon or choose Cisco Unified Communications Manager Assistant > Assistant Console from the Start...Programs menu.

Step 12 The Advanced tab in the Cisco Unified Communications Manager Assistant Settings window allows you to enable trace for the Assistant Console.

Step 13 Provide the assistant with the port number and the IP address or hostname of the Cisco Unified Communications Manager server on which the Cisco IP Manager Assistant service is active. The first time that the assistant logs in to the console, the assistant must enter the information in the Cisco Unified Communications Manager Assistant Server Port and the Cisco Unified Communications Manager Assistant Server Hostname or IP Address fields.

What to Do Next

Refer to the Manager Assistant Task Flow for Proxy Lines, on page 139 or Manager Assistant Task Flow for Shared Lines, on page 148 to determine the next task to complete.
Manager Assistant Interactions and Restrictions

Manager Assistant Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bulk Administration Tool</td>
<td>You can use the Bulk Administration Tool to add many users (managers and assistants) at once instead of adding users individually. The Bulk Administration Tool templates that the <strong>Cisco Unified CM Assistant Configuration Wizard</strong> creates for Cisco Unified IP Phones support only the Cisco Unified Communications Manager intercom lines. For more information, see the <em>Cisco Unified Communications Manager Bulk Administration Guide</em>.</td>
</tr>
<tr>
<td>Calling Party Normalization</td>
<td>Manager Assistant automatically supports localized and globalized calls if you configure the Calling Party Normalization feature. Manager Assistant can display localized calling party numbers on the user interfaces. In addition, for an incoming call to the manager, Manager Assistant can display localized and globalized calling party numbers when filter pattern matching occurs.</td>
</tr>
<tr>
<td>Extension Mobility</td>
<td>You can simultaneously use Manager Assistant with the Cisco Extension Mobility feature. When you log in to the Cisco Unified IP Phone using Extension Mobility, the Cisco IP Manager Assistant service is automatically enabled on that phone. You can then access the Manager Assistant features. For more information about Cisco Extension Mobility, see <em>Extension Mobility Overview</em>, on page 411.</td>
</tr>
<tr>
<td>Internet Protocol Version 6 (IPv6)</td>
<td>Manager Assistant does not support IPv6, so you cannot use phones with an IP Addressing Mode of IPv6 Only with Manager Assistant. To use Manager Assistant with the phone, ensure that you configure the phone with an IP Addressing Mode of IPv4 Only or IPv4 and IPv6.</td>
</tr>
</tbody>
</table>
Manager Assistant Interactions and Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reporting tools</td>
<td>Manager Assistant provides statistical information in the CDR Analysis and Reporting (CAR) tool and provides a summary of changes to configurations in a change log. The administrator can view a summary of changes that are made to the Manager or Assistant Configurations in Unified CM AssistantChangeLog*.txt. A manager can change defaults by accessing the Manager Configuration from a URL. An assistant can change the manager defaults from the Assistant Console. For information about the URL and Manager Configuration, see the Cisco Unified Communications Manager Assistant User Guide. When the manager or assistant makes changes, the changes are sent to a log file called ipma_changeLogxxx.log. The log file resides on the server that runs the Cisco IP Manager Assistant service. Use the following command to obtain the log file: file get activelog tomcat/logs/ipma/log4j. For more information about downloading the log file, see the Cisco Unified Real-Time Monitoring Tool Administration Guide.</td>
</tr>
</tbody>
</table>
| CDR Analysis and Reporting           | Manager Assistant supports call-completion statistics and inventory reporting for managers and assistants. The CAR tool supports call-completion statistics. Cisco Unified Serviceability supports inventory reporting. For more information, see the following guides:  
  - Cisco Unified Serviceability Administration Guide  
  - Cisco Unified Communications Manager CDR Analysis and Reporting Administration Guide |
| Multilevel Precedence and Preemption (MLPP) | The following points describe the interactions between Manager Assistant with shared line support and MLPP:  
  - The system preserves call precedence in the handling of calls by Manager Assistant. For example, when an assistant diverts a call, the system preserves the precedence of the call.  
  - Filtering of precedence calls occurs in the same manner as all other calls. The precedence of a call will not affect whether a call is filtered.  
  - Because Manager Assistant does not have information about the precedence of a call, it does not provide any additional indication of the precedence of a call on the Assistant Console. |
Manager Assistant Interactions and Restrictions

### Intercom
Manager Assistant supports the following two types of intercom:

- Manager Assistant intercom (used with Cisco Unified IP Phones 7940 and 7960). You can configure this intercom feature using the DN configuration and end user (manager and assistant) configuration windows.

- Cisco Unified Communications Manager intercom (used with Cisco Unified IP Phones 7940 and 7960). You can configure this intercom feature using the intercom partition, intercom calling search space, intercom directory number, intercom translation pattern, DN, and end user (manager and assistant) configuration windows.

### Message Waiting Indicator
The Message Waiting Indicator feature interacts with proxy line support only.

The Message Waiting Indicator (MWI) on and off numbers should have the partition of the manager line in their calling search space. The partition can exist in any order of priority within each calling search space.

### Time-of-Day Routing
The Time-of-Day feature interacts with proxy line support only.

Time-of-Day routing routes calls to different locations based on the time that the call gets made; for example, during business hours, calls get routed to a manager office, and after hours, the calls go directly to voicemail service.

For more information about Time-of-Day Routing, see the System Configuration Guide for Cisco Unified Communications Manager.

### Manager Assistant Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assistant Console Application</td>
<td>To install the Assistant Console application on a computer with Microsoft Internet Explorer 7 (or later), install the Microsoft Java Virtual Machine (JVM) before the Assistant Console installation.</td>
</tr>
<tr>
<td>Call Management features</td>
<td>The Assistant Console does not support hunt groups or queues, recording and monitoring, one-touch Call Pickup, and On-Hook transfer (the ability to transfer a call by pressing the Transfer softkey and going on hook to complete the transfer).</td>
</tr>
</tbody>
</table>
### Feature Configuration Guide for Cisco Unified Communications Manager, Release 11.0(1)

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco IP Phones</td>
<td>Manager Assistant supports SIP on Cisco Unified IP Phones 7900 Series, except for Cisco Unified IP Phones 7940 and 7960.</td>
</tr>
<tr>
<td></td>
<td>Manager Assistant supports up to 3500 managers and 3500 assistants by configuring multiple Cisco IP Manager Assistant servers (pools). When you enable multiple pools, the manager and all configured assistants for that manager should belong to the same pool.</td>
</tr>
<tr>
<td></td>
<td>Cisco Unified IP Phones 7960 and 7940 support only the Cisco Unified Communications Manager Assistant Intercom lines feature. Cisco Unified IP Phones 7900 (except 7940 and 7960) support only the Cisco Unified Communications Manager Intercom feature.</td>
</tr>
<tr>
<td></td>
<td>One manager can have up to ten assigned assistants and one assistant can support up to 33 managers (if each manager has one Cisco Unified Communications Manager–controlled line).</td>
</tr>
<tr>
<td></td>
<td>Only one assistant at a time can assist a manager.</td>
</tr>
<tr>
<td></td>
<td>Manager Assistant supports up to 3500 managers and 3500 assistants per Cisco Unified Communications Manager cluster.</td>
</tr>
<tr>
<td>Intercom</td>
<td>After an upgrade, Manager Assistant users that use the incoming intercom line do not get upgraded automatically to the Cisco Unified Communications Manager Intercom feature.</td>
</tr>
<tr>
<td></td>
<td>The system does not support calls between the Cisco Unified Communications Manager Intercom feature and regular lines (which may be configured as Manager Assistant Intercom lines).</td>
</tr>
<tr>
<td>Single Sign-On</td>
<td>Manager Assistant is not supported in the Single Sign-On environment.</td>
</tr>
<tr>
<td>Speed Dial</td>
<td>Cisco Unified IP Phones 7940, 7942, and 7945 support only two lines or speed-dial buttons.</td>
</tr>
</tbody>
</table>

### Cisco Unified Communications Manager Assistant Troubleshooting

This section describes the troubleshooting tools for Manager Assistant and the client desktop, and troubleshooting information for Manager Assistant.
### Calling Party Gets Reorder Tone

**Problem**
Calling party gets a reorder tone or a message:
This call cannot be completed as dialed.

**Possible Cause**
The calling search space of the calling line may not be configured correctly.

**Solution**
Check the calling search space of the line. For more information about configuration, see the System Configuration Guide for Cisco Unified Communications Manager.

You can also use the Cisco Dialed Number Analyzer service to check for flaws in the calling search space. For more information, see the Cisco Unified Communications Manager Dialed Number Analyzer Guide.
**Calls Do Not Get Routed When Filtering Is On or Off**

**Problem**
Calls are not routed properly.

**Possible Cause 1**
Cisco CTI Manager service may have stopped.

**Solution 1**
Restart the Cisco CTI Manager and Cisco IP Manager Assistant services from Cisco Unified Serviceability > Tools > Control Center—Feature Services.

**Possible Cause 2**
The Cisco Unified Communications Manager Assistant route point was not configured properly.

**Solution 2**
Use wildcards to match the directory number of the Cisco Unified Communications Manager Assistant CTI route point and the primary directory numbers of all managers that are configured for Cisco Unified Communications Manager Assistant.

**Possible Cause 3**
The status window on the manager phone displays the message Filtering Down. This message can indicate that Cisco Unified Communications Manager Assistant CTI route point may be deleted or may not be in service.

**Solution 3**
Use the following procedure to configure the CTI route point and restart the Cisco IP Manager Assistant service:

1. From Cisco Unified CM Administration, choose **Device > CTI Route Point**.
2. Find the route point, or add a new route point. For more information about configuration, see the *System Configuration Guide for Cisco Unified Communications Manager*.
3. Restart the Cisco CTI Manager and Cisco IP Manager Assistant services from Cisco Unified Serviceability > Tools > Control Center—Feature Services.

**Cisco IP Manager Assistant Service Unreachable**

**Problem**
After you open the Assistant Console, the following message is displayed:

Cisco IPMA Service Unreachable
Possible Cause 1
Cisco IP Manager Assistant service may have stopped.

Solution 1
Restart the Cisco Unified Communications Manager Assistant from Cisco Unified Serviceability > Tools > Control Center—Feature Services.

Possible Cause 2
The server address for the primary and secondary Cisco Unified Communications Manager Assistant servers may be configured as DNS names, but the DNS names are not configured in the DNS server.

Solution 2
Use the following procedure to replace the DNS name.

1. From Cisco Unified CM Administration, choose System > Server.
2. Replace the DNS name of the server with the corresponding IP address.
3. Restart the Cisco Unified Communications Manager Assistant from Cisco Unified Serviceability > Tools > Control Center—Feature Services.

Possible Cause 3
The Cisco CTI Manager service may have stopped.

Solution 3
Restart the Cisco Unified Communications Manager Assistant from Cisco Unified Serviceability > Tools > Control Center—Feature Services.

Possible Cause 4
The Cisco Unified Communications Manager Assistant service might be configured to open a CTI connection in secure mode, but the security configuration may not be complete.

If this scenario occurs, the following message is displayed in the alarm viewer or in the Cisco Unified Communications Manager Assistant service logs:

IPMA Service cannot initialize - Could not get Provider.

Solution 4
Check the security configuration in the service parameters of Cisco IP Manager Assistant service.

Restart the Cisco Unified Communications Manager Assistant from Cisco Unified Serviceability > Tools > Control Center—Feature Services.
Cannot Initialize Cisco IP Manager Assistant Service

Problem
The Cisco IP Manager Assistant service cannot open a connection to CTI Manager, and the following message is displayed:

IPMA Service cannot initialize - Could not get Provider

Possible Cause
The Cisco IP Manager Assistant service cannot open a connection to CTIManager. You can see the message in the alarm viewer or in the Unified CM Assistant service logs.

Solution
Restart the Cisco CTI Manager and Cisco IP Manager Assistant services from Cisco Unified Serviceability > Tools > Control Center—Feature Services.

Assistant Console Installation from Web Fails

Problem
Assistant Console installation from the web fails. The following message is displayed:

Exception: java.lang.ClassNotFoundException: InstallerApplet.class

Possible Cause
Using the Sun Java plug-in virtual machine instead of the Microsoft JVM with the standard Cisco Unified Communications Manager Assistant Console install causes failures.

Solution
The administrator directs the user to the following URL, which is a JSP page that supports the Sun Java plug-in:

https://<servername>:8443/ma/Install/IPMAConsoleInstallJar.jsp

HTTP Status 503—This Application Is Not Currently Available

Problem
http://<server-name>:8443/ma/Install/IPMAConsoleInstall.jsp displays the following error message:
HTTP Status 503—This application is not currently available

Possible Cause
Cisco IP Manager Assistant service has not been activated or is not running.
Solution
Ensure that the Cisco IP Manager Assistant service has been activated by checking the activation status of the service from Cisco Unified Serviceability > Tools > Service Activation.
If the Cisco IP Manager Assistant service has already been activated, restart the Cisco Unified Communications Manager Assistant from Cisco Unified Serviceability > Tools > Control Center—Feature Services.

Manager Is Logged Out While the Service Is Still Running

Problem
Although the manager is logged out of Cisco Unified Communications Manager Assistant, the service still runs. The display on the manager IP phone disappears. Calls do not get routed, although filtering is On. To verify that the manager is logged out, view the application log using the Cisco Unified Real-Time Monitoring Tool. Look for a warning from the Cisco Java Applications that indicates that the Cisco IP Manager Assistant service logged out.

Possible Cause
The manager pressed the softkeys more than four times per second (maximum limit allowed).

Solution
The Cisco Unified Communications Manager administrator must update the manager configuration. Perform the following procedure to correct the problem:
1. From Cisco Unified CM Administration, choose User Management > End User.
   The Find and List Users window is displayed.
2. Enter the manager name in the search field and click Find.
3. From the search results list, choose the manager that you want to update.
   The End User Configuration window is displayed.
4. From the Related Links drop-down list, choose Cisco IPMA Manager and click Go.
5. Make the necessary changes to the manager configuration and click Update.

Manager Cannot Intercept Calls That Are Ringing on the Assistant Proxy Line

Problem
The manager cannot intercept the calls that are ringing on the assistant proxy line.

Possible Cause
The calling search space of the proxy line is not configured properly.

Solution
Check the calling search space of the proxy line for the assistant phone. Perform the following procedure to correct the problem:
1. From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones search window is displayed.

2. Click the assistant phone. The Phone Configuration window is displayed.

3. Verify the calling search space configuration for the phone and for the directory number (line) and update as appropriate.

**No Page Found Error**

**Problem**
http://<server-name>:8443/ma/Install/IPMAConsoleInstall.jsp displays the following error message:
No Page Found Error

**Possible Cause 1**
Network problems.

**Solution 1**
Ensure that the client has connectivity to the server. Ping the server name that is specified in the URL and verify that it is reachable.

**Possible Cause 2**
Misspelled URL.

**Solution 2**
Because URLs are case sensitive, ensure that the URL matches exactly with the URL in the instructions.

**System Error - Contact System Administrator**

**Problem**
After you open the Assistant Console, the following message is displayed:
System Error - Contact System Administrator

**Possible Cause 1**
You may have upgraded the Cisco Unified Communications Manager. The system does not upgrade the Assistant Console automatically when you upgrade the Cisco Unified Communications Manager.
Solution 1
Uninstall the console by choosing Start > Programs > Cisco Unified Communications Manager Assistant > Uninstall Assistant Console and reinstall the console from URL https://<server-name>:8443/ma/Install/IPMAConsoleInstall.jsp.

Possible Cause 2
The user is not configured correctly in the database.

Solution 2
Ensure that the user ID and the password are run as a Cisco Unified Communications Manager user through Cisco Unified CM Administration.

Possible Cause 3
When you deleted a manager from an assistant, Cisco Unified CM Administration left a blank line for the assistant.

Solution 3
From the Assistant Configuration window, reassign the proxy lines.

Unable to Call Manager When Cisco IP Manager Assistant Service is Down

Problem
Calls do not get routed properly to managers when Cisco IP Manager Assistant service goes down.

Possible Cause
The Cisco Unified Communications Manager Assistant CTI route point does not have Call Forward No Answer enabled.

Solution
Perform the following procedure to properly configure the Cisco Unified Communications Manager Assistant route point.

1. From Cisco Unified CM Administration, choose Device > CTI Route Point.
   The Find and List CTI Route Point search window is displayed.

2. Click Find.
   A list of configured CTI route points is displayed.

3. Choose the Cisco Unified Communications Manager Assistant CTI route point that you want to update.

4. In the CTI Route Point Configuration window, click the line to update from the Association area.

5. In the Call Forward and Pickup Settings section, check the Forward No Answer Internal and the Forward No Answer External check box and enter the CTI route point DN in the Coverage/Destination field (for example, CFNA as 1xxx for the route point DN 1xxx).

6. In the Calling Search Space drop-down list, choose CSS-M-E (or appropriate calling search space).
7 Click Update.

User Authentication Fails

Problem
User authentication fails when you sign in using the login window from the Assistant Console.

Possible Cause
The following probable causes can apply:
- Incorrect management of the user in the database
- Incorrect management of the user as an assistant or a manager

Solution
Ensure that the user ID and the password are ran as a Cisco Unified Communications Manager user through Cisco Unified CM Administration.

You must run the user as an assistant or a manager by associating the Cisco Unified Communications Manager Assistant user information, which you access through Cisco Unified CM Administration under User Management > End User.
PART VI

Voice Messaging Features

• Audible Message Waiting Indicator, page 183
• Immediate Divert, page 187
Audible Message Waiting Indicator

- Audible Message Waiting Indicator Overview, page 183
- Audible Message Waiting Indicator Prerequisites, page 183
- Audible Message Waiting Indicator Configuration Task Flow, page 183
- Audible Message Waiting Indicator Troubleshooting, page 186

Audible Message Waiting Indicator Overview

You can configure Audible Message Waiting Indicator (AMWI) to play a stutter dial tone on the Cisco Unified IP Phones to notify users of new voice messages. Users hear a stutter dial tone whenever the phone goes off hook on a line on which a voice message was left.

You can configure AMWI for all the phones in a cluster or for only certain directory numbers. The directory-number-level configuration takes precedence over the cluster-wide configuration.

Audible Message Waiting Indicator Prerequisites

You can configure AMWI only on Cisco Unified IP Phones that are running phone firmware Release 8.3(1) or later.

Audible Message Waiting Indicator Configuration Task Flow

Before You Begin

- Review Audible Message Waiting Indicator Prerequisites, on page 183.
Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Generate a Phone Feature List, on page 7</td>
<td>Generate a report to identify devices that support the Audible Message Waiting Indicator feature.</td>
</tr>
<tr>
<td><strong>Step 2</strong> Configure Audible Message Waiting Indicator Service Parameters, on page 184</td>
<td>Configure AMWI default setting for all phones in a cluster.</td>
</tr>
<tr>
<td><strong>Step 3</strong> Configure Audible Message Waiting Indicator for a Directory Number, on page 184</td>
<td>Configure AMWI for a directory number that is associated to a device.</td>
</tr>
<tr>
<td><strong>Step 4</strong> Configure Audible Message Waiting Indicator for a SIP Profile, on page 185</td>
<td>Configure AMWI for SIP profiles. Perform this procedure to configure AMWI for SIP phones.</td>
</tr>
</tbody>
</table>

Configure Audible Message Waiting Indicator Service Parameters

This procedure describes how to configure AMWI default setting for all the phones in a cluster.

**Before You Begin**

Generate a Phone Feature List, on page 7

**Procedure**

<table>
<thead>
<tr>
<th>Step 1</th>
<th>From Cisco Unified CM Administration, choose System &gt; Service Parameters.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>From the Server drop-down list, choose the server that is running the Cisco CallManager service.</td>
</tr>
<tr>
<td>Step 3</td>
<td>From the Service drop-down list, choose Cisco CallManager.</td>
</tr>
<tr>
<td>Step 4</td>
<td>In the Clusterwide Parameters (Feature - General) section, choose the Audible Message Waiting Indication Policy service parameter. This parameter determines whether the Audible Message Waiting Indicator is turned on off for all the devices in the cluster.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Click Save.</td>
</tr>
</tbody>
</table>

**What to Do Next**

Configure Audible Message Waiting Indicator for a Directory Number, on page 184

Configure Audible Message Waiting Indicator for a Directory Number

Follow these steps to configure AMWI for a directory number that is associated with a device.

**Note**

The AMWI setting on an individual directory number overrides the clusterwide setting.
Before You Begin

Configure Audible Message Waiting Indicator Service Parameters, on page 184

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone.
Step 2 In the Association section, click Add a new DN.
The Directory Number Configuration window appears.
Step 3 Select the Audible Message Waiting Indicator Policy. Choose one of the following options:
   • Off
   • On—When you select this option, the users will receive a stutter dial tone when the handset is off hook.
   • Default—When you select this option, the phone uses the default that was set at the system level.
Step 4 Configure the remaining fields in the Directory Number Configuration window. See the online help for more information about the fields and their configuration options.
Step 5 Click Save.

What to Do Next

Configure Audible Message Waiting Indicator for a SIP Profile, on page 185

Configure Audible Message Waiting Indicator for a SIP Profile

Follow these steps to configure Audible Message Waiting Indicator (AMWI) for a SIP profile.

Note

The AMWI setting on an individual SIP profile overrides the clusterwide setting.

Before You Begin

Configure Audible Message Waiting Indicator for a Directory Number, on page 184

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > SIP Profile.
The Find and List SIP Profiles window appears.
Step 2 Enter the search criteria to use and click Find.
The window displays a list of SIP profiles that match the search criteria.
Step 3 Click the SIP profile that you want to update.
The SIP Profile Configuration window appears.

**Step 4** Check the **Stutter Message Waiting** check box to activate stutter dial tone when the phone is off hook and a message is waiting.

**Step 5** Click **Save**.

**Step 6** Click **Apply Config**.

---

**Audible Message Waiting Indicator Troubleshooting**

**Audible Message Waiting Indicator Is Not Heard on the Phone**

**Problem** Phone does not play stutter dial tone to notify the user of new voice messages.

**Solution**

If the user uses an SCCP phone, check the following:

- Ensure that the phone firmware release is 8.3(1) or later.
- Check the AMWI setting for the phone and the line on which the user went off hook.
- Verify that the Cisco CallManager service is running on the server.
- Check the sniffer trace between the phone and Cisco Unified Communications Manager. Make sure that the phone receives the StartTone message with tone type equal to 42.

If the user uses a SIP phone, check the following:

- Ensure that the phone firmware release is 8.3(1) or later.
- Check the line (directory number) configuration. The phone must display the settings such as `line1_msgWaitingAMWI : 1`, `line2_msgWaitingAMWI : 0`.
- Ensure that the **Stutter Message Waiting** check box is checked in the **SIP Profile Configuration** window in Cisco Unified CM Administration.

**Localized AMWI Tone Is Not Played in a Specific Locale**

**Problem** The phone that is configured in a non-English locale does not play the localized tone.

**Solution** Check the following:

- From Cisco Unified CM Administration, verify the User Locale in the **Device Profile Configuration** window (**Device > Device Settings > Device Profile**).
- Make sure that the user resets the phone after changing the locale.
- Check `user/local/cm/tftp /<locale name>` directory and verify that the AMWI tone is defined in the localized g3-tones.xml file.
Immediate Divert

- Immediate Divert Overview, page 187
- Immediate Divert Prerequisites, page 188
- Immediate Divert Configuration Task Flow, page 188
- Immediate Divert Interactions and Restrictions, page 194
- Immediate Divert Troubleshooting, page 197

Immediate Divert Overview

The Immediate Divert feature is a Cisco Unified Communications Manager supplementary service that allows you to immediately divert a call to a voicemail system. When Immediate Divert diverts a call, the line becomes available to make or receive new calls. Access the Immediate Divert feature by using the iDivert or Divert softkey on the IP phone.

Immediate Divert provides the following functions:

- Diverts a call to a voicemail system in the following manner:
  - Legacy iDivert diverts the call to the voice mailbox of the party that invokes the iDivert feature.
  - Enhanced iDivert diverts the call to either the voice mailbox of the party that invokes the iDivert feature or to the voice mailbox of the original called party.

- Diverts inbound calls that are in the Call Offering, Call on Hold, or Call Active states
- Diverts outbound calls in the Call Active or Call on Hold states

Although the Immediate Divert feature is not available to CTI applications, a CTI redirect operation exists that performs the same function as Immediate Divert. Application developers can use the CTI redirect operation to accomplish Immediate Divert.
Immediate Divert Prerequisites

- You must configure the voicemail profiles and hunt pilots. See the System Configuration Guide for Cisco Unified Communications Manager for information on how to configure voicemail profiles and hunt pilots.

- The following devices support Immediate Divert:
  - Voice-messaging systems such as Cisco Unity Connection that use the Skinny Client Control Protocol (SCCP).
  - QSIG devices (QSIG-enabled H.323 devices, MGCP PRI QSIG T1 gateways, and MGCP PRI QSIG E1 gateways), depending on the setting of the Use Legacy Immediate Divert and Allow QSIG During iDivert clusterwide service parameters.
  - The following table lists the phones that use the Divert or iDivert softkey.

<table>
<thead>
<tr>
<th>Cisco Unified IP Phone Model</th>
<th>Divert Softkey</th>
<th>iDivert Softkey</th>
<th>What to configure in softkey template</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco Unified IP Phone 6900 Series (except 6901 and 6911)</td>
<td>X</td>
<td></td>
<td>iDivert</td>
</tr>
<tr>
<td>Cisco Unified IP Phone 7900 Series</td>
<td></td>
<td>X</td>
<td>iDivert</td>
</tr>
<tr>
<td>Cisco Unified IP Phone 8900 Series</td>
<td>X</td>
<td></td>
<td>Configured by default</td>
</tr>
<tr>
<td>Cisco Unified IP Phone 9900 Series</td>
<td>X</td>
<td></td>
<td>Configured by default</td>
</tr>
</tbody>
</table>

**Note**
Cisco Unified IP Phones 8900 and 9900 series have the Divert softkey assigned by default.

Immediate Divert Configuration Task Flow

**Before You Begin**
- Review Immediate Divert Prerequisites, on page 188.
Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Configure Immediate Divert Service Parameters, on page 189</td>
<td>Configure the service parameters to enable Immediate Divert across various devices and applications.</td>
</tr>
<tr>
<td><strong>Step 2</strong> Configure a Softkey Template for Immediate Divert, on page 191</td>
<td>Create and configure a softkey template and add the iDivert softkey to that template.</td>
</tr>
<tr>
<td><strong>Step 3</strong> To Associate a Softkey Template with a Common Device Configuration, on page 192</td>
<td>Optional. To make the softkey template available to phones, you must complete either this step or the following step. Follow this step if your system uses a Common Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.</td>
</tr>
<tr>
<td><strong>Step 4</strong> Associate a Softkey Template with a Phone, on page 194</td>
<td>Optional. Use this procedure either as an alternative to associating the softkey template with the Common Device Configuration, or in conjunction with the Common Device Configuration. Use this procedure in conjunction with the Common Device Configuration if you need assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.</td>
</tr>
</tbody>
</table>

Configure Immediate Divert Service Parameters

Procedure

**Step 1** From Cisco Unified CM Administration, choose **System > Service Parameters**.

**Step 2** From the Server drop-down list, choose the server that is running the Cisco CallManager service.

**Step 3** From the Service drop-down list, choose **Cisco CallManager**.

**Step 4** Configure the fields in the **Service Parameter Configuration** window. See the Related Topics section for more information about the fields and their configuration options.

**Step 5** Click **Save**.

What to Do Next

Configure a Softkey Template for Immediate Divert, on page 191
### Service Parameter Fields for Immediate Divert

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call Park Display Timer</td>
<td>Enter a number from 0 to 100 (inclusive) to control the timer for the Immediate Divert text display on the IP phones. Set this timer for the server or for each server in a cluster that has the Cisco CallManager service and Immediate Divert configured. The default value for this service parameter is 10 seconds.</td>
</tr>
<tr>
<td>Use Legacy Immediate Divert</td>
<td>Select one of the following options from the drop-down list:</td>
</tr>
<tr>
<td></td>
<td>• True—The user that invokes the iDivert feature can divert an incoming call only to his own voice mailbox.</td>
</tr>
<tr>
<td></td>
<td>• False—Immediate Divert allows diversion of an incoming call to either the voice mailbox of the original called party or to the voice mailbox of the user that invokes the iDivert feature.</td>
</tr>
<tr>
<td></td>
<td>The default value for this service parameter is <strong>True</strong>.</td>
</tr>
<tr>
<td>Allow QSIG During iDivert</td>
<td>Select one of the following options from the drop-down list:</td>
</tr>
<tr>
<td></td>
<td>• True—Immediate Divert diverts calls to voicemail systems that can be reached over QSIG, SIP, and QSIG-enabled H.323 devices.</td>
</tr>
<tr>
<td></td>
<td>• False—Immediate Divert does not support access to voicemail systems over QSIG or SIP trunks.</td>
</tr>
<tr>
<td></td>
<td>The default value for this service parameter is <strong>False</strong>.</td>
</tr>
<tr>
<td>Immediate Divert User Response Timer</td>
<td>Enter a number from 5 to 30 (inclusive) to determine the time given to the iDivert softkey user to choose the party to whom to divert a call. If the user does not choose a party, the call remains connected. The default value for this service parameter is 5 seconds.</td>
</tr>
</tbody>
</table>
Configure a Softkey Template for Immediate Divert

To divert incoming calls or outgoing calls, configure a softkey template and assign the iDivert softkey to that template. You can configure the iDivert softkey in the following call states:

- Connected
- On hold
- Ring in

Immediate Divert supports the following call states:

- For incoming calls:
  - Call offering (shown as Ring In on the softkey template).
  - Call on hold
  - Call active

- For outgoing calls:
  - Call on hold
  - Call active

Before You Begin

Configure Immediate Divert Service Parameters, on page 189

Procedure

**Step 1**  
From Cisco Unified CM Administration, choose **Device > Device Settings > Softkey Template**. The **Softkey Template Configuration** window appears.

**Step 2**  
Perform this step to create a new softkey template; otherwise, proceed to the next step.

a) Click **Add New**.

b) Select a default template and click **Copy**.

c) In the **Softkey Template Name** field, enter a new name for the template.

d) Click **Save**.

**Step 3**  
Perform this step to add softkeys to an existing template.

a) Enter search criteria and click **Find**.

b) Choose an existing template.

The **Softkey Template Configuration** window appears.

**Step 4**  
Check the **Default Softkey Template** check box to designate this softkey template as the default softkey template.

**Note**  
If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.
Step 5 Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

Step 6 From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

Step 7 From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

Step 8 To display the softkey in additional call states, repeat the previous step.

Step 9 Click Save.

Step 10 Perform one of the following tasks:
   - If you modified a template that is already associated with devices, click Apply Config to restart the devices.
   - If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next
Perform one of the following procedures:
   - Add a Softkey Template to the Common Device Configuration, on page 193
   - Associate a Softkey Template with a Phone, on page 194

Associate a Softkey Template with a Common Device Configuration
Optional. There are two ways to associate a softkey template with a phone:
   - Add the softkey template to the Phone Configuration.
   - Add the softkey template to the Common Device Configuration.

The procedures in this section describe how to associate the softkey template with a Common Device Configuration. Follow these procedures if your system uses a Common Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see Associate a Softkey Template with a Phone, on page 194

Before You Begin
Configure a Softkey Template for Immediate Divert, on page 191

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Add a Softkey Template to the Common Device Configuration, on page 193</td>
<td></td>
</tr>
<tr>
<td>Step 2</td>
<td>Associate a Common Device Configuration with a Phone, on page 193</td>
<td></td>
</tr>
</tbody>
</table>
Add a Softkey Template to the Common Device Configuration

Procedure

**Step 1** From Cisco Unified CM Administration, choose Device > Device Settings > Common Device Configuration. The Find and List Common Device Configuration window appears.

**Step 2** Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.
   a) Click Add New.
   b) In the Name field, enter a name for the Common Device Configuration.
   c) Click Save.

**Step 3** Perform this step to add the softkey template to an existing Common Device Configuration.
   a) Enter search criteria and click Find.
   b) Choose an existing Common Device Configuration.
   The Common Device Configuration window appears.

**Step 4** In the Softkey Template drop-down list, choose the softkey template that contains the softkey that you want to make available.

**Step 5** Click Save.

**Step 6** Perform one of the following tasks:
   - If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.
   - If you modified a Common Device Configuration that is already associated with devices, click Apply Config to restart the devices.

---

**What to Do Next**

Associate a Common Device Configuration with a Phone, on page 193

---

**Associate a Common Device Configuration with a Phone**

Procedure

**Step 1** From Cisco Unified CM Administration, choose Device > Phone.
The Find and List Phones window appears.

**Step 2** Find the phone to which to add the softkey template.

**Step 3** From the Common Device Configuration drop-down list, choose the common device configuration that contains the new softkey template.

**Step 4** Click Save.

### Associate a Softkey Template with a Phone

This procedure is optional. You can use this procedure as an alternative to associating the softkey template with the Common Device Configuration. This procedure also works in conjunction with the Common Device Configuration: use it when you need to assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.

**Before You Begin**

Configure a Softkey Template for Immediate Divert, on page 191

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window appears.

**Step 2** Choose the phone to which you want to add the softkey template. The Phone Configuration window appears.

**Step 3** From the Softkey Template drop-down list, choose the template that contains the new softkey.

**Step 4** Click Save.

### Immediate Divert Interactions and Restrictions

#### Immediate Divert Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multilevel Precedence and Preemption (MLPP)</td>
<td>Immediate Divert diverts calls to voice-messaging mailboxes regardless of the type of call (for example, a precedence call). When Alternate Party Diversion (call precedence) is activated, Call Forward No Answer (CFNA) gets deactivated.</td>
</tr>
<tr>
<td>Feature</td>
<td>Interaction</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Call Forward</td>
<td>When the Forward No Answer setting on the Directory Number Configuration window is not configured, Call Forward uses the clusterwide CFNA timer service parameter, Forward No Answer Timer. If a user presses the iDivert softkey at the same time as the call is being forwarded, the call gets diverted to an assigned call forward directory number (because the timer was too short), not the voice-messaging mailbox. To resolve this situation, set the CFNA timer service parameter to enough time (for example, 60 seconds).</td>
</tr>
<tr>
<td>Call Detail Records (CDR)</td>
<td>Immediate Divert uses the immediate divert code number in the <strong>Onbehalf</strong> of fields (for example, joinOnbehalfOf and lastRedirectRedirectOnBehalfOf) in CDR.</td>
</tr>
<tr>
<td>Call Park and Directed Call Park</td>
<td>When user A calls user B, and user B parks the call; user B retrieves the call and then decides to send the call to a voice-messaging mailbox by pressing the iDivert or Divert softkey. User A receives the voice-messaging mailbox greeting of user B.</td>
</tr>
<tr>
<td>Conference</td>
<td>When a conference participant presses the iDivert softkey, the remaining conference participants receive the voice-messaging mailbox greeting of the immediate divert initiator. Conference types include Ad Hoc, Meet-Me, Barge, cBarge, and Join.</td>
</tr>
<tr>
<td>Hunt List</td>
<td>For calls that reach the phone directly through a hunt list pilot (as part of the hunting algorithms), the iDivert softkey appears dimmed if the Use Legacy Immediate Divert clusterwide service parameter is set to True; otherwise, it does not appear dimmed. For calls that do not reach the phone directly through a hunt list pilot (as part of the hunting algorithms), the iDivert softkey does not appear dimmed when the Use Legacy Immediate Divert clusterwide service parameter is set to True or False.</td>
</tr>
<tr>
<td>Auto Call Pickup</td>
<td>If the Use Legacy Immediate Divert clusterwide service parameter is set to False, and the Auto Call Pickup Enabled clusterwide service parameter is set to True, and a user of call pickup group uses call pickup to answer a call, the IP phone display will not present any choices to the user when the iDivert softkey is pressed.</td>
</tr>
</tbody>
</table>
## Immediate Divert Restrictions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voice Mail Profile</td>
<td>When you use QSIG integration with your voicemail system, a voicemail profile that includes either a voicemail pilot or a voicemail mask or both should leave the <strong>Make this the default Voice Mail Profile for the System</strong> check box unchecked. Ensure the default Voice Mail Profile setting is always set to No Voice Mail.</td>
</tr>
<tr>
<td>Call Forward All (CFA) and Call Forward Busy (CFB)</td>
<td>When Call Forward All (CFA) and Call Forward Busy (CFB) are activated, the system does not support Immediate Divert (CFA and CFB have precedence over Immediate Divert).</td>
</tr>
<tr>
<td>Busy Voicemail System</td>
<td>The iDivert detects a busy condition on the voicemail ports, when iDivert reaches a voicemail system over a local or SCCP connection. <strong>Note</strong> Immediate Divert cannot divert a call to a busy voicemail port; voicemail ports can exist as members of a route or hunt list. The call cannot divert to a busy voicemail system, but the original call gets maintained. The phone displays “Busy” message on which iDivert was invoked to indicate that the call was not diverted. When a voicemail system is reached over a QSIG or SIP trunk, iDivert can be detected, but the call does not get maintained. When the <strong>Allow QSIG During iDivert clusterwide</strong> service parameter is set to <em>True</em>, or the <strong>Use Legacy Immediate Divert clusterwide</strong> service parameter is set to <em>False</em>, Immediate Divert supports access to voicemail systems that can be reached over QSIG or SIP trunks. When the <strong>Allow QSIG During iDivert clusterwide</strong> service parameter is set to <em>False</em>, and the <strong>Use Legacy Immediate Divert clusterwide</strong> service parameter is set to <em>True</em>, Immediate Divert does not support access to voicemail systems over QSIG or SIP trunks.</td>
</tr>
<tr>
<td>Malicious Caller ID</td>
<td>System does not support using Malicious Caller ID and Immediate Divert features together.</td>
</tr>
</tbody>
</table>
Immediate Divert Troubleshooting

**Key is not active**

**Problem**
The phone displays this message when the user presses iDivert:

Key is not active

**Possible Cause**
The voice-messaging profile of the user who pressed iDivert does not have a voice-messaging pilot.

**Solution**
Configure a voice-messaging pilot in the user voice-messaging profile.

### Immediate Divert Troubleshooting

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Forward No Answer Timeout</strong></td>
<td>A race condition in connection with the Forward No Answer Timeout exists when you press the iDivert softkey. For example, if a manager presses the iDivert softkey immediately after the Forward No Answer timeout, call forward forwards the call to a preconfigured directory number. However, if the manager presses the iDivert softkey before the Forward No Answer timeout, immediate divert diverts the call to the voice-messaging mailbox of the manager.</td>
</tr>
<tr>
<td><strong>Calling Parties and Called Parties</strong></td>
<td>The calling parties and called parties can divert the call to their voice mailboxes if both simultaneously press the iDivert softkey.</td>
</tr>
<tr>
<td><strong>Conference Types</strong></td>
<td>When one participant in a conference presses the iDivert softkey, all remaining participants receive an outgoing greeting of the participant who pressed iDivert. Conference types include Meet-Me, Ad Hoc, cBarge, and Join.</td>
</tr>
<tr>
<td><strong>Split or Join Operation</strong></td>
<td>If the last action on a call was Auto Pickup, Call Transfer, Call Park, Call Park Reversion, Conference, Meet-Me Conference, or any application that performs a split or join operation, enhanced iDivert does not present a screen to a called party to choose the voice mailbox. Instead, enhanced iDivert immediately diverts the call to the voice mailbox that is associated with the called party.</td>
</tr>
</tbody>
</table>
**Temporary Failure**

**Problem**
The phone displays this message when the user presses iDivert:

Temporary Failure

**Possible Cause**
The voice-messaging system does not work, or a network problem exists.

**Solution**
Troubleshoot your voice-messaging system. See troubleshooting or voice-messaging documentation.

---

**Busy**

**Problem**
The phone displays this message when the user presses iDivert:

Busy

**Possible Cause**
This message means that the voice-messaging system is busy.

**Solution**
Configure more voice-messaging ports or try again.
PART VII

Conferencing Features

• Ad Hoc Conferencing, page 201
• Meet-Me Conferencing, page 215
• Conference Now, page 223
Ad Hoc Conferencing

- Ad Hoc Conferencing Overview, page 201

- Conference Interactions and Restrictions, page 210

Ad Hoc Conferencing Overview

Ad Hoc conferences allow the conference controller (or in some cases, another participant) to add participants to the conference.

Ad Hoc conferences comprise two types: basic and advanced. In basic ad hoc conferencing, the originator of the conference acts as the controller of the conference and is the only participant who can add or remove other participants. In advanced Ad Hoc conferencing, any participant can add or remove other participants. Advanced Ad Hoc conferencing also allows you to link multiple ad hoc conferences together.

Advanced Ad Hoc conferencing allows you to link multiple Ad Hoc conferences together by adding an Ad Hoc conference to another Ad Hoc conference as if it were an individual participant. If you attempt to link multiple conferences together when the Advanced Ad Hoc Conference Enabled service parameter is set to False, the IP phone displays a message. You can also use the methods that are available for adding individual participants to an Ad Hoc conference to add another conference to an Ad Hoc conference.

Ad Hoc Conferencing Task Flow

</table>
| • Add a Softkey Template to a Common Device Configuration, on page 204  
• Associate a Common Device Configuration with a Phone, on page 205 | Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones. |

**Step 3**  
Associate a Softkey Template with a Phone, on page 205  
Optional. Use this procedure either as an alternative to associating the softkey template with the Common Device Configuration, or in conjunction with the Common Device Configuration. Use this procedure in conjunction with the Common Device Configuration if you need assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.

**Step 4**  
Configure Ad Hoc Conferencing, on page 206  
Enable advanced conferencing, specify the maximum number of participants, and specify when to drop a conference connection.

**Step 5**  
Configure Join Across Lines, on page 209  
Enable Join Across Lines to create a conference.

### Configure Softkey Template for Conferencing

Use this procedure to make the following conferencing softkeys available:

<table>
<thead>
<tr>
<th>Softkey</th>
<th>Description</th>
<th>Call States</th>
</tr>
</thead>
</table>
| Conference List (ConfList) | View a list of participant directory numbers that are in an Ad Hoc conference. The name of the participant is displayed if it is configured in Cisco Unified Communications Manager Administration. | On Hook  
Connected |
| Join | Join up to 15 established calls (for a total of 16) to create a conference. | On Hold |
| Remove Last Conference Party (Remove) | The conference controller can invoke the conference list and remove any participant in the conference by using the Remove softkey. | On Hook  
Connected |
Procedure

**Step 1** From Cisco Unified CM Administration, choose Device > Device Settings > Softkey Template. The Softkey Template Configuration window appears.

**Step 2** Perform this step to create a new softkey template; otherwise, proceed to the next step.
   a) Click Add New.
   b) Select a default template and click Copy.
   c) In the Softkey Template Name field, enter a new name for the template.
   d) Click Save.

**Step 3** Perform this step to add softkeys to an existing template.
   a) Enter search criteria and click Find.
   b) Choose an existing template.
   The Softkey Template Configuration window appears.

**Step 4** Check the Default Softkey Template check box to designate this softkey template as the default softkey template.

*Note* If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.

**Step 5** Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

**Step 6** From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

**Step 7** From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

**Step 8** To display the softkey in additional call states, repeat the previous step.

**Step 9** Click Save.

**Step 10** Perform one of the following tasks:
   - If you modified a template that is already associated with devices, click Apply Config to restart the devices.
   - If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

---

**What to Do Next**

Complete one of the following procedures:
- Associate Softkey Template Common Device, on page 204
- Associate a Softkey Template with a Phone, on page 205
Associate Softkey Template Common Device

Optional. There are two ways to associate a softkey template with a phone:

- Add the softkey template to the Phone Configuration.
- Add the softkey template to the Common Device Configuration.

The procedures in this section describe how to associate the softkey template with a Common Device Configuration. Follow these procedures if your system uses a Common Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, go to Associate a Softkey Template with a Phone, on page 205

Before You Begin

Configure Softkey Template for Conferencing, on page 202

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Add a Softkey Template to a Common Device Configuration, on page 204</td>
<td>Perform this step to add a conferencing softkey template to the Common Device Configuration.</td>
</tr>
<tr>
<td><strong>Step 2</strong> Associate a Common Device Configuration with a Phone, on page 205</td>
<td>Perform this step to link the conferencing softkey Common Device Configuration to a phone.</td>
</tr>
</tbody>
</table>

Add a Softkey Template to a Common Device Configuration

Procedure

**Step 1**
From Cisco Unified CM Administration, choose Device > Device Settings > Common Device Configuration. The Find and List Common Device Configuration window appears.

**Step 2**
Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.

a) Click Add New.

b) In the Name field, enter a name for the Common Device Configuration.

c) Click Save.

**Step 3**
Perform this step to add the softkey template to an existing Common Device Configuration.

a) Enter search criteria and click Find.

b) Choose an existing Common Device Configuration.
The Common Device Configuration window appears.

**Step 4** In the Softkey Template drop-down list, choose the softkey template that contains the softkey that you want to make available.

**Step 5** Click Save.

**Step 6** Perform one of the following tasks:

- If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.

- If you modified a Common Device Configuration that is already associated with devices, click Apply Config to restart the devices.

---

**What to Do Next**

Associate a Common Device Configuration with a Phone, on page 205

---

**Associate a Common Device Configuration with a Phone**

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose Device > Phone.

The Find and List Phones window appears.

**Step 2** Find the phone to which you want to add the softkey template.

**Step 3** From the Common Device Configuration drop-down list, choose the common device configuration that contains the new softkey template.

**Step 4** Click Save.

**Step 5** Click Reset to update the phone settings.

---

**Associate a Softkey Template with a Phone**

This procedure is optional. You can use this procedure as an alternative to associating the softkey template with the Common Device Configuration. This procedure also works in conjunction with the Common Device Configuration: use it when you need to assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose Device > Phone.

The Find and List Phones window appears.

**Step 2** Choose the phone to which you want to add the softkey template.
The Phone Configuration window appears.

**Step 3** From the Softkey Template drop-down list, choose the template that contains the new softkey.

**Step 4** Click Save.

**Step 5** Press Reset to update the phone settings.

---

**Configure Ad Hoc Conferencing**

Configure advanced Ad Hoc conferencing to allow non-controller participants to add and remove other participants and the ability of all participants to link ad hoc conferences together.

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose System > Service Parameters.

**Step 2** From the Server drop-down list, choose the server.

**Step 3** From the Service drop-down list, choose Cisco CallManager.

**Step 4** Configure the fields in the Clusterwide Parameters (Features - Conference) area. See the Related Topics section for more information about the fields and their configuration options.

**Step 5** Click Save.

---

**What to Do Next**

Configure Join Across Lines, on page 209

**Related Topics**

Ad Hoc Conferencing Service Parameters, on page 206

---

**Ad Hoc Conferencing Service Parameters**

The following table lists the main service parameters for Ad Hoc conferencing. For additional conferencing service parameters, refer to the Service Parameter Configuration window’s Advanced option. Conferencing service parameters appear under Clusterwide Parameters (Feature - Conference).
### Table 12: Ad Hoc Conference Service Parameters

<table>
<thead>
<tr>
<th>Service Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drop Ad Hoc Conference</td>
<td>Drop Ad Hoc Conference, prevents toll fraud (where an internal conference controller disconnects from the conference while outside callers remain connected). The service parameter settings specify conditions under which an ad hoc conference gets dropped.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Never</strong>—The conference does not get dropped. (We recommend that you use the default option to avoid unintentional termination of a conference).</td>
</tr>
<tr>
<td></td>
<td>- <strong>When No OnNet Parties Remain in the Conference</strong>—The system drops the active conference when the last on-network party in the conference hangs up or drops out of the conference. Cisco Unified Communications Manager releases all resources that are assigned to the conference.</td>
</tr>
<tr>
<td></td>
<td>- <strong>When Conference Controller Leaves</strong>—The active conference terminates when the primary controller (conference creator) hangs up. Cisco Unified Communications Manager releases all resources that are assigned to the conference.</td>
</tr>
<tr>
<td><strong>Note</strong></td>
<td>We recommend that you set this service parameter to <strong>Never</strong>. Any other setting can result in unintentional termination of a conference.</td>
</tr>
<tr>
<td></td>
<td>The Drop Ad Hoc Conference service parameter works differently for conference calls that are initiated from a Cisco Unified IP Phone 7940 or 7960 that is running SIP, or a third-party phone that is running SIP.</td>
</tr>
<tr>
<td>Maximum Ad Hoc Conference</td>
<td>This parameter specifies the maximum number of participants that are allowed in a single Ad Hoc conference. Default Value: 4</td>
</tr>
<tr>
<td>Advanced Ad Hoc Conference Enabled</td>
<td>This parameter determines whether advanced Ad Hoc conference features are enabled. This includes the ability of non-controller participants to add and remove other participants and the ability of all participants to link ad hoc conferences together.</td>
</tr>
<tr>
<td>Non-linear Ad Hoc Conference Linking Enabled</td>
<td>This parameter determines whether more than two Ad Hoc conferences can be linked directly to an Ad Hoc conference in a non-linear fashion (three or more conferences linked to any one conference).</td>
</tr>
<tr>
<td>Service Parameters</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Choose Encrypted Audio Conference Instead Of Video Conference</td>
<td>This parameter determines whether Cisco Unified Communications Manager chooses an encrypted audio conference bridge or an unencrypted video conference bridge for an Ad-Hoc conference call when the conference controller's Device Security Mode is set to either Authenticated or Encrypted and at least two conference participants are video-capable. Because encrypted video conference bridges are not supported in this release, Cisco Unified Communications Manager must choose between an encrypted audio conference bridge and an unencrypted video conference bridge. The default value is <strong>True</strong>.</td>
</tr>
<tr>
<td>Minimum Video Capable Participants To Allocate Video Conference</td>
<td>This parameter specifies the number of video-capable conference participants that must be present in an Ad Hoc conference to allocate a video conference bridge. If the number of video-capable participants is less than the number specified in this parameter, Cisco Unified Communications Manager allocates an audio conference bridge. If the number of video-capable participants is equal to, or greater than, the number specified in this parameter, Cisco Unified Communications Manager allocates a video conference bridge, when available, from the configured media resource group list (MRGL). Specifying a value of zero means that video conference bridges will always be allocated, even when none of the participants on the conference are video-capable. When a conference has been established using an audio bridge and then additional video-capable participants join the conference, the conference will remain on the audio bridge and will not convert to video. The default value is <strong>2</strong>.</td>
</tr>
<tr>
<td>Allocate Video Conference Bridge For Audio Only Conferences When The Video Conference Bridge Has Higher Priority</td>
<td>This parameter determines whether Cisco Unified Communications Manager chooses a video conference bridge, when available, for an Ad Hoc audio-only conference call when the video conference bridge has a higher priority than an audio conference bridge in the media resource group list (MRGL). If an audio conference bridge has higher priority than any video conference bridge in the MRGL, Cisco Unified Communications Manager ignores this parameter. This parameter proves useful in situations where the local conference bridge is a video bridge (and configured in the MRGL with the highest priority) and audio conference bridges are only available in remote locations; in that situation, enabling this parameter means that Cisco Unified Communications Manager would attempt to use the local video conference bridge first, even for audio-only conference calls. The default value is <strong>False</strong>.</td>
</tr>
</tbody>
</table>
### Service Parameters

<table>
<thead>
<tr>
<th>Description</th>
<th>Service Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>This parameter determines whether the Click-to-Conference functionality over the SIP trunk is enabled on Cisco Unified Communications Manager. The Click-to-Conference feature allows third-party applications to setup a conference using the SIP out of dialog REFER method and subscribe to the SIP trunk for Conference Event Package through SIP SUBSCRIBE/NOTIFY. <strong>Warning</strong> Enabling this parameter could negatively affect CTI applications that are not coded to support this feature. Default value: False</td>
<td>Enable Click-to-Conference for Third-Party Applications</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Description</th>
<th>Service Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>This parameter defines a number, up to 8 digits (e.g. 0001), that is prefixed to a conference identifier generated for Adhoc and Meet-Me conferences that will be hosted on a SIP conference bridge such as Cisco Telepresence MCU or Cisco Telepresence Conductor. This field should be populated by the administrator when there are multiple clusters in a network that will be sharing the SIP conference bridges that Cisco Unified Communications Manager manages. Every cluster should be configured with a unique prefix to ensure that the conference identifier for Adhoc and Meet-Me conferences is unique. If conference resources are not being shared across clusters, then this field may not be populated.</td>
<td>Cluster Conferencing Prefix Identifier</td>
</tr>
</tbody>
</table>

### Configure Join Across Lines

The Join Across Lines feature allows a user to join calls on multiple phone lines (either on different directory numbers or on the same directory number but on different partitions) to create a conference.

**Before You Begin**

- Ensure the phone model supports Join Across Lines Generate a Phone Feature List, on page 7
- Configure Ad Hoc Conferencing, on page 206

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>From the Cisco Unified CM Administration, choose <strong>Device &gt; Device Settings &gt; Default Device Profile</strong>. The <strong>Default Device Profile Configuration</strong> window is displayed.</td>
</tr>
<tr>
<td>Step 2</td>
<td>From the <strong>Device Profile Type</strong> drop-down list, choose the phone model.</td>
</tr>
<tr>
<td>Step 3</td>
<td>From the <strong>Device Protocol</strong> drop-down list, choose the relevant SCCP or SIP protocol.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Set the <strong>Join Across Lines</strong> to <strong>On</strong>.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Click <strong>Save</strong>.</td>
</tr>
</tbody>
</table>
Conference Interactions and Restrictions

Conference Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conference by Using <strong>cBarge</strong></td>
<td>Initiate a conference by pressing the <strong>cBarge</strong> softkey, or if the Single Button cBarge feature is enabled, by pressing the shared-line button of the active call. When cBarge is initiated, a barge call gets set up by using the shared conference bridge, if available. The original call gets split and then joined at the conference bridge. The call information for all parties gets changed to Conference. The barged call becomes a conference call with the barge target device as the conference controller. It can add more parties to the conference or can drop any party. When any party releases from the call, leaving only two parties in the conference, the remaining two parties experience a brief interruption and then get reconnected as a point-to-point call, which releases the shared conference resource.</td>
</tr>
<tr>
<td>Interaction with Call Park, Call Transfer, and Redirect</td>
<td>If the conference controller transfers, parks, or redirects the conference to another party, the party that retrieves the call acts as the virtual controller for the conference. A virtual controller cannot add new parties to the conference nor remove any party that was added to the conference, but a virtual controller can transfer, park, or redirect the conference to another party, who would, in turn, become the virtual controller of the conference. When this virtual controller hangs up the call, the conference ends.</td>
</tr>
<tr>
<td>Softkey display on SIP phones</td>
<td>The ConfList and the Remove softkey feature is available only on SCCP phones. The SIP phones have a Show Details button with similar functionality.</td>
</tr>
</tbody>
</table>

Conference Restrictions

The following restrictions apply to ad hoc conferencing:
<table>
<thead>
<tr>
<th>Feature</th>
<th>Restrictions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ad Hoc conference</td>
<td>Cisco Unified Communications Manager supports a maximum of 100 simultaneous Ad Hoc conferences for each Cisco Unified Communications Manager server.</td>
</tr>
<tr>
<td></td>
<td>Cisco Unified Communications Manager supports a maximum of 64 participants per Ad Hoc conference (provided adequate conference resources are available). In the case of linked Ad Hoc conferences, the system considers each conference as one participant.</td>
</tr>
<tr>
<td>Ad Hoc conference on SIP phones:</td>
<td></td>
</tr>
<tr>
<td>• Cisco Unified IP Phone 7911</td>
<td></td>
</tr>
<tr>
<td>• Cisco Unified IP Phone 7941</td>
<td></td>
</tr>
<tr>
<td>• Cisco Unified IP Phone 7961</td>
<td></td>
</tr>
<tr>
<td>• Cisco Unified IP Phone 7970</td>
<td></td>
</tr>
<tr>
<td>• Cisco Unified IP Phone 7971</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Cisco Unified Communications Manager uses “beep” and “beep beep” tones when a new party is added and when the new party drops from the Ad Hoc conference, respectively. When a party is added to an Ad Hoc conference, a user on a phone that is running SIP may not hear the beep; when a participant drops from the Ad Hoc conference, a user on a phone that is running SIP may not hear the “beep beep”. Users might not hear the beeps because of the time it takes Cisco Unified Communications Manager to set up and tear down connections during the conferencing process.</td>
</tr>
<tr>
<td></td>
<td>You can invoke Ad Hoc conference linking for phones that are running SIP only by using the Conference and Transfer functions. The system does not support Direct Transfer and Join. Supported phones that are running SIP comprise Cisco Unified IP Phones 7911, 7941, 7961, 7970, and 7971.</td>
</tr>
</tbody>
</table>
### Conference Interactions and Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restrictions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ad Hoc conference on SIP phones:</td>
<td>• Phones display individual calls as conference calls. Cisco Unified IP Phones 7940 and 7960 can create local conference calls but not Ad Hoc conference calls.</td>
</tr>
<tr>
<td>• Cisco Unified IP Phone 7940</td>
<td>• Conference list (ConfList), is not available.</td>
</tr>
<tr>
<td>• Cisco Unified IP Phone 7960</td>
<td>• Remove last conference participant (RmLstC), is not available.</td>
</tr>
<tr>
<td>• Third-Party Phone</td>
<td>• Drop Ad Hoc conference is not supported.</td>
</tr>
<tr>
<td></td>
<td>• The SIP Profile parameter Conference Join Enabled controls behavior of the phone that is running SIP when the conference controller exits a locally hosted conference. If the Conference Join Enabled check box is unchecked, all legs disconnect when the conference controller exits the Ad Hoc conference call. If the Conference Join Enabled check box is checked, the remaining two parties stay connected.</td>
</tr>
<tr>
<td></td>
<td>• To achieve the same level of control that the Drop Ad Hoc Conference parameter settings provide for conference calls that a phone that is running SCCP initiates, the administrator can use a combination of the Conference Join Enabled SIP profile parameter and the Block OffNet to OffNet Transfer service parameter for conferences that are initiated on the phone that is running SIP (Cisco Unified IP Phone 7940 or 60). (Because the phone that is running SIP performs a transfer when it drops out of the conference call, the Block OffNet to OffNet Transfer can prevent toll fraud by not allowing two offnet phones to remain in the call.)</td>
</tr>
<tr>
<td></td>
<td>• Cisco Unified Communications Manager uses &quot;beep&quot; and &quot;beep beep&quot; tones when a new party is added and when the new party drops from the Ad Hoc conference, respectively. When a party is added to an Ad Hoc conference, a user on a phone that is running SIP may not hear the beep when a participant drops from the Ad Hoc conference, a user on a phone that is running SIP may not hear the &quot;beep beep&quot;. Users might not hear the beeps because of the time it takes Cisco Unified Communications Manager to set up and tear down connections during the conferencing process.</td>
</tr>
<tr>
<td>Feature</td>
<td>Restrictions</td>
</tr>
<tr>
<td>------------------------------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Phone displaying &quot;To Conference&quot; even when two parties are connected</td>
<td>Configure a Call Manager cluster with Publisher (CmA1) and Subscribers (CmA2). Phones A, B, C are registered with CmA1. Phones D is registered with CmA2.</td>
</tr>
<tr>
<td></td>
<td>• Setup an consultative or blind ad-hoc conference between A(1000), B(4000), C(5000), D(6000) with A as the controller.</td>
</tr>
<tr>
<td></td>
<td>• Shutdown Cma2.</td>
</tr>
<tr>
<td></td>
<td>• Phone D will go to Preservation mode &amp; press end call softkey.</td>
</tr>
<tr>
<td></td>
<td>• Phone A,B &amp; C are in conference.</td>
</tr>
<tr>
<td></td>
<td>• Phone A,B &amp; C are in conference.</td>

</tbody>
</table>
### Configure a Softkey Template for Meet-Me Conferencing

Use this procedure to make the Meet Me softkey available in the off hook call state.

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 3</strong></td>
<td>Common Device Configuration <a href="#">Associate a Softkey Template with a Phone</a>, on page 219</td>
<td>Optional. Use this procedure either as an alternative to associating the softkey template with the Common Device Configuration, or in conjunction with the Common Device Configuration. Use this procedure in conjunction with the Common Device Configuration if you need assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.</td>
</tr>
<tr>
<td><strong>Step 4</strong></td>
<td>Configure a Meet-Me Conferencing Number, on page 219</td>
<td>Enable advanced conferencing, specify the maximum number of participants, and specify when to drop a conference connection.</td>
</tr>
</tbody>
</table>

#### Configure a Softkey Template for Meet-Me Conferencing

Use this procedure to make the Meet Me softkey available in the off hook call state.

**Procedure**

1. **Step 1** From Cisco Unified CM Administration, choose **Device > Device Settings > Softkey Template**. The **Softkey Template Configuration** window appears.
2. **Step 2** Perform this step to create a new softkey template; otherwise, proceed to the next step.
   a) Click **Add New**.
   b) Select a default template and click **Copy**.
   c) In the **Softkey Template Name** field, enter a new name for the template.
   d) Click **Save**.
3. **Step 3** Perform this step to add softkeys to an existing template.
   a) Enter search criteria and click **Find**.
   b) Choose an existing template.
   The **Softkey Template Configuration** window appears.
4. **Step 4** Check the **Default Softkey Template** check box to designate this softkey template as the default softkey template.

**Note** If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.
Step 5 Choose **Configure Softkey Layout** from the **Related Links** drop-down list in the upper right corner and click **Go**.

Step 6 From the **Select a Call State to Configure** drop-down list, choose the call state for which you want the softkey to display.

Step 7 From the **Unselected Softkeys** list, choose the softkey to add and click the right arrow to move the softkey to the **Selected Softkeys** list. Use the up and down arrows to change the position of the new softkey.

Step 8 To display the softkey in additional call states, repeat the previous step.

Step 9 Click **Save**.

Step 10 Perform one of the following tasks:

- If you modified a template that is already associated with devices, click **Apply Config** to restart the devices.
- If you created a new softkey template, associate the template with the devices and then restart them. See the **What to Do Next** section for more information.

---

**What to Do Next**

Perform one of the following procedures:

- Add a Softkey Template to a Common Device Configuration, on page 218
- Associate a Softkey Template with a Phone, on page 219

---

**Associate a Softkey Template with a Common Device Configuration**

Optional. There are two ways to associate a softkey template with a phone:

- Add the softkey template to the **Phone Configuration**.
- Add the softkey template to the **Common Device Configuration**.

The procedures in this section describe how to associate the softkey template with a **Common Device Configuration**. Follow these procedures if your system uses a **Common Device Configuration** to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see **Associate a Softkey Template with a Phone**, on page 219.

**Before You Begin**

Configure a Softkey Template for Meet-Me Conferencing, on page 216

**Procedure**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Add a Softkey Template to a Common Device Configuration

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Common Device Configuration. The Find and List Common Device Configuration window appears.

Step 2  Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.
   a) Click Add New.
   b) In the Name field, enter a name for the Common Device Configuration.
   c) Click Save.

Step 3  Perform this step to add the softkey template to an existing Common Device Configuration.
   a) Enter search criteria and click Find.
   b) Choose an existing Common Device Configuration.
   The Common Device Configuration window appears.

Step 4  In the Softkey Template drop-down list, choose the softkey template that contains the softkey that you want to make available.

Step 5  Click Save.

Step 6  Perform one of the following tasks:
   • If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.
   • If you modified a Common Device Configuration that is already associated with devices, click Apply Config to restart the devices.

What to Do Next

Associate a Common Device Configuration with a Phone, on page 218

Associate a Common Device Configuration with a Phone

Before You Begin

Add a Softkey Template to a Common Device Configuration, on page 218

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Phone.
The **Find and List Phones** window appears.

**Step 2**  
Find the phone to which to add the softkey template.

**Step 3**  
From the **Common Device Configuration** drop-down list, choose the common device configuration that contains the new softkey template.

**Step 4**  
Click **Save**.

**Step 5**  
Click **Reset** to update the phone settings.

**What to Do Next**

*Configure a Meet-Me Conferencing Number*, on page 219

---

**Configure a Meet-Me Conferencing Number**

The Cisco Unified Communications Manager administrator provides the Meet-Me conference directory number range to users, so that they can access the feature. The user chooses a directory number from the range that is specified for the Meet-Me Number or Pattern to establish a Meet-Me conference and becomes the conference controller.
Procedure

Step 1 From Cisco Unified CM Administration, choose Call Routing > Meet-Me Number/Pattern. The Find and List Meet-Me Numbers window appears.

Step 2 Enter the appropriate search criteria and click Find. All matching records are displayed.

Step 3 In the list of records, click the link for the record that you want to view.

Step 4 Perform one of the followings tasks:

- To copy a Meet-Me number or pattern, click the Meet-Me number or pattern that you want to copy. The Meet-Me Number/Pattern Configuration window appears. Click Copy.

- To add a Meet-Me Number or Pattern, click the Add New button.

- To update an existing Meet-Me Number or Pattern, click the Meet-Me Number or Pattern that you want to update.

Step 5 Enter the appropriate settings. See the Related Topics section for information about the fields and their configuration options.

Step 6 Click Save.

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory Number or Pattern</td>
<td>Enter a Meet-Me number or a range of numbers. To configure a range, the dash must appear within brackets and follow a digit; for example, to configure the range 1000 to 1050, enter 10[0-5]0.</td>
</tr>
<tr>
<td>Description</td>
<td>The description can include up to 50 characters in any language, but it cannot include double quotation marks (&quot;), percentage sign (%), ampersand (&amp;), or angle brackets (&lt;&gt;).</td>
</tr>
</tbody>
</table>
### Field | Description
--- | ---
Partition | To use a partition to restrict access to the Meet-Me number or pattern, choose the desired partition from the drop-down list box. If you do not want to restrict access to the Meet-Me number or pattern, choose <None> for the partition. You can configure the number of partitions that are displayed in this drop-down list box by using the Max List Box Items enterprise parameter. If more partitions exist than the Max List Box Items enterprise parameter specifies, the Find button is displayed next to the drop-down list box. Click the Find button to display the Find and List Partitions window.

**Note** | | To set the maximum list box items, choose System > Enterprise Parameters and update the Max List Box Items field under CCMA admin Parameters.

**Note** | Make sure that the combination of Meet-Me number or pattern and partition is unique within the Cisco Unified Communications Manager cluster.

Minimum Security Level | Choose the minimum Meet-Me conference security level for this Meet-Me number or pattern from the drop-down list box.

- Choose **Authenticated** to block participants with nonsecure phones from joining the conference.
- Choose **Encrypted** to block participants with authenticated or nonsecure phones from joining the conference.
- Choose **Non Secure** to allow all participants to join the conference.

**Note** | | To use this feature, ensure that you have a secure conference bridge that is configured and available.

---

### Meet-Me Conferencing Restrictions

Cisco Unified Communications Manager supports a maximum of 100 simultaneous Meet-Me conferences for each Cisco Unified Communications Manager server.

After the maximum number of participants that is specified for that conference is has been exceeded, no other callers can join the conference.
Conference Now Overview

The Conference Now feature allows both external and internal callers to join a conference by dialing a Conference Now IVR Directory Number, which is a centralized conference assistant number. An IVR application guides the caller to join the conference by playing announcements.

A conference is established using a Meeting Number, which is the same as the Self-Service User ID. The meeting number is configured by the administrator in the end user's window. The Self-Service User ID is usually same as the user's primary extension number.

The host (End User) provides the Meeting Number, Time slot, and Attendees Access Code to all the participants. The host requires a PIN to join the conference, but the participants do not require it. If a participant dials into the meeting before the host, the participant hears Music on Hold (MOH).

After the host enters both Meeting Number and PIN correctly, a conference bridge is allocated based on the MRGL (Media Resource Group List) of the host. Participants who join before the start of the meeting are redirected to the same conference bridge.

The host can set the Attendees Access Code for a secure conference call. For more information, see topics related to Set the Access Code for Conference Now in the Cisco Unified Communications Self Care Portal Guide.

Conference Now Prerequisites

Interactive Voice Response (IVR) resource must be configured and the IVR resources have to be available to use the feature.
Conference Now Task Flow

Before You Begin

- Review Conference Now Prerequisites, on page 223.

Procedure

<table>

</tr>
<tr>
<td>Step 4</td>
<td>Configure Conference Now, on page 226</td>
<td>Use to configure Conference Now.</td>
</tr>
</tbody>
</table>

Enable End User to Host Conference Now

Procedure

Step 1 From Cisco Unified CM Administration, choose User Management > User/Phone Add > Feature Group Template. The Find and List Feature Group Templates window appears.
Step 2 Enter the appropriate search criteria and click Find. All matching records are displayed.
Step 3 In the list of records, click the link for the record that you want to view. The Feature Group Template Configuration window appears.
Step 4 Check the Enable End User to Host Conference Now check box in the Features section to allow the user to host a conference.
Step 5 Click Save.

What to Do Next

Add a Quick User/Phone, on page 225
Add a Quick User/Phone

Before You Begin
Enable End User to Host Conference Now, on page 224

Procedure

Step 1 From Cisco Unified CM Administration, choose User Management > User/Phone Add > Quick User/Phone Add
Find and List Users window is displayed.

Step 2 Click Add New.

Step 3 Configure the fields in the Quick User/Phone Add window. For more information about the fields and their configuration options, see the online help.

Step 4 Click Save.

What to Do Next
(Optional) Configure End User to Host Conference Now, on page 225

Configure End User to Host Conference Now

Procedure

Step 1 From Cisco Unified CM Administration, choose User Management > End User.
The Find and List Users window is displayed.

Step 2 To select an existing user, specify the appropriate filters in the Find User Where field, click Find to retrieve a list of users, and then select the user from the list. The search result displays all the end users that are configured in Cisco Unified Communications Manager.

Step 3 Click on the username to display user information. The End User Configuration window is displayed.

Step 4 Locate the Conference Now Information section.

Step 5 Check the Enable End User to Host Conference Now check box. If Enable End User to Host Conference Now is enabled under the Feature Group Template, then the newly added user inherits the default settings.

Step 6 The Meeting Number is generated automatically when the Self-Service User ID field in the End User Configuration window is configured. This number is the default directory number of the user which is modified in the Self-Service User ID field.

Step 7 (Optional) Enter the Attendees Access Code. The host can set the Attendees Access Code for a secure conference call. Later, the user can modify the access code in the Self Care Portal. For more information about configuration fields, see the Cisco Unified Communications Self Care Portal User Guide.

Step 8 Click Save.
What to Do Next

Call Back

Call Back Overview

The CallBack feature allows you to receive notification when a busy extension is available to receive calls. You can activate Call Back for a destination phone that is within the same Cisco Unified Communications Manager cluster as your phone or on a remote Private Integrated Network Exchange (PINX) over QSIG trunks or QSIG-enabled intercluster trunks.

To receive CallBack notification, press the CallBack softkey or feature button while receiving a busy or ringback tone. You can activate Call Back during reorder tone, which is triggered when the No Answer timer expires.

Suspend/Resume

The Call Back feature enables the system to suspend the call completion service if the user who originated Call Back is busy. When the originating user then becomes available, the call completion service resumes for that user.

Note

Call Back supports Suspend/Resume CallBack notification for both intracluster and intercluster QSIG trunks or QSIG-enabled intercluster trunks.

Call Back Prerequisites

To use the Call Back feature, the destination phone must be in one of the following locations:
• In the same Cisco Unified Communications Manager cluster as the user phone
• On a remote PINX over QSIG trunk
• On a remote PINX over QSIG-enabled intercluster trunks

If you want to use non-English phone locales or country-specific tones, you must install locales.
• The following devices support the Call Back feature:
  ◦ Cisco Unified IP Phones 6900, 7900, 8900, and 9900 Series (except 6901 and 6911)
  ◦ Cisco IP Phones 7800 and 8800 Series
  ◦ Cisco VGC Phone (uses the Cisco VG248 Gateway)
  ◦ Cisco Analog Telephone Adapter (ATA) 186 and 188
  ◦ Busy Subscriber for Cisco VG224 endpoints
  ◦ No Answer for Cisco VG224 endpoints

• A CTI route point that forwards calls to any of the supported phones.

## Call Back Configuration Task Flow

Complete one of the task flows depending on whether your phone supports softkey or buttons.

Use this table to determine whether to configure the CallBack softkey or the button for the Call Back supported IP phones.

**Configure Softkey Template for CallBack**

CallBack softkey has the following call states:

- On Hook
- Ring Out
- Connected Transfer

Use this procedure to make the CallBack softkey available:

**Before You Begin**

Ensure your phone supports Call Back.

**Procedure**

**Step 1**

From Cisco Unified CM Administration, choose **Device > Device Settings > Softkey Template**. The **Softkey Template Configuration** window appears.

**Step 2**

Perform this step to create a new softkey template; otherwise, proceed to the next step.

a) Click **Add New**.
b) Select a default template and click **Copy**.c) In the **Softkey Template Name** field, enter a new name for the template.d) Click **Save**.

**Step 3**

Perform this step to add softkeys to an existing template.

a) Enter search criteria and click **Find**.b) Choose an existing template.

The **Softkey Template Configuration** window appears.

**Step 4**

Check the **Default Softkey Template** check box to designate this softkey template as the default softkey template.

**Note** If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.
Step 5  Choose **Configure Softkey Layout** from the **Related Links** drop-down list in the upper right corner and click **Go**.

Step 6  From the **Select a Call State to Configure** drop-down list, choose the call state for which you want the softkey to display.

Step 7  From the **Unselected Softkeys** list, choose the softkey to add and click the right arrow to move the softkey to the **Selected Softkeys** list. Use the up and down arrows to change the position of the new softkey.

Step 8  To display the softkey in additional call states, repeat the previous step.

Step 9  Click **Save**.

Step 10  Perform one of the following tasks:

- If you modified a template that is already associated with devices, click **Apply Config** to restart the devices.

- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

---

**What to Do Next**

Perform one of the following procedures:

- **Associate CallBack Softkey Template with a Common Device Configuration**, on page 236
- **Associate CallBack Softkey Template with Phone**, on page 238

---

**Associate CallBack Softkey Template with a Common Device Configuration**

Optional. There are two ways to associate a softkey template with a phone:

- Add the softkey template to the **Phone Configuration**.

- Add the softkey template to the **Common Device Configuration**.

The procedures in this section describe how to associate the softkey template with a **Common Device Configuration**. Follow these procedures if your system uses a **Common Device Configuration** to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see **Associate CallBack Softkey Template with Phone**, on page 238.

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Add CallBack Softkey Template to the Common Device Configuration, on page 237</td>
<td>Perform this step to add CallBack softkey template to the Common Device Configuration.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Associate a Common Device Configuration with a Phone, on page 237</td>
<td>Perform this step to link the CallBack softkey Common Device Configuration to a phone.</td>
</tr>
</tbody>
</table>
Add CallBack Softkey Template to the Common Device Configuration

Procedure

Step 1
From Cisco Unified CM Administration, choose Device > Device Settings > Common Device Configuration. The Find and List Common Device Configuration window appears.

Step 2
Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.
   a) Click Add New.
   b) In the Name field, enter a name for the Common Device Configuration.
   c) Click Save.

Step 3
Perform this step to add the softkey template to an existing Common Device Configuration.
   a) Enter search criteria and click Find.
   b) Choose an existing Common Device Configuration.
      The Common Device Configuration window appears.

Step 4
In the Softkey Template drop-down list, choose the softkey template that contains the softkey that you want to make available.

Step 5
Click Save.

Step 6
Perform one of the following tasks:
   • If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.
   • If you modified a Common Device Configuration that is already associated with devices, click Apply Config to restart the devices.

What to Do Next
Associate a Common Device Configuration with a Phone, on page 237

Associate a Common Device Configuration with a Phone

Procedure

Step 1
From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window appears.

Step 2
Find the phone to which to add the softkey template.

Step 3
From the Common Device Configuration drop-down list, choose the common device configuration that contains the new softkey template.

Step 4
Click Save.

Step 5
Click Reset to update the phone settings.
Associate CallBack Softkey Template with Phone

Optional: Use this procedure either as an alternative to associating the softkey template with the Common Device Configuration, or in conjunction with the Common Device Configuration. Use this procedure in conjunction with the Common Device Configuration if you need to assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window appears.
Step 2  Choose the phone to which you want to add the softkey template. The Phone Configuration window appears.
Step 3  From the Softkey Template drop-down list, choose the template that contains the new softkey.
Step 4  Click Save.
Step 5  Press Reset to update the phone settings.

Configure CallBack Button

The procedures in this section describe how to configure the CallBack button.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1 Configure Phone Button Template for Call Back, on page 238</td>
<td>Perform this step to assign CallBack button features to line or speed dial keys.</td>
</tr>
<tr>

<td>Perform this step to configure the CallBack button for a phone.</td>
</tr>
</tbody>
</table>

Configure Phone Button Template for Call Back

Follow this procedure when you want to assign features to line or speed dial keys.

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Phone Button Template. The Find and List Phone Button Templates window appears.
Step 2  Click Find. The window displays a list of templates for the supported phones.
Step 3  Perform this step if you want to create a new phone button template; otherwise, proceed to the next step.
a) Select a default template for the model of phone and click **Copy**.
b) In the **Phone Button Template Information** field, enter a new name for the template.
c) Click **Save**.

**Step 4**
Perform this step if you want to add phone buttons to an existing template.
a) Enter search criteria and click **Find**.
b) Choose an existing template.
The **Phone Button Template Configuration** window appears.

**Step 5**
From the **Line** drop-down list, choose feature that you want to add to the template.

**Step 6**
Click **Save**.

**Step 7**
Perform one of the following tasks:

- If you modified a template that is already associated with devices, click **Apply Config** to restart the devices.
- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

---

**What to Do Next**

**Associate a Button Template with a Phone,** on page 239

---

**Associate a Button Template with a Phone**

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose **Device > Phone**.
The **Find and List Phones** window is displayed.

**Step 2**
From the **Find and List Phones** window, click **Find**.
A list of phones that are configured on the Cisco Unified Communications Manager is displayed.

**Step 3**
Choose the phone to which you want to add the phone button template.
The **Phone Configuration** window appears.

**Step 4**
In the **Phone Button Template** drop-down list, choose the phone button template that contains the new feature button.

**Step 5**
Click **Save**.
A dialog box is displayed with a message to press **Reset** to update the phone settings.

<tr>
<td>Call Forward</td>
<td>Calls that are made from CallBack notification screen will override all the Call Forward configured values on the target DN. The calls should be made before CallBack recall timer expires otherwise the calls will not override the Call Forward configured values.</td>
</tr>
</tbody>
</table>
| CallBack notification with phones running SIP | CallBack notification works differently only for Cisco Unified IP Phones 7960 and 7940. All other SIP phones and all SCCP phones support on-hook and off-hook notification.  
  
  The only way that Cisco Unified Communications Manager knows when a line on a SIP 7960 or 7940 phone becomes available is by monitoring an incoming SIP INVITE message that Cisco Unified Communications Manager receives from the phone. After the phone sends the SIP INVITE to Cisco Unified Communications Manager and the phone goes on-hook, Cisco Unified Communications Manager sends an audio and CallBack notification screen to the Cisco Unified IP Phone 7960 and 7940 (SIP) user. |
| Do Not Disturb (DND)             | CallBack would work normally in case or when DND-Reject is set to Off at the originating or the terminating end. The behavior differs only when DND-Reject is set to On.  
  
  - **DND-Reject On on Originating end**—User A calls User B and invokes Call Back. User A goes on DND-R. After User B is available, the CallBack notification will still be displayed to User A. That is, user will still be notified with the availability of the other party irrespective of the DND status.  
  
  - **DND-Reject On on Terminating end**—User A calls User B, and User B has set DND-Reject to On. User A will get a fast busy tone. User A can initiate CallBack on a busy endpoint. If User B is still on DND-Reject and goes Offhook and Onhook, User A will get a notification "User B is available now but on DND-R", and it will not show the Dial option. If User A does not choose to cancel, CallBack will still monitor User B until User B sets DND-Reject to Off. |
| Cisco Extension Mobility         | When a Cisco Extension Mobility user logs in or logs out, any active call completion that is associated with Call Back is automatically canceled. If a called phone is removed from the system after Call Back is activated on the phone, the caller receives a reorder tone after pressing the Dial softkey. The user may cancel or reactivate Call Back. |
Call Back Restrictions

Call Back Troubleshooting

This section describes the problems, possible causes, and solutions for various scenarios, and error messages that are displayed on the IP phone for Call Back.

**Unplug/Reset Phone After Pressing CallBack Softkey but Before CallBack Occurs**

**Problem**

You have unplugged or reset the phone after pressing the CallBack Softkey but before activating CallBack.

**Possible Cause**

Cisco Unified Communications Manager cancels the Call Back activation.

**Solution**

After the caller phone registers, the caller phone does not display the Call Back activation window after the reset. The caller must press the CallBack Softkey to view the active Call Back service. CallBack notification occurs on the phone.

**Caller Misses to View Availability Notification Before Phone Reset**

**Problem**

In an intracluster or intercluster Call Back scenario, a caller initiates Call Back for a user, for example, User B, who is unavailable. When User B becomes available, the availability notification screen displays on the caller phone, and a tone plays. The caller misses the availability notification for some reason, and the phone resets.
The caller contacts a different user, User C, for example, and presses the CallBack softkey because User C appears busy. The replace/retain screen displays on the caller phone, but the screen does not state that the availability notification already occurred for User B.

**Possible Cause**
The user reset the phone.

**Solution**
After a phone reset but not during an active call, review the Call Back notifications on the phone. Press the CallBack softkey.

### Call Back Error Messages

The following section describes the error messages that display on the IP phone screen.

**CallBack Is Not Active**

**Problem**
The following error message is displayed:

CallBack is not active. Press Exit to quit this screen.

**Possible Cause**
User pressed the CallBack softkey during the idle state.

**Solution**
Follow the recommended action provided in the error message.

**CallBack Is Already Active**

**Problem**
The following error message is displayed:

CallBack is already active on xxxx. Press OK to activate on yyyy. Press Exit to quit this screen.

**Possible Cause**
A user tried to activate Call Back, but it is already active.

**Problem**
Follow the recommended action provided in the error message.
CallBack Cannot Be Activated

Problem
The following error message is displayed:
CallBack cannot be activated for xxxx.

Possible Cause
When a user tried to activate Call Back, either the extension is not available in Cisco Unified Communications Manager database or there is no QSIG route to the destination (that is, the extension belongs to remote Proxy which is connected via non-QSIG trunk), and the extension is not found in the database.

Solution
The user must try again, or the administrator must add the directory number to the Cisco Unified CM Administration.

Key Not Active

Problem
During a call, the CallBack softkey displays on the phone and the user presses the CallBack softkey before the phone rings. But, the following error message is displayed on the phone:
Key Not Active

Possible Cause
User may not be pressing the CallBack softkey at the appropriate time.

Solution
Users must press the CallBack softkey after a ringing or busy signal is received. Pressing the softkey at the wrong time may cause an error message to display on the phone.
Hotline

This chapter describes how to use and configure the Hotline feature.

- Hotline Overview, page 245
- System Requirements for Hotline, page 246
- Hotline Configuration Task Flow, page 246
- Hotline Troubleshooting, page 257

Hotline Overview

The Hotline feature extends the Private Line Automatic Ringdown (PLAR) feature, which allows you to configure a phone so that when the user goes off hook (or the NewCall softkey or line key gets pressed), the phone immediately dials a preconfigured number. The phone user cannot dial any other number from a phone that is configured for PLAR. Hotline adds the following additional restrictions and administrator controls for phones that use PLAR:

- Hotline devices (devices configured to use hotline) that receive calls will receive calls only from other hotline devices, and will reject non-hotline callers.
- You can configure a Hotline phone to call only, receive only, or both call and receive.
- You can restrict the features available on a Hotline phone by applying a softkey template to the phone.
- Analog hotline phones ignore inbound hookflash signals.

Route Class Signaling

Hotline uses route class signaling to allow Hotline phones to receive calls only from other Hotline phones. A route class is a DSN code that identifies the class of traffic for a call. The route class informs downstream devices about special routing or termination requirements. A Hotline phone can only accept calls from a Hotline phone with the same route class.
Call Screening

Hotline also provides Configurable Call Screening based on caller ID. Configurable Call Screening allows a receiving Hotline phone to screen calls based on caller ID information and allow only callers in a screening list to connect.

System Requirements for Hotline

The following hotline system requirements exist for Cisco Unified Communications Manager:

- Cisco Unified Communications Manager 8.0(1) or higher on each server in the cluster
- MGCP gateway POTS phones (FXS).
- SCCP gateway POTS phones (FXS).

Tip

Cisco Feature Navigator allows you to determine which Cisco IOS and Catalyst OS software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to http://cfn.cloudapps.cisco.com/ITDIT/CFN/.

You do not need a Cisco.com account to access Cisco Feature Navigator.

Hotline Configuration Task Flow

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Generate a Phone Feature List, on page 7</td>
<td>Log in to Cisco Unified Reporting and run a phone feature list report to determine which phones support Hotline.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Create Custom Softkey Template, on page 247</td>
<td>Optional. If you want to restrict features on a Hotline phone, create a softkey template that allows only the features that you want.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Configure Hotline on Phones, on page 247</td>
<td>Enable the phone as a Hotline device.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Configure Route Class Signaling Task Flow, on page 248</td>
<td>Configure route class signaling to support the Hotline feature.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Configure Hotline to Call Only or Receive Only Task Flow, on page 252</td>
<td>Optional. If you want to restrict a Hotline phone to either originating calls only or terminating calls only, configure call and receive settings.</td>
</tr>
<tr>
<td>Step 6</td>
<td>Configure Call Screening with a Calling Search Space, on page 254</td>
<td>Optional. Use calling search spaces and partitions to configure a call screening list for your Hotline phones.</td>
</tr>
</tbody>
</table>
Create Custom Softkey Template

When configuring Hotline, you can customize a softkey template to display only those features that you want to make available to a Hotline phone.

Cisco Unified Communications Manager includes standard softkey templates for call processing and applications. When creating custom softkey templates, copy the standard templates and make modifications as required.

Before You Begin

Generate a Phone Feature List, on page 7

Procedure

Step 1 Choose Device > Device Settings > Softkey Template.
Step 2 Click Add New.
Step 3 From the drop-down list, select a softkey template and click Copy to create a new template.
Step 4 In the Softkey Template Name field, enter a unique name to identify the softkey template.
Step 5 Enter a description that describes the use of the template. The description can include up to 50 characters in any language, but it cannot include double-quotes ("), percentage sign (%), ampersand (&), backslash (\), or angle brackets (<>).
Step 6 To designate this softkey template as the standard softkey template, check the Default Softkey Template check box.
  Note If you designate a softkey template as the default softkey template, you will not be able to delete this softkey template unless you first remove the default designation.
Step 7 Click Save.
  The softkey template gets copied, and the Softkey Template Configuration window redisplay.
Step 8 (Optional) Click the Add Application button.
Step 9 Configure the positions of the softkeys on the Cisco Unified IP Phone LCD screen.
Step 10 To save your configuration, click Save.

What to Do Next

Configure Hotline on Phones, on page 247

Configure Hotline on Phones

Use this procedure to enable the phone as a Hotline device.

Before You Begin

Optional. If you want to create a custom softkey template to display only those features that you want to make available to a Hotline phone, see Create Custom Softkey Template, on page 247.
Procedure

**Step 1** In Cisco Unified CM Administration, choose **Device > Phone**.

**Step 2** Click **Find** and select the phone that you want to enable as a Hotline device.

**Step 3** Check the **Hotline Device** check box.

**Step 4** If you have created a custom softkey template specifically for the Hotline phone, from the **Softkey Template** drop-down list, choose the softkey template.

**Step 5** Click **Save**.

**Note** You can also assign a softkey template to a Device Pool and then assign that Device Pool to the phone.

---

**What to Do Next**

Configure Route Class Signaling Task Flow, on page 248

---

**Configure Route Class Signaling Task Flow**

Perform this task flow to configure route class signaling for Hotline calls.

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** Enable Route Class Signaling in the Cluster, on page 249 | Set the route class signaling clusterwide defaults for trunks and gateways to enabled.  
**Note** The settings for individual trunks and gateways override the clusterwide defaults. If you use this service parameter to enable route class signaling across the cluster, route class signaling can still be disabled on an individual trunk or gateway. |
| **Step 2** Enable Route Class Signaling on Trunks, on page 249 | Enable route class signaling on an individual trunk. |
| **Step 3** Enable Route Class Signaling on Gateways, on page 250 | Enable route class signaling on an MGCP T1/CAS or MGCP PRI gateway. |
| **Step 4** Configure Signaling Labels for the Hotline Route Class, on page 250 | Configure SIP signaling labels for Hotline route classes. |
| **Step 5** Configure the Route Class on Hotline Route Patterns, on page 251 | Configure the route class on the route patterns that are routing your Hotline calls. |
| **Step 6** Configure the Route Class on Hotline Translation Patterns, on page 252 | Optional. If you use translation patterns on your Hotline calls, configure the route class on your translation patterns. |
Enable Route Class Signaling in the Cluster

When you set the **Route Class Trunk Signaling Enabled** service parameter to **True**, the default route class signaling setting for all trunks or gateways in the cluster that support route class signaling is set to enabled.

---

**Note**

The settings for individual trunks and gateways override the clusterwide defaults. If you use this service parameter to enable route class signaling across the cluster, route class signaling can still be disabled on an individual trunk or gateway.

---

**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose **System > Service Parameters**.

**Step 2**
Set the **Route Class Trunk Signaling Enabled** service parameter to **True**.

**Step 3**
Click **Save**.

---

**What to Do Next**

Use the following procedures to configure route class signaling on individual trunks or gateways.

- Enable Route Class Signaling on Trunks, on page 249
- Enable Route Class Signaling on Gateways, on page 250

---

Enable Route Class Signaling on Trunks

Use this procedure to enable route class signaling on an individual trunk. The configuration for individual trunks overrides the clusterwide service parameter setting.

**Before You Begin**

Follow the Enable Route Class Signaling in the Cluster, on page 249 procedure to use a clusterwide service parameter to configure the default route class signaling settings for all trunks in the cluster.

**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose **Device > Trunks**.

**Step 2**
Click **Find** and select the SIP trunk on which you want to enable route class signaling.

**Step 3**
From the **Route Class Signaling Enabled** drop-down list box, choose one of the following options:

- **Default**—This trunk uses the setting from the **Route Class Signaling Enabled** service parameter.
- **Off**—Route class signaling is disabled for this trunk.
- **On**—Route class signaling is enabled for this trunk.

**Step 4**
Click **Save**.
What to Do Next

Enable Route Class Signaling on Gateways, on page 250

Enable Route Class Signaling on Gateways

Use this procedure to enable route class signaling on an individual MGCP PRI or MGCP T1/CAS gateway. The configuration for individual gateways overrides the clusterwide service parameter setting.

Before You Begin

Follow the Enable Route Class Signaling in the Cluster, on page 249 procedure to use a clusterwide service parameter to set the default route class signaling setting for gateways in the cluster.

Perform the Enable Route Class Signaling on Trunks, on page 249 procedure to configure route class signaling for individual trunks.

Procedure

Step 1 In Cisco Unified CM Administration, choose Device > Gateways.
Step 2 Click Find and select the gateway on which you want to configure route class signaling.
Step 3 From the Route Class Signaling Enabled drop-down list box, choose one of the following options:

  • Default—This gateway uses the setting from the clusterwide Route Class Signaling Enabled service parameter.
  • Off—Route class signaling is disabled on this gateway.
  • On—Route class signaling is enabled on this gateway.

Step 4 If you want to encode voice route class for voice calls, check the Encode Voice Route Class check box.
Step 5 Click Save.

What to Do Next

Configure Signaling Labels for the Hotline Route Class, on page 250

Configure Signaling Labels for the Hotline Route Class

You must configure a SIP signaling label value for the Hotline route class that you want to use.

Before You Begin

Enable route class signaling on your trunks and gateways. For details, see Enable Route Class Signaling in the Cluster, on page 249.
Procedure

Step 1  In Cisco Unified CM Administration, choose System > Service Parameters.
Step 2  From the Server drop-down list, choose the server on which the CallManager service is running.
Step 3  From the Service drop-down list, choose Cisco CallManager.
Step 4  Click Advanced.
Step 5  In the SIP Route Class Naming Authority service parameter field, enter a value to represent the naming authority and context for the labels used in SIP signaling to represent route class. The default value is cisco.com.
Step 6  In the SIP Hotline Voice Route Class Label service parameter field, enter a label to represent the Hotline Voice route class. The default value is hotline.
Step 7  In the SIP Hotline Data Route Class Label service parameter field, enter a label to represent the Hotline Data route class. The default value is ccdata.
Step 8  Click Save.

What to Do Next

Configure the Route Class on Hotline Route Patterns, on page 251

Configure the Route Class on Hotline Route Patterns

This procedure describes call routing instructions that are specific to Hotline devices. For detailed information on how to configure route patterns and translation patterns in your network, see the Cisco Unified Communications Manager System Configuration Guide.

For each route pattern that you expect to route a Hotline call, you must set the route class for that route pattern to Hotline Voice or Hotline Data.

Before You Begin

Configure Signaling Labels for the Hotline Route Class, on page 250

Before you perform this procedure, it is expected that your network call routing is set up with route patterns.

Procedure

Step 1  In Cisco Unified CM Administration, choose Call Routing > Route/Hunt > Route Patterns.
Step 2  Click Find to display a list of route patterns in your network.
Step 3  For each T1/CAS route pattern that is used to route a Hotline call:
   a) From the Find and List Route Patterns window, select the route pattern.
   b) From the Route Class drop-down list box, choose either Hotline Voice or Hotline Data as the route class for this route pattern.
   c) Click Save.

What to Do Next

Configure the Route Class on Hotline Translation Patterns, on page 252
Configure the Route Class on Hotline Translation Patterns

Before You Begin

Before you perform this procedure, it is expected that you have set up network call routing with route patterns and translation patterns.

Perform the Configure the Route Class on Hotline Route Patterns, on page 251 procedure.

Procedure

| Step 1 | In Cisco Unified CM Administration, choose Call Routing > Translation Pattern. |
| Step 2 | Click Find to display the translation patterns in your cluster. |
| Step 3 | For each translation pattern that you want to use on a Hotline number, perform the following steps: |
|       | a) From the Route Class drop-down list box, select either Hotline Voice or Hotline Data. |
|       | b) Click Save. |

Configure Hotline to Call Only or Receive Only Task Flow

The configuration example in this task flow describes how to set up a Hotline phone to either place calls only or receive calls only.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure Partitions for Hotline Call Only Receive Only, on page 252</td>
</tr>
<tr>
<td></td>
<td>Create two partitions: one should be empty and the other will be assigned to a new CSS.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Configure Calling Search Space for Hotline Call Only Receive Only, on page 253</td>
</tr>
<tr>
<td></td>
<td>Create a new calling search space and assign one of the new partitions to this CSS. This CSS will contain no other partition.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Perform one of the following procedures:</td>
</tr>
<tr>
<td></td>
<td>• Configure Call Only on Hotline Phone, on page 254</td>
</tr>
<tr>
<td></td>
<td>• Configure Receive Only on Hotline Phone, on page 254</td>
</tr>
<tr>
<td></td>
<td>If you want to configure call only, assign the empty partition to the phone line. If you want to configure receive only, assign the new CSS to the phone.</td>
</tr>
</tbody>
</table>

Configure Partitions for Hotline Call Only Receive Only

If you want to configure a Hotline phone to either place calls only, or to receive calls only you must create two partitions.
**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose **Call Routing > Class of Control > Partitions**.

**Step 2**
Click **Add New**.

**Step 3**
Create a new partition.

**Step 4**
Enter a unique name and description for the partition. For example, **IsolatedPartition**.

*Note* This partition will not be assigned to any CSS.

**Step 5**
Click **Save**

**Step 6**
Repeat steps 2-5 and create a second partition. For example, **EmptyPartition**.

*Note* This partition will not be assigned to any phone line, but it will be assigned to the NoRouteCSS.

---

**What to Do Next**

Configure Calling Search Space for Hotline Call Only Receive Only, on page 253

---

**Configure Calling Search Space for Hotline Call Only Receive Only**

You must create a calling search and assign one of the two partitions that you've created to the calling search space.

**Before You Begin**

Configure Partitions for Hotline Call Only Receive Only, on page 252

---

**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose **Call Routing > Class of Control > Calling Search Space**.

**Step 2**
Click **Add New**.

**Step 3**
Enter a **Name** and **Description** for the calling search space.

**Step 4**
From the **Available Partitions** list box, use the arrows to select the **EmptyPartition** partition.

*Note* Make sure that the partition is assigned to only this calling search space and to no phone lines.

**Step 5**
Click **Save**

---

**What to Do Next**

Perform one of the following procedures:

- Configure Call Only on Hotline Phone, on page 254
- Configure Receive Only on Hotline Phone, on page 254
Configure Call Only on Hotline Phone

If you have set up your partitions and calling search spaces, perform these steps to configure the Hotline phone to place calls only.

**Before You Begin**

Configure Calling Search Space for Hotline Call Only Receive Only, on page 253

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>In Cisco Unified CM Administration, choose Call Routing &gt; Phone.</td>
</tr>
<tr>
<td>2</td>
<td>Click Find and select the Hotline phone.</td>
</tr>
<tr>
<td>3</td>
<td>From the left navigation pane, click the phone line. The Directory Number Configuration window displays.</td>
</tr>
<tr>
<td>4</td>
<td>From the Route Partition drop-down list, select the empty partition that you created.</td>
</tr>
<tr>
<td>5</td>
<td>Click Save.</td>
</tr>
</tbody>
</table>

Configure Receive Only on Hotline Phone

If you have created your calling search space and partitions already, perform these steps to configure the Hotline phone to receive calls only.

**Before You Begin**

Configure Calling Search Space for Hotline Call Only Receive Only, on page 253

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>In Cisco Unified CM Administration, choose Device &gt; Phone.</td>
</tr>
<tr>
<td>2</td>
<td>Click Find and select the Hotline phone.</td>
</tr>
<tr>
<td>3</td>
<td>From the Calling Search Space drop-down list, select the new CSS that you created in the previous procedure.</td>
</tr>
<tr>
<td>4</td>
<td>Click Save.</td>
</tr>
</tbody>
</table>

Configure Call Screening with a Calling Search Space

Configure call screening for any intraswitched (line to line) Hotline calls by assigning a unique CSS where the Hotline phones that are in the partitions are only those Hotline phones that you want to be able to call each other.

**Note**

You can also configure call screening by creating translation patterns where each pattern matches each number pattern that you want to either allow or screen.
Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure Partitions for Hotline Call Screening, on page 255</td>
<td>Create any new partitions for your Hotline phone lines.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Create Calling Search Space for Hotline Call Screening, on page 256</td>
<td>Create a new CSS for the screening list. The CSS must include partitions with only those Hotline numbers that you want to allow.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Configure Hotline Phones for Call Screening, on page 257</td>
<td>Assign the new CSS and partition to the Hotline phone.</td>
</tr>
</tbody>
</table>

Configure Partitions for Hotline Call Screening

To configure call screening in Hotline phones using a calling search space, you must set up partitions where the only Hotline numbers are those that you want to allow.

Perform the following procedure if you need to create a new partition for your Hotline call screening list.

Procedure

Step 1 From Cisco Unified CM Administration, choose Call Routing > Class of Control > Partition.

Step 2 Click Add New to create a new partition.

Step 3 In the Partition Name, Description field, enter a name for the partition that is unique to the route plan. Partition names can contain alphanumeric characters, as well as spaces, hyphens (-), and underscore characters (_). See the online help for guidelines about partition names.

Step 4 Enter a comma (,) after the partition name and enter a description of the partition on the same line. The description can contain up to 50 characters in any language, but it cannot include double quotes ("), percentage sign (%), ampersand (&), backslash (\), angle brackets (<>), or square brackets ([ ]). If you do not enter a description, Cisco Unified Communications Manager automatically enters the partition name in this field.

Step 5 To create multiple partitions, use one line for each partition entry.

Step 6 From the Time Schedule drop-down list, choose a time schedule to associate with this partition. The time schedule specifies when the partition is available to receive incoming calls. If you choose None, the partition remains active at all times.

Step 7 Select one of the following radio buttons to configure the Time Zone:

- **Originating Device**—When you select this radio button, the system compares the time zone of the calling device to the Time Schedule to determine whether the partition is available to receive an incoming call.
• **Specific Time Zone**—After you select this radio button, choose a time zone from the drop-down list. The system compares the chosen time zone to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

**Step 8**  
Click **Save**.

---

**What to Do Next**

Create Calling Search Space for Hotline Call Screening, on page 256

---

**Create Calling Search Space for Hotline Call Screening**

Perform the following procedure to create a new calling search space for the Hotline phones in the call screening list. Make sure that the only Hotline numbers in the partitions that you select for this CSS are those Hotline numbers that you want to allow in the call screening list. No Hotline numbers that you want to screen out should be included in the partitions for this CSS.

**Before You Begin**

Configure Partitions for Hotline Call Screening, on page 255

---

**Procedure**

**Step 1**  
From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Calling Search Space**.

**Step 2**  
Click **Add New**.

**Step 3**  
In the **Name** field, enter a name.  
Ensure that each calling search space name is unique to the system. The name can include up to 50 alphanumeric characters and can contain any combination of spaces, periods (.), hyphens (-), and underscore characters (_).

**Step 4**  
In the **Description** field, enter a description.  
The description can include up to 50 characters in any language, but it cannot include double-quotes ("), percentage sign (%), ampersand (&), back-slash (\), or angle brackets (<>).

**Step 5**  
From the **Available Partitions** drop-down list, perform one of the following steps:

- For a single partition, select that partition.
- For multiple partitions, hold down the **Control (CTRL)** key, then select the appropriate partitions.

**Step 6**  
Select the down arrow between the boxes to move the partitions to the **Selected Partitions** field.

**Step 7**  
(Optional) Change the priority of selected partitions by using the arrow keys to the right of the **Selected Partitions** box.

**Step 8**  
Click **Save**.

---

**What to Do Next**

Configure Hotline Phones for Call Screening, on page 257
Configure Hotline Phones for Call Screening

If you have already configured calling search spaces and partitions for Hotline call screening, perform this procedure to assign the calling search spaces and partitions to your Hotline phones.

**Before You Begin**

*Create Calling Search Space for Hotline Call Screening*, on page 256

**Procedure**

**Step 1**  
In Cisco Unified CM Administration, choose **Device > Phone**.

**Step 2**  
Click **Find** and select the Hotline phone.

**Step 3**  
From the **Calling Search Space** drop-down list box, select the new calling search space that you created for the Hotline call screening list.

**Step 4**  
Click **Save**.

**Step 5**  
From the left navigation pane, click the phone line that you want to use for Hotline calls. The Directory Number Configuration window displays.

**Step 6**  
From the **Route Partition** drop-down list box, select a partition that is included in the calling search space that you set up.

**Step 7**  
Click **Save**.

**Hotline Troubleshooting**

The following table provides troubleshooting information for cases where hotline calls do not dial correctly.

*Table 14: Troubleshooting Hotline—Calls Do Not Dial Correctly*

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dial tone</td>
<td>Check PLAR configuration.</td>
</tr>
<tr>

</table>
Speed Dial and Abbreviated Dial Overview

Administrators can configure speed dial numbers for phones to provide speed dial buttons for users or to configure phones that do not have a specific user that is assigned to them. Users use the Cisco Unified Communications Self Care Portal to change the speed dial buttons on their phones. When configuring speed dial entries, some of the speed dial entries are assigned to the speed dial buttons on the IP phone; the remaining speed dial entries are used for abbreviated dialing. When a user starts dialing digits, the AbbrDial softkey displays, and the user can access any speed dial entry by entering the appropriate index (code) for abbreviated dialing.

The speed dial settings on the phone are associated with a physical button on a phone, whereas the abbreviated dial settings are not associated with a phone button.

Pause In Speed Dial

You can use Speed Dial to reach destinations that require a Forced Authorization Code (FAC), Client Matter Code (CMC), dialing pauses, or additional digits (such as a user extension, a meeting access code, or a voice mail password). When you press the configured speed dial, the phone establishes the call to the destination number and sends the specified FAC, CMC, and additional digits with dialing pauses inserted.

To include dialing pauses in the speed dial, include a comma (,) as part of the speed-dial string. A comma acts as a pause duration for post connect DTMF digits and also as a delimiter between destination address digits and FAC, CMC codes. Each comma you include represents an additional pause of 2 seconds. For example, two commas (,,) represent a pause of 4 seconds. It also allows you to separate FAC and CMC from the other digits in the speed-dial string.
Speed Dial and Abbreviated Dial Configuration Task Flow

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Generate a Phone Feature List, on page 7</td>
<td>Generate a report to identify devices that support the Speed Dial and Abbreviated Dial feature.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Configure Speed Dial and Abbreviated Dial, on page 260</td>
<td>Configure Speed Dial and Abbreviated Dial numbers.</td>
</tr>
</tbody>
</table>

**Configure Speed Dial and Abbreviated Dial**

You can configure a total of 199 speed dial and abbreviated dial settings. Configure speed dial settings for the physical buttons on the phone. Configure abbreviated dial settings for the speed dial numbers that you access with abbreviated dialing. You can configure speed dial entries and abbreviated dial indexes in the same window.

You can also configure post connect DTMF digits as well as FAC, CMC codes as part of the speed dial.

Follow these steps to configure speed dial and abbreviated dial.

---

**Note**

Not all Cisco Unified IP Phones support abbreviated dialing. See the phone user guide for information.

**Before You Begin**

Generate a Phone Feature List, on page 7

**Procedure**

**Step 1**

In Cisco Unified Communications Manager Administration, choose Device > Phone. Enter your search criteria and click Find. Choose the phone for which you want to configure speed dial buttons. The Phone Configuration window appears.

**Step 2**

From the Phone Configuration window, choose Add/Update Speed Dials from the Related Links drop-down list at the top of the window and click Go. The Speed Dial and Abbreviated Dial Configuration window appears for the phone.

**Step 3**

In the Number field, enter the number that you want the system to dial when the user presses the speed dial button or the abbreviated dial index for abbreviated dial. You can enter digits 0 through 9, *, #, and +, which is the international escape character. To include dialing pauses in the speed dial, you can enter comma (,) which can act as a delimiter before sending DTMF digits. Each comma you include represents an additional pause of 2 seconds. For example, two commas (,,) represent a pause of 4 seconds. Use of commas also allows you to separate FAC and CMC from the other digits in the speed dial string.
Ensure that the following requirements are met when you include FAC and CMC in the speed dial string:

- FAC must always precede CMC in the speed dial string.
- A speed dial label is required for speed dials with FAC and DTMF digits.
- Only one comma is allowed between FAC and CMC digits in the string.

**Step 4** In the **Label** field, Enter the text that you want to display for the speed dial button or abbreviated dial number.

**Note** This field is not available for all the phones. To determine whether this field is available for your Cisco Unified IP Phone, see the user documentation for your phone model.

**Step 5** (Optional) If you are configuring a pause in speed dial, you must add a label so that FAC, CMC, and DTMF digits are not displayed on the phone screen.
Speed Dial and Abbreviated Dial Configuration Task Flow
WebDialer

- WebDialer Configuration Task Flow, page 263
- WebDialer Interactions and Restrictions, page 275
- WebDialer Troubleshooting, page 276

WebDialer Overview

Cisco WebDialer is installed on a Cisco Unified Communications Manager node and used along with Cisco Unified Communications Manager. It allows Cisco Unified IP Phone users to make calls from web and desktop applications.

Cisco WebDialer uses hyperlinked telephone numbers in a company directory to allow users to make calls from a web page by clicking on the telephone number of the person that they are trying to call.

In the Cisco Unified Communications Self-Care Portal, from the Directory window, launch Cisco WebDialer using a URL similar to the following:

https://<IP address of Cisco Unified Communications Manager server>:8443/webdialer/

WebDialer Prerequisites

Cisco WebDialer requires the following software components:

- CTI-supported Cisco Unified IP Phones

WebDialer Configuration Task Flow

Activate WebDialer

Procedure

**Step 1**
From Cisco Unified Serviceability, choose **Tools > Service Activation**.

**Step 2**
From the **Servers** drop-down list, choose the Cisco Unified Communications Manager server that is listed.

**Step 3**
From **CTI Services**, check the **Cisco WebDialer Web Service** check box.

**Step 4**
Click **Save**.

**Step 5**
From Cisco Unified Serviceability, choose **Tools > Control Center - Feature Services** to confirm that the CTI Manager service is active and is in start mode.

For WebDialer to function properly, the CTI Manager service must be active and in start mode.

What to Do Next

Configure Language Locale for WebDialer, on page 271 or complete any or all of the following optional tasks:

- Enable WebDialer Tracing, on page 265
- Configure WebDialer Servlet, on page 266
- Configure Redirector Servlet, on page 266
- Configure WebDialer Application Server, on page 267
- Configure Secure TLS Connection to CTI, on page 267

Enable WebDialer Tracing

To enable Cisco WebDialer tracing, use the Cisco Unified Serviceability Administration application. Trace settings apply to both the WebDialer and Redirector servlets. To collect traces, use the Real Time Monitoring Tool (RTMT).

To access the WebDialer trace files, use the following CLI commands:

- `file get activelog tomcat/logs/webdialer/log4j`
- `file get activelog tomcat/logs/redirector/log4j`

For more information about traces, see the *Cisco Unified Serviceability Administration Guide*.

Before You Begin

Activate WebDialer, on page 265
Procedure

Step 1 From the navigation drop-down list of the Cisco Unified Communications Manager application, choose **Cisco Unified Serviceability** and then click **Go**.

Step 2 Choose **Trace > Configuration**.

Step 3 From the **Server** drop-down list, choose the server on which to enable tracing.

Step 4 From the **Service Group** drop-down list, choose CTI Services.

Step 5 From the **Service** drop-down list, choose the **Cisco WebDialer Web Service**.

Step 6 In the **Trace Configuration** window, change the trace settings according to your troubleshooting requirements.

**Note** For more information about WebDialer trace configuration settings, see the *Cisco Unified Serviceability Administration Guide*.

Step 7 Click **Save**.

What to Do Next

Configure WebDialer Servlet, on page 266

Configure WebDialer Servlet

The WebDialer servlet is a Java servlet that allows Cisco Unified Communications Manager users in a specific cluster to make and complete calls.

**Before You Begin**

Activate WebDialer, on page 265

Procedure

Step 1 Choose **System > Service Parameters**.

Step 2 From the **Server** drop-down list, choose the Cisco Unified Communications Manager server on which to configure Cisco WebDialer web service parameters.

Step 3 From the **Service** drop-down list, choose **Cisco WebDialer Web Service**.

Step 4 Configure the relevant WebDialer Web Service parameters. For detailed information about the parameters, see online help.

Step 5 Restart the Cisco WebDialer Web Service for new parameter values to take effect.

What to Do Next

Configure Redirector Servlet, on page 266

Configure Redirector Servlet

Redirector servlet is a Java-based Tomcat servlet. When a Cisco WebDialer user makes a request, the Redirector servlet looks for that request in the Cisco Unified Communications Manager cluster and redirects the request to the specific Cisco WebDialer server that is located in the Cisco Unified Communications Manager cluster.
The Redirector servlet is available only for multi cluster applications that are developed by using HTML over HTTPS interfaces.

**Before You Begin**

*Activate WebDialer, on page 265*

**Procedure**

**Step 1** From Cisco Unifies CM Administration, choose System > Service Parameters.

**Step 2** From the Server drop-down list, choose the Cisco Unified Communications Manager server on which to configure the Redirector Servlet.

**Step 3** From the Service drop-down list, choose the Cisco WebDialer Web Service.

**Step 4** Configure the relevant WebDialer Web Service parameters. For detailed information about the parameters, see online help.

**Step 5** Restart the Cisco WebDialer Web Service for new parameter values to take effect.

For more information on WebDialer Web Service, see the *Cisco Unified Serviceability Administration Guide*.

**What to Do Next**

*Configure WebDialer Application Server, on page 267*

**Configure WebDialer Application Server**

Application server is required to configure the Redirector Servlet. Redirector is required only when you have multiple Cisco Unified Communications Manager servers configured in a cluster.

**Before You Begin**

*Activate WebDialer, on page 265*

**Procedure**

**Step 1** In the Cisco Unified Communications Manager Administration Application server window, choose System > Application Server.

**Step 2** From the Application Server Type drop-down list box, choose a Cisco WebDialer application server. The server appears in the List of WebDialers field in the Service Parameter Configuration window for the Cisco WebDialer Web Service.

**Configure Secure TLS Connection to CTI**

WebDialer uses WDSecureSysUser application user credentials to establish a secure TLS connection to CTI to make calls. To configure the WDSecureSysUser application user to establish a secure TLS connection, complete the following tasks.
Before You Begin

- Install and configure the Cisco CTL Client. For more information about CTL Client, see the Cisco Unified Communications Manager Security Guide.

- Verify that the Cluster Security Mode in the Enterprise Parameters Configuration window is 1 (mixed mode). Operating the system in mixed mode impacts other security functions in your system. If your system is not currently running in mixed mode, do not switch to mixed mode until you understand these interactions. For more information, see the Cisco Unified Communications Manager Security Guide.

- Activate the Cisco Certificate Authority Proxy Function service on the first node.

- Activate WebDialer, on page 265

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure WDSecureSysUser Application User, on page 268</td>
<td>Configure a WDSecureSysUser application user.</td>

Configure WDSecureSysUser Application User

Procedure

- Step 1: From Cisco Unified CM Administration, choose User Management > Application User. The Find and List Application Users window appears.
- Step 2: Click Find.
- Step 3: From the Find and List Application Users Application window, choose WDSecureSysUser.
- Step 4: Configure the fields in the Application User Configuration window and click Save.

What to Do Next

Configure CAPF Profile, on page 157

Configure CAPF Profile

Certificate Authority Proxy Function (CAPF) is a component that performs tasks to issue and authenticate security certificates. When you create an application user CAPF profile, the profile uses the configuration details to open secure connections for the application.
Before You Begin
Configure IPMASSecureSysUser Application User, on page 157

Procedure

Step 1
In Cisco Unified CM Administration, choose User Management > Application User CAPF Profile.

Step 2
Perform one of the following tasks:
• To add a new CAPF profile, click Add New in the Find window.
• To copy an existing profile, locate the appropriate profile and click the Copy icon for that record in the Copy column.

To update an existing entry, locate and display the appropriate profile.

Step 3
Configure or update the relevant CAPF profile fields. See the Related Topics section information about the fields and their configuration options.

Step 4
Click Save.

Step 5
Repeat the procedure for each application and end user that you want to use security.

What to Do Next
Configure Cisco IP Manager Assistant, on page 159

**Configure Cisco IP Manager Assistant**

**Before You Begin**

Configure CAPF Profile, on page 157
Procedure

Step 1  In Cisco Unified CM Administration, choose System > Service Parameters.
Step 2  From the Server drop-down list, choose the server on which the Cisco IP Manager Assistant service is active.
Step 3  From the Service drop-down list, choose the Cisco IP Manager Assistant service. A list of parameters appears.
Step 4  Navigate to and update the CTIManager Connection Security Flag and CAPF Profile Instance ID for Secure Connection to CTIManager parameters.
To view parameter descriptions, click the parameter name link.
Step 5  Click Save.
Step 6  Repeat the procedure on each server on which the service is active.

What to Do Next

Refer to the Manager Assistant Task Flow for Shared Lines, on page 148 to determine the next task to complete.

Configure Language Locale for WebDialer

Use the Cisco Unified Communications Self Care Portal to configure a language locale for Cisco WebDialer. The default language is English.

Before You Begin

Activate WebDialer, on page 265

Procedure

Step 1  In the Cisco Unified Communications Self Care Portal, click the General Settings tab.
Step 2  Click Language.
Step 3  From the Display Language drop-down list, select a language local, and then click Save.

Configure WebDialer Alarms

Cisco WebDialer service uses Cisco Tomcat to generate alarms.

Before You Begin

Configure Language Locale for WebDialer, on page 271
**Procedure**

**Step 1** In Cisco Unified Serviceability, choose **Alarm > Configuration**.

**Step 2** From the **Server** drop-down list, choose the server on which to configure the alarm and then click **Go**.

**Step 3** From the **Services Group** drop-down list, choose **Platform Services** and then click **Go**.

**Step 4** From the **Services** drop-down list, choose **Cisco Tomcat** and then click **Go**.

**Step 5** If your configuration supports clusters, check the **Apply to All Nodes** check box to apply the alarm configuration to all nodes in the cluster.

**Step 6** Configure the settings, as described in Alarm configuration settings, which includes descriptions for monitors and event levels.

**Note** For more information about the Alarm configuration settings, see the *Cisco Unified Serviceability Guide*.

**Step 7** Click **Save**.

---

**What to Do Next**

Add Users to Standard CCM End User Group, on page 273 or (optionally) if your application requires multiple clusters, see Configure Application Dial Rules, on page 272.

---

**Configure Application Dial Rules**

**Before You Begin**

Configure WebDialer Alarms, on page 271

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Call Routing > Dial Rules > Application Dial Rules**.

**Step 2** In the **Name** field, enter a name for the dial rule.

**Step 3** In the **Description** field, enter a description for the dial rule.

**Step 4** In the **Number Begins With** field, enter the initial digits of the directory numbers to which you want to apply this application dial rule.

**Step 5** In the **Number of Digits** field, enter the length of the dialed numbers to which you want to apply this application dial rule.

**Step 6** In the **Total Digits to be Removed** field, enter the number of digits that you want Cisco Unified Communications Manager to remove from the beginning of dialed numbers that apply to this dial rule.

**Step 7** In the **Prefix With Pattern** field, enter the pattern to prepend to dialed numbers that apply to this application dial rule.

**Step 8** For **Application Dial Rule Priority**, choose the dial rule priority as top, bottom, or middle.

**Step 9** Click **Save**.
What to Do Next
Add Users to Standard CCM End User Group, on page 273

Add Users to Standard CCM End User Group
To use the Cisco WebDialer links in the User Directory windows in Cisco Unified Communications Manager, you must add each user to the Standard Cisco Unified Communications Manager End Users Group.

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Choose User Management &gt; User Group.</td>
<td>Add an new user. If the user exists, you can proceed to the next task.</td>
</tr>
<tr>
<td>Step 2</td>
<td>In the Find and List User Group window, click Find.</td>
<td></td>
</tr>
<tr>
<td>Step 3</td>
<td>Click Standard CCM End Users.</td>
<td></td>
</tr>
<tr>
<td>Step 4</td>
<td>In the User Group Configuration window, click Add End Users to Group.</td>
<td></td>
</tr>
<tr>
<td>Step 5</td>
<td>In the Find and List Users window, click Find.</td>
<td>You can enter criteria for a specific user.</td>
</tr>
<tr>
<td>Step 6</td>
<td>To add one or more users to the user group, complete one of the following steps:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• To add one or more users, check the check box beside each user to add and then click Add Selected.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• To add all users, click Select All and then click Add Selected.</td>
<td></td>
</tr>
</tbody>
</table>

The users appear in the Users in Group table of the User Group Configuration window.

Configure Proxy User
If you use makeCallProxy HTML over HTTP interface to develop an application for using Cisco WebDialer, create a proxy user. For information about the makeCallProxy interface, see the makeCallProxy section in the Cisco WebDialer API Reference Guide.

Before You Begin
Add Users to Standard CCM End User Group, on page 273

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1 (Optional) Add a WebDialer End User, on page 274</td>
<td>Add a new user. If the user exists, you can proceed to the next task.</td>
</tr>
<tr>
<td>Step 2 Assign Authentication Proxy Rights, on page 274</td>
<td>Assign authentication proxy rights to an end user.</td>
</tr>
</tbody>
</table>
Add a WebDialer End User

Procedure

Step 1 From Cisco Unified CM Administration, choose User Management > End User.
Step 2 Click Add New.
Step 3 Enter a Last Name.
Step 4 Enter and confirm a Password.
Step 5 Enter and confirm a PIN.
Step 6 Complete any remaining fields in the End User Configuration window. For field descriptions, refer to the online help.
Step 7 Click Save.

What to Do Next
Assign Authentication Proxy Rights, on page 274

Assign Authentication Proxy Rights

Perform the following procedure to enable authentication proxy rights for an existing user.

Procedure

Step 1 Choose User Management > User Group.
   The Find and List User Group window appears.
Step 2 Click Find.
Step 3 Click the Standard EM Authentication Proxy Rights link.
   The User Group Configuration window appears.
Step 4 Click Add End Users to Group.
   The Find and List Users window appears.
Step 5 Click Find. You can also add a criteria for a specific user.
Step 6 To assign proxy rights to one or more users, complete one of the following steps:
Step 7 To add a single user, select the user and then click Add Selected.
Step 8 To add all users that appear in the list, click Select All and then click Add Selected.
   The user or users appear in the Users in Group table in the User Group Configuration window.

WebDialer Troubleshooting

Authentication Error

Problem
Cisco WebDialer displays the following message:
Authentication failed, please try again.

Possible Cause
User entered wrong user ID or password.

Solution
Ensure that you use your Cisco Unified Communications Manager user ID and password to log in.

Service Temporarily Unavailable

Problem
Cisco WebDialer displays the following message:
Service temporarily unavailable, please try again later.

Possible Cause
The Cisco CallManager service became overloaded because it has reached its throttling limit of three concurrent CTI sessions.

Solution
After a short time, retry your connection.

Directory Service Down

Problem
Cisco WebDialer displays the following message:
Service temporarily unavailable, please try again later: Directory service down.

Possible Cause
The Cisco Communications Manager directory service may be down.

Solution
After a short time, retry your connection.
**Cisco CTIManager Down**

**Problem**
Cisco WebDialer displays the following message:
Service temporarily unavailable, please try again later: Cisco CTIManager down.

**Possible Cause**
Cisco CTIManager service that is configured for Cisco Web Dialer went down.

**Solution**
After a short time, retry your connection.

**Session Expired, Please Login Again**

**Problem**
Cisco WebDialer displays the following message:
Session expired, please login again.

**Possible Cause**
A Cisco Web Dialer session expires:
- After the WebDialer servlet gets configured
- If the Cisco Tomcat Service is restarted.

**Solution**
Log in by using your Cisco Unified Communications Manager User ID and Password.

**User Not Logged In on Any Device**

**Problem**
Cisco Web Dialer displays the following message:
User not logged in on any device.

**Possible Cause**
The user chooses to use Cisco Extension Mobility from the Cisco WebDialer preference window but does not get log in to any IP phone.

**Solution**
- Log in to a phone before using Cisco WebDialer.
Choose a device from the Cisco WebDialer preference list in the dialog box instead of choosing the option Use Extension Mobility.

Failed to Open Device/Line

Problem
After a user attempts to make a call, Cisco WebDialer displays the following message:
User not logged in on any device.

Possible Cause
- The user chose a Cisco Unified IP Phone that is not registered with Cisco Unified Communications Manager. For example, the user chooses a Cisco IP SoftPhone as the preferred device before starting the application.
- The user who has a new phone chooses an old phone that is no longer in service.

Solution
Choose a phone that is in service and is registered with Cisco Unified Communications Manager.

Destination Not Reachable

Problem
Cisco WebDialer displays the following message on the End Call window:
Destination not reachable.

Possible Cause
- User dialed the wrong number.
- The correct dial rules did not get applied. For example, the user dials 5550100 instead of 95550100.

Solution
Check the dial rules.
Paging Overview

Cisco Unified Communications Manager can be configured to integrate with Cisco Paging Server to provide basic paging services for Cisco Unified IP Phones and a variety of endpoints. The Cisco Paging Server product is offered through the InformaCast Virtual Appliance and offers the following deployment options:

InformaCast Basic Paging

InformaCast Basic Paging provides phone-to-phone live audio paging to individual Cisco IP phones or groups of up to 50 phones simultaneously. InformaCast Basic Paging is free to all Cisco Unified Communications Manager customers and all Cisco Business Edition 6000 and Cisco Business Edition 7000 customers.

InformaCast Advanced Notification

InformaCast Advanced Notification is a full-featured emergency notification and paging solution that allows you to reach an unlimited number of Cisco IP phones and a variety of devices and systems with text and audio messages.

Some of the features include:

• Ability to reach analog PA systems and IP speakers
• Support for Cisco Jabber
• 911 emergency call monitoring, recording, and notification
• Dynamic conference call
• Event accountability with message confirmation and reporting
• Implementation with panic buttons
• Building evacuation or lockdown
• Facilities integration (control lighting, door locks)
• Security integration (motion detectors, access, fire)
• General purpose and shift or bell scheduling

Users must purchase a license key to access InformaCast Advanced Notification features.

**InformaCast Mobile**

InformaCast Mobile is a cloud-based service that allows users to send images, text, and pre-recorded audio to mobile devices running iOS or Android. It also has bi-directional integration with InformaCast Advanced Notification.

Some of the features include:

• The ability to send and receive InformaCast messages via mobile devices running iOS or Android
• Bi-directional integration with InformaCast Advanced Notification
• Message confirmations and read receipts
• No calling or SMS messaging fees

InformaCast Mobile must be purchased direct from Singlewire Software. Please refer to the Singlewire website for additional details and downloads.

If you have already configured Cisco Unified Communications Manager to integrate with InformaCast Advanced Notification, no further configuration of Cisco Unified Communications Manager is required.

**Paging Prerequisites**

Cisco Paging Server is designed to work in a multicast environment. You must configure your network for multicast.

For a list of Cisco Unified IP Phones that support paging, refer to the **Cisco Unified IP Phones** section of the Singlewire Compatibility Matrix at:

**Basic Paging Configuration Task Flow**

Perform the following tasks to configure Cisco Unified Communications Manager to integrate with Cisco Paging Server for an InformaCast Basic Paging deployment.

**Before You Begin**

• Review **Paging Prerequisites**, on page 280
### Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>

</table>

### Advanced Notification Paging Task Flow

Perform the following tasks to configure Cisco Unified Communications Manager to integrate with an InformaCast Advanced Notification paging deployment. An Advanced Notification deployment can include the following features:

- InformaCast paging
- CallAware
- PushToTalk
- Legacy paging devices
- Plugins such as Facebook, Twitter and conferencing

Before You Begin
- Review Paging Prerequisites, on page 280

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure SNMP for Paging, on page 283</td>
<td>Configure SNMP services in Cisco Unified Communications Manager.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Configure Media Resources for Legacy Paging, on page 285</td>
<td>Optional. If you want to connect to legacy paging devices, configure a media resource group that includes an MTP.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Configure Region for Paging, on page 286</td>
<td>Configure a region for paging with G.711 as the default codec and a device pool for paging devices.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Configure Partitions and Calling Search Spaces for Paging, on page 288</td>
<td>Configure partitions and calling search spaces for your paging deployment.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Configure CTI Route Points for CallAware, on page 291</td>
<td>If you are deploying CallAware, configure CTI route points for each CallAware redirect.</td>
</tr>
</tbody>
</table>
| Step 6 | Enable the Built in Bridge using one of the following procedures:  
  • Enable Built in Bridge for Cluster, on page 292  
  • Enable Built in Bridge for a Phone, on page 293 | If you are deploying CallAware, enable the Built in Bridge using a clusterwide service parameter, or on the phone itself.  
  Note: The settings in the Phone Configuration window for an individual phone override the clusterwide service parameter. |
| Step 7 | Configure CTI Ports for Paging, on page 294 | Configure CTI ports for InformaCast paging and CallAware redirects. |
| Step 8 | Configure SIP Trunk for Legacy Paging Devices, on page 295 | If you are connecting to legacy paging devices, configure a SIP trunk that connects to your legacy devices. |
| Step 9 | Configure Access Control Group with AXL Access, on page 296 | Configure an access control group that includes access to the AXL API. |
Configure Application User for Paging, on page 296

Configure an application user. You must configure different application users for InformaCast, CallAware, and PushToTalk.

Step 11
Perform one of the following procedures:
- Enable Web Access for a Phone, on page 297
- Enable Web Access for Common Phone Profile, on page 298

Enable web access for your phones. You can enable web access on an individual phone, or use a Common Phone Profile to enable web access for a group of phones.

Step 12
Configure Authentication URL, on page 298

Configure the Cisco Unified Communications Manager authentication URL to point to InformaCast so that when InformaCast pushes broadcasts to Cisco Unified IP Phones, the phones will authenticate with InformaCast.

Step 13
Configure PushToTalk Service Integration, on page 301

Configure PushToTalk service integration for your Cisco Unified IP Phones.

Step 14
Assign a Directory URI to a Phone, on page 308

Optional. Assign directory URIs to your paging directory numbers. This allows you to implement URI dialing in your paging deployment.

For detailed information on the InformaCast Advanced Notification deployment options, refer to your InformaCast Advanced Notification product documentation. For help, visit Singlewire's website at http://www.singlewire.com.

### Configure SNMP for Paging

Perform the following tasks to configure SNMP services in the cluster for either Basic Paging or Advanced Notification deployments.

#### Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Enable SNMP Service, on page 284</td>
</tr>
<tr>
<td>Step 2</td>
<td>Create an InformaCast SNMP Community String, on page 284</td>
</tr>
</tbody>
</table>
Enable SNMP Service

To configure paging in either Basic Paging or Advanced Notification deployments, you must enable SNMP on every node in the cluster. In addition, you must enable the following services:

- Cisco CallManager SNMP Service—Enable on all nodes in the cluster.
- Cisco CallManager—Enable on all nodes in the cluster.
- Cisco AXL Web Services—Enable on at least one node.
- Cisco CTIManager—Enable on at least one node.

Procedure

Step 1  Log in to Cisco Unified Serviceability and choose Tools > Service Activation.
Step 2  From the Server drop-down list, choose the server on which you want to configure SNMP.
Step 3  Check the check boxes that correspond to the Cisco CallManager SNMP Service and Cisco CallManager.
Step 4  For at least one server in the cluster, check the check boxes that correspond to the Cisco CTIManager and Cisco AXL Web Service services.
Step 5  Click Save.
Step 6  Click OK.
Step 7  Repeat the previous steps for all nodes in the cluster.

What to Do Next

Create an InformaCast SNMP Community String, on page 284

Create an InformaCast SNMP Community String

Perform this procedure for Basic Paging or Advanced Notification deployments to set up an SNMP community string.

Before You Begin

Enable SNMP Service, on page 284
**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>In Cisco Unified Serviceability, choose SNMP &gt; V1/V2c &gt; Community String.</td>
<td></td>
</tr>
<tr>
<td>Step 2</td>
<td>From the Server drop-down list box, choose a server and click Find.</td>
<td></td>
</tr>
<tr>
<td>Step 3</td>
<td>Click Add New.</td>
<td></td>
</tr>
<tr>
<td>Step 4</td>
<td>In the Community String Name field, enter ICVA.</td>
<td></td>
</tr>
<tr>
<td>Step 5</td>
<td>From the Access Privileges drop-down menu, select ReadOnly.</td>
<td></td>
</tr>
<tr>
<td>Step 6</td>
<td>Check the Apply to All Nodes check box if the check box is active.</td>
<td></td>
</tr>
<tr>
<td>Step 7</td>
<td>Click Save.</td>
<td></td>
</tr>
<tr>
<td>Step 8</td>
<td>Click OK.</td>
<td></td>
</tr>
</tbody>
</table>

**What to Do Next**

For Basic Paging, go to Set Default Codec to G.711, on page 287
For Advanced Notification, go to Configure Media Resources for Legacy Paging, on page 285

**Configure Media Resources for Legacy Paging**

If you are implementing an Advanced Notification deployment that includes legacy paging devices, perform these tasks to configure media resources with an MTP so that InformaCast can send broadcasts to your legacy paging devices.

**Before You Begin**

Configure SNMP for Paging, on page 283

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1 Create a Media Resource Group, on page 285</td>
<td>Configure a media resource group that includes an MTP.</td>
</tr>
<tr>
<td>Step 2 Create a Media Resource Group List, on page 286</td>
<td>Add your media resource group to a media resource group list.</td>
</tr>
</tbody>
</table>

**Create a Media Resource Group**

Perform this procedure if you are configuring an Advanced Notification deployment that connects to legacy paging devices. You must configure a media resource group that includes an Media Termination Point (MTP) resource. The MTP is required to connect the legacy paging interface.
Procedure

Step 1  From Cisco Unified CM Administration, choose Media Resources > Media Resource Group.
Step 2  Click Add New.
Step 3  Enter a Name and Description for the group.
Step 4  Use the arrows to move MTP from the Available Media Resources area to the Selected Media Resources area.
Step 5  Click Save.

What to Do Next
Create a Media Resource Group List, on page 286

Create a Media Resource Group List

If you have configured a media resource group with an MTP to connect to a legacy paging interface, configure a media resource group that includes your media resource group.

Before You Begin
Create a Media Resource Group, on page 285

Procedure

Step 1  From Cisco Unified CM Administration, choose Media Resources > Media Resource Group List.
Step 2  Click Add New.
Step 3  Enter a Name and Description for the list.
Step 4  Use the arrows to move the media resource group that you created to the Selected Media Resource Groups area.
Step 5  Click Save.

What to Do Next
Set Default Codec to G.711, on page 287

Configure Region for Paging

For either Basic Paging or Advanced Notification deployments, you must set up a region for your paging deployment.

Before You Begin
For Basic Paging, Configure SNMP for Paging, on page 283
For Advanced Notification, Configure Media Resources for Legacy Paging, on page 285
**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Create a region that uses the G.711 codec for calls to other regions.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Set up a device pool for paging and assign the region that you created to that device pool.</td>
</tr>
</tbody>
</table>

**Set Default Codec to G.711**

You must create an InformaCast region that uses G.711 as the default codec for calls to other regions.

**Before You Begin**

Configure SNMP for Paging, on page 283

**Procedure**

1. In Cisco Unified CM Administration, choose *System > Region Information > Region*.
2. Click Add New.
3. In the Name field, enter ICVA.
4. Click Save.
5. In the Regions text box, select all regions by pressing the CTRL key and clicking all of the selected regions.
6. From the Maximum Audio Bit Rate drop-down list box, select 64 kbps (G.722, G.711).
7. From the Maximum Session Bit Rate for Video Calls column click the None radio button.
8. Click Save.

**What to Do Next**

Configure a Device Pool for Paging, on page 287

**Configure a Device Pool for Paging**

Perform this procedure for both Basic Paging and Advanced Notification deployments to configure a device pool for your paging deployment.

**Before You Begin**

Set Default Codec to G.711, on page 287
Procedure

Step 1 In Cisco Unified CM Administration, choose System > Device Pool.

Step 2 Click Add New.

Step 3 In the Device Pool Name field, enter ICVA.

Step 4 From the Cisco Unified Communications Manager Group drop-down list box, select the group that contains the Cisco Unified Communications Manager cluster with which the InformaCast Virtual Appliance will communicate.

Step 5 From the Date/Time Group drop-down list box, select a date/time group. Select CMLocal unless you are performing dialing restrictions by the time of day.

Step 6 From the Region drop-down list box, choose ICVA.

Step 7 If you have an Advanced Notification deployment that includes legacy paging devices, from the Media Resource Group List drop-down list box, select the media resource group list that you configured to include an MTP.

Step 8 From the SRST Reference drop-down list box, select Disable.

Step 9 Click Save.

What to Do Next
Configure Partitions and Calling Search Spaces for Paging, on page 288

Configure Partitions and Calling Search Spaces for Paging

Perform the following tasks to configure a partition and calling search space (CSS) for paging as follows:

- For Basic Paging deployments, create a single partition and CSS for InformaCast paging.
- For Advanced Notification deployments, create a single partition and CSS for InformaCast paging. If you are deploying CallAware, you must also configure a unique partition and CSS combination for each CallAware redirect.

Before You Begin
Configure Region for Paging, on page 286

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure Route Partition for InformaCast Paging, on page 289</td>
<td>Configure a route partition for InformaCast paging.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Configure Calling Search Space for InformaCast Paging, on page 289</td>
<td>Configure a calling search space for InformaCast paging.</td>
</tr>
</tbody>
</table>
Configure Route Partition for InformaCast Paging

Create a route partition for InformaCast paging in either a Basic Paging or Advanced Notification deployment.

Before You Begin
Configure a Device Pool for Paging, on page 287

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>In Cisco Unified CM Administration, choose Call Routing &gt; Class of Control &gt; Route Partitions.</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>Click Add New.</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>In the Name field, enter the following name and description for the partition: ICVA-CTIOutbound,ICVA-Do not add to any phone CSS.</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Click Save.</td>
<td></td>
</tr>
</tbody>
</table>

What to Do Next
Configure Calling Search Space for InformaCast Paging, on page 289

Configure Calling Search Space for InformaCast Paging

Perform this procedure to configure a calling search space for InformaCast paging in either a Basic Paging or Advanced Notification deployment.

Before You Begin
Configure Route Partition for InformaCast Paging, on page 289
**Procedure**

**Step 1** In Cisco Unified CM Administration, choose Call Routing > Class of Control > Calling Search Space.

**Step 2** Click Add New.

**Step 3** In the Name field, enter ICVA.

**Step 4** In the Available Partitions list box, use the arrows to move the following partitions to the Selected Partitions list box.

- The partition that you created for InformaCast paging
- The partitions that contain your users’ extensions and any analog paging extensions

**Step 5** Click Save.

**What to Do Next**

For Basic Paging or Advanced Notification without CallAware, Configure CTI Ports for Paging, on page 294

For Advanced Notification with CallAware, Configure Route Partitions for CallAware, on page 290

### Configure Route Partitions for CallAware

If you are deploying CallAware in an Advanced Notification paging deployment, perform this procedure to set up a unique partition for each CallAware redirect.

**Before You Begin**

Configure Calling Search Space for InformaCast Paging, on page 289

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose Call Routing > Class of Control > Partition.

**Step 2** Click Add New.

**Step 3** In the Name field, enter the following name and description for the partition: ICVA-Redirect1-CA,ICVA Redirect 1 CallAware.

**Step 4** Click Save

**Step 5** For each additional call redirect, create a new partition, incrementing the redirect number that you enter in the Name field. For example, ICVA-Redirect2-CA.

**What to Do Next**

Configure Calling Search Spaces for CallAware, on page 291
Configure Calling Search Spaces for CallAware

If you are deploying CallAware in an Advanced Notification deployment, you must configure a unique calling search space (CSS) for each CallAware redirect.

**Before You Begin**

*Configure Route Partitions for CallAware, on page 290*

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose **Call Routing > Class of Control > Calling Search Space**.

**Step 2** Click **Add New**.

**Step 3** In the **Name** field, enter ICVA-Redirect1-CA.

**Step 4** Click **Save**.

**Step 5** Repeat the above steps until you have a separate CSS for each call redirect. For each CSS, increment the redirect number in the **Name** field. For example, ICVA-Redirect2-CA.

**What to Do Next**

*Configure CTI Route Points for CallAware, on page 291*

Configure CTI Route Points for CallAware

Perform this procedure only if you have an Advanced Notification paging deployment that includes CallAware. You must configure CTI route points for each CallAware redirect.

**Before You Begin**

*Configure Partitions and Calling Search Spaces for Paging, on page 288*
**Procedure**

**Step 1** In Cisco Unified CM Administration, choose **Device > CTI Route Point**.

**Step 2** Click **Add New**.

**Step 3** In the **Device Name** field, enter a name for your route point. This name must match the corresponding route point name that you configure in the InformaCast Virtual Appliance.

**Step 4** Enter a **Description** for the route point. For example, ICVA Redirect 1 CallAware.

**Step 5** From the **Device Pool** drop-down list box, choose **ICVA**.

**Step 6** From the **Calling Search Space** drop-down list box, choose the calling search spaces that you set up for this CallAware redirect.

**Step 7** Click **Save**.

**Step 8** In the **Association** area, click **Line [1] - Add a new DN**.

**Step 9** In the **Directory Number** field, enter the directory number that CallAware will monitor.

**Step 10** From the **Route Partition** drop-down list box, select the partition that you set up for this CallAware redirect.

**Step 11** In the **Call Forward and Call Pickup Settings** area, leave the **Forward All** field empty.

**Step 12** For each of the remaining call forward options, configure the following settings:
   a) In the **Destination** text box, enter the directory number to which you want to redirect calls.
   b) From the **Calling Search Space** drop-down list box, select the CSS that you created for this redirect.
   c) Click **Save**.

**Step 13** Repeat this procedure for each CallAware redirect.

**What to Do Next**

Perform one of the following procedures to enable the Built in Bridge on the phone:

- Enable Built in Bridge for Cluster, on page 292
- Enable Built in Bridge for a Phone, on page 293

**Enable Built in Bridge for Cluster**

Perform this procedure if you have an Advanced Notification paging deployment that includes CallAware. When you use this procedure to enable the Built in Bridge using a clusterwide service parameter, the Built in Bridge default setting for all phones in the cluster is changed to enabled. However, the Built in Bridge setting in the **Phone Configuration** window for an individual phone overrides the clusterwide setting.

**Before You Begin**

Configure CTI Route Points for CallAware, on page 291
Procedure

Step 1  In Cisco Unified CM Administration, choose System > Service Parameters.
Step 2  From the Server drop-down list, choose the server on which the CallManager service is running.
Step 3  From the Service drop-down list, choose Cisco CallManager.
Step 4  Set the Built in Bridge Enable service parameter to On.
Step 5  Click Save.

What to Do Next
Enable Built in Bridge for a Phone, on page 293

Enable Built in Bridge for a Phone

If you have an Advanced Notification paging deployment that uses CallAware, perform this procedure to enable an individual phone's Built in Bridge.

You can also use a service parameter to set the Built in Bridge clusterwide default setting to enabled. However, an individual phone's Built in Bridge setting in the Phone Configuration window overrides the clusterwide service parameter default.

Before You Begin
Enable Built in Bridge for Cluster, on page 292

Procedure

Step 1  In Cisco Unified CM Administration, choose Device > Phone.
Step 2  Click Find.
Step 3  Select the agent phone.
Step 4  From the Built in Bridge drop-down list, choose one of the following options:
   • On—The Built in Bridge is enabled.
   • Off—The Built in Bridge is disabled.
   • Default—The setting of the clusterwide Built in Bridge Enable service parameter is used.
Step 5  Click Save.

What to Do Next
Configure CTI Ports for Paging, on page 294
Configure CTI Ports for Paging

Perform this procedure to configure CTI ports for your paging deployment. The number of CTI ports that you need depends on your deployment type and your applications' usage:

• For Basic Paging deployments, you must create a minimum of two CTI ports for InformaCast paging.
• For Advanced Notification deployments, you must create a minimum of two CTI ports for InformaCast paging and two CTI ports for CallAware.

Before You Begin
For Basic Paging, Configure Calling Search Space for InformaCast Paging, on page 289
For Advanced Notification, Enable Built in Bridge for a Phone, on page 293

Procedure

Step 1 In Cisco Unified CM Administration, choose Device > Phone.
Step 2 Click Add New.
Step 3 From the Phone Type drop-down list box, choose CTI Port.
Step 4 In the Device Name field, enter a name for the CTI Port. For example, ICVA-IC-001 for an InformaCast port or ICVA-CA-001 for a CallAware port.
Step 5 In the Description field, enter a description for the port. For example, InformaCast Recording Port or CallAware CTI port for Call Monitoring.
Step 6 From the Device Pool drop-down list box, select ICVA.
Step 7 From the Calling Search Space drop-down list box, select ICVA.
Step 8 From the Device Security Profile drop-down list box, select Cisco CTI Port - Standard SCCP Non-Secure Profile.
Step 9 Click Save.
Step 10 Click OK.
Step 11 In the left association area, click Line [1] - Add a new DN.
Step 12 In the Directory Number field, enter a directory number. This directory number should not be used for any purpose other than making paging calls. It should not be assigned to a phone and should not be within a direct-inward-dialing range.
Step 13 In the Route Partition drop-down list box, select one of the following ports:

• For InformaCast ports, select ICVA-CTIOutbound.
• For CallAware ports, select the CallAware partitions. For example, ICVA-Redirect1-CA.

Step 14 In the **Display (Internal Caller ID)** text box, enter InformaCast or CallAware depending on which type of port you are configuring.

Step 15 In the **ASCII Display (Internal Caller ID)** text box, enter InformaCast or CallAware depending on which type of port you are configuring.

Step 16 If you have an Advanced Notification deployment that includes CallAware, from the **Monitoring Calling Search Space** drop-down list box, select the CSS that you created for the CallAware redirect. For example, ICVA-Redirect1-CA.

Step 17 Click **Save**.

Step 18 Repeat this procedure for each CTI port that you need.

---

**What to Do Next**

For Basic Paging, go to Configure Access Control Group with AXL Access, on page 296

For Advanced Notification, go to Configure SIP Trunk for Legacy Paging Devices, on page 295

---

**Configure SIP Trunk for Legacy Paging Devices**

Perform this procedure if you have an Advanced Notification paging deployment and you want to connect to legacy paging devices. You must configure a SIP trunk to enable the Legacy Paging Interface.

**Before You Begin**

Configure CTI Ports for Paging, on page 294

**Procedure**

Step 1 In Cisco Unified CM Administration, choose **Device > Trunk**.

Step 2 Click **Add New**.

Step 3 From the **Trunk Type** drop-down list box, select **SIP Trunk**.

Step 4 Click **Next**.

Step 5 In the **Device Name** text box, enter ICVA.

Step 6 In the **Description**, field enter a description for the trunk.

Step 7 From the **Device Pool** drop-down menu, select **ICVA**.

Step 8 From the **Calling Search Space** drop-down list box, select **ICVA**.

Step 9 In the **SIP Information** area, enter the InformaCast Virtual Appliance IP address in the **Destination Address** text box.

Step 10 From the **SIP Trunk Security Profile** drop-down list box, select **Non Secure SIP Trunk Profile**.

Step 11 From the **SIP Profile** drop-down list box, select **Standard SIP Profile**.

Step 12 Click **Save**.
Configure Access Control Group with AXL Access

Perform this procedure for either Basic Paging or Advanced Notification deployments to create an access control group that includes AXL access.

Before You Begin
For Basic Paging, Configure CTI Ports for Paging, on page 294
For Advanced Notification, Configure SIP Trunk for Legacy Paging Devices, on page 295

Procedure

Step 1 In Cisco Unified CM Administration, choose User Management > User Settings > Access Control Group.
Step 2 Click Add New.
Step 3 In the Name text box, enter ICVA User Group.
Step 4 Click Save.
Step 5 From the Related Links drop-down, select Back to Find/List and click Go.
Step 6 In the Roles column, click the i icon that corresponds to the new access control group.
Step 7 Click Assign Role to Group.
Step 8 Click Find.
Step 9 Select Standard AXL API Access check box, and click Add Selected.
Step 10 Click Save.

Configure Application User for Paging

Perform this procedure to configure an application user for either Basic Paging or Advanced Notification deployments as follows:

- For Basic Paging, configure an InformaCast application user.
- For Advanced Notification, if you are deploying the InformaCast, CallAware, and PushToTalk features, you must create a separate application user for each feature.

Before You Begin
Configure Access Control Group with AXL Access, on page 296
**Procedure**

**Step 1** In Cisco Unified CM Administration, choose **User Management > Application User**.

**Step 2** Click **Add New**.

**Step 3** In the **User ID** text box, enter a user ID for the application user. For example, ICVA InformaCast, ICVA CallAware, or ICVA PushToTalk.

**Step 4** Enter a password in the **Password** and **Confirm Password** fields.

**Step 5** In the **Available Devices** list box, click the CTI ports that you created for your deployment and use the arrows to move the devices to the **Controlled Devices** list box. For example, select **ICVA-IC-001** for InformaCast and **ICVA-CA-001** for CallAware.

**Step 6** Click the **Add to Access Control Group** button.

**Step 7** Click **Find**.

**Step 8** Check the following checkboxes (unless otherwise indicated, select these permissions for all application users):

- ICVA User Group
- Standard CTI Allow Call Monitoring—for CallAware or PushToTalk application users only
- Standard CTI Allow Control of All Devices
- Standard CTI Allow Control of Phones supporting Connected Xfer and conf
- Standard CTI Allow Control of Phones supporting Rollover Mode
- Standard CTI Enabled

**Step 9** Click **Add Selected**.

**Step 10** Click **Save**.

**Step 11** If you have an Advanced Notification deployment, repeat all the steps in this procedure until you have configured application users for InformaCast, CallAware, and PushToTalk.

---

**What to Do Next**

Perform one of the following procedures to enable web access on your phones:

- **Enable Web Access for a Phone**, on page 297
- **Enable Web Access for Common Phone Profile**, on page 298

---

**Enable Web Access for a Phone**

Perform this procedure in Basic Paging or Advanced Notification deployments to enable web access for a Cisco Unified IP Phone. You can also use a Common Phone Profile to enable web access for a group of phones that use that profile. For details, see **Enable Web Access for Common Phone Profile**, on page 298.

**Before You Begin**

**Configure Application User for Paging**, on page 296
**Procedure**

**Step 1** In Cisco Unified CM Administration, choose **Device > Phone**.

**Step 2** Click **Find** and select the phone for which you want to enable web access.

**Step 3** In the **Product Specific Configuration Layout** area, from the **Web Access** drop-down menu, select **Enabled**.

**Step 4** Click **Save**.

**What to Do Next**

For Basic Paging or Advanced Notification, go to Configure Authentication URL, on page 298

---

**Enable Web Access for Common Phone Profile**

Perform this procedure in either Basic Paging or Advanced Notification deployments to enable web access for a group of Cisco Unified IP Phones that use a Common Phone Profile. You can also enable web access on an individual phone. For details, see Enable Web Access for a Phone, on page 297.

**Before You Begin**

Configure Application User for Paging, on page 296

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose **Device > Device Settings > Common Phone Profile**.

**Step 2** Click **Find** and select the profile that applies to the group of phones for which you want to enable web access.

**Step 3** In the **Product Specific Configuration Layout** area, from the **Web Access** drop-down list, select **Enable**.

**Step 4** Click **Save**.

**Step 5** Click **Apply Config** to reset the phones that use the Common Phone Profile.

**Step 6** Click **OK**.

**What to Do Next**

For Basic Paging or Advanced Notification, go to Configure Authentication URL, on page 298

---

**Configure Authentication URL**

Perform the following tasks to configure an authentication URL that points to InformaCast so that when InformaCast pushes broadcasts to Cisco Unified IP Phones, the phones authenticate with InformaCast instead of Cisco Unified Communications Manager.
Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Set the Cisco Unified Communications Manager authentication URL to point to InformaCast.</td>
<td></td>
</tr>
<tr>
<td>Step 2</td>
<td>Reset the phones in your deployment so that your phones use the new settings.</td>
<td></td>
</tr>
<tr>
<td>Step 3</td>
<td>Verify that the phones in your deployment use the new authentication URL settings.</td>
<td></td>
</tr>
</tbody>
</table>

Set Authentication URL

Perform this procedure to set the Cisco Unified Communications Manager authentication URL to point to the InformaCast Virtual Appliance.

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>In Cisco Unified CM Administration choose System &gt; Enterprise Parameters.</td>
<td></td>
</tr>
<tr>
<td>Step 2</td>
<td>Scroll to the Phone URL Parameters area, and in the URL Authentication field, enter http://&lt;IP Address&gt;:8081/InformaCast/phone/auth where &lt;IP Address&gt; is the IP Address of the InformaCast Virtual Appliance.</td>
<td></td>
</tr>
<tr>
<td>Note</td>
<td>Make a note of the existing URL in the URL Authentication field. You may need this when you configure InformaCast. See your InformaCast documentation for details.</td>
<td></td>
</tr>
<tr>
<td>Step 3</td>
<td>Scroll to the Secured Phone URL Parameters area, and in the Secured Authentication URL field, enter http://&lt;IP Address&gt;:8081/InformaCast/phone/auth where &lt;IP Address&gt; is the IP Address of the InformaCast Virtual Appliance.</td>
<td></td>
</tr>
<tr>
<td>Step 4</td>
<td>Click Save.</td>
<td></td>
</tr>
</tbody>
</table>

What to Do Next

Reset Your Phones, on page 299.

Reset Your Phones

After you set the authentication URL to point to the InformaCast Virtual Appliance, you must reset your phones. This procedure describes how to manually reset the phones in device pools. There are many methods for resetting your phones. For example, you can also use Bulk Administration Tool to schedule the reset during off hours. See the Cisco Unified Communications Manager Bulk Administration Guide for information on the Bulk Administration Tool.
**Before You Begin**

Set Authentication URL, on page 299

**Procedure**

- **Step 1** In Cisco Unified CM Administration, choose Device > Phone.
- **Step 2** In the From Phone Where box, select Device Pool.
- **Step 3** Set the other drop-down menus and field items to settings that will bring up the device pools that you contain your phones.
- **Step 4** Click Find.
- **Step 5** Select the device pools that you want to reset.
- **Step 6** Click Reset Selected.
- **Step 7** Click Reset.

**What to Do Next**

Test Your Phones, on page 300

**Test Your Phones**

Verify that your phones are authenticating with the InformaCast Virtual Appliance.

**Before You Begin**

Reset Your Phones, on page 299.

**Procedure**

- **Step 1** In Cisco Unified CM Administration, choose Device > Phone.
- **Step 2** Use the drop-down menus and fields in the Find and List Phones window to filter your search for a phone that should be using the new authentication URL, and click Find.
- **Step 3** For the phone that should be using the new settings, click the IP Address link in the IPv4 Address column.
- **Step 4** Click Network Configuration.
The Network Configuration page appears.
- **Step 5** Verify that the Authentication URL field displays the InformaCast Virtual Appliance IP address that you entered for the URL Authentication enterprise parameter. If the correct URL does not appear, you will need to set the authentication URL.

**What to Do Next**

For Basic Paging, you can now start using paging services.
For Advanced Notification, Configure PushToTalk Service Integration, on page 301.
Configure PushToTalk Service Integration

If you have already configured an Advanced Notification paging deployment in Cisco Unified Communications Manager, perform the following tasks to add PushToTalk services.

Before You Begin

If you have not done so, configure an application user specifically for PushToTalk. For details, see Configure Application User for Paging, on page 296

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1 Create a PushToTalk Service Definition, on page 301</td>
<td>Set up the PushToTalk phone service in Cisco Unified Communications Manager.</td>
</tr>
<tr>
<td>Step 2 Configure PhoneGroup Parameter for PushToTalk, on page 302</td>
<td>Configure the Phone Group parameter for the PushToTalk service.</td>
</tr>
<tr>
<td>Step 3 Configure SkipConfirm Parameter for PushToTalk, on page 303</td>
<td>Configure the Skip Confirmation parameter for the PushToTalk service.</td>
</tr>
<tr>
<td>Step 4 Configure Directory Number Parameter for PushToTalk, on page 304</td>
<td>Configure the Directory Number Parameter for the PushToTalk service.</td>
</tr>
<tr>
<td>Step 5 Assign Phones to PushToTalk Service, on page 305</td>
<td>Configure your phones for the PushToTalk service.</td>
</tr>
<tr>
<td>Step 6 Configure Wireless Phones for PushToTalk, on page 306</td>
<td>Configure wireless phones for PushToTalk services.</td>
</tr>
<tr>
<td>Step 7 Install Audio Files for PushToTalk, on page 307</td>
<td>Download PushToTalk audio files from the InformaCast Virtual Appliance and upload them to Cisco Unified Communications Manager.</td>
</tr>
</tbody>
</table>

Create a PushToTalk Service Definition

If you want to enable PushToTalk services, you must create a service definition for PushToTalk to be able to display interactive content with text and graphics on Cisco Unified IP Phones.
Procedure

Step 1 In Cisco Unified CM Administration, choose **Device > Device Settings > Phone Services**.

Step 2 Click **Add New**.

Step 3 Enter a **Service Name** for the service. For example, PushToTalk.

Step 4 Enter a **Service Description** for the service. For example, Intercom Functionality.

Step 5 In the Service URL text box, enter http://<InformaCast Virtual Appliance IP Address>:8085/PushToTalk/PhoneMenu.action?sep=#DEVICENAME#.

Step 6 Check the **Enable** check box.

Step 7 Click **Save**.

What to Do Next

Perform the following procedures to configure the parameters by which PushToTalk can be customized for each phone:

- **Configure PhoneGroup Parameter for PushToTalk**, on page 302
- **Configure SkipConfirm Parameter for PushToTalk**, on page 303
- **Configure Directory Number Parameter for PushToTalk**, on page 304

Configure PhoneGroup Parameter for PushToTalk

Use this procedure to configure the PhoneGroup parameter, which allows you to limit a phone subscribed to this service’s parameter to only displaying a subset of the phone groups available.

Before You Begin

Create a PushToTalk Service Definition, on page 301
## Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>In Cisco Unified CM Administration, choose <strong>Device &gt; Device Settings &gt; Phone Services.</strong></td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Click <strong>Find</strong> and select the service that you created for PushToTalk.</td>
</tr>
<tr>
<td><strong>Step 3</strong></td>
<td>Click the <strong>New Parameter</strong> button.</td>
</tr>
<tr>
<td><strong>Step 4</strong></td>
<td>In the <strong>Parameter Name</strong> text box, enter PhoneGroupIds.</td>

</tbody>
</table>

### What to Do Next

- **Configure SkipConfirm Parameter for PushToTalk, on page 303**

---

**Configure SkipConfirm Parameter for PushToTalk**

Use this procedure to configure the SkipConfirm parameter for PushToTalk. The SkipConfirm parameter allows you to (in conjunction with the PhoneGroupIds parameter) immediately enter a PushToTalk session by pressing the side button on wireless phones or the Services button on desktop phone.

### Before You Begin

- **Configure PhoneGroup Parameter for PushToTalk, on page 302**
Procedure

Step 1  In Cisco Unified CM Administration, choose Device > Device Settings > Phone Services.
Step 2  Click Find and select the phone service that you created for PushToTalk.
Step 3  Click New Parameter.
Step 4  In the Parameter Name text box, enter SkipConfirm.
Step 5  In the Parameter Display Name text box, enter SkipConfirmation.
Step 6  In the Default Value text box, enter N.
Step 7  In the Parameter Description text box, enter text similar to, “Skip (Y/N) the confirmation page when limiting to only one specific PushToTalk phone group.”
Step 8  Uncheck the Parameter is Required check box.
Step 9  Uncheck the Parameter is a Password (mask contents) check box.
Step 10  Click Save.
Step 11  Close the Configure Cisco IP Phone Service Parameter window.
Step 12  Click the Update Subscriptions button.
Step 13  Click Save.

What to Do Next

Configure Directory Number Parameter for PushToTalk, on page 304

Configure Directory Number Parameter for PushToTalk

Use this procedure to configure the Directory Number parameter for PushToTalk services in an Advanced Notification deployment. The Directory Number parameter allows you to immediately enter a PushToTalk session by pressing the side button on wireless phones or the Services button on desktop phone.

Before You Begin

Configure SkipConfirm Parameter for PushToTalk, on page 303
Procedure

**Step 1** In Cisco Unified CM Administration, choose Device > Device Settings > Phone Services.
**Step 2** Click Find and select the service that you set up for PushToTalk.
**Step 3** Click the New Parameter button.
**Step 4** In the Parameter Name text box, enter DN.
**Step 5** In the Parameter Display Name text box, enter Directory Number.
**Step 6** In the Parameter Description text box, enter text similar to “If skipping confirmation page when limiting to a specific phone group, use this directory number when starting a one-to-one or intercom session.”
**Step 7** Uncheck the Parameter is Required check box.
**Step 8** Uncheck the Parameter is a Password (mask contents) check box.
**Step 9** Click Save.
**Step 10** Close the Configure Cisco IP Phone Service Parameter window.
**Step 11** Click the Update Subscriptions button.
**Step 12** Click Save.

What to Do Next

Assign Phones to PushToTalk Service, on page 305

Assign Phones to PushToTalk Service

Use this procedure to assign a phone to the PushToTalk service and to customize how the Phone Group, Skip Confirmation and Directory Number parameters are set when the user initiates a PushToTalk session.

**Before You Begin**

Configure Directory Number Parameter for PushToTalk, on page 304

Procedure

**Step 1** In Cisco Unified CM Administration, choose Device > Phone.
**Step 2** Click Find and select the phone that you want to use with PushToTalk. The Phone Configuration window opens.
**Step 3** From the Related Links drop-down list box, select Subscribe/Unsubscribe and click Go. The Cisco IP Phone Services window opens.
**Step 4** From the Select a Service drop-down list box, select PushToTalk and click Next.
**Step 5** Leave the Service Name and ASCII Service Name fields with their default values.
**Step 6** If you want to limit the phone to specific phone groups for PushToTalk, in the Phone Group Default text box, enter the phone group IDs that you want to include. Note: If you leave the field empty, the Phone Groups menu appears whenever you initiate a PushToTalk session.
**Step 7** If you want the phone to skip the confirmation screen when entering a PushToTalk session, enter Y in the Skip Confirmation field.
If you enter N, the Start confirmation appears whenever you initiate a PushToTalk session.

**Step 8**
If you want the phone to enter a one-to-one or intercom session immediately, in the **Directory Number** text box, enter the directory number for the one-to-one or intercom session.

*Note*  If you leave the field empty, you must enter the directory number in the phone interface when you initiate a one-to-one or intercom PushToTalk session.

**Step 9**
Click **Subscribe**.

**Step 10**
Close the **Cisco IP Phone Services** window.

**Step 11**
Click **Reset**.

The **Device Reset** window appears.

**Step 12**
Click **Reset**.

---

**What to Do Next**

Configure Wireless Phones for PushToTalk, on page 306

---

**Configure Wireless Phones for PushToTalk**

Use this procedure to assign PushToTalk services to a wireless phone and to configure how the Phone Group, Skip Confirmation and Directory Number parameters are set when PushToTalk feature is invoked from a wireless phone.

**Before You Begin**

Assign Phones to PushToTalk Service, on page 305

**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose **Device > Phone**.

**Step 2**
Click **Find** and select the wireless phone.

The **Phone Configuration** window appears.

**Step 3**
In the **Application URL** text box, enter a URL to configure the Phone Group, Skip Confirmation and Directory Number parameters and control how PushToTalk behaves when the feature is invoked from the phone. Refer to the following table for the URLs.

<table>
<thead>
<tr>
<th>Desired Behavior for PushToTalk</th>
<th>URL to Enter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Phone Group menu prompts user to select a phone group.</td>
<td>http://&lt;InformaCast IP Address&gt;:8085/PushToTalk/PhoneMenu.action?sep=#DEVICENAME#</td>
</tr>
<tr>
<td>Bypass the Phone Group menu. The phone group is limited to the phone groups in the URL.</td>
<td>http://&lt;InformaCast IP Address&gt;:8085/PushToTalk/PhoneMenu.action?sep=#DEVICENAME#;PhoneGroupIds=x where x represents the phone group. For example, PhoneGroupIds=3,5.</td>
</tr>
</tbody>
</table>
**Desired Behavior for PushToTalk** | **URL to Enter**
---|---
Bypass Phone Group menu and bypass the confirmation screen for a standard PushToTalk session. | http://<InformaCast IP Address>:8085/PushToTalk/PhoneMenu.action?sep=#DEVICENAME#;PhoneGroupIds=x;SkipConfirm=Y where x represents the phone group. For example, PhoneGroupIds=3,5

Bypass Phone Group menu, confirmation screen, and directory number selection for a one-to-one or intercom PushToTalk session. | http://<InformaCast IP Address>:8085/PushToTalk/PhoneMenu.action?sep=#DEVICENAME#;PhoneGroupIds=x;SkipConfirm=Y;DN=xx where x represents the phone group and xx represents the directory number for the one-to-one or intercom PushToTalk session. For example, PhoneGroupIds=3,5;SkipConfirm=Y;DN=2004

---

**Step 4** Click **Save**.
**Step 5** Click **Reset**. The **Device Reset** window appears.
**Step 6** Click **Reset**.

---

**What to Do Next**
*Install Audio Files for PushToTalk, on page 307*

**Install Audio Files for PushToTalk**
Perform this procedure to install the following audio files that PushToTalk uses to indicate session activity:

- PTT_start.raw
- PTT_accept.raw
- PTT_change.raw
- PTT_end.raw
- PTT_active.raw

**Before You Begin**
Perform one of the following procedures to set up the PushToTalk service on your phones:

- Assign Phones to PushToTalk Service, on page 305
- Configure Wireless Phones for PushToTalk, on page 306
**Procedure**

**Step 1**
Use an SFTP client to access the five PushToTalk audio files from the following default location on the InformaCast Virtual Appliance: /usr/local/singlewire/PushToTalk/web/sounds.

**Step 2**
Use the SFTP client to download the files to a location that the Cisco Unified Communications Manager TFTP server can access.

**Step 3**
Log in to Cisco Unified Operating System Administration and choose Software Upgrades > TFTP File Management.

**Step 4**
Click Upload File.

**Step 5**
Browse to the location where you saved the PushToTalk audio files.

**Step 6**
For each audio file, perform the following steps:
   a) Select the audio file.
   b) In the Directory field, enter the subdirectory where the file will reside.
   c) Click Upload File.

**Step 7**
Restart the TFTP service by performing the following steps:
   a) From Cisco Unified Serviceability, choose Tools > Control Center - Feature Services.
   b) From the Server drop-down list box, select the server on which the TFTP service is running.
   c) Click the Cisco Tftp radio button.
   d) Click the Restart button.
   e) Click OK.

**What to Do Next**
Optional. **Assign a Directory URI to a Phone**, on page 308

**Assign a Directory URI to a Phone**

Use this procedure if you want to assign a directory URI to a phone, thereby allowing you to use URI dialing for that phone.

**Before You Begin**
Configure PushToTalk Service Integration, on page 301

**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose Device > Phone.

**Step 2**
Click Find and select the phone for which you want to assign a directory URI. The Phone Configuration window appears.

**Step 3**
In the Association Information pane that appears on the left, click the phone line. The Directory Number Configuration window appears.

**Step 4**
In the Directory URIs section, enter a directory URI in the URI text box.

**Step 5**
Click Save.
Intercom

- Intercom Overview, page 311
- Intercom Prerequisites, page 312
- Intercom Configuration Task Flow, page 312
- Intercom Interactions and Restrictions, page 326
- Intercom Troubleshooting, page 329

Intercom Overview

Intercom is a type of phone line that combines the functionality of a traditional line and a speed dial. With an intercom line, a user can call the intercom line of another user, which answers automatically to one-way audio whisper. The recipient can then acknowledge the whispered call and initiate a two-way intercom call.

You can use an intercom line to dial any other intercom line in the intercom partition, or you can preconfigure the line to target an intercom line outside the intercom partition.

Intercom allows a user to place a call to a predefined target. The called destination answers the call automatically in speakerphone mode with mute activated. This sets up a one-way voice path between the initiator and the destination, so the initiator can deliver a short message, regardless of whether the called party is busy or idle.

To ensure that the voice of the called party does not get sent back to the caller when the intercom call is automatically answered, Cisco Unified Communications Manager implements whisper intercom. Whisper intercom ensures that only one-way audio exists from the caller to the called party. The called party must manually press a key to talk to the caller.

An auto-answer tone indicates the beginning of the whisper intercom state for both the sender and the recipient.

Intercom and Default Devices

Each intercom line needs a default device. The intercom line is displayed only on the designated default device.

When the administrator assigns an intercom line to a device, the system sets the device as the default device for the intercom line if not set previously. The administrator can modify the default device for the intercom line. When the administrator changes the default device to a different device, the intercom line gets removed from the original device, even though the intercom line may still be assigned to the original device.
You can assign an intercom line to a device profile. Only when a user uses a device profile to log in to the default device that matches the default device of the intercom line does the intercom line become available. Otherwise, no intercom line is displayed when the user logs in.

**Intercom Prerequisites**

The intercom feature has the following system requirements:

- Cisco Unified IP Phones Firmware Release 8.3(1) or later

**Intercom Configuration Task Flow**

**Before You Begin**

- Review *Intercom Prerequisites*, on page 312.

**Procedure**

<table>
<thead>
<tr>

**Configure Intercom Partition**

**Before You Begin**

Ensure the phone model supports the Intercom feature for a particular release and device pack Generate a Phone Feature List, on page 7

**Procedure**

**Step 1** In the Cisco Unified Communications Manager Administration window, choose Call Routing > Intercom > Intercom Route Partition.
The Find and List Intercom Partitions window appears.

**Step 2** Click the **Add New** button.  
An **Add New Intercom Partition** window appears.

**Step 3** Under the **Intercom Partition Information** section, in the **Name** box, enter the name and description of the intercom partition that you want to add.  
**Note** To enter multiple partitions, use one line for each partition entry. You can enter up to 75 partitions; the names and descriptions can have up to a total of 1475 characters. The partition name cannot exceed 50 characters. Use a comma (,) to separate the partition name and description on each line.  
If a description is not entered, Cisco Unified Communications Manager uses the partition name as the description.

**Step 4** Click **Save**.  
**Step 5** Locate the partition that you want to configure.  
**Intercom Partition Configuration** window is displayed  
**Step 6** Configure the fields in the Intercom Partition Configuration field area. See the online help for more information about the fields and their configuration options.  
**Step 7** Click **Save**.  
The **Intercom Partition Configuration** window appears.  
**Step 8** Enter the appropriate settings. For detailed information about the Intercom Partition Configuration parameters, see online help.  
**Step 9** Click **Save**.  
**Step 10** Click **Apply Config**.

---

**What to Do Next**

Configure an Intercom Calling Search Space, on page 314

---

**Intercom Partition Configuration Fields**

*Table 16: Intercom Partition Configuration Fields*

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>The name of the intercom partition that you selected displays in this box.</td>

</table>
| Time Zone  | • If you want the time zone to be the same as the originating device, click the radio button next to Originating Device.  
• If you want to set a specific time zone, click the Specific Time Zone radio button and select the correct time zone from the drop-down list. |
Configure an Intercom Calling Search Space

Before You Begin

Configure Intercom Partition, on page 312

Procedure

Step 1 In the menu bar, choose Call Routing > Intercom > Intercom Calling Search Space.
Step 2 Click the Add New button.
Step 3 Configure the fields in the Intercom Calling Search Space field area. See the online help for more information about the fields and their configuration options.
Step 4 Click Save.

What to Do Next

Configure an Intercom Translation Pattern, on page 315

Intercom Calling Search Space Configuration Fields

Table 17: Intercom Calling Search Space Configuration Fields

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Name                | Enter a name in the Intercom Calling Search Space Name field. The name can comprise up to 50 alphanumeric characters and can contain any combination of spaces, periods (.), hyphens (-), and underscore characters (_). Ensure each calling search space name is unique to the system.  
**Note** Use concise and descriptive names for your intercom calling search spaces. The CompanynameLocationCalltype format usually provides a sufficient level of detail and is short enough to enable you to quickly and easily identify a calling search space. For example, CiscoDallasMetroCS identifies a calling search space for toll-free, inter-local access and transport area (LATA) calls from the Cisco office in Dallas. |
| Description         | Enter a description in the Description field. The description can include up to 50 characters in any language, and can contain any combination of spaces, periods (.), hyphens (-), and underscore characters (_), but it cannot include double-quotes ("), percentage sign (%), ampersand (&), or angle brackets (<>).                                                                                           |

Intercom Route Partitions for this Calling Search Space
### Configure an Intercom Translation Pattern

**Before You Begin**

Configure an Intercom Calling Search Space, on page 314

**Procedure**

**Step 1**
Choose Call Routing > Intercom > Intercom Translation Pattern. The Find and List Intercom Translation Patterns window appears.

**Step 2**
Perform one of the followings tasks:

a) To copy an existing intercom translation pattern, locate the partition to configure, click the Copy button beside the intercom translation pattern to copy.

b) To add a new intercom translation pattern, click the Add New button.

**Step 3**
Configure the fields in the Intercom Translation Pattern Configuration field area. See the online help for more information about the fields and their configuration options.

**Step 4**
Click Save.

Ensure that the intercom translation pattern that uses the selected partition, route filter, and numbering plan combination is unique. If you receive an error that indicates duplicate entries, check the route pattern or hunt pilot, translation pattern, directory number, call park number, call pickup number, or meet-me number configuration windows.
The **Intercom Translation Pattern Configuration** window displays the newly configured intercom translation pattern.

### What to Do Next

Configure an Intercom Directory Number, on page 320

### Intercom Translation Pattern Configuration Fields

**Table 18: Translation Pattern Configuration Field Settings**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Pattern Definition         | Enter the Intercom Translation Pattern, including numbers and wildcards (do not use spaces), in the Intercom Translation Pattern field. For example, for the NANP, enter 9.@ for typical local access or 8XXX for a typical private network numbering plan. Valid characters include the uppercase characters A, B, C, and D and \+, which represents the international escape character +. If you leave this field blank, you must select a partition from the Partition drop-down list box.  

**Note** Ensure that the Intercom Translation Pattern, which uses the chosen intercom partition, route filter, and numbering plan combination, is unique.

Check the route pattern/hunt pilot, translation pattern, directory number, call park number, call pickup number, or meet-me number if you receive a message that indicates duplicate entries. Alternatively, check the route plan report if you receive a message that indicates duplicate entries. |
| Intercom Translation Pattern | Choose an intercom partition. If you do not want to assign an intercom partition, choose <None>. If you choose <None>, you must enter a value in the Intercom Translation Pattern field.  

You can configure the number of intercom partitions that display in this drop-down list by using the Max List Box Items enterprise parameter. If more intercom partitions exist than the Max List Box Items enterprise parameter specifies, the Find button displays next to the drop-down list. Click the Find button to display the Find and List Partitions window. Find and choose an intercom partition name.  

**Note** To set the maximum list items, choose **System > Enterprise Parameters** and choose **CCMAdmin Parameters**.  

**Note** Make sure that the combination of intercom translation pattern, route filter, and intercom partition is unique within the Cisco Unified Communications Manager cluster. |
| Partition                  | Choose an intercom partition. If you do not want to assign an intercom partition, choose <None>. If you choose <None>, you must enter a value in the Intercom Translation Pattern field.  

You can configure the number of intercom partitions that display in this drop-down list by using the Max List Box Items enterprise parameter. **Note** Make sure that the combination of intercom translation pattern, route filter, and intercom partition is unique within the Cisco Unified Communications Manager cluster. |
### Field Description

**Description**
Enter a description for the Intercom Translation Pattern. The description can include up to 50 characters in any language, but it cannot include double-quotes ("), percentage sign (%), ampersand (&), or angle brackets (<>).

**Numbering Plan**
Choose a numbering plan.
If your Intercom Translation Pattern includes the @ wildcard, you may choose a numbering plan. The optional act of choosing a numbering plan restricts certain number patterns.

**Route Filter**
Choosing an optional route filter restricts certain number patterns. See topics related to wildcards and special characters in route patterns and hunt pilots.
The route filters that display depend on the numbering plan that you choose from the Numbering Plan drop-down list.
If more than 250 route filters exist, the Find button displays next to the drop-down list box. Click the Find button to display the Select Route Filters window. Enter a partial route filter name in the List items where Name contains field. Click the desired route filter name in the list of route filters that displays in the Select item to use box and click Add Selected.

**MLPP Precedence**
Choose an MLPP precedence setting for this intercom translation pattern from the drop-down list:
- Executive Override - Highest precedence setting for MLPP calls.
- Flash Override - Second highest precedence setting for MLPP calls.
- Flash - Third highest precedence setting for MLPP calls.
- Immediate - Fourth highest precedence setting for MLPP calls.
- Priority - Fifth highest precedence setting for MLPP calls.
- Routine - Lowest precedence setting for MLPP calls.
- Default - Does not override the incoming precedence level but rather lets it pass unchanged.

**Calling Search Space**
From the drop-down list, choose the Intercom Calling Search Space for which you are adding an Intercom Translation Pattern, if necessary.
You can configure the number of Intercom Calling Search Spaces that display in this drop-down list by using the Max List Box Items enterprise parameter. If more Intercom Calling Search Spaces exist than the Max List Box Items enterprise parameter specifies, the Find button displays next to the drop-down list. Click the Find button to display the Find and List Calling Search Space window.

---

*Note* To set the maximum list box items, choose System > Enterprise Parameters and choose CCMAadmin Parameters.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Route Option</td>
<td>The Route Option designation indicates whether you want this intercom translation pattern to be used for routing calls (such as 9.@ or 8[2-9]XX) or for blocking calls. Choose the Route this pattern or Block this pattern radio button. If you choose the Block this pattern radio button, you must choose the reason for which you want this intercom translation pattern to block calls. Choose a value from the drop-down list: • No Error • Unallocated Number • Call Rejected • Number Changed • Invalid Number Format • Precedence Level Exceeded</td>
</tr>
<tr>
<td>Provide Outside Dial Tone</td>
<td>Outside dial tone indicates that Cisco Unified Communications Manager routes the calls off the local network. Check this check box for each Intercom Translation Pattern that you consider to be off network.</td>
</tr>
<tr>
<td>Urgent Priority</td>
<td>If the dial plan contains overlapping patterns, Cisco Unified Communications Manager does not route the call until the interdigit timer expires (even if it is possible to dial a sequence of digits to choose a current match). Check this check box to interrupt interdigit timing when Cisco Unified Communications Manager must route a call immediately. By default, the Urgent Priority check box displays as checked. Unless your dial plan contains overlapping patterns or variable length patterns that contain !, Cisco recommends that you do not uncheck the check box.</td>
</tr>
<tr>
<td>Calling Party Transformations</td>

<td>Calling Line ID Presentation</td>
<td>Cisco Unified Communications Manager uses calling line ID presentation (CLIP/CLIR) as a supplementary service to allow or restrict the originating caller phone number on a call-by-call basis. Choose whether you want the Cisco Unified Communications Manager to allow or restrict the display of the calling party phone number on the called party phone display for this intercom translation pattern. Choose Default if you do not want to change calling line ID presentation. Choose Allowed if you want Cisco Unified Communications Manager to allow the display of the calling number. Choose Restricted if you want Cisco Unified Communications Manager to block the display of the calling number.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> Use this parameter and the Connected Line ID Presentation parameter, in combination with the Ignore Presentation Indicators (internal calls only) device-level parameter, to configure call display restrictions. Together, these settings allow you to selectively present or restrict calling and/or connected line display information for each call. See the Cisco Unified Communications Manager Administration Guide for information about the Ignore Presentation Indicators (internal calls only) field.</td>
</tr>
<tr>
<td>Calling Name Presentation</td>
<td>Cisco Unified Communications Manager uses calling name presentation (CNIP/CNIR) as a supplementary service to allow or restrict the originating caller name on a call-by-call basis. Choose whether you want the Cisco Unified Communications Manager to allow or restrict the display of the calling party name on the called party phone display for this Intercom Translation Pattern. Choose Default if you do not want to change calling name presentation. Choose Allowed if you want Cisco Unified Communications Manager to display the calling name information. Choose Restricted if you want Cisco Unified Communications Manager to block the display of the calling name information.</td>
</tr>
<tr>
<td>Connected Party Transformations</td>
<td></td>
</tr>
<tr>
<td>Connected Line ID Presentation</td>
<td>Cisco Unified Communications Manager uses connected line ID presentation (COLP/COLR) as a supplementary service to allow or restrict the called party phone number on a call-by-call basis. Choose whether you want Cisco Unified Communications Manager to allow or restrict the display of the connected party phone number on the calling party phone display for this Intercom Translation Pattern. Choose Default if you do not want to change the connected line ID presentation. Choose Allowed if you want to display the connected party phone number. Choose Restricted if you want Cisco Unified Communications Manager to block the display of the connected party phone number.</td>
</tr>
</tbody>
</table>
Cisco Unified Communications Manager uses connected name presentation (CONP/CONR) as a supplementary service to allow or restrict the called party name on a call-by-call basis.

Choose whether you want Cisco Unified Communications Manager to allow or restrict the display of the connected party name on the calling party phone display for this Intercom Translation Pattern.

Choose Default if you do not want to change the connected name presentation. Choose Allowed if you want to display the connected party name. Choose Restricted if you want Cisco Unified Communications Manager to block the display of the connected party name.

**Called Party Transformations**

**Discard Digits**
Choose the discard digits instructions that you want to be associated with this intercom translation pattern. See the Cisco Unified Communications Manager System Guide for more information.

**Note** The discard digits that display depend on the numbering plan that you choose from the Numbering Plan drop-down list.

**Called Party Transform Mask**
Enter a transformation mask value. Valid entries include the digits 0 through 9, the wildcard characters asterisk (*) and octothorpe (#), the international escape character + and blank. If the field is blank, no transformation takes place. The dialed digits get sent exactly as dialed.

**Prefix Digits (Outgoing Calls)**
Enter prefix digits. Valid entries include the digits 0 through 9, the wildcard characters asterisk (*) and octothorpe (#), the international escape character + and blank.

**Note** The appended prefix digit does not affect which directory numbers route to the assigned device.

### Configure an Intercom Directory Number

You can assign patterns to intercom directory numbers; for example, 352XX. To avoid user confusion, when you assign a pattern to an intercom directory number, add text or digits to these intercom DN configuration fields, Line Text Label, Display (Internal Caller ID), and External Phone Number Mask. These fields are displayed for an intercom directory number only after you add the intercom directory number and you associate the intercom directory number with a phone.

For example, add the username to the line text label and internal caller ID, and add the outside line number to the external number mask, when the calling information is displayed, it says John Chan, not 352XX.

**Before You Begin**

Configure an Intercom Translation Pattern, on page 315
Procedure

Step 1  Choose **Call Routing > Intercom > Intercom Directory Number**. The **Find and List Intercom Directory Numbers** window is displayed.

Step 2  To locate a specific intercom directory number, enter search criteria and click **Find**. A list of intercom directory numbers that match the search criteria displayed.

Step 3  Perform one of the followings tasks:
   a)  To add an intercom directory number, click the **Add New** button.
   b)  To update an intercom directory number, click the intercom directory number to update.
   The **Intercom Directory Number Configuration** window displayed.

Step 4  Configure the fields in the Intercom Directory Number Configuration field area. See the online help for more information about the fields and their configuration options.

Step 5  Click **Save**.

Step 6  Click **Apply Config**.

Step 7  Click **Reset Phone**.

Step 8  Restart devices.
   During the restart, the system may drop calls on gateways.

What to Do Next

**Intercom Line and Speed Dial Configuration, on page 325**

Intercom Directory Number Configuration Fields

The following table describes the fields that are available in the Intercom Directory Number Configuration window.

*Table 19: Intercom Directory Number Configuration Settings*

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Intercom Directory Number Information | Enter a dialable phone number. Values can include numeric characters and route pattern wildcards and special characters except for (,) and (@).
| Intercom Directory Number | Enter a dialable phone number. Values can include numeric characters and route pattern wildcards and special characters except for (,) and (@).
   The intercom directory number that you enter can appear in more than one intercom partition.
   At the beginning of the intercom directory number, enter \+ if you want to use the international escape character +. For this field, \+ does not represent a wildcard; instead, entering \+ represents a dialed digit. |
### Intercom Configuration Task Flow

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Route Partition</td>
<td>Choose the intercom partition to which the intercom directory number belongs. Make sure that the intercom directory number that you enter in the Intercom Directory Number field is unique within the intercom partition that you choose. You can configure the number of intercom partitions that display in this drop-down list by using the Max List Items enterprise parameter. If more intercom partitions exist than the Max List Items enterprise parameter specifies, the Find button displays next to the drop-down list. Click the Find button to display the Find and List Partition window. Enter a partial intercom partition name in the List items where Name contains field. Click the desired intercom partition name in the list of intercom partitions that displays in the Select item to use box and click Add Selected. <strong>Note</strong> To set the maximum list box items, choose <strong>System &gt; Enterprise Parameters</strong> &gt; <strong>CCMAdmin</strong> &gt; <strong>Parameters</strong>.</td>
</tr>
<tr>
<td>Description</td>
<td>Enter a description of the intercom directory number and intercom route partition. The description can include up to 50 characters in any language, but it cannot include double-quotes (&quot;), percentage sign (%), ampersand (&amp;), or angle brackets (&lt;&gt;).</td>
</tr>
<tr>
<td>Alerting Name</td>
<td>Enter a name that you want to display on the phone of the caller. This setting, which supports the Identification Services for the QSIG protocol, applies to shared and nonshared directory numbers. If you configure an alerting name for a directory number with shared-line appearances, when the phone rings at the terminating PINX, the system performs the following tasks: • Forwards the name of the caller that is assigned to the directory number. • Applies the Connected Name Restrictions (CONR) that are configured for the translation pattern (if restrictions exist); the originating PINX may modify the CONR, depending on the route pattern configuration. If you do not configure an alerting name, &quot;Name Not Available&quot; may display on the caller phone. If you do not enter a name for the Display (Internal Caller ID) field, the information in the Alerting Name field displays in the Display (Internal Caller ID) field. If you set the Always Display Original Dialed Number service parameter to True, the alerting name does not display on the calling phone; only the original dialed number displays.</td>
</tr>
<tr>
<td>ASCII Alerting Name</td>
<td>This field provides the same information as the Alerting Name field, but you must limit input to ASCII characters. Devices that do not support Unicode (internationalized) characters display the content of the Alerting Name ASCII field.</td>
</tr>
<tr>
<td>Allow Control of Device from CTI</td>
<td>Check this check box to allow CTI to control and monitor a line on a device with which this intercom directory number is associated.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| Associated Devices    | After you associate this intercom directory number with a device, this pane displays the device with which this intercom directory number is associated.  
**Note** An intercom directory number can be associated with at most one device.  
To edit a device with which this intercom directory number is associated, choose a device name in the Associated Devices pane and click the Edit Device button. The Phone Configuration window or Device Profile Configuration window displays for the device that you choose.  
To edit a line appearance that has been defined for this intercom directory number, choose a device name in the Associated Devices pane and click the Edit Line Appearance button. The Directory Number Configuration window or Device Profile Configuration window refreshes to show the line appearance for this DN on the device that you choose.  
To associate a device to this intercom directory number from the list of devices in the Dissociate Devices pane, choose a device in the Dissociate Devices pane and add it to the Associated Devices pane by clicking the up arrow between the two panes. |
| Dissociate Devices    | If you choose to dissociate an intercom directory number from a device, this pane displays the device(s) from which you dissociate this intercom directory number.  
Choose a device in the Associated Devices pane and add it to the Dissociate Devices pane by clicking the down arrow between the two panes. |
| Intercom Directory Number Settings |                                                                                                                                                                                                             |
### Intercom Configuration Task Flow

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calling Search Space</td>
<td>From the drop-down list, choose the appropriate intercom calling search space. An intercom calling search space comprises a collection of intercom partitions that are searched for numbers that are called from this intercom directory number. The value that you choose applies to all devices that are using this intercom directory number. Changes result in an update of the numbers that the Call Pickup Group field lists. You can configure calling search space for forward all, forward busy, forward no answer, forward no coverage, and forward on CTI failure directory numbers. The value that you choose applies to all devices that are using this directory number. You must configure either primary forward all calling search space or secondary forward all calling search space or both for call forward all to work properly. The system uses these concatenated fields (Primary CFA CSS + Secondary CFA CSS) to validate the CFA destination and forward the call to the CFA destination. <strong>Note</strong> If the system is using partitions and calling search spaces, Cisco recommends that you configure the other call forward calling search spaces as well. When a call is forwarded or redirected to the call forward destination, the configured call forward calling search space gets used to forward the call. If the forward calling search space is None, the forward operation may fail if the system is using partitions and calling search spaces. For example, if you configure the forward busy destination, you should also configure the forward busy calling search space. If you do not configure the forward busy calling search space and the forward busy destination is in a partition, the forward operation may fail. When you forward calls by using the CFwdAll softkey on the phone, the automatic combination of the line CSS and device CSS does not get used. Only the configured Primary CFA CSS and Secondary CFA CSS get used. If both of these fields are None, the combination results in two null partitions, which may cause the operation to fail. If you want to restrict users from forwarding calls on their phones, you must choose a restrictive calling search space from the Forward All Calling Search Space field.</td>
</tr>
<tr>
<td>BLF Presence Group</td>
<td>Configure this field with the BLF presence group feature. From the drop-down list box, choose a BLF Presence Group for this intercom directory number. The selected group specifies the devices, end users, and application users that can monitor this intercom directory number. The default value for BLF Presence Group specifies Standard Presence group, configured with installation. BLF Presence groups that are configured in Cisco Unified Communications Manager Administration also appear in the drop-down list. Presence authorization works with BLF presence groups to allow or block presence requests between groups.</td>
</tr>
</tbody>
</table>
Intercom Configuration Task Flow

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto Answer</td>
<td>Choose one of the following options to activate the auto answer feature for this intercom directory number:</td>
</tr>
<tr>
<td></td>
<td>• Auto Answer with Headset</td>
</tr>
<tr>
<td></td>
<td>• Auto Answer with Speakerphone</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> Make sure that the headset or speakerphone is not disabled when you choose Auto Answer with headset or Auto Answer with speakerphone.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> Do not configure auto answer for devices that have shared lines.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> For an intercom line on a CTIPort device, autoanswer-speakerphone and autoanswer-headset means that the autoanswer is on. The speakerphone or headset options do not apply to CTIPort devices; instead, it just indicates that the line is capable of auto-answering. Applications have responsibility for terminating the media on CTIPort devices and can terminate the media on either type of output device.</td>
</tr>
<tr>
<td>Default Activated Device</td>
<td>From the drop-down list, choose a default activated device for this intercom directory number. The selected device specifies the phone on which this intercom directory number is activated by default. The drop-down list lists only devices that support intercom.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> You must specify a default activated device for this intercom directory number to be active as an intercom line.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> If an intercom directory number is specified in a device profile that is configured for Cisco Extension Mobility, that intercom directory number will display as an intercom line only when a user logs in to the specified default activated device by using that device profile, as long as the device supports the intercom feature.</td>
</tr>
</tbody>
</table>

Intercom Line and Speed Dial Configuration

**Before You Begin**

Configure an Intercom Directory Number, on page 320

**Procedure**

**Step 1** Choose Device > Device Settings > Phone Button Template and add the intercom line to an existing phone button template or create a new template.  
**Note** The intercom line cannot be configured as the primary line.

**Step 2** From the Button Information area, from Feature drop-down list, choose Intercom.

**Step 3** From the Button Information area, from Feature drop-down list, choose Speed Dial.  
**Note** You can configure the intercom line with a predefined destination (speed dial) to allow fast access.
### Intercom Interactions and Restrictions

#### Intercom Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bulk Administration Tool</td>
<td>The Cisco Unified Communications Manager administrator can use the Bulk Administration Tool to add many intercom users at once instead of adding users individually. See the <em>Cisco Unified Communications Manager Bulk Administration Guide</em> for more information.</td>
</tr>
<tr>
<td>Barge</td>
<td>When the intercom destination is a barge target, the Cisco Unified IP Phone can still support whisper intercom. When the destination caller chooses to talk to the intercom caller by pressing the intercom button, the original call is put on hold, and the barge initiator is released.</td>
</tr>
<tr>
<td>Do Not Disturb (DND)</td>
<td>The intercom call will override DND on the destination phone.</td>
</tr>
<tr>
<td>Call Preservation</td>
<td>When a call is preserved, the end user must hang up before the phone can reregister with Cisco Unified Communications Manager. When the intercom call is in whisper mode, it represents a one-way medium, and the terminating side might have no user at all; therefore, only the intercom call in talkback mode will get preserved. (Whisper intercom will not get preserved.)</td>
</tr>
<tr>
<td>Cisco Unified Survivable Remote Site Telephony (SRST)</td>
<td>When Cisco Unified IP Phones register with SRST, the phones do not register intercom lines; therefore, the feature will not be available when the phones are registered with SRST.</td>
</tr>
<tr>
<td>Feature</td>
<td>Interaction</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Cisco Unified Communications Manager Assistant</td>
<td>With the Cisco Unified Communications Manager Assistant Configuration Wizard, <strong>Cisco Unified Communications Manager Assistant</strong> configuration takes less time and eliminates errors. The partitions, calling search spaces, route point, and translation pattern automatically get created when the administrator successfully runs and completes the configuration wizard.</td>
</tr>
</tbody>
</table>
| CTI                             | You can use CTI/JTAPI/TSP to set or modify the preconfigured target directory number for an intercom line. You will receive notification if the target directory number is updated or reconfigured through Cisco Unified Communications Manager Administration.  
  Be aware that CTI/JTAPI/TSP is backward compatible if the intercom line is not configured to be controlled by the application. If the intercom line is configured in the application user list, you may have to make changes and test the compatibility. |
| Cisco Extension Mobility        | The intercom feature interacts with Cisco Extension Mobility. The system presents an intercom line to a user who uses Cisco Extension Mobility to log in to a phone that supports the feature if the device profile that the user uses to log in has an intercom line that is provisioned. The phone must be the default device for that intercom line. |
| Internet Protocol Version 6 (IPv6) | Intercom can support phones with an IP Addressing Mode of IPv4 Only or IPv4 and IPv6. During an intercom call, the talkback mode establishes media streams with the same IP version as the media stream that is used when the caller initiates intercom. |
| Intercom directory numbers (lines) | Intercom directory numbers (lines) are restricted to one device per intercom line. Cisco Extension Mobility is widely used; mobile users need the intercom feature but need it to be available only on a single device. You can assign intercom lines to either a regular device or to an extension mobility profile, but the system needs to enforce that an intercom line gets associated to either a regular device or to an extension mobility profile. |
Interaction Features

An extension mobility profile can be used on more than one phone simultaneously, use the **Default Activated Device** field in the **Intercom Directory Number Configuration** window (Cisco Unified CM Administration > Call Routing > Intercom > intercom Directory Number Configuration) to specify which device can display this intercom line. Intercom lines that are not used for Extension Mobility also require configuration of the **Default Activated Device** field.

### Intercom Restrictions

The following restrictions apply to the Intercom feature:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restrictions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hold</td>
<td>The system does not allow intercom calls to be placed on hold.</td>
</tr>
<tr>
<td>Call Forwarding</td>
<td>Intercom calls cannot be forwarded.</td>
</tr>
<tr>
<td>Transfer</td>
<td>The system does not allow an intercom call to be transferred.</td>
</tr>
<tr>
<td>iDivert</td>
<td>The system does not allow an intercom call to be diverted.</td>
</tr>
<tr>
<td>Call Pickup/Directed Call Pickup</td>
<td>The call pickup groups do not include intercom calls.</td>
</tr>
<tr>
<td>DND</td>
<td>Intercom overrides Do Not Disturb (DND).</td>
</tr>
<tr>
<td>Bandwidth</td>
<td>If sufficient bandwidth does not exist, the intercom call fails.</td>
</tr>
<tr>
<td>Call Target</td>
<td>If two intercom calls are directed to a target, the first one goes through; the second fails with a busy tone.</td>
</tr>
<tr>
<td>Barge and cBarge</td>
<td>Intercom does not work with Barge and cBarge.</td>
</tr>
<tr>
<td>Conferencing</td>
<td>The system does not allow intercom calls to be in conference.</td>
</tr>
<tr>
<td>Monitoring and Recording</td>
<td>When an active call is being monitored or recorded, the user cannot receive nor place intercom calls.</td>
</tr>
<tr>
<td>Video</td>
<td>Video is not supported with intercom.</td>
</tr>
</tbody>
</table>
### Intercom Troubleshooting

#### Busy Tone When Dialing Out of Intercom Line

**Problem**
Phone plays busy tone when user is dialing out of intercom line.

**Possible Cause**
The DN is not in the same intercom partition as the calling number.

**Solution**
- Ensure that the DN is in the same intercom partition as the calling number.
- If it is, ensure that the dialed-out DN is configured on another phone and that the phone is registered with the same Cisco Unified Communications Manager cluster.

#### Intercom Calls cannot use Talkback with Speaker, Handset or Headset

**Problem**
User cannot go into talkback mode for intercom calls by using headset, handset, or speaker.

**Possible Cause**
This situation exists by design. The only way to go into the connected state for intercom calls is by pressing the corresponding line button.

**Solution**
User can end call by using speaker, handset, or headset.

---

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restrictions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intercom Partition</td>
<td>An intercom partition assigned to an item such as calling search space or to a route pattern cannot be deleted.</td>

<td>Intercom Calling Search Spaces</td>
<td>Intercom calling search spaces that devices, lines (DNs), translation patterns, or other items are using cannot be deleted.</td>
</tr>
</tbody>
</table>
Troubleshooting SCCP

Intercom Lines Not Showing Up on Phone

Problem
Intercom lines do not display on the phone.

Possible Cause
The phone version may be earlier than 8.3(1), or the button template may not be assigned to the phone.

Solution
- Check the phone version. Ensure that it is 8.3(1) or later.
- Determine whether the button template is assigned to the phone.
- Capture the sniffer trace between Cisco Unified Communications Manager and the phone. In the button template response, see whether intercom lines get sent to the phone (button definition = Ox17).

Intercom Lines Not Showing Up When Phone Falls Back to SRST

Problem
A phone that was configured with Cisco Unified Communications Manager Release 6.0(x) or later, includes two intercom lines. Cisco Unified Communications Manager stops and falls back to SRST. The intercom lines do not display.

Possible Cause
The SCCP version of SRST does not support SCCP Version 12.

Solution
- Check the SCCP Version of SRST. If SRST supports SCCP Version 12, it will support intercom lines.
- If SRST supports SCCP Version 12, capture a sniffer trace and ensure that the button template that the phone sent includes intercom lines.

Troubleshooting SIP

Debug Phones That Are Running SIP

Use this debug command: `Debug sip-messages sip-task gsmfsmIsm sip-adapter`.
Configuration of Phones That Are Running SIP

Show config — The command on the phone is displayed if intercom lines are configured as regular lines with featureid-->23.

Cisco Extension Mobility User Is Logged In But Intercom Line Does Not Display

Problem
The Cisco Extension Mobility user is logged in to a phone, but the user intercom line does not display.

Possible Cause
Default Activated Device is configured incorrectly.

Solution
- Check that the Default Activated Device is configured on the intercom directory number.
- Check that the Default Activated Device matches the device to which the user is logged in.

Intercom Line Fails to Display on Phone

Problem
An intercom line has been configured and assigned to a phone but fails to display on the phone.

Possible Cause
Default Activated Device value is set to the intercom line of this device.

Solution
If the configuration has been done, reset the phone.
PART IX

Receiving Calls

Prime Line Support

Prime Line Support Overview

You can configure the Prime Line Support in Cisco Unified CM Administration so that when the phone is off-hook and receives a call on any line, the system always chooses the primary line for the call.

Prime Line Support Prerequisites

The following devices are compatible with the Prime Line Support feature:
Cisco Unified IP Phone 7900 Series, 8900 Series, and 9900 Series

For more information on the supported devices, see the latest version of Cisco Unified IP Phone Guide and Cisco Unified IP Phone Administration Guide.

Prime Line Support Configuration Task Flow

To configure the Prime Line Support feature for either the Cisco CallManager service or devices and device profiles, perform one of the following procedures.

Before You Begin

• Review Prime Line Support Prerequisites, on page 335.
### Procedure

<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>(Optional) Configure the Prime Line Support feature for the Cisco CallManager service, which applies to the entire cluster.</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>(Optional) Configure the Prime Line Support feature for specific devices within the cluster, if you do not want to enable the feature clusterwide.</td>
</tr>
</tbody>
</table>

**Note** When you configure this parameter, going off-hook makes only the first line active on the phone, even when a call rings on another line on the phone. So the call does not get answered on the other line.

### Configure Clusterwide Prime Line Support

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose `System > Service Parameters`.

**Step 2** From the `Server` drop-down list, choose the server that is running the Cisco CallManager service.

**Step 3** From the `Service` drop-down list, choose `Cisco CallManager`.

**Step 4** From the `Always Use Prime Line` clusterwide service parameter, choose one of the following options from the drop-down list:

- **True** - When a phone goes off-hook, the primary line gets chosen and becomes the active line.
- **False** - When a phone goes off-hook, the IP phone automatically chooses an available line as the active line.

The default value for this service parameter is **False**.

**Step 5** For this change to take effect on the SIP phones, click the `ApplyConfig` button in Cisco Unified CM Administration (for example, on the `Device Configuration` window, the `Device Pool Configuration` window, or any other window on which ApplyConfig is an option).

**Note** If the new configuration is not applied on the SIP phones, the SIP Prime Line Support feature changes will not be implemented until the next reset of the Cisco CallManager service or reset of each affected device.

### What to Do Next

(Optional) **Configure Prime Line Support for Devices**, on page 337
Configure Prime Line Support for Devices

Before You Begin
(Optional) Configure Clusterwide Prime Line Support, on page 336

Procedure

Step 1 Log in to Cisco Unified CM Administration, and choose Device > Common Phone Profile.

Step 2 From the Find and List window, choose the phone for which you want to change the Always Use Prime Line setting.
The Phone Configuration window appears.

Step 3 From the Always Use Prime Line drop-down list, choose one of the following options:

- **Off**- When the phone is idle and receives a call on any line, the phone user answers the call from the line on which the call is received.

- **On**- When the phone is idle (off hook) and receives a call on any line, the primary line is chosen for the call. Calls on other lines continue to ring, and the phone user must select those other lines to answer these calls.

- **Default**- Cisco Unified Communications Manager uses the configuration from the Always Use Prime Line service parameter, which supports the Cisco CallManager service.

Step 4 Click Save.

Prime Line Support Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always Use Prime Line</td>
<td>If you select On for the Always Use Prime Line parameter in the Device Profile or Default Device Profile Configuration window, a Cisco Extension Mobility user can use this feature after logging in to the device that supports Cisco Extension Mobility.</td>
</tr>
<tr>
<td>Maximum Number of Calls and Busy Trigger Settings</td>
<td>When the phone already has a call on a line, Cisco Unified Communications Manager uses the configuration for the Maximum Number of Calls and Busy Trigger settings to determine how to route the call.</td>
</tr>
</tbody>
</table>
### Prime Line Support Troubleshooting

#### Prime Line Support Does Not Work When Set To True

**Problem**  When the cluster-wide service parameter *Always use Prime Line* is set to *True* and the IP phone goes off-hook, the primary line becomes the active line. Even if a call rings on the second line, when the user goes off-hook, it activates only the first line. The phone does not answer the call on the second line. However, when IP phones with multiple line appearances are used with the 7.1.2 phone load, the phone does not use the primary line when a second line rings. If the user picks up the handset, the phone answers the call on the second line.

**Solution**  Press the line button for the primary line so that the secondary line is not engaged when a call is initiated.

#### Unable To Answer Inbound Calls

**Problem**  The users are unable to automatically answer inbound calls after they go off-hook on IP phones, and must press the Answer softkey to answer the calls.

**Solution**  To resolve the problem, perform the following procedure:

1. In Cisco Unified CM Administration, choose *System > Service Parameters*.
2. From the Server drop-down list, choose the server that is running the Cisco CallManager service.
3. From the Service drop-down list, choose *Cisco CallManager*.
4. In Cluster wide parameters (Device - phone), set *Always Use Prime Line* to *False*.

#### Inbound Calls Are Answered Automatically

**Problem**  When an inbound call is received on a shared line of an IP phone, the call is answered immediately as the handset is lifted, without the option to either answer the call or make an outbound call. This behavior does not change even though *Auto Line Select* is set to disabled.

**Solution**  To resolve the problem, perform the following procedure:

1. In Cisco Unified CM Administration, choose *System > Service Parameters*.
2. From the Server drop-down list, choose the server that is running the Cisco CallManager service.
3. From the Service drop-down list, choose *Cisco CallManager*.
4 In Cluster wide parameters (Device - phone), set **Always Use Prime Line** to **False**.
Call Forwarding

• Call Forwarding Overview, page 341
• Call Forwarding Configuration Task Flow, page 343
• Call Forwarding Interactions and Restrictions, page 352

Call Forwarding Overview

As a user, you can configure a Cisco Unified IP Phone to forward calls to another phone. The following call forwarding types are supported:

• **Call Forward No Bandwidth**—Forwards calls when a call to a directory number fails due to insufficient bandwidth, and provides forwarding functionality to an Automated Alternate Routing (AAR) destination using public switched telephone network (PSTN) as the alternate route or to a voicemail system.

• **Call Forward with Alternate Destination**—Forwards calls when a call to a directory number and the forwarded destination are not answered. The call gets diverted to an alternate destination as a last resort. This Call Forwarding type is also referred to as “MLPP Alternate Party destination.”

• **Call Forward All (CFA)**—Forwards all calls to a directory number.

• **Call Forward Busy (CFB)**—Forwards calls only when the line is in use and the configured Call Forward Busy trigger value is reached.

• **Call Forward No Answer (CFNA)**—Forwards calls when the phone is not answered after the configured No Answer Ring Duration timer is exceeded or the destination is unregistered.

• **Call Forward No Coverage (CFNC)**—Forwards calls when the hunt list is exhausted or timed out, and the associated hunt-pilot for coverage specifies "Use Personal Preferences" for its final forwarding.

• **Call Forward Unregistered (CFU)**—Forwards calls when the phone is unregistered due to a remote WAN link failure, and provides automated rerouting through the Public Switched Telephone Network (PSTN). Calls can also be forwarded based on the type of caller: internal or external.

• **CFA Destination Override**—Forwards calls when the user to whom calls are being forwarded (the target) calls the user whose calls are being forwarded (the initiator). The phone of the initiator rings instead of call forwarding back to the target.
Call Forward All, Including CFA Loop Prevention and CFA Loop Breakout

Call Forward All (CFA) allows a phone user to forward all calls to a directory number.

You can configure CFA for internal and external calls and can forward calls to a voicemail system or a dialed destination number by configuring the calling search space (CSS). Cisco Unified Communications Manager includes a secondary Calling Search Space configuration field for CFA. The secondary CSS for CFA combines with the existing CSS for CFA to allow support of the alternate CSS system configuration. When you activate CFA, only the primary and secondary CSS for CFA are used to validate the CFA destination and redirect the call to the CFA destination. If these fields are empty, the null CSS is used. Only the CSS fields that are configured in the primary CSS for CFA and secondary CSS for CFA fields are used. If CFA is activated from the phone, the CFA destination is validated by using the CSS for CFA and the secondary CSS for CFA, and the CFA destination gets written to the database. When a CFA is activated, the CFA destination always gets validated against the CSS for CFA and the secondary CSS for CFA.

Cisco Unified Communications Manager prevents CFA activation on the phone when a CFA loop is identified. For example, Cisco Unified Communications Manager identifies a call forward loop when the user presses the CFwddALL softkey on the phone with directory number 1000 and enters 1001 as the CFA destination, and 1001 has forwarded all calls to directory number 1002, which has forwarded all calls to directory number 1003, which has forwarded all calls to 1000. In this case, Cisco Unified Communications Manager identifies that a loop has occurred and prevents CFA activation on the phone with directory number 1000.

Tip

If the same directory number exists in different partitions, for example, directory number 1000 exists in partitions 1 and 2, Cisco Unified Communications Manager allows the CFA activation on the phone.

CFA loops do not affect call processing because Cisco Unified Communications Manager supports CFA loop breakout, which ensures that if a CFA loop is identified, the call goes through the entire forwarding chain, breaks out of the Call Forward All loop, and the loop is completed as expected, even if CFNA, CFB, or other forwarding options are configured along with CFA for one of the directory numbers in the forwarding chain.

For example, the user for the phone with directory number 1000 forwards all calls to directory number 1001, which has forwarded all calls to directory number 1002, which has forwarded all calls to directory number 1000, which creates a CFA loop. In addition, directory number 1002 has configured CFNA to directory number 1004. The user at the phone with directory number 1003 calls directory number 1000, which forwards to 1001, which forwards to 1002. Cisco Unified Communications Manager identifies a CFA loop, and the call, which breaks out of the loop, tries to connect to directory number 1002. If the No Answer Ring Duration timer expires before the user for the phone with directory number 1002 answers the call, Cisco Unified Communications Manager forwards the call to directory number 1004.

For a single call, Cisco Unified Communications Manager may identify multiple CFA loops and attempt to connect the call after each loop is identified.

<td>Administrators can override the CFA when the target of the CFA calls the initiator of the CFA. This allows the CFA target can reach the initiator for important calls.</td>
</tr>
</tbody>
</table>

**Configure Partitions for Call Forwarding**

Configure partitions to create a logical grouping of directory numbers (DNs) and route patterns with similar reachability characteristics. Partitions facilitate call routing by dividing the route plan into logical subsets that are based on organization, location, and call type. You can configure multiple partitions.

Configure partitions to restrict call forwarding to certain numbers based on your design criteria and requirements.
Procedure

Step 1
From Cisco Unified CM Administration, choose Call Routing > Class of Control > Partition.

Step 2
Click Add New to create a new partition.

Step 3
In the **Partition Name, Description** field, enter a name for the partition that is unique to the route plan.
Partition names can contain alphanumeric characters, as well as spaces, hyphens (-), and underscore characters (_). See the online help for guidelines about partition names.

Step 4
Enter a comma (,) after the partition name and enter a description of the partition on the same line.
The description can contain up to 50 characters in any language, but it cannot include double quotes ("), percentage sign (%), ampersand (&), backslash (\), angle brackets (<>), or square brackets ([ ]). If you do not enter a description, Cisco Unified Communications Manager automatically enters the partition name in this field.

Step 5
To create multiple partitions, use one line for each partition entry.

Step 6
From the **Time Schedule** drop-down list, choose a time schedule to associate with this partition.
The time schedule specifies when the partition is available to receive incoming calls. If you choose None, the partition remains active at all times.

Step 7
Select one of the following radio buttons to configure the **Time Zone**:

- **Originating Device**—When you select this radio button, the system compares the time zone of the calling device to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

- **Specific Time Zone**—After you select this radio button, choose a time zone from the drop-down list.
The system compares the chosen time zone to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

Step 8
Click Save.

What to Do Next
Configure Call Forwarding when Hunt List is Exhausted or Hunt Timer Expires, on page 346

Configure Call Forwarding when Hunt List is Exhausted or Hunt Timer Expires

The concept of hunting differs from that of call forwarding. Hunting allows Cisco Unified Communications Manager to extend a call to one or more lists of numbers, where each list specifies a hunting order that is chosen from a fixed set of algorithms. When a call extends to a hunt party from these lists and the party fails to answer or is busy, hunting resumes with the next hunt party. (The next hunt party varies depending on the current hunt algorithm.) Hunting then ignores the Call Forward No Answer (CFNA), Call Forward Busy (CFB), or Call Forward All (CFA) configured values for the attempted party.

Call Forwarding allows detailed control as to how to extend (divert or redirect) a call when a called party fails to answer, or is busy and hunting is not taking place. For example, if the CFNA value for a line is set to a hunt-pilot number, a call to that line that is not answered diverts to the hunt-pilot number and begins hunting.

Before You Begin
Configure Calling Search Space for Call Forwarding, on page 345

Procedure

Step 1 From Cisco Unified CM Administration, choose Call Routing > Route/Hunt > Hunt Pilot. The Find and List Hunt Pilots window is displayed.
Step 2 Click Find. A list of configured Hunt Pilots is displayed.
Step 3 Choose the pattern for which you want to configure call treatment when hunting fails. The Hunt Pilot Configuration window is displayed.
Step 4 Configure the fields in the Hunt Pilot Configuration for the Hunt Call Treatment Settings area. See the Related Topics section for more information about the fields and their configuration options.
Step 5 Click Save.

<tr>
<td><strong>Note</strong> Forward Hunt No Answer or Forward Hunt Busy fields are designed to move calls through the route list. Queuing is used to hold callers in a route list. Therefore, if queuing is enabled, both Forward Hunt No Answer and Forward Hunt Busy are automatically disabled. Conversely, if Forward Hunt No Answer or Forward Hunt Busy are enabled, queuing is automatically disabled.</td>
<td></td>
</tr>
</tbody>
</table>
| Forward Hunt No Answer       | When the call that is distributed through the hunt list is not answered in a specific period of time, this field specifies the destination to which the call gets forwarded. Choose one of the following options:  
  • Do Not Forward Unanswered Calls  
  • Use Forward Settings of Line Group Member (replaces Use Personal Preferences check box)  
  • Forward Unanswered Calls to  
    • Destination—Enter a directory number to which calls must be forwarded to.  
    • Calling Search Space—Choose a calling search space from the drop-down list which applies to all devices that use this directory number.  
  • Maximum Hunt Timer—Enter a value (in seconds) that specifies the maximum time for hunting without queuing. Valid values are 1 to 3600. The default value is 1800 seconds (30 minutes). This timer is canceled if either a hunt member answers the call or the hunt list gets exhausted before the timer expires. If you do not specify a value for this timer, hunting continues until a hunt member answers or the hunt list is exhausted. If neither event takes place, hunting continues for 30 minutes, after which the call is received for final treatment. |
| Note                         | If hunting exceeds the number of hops that the Forward Maximum Hop Count service parameter specifies, hunting expires before the 30 minute maximum hunt timer value, and the caller receives a reorder tone. |

---

**Configure Other Call Forwarding Types**

You can configure Call Forward All (CFA), Call Forward Busy (CFB), Call Forward No Answer (CFNA), Call Forward No Coverage (CFNC), and Call Forward Unregistered (CFU) from the **Directory Number Configuration** window.
Before You Begin

- For Call Forwarding functionality to work as intended, Cisco recommends that for the configured phones and the directory numbers in various partitions, the Call Forward Calling Search Spaces also be configured or else the forwarding may fail. When a call is forwarded or redirected to the Call Forward destination, the configured Call Forward Calling Search Space is used to forward the call.

- Configure Call Forward Alternate Destination, on page 349

Procedure

Step 1: From Cisco Unified Communications Manager, choose Call Routing > Directory Number Configuration. The Find and List Directory Numbers window is displayed.

Step 2: Configure the Call Forwarding and Call Pickup Settings fields in the Directory Number Configuration window to configure CFA, CFB, CFNA, CFNC, and CFU. See the Related Topics section for information about the fields and their configuration options.

Step 3: Click Save.

What to Do Next

Enable Destination Override for Call Forwarding, on page 351

Related Topics

Call Forwarding Fields

Enable Destination Override for Call Forwarding

When you enable the destination override for call forwarding, Cisco Unified Communications Manager ignores the CFA destination when it matches the calling party number. The override applies to both internal and external calls.

In cases where the calling party number has been transformed, the calling party number does not match the CFA destination, no override occurs.

Before You Begin

Configure Other Call Forwarding Types, on page 350

Procedure

Step 1: From Cisco Unified CM Administration, choose System > Service Parameters. The Service Parameter Configuration window is displayed.

Step 2: In the Clusterwide Parameters (Feature - Hold Reversion) area, set the CFA Destination Override service parameter value to True.
## Call Forwarding Interactions and Restrictions

### Call Forwarding Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call Back</td>
<td>Calls that are made from the CallBack notification screen will override all the Call Forward configured values on the target DN. The calls should be made before the CallBack recall timer expires, otherwise the calls will not override the Call Forward configured values.</td>
</tr>
<tr>
<td>Call Display Restrictions</td>
<td>The Connected Number Display restriction applies to all calls that originate in the system. When this value is set to True, this field interacts transparently with existing Cisco Unified Communications Manager applications, features, and call processing. The value applies to all calls that terminate inside or outside the system. The Connected Number Display is updated to show the modified number or redirected number when a call is routed to a Call Forward All or Call Forward Busy destination, or gets redirected through a call transfer or CTI application.</td>
</tr>
<tr>
<td>Do Not Disturb</td>
<td>On Cisco Unified IP Phones, the message that indicates that the Do Not Disturb (DND) feature is active takes priority over the message that indicates that the user has new voice messages. However, the message that indicates that the Call Forward All feature is active has a higher priority than DND.</td>
</tr>
<tr>
<td>External Call Control</td>
<td>External Call Control intercepts calls at the translation pattern level, while Call Forward intercepts calls at the directory number level. External Call Control has higher priority; for calls where call forward is invoked, Cisco Unified Communications Manager sends a routing query to the adjunct route server if the translation pattern has an External Call Control profile assigned to it. Call Forwarding is triggered only when the adjunct route server sends a Permit decision with a Continue obligation to the Cisco Unified Communications Manager. <strong>Note</strong> The Call Diversion Hop Count service parameter that supports External Call Control, and the Call Forward Call Hop Count service parameter that supports Call Forwarding are independent of each other; they work separately.</td>

<td>Extend and Connect supports Call Forward All.</td>
</tr>
</tbody>
</table>
### Call Forwarding Interactions and Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Immediate Divert</td>
<td>When the Forward No Answer field in the <strong>Directory Number Configuration</strong> window is not configured, Call Forward uses the clusterwide CFNA timer service parameter, <strong>Forward No Answer Timer</strong>. If a user presses the iDivert softkey at the same time as the call is being forwarded, the call gets diverted to an assigned call forward directory number (because the amount of time set on the timer was too short), not the voicemail. To resolve this situation, set the CFNA timer service parameter to enough time (for example, 60 seconds).</td>
</tr>
<tr>
<td>Logical Partitioning</td>
<td>Cisco Unified Communications Manager performs logical partitioning policy check using the geolocation identifier information that associates with the incoming and forwarded devices. This handling applies to all types of call forwarding.</td>
</tr>
</tbody>
</table>
You can optionally configure a preconfigured Precedence Alternate Party target for any MLPP-enabled station.

Cisco Unified Communications Manager applies the Call Forward Busy feature to forward a precedence call in the usual manner before it applies to any Precedence Alternate Party Diversion procedures to the call.

The system preserves precedence of calls across multiple forwarded calls.

If the incoming precedence call is of higher precedence than the existing call, preemption occurs. Both the preempted parties in the active call receive a continuous preemption tone until the station to which the precedence call is directed hangs up. After hanging up, the station to which the precedence call is directed receives precedence ringing. The destination station connects to the preemption call when the station goes off hook.

Call Forward No Answer

For calls of Priority precedence level and above, call processing preserves the precedence level of calls during the forwarding process and may preempt the forwarded-to user.

If an Alternate Party is configured for the destination of a precedence call, call processing diverts the precedence call to the Alternate Party after the Precedence Call Alternate Party timeout expires. If no Alternate Party value is configured for the destination of a precedence call, call processing diverts the precedence call to the Call Forward No Answer value.

Normally, precedence calls are routed to users and not to the voicemail system. The administrator sets the Use Standard VM Handling for Precedence Calls enterprise parameter to avoid routing precedence calls to voicemail systems.

If the incoming precedence call is of equal or lower precedence than the existing call, call processing invokes normal call-forwarding behavior. If the destination station for a precedence call is nonpreemptable (that is, not MLPP-configured), call processing invokes call-forwarding behavior.

Alternate Party Diversion (APD) comprises a special type of call forwarding. If users are configured for APD, APD takes place when a precedence call is directed to a directory number (DN) that is busy or does not answer. MLPP APD applies only to precedence calls. An MLPP APD call disables the DN Call Forward No Answer value for precedence calls.
### Feature Configuration Guide for Cisco Unified Communications Manager, Release 11.0(1)

#### Call Forwarding Interactions and Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Originally called party name in Placed Call History</td>
<td>When privacy is configured only in the SIP profile of the called party device and Call Forward All (CFA), or Call Forward Busy (CFB), or Call Forward Unregistered (CFUR) is enabled, the configured alerting name is displayed instead of “private”. To ensure that “private” is displayed for call forwarding, Cisco recommends that you configure the name presentation restriction in the translation pattern or the route pattern rather than in the SIP profile.</td>
</tr>
<tr>
<td>Secure Tone</td>
<td>Call Forward All is supported on protected phones.</td>
</tr>
<tr>
<td>Session Handoff</td>
<td>When the user hands off a call, a new call gets presented on the desk phone. While the desk phone is flashing, Call Forward All is not triggered on the desk phone for the call that was handed off.</td>
</tr>
</tbody>
</table>

#### Call Forwarding Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
</table>
| Call Forwarding | • If Call Forward All activation occurs in Cisco Unified Communications Manager Administration or the Cisco Unified Communications Self Care Portal, Cisco Unified Communications Manager does not prevent the CFA loop.  

• Cisco Unified Communications Manager prevents Call Forward All loops if CFA is activated from the phone, if the number of hops for a Call Forward All call exceeds the value that is specified for the Forward Maximum Hop Count service parameter, and if all phones in the forwarding chain have CFA activated (not CFB, CFNA, or any other call forwarding options).  

For example, if the user with directory number 1000 forwards all calls to directory number 1001, which has CFB and CFNA configured to directory number 1002, which has CFA configured to directory number 1000, Cisco Unified Communications Manager allows the call to occur because directory number 1002 acts as the CFB and CFNA (not CFA) destination for directory number 1001.  

• You cannot activate Call Back if you forward all calls to voicemail system.  

• An uncommon condition in connection with the Forward No Answer Timeout exists when you press the iDivert softkey. For example, if a manager presses the iDivert softkey immediately after the Forward No Answer timeout, Call Forward forwards the call to a preconfigured directory number. However, if the manager presses the iDivert softkey before the Forward No Answer timeout, Immediate Divert diverts the call to the voicemail of the manager. |
<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Immediate Divert</td>
<td>When Call Forward All (CFA) and Call Forward Busy (CFB) are activated, the system does not support Immediate Divert (CFA and CFB have precedence over Immediate Divert).</td>
</tr>
<tr>
<td>Intercom</td>
<td>You cannot forward Intercom calls.</td>
</tr>
<tr>
<td>Log Out of Hunt Group</td>
<td>When a phone that is running SIP (7906, 7911, 7941, 7961, 7970, and 7971Steve Lawson - 7970 and 7971 phones are deprecated in 12.0(1)) is logged in to hunt groups and Call Forward All is activated, the call gets presented to the phone that is running SIP. When 7940 and 7960 IP phones that are running SIP are logged in to hunt groups and Call Forward All is activated, the phone gets skipped and the next phone in the line group is rung.</td>
</tr>
<tr>
<td>Logical Partitioning</td>
<td>Logical partitioning handling does not take place in the following circumstances:</td>
</tr>
<tr>
<td></td>
<td>• When both the caller and forwarded devices are Voice over IP (VoIP) phones.</td>
</tr>
<tr>
<td></td>
<td>• When geolocation or a geolocation filter is not associated with any device.</td>
</tr>
<tr>
<td>Multilevel Precedence and Preemption (MLPP)</td>
<td>Multilevel Precedence and Preemption (MLPP) support for supplementary services specifies the following restrictions for Call Forwarding:</td>
</tr>
<tr>
<td></td>
<td>• Call Forward All (CFA) support for inbound MLPP calls always forwards the call to the MLPP Alternate Party (MAP) target of the called party, if the MAP target is configured. In the event of an incorrect configuration (that is, if no MAP target is specified), the call gets rejected, and the calling party receives reorder tone.</td>
</tr>
<tr>
<td></td>
<td>• Call Forward No Answer (CFNA) support for inbound MLPP calls forwards the call once to a CFNA target. After the first hop, if the call remains unanswered, the call is sent to the MAP target of the original called party, if the MAP target is configured. In the event of an incorrect configuration (that is, if no MAP target is specified), the call gets rejected, and the calling party receives reorder tone.</td>
</tr>
<tr>
<td></td>
<td>• Call Forward Busy (CFB) support for inbound MLPP calls forwards the call up to the maximum number that is configured for forwarding hops. If the maximum hop count is reached, the call is sent to the MAP target of the original called party, if the MAP target is configured. In the event of an incorrect configuration (that is, no MAP target is specified), the call gets rejected, and the calling party receives reorder tone.</td>
</tr>

- Directed Call Park Overview, page 377
- Directed Call Park Prerequisites, page 377
- Directed Call Park Configuration Task Flow, page 377
- Directed Call Park Interactions and Restrictions, page 382
- Troubleshooting Directed Call Park, page 384

Call Park Overview

The Call Park feature allows you to place a call on hold so that it can be retrieved from another phone in the Cisco Unified Communications Manager system (for example, a phone in another office or in a conference room). If you are on an active call, you can park the call to a call park extension by pressing the Park softkey. Another phone in your system can then dial the call park extension to retrieve the call.

You can define either a single directory number or a range of directory numbers for use as Call Park extension numbers. You can park only one call at each Call Park extension number.

The Call Park feature works within a Cisco Unified Communications Manager cluster, and each Cisco Unified Communications Manager node in a cluster must have Call Park extension numbers defined. You can define either a single directory number or a range of directory numbers for use as Call Park extension numbers. Ensure that the directory number or range of numbers is unique.

Users can dial the assigned route pattern (for example, a route pattern for an intercluster trunk could be 80XX) and the Call Park number (for example, 8022) to retrieve parked calls from another Cisco Unified Communications Manager cluster. You must ensure that calling search spaces and partitions are properly configured. Call Park works across clusters.
Valid Call Park extension numbers comprise integers and the wildcard character X. You can configure a maximum of XX in a Call Park extension number (for example, 80XX), which provides up to 100 Call Park extension numbers. When a call gets parked, Cisco Unified Communications Manager chooses the next Call Park extension number that is available and displays that number on the phone.

**Park Monitoring**

Park Monitoring is an optional Call Park feature where Cisco Unified Communications Manager monitors the status of a parked call until a timer expires. After the timer expires, the call is forwarded to a preassigned number, sent to voicemail, or returned to the call parker. You can apply park monitoring to phone lines and to hunt pilots.

**Call Park Prerequisites**

If you are using call park across clusters, you must have partitions and calling search spaces configured.

**Table 21: Cisco Unified IP Phones that Support Park Softkey Template and Call Park Button Template**

**Note**

You can configure Call Park on any line (except line 1) or button by using the programmable line key feature.
## Call Park Configuration Task Flow

### Before You Begin
- Review Call Park Prerequisites, on page 358

### Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Configure Clusterwide Call Park, on page 360</td>
<td>(Optional) Configure Call Park for the entire cluster, or use the procedure in step 3 to configure Call Park on servers within the cluster</td>
</tr>
<tr>
<td><strong>Step 2</strong> Configure a Partition for Call Park, on page 360</td>
<td>Create a partition to add a Call Park Number</td>
</tr>
<tr>
<td><strong>Step 3</strong> Configure a Call Park Number, on page 361</td>
<td>Configure a Call Park Number to use Call Park across servers in a cluster.</td>
</tr>
<tr>
<td><strong>Step 4</strong> Configure a Softkey Template for Call Park, on page 364</td>
<td>Add the Park softkey to a softkey template.</td>
</tr>
</tbody>
</table>
| **Step 5** To Associate a Softkey Template with a Common Device Configuration, on page 365, complete the following subtasks:  
  - Add a Softkey Template to a Common Device Configuration, on page 366  
  - Associate a Common Device Configuration with a Phone, on page 366 | Optional. To make the softkey template available to phones, you must complete either this step or the following step. Follow this step if your system uses a Common Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones. |
| **Step 6** Associate a Softkey with a Phone, on page 367 | Optional. Use this procedure either as an alternative to associating the softkey template with the Common Device Configuration, or in conjunction with the Common Device Configuration. Use this procedure in conjunction with the Common Device Configuration if you need assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment. |
| **Step 7** To Configure Call Park Button, on page 367, complete the following subtasks:  
  - Configure a Phone Button Template for Call Park, on page 367  
  - Associate a Button Template with a Phone, on page 368 | |

Feature Configuration Guide for Cisco Unified Communications Manager, Release 11.0(1)
Configure Clusterwide Call Park

Procedure

Step 1  Choose **System > Service Parameters**.

Step 2  Select the desired node as **Server** and the service as **Cisco CallManager** (active).

Step 3  Click the **Advanced** button.

The advanced service parameters are displayed in the window.

Step 4  In Clusterwide Parameter(Feature-General) section set the **Enable cluster-wide Call Park Number/Ranges** to **True**.

The default value is False. This parameter determines whether the Call Park feature is implemented clusterwide or restricted to a specific Unified CM node.

Step 5  Set the **Call Park Display Timer** for each server in a cluster that has the Cisco CallManager service and Call Park configured.

The default is 10 seconds. This parameter determines how long a Call Park number displays on the phone that parked the call.

Step 6  Set the **Call Park Reversion Timer** for each server in a cluster that has the Cisco Unified Communications Manager service and Call Park configured.

The default is 60 seconds. This parameter determines the time that a call remains parked. When this timer expires, the parked call returns to the device that parked the call. If a hunt group member parks a call that comes through a hunt pilot, the call goes back to the hunt pilot when the Call Park Reversion Timer expires.

**Note**  If you enter a Call Park Reversion Timer value that is less than the Call Park Display Timer, Call Park numbers may not display on the phone.

Step 7  Click **Save**.

Step 8  Restart all Cisco Unified Communications Manager services.

What to Do Next

Configure a Partition for Call Park, on page 360

Configure a Partition for Call Park

Configure partitions to create a logical grouping of directory numbers (DNs) and route patterns with similar reachability characteristics. Partitions facilitate call routing by dividing the route plan into logical subsets that are based on organization, location, and call type. You can configure multiple partitions.
Before You Begin

(Optional) Configure Clusterwide Call Park, on page 360

Procedure

**Step 1** From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Partition**.

**Step 2** Click **Add New** to create a new partition.

**Step 3** In the **Partition Name, Description** field, enter a name for the partition that is unique to the route plan. Partition names can contain alphanumeric characters, as well as spaces, hyphens (-), and underscore characters (_). See the online help for guidelines about partition names.

**Step 4** Enter a comma (,) after the partition name and enter a description of the partition on the same line. The description can contain up to 50 characters in any language, but it cannot include double quotes ("), percentage sign (%), ampersand (&), backslash (\), angle brackets (<>,), or square brackets ([ ]). If you do not enter a description, Cisco Unified Communications Manager automatically enters the partition name in this field.

**Step 5** To create multiple partitions, use one line for each partition entry.

**Step 6** From the **Time Schedule** drop-down list, choose a time schedule to associate with this partition. The time schedule specifies when the partition is available to receive incoming calls. If you choose **None**, the partition remains active at all times.

**Step 7** Select one of the following radio buttons to configure the **Time Zone**:

- **Originating Device**—When you select this radio button, the system compares the time zone of the calling device to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

- **Specific Time Zone**—After you select this radio button, choose a time zone from the drop-down list. The system compares the chosen time zone to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

**Step 8** Click **Save**.

What to Do Next

Configure a Call Park Number, on page 361

Configure a Call Park Number

If you want to use Call Park across servers in a cluster, you must configure Call Park extension numbers on each server.

Ensure that each Call Park directory number, partition, and range is unique within the Cisco Unified Communications Manager. Each Cisco Unified Communications Manager to which devices are registered requires its own unique Call Park directory number and range. Cisco Unified Communications Manager Administration does not validate the Call Park numbers or range that you use to configure Call Park. To help identify invalid numbers or ranges and potential range overlaps, use the Cisco Unified Communications Manager Dialed Number Analyzer tool.
Before You Begin

Configure a Partition for Call Park, on page 360

Procedure

Step 1  Choose Call Routing > Call Park.
Step 2  Perform one of the following tasks:
    • To add a new Call Park number, click Add New.
    • To copy a Call Park number, find the Call Park number or range of numbers and then click the Copy icon.
    • To update a Call Park number, find the Call Park number or range of numbers.

The Call Park number configuration window displays.

Step 3  Configure the fields in the Call Park configuration fields. See the Related Topics section for more information about the fields and their configuration options.
Step 4  To save the new or changed Call Park numbers in the database, click Save.

What to Do Next

Configure a Softkey Template for Call Park, on page 364

Related Topics

Call Park Configuration Fields, on page 363
## Call Park Configuration Fields

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Call Park Number/Range | Enter the Call Park extension number. You can enter digits or the wildcard character X (the system allows one or two Xs). For example, enter 5555 to define a single Call Park extension number of 5555 or enter 55XX to define a range of Call Park extension numbers from 5500 to 5599.  
**Note** You can create a maximum of 100 Call Park numbers with one call park range definition. Make sure that the call park numbers are unique.  
**Note** You cannot overlap call park numbers between Cisco Unified Communications Manager servers. Ensure that each Cisco Unified Communications Manager server has its own number range.  
**Note** The call park range is selected from the list of servers where the call originates. For example, if phone A (registered to node A) calls phone B (registered to node B) and the phone B user presses Park, phone B requires a call park range in the CSS that resides on node A. In a multinode environment where phones and gateways communicate with various nodes and where calls that originate from any server may need to be parked, the phones require a CSS that contains call park ranges from all servers. |
| Description            | Provide a brief description of this call park number. The description can include up to 50 characters in any language, but it cannot include double-quotes ("), percentage sign (%), ampersand (&), or angle brackets (<>). |
| Partition              | If you want to use a partition to restrict access to the call park numbers, choose the desired partition from the drop-down list. If you do not want to restrict access to the call park numbers, choose <None> for the partition.  
**Note** Make sure that the combination of call park extension number and partition is unique within the Cisco Unified Communications Manager. |
Configure a Softkey Template for Call Park

Use this procedure to make the Park softkey available.

Park softkey has the following call states:

- On Hook
- Ring Out
- Connected Transfer

Before You Begin
Configure a Call Park Number, on page 361

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Softkey Template. The Softkey Template Configuration window appears.

Step 2  Perform this step to create a new softkey template; otherwise, proceed to the next step.
   a) Click Add New.
   b) Select a default template and click Copy.
   c) In the Softkey Template Name field, enter a new name for the template.
   d) Click Save.

Step 3  Perform this step to add softkeys to an existing template.
   a) Enter search criteria and click Find.
   b) Choose an existing template.

Step 4  Check the Default Softkey Template check box to designate this softkey template as the default softkey template.

Note  If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.
Step 5  Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

Step 6  From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

Step 7  From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

Step 8  To display the softkey in additional call states, repeat the previous step.

Step 9  Click Save.

Step 10  Perform one of the following tasks:

- If you modified a template that is already associated with devices, click Apply Config to restart the devices.
- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next

Associate a Softkey Template with a Common Device Configuration, on page 365

Associate a Softkey Template with a Common Device Configuration

Optional. There are two ways to associate a softkey template with a phone:

- Add the softkey template to the Phone Configuration.
- Add the softkey template to the Common Device Configuration.

The procedures in this section describe how to associate the softkey template with a Common Device Configuration. Follow these procedures if your system uses a Common Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see Associate a Softkey Template with a Phone.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Add a Softkey Template to a Common Device Configuration, on page 366</td>
</tr>
<tr>
<td>Step 2</td>
<td>Associate a Common Device Configuration with a Phone, on page 366</td>
</tr>
</tbody>
</table>
Add a Softkey Template to a Common Device Configuration

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Common Device Configuration. The Find and List Common Device Configuration window appears.

Step 2  Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.
   a) Click Add New.
   b) In the Name field, enter a name for the Common Device Configuration.
   c) Click Save.

Step 3  Perform this step to add the softkey template to an existing Common Device Configuration.
   a) Enter search criteria and click Find.
   b) Choose an existing Common Device Configuration.
   The Common Device Configuration window appears.

Step 4  In the Softkey Template drop-down list, choose the softkey template that contains the softkey that you want to make available.

Step 5  Click Save.

Step 6  Perform one of the following tasks:
   • If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.
   • If you modified a Common Device Configuration that is already associated with devices, click Apply Config to restart the devices.

What to Do Next

Associate a Common Device Configuration with a Phone, on page 366

Associate a Common Device Configuration with a Phone

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window appears.

Step 2  Find the phone to which to add the softkey template.

Step 3  From the Common Device Configuration drop-down list, choose the common device configuration that contains the new softkey template.

Step 4  Click Save.

Step 5  Click Reset to update the phone settings.
**Associate a Softkey with a Phone**

This procedure is optional. You can use this procedure as an alternative to associating the softkey template with the Common Device Configuration. This procedure also works in conjunction with the Common Device Configuration: use it when you need to assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.

**Procedure**

<table>
<thead>
<tr>

| **Step 6** | Click **Save**. |
| **Step 7** | Perform one of the following tasks:  
   - If you modified a template that is already associated with devices, click **Apply Config** to restart the devices. |
If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next

Associate a Button Template with a Phone, on page 239

Associate a Button Template with a Phone

Before You Begin

Configure a Phone Button Template for Call Park, on page 367

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window is displayed.

Step 2 From the Find and List Phones window, click Find. A list of phones that are configured on the Cisco Unified Communications Manager is displayed.

Step 3 Choose the phone to which you want to add the phone button template. The Phone Configuration window appears.

Step 4 In the Phone Button Template drop-down list, choose the phone button template that contains the new feature button.

Step 5 Click Save. A dialog box is displayed with a message to press Reset to update the phone settings.

What to Do Next

(Optional) Configure Park Monitoring, on page 368

Configure Park Monitoring

Complete these optional tasks to add Park Monitoring to your Call Park configuration.

Before You Begin

Park Monitoring is supported on only a subset of phones that support Call Park. The following Cisco Unified IP Phones support Park Monitoring:

- Cisco IP Phone 8811
- Cisco IP Phone 8841
- Cisco IP Phone 8845
- Cisco IP Phone 8851
- Cisco IP Phone 8851NR
**Cisco IP Phone 8861**
**Cisco IP Phone 8865**
**Cisco IP Phone 8865NR**
**Cisco Unified IP Phone 8961**
**Cisco Unified IP Phone 9951**
**Cisco Unified IP Phone 9971**

### Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>

</tr>
</tbody>
</table>

### Configure Park Monitoring System Timers

Use this procedure to configure system-level timers for the Park Monitoring feature.

**Procedure**

**Step 1**  
In Cisco Unified CM Administration, choose System > Service Parameters.

**Step 2**  
From the Server drop-down list box, select the publisher node.

**Step 3**  
From the Service drop-down list box, select Cisco CallManager.

**Step 4**  
Configure values for the following service parameters:

- **Park Monitoring Reversion Timer**—The number of seconds that Cisco Unified Communications Manager waits before prompting the user to retrieve a parked call. For individual phone lines, this setting can be overridden by the same setting in the Directory Number Configuration window.

- **Park Monitoring Periodic Reversion Timer**—The number of seconds between reversion attempts when a call has been parked. Cisco Unified Communications Manager prompts the user about the parked call by ringing, beeping, or flashing the parker's phone.
• **Park Monitoring Forward No Retrieve Timer**—The number of seconds that park reminder notifications occur before the parked call is forwarded to the Park Monitoring Forward No Retrieve destination specified in the call parker's Directory Number configuration.

**Note** For additional details on these fields, see the service parameter online help.

**Step 5** Click **Save**.

---

**What to Do Next**

Use any of these optional tasks to assign how expired timers get handled for individual phones lines and hunt pilots:

• Configure Park Monitoring for Hunt Pilots, on page 370
• Configure Park Monitoring for a Directory Number, on page 371
• Configure Park Monitoring via Universal Line Template, on page 372

---

**Configure Park Monitoring for Hunt Pilots**

If your deployment uses hunt pilots, use this optional procedure to assign a Park Monitoring destination to a hunt pilot.

**Note** For general information on setting up hunt pilots, see the "Configure Hunt Pilots" chapter of the System Configuration Guide for Cisco Unified Communications Manager.

**Before You Begin**

Configure Park Monitoring System Timers, on page 369

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Call Routing > Route/Hunt > Hunt Pilot**.

**Step 2** Click **Find** and select the hunt pilot on which you want to configure a Park Monitoring destination.

**Step 3** In the Park Monitoring No Retrieve Destination field, assign a Destination directory number and Calling Search Space.

**Step 4** Complete any remaining fields in the Hunt Pilot Configuration window. For help with the fields and their settings, see the online help.

**Step 5** Click **Save**.

---

**What to Do Next**

(Optional) Configure Park Monitoring for a Directory Number, on page 371
Configure Park Monitoring for a Directory Number

Use this procedure to assign a Park Monitoring destination for an individual phone line. You can forward calls to another number, send to voicemail, or return to the call parker.

**Note**
The following tools are available to provision settings for multiple phone lines:

- Use a universal line template to provision park monitoring settings for multiple phone lines via an LDAP directory sync. For details, see Configure Park Monitoring via Universal Line Template, on page 372.
- Use the Bulk Administration Tool to import a CSV file with settings for a large number of phone lines. For details, see the Bulk Administration Guide for Cisco Unified Communications Manager.

**Before You Begin**

Configure Park Monitoring System Timers, on page 369

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose Call Routing > Directory Number.

**Step 2**
Click Find and select the directory number that you want to configure.

**Step 3**
Enter values for the following Park Monitoring fields:

- **Park Monitoring Forward No Retrieve Destination External**—When the Park Monitoring Forward No Retrieve Timer expires, and the parkee is an external party, the call is forwarded either to voicemail or to a specified directory number. If this field is empty, the call is redirected to the call parker’s line.

- **Park Monitoring Forward No Retrieve Destination Internal**—When the Park Monitoring Forward No Retrieve Timer expires, and the parkee is an internal party, the call is forwarded either to voicemail or to a specified directory number. If this field is empty, the call is redirected to the call parker’s line.

- **Park Monitor Reversion Timer**—The number of seconds that Cisco Unified Communications Manager waits before prompting the user to retrieve a call parked on this phone line. If the value is 0 or empty, then Cisco Unified Communications Manager uses the value of the Park Monitor Reversion Timer service parameter.

**Step 4**
Complete any remaining fields in the Directory Number Configuration window. For help with the fields and their settings, refer to the online help.

**Step 5**
Click Save.

**What to Do Next**

(Optional) Configure Park Monitoring via Universal Line Template, on page 372
Configure Park Monitoring via Universal Line Template

Use this procedure to assign park monitoring settings to a universal line template. If you have an LDAP directory sync configured, you can use the universal line template configuration to provision directory number settings with park monitoring configured for multiple users.

Before You Begin
Configure Park Monitoring System Timers, on page 369

Procedure

**Step 1**
From Cisco Unified CM Administration, choose User Management > User Phone/Add > Universal Line Template.

**Step 2**
Perform one of the following steps:
- Click Find and select an existing template.
- Click Add New to create a new template.

**Step 3**
Expand the Park Monitoring Settings section and complete the fields. For field descriptions, see Park Monitoring Settings for Universal Line Templates, on page 372.

**Step 4**
Click Save.

What to Do Next
To apply the universal line template to individual directory numbers, you must assign the template to a user profile, feature group template, and LDAP directory sync. When the sync occurs, the template settings get applied to the phone lines that are a part of the sync. For LDAP setup, see the "Configure End Users" chapters in the System Configuration Guide for Cisco Unified Communications Manager.

Park Monitoring Settings for Universal Line Templates
The following table contains the Park Monitoring fields in the Universal Line Template Configuration window of Cisco Unified Communications Manager.
Table 22: Park Monitoring Settings for Universal Line Templates

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Forward Destination for External Calls When Not Retrieved | When the person whose call is parked is an external party and the Park Monitoring Forward No Retrieve Timer expires, the system sends the call to one of these destinations:  
  - Voicemail—Uses the configuration in Voice Mail Profile to determine where to send the call.  
  - Revert to Originator—Returns the call to the call parker.  
  - To forward calls to another number, input the other number in the text box.  
  If no option is selected, the call returns to the call parker. |
| Calling Search Space for Forwarding External Calls When Not Retrieved | If you have configured parked calls to be redirected to a configured number, select the calling search space for the forward destination. |
| Forward Destination for Internal Calls When Not Retrieved | When the person whose call is parked is an internal party and the Park Monitoring Forward No Retrieve Timer expires, the system sends the call to one of these destinations:  
  - Voicemail—Uses the configuration in Voice Mail Profile to determine where to send the call.  
  - Revert to Originator—Returns the call to the call parker.  
  - To forward calls to another number, input the other number in the text box.  
  If no option is selected, the call returns to the call parker. |
| Calling Search Space for Forwarding Internal Calls When Not Retrieved | If you have configured parked calls to be redirected to a configured number, select the calling search space for the forward destination. |
| Park Monitor Reversion Timer (seconds)  | This timer determines the number of seconds that Unified Communications Manager waits before prompting the user to retrieve a call that the user parked. This timer starts when the user presses the Park softkey on the phone, and a reminder is issued when the timer expires. The default value is 60 seconds.  
  **Note** If you select 0 for the timer then phone lines that use this template will use the value of the Park Monitor Reversion Timer cluster-wide service parameter. |
## Call Park Interactions and Restrictions

### Call Park Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTI Applications</td>
<td>CTI applications access call park functionality, including monitoring activity on call park DN. To monitor a call park DN, add an application or end user that is associated with the CTI application to the Standard CTI Allow Call Park Monitoring user group.</td>
</tr>
<tr>
<td>Music On Hold</td>
<td>Music On Hold allows users to place calls on hold with music that a streaming source provides. Music On Hold allows two types of hold:</td>
</tr>
<tr>
<td></td>
<td>• User hold–The system invokes this type of hold when a user presses the Hold button or Hold softkey.</td>
</tr>
<tr>
<td></td>
<td>• Network hold–This type of hold takes place when a user activates the Transfer, Conference, or Call Park feature, and the hold automatically gets invoked.</td>
</tr>
<tr>
<td>Route Plan Report</td>
<td>The route plan report displays the patterns and directory numbers that are configured in Cisco Unified Communications Manager. Use the route plan report to look for overlapping patterns and directory numbers before assigning a directory number to Call Park.</td>
</tr>
<tr>
<td>Calling Search Space and Partitions</td>
<td>Assign the call park directory number or range to a partition to limit call park access to users on the basis of the device calling search space.</td>
</tr>
<tr>
<td>Immediate Divert</td>
<td>Call Park supports Immediate Divert (iDivert or Divert softkey). For example, user A calls user B, and user B parks the call. User B retrieves the call and then decides to send the call to a voice-messaging mailbox by pressing the iDivert or Divert softkey. User A receives the voice mail greeting of user B.</td>
</tr>
</tbody>
</table>
### Interaction Feature

**Barge**

- Barge with Call Park—The target phone (the phone that is being barged upon) controls the call. The barge initiator “piggybacks” on the target phone. The target phone includes most of the common features, even when the target is being barged; therefore, the barge initiator has no feature access. When the target parks a call, the barge initiator then must release its call (the barge).

- cBarge with Call Park—The target and barge initiator act as peers. The cBarge feature uses a conference bridge, which causes it to function like a MeetMe conference. Both phones (target and barge initiator) have full access to their features.

**Directed Call Park**

We recommend that you do not configure both Directed Call Park and the Park softkey for Call Park, but the possibility exists to configure both. If you configure both, ensure that the call park and directed call park numbers do not overlap.

**QSIG Intercluster Trunks**

When a user parks a call across a QSIG intercluster trunk or a QSIG gateway trunk, the caller who has been parked (the parkee) does not see the To parked number message. The phone continues to display the original connected number. The call has been parked, and the user who parked the call can retrieve it. When the call is retrieved from the parked state, the call continues, but the caller who was parked does not see the newly connected number.

### Call Park Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call Park</td>
<td>Cisco Unified Communications Manager can park only one call at each call park extension number.</td>
</tr>
<tr>
<td>Shared Line</td>
<td>For shared line devices across nodes, the line registers to the node on which the device registers first. For example, if a device from subscriber2 registers first and the line is created in subscriber2 and the publisher node, the line belongs to subscriber2. Each node must be configured with the call park number.</td>
</tr>
</tbody>
</table>
Restriction Feature

To achieve failover or fallback, configure call park numbers on the publisher node and subscriber nodes. With this configuration, when the primary node is down, the line device association gets changed to the secondary node, and the secondary node call park number gets used.

Directed Call Park

If a directed call park (or call park) is initiated from a shared line and the call is not retrieved from any device, the parked call does not always get reverted to the recipient in the shared line (parker).

Conference

When a conference call is set up between both the shared line and the caller on park reversion or park reversion fails causing a two-party call (between the other shared line and caller). The reason is that, on park reversion, Cisco Unified Communications Manager extends the call to both devices sharing the line and tries to add either party in conference (party already in conference or party that hit the park). If the party attempts to add the party who is already in the conference first, then the park reversion fails. When park reversion fails, the shared line can still barge into the call as usual.

Delete Server

If any call park numbers are configured for Cisco Unified Communications Manager on a node that is being deleted in the Server Configuration window (System > Server), the node deletion fails. Before you can delete the node, you must delete the call park numbers in Cisco Unified Communications Manager Administration.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Backup</td>
<td>To achieve failover or fallback, configure call park numbers on the publisher node and subscriber nodes. With this configuration, when the primary node is down, the line device association gets changed to the secondary node, and the secondary node call park number gets used.</td>
</tr>
<tr>
<td>Directed Call Park</td>
<td>If a directed call park (or call park) is initiated from a shared line and the call is not retrieved from any device, the parked call does not always get reverted to the recipient in the shared line (parker).</td>
</tr>
<tr>
<td>Conference</td>
<td>When a conference call is set up between both the shared line and the caller on park reversion or park reversion fails causing a two-party call (between the other shared line and caller). The reason is that, on park reversion, Cisco Unified Communications Manager extends the call to both devices sharing the line and tries to add either party in conference (party already in conference or party that hit the park). If the party attempts to add the party who is already in the conference first, then the park reversion fails. When park reversion fails, the shared line can still barge into the call as usual.</td>
</tr>
<tr>
<td>Delete Server</td>
<td>If any call park numbers are configured for Cisco Unified Communications Manager on a node that is being deleted in the Server Configuration window (System &gt; Server), the node deletion fails. Before you can delete the node, you must delete the call park numbers in Cisco Unified Communications Manager Administration.</td>
</tr>
</tbody>
</table>

Troubleshooting Call Park

User Cannot Park Calls

Problem
User cannot park calls. When the user presses the Park softkey or feature button, the call does not get parked.

Solution
Ensure that a unique call park number is assigned to each Cisco Unified Communications Manager in the cluster.
The partition that is assigned to the call park number does not match the partition that is assigned to the phone directory number. For more information on partition see the *System Configuration Guide for Cisco Unified Communications Manager*.

**Call Park Number is Not Displayed Long Enough**

**Problem**
The call park number is not displayed long enough for the user.

**Solution**
Set the Call Park Display Timer to a longer duration. See the Related Topics section for more information about the Timer.

**Related Topics**
- [Configure Clusterwide Call Park](#), on page 360

**Directed Call Park Overview**

Directed Call Park allows a user to transfer a call to an available user-selected directed call park number. Configured Directed Call Park numbers exist cluster-wide. You can configure phones that support the directed call park Busy Lamp Field (BLF) to monitor the busy or idle status of specific directed call park numbers. Users can also use the BLF to speed dial a directed call park number.

Cisco Unified Communications Manager can park only one call at each directed call park number. To retrieve a parked call, a user must dial a configured retrieval prefix followed by the directed call park number at which the call is parked.

**Directed Call Park Prerequisites**

Make sure that the phones in your deployment support Directed Call Park. For a list of supported phones, run the *Phone Feature List* report from Cisco Unified Reporting, selecting *Assisted Directed Call Park* as the feature. For details, see Generate a Phone Feature List, on page 7.

**Directed Call Park Configuration Task Flow**

**Before You Begin**

- Review Directed Call Park Prerequisites, on page 377
### Procedure

<table>
<thead>
<tr>

<td><strong>Step 4</strong> Synchronize Directed Call Park with Affected Devices, on page 381</td>
<td>Synchronize Directed Call Park with Affected Devices</td>
</tr>
</tbody>
</table>

### Configure ClusterWide Directed Call Park

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose **System > Service Parameters**.

**Step 2** To set the timer, update the **Call Park Reversion Timer** fields in the Clusterwide Parameter(Feature- General) section.

- The default is 60 seconds. This parameter determines the time that a call remains parked. When this timer expires, the parked call returns to the device that parked the call or to another specified number, depending on what you configure in the **Directed Call Park Configuration** window.

---

**What to Do Next**

Configure a Directed Call Park Number, on page 378

### Configure a Directed Call Park Number

**Before You Begin**

Ensure that each directed call park directory number, partition, and range is unique within the Cisco Unified Communications Manager. Before you begin, generate a route plan report. If the Park softkey is also activated (not recommended), ensure that no overlap exists between call park numbers and directed call park numbers. If reversion number is not configured, the call reverts to the parker (parking party) after the Call Park Reversion Timer expires.

Configure ClusterWide Directed Call Park, on page 378
Procedure

**Step 1** Choose **Call Routing > Directed Call Park**.

**Step 2** Perform one of the following tasks:

- To add a new directed call park number, click **Add New**.
- To copy a directed call park number, find the directed call park number or range of numbers and then click the **Copy** icon.
- To update a directed call park number, find the directed call park number or range of numbers.

The **directed call park number configuration** window is displayed.

**Step 3** Configure the fields in the Directed Call Park settings area. See the Related Topics section for more information about the fields and their configuration options.

**Step 4** To save the new or changed call park numbers in the database, click **Save**.

If you update a directed call park number, Cisco Unified Communications Manager reverts any call that is parked on that number only after the Call Park Reversion Timer expires.

**Step 5** Click **Apply Config**.

The **Apply Configuration Information** dialog is displayed.

**Step 6** Click **OK**.

**Step 7** If you are using BLF to monitor directed Call Park numbers, click **Restart Devices** button on the **Directed Call Park Configuration** window. This step is optional if you are using change notification.

What to Do Next

*Configure BLF/Directed Call Park Buttons, on page 380*

**Directed Call Park Configuration Settings**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number</td>
<td>Enter the directed call park number. You can enter digits (0-9) or the wildcard character ([], - , *, ^, #) and X (the system allows one or two Xs). For example, enter 5555 to define a single call park number of 5555 or enter 55XX to define a range of directed call park extension numbers from 5500 to 5599. Make sure that the directed call park numbers are unique and that they do not overlap with call park numbers.</td>
</tr>
<tr>
<td>Description</td>
<td>Provide a brief description of this directed call park number or range. The description can include up to 50 characters in any language, but it cannot include double quotation marks (&quot;), percentage sign (%), ampersand (&amp;), or angle brackets (&lt;&gt;) and tabs.</td>
</tr>
</tbody>
</table>
### Configure BLF/Directed Call Park Buttons

**Before You Begin**

Configure ClusterWide Directed Call Park,  on page 378

**Procedure**

**Step 1**  
From Cisco Unified Communications Manager Administration, choose *Device > Device Settings > Phone Button Template*.  
The Phone Button Template Configuration window displays.

**Step 2**  
After the configuration window displays, click the Add a new BLF Directed Call Park link in the Association Information pane.  
**Note**  
The link does not display in the Association Information pane if the phone button template that you applied to the phone or device profile does not support BLF/Directed Call Park.

**Step 3**  
Configure the fields in the BLF/Directed Call Park fields area. See the Related Topics section for more information about the fields and their configuration options.

**Step 4**  
After you complete the configuration, click Save and close the window.  
The directory numbers are displayed in the Association Information pane of the Phone Configuration Window.

**What to Do Next**

Synchronize Directed Call Park with Affected Devices,  on page 381

<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Music On Hold</td>
<td>Directed Call Park uses the Default Network Hold MOH Audio Source for music on hold.</td>
</tr>
<tr>
<td>Calling Search Space and Partitions</td>
<td>Assign the Directed Call Park Directory number or range to a partition to limit Directed Call Park access to users on the basis of the device calling search space.</td>
</tr>
<tr>
<td>Immediate Divert</td>
<td>Directed call park supports Immediate Divert (iDivert or Divert softkey). For example, user A calls user B, and user B parks the call. User B retrieves the call and then decides to send the call to a voice-messaging mailbox by pressing the iDivert or Divert softkey. User A receives the voicemail greeting of user B.</td>
</tr>
</tbody>
</table>
### Directed Call Park Interactions and Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
</table>
| Barge                    | • Barge with Directed Call Park–The target phone (the phone that is being barged upon) controls the call. The barge initiator "piggybacks" on the target phone. The target phone includes most of the common features, even when the target is being barged; therefore, the barge initiator has no feature access. When the target parks a call by using directed call park, the barge initiator then must release its call (the barge).  
• cBarge with Directed Call Park–The target and barge initiator act as peers. The cBarge feature uses a conference bridge that makes it behave like to a meet-me conference. Both phones (target and barge initiator) retain full access to their features. |
| Call Park                | We recommend that you do not configure both directed call park and the Park softkey for call park, but the possibility exists to configure both. If you configure both, ensure that the call park and directed call park numbers do not overlap.  
A caller who has been parked (the parkee) by using the directed call park feature cannot, while parked, use the standard call park feature. |

### Directed Call Park Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
</table>
| Directed Call Park number    | Cisco Unified Communications Manager one party can park only one call at each Directed Call Park number.  
You cannot delete a Directed Call Park number that a device is configured to monitor (using the BLF button). A message indicates that the Directed Call Park number or range cannot be deleted because it is in use. To determine which devices are using the number, click the Dependency Records link on the **Directed Call Park Configuration** window. |
| Standard Call Park feature   | A caller who has been parked (the parkee) by using the Directed Call Park feature cannot, while parked, use the standard call park feature. |
The Directed Call Park BLF cannot monitor a range of Directed Call Park numbers. A user can monitor only individual Directed Call Park numbers by using the Directed Call Park BLF. For example, if you configure a Directed Call Park number range 8X, you cannot use the Directed Call Park BLF to monitor that whole range of 80 to 89.

The following limitations apply to Directed Call Park for phones that are running SIP:

- Directed Call Park gets invoked by using the Transfer softkey on Cisco Unified IP Phones 7940 and 7960 that are running SIP.
- The system does not support directed call park when the Blind Transfer softkey is used on Cisco Unified IP Phones 7940 and 7960 that are running SIP.
- The system does not support directed call park BLF on Cisco Unified IP Phones 7940 and 7960 that are running SIP, and third-party phones that are running SIP.

### Troubleshooting Directed Call Park

#### User Cannot Retrieve Parked Calls

**Problem**

User cannot retrieve parked calls. After dialing the directed call park number to retrieve a parked call, the user receives a busy tone, and the IP phone displays the message, “Park Slot Unavailable”.

**Solution**

Ensure that the user dials the retrieval prefix followed by the directed call park number.

#### User Cannot Park Calls

**Problem**

User cannot park calls. After the Transfer softkey (or Transfer button if available) is pressed and the directed call park number is dialed, the call does not get parked.

**Solution**

Ensure that the partition that is assigned to the call park number matches the partition that is assigned to the phone directory number. Ensure that the partition and calling search space are configured correctly for the
device. For more information about the partition, see the System Configuration Guide for Cisco Unified Communications Manager.

User Receives a Reorder Tone After the Reversion Timer Expires

**Problem**
User cannot park calls. The user receives a reorder tone after the reversion timer expires.

**Solution**
Ensure that the user presses the Transfer softkey (or Transfer button if available) before dialing the directed call park number, and then presses the Transfer softkey (or Transfer button) again or goes on hook after dialing the directed call park number. Because directed call park is a transfer function, the directed call park number cannot be dialed alone.

**Note**
You can complete the transfer only by going on hook rather than pressing the Transfer softkey (or Transfer button) a second time if the Transfer On-hook Enabled service parameter is set to True.

User Receives a Reorder Tone or Announcement

**Problem**
User cannot park calls. After pressing the Transfer softkey (or Transfer button if available) and dialing the directed call park number, the user receives a reorder tone or announcement.

**Solution**
Ensure that the dialed number is configured as a directed call park number.

User Cannot Park a Call at a Number Within The Range

**Problem**
After configuring a range of directed call park numbers, the user cannot park a call at a number within the range.

**Solution**
Review the syntax for entering a range of directed call park numbers. If incorrect syntax is used, the system may appear to configure the range when it actually does not.

Parked Calls Revert Too Quickly

**Problem**
Parked calls revert too quickly.

**Solution**
Set the Call Park Reversion Timer to a longer duration.
Park Slot Unavailable

Problem
User cannot park calls. After pressing the Transfer softkey (or Transfer button if available) and dialing the directed call park number, the user receives a busy tone, and the IP phone displays the message, "Park Slot Unavailable".

Solution
Ensure that the dialed directed call park number is not already occupied by a parked call or park the call on a different directed call park number.

Parked Calls Do Not Revert to the Parked Call Number

Problem
Parked calls do not revert to the number that parked the call.

Solution
Check the configuration of the directed call park number to ensure that it is configured to revert to the number that parked the call rather than to a different directory number.

Number or Range Cannot Be Deleted Because It Is in Use

Problem
When an attempt is made to delete a directed call park number or range, a message displays that indicates that the number or range cannot be deleted because it is in use.

Solution
You cannot delete a directed call park number that a device is configured to monitor (by using the BLF button). To determine which devices are using the number, click the Dependency Records link in the Directed Call Park Configuration window.
CHAPTER 29

Call Pickup

- Call Pickup Overview, page 387
- Call Pickup Configuration Task Flow, page 389
- Call Pickup Interactions and Restrictions, page 408

Call Pickup Overview

The Call Pickup feature allows users to answer calls that come in on a directory number other than their own.

Group Call Pickup Overview

The Group Call Pickup feature allows users to pick up incoming calls in another group. Users must dial the appropriate call pickup group number when this feature is activated from a Cisco Unified IP Phone. Use the softkey, GPickUp, for this type of call pickup. When the user invokes the Group Call Pickup phone feature while multiple calls are incoming to a pickup group, the user gets connected to the incoming call that has been ringing the longest. Depending on the phone model, the users can either use the Group Pickup programmable feature button or the Group Pickup softkey to pick up an incoming call. If Auto Group Call Pickup is not enabled, the user must press the GPickUp softkey, dial the group number of another pickup group, and answer the call to make the connection.

Other Group Pickup Overview

The Other Group Pickup feature allows users to pick up incoming calls in a group that is associated with their own group. The Cisco Unified Communications Manager automatically searches for the incoming call in the associated groups to make the call connection when the user activates this feature from a Cisco Unified IP Phone. Users use the softkey, OPickUp, for this type of call pickup. If Auto Other Group Pickup is not enabled, the user must press the softkeys, OPickUp and Answer, to make the call connection. Depending on the phone model, the users can either use the Call Pickup programmable feature button or the Call Pickup softkey to pick up an incoming call.

When more than one associated group exists, the first associated group has the highest priority of answering calls for the associated group. For example, groups A, B, and C associate with group X, the group A has the highest priority and the group C has the lowest priority of answering calls. The group X picks up incoming call in group A, though a call may have come in earlier in group C than the incoming call in group A.
Directed Call Pickup Overview

The Directed Call Pickup feature allows a user to pick up a ringing call on a DN directly by pressing the GPickUp or Group Pickup softkeys and entering the directory number of the device that is ringing. If Auto Directed Call Pickup is not enabled, the user must press the GPickUp softkey, dial the DN of the ringing phone, and answer the call that will now ring on the user phone to make the connection. Cisco Unified Communications Manager uses the associated group mechanism to control the privilege of a user who wants to pick up an incoming call by using Directed Call Pickup. The associated group of a user specifies one or more call pickup groups that are associated to the pickup group to which the user belongs.

If a user wants to pick up a ringing call from a DN directly, the associated groups of the user must contain the pickup group to which the DN belongs. If two users belong to two different call pickup groups and the associated groups of the users do not contain the call pickup group of the other user, the users cannot invoke Directed Call Pickup to pick up calls from each other.

When the user invokes the Directed Call Pickup feature and enters a DN to pick up an incoming call, the user connects to the call that is incoming to the specified phone whether or not the call is the longest ringing call in the call pickup group to which the DN belongs. If multiple calls are ringing on a particular DN and the user invokes Directed Call Pickup to pick up a call from the DN, the user connects to the incoming call that has been ringing the specified DN the longest.

BLF Call Pickup Overview

The BLF Call Pickup feature allows Cisco Unified Communications Manager to notify a phone user when a call is waiting to be picked up from a BLF DN. The BLF call pickup initiator (the phone that picks up the call) is selected as the next available line or as a specified line. To use a specified line, the line must remain off hook before the BLF SD button is pressed. You can configure a hunt list member DN as the BLF DN to allow an incoming call to a hunt list member to be picked up by the BLF call pickup initiator. The incoming call on the hunt list member can come from the hunt list or be a directed call. The behavior in each case depends on how you configure call pickup for the hunt list member DN, the BLF DN, and the hunt pilot number. When a Call Pickup occurs with the service parameter Auto Call Pickup Enabled set to false, the phone must remain off hook or the user must press the answer key to pick up the call.

The BLF SD button on the phone can exist in any of the following states:

- Idle—Indicates that no call exists on the BLF DN.
- Busy—Indicates that at least one active call exists on the BLF DN, but no alerts exist.
- Alert—Indicates by flashing that at least one incoming call exists on the BLF DN.

When there is an incoming call to the BLF DN, the BLF SD button flashes on the BLF call pickup initiator phone to indicate that an incoming call to the BLF DN exists. If Auto Call Pickup is configured, the user presses the BLF SD button on the call pickup initiator phone to pick up the incoming call. If auto call pickup is not configured, the phone must remain off hook, or the user must press the answer key to pick up the call.
# Call Pickup Configuration Task Flow

## Procedure

<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** | Configure a Call Pickup Group, on page 391 | Configure a call pickup group for each of the call pickup features that you want to use:  
- Call Pickup  
- Group Call Pickup  
- Other Call Pickup  
- Directed Call Pickup  
- BLF Call Pickup  
You must define groups with unique names and numbers. |
<p>| <strong>Step 2</strong> | Assign a Call Pickup Group to Directory Numbers, on page 391 | Assign each of the call pickup groups that you created to the directory numbers that are associated with phones on which you want to enable call pickup. Directory numbers must be assigned to a call pickup group to use this feature. Repeat this procedure for each call pickup group that you create. |
| <strong>Step 3</strong> | Create another call pickup group and associate it with the BLF call pickup group that you created in Step 1, on page 389. You can associate a call pickup group with multiple BLF DN call pickup groups. | Perform this step if you are configuring BLF Call Pickup. <strong>Note</strong> You do not always need to create another call pickup group. For example, you can have a single call pickup group that includes both the initiator DN and the destination DN. In such cases, associate the BLF call pickup group with itself. |
| <strong>Step 4</strong> | Configure Partitions for Call Pickup, on page 392 | Configure partitions to create a logical grouping of directory numbers (DN) with similar reachability characteristics. You can use partitions to restrict access to call pickup groups. If you assign call pickup group numbers to a partition, only those phones that can dial numbers in that partition can use the call pickup group. You must complete this procedure for directed call pickup. It is optional for other types of call pickup. |
| <strong>Step 5</strong> | Configure Calling Search Space, on page 393 | If you configure partitions, you must also configure calling search spaces. Configure calling search spaces to identify the partitions that calling devices can search when they attempt to complete a call. You must complete this procedure for directed all pickup. It is optional for other types of call pickup. |
| <strong>Step 6</strong> | (Optional) Assign a Call Pickup Group to Hunt Pilots, on page 394 | Assign a call pickup group to a hunt pilot DN so that users can pick up calls that are alerting in the line group |</p>
<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>

</thead>
<tbody>
<tr>
<td></td>
<td>members. Hunt lists that are assigned to a call pickup group can use Call Pickup, Group Call pickup, BLF Call Pickup, Other Group Pickup, and Directed call pickup.</td>
</tr>
</tbody>
</table>

**Step 7** *(Optional) Configure notifications:*
- Configure Call Pickup Notification, on page 394
- Configure Call Pickup Notification for a Directory Number, on page 397
- Configure BLF Call Pickup Notification, on page 395

Configure notifications when other members of a pickup group receive a call. You can configure audio or visual notifications, or both.

**Step 8** Configure Directed Call Pickup:
- Configure a Time Period, on page 398
- Configure Time Schedule, on page 399
- Associate a Time Schedule with a Partition, on page 399

Before you configure directed call pickup, you must configure partitions and calling search spaces. With directed call pickup, the calling search space of the user who requests the Directed Call Pickup feature must contain the partition of the DN from which the user wants to pick up a call.

Time periods and time schedules specify the times when members in the associated group are available to accept calls.

**Step 9** *(Optional) Configure automatic call answering:*
- Configure Auto Call Pickup, on page 400
- Configure BLF Auto Pickup, on page 401

Enable automatic call answering and configure timers for automatic call answering.

**Step 10** Configure phone button templates:
- Configure Call Pickup Phone Button Template, on page 402
- Associate Call Pickup Button Template with Phone, on page 403
- Configure BLF Speed Dial Number for the BLF Call Pickup Initiator, on page 403

Configure phone button templates for any of the call pickup features that you want to use:
- Speed Dial BLF
- Call Pickup
- Group Call Pickup
- Other Group Pickup

For Directed Call Pickup, use the Group Call Pickup button.
Configure a Call Pickup Group

Procedure

Step 1 From Cisco Unified CM Administration, choose Call Routing > Call Pickup Group. The Find and List Call Pickup Groups window appears.
Step 2 Click Add New. The Call Pickup Group Configuration window appears.
Step 3 Configure the fields in the Call Pickup Group Configuration window. See the online help for more information about the fields and their configuration options.

Assign a Call Pickup Group to Directory Numbers

This section describes how to assign a call pickup group to a directory number. Only directory numbers that are assigned to a call pickup group can use call pickup, group call pickup, BLF call pickup, other group pickup, and directed call pickup. If partitions are used with call pickup numbers, make sure that the directory numbers that are assigned to the call pickup group have a calling search space that includes the appropriate partitions.

Before You Begin
Configure a Call Pickup Group, on page 391

Procedure

Step 1 Choose Device > Phone or Call Routing > Directory Number.
Step 2 Enter the appropriate search criteria to find the phone or directory number that you want to assign to a call pickup group and click Find. A list of phones or directory numbers that match the search criteria displays.
Step 3  Choose the phone or directory number to which you want to assign a call pickup group.
Step 4  From the Association Information list in the Phone Configuration window, choose the directory number to which the call pickup group will be assigned.
Step 5  From the Call Pickup Group drop-down list that displays in the Call Forward and Call Pickup Settings area, choose the desired call pickup group.
Step 6  To save the changes in the database, click Save.

What to Do Next
Perform the following tasks:

- Configure Partitions for Call Pickup, on page 392
- Configure Calling Search Space, on page 393

Configure Partitions for Call Pickup
You can restrict access to call pickup groups by assigning a partition to the call pickup group number. When this configuration is used, only the phones that have a calling search space that includes the partition with the call pickup group number can participate in that call pickup group. Make sure that the combination of partition and group number is unique throughout the system. You can create multiple partitions.
If you assign call pickup group numbers to a partition, only those phones that can dial numbers in that partition can use the call pickup group. If partitions represent tenants in a multitenant configuration, make sure that you assign the pickup groups to the appropriate partition for each tenant.

Before You Begin
Assign a Call Pickup Group to Directory Numbers, on page 391

Procedure

Step 1  From Cisco Unified CM Administration, choose Call Routing > Class of Control > Partition.
Step 2  In the Partition Name, Description field, enter a name for the partition that is unique to the route plan. Partition names can contain alphanumeric characters, as well as spaces, hyphens (-), and underscore characters (_). See the online help for guidelines about partition names.
Step 3  Enter a comma (,) after the partition name and enter a description of the partition on the same line. The description can contain up to 50 characters in any language, but it cannot include double quotes ("), percentage sign (%), ampersand (&), backslash (\), angle brackets (< >), or square brackets ([ ]). If you do not enter a description, Cisco Unified Communications Manager automatically enters the partition name in this field.
Step 4  To create multiple partitions, use one line for each partition entry.
Step 5  From the Time Schedule drop-down list, choose a time schedule to associate with this partition. The time schedule specifies when the partition is available to receive incoming calls. If you choose None, the partition remains active at all times.
Step 6  Select one of the following radio buttons to configure the Time Zone:
• **Originating Device**—When you select this radio button, the system compares the time zone of the calling device to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

• **Specific Time Zone**—After you select this radio button, choose a time zone from the drop-down list. The system compares the chosen time zone to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

**Step 7**  
Click **Save**.

---

**Configure Calling Search Space**

A calling search space is an ordered list of route partitions that are typically assigned to devices. Calling search spaces determine the partitions that calling devices can search when they are attempting to complete a call.

**Before You Begin**

Configure Partitions for Call Pickup, on page 392

**Procedure**

**Step 1**  
From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Calling Search Space**.

**Step 2**  
Click **Add New**.

**Step 3**  
In the **Name** field, enter a name. Ensure that each calling search space name is unique to the system. The name can include up to 50 alphanumeric characters and can contain any combination of spaces, periods (.), hyphens (-), and underscore characters (_).

**Step 4**  
In the **Description** field, enter a description. The description can include up to 50 characters in any language, but it cannot include double-quotes ("), percentage sign (%), ampersand (&), back-slash (\), or angle brackets (<>).

**Step 5**  
From the **Available Partitions** drop-down list, perform one of the following steps:

• For a single partition, select that partition.

• For multiple partitions, hold down the **Control (CTRL)** key, then select the appropriate partitions.

**Step 6**  
Select the down arrow between the boxes to move the partitions to the **Selected Partitions** field.

**Step 7**  
(Optional) Change the priority of selected partitions by using the arrow keys to the right of the **Selected Partitions** box.

**Step 8**  
Click **Save**.

---

Configure Call Pickup Notification for a Directory Number

Perform these steps to configure the type of audio notification that is provided when a phone is idle or in use.

Before You Begin

Configure Call Pickup Notification for a Call Pickup Group, on page 396

Procedure

Step 1 From Cisco Unified CM Administration, choose Call Routing > Directory Number. The Find and List Directory Numbers window appears.

Step 2 Enter the search criteria and click Find.

Step 3 Click the directory number for which you want to configure the Call Pickup Notification. The Directory Number Configuration window appears.

Step 4 Choose a device name in the Associated Devices pane and click the Edit Line Appearance button. The Directory Number Configuration window refreshes to show the line appearance for this DN on the device that you choose.

Step 5 From the Call Pickup Group Audio Alert Setting(Phone Idle) drop-down list, choose one of the following:
• Use System Default
• Disable
• Ring Once

**Step 6** From the **Call Pickup Group Audio Alert Setting** (**Phone Active**) drop-down list, choose one of the following:
• Use System Default
• Disable
• Beep Only

**Step 7** Click **Save**.

</tr>
</tbody>
</table>

**Configure a Time Period**

Use this procedure to define time periods. You can define a start time and an end time, and also specify repetition interval either as days of the week or a specified date on the yearly calendar.
Procedure

Step 1
In Cisco Unified Communications Manager Administration, choose Call Routing > Class of Control > Time Period.

Step 2
Configure the fields in the Time Period Configuration window. See the online help for more information about the fields and their configuration options.

Step 3
Click Save.

What to Do Next
Configure Time Schedule, on page 399

Configure Time Schedule

Before You Begin
Configure a Time Period, on page 398

Procedure

Step 1
From Cisco Unified CM Administration, choose Call Routing > Class of Control > Time Schedule.

Step 2
Configure the fields in the Time Schedule Configuration window. See the online help for more information about the fields and their configuration options.

What to Do Next
Associate a Time Schedule with a Partition, on page 399

Associate a Time Schedule with a Partition

Associate time schedules with partitions to determine where calling devices search when they are attempting to complete a call during a particular time of day.

Before You Begin
Configure Time Schedule, on page 399

Procedure

Step 1
Choose Call Routing > Class of Control > Partition.

Step 2
From the Time Schedule drop-down list, choose a time schedule to associate with this partition. The time schedule specifies when the partition is available to receive incoming calls. If you choose None, the partition remains active at all times.

Step 3
Click Save.
What to Do Next
Configure Automatic Call Answering, on page 400

Configure Automatic Call Answering

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Configure Auto Call Pickup, on page 400</td>
<td>You can automate call pickup, group pickup, other group pickup, directed call pickup, and BLF call pickup. If you do not enable automatic call answering, users must press additional softkeys or dial group numbers to complete the connection.</td>
</tr>
<tr>
<td><strong>Step 2</strong> Configure BLF Auto Pickup, on page 401</td>
<td></td>
</tr>
</tbody>
</table>

Configure Auto Call Pickup

Auto call pickup connects the user to an incoming call. When the user presses the softkey on the phone, Cisco Unified Communications Manager locates the incoming call in the group and completes the call connection. You can automate call pickup, group pickup, other group pickup, directed call pickup, and BLF call pickup. If you do not enable automatic call answering, users must press additional softkeys or dial group numbers to complete the connection.

Before You Begin
Associate a Time Schedule with a Partition, on page 399

Procedure

**Step 1** In Cisco Unified CM Administration, choose, System > Service Parameters.

**Step 2** From the Server drop-down list box, choose the server that is running the Cisco CallManager service.

**Step 3** From the Service drop-down list box, choose Cisco CallManager.

**Step 4** In the Clusterwide Parameters (Feature – Call Pickup) section, select True or False from the Auto Call Pickup Enabled drop-down list to enable or disable automatic call answering for call pickup groups.

**Step 5** If the Auto Call Pickup Enabled service parameter is False, enter a value from 12 to 300 in the Call Pickup No Answer Timer field. This parameter controls the time that a call takes to get restored if the call is picked up but not answered by using call pickup, group call pickup, or other group call pickup.

**Step 6** In the Pickup Locating Timer field, enter a value from 1 to 5. This service parameter specifies the maximum time, in seconds, for Cisco Unified Communications Manager to identify all alerting calls from all nodes in
the cluster. This information is then used to help ensure that the call that has been waiting longest in the queue is delivered to the next user who presses the PickUp, GPickUp, or OPickUp softkey.

**Step 7**

Click **Save**.

</table>

### Configure a Softkey Template for Call Pickup

Use this procedure to make the following call pickup softkeys available:

<table>
<thead>
<tr>
<th>Softkey</th>
<th>Description</th>
<th>Call States</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call Pickup (Pickup)</td>
<td>Allows you to answer a call on another extension in your group.</td>
<td>On Hook, Off Hook</td>
</tr>
<tr>
<td>Group Call Pickup (GPickup)</td>
<td>Allows you to answer a call on extension outside your group.</td>
<td>On Hook, Off Hook</td>
</tr>
<tr>
<td>Other Group Pickup (OPickup)</td>
<td>Allows you to answer a call ringing in another group that is associated with your group.</td>
<td>On Hook, Off Hook</td>
</tr>
</tbody>
</table>
Before You Begin

Configure Call Pickup Phone Buttons, on page 401

Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Softkey Template. The Softkey Template Configuration window appears.

Step 2  Perform this step to create a new softkey template; otherwise, proceed to the next step.
   a) Click Add New.
   b) Select a default template and click Copy.
   c) In the Softkey Template Name field, enter a new name for the template.
   d) Click Save.

Step 3  Perform this step to add softkeys to an existing template.
   a) Enter search criteria and click Find.
   b) Choose an existing template.
   The Softkey Template Configuration window appears.

Step 4  Check the Default Softkey Template check box to designate this softkey template as the default softkey template.

Note  If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.

Step 5  Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

Step 6  From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

Step 7  From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

Step 8  To display the softkey in additional call states, repeat the previous step.

Step 9  Click Save.

Step 10  Perform one of the following tasks:
   a) If you modified a template that is already associated with devices, click Apply Config to restart the devices.
   b) If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next

Perform one of the following tasks:
   a) Associate a Softkey Template with a Common Device Configuration, on page 406
   b) Associate a Softkey Template with a Phone, on page 407
Associate a Softkey Template with a Common Device Configuration

Optional. There are two ways to associate a softkey template with a phone:

- Add the softkey template to the **Phone Configuration**.
- Add the softkey template to the **Common Device Configuration**.

The procedures in this section describe how to associate the softkey template with a **Common Device Configuration**. Follow these procedures if your system uses a **Common Device Configuration** to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see Associate a Softkey template with a Phone.

**Before You Begin**

Configure a Softkey Template for Call Pickup, on page 404

**Procedure**

**Step 1** Add a Softkey Template to Common Device Configuration, on page 406

**Step 2** Associate a Common Device Configuration with a Phone, on page 407

---

**Add a Softkey Template to Common Device Configuration**

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Device Settings > Common Device Configuration**. The **Find and List Common Device Configuration** window appears.

**Step 2** Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.

a) Click **Add New**.

b) In the **Name** field, enter a name for the Common Device Configuration.

c) Click **Save**.

**Step 3** Perform this step to add the softkey template to an existing Common Device Configuration.

a) Enter search criteria and click **Find**.

b) Choose an existing Common Device Configuration.

The **Common Device Configuration** window appears.

**Step 4** In the **Softkey Template** drop-down list, choose the softkey template that contains the softkey that you want to make available.

**Step 5** Click **Save**.

**Step 6** Perform one of the following tasks:

- If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.
• If you modified a Common Device Configuration that is already associated with devices, click **Apply Config** to restart the devices.

---

# Call Pickup Interactions and Restrictions

## Call Pickup Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Route Plan Report</td>
<td>The route plan report displays the patterns and DNs that are configured in Cisco Unified Communications Manager. Use the route plan report to look for overlapping patterns and DNs before assigning a DN to call pickup group.</td>
</tr>
<tr>
<td>Calling search space and partitions</td>
<td>Assigning a partition to the Call Pickup Group number limits call pickup access to users on the basis of the device calling search space.</td>
</tr>
<tr>
<td>Time of Day (TOD)</td>
<td>Time of Day (TOD) parameter for members in the associated group enable them to accept calls within the same time period as their own group. TOD associates a time stamp to the calling search space and partition.</td>
</tr>
<tr>
<td>Call Accounting</td>
<td>When a call pickup occurs through auto call pickup, the system generates two call detail records (CDRs). One CDR applies to the original call that is cleared, and another CDR applies to the requesting call that is connected. When a call pickup occurs via non-auto call pickup, the system generates one call detail record, which applies to the requesting call that is connected. A CDR search returns all CDRs that match a specific time range and other search criteria. You can also search for a type of call that is associated with a particular CDR. The search result displays a call type field that indicates whether the call is a pickup call.</td>
</tr>
<tr>
<td>Call Forwarding</td>
<td>When a call pickup occurs with the service parameter Auto Call Pickup Enabled set to false, the call forward that is configured on the phone gets ignored when one of the pickup softkeys is pressed. If the call pickup requestor does not answer the call, the original call gets restored after the pickup no answer timer expires.</td>
</tr>
</tbody>
</table>
# Call Pickup Restrictions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Different phone lines to different call pickup groups</td>
<td>Although you can assign different lines on a phone to different call pickup groups, Cisco does not recommend this setup because it can be confusing to users.</td>
</tr>
</tbody>
</table>
| Call Pickup Group Number                         | • You cannot delete a call pickup group number when it is assigned to a line or DN. To determine which lines are using the call pickup group number, use Dependency Records in **Call Pickup Configuration** window. To delete a call pickup group number, reassign a new call pickup group number to each line or DN.  
  • When you update a call pickup group number, Cisco Unified Communications Manager automatically updates all directory numbers that are assigned to that call pickup group. |
| SIP Phones                                       | • The system does not support Call Pickup Notification on a few Cisco Unified IP Phones that run SIP.                                           
  • Call Pickup Notification is only supported on licensed, third-party phones that run SIP. |
| Directed Call Pickup                             | • If a device that belongs to a hunt list rings due to a call that was made by calling the hunt pilot number, users cannot use the Directed Call Pickup feature to pick up such a call. 
  • Users cannot pick up calls to a DN that belongs to a line group by using the Directed Call Pickup feature. |
| BLF Pickup                                       | The system does not support Call Pickup Notification on a few Cisco Unified IP Phones that run SIP.                                           |
| Incoming Calling Party International Number Prefix - Phone | If you have configured a prefix in the “Incoming Calling Party International Number Prefix - Phone ” service parameter, and an international call is placed to a member in the Call Pickup Group, the prefix does not get invoked in the calling party field if the call gets picked up by another member of the Call Pickup Group. |
Extension Mobility

• Extension Mobility Prerequisites, page 411
• Extension Mobility Configuration Task Flow, page 411
• Extension Mobility Interactions and Restrictions, page 425
• Extension Mobility Troubleshooting, page 427

Extension Mobility Overview

Cisco Extension Mobility allows users to temporarily access their phone settings, such as line appearances, services, and speed dials, from other phones within your system. If you have a single phone that will be used by multiple workers, for example, you can configure extension mobility so that individual users can log in to the phone and access their settings without affecting settings on other user accounts.

Extension Mobility Prerequisites

• A TFTP server that is reachable.

• Extension mobility functionality extends to most Cisco Unified IP Phones. Check the phone documentation to verify that Cisco Extension Mobility is supported.

Extension Mobility Configuration Task Flow

Before You Begin

• Review Extension Mobility Prerequisites, on page 411

### Activate Extension Mobility Services

**Before You Begin**

Generate a Phone Feature List, on page 7

**Procedure**

1. From Cisco Unified Serviceability, choose **Tools > Service Activation**.
2. From the **Server** drop-down list, choose the publisher node.
3. Activate the following services as needed:
   a) Cisco CallManager
Configure the Cisco Extension Mobility Phone Service

Configure the extension mobility IP phone service to which users can later subscribe to access extension mobility.

Before You Begin
Activate Extension Mobility Services, on page 412

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Phone Services.
Step 2 Click Add New.
Step 3 In the Service Name field, enter a name for the service.
Step 4 In the Service URL field, enter the Service URL. The format is http://<IP Address>:8080/emapp/EMAppServlet?device=#DEVICENAME#. IP Address is the IP address of the Cisco Unified Communications Manager where Cisco Extension Mobility is activated and running.

Example:
http://123.45.67.89:8080/emapp/EMAppServlet?device=#DEVICENAME#

Note If you append the Extension Mobility Cross Cluster suffix &EMCC=#EMCC# in the service URL for Extension Mobility, the Extension Mobility login fails with an HTTP 400 error on phones that do not support Extension Mobility Cross Cluster. Users will see a blank screen on the phone when the Extension Mobility service is not selected.

Step 5 In the Service Type field, choose whether the service is provisioned to the Services, Directories, or Messages button.
Step 6 Click Save.

What to Do Next
Create an Extension Mobility Device Profile for Users, on page 414
Create an Extension Mobility Device Profile for Users

Configure an extension mobility device profile. This profile acts as a virtual device that maps onto a physical device when a user logs in to extension mobility. The physical device takes on the characteristics in this profile.

Before You Begin
Configure the Cisco Extension Mobility Phone Service, on page 413

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Device Profile.
Step 2 Perform one of the following tasks:
   • To modify the settings for an existing device profile, enter search criteria, click Find, and choose an existing device profile from the resulting list.
   • To add a new device profile, click Add New, choose an option from the Device Profile Type, and click Next. Then, choose a device protocol from the Device Protocol drop-down list and click Next.
Step 3 Configure the fields. See the Related Topics section for more information about the fields and their configuration options.
Step 4 Click Save.
Step 5 From the Association Information section, click Add a new DN.
Step 6 In the Directory Number field, enter the directory number and click Save.
Step 7 Click Reset and follow the prompts.

What to Do Next
Associate a Device Profile to a User, on page 420

| User Hold MOH Audio Source| To specify the audio source that plays when a user initiates a hold action, choose an audio source from the User Hold MOH Audio Source drop-down list box. If you do not choose an audio source, Cisco Unified Communications Manager uses the audio source that is defined in the device pool or the system default if the device pool does not specify an audio source ID.  
  **Note** You define audio sources in the Music On Hold Audio Source Configuration window. For access, choose Media Resources > Music On Hold Audio Source. |
| User Locale               | From the drop-down list box, choose the locale that is associated with the phone user interface. The user locale identifies a set of detailed information, including language and font, to support users.  
  Cisco Unified Communications Manager makes this field available only for phone models that support localization.  
  **Note** If no user locale is specified, Cisco Unified Communications Manager uses the user locale that is associated with the device pool.  
  **Note** If the users require information to display (on the phone) in any language other than English, verify that the locale installer is installed before configuring user locale. See the Cisco Unified Communications Manager Locale Installer documentation. |
| Phone Button Template      | From the Phone Button Template drop-down list, choose a phone button template.  
  **Tip** If you want to configure BLF/SpeedDials for the profile for presence monitoring, choose a phone button template that you configured for BLF/SpeedDials. After you save the configuration, the Add a New BLF SD link displays in the Association Information pane. For more information on BLF/SpeedDials, see the Cisco Unified Communications Manager Features and Services Guide. |
| Softkey Template           | From the Softkey Template drop-down list box, choose the softkey template from the list that displays.                                                                                                     |
| Privacy                   | From the Privacy drop-down list box, choose On for each phone on which you want privacy. For more information, see the Cisco Unified Communications Manager Features and Services Guide.   |
### Field	| Description
---|---
**Single Button Barge**
| From the drop-down list box, choose from the following options:
| • **Off**—This device does not allow users to use the Single Button Barge/cBarge feature.
| • **Barge**—Choosing this option allows users to press the Single Button Barge shared-line button on the phone to barge into a call using Barge.
| • **Default**—This device inherits the Single Button Barge/cBarge setting from the service parameter and device pool settings.
| **Note** If the server parameter and device pool settings are different, the device will inherit the setting from the service parameter setting.

For more information, see the *Cisco Unified Communications Manager Features and Services Guide*.

**Join Across Lines**
| From the drop-down list box, choose from the following options:
| • **Off**—This device does not allow users to use the Join Across Lines feature.
| • **On**—This device allows users to join calls across multiple lines.
| • **Default**—This device inherits the Join Across Lines setting from the service parameter and device pool settings.
| **Note** If the server parameter and device pool settings are different, the device will inherit the setting from the service parameter setting.

For more information, see the Cisco Unified Communications Manager System Guide.

**Always Use Prime Line**
| From the drop-down list box, choose one of the following options:
| • **Off**—When the phone is idle and receives a call on any line, the phone user answers the call from the line on which the call is received.
| • **On**—When the phone is idle (off hook) and receives a call on any line, the primary line gets chosen for the call. Calls on other lines continue to ring, and the phone user must select those other lines to answer these calls.
| • **Default**—Cisco Unified Communications Manager uses the configuration from the Always Use Prime Line service parameter, which supports the Cisco CallManager service.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Always Use Prime Line for Voice Message | From the drop-down list box, choose one of the following options:  
• On—If the phone is idle, the primary line on the phone becomes the active line for retrieving voice messages when the phone user presses the Messages button on the phone.  
• Off—If the phone is idle, pressing the Messages button on the phone automatically dials the voice-messaging system from the line that has a voice message. Cisco Unified Communications Manager always selects the first line that has a voice message. If no line has a voice message, the primary line gets used when the phone user presses the Messages button.  
• Default—Cisco Unified Communications Manager uses the configuration from the Always Use Prime Line for Voice Message service parameter, which supports the Cisco CallManager service.                                                                                                                                                                                                                                                                                                                                                      |
| Ignore Presentation Indicators (internal calls only) | To configure call display restrictions and ignore any presentation restriction that is received for internal calls, check the "Ignore Presentation Indicators (internal calls only)" check box.  
Tip: Use this configuration in combination with the calling line ID presentation and connected line ID presentation configuration at the translation pattern level. Together, these settings allow you to configure call display restrictions to selectively present or block calling and/or connected line display information for each call. For more information about call display restrictions, see the *Cisco Unified Communications Manager Features and Services Guide*.                                                                                                                                                                                                                                                                                                                                 |
| Do Not Disturb | Check this check box to enable Do Not Disturb.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| DND Option | When you enable DND on the phone, this parameter allows you to specify how the DND feature handles incoming calls:  
• Call Reject—This option specifies that no incoming call information gets presented to the user. Depending on how you configure the DND Incoming Call Alert parameter, the phone may play a beep or display a flash notification of the call.  
• Ringer Off—This option turns off the ringer, but incoming call information gets presented to the device, so that the user can accept the call.  
• Use Common Phone Profile Setting—This option specifies that the DND Option setting from the Common Phone Profile window will get used for this device.  
Note: For 7940/7960 phones that are running SCCP, you can only choose the Ringer Off option. For mobile devices and dual-mode phones, you can only choose the Call Reject option. When you activate DND Call Reject on a mobile device or dual-mode phone, no call information gets presented to the device. |
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| DND Incoming Call Alert       | When you enable the DND Ringer Off or Call Reject option, this parameter specifies how a call displays on a phone. From the drop-down list, choose one of the following options:  
  • None — This option specifies that the DND Incoming Call Alert setting from the Common Phone Profile window will get used for this device.  
  • Disable — This option disables both beep and flash notification of a call but for the DND Ringer Off option, incoming call information still gets displayed. For the DND Call Reject option, no call alerts display and no information gets sent to the device.  
  • Beep Only — For an incoming call, this option causes the phone to play a beep tone only.  
  • Flash Only — For an incoming call, this option causes the phone to display a flash alert. |
| Extension Mobility Cross Cluster CSS | From the drop-down list box, choose an existing Calling Search Space (CSS) to use for this device profile for the Extension Mobility Cross Cluster feature. (To configure a new CSS or modify an existing CSS, choose Call Routing > Class of Control > Calling Search Space in Cisco Unified Communications Manager Administration.)  
Default value specifies None.  
The home administrator specifies this CSS, which gets used as the device CSS that gets assigned to the phone when the user logs in to this remote phone. For more information, see the Cisco Unified Communications Manager Features and Services Guide. |
| Module 1                      | You can configure one or two expansion modules for this device profile by choosing phone templates from the expansion module drop-down lists in the expansion module fields.  
**Note** You can view a phone button list at any time by choosing the View button list link next to the phone button template fields. A separate dialog box pops up and displays the phone buttons for that particular expansion module.  
Choose the appropriate expansion module or None. |
| Module 2                      | Choose the appropriate expansion module or None. |
| MLPP Domain                   | If this user device profile will be used for MLPP precedence calls, choose the MLLP Domain from the drop-down list box.  
**Note** You define MLPP domains in the MLPP Domain Configuration window. For access, choose **System > MLPP Domain**. |
If this user device profile will be used for MLPP precedence calls, assign an MLPP Indication setting to the device profile. This setting specifies whether a device that can play precedence tones will use the capability when it places an MLPP precedence call.

From the drop-down list box, choose a setting to assign to this device profile from the following options:

1. Default—This device profile inherits its MLPP indication setting from the device pool of the associated device.
2. Off—This device does not handle nor process indication of an MLPP precedence call.
3. On—This device profile does handle and process indication of an MLPP precedence call.

**Note** Do not configure a device profile with the following combination of settings: MLPP Indication is set to Off or Default (when default is Off) while MLPP Preemption is set to Forceful.

If this user device profile will be used for MLPP precedence calls, assign an MLPP Preemption setting to the device profile. This setting specifies whether a device that can preempt calls in progress will use the capability when it places an MLPP precedence call.

From the drop-down list box, choose a setting to assign to this device profile from the following options:

1. Default—This device profile inherits its MLPP preemption setting from the device pool of the associated device.
2. Disabled—This device does not allow preemption of lower precedence calls to take place when necessary for completion of higher precedence calls.
3. Forceful—This device allows preemption of lower precedence calls to take place when necessary for completion of higher precedence calls.

**Note** Do not configure a device profile with the following combination of settings: MLPP Indication is set to Off or Default (when default is Off) while MLPP Preemption is set to Forceful.

From the Login UserID drop-down list box, choose a valid login user ID.

**Note** If the device profile is used as a logout profile, specify the login user ID that will be associated with the phone. After the user logs out from this user device profile, the phone will automatically log in to this login user ID.
**Associate a Device Profile to a User**

Associate a device profile to users so that they can access their settings from a different phone. You associate a user device profile to a user in the same way that you associate a physical device.

**Tip**

**Before You Begin**

Create an Extension Mobility Device Profile for Users, on page 414

**Procedure**

**Step 1**

From Cisco Unified CM Administration, choose **User Management > End User**.

**Step 2**

Perform one of the following tasks:

- To modify the settings for an existing user, enter search criteria, click **Find**, and choosing an existing user from the resulting list.
- To add a new user, click **Add New**.

**Step 3**

Under **Extension Mobility**, locate the device profile that you created and move it from **Available Profiles** to **Controlled Profiles**.

**Step 4**

Check the **Home Cluster** check box.

**Step 5**

Click **Save**.

**What to Do Next**

Subscribe to Extension Mobility, on page 420

**Subscribe to Extension Mobility**

Subscribe IP phones and device profiles to the extension mobility service so that users can log in, use, and log out of extension mobility.

**Before You Begin**

Associate a Device Profile to a User, on page 420

**Procedure**

**Step 1**

Perform one of the following tasks from Cisco Unified CM Administration:
Choose Device > Phone, specify search criteria, click Find, and choose a phone which users will use for extension mobility.

Choose Device > Device Settings > Device Profile, specify search criteria, click Find, and choose the device profile that you created.

**Step 2** From the Related Links drop-down list, choose Subscribe/Unsubscribe Services, and then click Go.

**Step 3** From the Select a Service drop-down list, choose the Extension Mobility service.

**Step 4** Click Next.

**Step 5** Click Subscribe.

**Step 6** Click Save and close the popup window.

---

**What to Do Next**

Configure the Change Credential IP Phone Service, on page 421

---

**Configure the Change Credential IP Phone Service**

To allow users to change their PINs on their phones, you must configure the change credential Cisco Unified IP Phone service and associate the user, the device profile, or the IP phone with the change credential phone service.

**Before You Begin**

Subscribe to Extension Mobility, on page 420

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose Device > Device Settings > Phone Services.

**Step 2** Click Add New.

**Step 3** In the Service Name field, enter Change Credential.

**Step 4** In the Service URL field, enter the following value, where server designates the server where the Change Credential IP phone service runs:

```
http://server:8080/changecredential/ChangeCredentialServlet?device=#DEVICENAME#
```

**Step 5** (Optional) In the Secure-Service URL field, enter the following value, where server is the server where the Change Credential IP phone service runs:

```
https://server:8443/changecredential/ChangeCredentialServlet?device=#DEVICENAME#
```
Step 6 Configure the remaining fields in the IP Phone Services Configuration window, and choose Save.
Step 7 To subscribe the Cisco Unified IP Phone to the Change Credential IP phone service, choose Device > Phone.
Step 8 In the Phone Configuration window, go to the Related Links drop-down list and choose Subscribe/Unsubscribe Services.
Step 9 Click Go.
Step 10 From the Select a Service drop-down list, choose the Change Credential IP phone service.
Step 11 Click Next.
Step 12 Click Subscribe.
Step 13 Click Save.

What to Do Next
(Optional) Configure Service Parameters for Extension Mobility, on page 422

Configure Service Parameters for Extension Mobility

If you want to modify the behavior of extension mobility, configure the service parameters.

Before You Begin
Activate Extension Mobility Services, on page 412

Procedure

Step 1 From Cisco Unified CM Administration, choose System > Service Parameters.
Step 2 In the Server field, choose the node that is running the Cisco Extension Mobility service.
Step 3 In the Service field, choose Cisco Extension Mobility.
Step 4 Click Advanced to show all service parameters. See the Related Topics section for more information about these service parameters and their configuration options.
Step 5 Click Save.

## Extension Mobility Service Parameters

### Table 25: Extension Mobility Service Parameters

<table>
<thead>
<tr>
<th>Service Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enforce Intra-cluster Maximum Login Time</td>
<td>Select <strong>True</strong> to specify a maximum time for local logins. After this time, the system automatically logs out the device. <strong>False</strong>, which is the default setting, means that no maximum time for logins exists. To set an automatic logout, you must choose <strong>True</strong> for this service parameter and also specify a system maximum login time for the <strong>Intra-cluster Maximum Login Time</strong> service parameter. Cisco Unified Communications Manager then uses the automatic logout service for all logins.</td>
</tr>
<tr>
<td>Intra-cluster Maximum Login Time</td>
<td>This parameter sets the maximum time that a user can be locally logged in to a device, such as 8:00 (8 hours) or :30 (30 minutes). The system ignores this parameter if the <strong>Enforce Intra-cluster Maximum Login Time</strong> parameter is set to <strong>False</strong>. Valid values are between 0:01 and 168:00 in the format HHH:MM, where HHH represents the number of hours and MM represents the number of minutes.</td>
</tr>
<tr>
<td>Maximum Concurrent Requests</td>
<td>Specify the maximum number of login or logout operations that can occur simultaneously. This number prevents the Cisco Extension Mobility service from consuming excessive system resources. The default value of 5 is acceptable in most cases.</td>
</tr>
<tr>
<td>Intra-cluster Multiple Login Behavior</td>
<td>Choose one of the following options:</td>
</tr>
<tr>
<td></td>
<td>• Multiple Logins Allowed—A user can log in to more than one device at a time.</td>
</tr>
<tr>
<td></td>
<td>• Multiple Logins Not Allowed—The second and subsequent login attempts after a user successfully logs in once will fail.</td>
</tr>
<tr>
<td></td>
<td>• Auto Logout—After a user logs in to a second device, the Cisco Unified Communications Manager automatically logs the user out of the first device. For EMCC, multiple logins are always allowed.</td>
</tr>
<tr>
<td>Alphanumeric User ID</td>
<td>Choose <strong>True</strong> to allow the user ID to contain alphanumeric characters. Choosing <strong>False</strong> allows the user ID to contain only numeric characters.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> The Alphanumeric User ID parameter applies systemwide. You can have a mix of alphanumeric and numeric user IDs. The system supports only user IDs that can be entered by using the alphanumeric keypad. The case-sensitive userid field requires the characters to be lowercase.</td>
</tr>
<tr>
<td>Service Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
| Remember the Last User Logged In | When you choose **False**, the system does not remember the last user who logged in to the phone. Use this option when the user will access the phone on a temporary basis only. Choose **True** to remember the last user that logged into the phone. Use this option when a phone has only one user.  

For example, Cisco Extension Mobility can used to enable the types of calls that are allowed from a phone. Individuals who are not logged in and who are using their office phone can make only internal or emergency calls. But after logging in using Cisco Extension Mobility, the user can make local, long-distance, and international calls. In this scenario, only this user regularly logs in to the phone. It makes sense to set the Cisco Extension Mobility to remember the last user ID that logged in. |
| Clear Call Logs on Intra-cluster EM | Choose **True** to specify that the call logs are cleared during the Cisco Extension Mobility manual login and logout process.  

While a user is using the Cisco Extension Mobility service on an IP phone, all calls (placed, received, or missed) appear in a call log and can be retrieved and seen on the IP phone display. To ensure privacy, set the Clear Call Log service parameter to **True**. This ensures that the call logs are cleared when a user logs out and another user logs in.  

For extension mobility cross cluster (EMCC), the call log is always cleared when the user logs in or out of a phone.  

**Note**: Call logs are cleared only during only manual login/logout. If a Cisco Extension Mobility logout occurs automatically or any occurrence other than a manual logout, the call logs are not cleared. |
| Validate IP Address | This parameter sets whether validation occurs on the IP address of the source that is requesting login or logout.  

If the parameter is set to **True**, the IP address from which a Cisco Extension Mobility log in or log out request occurs is validated to ensure that it is trusted.  

Validation is first performed against the cache for the device that will log in or log out.  

If the IP address is found in the cache or in the list of trusted IP addresses or is a registered device, the device can log in or log out. If the IP address is not found, the log in or log out attempt is blocked.  

If the parameter is set to **False**, the Cisco Extension Mobility log in or log out request is not validated.  

Validation of IP addresses can affect the time that is required to log in or log out a device, but it offers additional security that prevents unauthorized log in or log out attempts. This function is recommended, especially when used in conjunction with log ins from separate trusted proxy servers for remote devices. |
| Trusted List of IPs | This parameter appears as a text box (the maximum length is 1024 characters). You can enter strings of trusted IP addresses or hostnames, separated by semicolons, in the text box. IP address ranges and regular expressions are not supported. |
### Service Parameter | Description
--- | ---
Allow Proxy | If the parameter is **True**, the Cisco Extension Mobility log in and log out operations that use a web proxy are allowed.  
If the parameter is **False**, the Cisco Extension Mobility log in and log out requests coming from behind a proxy get rejected.  
The setting you select takes effect only if the Validate IP Address parameter specifies true.

### Extension Mobility Cache Size
In this field, enter the size of the device cache that is maintained by Cisco Extension Mobility. The minimum value for this field is 1000 and the maximum is 20000. The default value is 10000.  
The value you enter takes effect only if the Validate IP Address parameter is **True**.

---

### Extension Mobility Interactions and Restrictions

#### Cisco Extension Mobility Interactions

**Table 26: Cisco Extension Mobility Interactions**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assistant</td>
<td>A manager who uses Cisco Extension Mobility can simultaneously use Cisco Unified Communications Manager Assistant. The manager logs in to the Cisco Unified IP Phone by using Cisco Extension Mobility and then chooses the Cisco IP Manager Assistant service. When the Cisco IP Manager Assistant service starts, the manager can access assistants and all Cisco Unified Communications Manager Assistant features (such as call filtering and Do Not Disturb).</td>
</tr>
</tbody>
</table>
| BLF Presence | When you configure BLF/speed dial buttons in a user device profile, a phone that supports Cisco Extension Mobility displays BLF presence status on the BLF/SpeedDial buttons after you log in to the device.  
When the extension mobility user logs out, a phone that supports Cisco Extension Mobility displays BLF presence status on the BLF/SpeedDial buttons for the logout profile that is configured. |
| Call Display Restrictions | When you enable call display restrictions, Cisco Extension Mobility functions as usual: when a user is logged in to the device, the presentation or restriction of the call information depends on the user device profile that is associated with that user. When the user logs out, the presentation or restriction of the call information depends on the configuration that is defined for that phone type in the Phone Configuration window.  
To use call display restrictions with Cisco Extension Mobility, check the **Ignore Presentation Indicators (internal calls only)** check box in both the **Device Profile Configuration** window and the **Phone Configuration** window. |
<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
</table>
| Call Forward All Calling Search Space| An enhancement to call forward all calling search space (CSS) lets you upgrade to later releases of Cisco Unified Communications Manager without loss of functionality. The **CFA CSS Activation Policy** service parameter supports this enhancement. In the **Service Parameter Configuration** window, this parameter displays in the **Clusterwide Parameters (Feature - Forward)** section with two options:  
  - With Configured CSS (default)  
  - With Activating Device/Line CSS |
| Do Not Disturb                       | For extension mobility, the device profile settings include do not disturb (DND) incoming call alert and DND status. When a user logs in and enables DND, the DND incoming call alert and DND status settings are saved, and these settings are used when the user logs in again.  
  **Note** When a user who is logged in to extension mobility modifies the DND incoming call alert or DND status settings, this action does not affect the actual device settings. |
| Intercom                             | Cisco Extension Mobility supports the intercom feature. To support intercom, Cisco Extension Mobility uses a default device that is configured for an intercom line. An intercom line is presented on only the default device.  
  You can assign an intercom line to a device profile. When a user logs in to a device that is not the default device, the intercome line is not presented.  
  The following additional considerations apply to intercom for Cisco Extension Mobility:  
  - When Unified Communications Manager assigns an intercom line to a device and the default device value is empty, the current device is selected as the default device.  
  - When AXL programatically assigns an intercom DN, you must update the intercom DN separately by using Cisco Unified Communications Manager Administration to set the default device.  
  - When you delete a device that is set as the intercom default device for an intercom line, the intercom default device is no longer set to the deleted device. |
| Internet Protocol Version 6 (IPv6)   | Cisco Extension Mobility supports IPv4, so you cannot use phones with an IP Addressing Mode of IPv6 Only for Cisco Extension Mobility. If you want to use Cisco Extension Mobility with the phone, you must configure the phone with an IP Addressing Mode of IPv4 Only or IPv4 and IPv6. |
| Prime Line                           | If you select **On** for the **Always Use Prime Line** parameter in the **Device Profile** or **Default Device Profile Configuration** window, a Cisco Extension Mobility user can use this feature after logging in to the device that supports Cisco Extension Mobility. |
## Cisco Extension Mobility Restrictions

**Table 27: Cisco Extension Mobility Restrictions**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cache</td>
<td>Cisco Extension Mobility maintains a cache of all logged-in user information for 2 minutes. If a request comes to extension mobility regarding a user who is represented in the cache, the user is validated with information from the cache. For example, if a user changes the password, logs out, and then logs back in within 2 minutes, both the old and new passwords are recognized.</td>
</tr>
<tr>
<td>Call Back</td>
<td>When a Cisco Extension Mobility user logs out of a device, all call back services that are active for the Cisco Extension Mobility user are automatically cancelled.</td>
</tr>
<tr>
<td>Character Display</td>
<td>The characters that display when a user logs in depend on the current locale of the phone. For example, if the phone is currently in the English locale (based on the Logout profile of the phone), the user can only enter English characters in the UserID.</td>
</tr>
<tr>
<td>Hold Reversion</td>
<td>Cisco Extension Mobility does not support the hold reversion feature.</td>
</tr>
<tr>
<td>IP Phones</td>
<td>Cisco Extension Mobility requires a physical Cisco Unified IP Phone for login. Users of office phones that are configured with Cisco Extension Mobility cannot remotely log in to their phones.</td>
</tr>
<tr>
<td>Locale</td>
<td>If the user locale that is associated with the user or profile is not the same as the locale or device, after a successful login, the phone will restart and then reset. This behavior occurs because the phone configuration file is rebuilt. Addon-module mismatches between profile and device can cause the same behavior.</td>
</tr>
<tr>
<td>Log Out</td>
<td>If Cisco Extension Mobility is stopped or restarted, the system does not automatically log out users who are already logged in after the logout interval expires. Those phones automatically log out users only once a day. You can manually log out these users from either the phones or from Cisco Unified CM Administration.</td>
</tr>
<tr>
<td>Secure Tone</td>
<td>Cisco Extension Mobility and join across line services are disabled on protected phones.</td>
</tr>
<tr>
<td>User Group</td>
<td>Although you can add users to the Standard EM authentication proxy rights user group, those users are not authorized to authenticate by proxy.</td>
</tr>
</tbody>
</table>

---

## Extension Mobility Troubleshooting

### Troubleshoot Extension Mobility

- Configure the Cisco Extension Mobility trace directory and enable debug tracing by performing the following steps:
  - a) From Cisco Unified Serviceability, choose **Trace > Trace Configuration**.
  - b) From the **Servers** drop-down list, select a server.
c) From the Configured Services drop-down-list, select Cisco Extension Mobility.

- Make sure that you entered the correct URL for the Cisco Extension Mobility service. Remember that the URL is case sensitive.
- Check that you have thoroughly and correctly performed all the configuration procedures.
- If a problem occurs with authentication of a Cisco Extension Mobility user, go to the user pages and verify the PIN.

What to Do Next

If you are still having problems, see the troubleshooting topics that follow.

Authentication Error

Problem “Error 201 Authentication Error” appears on the phone.
Solution The user should check that the correct user ID and PIN were entered; the user should check with the system administrator that the user ID and PIN are correct.

Blank User ID or PIN

Problem “Error 202 Blank User ID or PIN” appears on the phone.
Solution Enter a valid user ID and PIN.

Busy Please Try Again

Problem "Error 26 Busy Please Try Again" appears on the phone.
Solution Check whether the number of concurrent login and logout requests is greater than the Maximum Concurrent requests service parameter. If so, lower the number of concurrent requests.

Note To verify the number of concurrent login and logout requests, use the Cisco Unified Real-Time Monitoring Tool to view the Requests In Progress counter in the Extension Mobility object. For more information, see the Cisco Unified Real-Time Monitoring Tool Administration Guide at http://www.cisco.com/c/en/us/support/unified-communications/unified-communications-manager-callmanager/products-maintenance-guides-list.html

Database Error

Problem “Error 6 Database Error” appears on the phone.
Solution Check whether a large number of requests exists. If a large number of requests exists, the Requests In Progress counter in the Extension Mobility object counter shows a high value. If the requests are rejected because of a large number of concurrent requests, the Requests Throttled counter also shows a high value. Collect detailed database logs.
Dev Logon Disabled

**Problem** “Error 22 Dev Logon Disabled” appears on the phone.

**Solution** Verify that you checked the Enable Extension Mobility check box in the Phone Configuration window (Device > Phone).

Device Name Empty

**Problem** “Error 207 Device Name Empty” appears on the phone.

**Solution** Check that the URL that is configured for Cisco Extension Mobility is correct. See the Related Topics section for more information.

**Related Topics**
- Configure the Cisco Extension Mobility Phone Service, on page 413

EM Service Connection Error

**Problem** “Error 207 EM Service Connection Error” appears on the phone.

**Solution** Verify that the Cisco Extension Mobility service is running by selecting Tools > Control Center—Feature in Cisco Unified Serviceability.

Host Not Found

**Problem** The “Host Not Found” error message appears on the phone.

**Solution** Check that the Cisco Tomcat service is running by selecting Tools > Control Center—Network Services in Cisco Unified Serviceability.

HTTP Error

**Problem** HTTP Error (503) appears on the phone.

**Solution**
- If you get this error when you press the Services button, check that the Cisco IP Phone Services service is running by selecting Tools > Control Center—Network Services in Cisco Unified Serviceability.
- If you get this error when you select Extension Mobility service, check that the Cisco Extension Mobility Application service is running by selecting Tools > Control Center—Network Services in Cisco Unified Serviceability.

Phone Resets

**Problem** After users log in or log out, their phones reset instead of restarting.

**Possible Cause** Locale change is the probable cause of the reset.
**Solution**  No action is required. If the user locale that is associated with the logged-in user or profile is not the same as the locale or device, after a successful login the phone will restart and then reset. This pattern occurs because the phone configuration file is rebuilt.

**Phone Services Unavailable After Login**

**Problem** After logging in, the user finds that the phone services are not available.

**Possible Cause** This problem occurs because the user profile had no services associated with it when it was loaded on the phone.

**Solution**

- Ensure that the user profile includes the Cisco Extension Mobility service.
- Change the configuration of the phone where the user is logged in to include Cisco Extension Mobility. After the phone is updated, the user can access the phone services.

**Phone Services Unavailable After Logout**

**Problem** After a user logs out and the phone reverts to the default device profile, the phone services are no longer available.

**Solution**

- Verify that the Synchronization Between Auto Device Profile and Phone Configuration enterprise parameter is set to **True**.
- Subscribe the phone to the Cisco Extension Mobility service.

**User Logged in Elsewhere**

**Problem** “Error 25 User Logged in Elsewhere” appears on the phone.

**Solution** Check whether the user is logged in to another phone. If multiple logins must be allowed, ensure that the Multiple Login Behavior service parameter is set to **Multiple Logins Allowed**.

**User Profile Absent**

**Problem** “Error 205 User Profile Absent” appears on the phone.

**Solution** Associate a device profile to the user.
Extension Mobility Cross Cluster Overview

The extension mobility cross cluster (EMCC) feature provides users with the same functionality as extension mobility, but also allows them to move from one cluster (the home cluster) and log in to a temporary phone on another remote cluster (the visiting cluster). From there, they can access their phone settings from any location as if they were using an IP phone at the home office.

Extension Mobility Cross Cluster Prerequisites

- Other call-control entities that support and use the extension mobility cross cluster (EMCC) configuration; for example, other Cisco Unified Communications Manager clusters, EMCC intercluster service profiles, and EMCC remote cluster services
- Clusters that are set to nonsecure or mixed mode. See Extension Mobility Cross Cluster and Security Mode for Different Cluster Versions, on page 456 for more information.
- Supported phones in secure or nonsecure mode

Extension Mobility Cross Cluster Configuration Task Flow

<td>Configure the Extension Mobility Phone Service, on page 434</td>
</tr>
<tr>
<td></td>
<td>Create the Extension Mobility phone service to which you can subscribe your users.</td>
</tr>
</tbody>
</table>
### Command or Action | Purpose |
--- | --- |
**Step 3** | Configure a Device Profile for Extension Mobility Cross Cluster, on page 435  
Create a device profile to map settings onto a real device when a user logs in to Extension Mobility cross cluster. |
**Step 4** | Enable Extension Mobility Cross Cluster for a User, on page 441 |
**Step 5** | Subscribe Devices to Extension Mobility, on page 442  
Enable Extension Mobility on devices and subscribe to the service if you have not set up an enterprise subscription for all devices. |

## Activate Services for Extension Mobility Cross Cluster

**Before You Begin**

Generate a Phone Feature List, on page 7

**Procedure**

1. From Cisco Unified Serviceability, choose **Tools > Service Activation**.
2. From the **Server** drop-down list, choose the publisher node.
3. Activate the following services as needed:
   - a) Cisco CallManager
   - b) Cisco Tftp
   - c) Cisco Extension Mobility
4. Click **Save**.
5. Click **OK**.

**What to Do Next**

Configure the Extension Mobility Phone Service, on page 434

## Configure the Extension Mobility Phone Service

Create the Extension Mobility phone service to which you can subscribe your users.

**Before You Begin**

Activate Services for Extension Mobility Cross Cluster, on page 434
Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Phone Services.
Step 2 Click Add New.
Step 3 In the Service Name field, enter a name for the service. For example, enter a name such as Extension Mobility or EM. For Java MIDlet services, the service name must exactly match the name that is defined in the Java Application Descriptor (JAD) file.
Step 4 In the Service URL field, enter the service URL in the following format:
http://<IPAddress>:8080/emapp/EMAppServlet?device=#DEVICENAME#&EMCC=#EMCC#.
Step 5 (Optional) If you want to create a secure URL using HTTPS, enter the secure service URL in the following format:
https://<IPAddress>:8443/emapp/EMAppServlet?device=#DEVICENAME#&EMCC=#EMCC#.
Step 6 Use the default values for the Service Category and Service Type fields.
Step 7 Check the Enable check box.
Step 8 (Optional) Check the Enterprise Subscription check box to subscribe all phones and device profiles to this phone service.
Note If you check this check box when configuring the service for the first time, you will set up this IP phone service as an enterprise subscription service. All phones and device profiles in the enterprise will automatically subscribe to this IP phone service, removing the need for you to subscribe them individually.
Step 9 Click Save.

What to Do Next
Configure a Device Profile for Extension Mobility Cross Cluster, on page 435

Configure a Device Profile for Extension Mobility Cross Cluster

Create a device profile to map settings onto a real device when a user logs in to Extension Mobility cross cluster.

Before You Begin
Configure the Extension Mobility Phone Service, on page 434

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Device Profile.
Step 2 Perform one of the following tasks:
  • To modify an existing device profile, enter search criteria, click Find, and click a device profile name in the resulting list.
• To add a new device profile, click Add New, click Next, choose a device profile type, click Next, choose a protocol, then click Next.

**Step 3** Configure the fields on the **Device Profile Configuration** window. See the Related Topics for more information about the fields and their configuration options.

**Step 4** Click Save.

**Step 5** Add a directory number (DN) to the new device profile.

### What to Do Next

*Enable Extension Mobility Cross Cluster for a User*, on page 441

### Related Topics

</thead>
<tbody>
<tr>
<td>Product Type</td>
<td>This field displays the product type to which this device profile applies.</td>
</tr>
<tr>
<td>Product Type</td>
<td>This field displays the product type to which this device profile applies.</td>
</tr>
<tr>
<td>Device Protocol</td>
<td>This field displays the device protocol to which this device profile applies.</td>
</tr>
<tr>
<td>Device Profile Name</td>
<td>Enter a unique name. This name can comprise up to 50 characters in length.</td>
</tr>
<tr>
<td>Description</td>
<td>Enter a description of the device profile. For text, use anything that describes this particular user device profile.</td>
</tr>
<tr>
<td>User Hold MOH Audio Source</td>
<td>To specify the audio source that plays when a user initiates a hold action, choose an audio source from the User Hold MOH Audio Source drop-down list box. If you do not choose an audio source, Cisco Unified Communications Manager uses the audio source that is defined in the device pool or the system default if the device pool does not specify an audio source ID.</td>
</tr>
</tbody>
</table>

**Note** You define audio sources in the Music On Hold Audio Source Configuration window. For access, choose **Media Resources > Music On Hold Audio Source**.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| User Locale         | From the drop-down list box, choose the locale that is associated with the phone user interface. The user locale identifies a set of detailed information, including language and font, to support users.  
Cisco Unified Communications Manager makes this field available only for phone models that support localization.  
**Note** If no user locale is specified, Cisco Unified Communications Manager uses the user locale that is associated with the device pool.  
**Note** If the users require information to display (on the phone) in any language other than English, verify that the locale installer is installed before configuring user locale. See the Cisco Unified Communications Manager Locale Installer documentation. |
| Phone Button Template| From the Phone Button Template drop-down list, choose a phone button template.  
**Tip** If you want to configure BLF/SpeedDials for the profile for presence monitoring, choose a phone button template that you configured for BLF/SpeedDials. After you save the configuration, the Add a New BLF SD link displays in the Association Information pane. For more information on BLF/SpeedDials, see the [Cisco Unified Communications Manager Features and Services Guide](#). |
| Softkey Template    | From the Softkey Template drop-down list box, choose the softkey template from the list that displays.                                                                                                                                                                                                                                           |
| Privacy             | From the Privacy drop-down list box, choose On for each phone on which you want privacy. For more information, see the [Cisco Unified Communications Manager Features and Services Guide](#).                                                                                                                                                           |
| Single Button Barge | From the drop-down list box, choose from the following options:  
• Off—This device does not allow users to use the Single Button Barge/cBarge feature.  
• Barge—Choosing this option allows users to press the Single Button Barge shared-line button on the phone to barge into a call using Barge.  
• Default—This device inherits the Single Button Barge/cBarge setting from the service parameter and device pool settings.  
**Note** If the server parameter and device pool settings are different, the device will inherit the setting from the service parameter setting.  
For more information, see the [Cisco Unified Communications Manager Features and Services Guide](#). |
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Join Across Lines**         | From the drop-down list box, choose from the following options:  
|                               | • Off—This device does not allow users to use the Join Across Lines feature.  
|                               | • On—This device allows users to join calls across multiple lines.  
|                               | • Default—This device inherits the Join Across Lines setting from the service parameter and device pool settings.  
|                               | **Note** If the server parameter and device pool settings are different, the device will inherit the setting from the service parameter setting.  
|                               | For more information, see the Cisco Unified Communications Manager System Guide.                                                             |
| **Always Use Prime Line**     | From the drop-down list box, choose one of the following options:  
|                               | • Off—When the phone is idle and receives a call on any line, the phone user answers the call from the line on which the call is received.  
|                               | • On—When the phone is idle (off hook) and receives a call on any line, the primary line gets chosen for the call. Calls on other lines continue to ring, and the phone user must select those other lines to answer these calls.  
|                               | • Default—Cisco Unified Communications Manager uses the configuration from the Always Use Prime Line service parameter, which supports the Cisco CallManager service. |
| **Always Use Prime Line for Voice Message** | From the drop-down list box, choose one of the following options:  
|                               | • On—If the phone is idle, the primary line on the phone becomes the active line for retrieving voice messages when the phone user presses the Messages button on the phone.  
|                               | • Off—If the phone is idle, pressing the Messages button on the phone automatically dials the voice-messaging system from the line that has a voice message. Cisco Unified Communications Manager always selects the first line that has a voice message. If no line has a voice message, the primary line gets used when the phone user presses the Messages button.  
|                               | • Default—Cisco Unified Communications Manager uses the configuration from the Always Use Prime Line for Voice Message service parameter, which supports the Cisco CallManager service. |
### Field | Description
---|---
Ignore Presentation Indicators (internal calls only) | To configure call display restrictions and ignore any presentation restriction that is received for internal calls, check the "Ignore Presentation Indicators (internal calls only)" check box.

**Tip** Use this configuration in combination with the calling line ID presentation and connected line ID presentation configuration at the translation pattern level. Together, these settings allow you to configure call display restrictions to selectively present or block calling and/or connected line display information for each call. For more information about call display restrictions, see the *Cisco Unified Communications Manager Features and Services Guide*.

Do Not Disturb | Check this check box to enable Do Not Disturb.

**DND Option** | When you enable DND on the phone, this parameter allows you to specify how the DND feature handles incoming calls:
- Call Reject—This option specifies that no incoming call information gets presented to the user. Depending on how you configure the DND Incoming Call Alert parameter, the phone may play a beep or display a flash notification of the call.
- Ringer Off—This option turns off the ringer, but incoming call information gets presented to the device, so that the user can accept the call.
- Use Common Phone Profile Setting—This option specifies that the DND Option setting from the Common Phone Profile window will get used for this device.

**Note** For 7940/7960 phones that are running SCCP, you can only choose the Ringer Off option. For mobile devices and dual-mode phones, you can only choose the Call Reject option. When you activate DND Call Reject on a mobile device or dual-mode phone, no call information gets presented to the device.

**DND Incoming Call Alert** | When you enable the DND Ringer Off or Call Reject option, this parameter specifies how a call displays on a phone.

From the drop-down list, choose one of the following options:
- None—This option specifies that the DND Incoming Call Alert setting from the Common Phone Profile window will get used for this device.
- Disable—This option disables both beep and flash notification of a call but for the DND Ringer Off option, incoming call information still gets displayed. For the DND Call Reject option, no call alerts display and no information gets sent to the device.
- Beep Only—For an incoming call, this option causes the phone to play a beep tone only.
- Flash Only—For an incoming call, this option causes the phone to display a flash alert.

| Login User Id  | From the Login User ID drop-down list box, choose a valid login user ID.  
   **Note** If the device profile is used as a logout profile, specify the login user ID that will be associated with the phone. After the user logs out from this user device profile, the phone will automatically log in to this login user ID. |
Subscribe Devices to Extension Mobility

Enable Extension Mobility on devices and subscribe to the service if you have not set up an enterprise subscription for all devices.

Before You Begin
Enable Extension Mobility Cross Cluster for a User, on page 441

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone.
Step 2 Find the phone on which users can use Extension Mobility Cross Cluster.
Step 3 For this device, check the Enable Extension Mobility check box in the Extension Information pane.
Step 4 In the Phone Configuration window, choose the Subscribe/Unsubscribe Services option in the Related Links drop-down list.
Step 5 Click Go.
Step 6 In the popup window that opens, choose the Extension Mobility service in the Select a Service drop-down list.
Step 7 Click Next.
Step 8 Click Subscribe.
Step 9 From the popup window, click Save, and then close the window.
Step 10 In the Phone Configuration window, click Save.
Step 11 Click OK if prompted.

Configure Certificates for Extension Mobility Cross Cluster

To configure the home and remote clusters properly, you must export certificates on each cluster to the same SFTP server and SFTP directory and consolidate them on one of the participating clusters. This procedure ensures that trust is established between the two clusters.

Before You Begin
Configure Extension Mobility, on page 433

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Activate the Bulk Provisioning Service, on page 443</td>
</tr>
</tbody>
</table>
Configure bulk certificate management in Cisco Unified OS Administration to export the certificates from both the home and remote clusters.

**Step 2**
Configure Bulk Certificate Management and Export Certificates, on page 443

Configure bulk certificate management in Cisco Unified OS Administration to export the certificates from both the home and remote clusters.

**Step 3**
Consolidate the Certificates, on page 444

Consolidate certificates when all participating clusters have exported their certificates. This option is available only if two or more clusters exported their certificates to the SFTP server.

**Step 4**
Import the Certificates into the Clusters, on page 445

Import the certificates back into the home and remote (visiting) clusters.

**Note** After an upgrade, these certificates are preserved. You do not need to reimport or reconsolidate certificates.

### Activate the Bulk Provisioning Service

**Before You Begin**
Configure Extension Mobility, on page 433

**Procedure**

<table>
<thead>
<tr>
<th>Step 1</th>
<th>From Cisco Unified Serviceability, choose Tools &gt; Service Activation.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>From the Server drop-down list, choose the publisher node.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Check the Cisco Bulk Provisioning Service check box.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Click Save.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Click OK.</td>
</tr>
</tbody>
</table>

**What to Do Next**
Configure Bulk Certificate Management and Export Certificates, on page 443

### Configure Bulk Certificate Management and Export Certificates

Configure bulk certificate management in Cisco Unified OS Administration to export the certificates from both the home and remote clusters.

This procedure creates a PKCS12 file that contains certificates for all nodes in the cluster.
Before You Begin

Activate the Bulk Provisioning Service, on page 443

Procedure

Step 1 From Cisco Unified OS Administration, choose Security > Bulk Certificate Management.
Step 2 Configure the settings for a TFTP server that both the home and remote clusters can reach. See the online help for information about the fields and their configuration options.
Step 3 Click Save.
Step 4 Click Export.
Step 5 In the Bulk Certificate Export window, choose All for the Certificate Type field.
Step 6 Click Export.
Step 7 Click Close.

What to Do Next

Consolidate the Certificates, on page 444

Consolidate the Certificates

Consolidate certificates when all participating clusters have exported their certificates. This option is available only if two or more clusters exported their certificates to the SFTP server.

This procedure consolidates all PKCS12 files in the SFTP server to form a single file.

Note

If you export new certificates after consolidation, you must perform this procedure again to include the newly exported certificates.

Before You Begin

Configure Bulk Certificate Management and Export Certificates, on page 443
Procedure

Step 1 From Cisco Unified OS Administration, choose Security > Bulk Certificate Management > Consolidate > Bulk Certificate Consolidate.

Step 2 In the Certificate Type field, choose All.

Step 3 Click Consolidate.

What to Do Next

Import the Certificates in to the Clusters, on page 445

Import the Certificates in to the Clusters

Import the certificates back into the home and remote (visiting) clusters.

Note

After an upgrade, these certificates are preserved. You do not need to reimport or reconsolidate certificates.

Caution

After you import the certificates, the phones on the cluster will automatically restart.

Before You Begin

Consolidate the Certificates, on page 444

Procedure

Step 1 From Cisco Unified OS Administration, choose Security > Bulk Certificate Management > Import > Bulk Certificate Import.

Step 2 From the Certificate Type drop-down list, choose All.

Step 3 Choose Import.

Configure Extension Mobility Cross Cluster Devices and Templates

Before You Begin

Configure Certificates for Extension Mobility Cross Cluster, on page 442
<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Create a Common Device Configuration, on page 446</td>
<td>Configure a common device configuration to specify the services or features that will be associated with a particular user.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Configure an Extension Mobility Cross Cluster Template, on page 447</td>
<td>Create an extension mobility cross cluster template to link the common device configuration with this feature.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Set the Default Template, on page 447</td>
<td>Set the extension mobility cross cluster template that you created as the default template.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Add Extension Mobility Cross Cluster Devices, on page 448</td>
<td>Insert extension mobility cross cluster device entries into your system database. Each device is identified with a unique name in the format EMCC1, EMCC2, and so on. The Bulk Administration Tool assigns device numbers by obtaining the last one used.</td>
</tr>
</tbody>
</table>

Create a Common Device Configuration

Configure a common device configuration to specify the services or features that will be associated with a particular user.

Before You Begin

Configure Certificates for Extension Mobility Cross Cluster, on page 442

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Common Device Configuration.

Step 2 Perform one of the following tasks:

- To modify an existing common device configuration, enter search criteria, click Find, and choose a common device configuration from the resulting list.
- To add a new common device configuration, click Add New.

Step 3 Configure the fields on the Common Device Configuration window. See the online help for more information about the fields and their configuration options.

Step 4 Click Save.

What to Do Next

Configure an Extension Mobility Cross Cluster Template, on page 447
Configure an Extension Mobility Cross Cluster Template

Create an extension mobility cross cluster template to link the common device configuration with this feature.

Before You Begin
Create a Common Device Configuration, on page 446

Procedure

Step 1  From Cisco Unified CM Administration, choose Bulk Administration > EMCC > EMCC Template.
Step 2  Click Add New.
Step 3  Configure the fields on the EMCC Template Configuration window. See the online help for more information about the fields and their configuration options.
Step 4  Click Save.

What to Do Next
Set the Default Template, on page 447

Set the Default Template

Set the extension mobility cross cluster template that you created as the default template.

Before You Begin
Configure an Extension Mobility Cross Cluster Template, on page 447

Procedure

Step 1  From Cisco Unified CM Administration, choose Bulk Administration > EMCC > Insert/Update EMCC.
Step 2  Click Update EMCC Devices.
Step 3  From the Default EMCC Template drop-down list, choose the extension mobility cross cluster device template that you configured.
Step 4  Click Run Immediately.
Step 5  Click Submit.
Step 6  Verify the success of the job:
   a) Choose Bulk Administration > Job Scheduler.
   b) Locate the Job ID of your job.

What to Do Next
Add Extension Mobility Cross Cluster Devices, on page 448
Add Extension Mobility Cross Cluster Devices

Insert extension mobility cross cluster device entries into your system database. Each device is identified with a unique name in the format EMCC1, EMCC2, and so on. The Bulk Administration Tool assigns device numbers by obtaining the last one used.

Before You Begin
Set the Default Template, on page 447

Procedure

Step 1 From Cisco Unified CM Administration, choose Bulk Administration > EMCC > Insert/Update EMCC.
Step 2 Click Insert EMCC Devices.
Step 3 Enter the number of devices you are adding in the Number of EMCC Devices to be added field.
Step 4 Click Run Immediately and click Submit.
Step 5 Refresh the window and verify that the Number of EMCC Devices already in database value shows the number of devices that you added.

Configure a Geolocation Filter for Extension Mobility Cross Cluster

Configure a geolocation filter to specify criteria for device location matching, such as country, state, and city values. Geolocations are used to identify the location of a device, and the filter indicates what parts of the geolocation are significant.

Before You Begin
Configure Extension Mobility Cross Cluster Devices and Templates, on page 445

Procedure

Step 1 From Cisco Unified CM Administration, choose System > Geolocation Filter.
Step 2 Click Add New.
Step 3 Configure the fields on the Geolocation Filter Configuration window. See the online help for more information about the fields and their configuration options.
Step 4 Click Save.

What to Do Next
Configure Feature Parameters for Extension Mobility Cross Cluster, on page 448

Configure Feature Parameters for Extension Mobility Cross Cluster

Select values for the feature parameters that you configured, such as the geolocation filter.
Before You Begin

Configure Bulk Certificate Management and Export Certificates, on page 443

Procedure

Step 1  From Cisco Unified CM Administration, choose Advanced Features > EMCC > EMCC Feature Configuration.

Step 2  Configure the fields on the EMCC Feature Configuration window. See the Related Topics section for more information about the fields and their configuration options.

Step 3  Click Save.

What to Do Next

Configure Intercluster SIP Trunk for Extension Mobility Cross Cluster, on page 452

Related Topics

Feature Parameter Fields for Extension Mobility Cross Cluster, on page 449

Feature Parameter Fields for Extension Mobility Cross Cluster

<table>
<thead>
<tr>
<th>EMCC Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default TFTP Server for EMCC Login Device</td>
<td>Choose the computer name or IP address of the default TFTP server that devices logging into extension mobility cross cluster (EMCC) from a remote cluster should use.</td>
</tr>
<tr>
<td>Backup TFTP Server for EMCC Login Device</td>
<td>Choose the computer name or IP address of the backup TFTP server that devices logging into EMCC from a remote cluster should use.</td>
</tr>
<tr>
<td>Default Interval for Expired EMCC Device Maintenance</td>
<td>Specify the number of minutes that elapse between system checks for expired EMCC devices. An expired EMCC device is a device that logged in to EMCC from a remote cluster, but that, because of a WAN failure or a connectivity issue, the phone logged out of the visiting cluster. When connectivity was restored, the device logged back into the visiting cluster. During this maintenance job, the Cisco Extension Mobility service checks the Cisco Unified Communications Manager database for any expired EMCC devices and automatically logs them out. The default value is 1440 minutes. Valid values range from 10 minutes to 1440 minutes.</td>
</tr>
<tr>
<td>EMCC Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Enable All Remote Cluster Services When Adding A New Remote Cluster</td>
<td>Choose whether you want all services on a new remote cluster to be automatically enabled when you add a new cluster. Valid values are True (enable all services on the remote cluster automatically) or False (manually enable the services on the remote cluster via the Remote Cluster Configuration window in Cisco Unified Communications Manager Administration). You can enable the services manually so that you have time to configure the EMCC feature completely before enabling the remote services. The default value is False.</td>
</tr>
</tbody>
</table>
| CSS for PSTN Access SIP Trunk                               | Choose the calling search space (CSS) that the PSTN Access SIP trunk for processing EMCC calls uses. The PSTN Access SIP trunk is the SIP trunk that you configured for PSTN access in the **Intercluster Service Profile** window. Calls over this trunk are intended for and are routed to only the local PSTN that is co-located with the EMCC logged-in phone that initiates the call. Valid values are the following:  
  - Use Trunk CSS (PSTN calls use the local route group, which can prove useful for properly routing emergency service calls)  
  - Use phone's original device CSS (PSTN calls are routed using the configured calling search space on the remote phone, that is, the CSS that is used when the phone is not logged into EMCC).  
  The default value is Use trunk CSS. |
<p>| EMCC Geolocation Filter                                     | Choose the geolocation filter that you have configured for use EMCC. Based on the information in the geolocation that associates with a phone that is logged in through Extension Mobility from another cluster, as well as the selected EMCC geolocation filter, Cisco Unified Communications Manager places the phone into a roaming device pool. Cisco Unified Communications Manager determines which roaming device pool to use by evaluating which device pool best matches the phone geolocation information after the EMCC geolocation filter is applied. |
| EMCC Region Max Audio Bit Rate                              | This parameter specifies the maximum audio bit rate for all EMCC calls, regardless of the region associated with the other party. The default value is 8 kbps (G.729). Note: All participating EMCC clusters must specify the same value for the EMCC region max audio bit rate. |</p>
<table>
<thead>
<tr>
<th>EMCC Parameter</th>
<th>Description</th>
</tr>
</thead>
</table>
| EMCC Region Max Video Call Bit Rate (Includes Audio) | This parameter specifies the maximum video call bit rate for all EMCC video calls, regardless of the maximum video call bit rate of the region associated with the other party.  
The default value is 384. Valid values range from 0 to 8128.  
**Note** All participating EMCC clusters must specify the same value for the EMCC region max video call bit rate. |
| EMCC Region Link Loss Type                          | This parameter specifies the link loss type between any EMCC phone and devices in any remote cluster.  
**Note** To allow two-way audio on EMCC calls, all participating EMCC clusters must use the same EMCC region link loss type.  
Based on the option that you choose, Cisco Unified Communications Manager attempts to use the optimal audio codec for the EMCC call while observing the configured EMCC region max audio bit rate.  
Valid values are the following:  
• **Lossy**—A link where some packet loss can or may occur, for example, DSL.  
• **Low Loss**—A link where low packet loss occurs, for example, T1.  
When you set this parameter to **Lossy**, Cisco Unified Communications Manager chooses the optimal codec within the limit that is set by the EMCC Region Max Audio Bit Rate, based on audio quality. Some packet loss will occur.  
When this parameter is set to **Low Loss**, Cisco Unified Communications Manager chooses the optimal codec within the limit that is set by the EMCC Region Max Audio Bit Rate, based on audio quality. Little or no packet loss will occur.  
The only difference in the audio codec preference ordering between the low loss and lossy options is that G.722 is preferred over Internet Speech Audio Codec (iSAC) when the link loss type is set as low loss, whereas iSAC is preferred over G.722 when the link loss type is set as lossy.  
The default value is **Low Loss**. |
| RSVP SIP Trunk KeepAlive Timer                       | Specify the number of seconds that Cisco Unified Communications Manager waits between sending or receiving KeepAlive messages or acknowledgments between two clusters over EMCC RSVP SIP trunks.  
An EMCC RSVP SIP trunk is a SIP trunk that has Cisco Extension Mobility Cross Cluster configured as the Trunk Service Type and that has been selected as the SIP Trunk for RSVP Agent in the Intercluster Service Profile window.  
When two of these intervals elapse without receipt of a KeepAlive message or an acknowledgment, Cisco Unified Communications Manager releases the RSVP resources with the remote cluster.  
The default value is 15 seconds. Valid values range from 1 second to 600 seconds. |
<table>

<tr>
<td>Backup Server for Remote Cluster Update</td>
<td>Choose the default server name or IP address of the secondary node in this local cluster that has the Cisco Extension Mobility service activated. The remote cluster accesses this node when the primary node is down to retrieve information about this local cluster.</td>
</tr>
<tr>
<td>Remote Cluster Update Interval</td>
<td>Specify an interval, in minutes, during which the Cisco Extension Mobility service on the local node collects information about the remote EMCC cluster. Collected information includes such details as the remote cluster Cisco Unified Communications Manager version and service information. The default value is 30. Valid values range from 15 minutes to 10,080 minutes.</td>
</tr>
</tbody>
</table>

**Configure Intercluster SIP Trunk for Extension Mobility Cross Cluster**

Configure trunks to process inbound or outbound traffic for intercluster PSTN access and RSVP agent services. You can configure one trunk for both PSTN access and RSVP agent services or one trunk for each service. You do not need more than two SIP trunks for extension mobility cross cluster.

**Before You Begin**

Configure Feature Parameters for Extension Mobility Cross Cluster, on page 448

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose **Device > Trunk**.

**Step 2**
Click **Add New**.

**Step 3**
From the **Trunk Type** drop-down list, choose **SIP Trunk**.

**Step 4**
From the **Trunk Service Type** drop-down list, choose **Extension Mobility Cross Clusters**.

**Step 5**
Click **Next**.

**Step 6**
Configure the fields in the **Trunk Configuration** window. See the online help for more information about the fields and their configuration options.

**Step 7**
Click **Save**.

**What to Do Next**

Configure an Intercluster Service Profile for Extension Mobility Cross Cluster, on page 453
Configure an Intercluster Service Profile for Extension Mobility Cross Cluster

Configure the intercluster service profile to activate extension mobility cross cluster. The profile collects all the configuration that precedes and provides a results report.

Before You Begin
Configure Intercluster SIP Trunk for Extension Mobility Cross Cluster, on page 452

Procedure

Step 1 From Cisco Unified CM Administration, choose Advanced Features > EMCC > EMCC Intercluster Service Profile.

Step 2 Configure the fields on the EMCC Intercluster Service Profile Configuration window. See the online help for more information about the fields and their configuration options.

Step 3 If no failure messages appear in the popup window, click Save.

What to Do Next
Configure Remote Cluster Services, on page 453

Configure Remote Cluster Services

Configure the remote cluster for extension mobility cross cluster. This step completes the link between the home cluster with remote (visiting) cluster.

Before You Begin
Configure an Intercluster Service Profile for Extension Mobility Cross Cluster, on page 453

Procedure

Step 1 From Cisco Unified CM Administration, choose Advanced Features > Cluster View.

Step 2 Click Find to show a list of known remote clusters.

Step 3 Perform one of the following steps:

• If the remote cluster that you want to configure appears, click the remote cluster name and verify the fields.

• If the remote cluster that you want to configure does not appear, click Add New and configure the following fields:

  1. For the Cluster Id field, ensure that the ID matches the enterprise parameter value of the cluster ID of the other clusters.

  2. In the Fully Qualified Name field, enter the IP address of the remote cluster or a domain name that can resolve to any node on the remote cluster.

  3. Click Save.
Note For extension mobility cross cluster, the TFTP check box should always be disabled.

### Extension Mobility Cross Cluster Interactions and Restrictions

- [Extension Mobility Cross Cluster Restrictions](#), on page 455

### Extension Mobility Cross Cluster Interactions

**Table 30: Extension Mobility Cross Cluster Interactions**

<td>• Local calls are routed to the local gateways of the PSTN.</td>
</tr>
<tr>
<td></td>
<td>• Calls terminating to local route groups route to local gateways in the visiting cluster.</td>
</tr>
<tr>
<td>Other call features and services</td>
<td>Example restriction: Intercom configuration specifies configuration to a static device, so EMCC does not support the intercom feature.</td>
</tr>
</tbody>
</table>
Interaction Feature

- Cross-cluster security is provided by default.
- Cisco Unified IP Phones with secure and nonsecure phone security profiles are supported.

### Extension Mobility Cross Cluster Restrictions

#### Table 31: Extension Mobility Cross Cluster Restrictions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
</table>
| Unsupported Features                     | • EMCC does not support the intercom feature, because intercom configuration requires a static device.  
  • Location CAC is not supported, but RSVP-based CAC is supported. |
| EMCC Device Cannot Be Provisioned in More Than One Cluster | For EMCC to function properly, you cannot configure the same phone (device name) in two clusters. Otherwise, login will fail due to the duplicate device error (37). For this reason, for cluster deployed with EMCC you should disable Autoregistration on all Unified Communication Manager nodes to prevent a new device being created in the home cluster after EMCC logout. |
| Number of EMCC Devices                   | Cisco Unified Communications Manager can support a MaxPhones value of 60,000. Include EMCC in the total number of devices that are supported in the cluster by using the following calculation:  
  Phones + (2 x EMCC devices) = MaxPhones |
  **Note** EMCC login does not affect the number of licenses that are used in the home cluster. |
| Visiting Device Logout Limitations       | • If the home cluster administrator disables EMCC for a user while the user is logged in with EMCC, the system does not automatically log this user out. Instead, the system does not allow future EMCC attempts by this user. The current EMCC session continues until the user logs out.  
  • In the visiting cluster, the **Phone Configuration** window has a Log Out button for extension mobility. This button is also used by the visiting cluster administrator to log out an EMCC phone. Because the EMCC phone is not currently registered with the visiting Cisco Unified Communications Manager, this operation is like a database cleanup in the visiting cluster. The EMCC phone remains registered with the home Cisco Unified Communications Manager until the phone returns to the visiting cluster because of a reset or a logout from the home cluster. |
The extension mobility service in participating clusters performs a periodic remote cluster update. The **Remote Cluster Update Interval** feature parameter controls the update interval. The default interval is 30 minutes.

If the extension mobility service on cluster A does not receive a reply from a remote cluster (such as cluster B) for this update, the Remote Cluster window for cluster A shows that the Remote Activated service is set to False for cluster B.

In this case, the visiting cluster does not receive any response from the home cluster and sets the Remote Activated values for the home cluster to False.

During this interval, a visiting phone may not be able to log in by using EMCC. The visiting phone receives the "Login is unavailable" error message.

At this point, a login attempt to EMCC from a visiting phone can fail; the phone displays the "Login is unavailable" error message. This error occurs because the visiting cluster has not yet detected the change of the home cluster from out-of-service to in-service.

Remote cluster status change is based on the value of the Remote Cluster Update Interval EMCC feature parameter and on when the visiting extension mobility service performed the last query or update.

You can select **Update Remote Cluster Now** in the Remote Cluster Service Configuration window (Advanced Features > EMCC > EMCC Remote Cluster) to change Remote Activate values to True, which also allows EMCC logins.

Otherwise, after the next periodic update cycle, EMCC logins by visiting phones will return to normal.

---

### Extension Mobility Cross Cluster and Security Mode for Different Cluster Versions

**Note**

Phone configuration files can be encrypted only if both the home cluster and visiting cluster versions are 9.x or later, and when the TFTP encryption configuration flag is enabled.

During EMCC login, if both the visiting cluster and home cluster versions are in 9.x or later, the phone will behave in various modes as shown in the following table.

**Table 32: Supported Security Modes When Both Visiting Cluster and Home Cluster Are In 9.x or Later Versions**

CHAPTER 32

Hold Reversion

This chapter provides information about the hold reversion feature which alerts a phone user when a held call exceeds a configured time limit.

- Hold Reversion Overview, page 465
- Hold Reversion Prerequisites, page 466
- Hold Reversion Configuration Task Flow, page 466
- Hold Reversion Interactions and Restrictions, page 469

Hold Reversion Overview

When you place a call on hold, the Hold Reversion feature alerts you when the held call exceeds a configured time limit. When the configured time limit expires, an alert is generated on your phone to remind you to handle the call.

The following alerts are available:

- The Phone rings or beeps once
- The status line displays "Hold Reversion"
- The LED next to the line button flashes continuously
- A vibrating handset icon displays

Note

The type of alert that you receive depends on the capabilities of your phone.

To retrieve a reverted call, you can:

- Pick up the handset
- Press the speaker button on the phone
- Press the headset button
- Select the line that is associated with the reverted call
Hold Reversion Prerequisites

- Cisco CallManager service must be running on at least one node in the cluster
- Cisco CTIManager service must be running on at least one node in the cluster
- Cisco Database Layer Monitor service must be running on the same node as the Cisco CallManager service
- Cisco RIS Data Collector service must be running on the same node as the Cisco CallManager service
- Cisco Tftp service must be running on at least one node in the cluster
- Cisco Unified Communications Manager Locale Installer must be installed, if you want to use non-English phone locales or country-specific tones

Hold Reversion Configuration Task Flow

Perform the following steps to configure Hold Reversion for your phones. This procedure assumes that you have configured directory numbers for phones, or that you are using auto-registration.

Before You Begin

- If phone users want the hold reversion messages to display in a language other than English, or if you want the user to receive country-specific tones for calls, verify that you have installed the locale installer.
- Review Hold Reversion Prerequisites, on page 466

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Generate a Phone Feature List, on page 7</td>
<td>Run a phone feature list report to determine which phones support the Hold Reversion feature.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Configure Call Focus Priority for Hold Reversion, on page 467</td>
<td>Configure the call focus priority setting against the device pool for your phones.</td>
</tr>
</tbody>
</table>
| Step 3 | Perform one of the following procedures:  
  - Configure Hold Reversion Timer Defaults for Cluster, on page 467  
  - Configure Hold Reversion Timer Settings for Phone, on page 468 | Configure the Hold Reversion timer settings. You can configure the timer using a clusterwide service parameter, or configure the settings on an individual phone line.  
  **Note** The settings on an individual phone line override the clusterwide service parameter settings. |
Configure Call Focus Priority for Hold Reversion

As an administrator, you can prioritize incoming calls and reverted calls. By default, all incoming calls are handled before reverted calls, however you can change the call focus priority so that reverted calls take precedence.

Before You Begin

Generate a Phone Feature List, on page 7

Procedure

Step 1
From Cisco Unified CM Administration, choose **System > Device Pool** and open the device pool that applies to your phones.

Step 2
In the **Reverted Call Focus Priority** field, choose one of the following options and click **Save**:

- **Default**—Incoming calls have priority over reverted calls.
- **Highest**—Reverted calls have priority over incoming calls.

Step 3
Click **Save**.

Step 4
Reset any devices in the Device Pool by performing the following steps:

a) Click **Reset**. The **Device Reset** window displays.

b) In the **Device Reset** window, click **Reset**.

What to Do Next

Perform one of the following procedures to configure Hold Reversion Timer Settings:

- **Configure Hold Reversion Timer Defaults for Cluster**, on page 467
- **Configure Hold Reversion Timer Settings for Phone**, on page 468

Configure Hold Reversion Timer Defaults for Cluster

Perform this procedure to configure clusterwide service parameters that apply hold reversion timer default settings for all phones in the cluster.

Note

When you configure the clusterwide service parameters, the configuration is applied as the default hold reversion setting for all phones in the cluster. However, the settings on an individual phone line can override the clusterwide defaults.

Before You Begin

**Configure Call Focus Priority for Hold Reversion**, on page 467
Procedure

Step 1 In Cisco Unified CM Administration, choose **System > Service Parameters**.

Step 2 From the **Server** drop-down list box, choose the server that is running the **CallManager** service.

Step 3 From the **Service** drop-down list box, choose **Cisco CallManager**.

Step 4 Configure values for the following clusterwide service parameters:

- **Hold Reversion Duration**—Enter a number from 0 to 1200 (inclusive) to specify the wait time in seconds before Cisco Unified Communications Manager issues a reverted call alert to the holding party phone. If you enter 0, Cisco Unified Communications Manager does not issue reverted call alerts, unless it is configured on a phone line.

- **Hold Reversion Interval Notification**—Enter a number from 0 to 1200 (inclusive) to specify the wait time in seconds before Cisco Unified Communications Manager sends periodic reminder alerts to the holding party phone. If you enter 0, Cisco Unified Communications Manager does not send periodic reminder alerts unless the timer is configured on a phone line.

Step 5 Click **Save**.

What to Do Next

Perform the following procedure to configure the Hold Reversion timer for an individual phone:

Configure Hold Reversion Timer Settings for Phone, on page 468

Configure Hold Reversion Timer Settings for Phone

Perform this procedure to configure Hold Reversion timer settings for a phone and phone line.

**Note**

You can also configure Hold Reversion timer settings using a clusterwide service parameter. However, the settings on an individual phone line override the clusterwide service parameter setting.

**Before You Begin**

Perform Configure Hold Reversion Timer Defaults for Cluster, on page 467 to configure Hold Reversion clusterwide defaults.

Procedure

Step 1 In Cisco Unified CM Administration, choose **Device > Phone**.

Step 2 Click **Find** and select the phone on which you want to configure Hold Reversion.

Step 3 In the **Association** pane on the left, click the phone line on which you want to configure Hold Reversion.

Step 4 Configure values for the following fields:

- **Hold Reversion Ring Duration**—Enter a number from 0 to 1200 (inclusive) to specify the wait time in seconds before Cisco Unified Communications Manager issues a reverted call alert. If you enter 0,
Cisco Unified Communications Manager does not issue reverted call alerts to this DN. If you leave the field empty (the default setting), Cisco Unified Communications Manager applies the setting from the Hold Reversion Duration service parameter.

- **Hold Reversion Ring Interval Notification**—Enter a number from 0 to 1200 (inclusive) to specify the wait time in seconds before Cisco Unified Communications Manager sends periodic reminder alerts. If you enter 0, Cisco Unified Communications Manager does not send periodic reminder alerts to this DN. If you leave the field empty (the default setting), Cisco Unified Communications Manager applies the setting from the Hold Reversion Interval Notification service parameter.

**Step 5**
Click **Save**.

**Step 6**
Reset the phone by performing the following steps:

a) Click **Reset**. The **Reset Device** window displays.

b) Click **Reset**.

---

## Hold Reversion Interactions and Restrictions

### Hold Reversion Interactions

**Table 37: Hold Reversion Feature Interactions**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interactions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Music on Hold</td>
<td>MOH is supported on a reverted call if MOH is configured for a normal held call.</td>
</tr>
<tr>
<td>Call Park</td>
<td>If hold reversion is invoked and the held party presses the <strong>Park</strong> softkey, the holding party still receives hold reversion alerts and can retrieve the call. When the holding party retrieves the call, the holding party receives MOH, if configured. If the held party parks before the hold duration exceeds the configured time limit, the system suppresses all hold reversion alerts until the call is picked up or redirected.</td>
</tr>
<tr>
<td>MLPP</td>
<td>When a multilevel precedence and preemption (MLPP) call is put on hold and reverts, the MLPP call loses its preemption status, and the reverted call gets treated as a routine call. After the call reverts, the system does not play a preemption ring. If a high precedence call becomes a reverted call, the system does not play a precedence tone.</td>
</tr>
</tbody>
</table>
### Hold Reversion Interactions and Restrictions

#### Feature | Interactions
--- | ---
CTI Applications | CTI applications can access hold reversion functionality when the feature is enabled for a line or the system. Cisco-provided applications such as Cisco Unified Communications Manager Assistant and attendant console provide hold reversion functionality using the CTI interface.

When hold reversion gets invoked, the CTI port receives event notification instead of the audible tone presented on Cisco Unified IP Phones. CTI ports and route points receive the event notification once only, whereas Cisco Unified IP Phones receive alerts at regular intervals.

See the following API documents for information about CTI requirements and interactions with hold reversion:

- Cisco Unified Communications JTAPI Developer Guide
- Cisco Unified Communications TAPI Developer Guide

| Hold Reversion Interval for SCCP phones when interacting with SIP Phones | SCCP phones support a minimum Hold Reversion Notification Interval (HRNI) of 5 seconds, whereas SIP phones support a minimum of 10 seconds. SCCP phones set for the minimum HRNI of 5 seconds may experience a Hold Reversion Notification ring delay of 10 seconds when handling calls involving SIP phones. |

| Shared Lines | If a Cisco Unified IP Phone that supports hold reversion shares a line with a phone device that does not support hold reversion, the hold reversion configuration settings display only for the line on the supporting device.  
If a shared line device disables the feature, hold reversion gets disabled on all other devices that share the line. |

| Ring Settings | If the ring settings that are configured for the phone specify Disabled, the phone does not ring, flash, or beep for the hold reversion feature. |

### Hold Reversion Restrictions

#### Feature | Restriction
--- | ---
Cisco Extension Mobility and Cisco Web Dialer | Cisco Extension Mobility and Cisco Web Dialer features do not support the hold reversion feature.

| Directory numbers | If a directory number is associated to a phone that does not support hold reversion, the feature settings do not display for that directory number in the Directory Number Configuration window. |
### Hold Reversion Interactions and Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shared lines</td>
<td>If a Cisco Unified IP Phone that supports hold reversion shares a line with a phone device that does not support hold reversion, the hold reversion configuration settings display only for the line on the supporting device. If a shared-line device disables this feature, hold reversion gets disabled on all other devices that share this line.</td>
</tr>
<tr>
<td>Ring settings</td>
<td>Hold reversion ring uses the ring settings that Cisco Unified Communications Manager Administration defines for that user (disable, flash only, ring once, ring, beep only) except that flash gets converted to flash once, and ring gets converted to ring once.</td>
</tr>
<tr>
<td>Maximum number of reverted calls</td>
<td>The maximum number of reverted calls on a line equals the maximum number of calls on your system.</td>
</tr>
<tr>
<td>Cisco Unified IP Phones</td>
<td>You cannot configure hold reversion settings for DNAs that are associated with phones that do not support this feature. Only Cisco Unified IP Phones that support the hold reversion feature display the hold reversion timer settings in the Directory Number Configuration window. When Hold Reversion is configured for the system, the phone must support the feature or the feature does not activate. See the Cisco Unified IP Phone administration guides for Cisco Unified IP Phone models that support hold reversion and this version of Cisco Unified Communications Manager for any phone restrictions with hold reversion.</td>
</tr>

</table>
Accessing Hunt Groups

- Hunt Group Overview, page 473
- Hunt Group Prerequisites, page 474
- Hunt Group Configuration Task Flow, page 474
- Hunt Group Interactions and Restrictions, page 479

Hunt Group Overview

A Hunt Group is a group of lines that are organized hierarchically, so that if the first number in the hunt group list is busy, the system dials the second number. If the second number is busy, the system dials the next number, and so on.

The phone users can log in to or log out of the hunt groups by using the HLog softkey or the Hunt Group line button on the IP phone. The phone provides a visual status of the login state, so that the user can determine whether they are logged in to one or more of their line groups.

The Hunt Group feature provides the following functions:

- The HLog softkey on the IP phone allows the user to toggle between login and logout of phone.
- A hunt group allows a caller to automatically find an available line from amongst a group of extensions.
- The Hunt Group Log Off feature allows phone users to prevent their phones from receiving incoming calls that get routed to directory numbers. Regardless of the phone status, the phone rings normally for incoming calls that are not calls to one or more line groups associated with the phone.

Note

| The directory numbers (DNs) belong to line groups that are associated with the phone. |

- System administrators can log in or log out the users from the phones that are automatically logged into hunt groups.
- The HLog softkey allows a phone user to log a phone out of all line groups to which the phone directory numbers belong.
From Cisco Unified Communications Manager Release 9.0 onward, the Hunt Group Log Off feature enables the use of mobile device as a desk phone. When you use the Hlog softkey through your mobile client, you no longer receive calls that are placed to the hunt pilot.

**Hunt Group Prerequisites**

- The phones must be running Skinny Client Control Protocol (SCCP) or Session Initiation Protocol (SIP).
- The phone ringtone file must be located in the TFTP directory (/usr/local/cm/tftp).

**Hunt Group Configuration Task Flow**

**Before You Begin**

- Review Hunt Group Prerequisites, on page 474

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Configure a Softkey Template for Hunt Group</td>
<td>Configure a softkey template for the HLog softkey.</td>
</tr>
<tr>
<td><strong>Step 2</strong> To Associate a Softkey Template with a Common Device Configuration, on page 476</td>
<td>Optional. To make the softkey template available to phones, you must complete either this step or the following step. Follow this step if your system uses a Common Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.</td>
</tr>
<tr>
<td>- Add a Softkey Template to a Common Device Configuration, on page 476</td>

<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> Associate a Softkey Template with a Phone, on page 477</td>
<td>Optional. Use this procedure either as an alternative to associating the softkey template with the Common Device Configuration, or in conjunction with the Common Device Configuration. Use this procedure in conjunction with the Common Device Configuration if you need to assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.</td>
</tr>
<tr>
<td><strong>Step 4</strong> Configure Phones for Hunt Group, on page 478</td>
<td>Configure phones to automatically log in to or log out of hunt groups and hunt lists.</td>
</tr>
</tbody>
</table>
Configure a Softkey Template for Hunt Group

The HLog softkey appears on the phone when the phone is in the following call states:

- Connected
- On Hook
- Off Hook

Note

You must create a new softkey template to configure the HLog softkey. You cannot configure the HLog softkey in a standard softkey template.

Use this procedure to make the HLog softkey available:

Procedure

Step 1
From Cisco Unified CM Administration, choose Device > Device Settings > Softkey Template. The Softkey Template Configuration window appears.

Step 2
Perform this step to create a new softkey template; otherwise, proceed to the next step.

a) Click Add New.
b) Select a default template and click Copy.
c) In the Softkey Template Name field, enter a new name for the template.
d) Click Save.

Step 3
Perform this step to add softkeys to an existing template.

a) Enter search criteria and click Find.
b) Choose an existing template.
The Softkey Template Configuration window appears.

Step 4
Check the Default Softkey Template check box to designate this softkey template as the default softkey template.

Note
If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.

Step 5
Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

Step 6
From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

Step 7
From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

Step 8
To display the softkey in additional call states, repeat the previous step.

Step 9
Click Save.

Step 10
Perform one of the following tasks:

- If you modified a template that is already associated with devices, click Apply Config to restart the devices.
• If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

---

What to Do Next

Perform one of the following procedures:

• Add a Softkey Template to a Common Device Configuration, on page 476
• Associate a Softkey Template with a Phone, on page 477

---

Associate a Softkey Template with a Common Device Configuration

Optional. There are two ways to associate a softkey template with a phone:

• Add the softkey template to the Phone Configuration.
• Add the softkey template to the Common Device Configuration.

The procedures in this section describe how to associate the softkey template with a Common Device Configuration. Follow these procedures if your system uses a Common Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see Associate a Softkey Template with a Phone, on page 477.

---

Before You Begin

Configure a Softkey Template for Hunt Group, on page 475

---

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Add a Softkey Template to a Common Device Configuration, on page 476</td>

<td>Associate a Common Device Configuration with a Phone, on page 477</td>
</tr>
</tbody>
</table>

---

Add a Softkey Template to a Common Device Configuration

---

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Common Device Configuration. The Find and List Common Device Configuration window appears.

Step 2 Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.
a) Click Add New.
b) In the Name field, enter a name for the Common Device Configuration.
c) Click Save.

**Step 3**
Perform this step to add the softkey template to an existing Common Device Configuration.

a) Enter search criteria and click Find.
b) Choose an existing Common Device Configuration.
The Common Device Configuration window appears.

**Step 4**
In the Softkey Template drop-down list, choose the softkey template that contains the softkey that you want to make available.

**Step 5**
Click Save.

**Step 6**
Perform one of the following tasks:

- If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.
- If you modified a Common Device Configuration that is already associated with devices, click Apply Config to restart the devices.

---

**What to Do Next**

Associate a Common Device Configuration with a Phone, on page 477

---

**Associate a Common Device Configuration with a Phone**

**Before You Begin**

Add a Softkey Template to a Common Device Configuration, on page 476

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window appears.

**Step 2**
Find the phone to which to add the softkey template.

**Step 3**
From the Common Device Configuration drop-down list, choose the common device configuration that contains the new softkey template.

**Step 4**
Click Save.

**Step 5**
Click Reset to update the phone settings.

---

**Associate a Softkey Template with a Phone**

This procedure is optional. You can use this procedure as an alternative to associating the softkey template with the Common Device Configuration. This procedure also works in conjunction with the Common Device...
Configuration: use it when you need to assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.

**Before You Begin**

Configure a Softkey Template for Hunt Group, on page 475

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>From Cisco Unified CM Administration, choose <strong>Device &gt; Phone</strong>. The <strong>Find and List Phones</strong> window appears.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Choose the phone to which you want to add the softkey template. The <strong>Phone Configuration</strong> window appears.</td>
</tr>
<tr>
<td>Step 3</td>
<td>From the <strong>Softkey Template</strong> drop-down list, choose the template that contains the new softkey.</td>
</tr>
<tr>
<td>Step 4</td>

</tr>
</tbody>
</table>

**Configure Phones for Hunt Group**

Use this procedure to configure phones to automatically log in to or log out of hunt groups and hunt lists.

**Before You Begin**

Ensure the phone directory numbers belong to one or more hunt groups. See the Cisco Unified Communications Manager Administration Guide for information on hunt groups and hunt lists.

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>In the Cisco Unified CM Administration, choose <strong>Device &gt; Phone</strong>.</td>
</tr>
</tbody>
</table>
| Step 2 | Perform one of the following tasks:  
  a) To modify the fields for an existing phone, enter search criteria and choose a phone from the resulting list. The **Phone Configuration** window appears.  
  b) To add a new phone, click **Add New**. The **Add a New Phone** window appears. |
| Step 3 | In the **Phone Configuration** window, perform one of the following tasks:  
  a) To log out the phone from the hunt group, uncheck the **Logged Into Hunt Group** check box.  
  b) To log in the phone to the hunt group, ensure that the **Logged Into Hunt Group** check box is checked. **Note** The **Logged Into Hunt Group** check box remains checked by default for all phones. |
| Step 4 | Click **Save**. |
Configure Hunt Group Service Parameter

The Hunt Group Logoff Notification service parameter provides the option to turn audible ringtones on or off when calls that come in to a line group arrive at a phone that is currently logged out. This ringtone alerts a logged-out user that there is an incoming call to a hunt list to which the line is a member, but the call will not ring at the phone of that line group member because of the logged-out status.

To configure the Hunt Group Logoff Notification service parameter, perform the following steps.

**Procedure**

1. From Cisco Unified CM Administration, choose System > Service Parameters.
2. From the Server drop-down list, choose the server that is running the Cisco CallManager service.
3. From the Service drop-down list, choose Cisco CallManager. The Service Parameter Configuration window appears.
4. In the Clusterwide Parameters (Device - Phone) section, configure values for the following Hunt Group Logoff Notifications service parameter:
   - Enter a name for the ringtone file that Cisco IP Phones play when a member of a line group (hunt group) has logged out. The default value for this service parameter is None, which indicates no ringtone. You can enter a maximum of 255 characters.
5. Click Save. The window refreshes, and Cisco Unified Communications Manager updates the service parameter with your changes.

**Hunt Group Interactions and Restrictions**

**Hunt Group Interactions**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-shared-line Directory Number</td>
<td>If a phone is logged out of a line group and an extension on the phone is not shared, the line group does not ring that directory number (DN) in the line group. When the line group would normally offer the call to the DN, call processing skips the DN and acts as if the DN does not belong to the line group.</td>
</tr>
</tbody>
</table>
Because the Log Out of Hunt Group feature is device-based, when a user logs a phone out, the feature affects only the logged-out phone. Calls to a line group that contains a shared-line directory number behave as follows:

- The DN does not ring if all phones that share that DN are logged out.
- The DN does ring if one or more phones that share the DN are logged in.
- The audible ring on a phone that is logged out is turned off by default. Cisco Unified Communications Manager provides a system parameter that can be set, so that a different ring tone plays when a call comes in to a logged-out hunt group member.

### Hunt Group Restrictions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multiple Line Groups</td>
<td>When the user enables the Hunt Group Log Off feature by pressing the HLog softkey, the phone gets logged out from all associated line groups. This is because Hunt Group Log Off is a device-based feature. If a phone has DNs that belong to multiple line groups, pressing the HLog softkey logs the phone out of all associated line groups.</td>
</tr>
</tbody>
</table>
### Hunt Group Interactions and Restrictions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
</table>
| 7940, 7960, and third-party SIP phones | - When a phone that is running SIP (7906, 7911, 7941, 7961, 7970, and 7971) is logged in to hunt groups and Call Forward All is activated, the call gets presented to the phone that is running SIP.  
  - When 7940 and 7960 phones that are running SIP are logged in to hunt groups and Call Forward All is activated, the phones get skipped and the next phone in the line group rings.  
  - 7940 and 7960 phones that are running SIP and third-party phones that are running SIP can be logged in to or logged out of hunt groups by using the **Phone Configuration** window, but no softkey support exists.  
  - 7940 and 7960 phones that are running SIP and third-party phones that are running SIP do not show "Logged out of hunt groups" on the status line.  
  - 7940 and 7960 phones that are running SIP and third-party phones that are running SIP do not play the Hunt Group Logoff Notification tone regardless of whether the tone is configured. |
Malicious Call Identification

Malicious Call Identification Overview

You can configure the Malicious Call Identification (MCID) feature to track troublesome or threatening calls. Users can report these calls by requesting that Cisco Unified Communications Manager identify and register the source of the incoming call in the network.

When the MCID feature is configured, the following actions take place:

1. The user receives a threatening call and presses Malicious call (or enters the feature code *39 if using a POTS phone that is connected to an SCCP gateway).
2. Cisco Unified Communications Manager sends the user a confirmation tone and a text message, if the phone has a display, to acknowledge receiving the MCID notification.
3. Cisco Unified Communications Manager updates the call details record (CDR) for the call with an indication that the call is registered as a malicious call.
4. Cisco Unified Communications Manager generates the alarm and local syslogs entry that contains the event information.
5. Cisco Unified Communications Manager sends an MCID invocation through the facility message to the connected network. The facility information element (IE) encodes the MCID invocation.
6. After receiving this notification, the PSTN or other connected network can take actions, such as providing legal authorities with the call information.

Malicious Call Identification Prerequisites

• Gateways and connections that support MCID:
  • PRI gateways that use the MGCP PRI backhaul interface for T1 (NI2) and E1 (ETSI) connections
Malicious Call Identification Configuration Task Flow

</tr>
</tbody>
</table>
| **Step 5** To Associate a Softkey Template with a Common Device Configuration, on page 487, complete the following subtasks:  
  - Add a Softkey Template to a Common Device Configuration, on page 487  
  - Associate a Common Device Configuration with a Phone, on page 488 | Optional. To make the softkey template available to phones, you must complete either this step or the following step. Follow this step if your system uses a **Common Device Configuration** to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones. |
| **Step 6** Associate a Softkey Template with a Phone, on page 489 | Optional. Use this procedure either as an alternative to associating the softkey template with the Common Device Configuration, or in conjunction with the Common Device Configuration. Use this procedure in conjunction with the Common Device Configuration if you need assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment. |
Perform this step to add and configure the MCID button to a phone.

To Configure Malicious Call Identification Button, on page 489, complete the following subtasks:

- Configure Malicious Call ID Phone Button Template, on page 489
- Associate a Button Template with a Phone, on page 490

Set Malicious Call ID Service Parameter

To enable Cisco Unified Communications Manager to flag a CDR with the MCID indicator, you must enable the CDR flag.

Before You Begin

Generate a Phone Feature List, on page 7

Procedure

Step 1 From Cisco Unified CM Administration, choose System > Service Parameters.
Step 2 From the Server drop-down list, choose the Cisco Unified Communications Manager server name.
Step 3 From the Service drop-down list, choose Cisco CallManager.
   The Service Parameter Configuration window displays.
Step 4 In the System area, set the CDR Enabled Flag field to True.
Step 5 Click Save.

What to Do Next

Configure Malicious Call ID Alarms, on page 485

Configure Malicious Call ID Alarms

In the Local Syslogs, you must set the alarm event level and activate alarms for MCID.

Before You Begin

Set Malicious Call ID Service Parameter, on page 485

Procedure

Step 1 From Cisco Unified Serviceability, choose Alarm > Configuration.
The **Alarm Configuration** window displays.

**Step 2** From the **Server** drop-down list, choose the Cisco Unified Communications Manager server and click **Go**.

**Step 3** From the **Service Group** drop-down list, choose **CM Services**. The **Alarm Configuration** window updates with configuration fields.

**Step 4** From the **Service** drop-down list, choose **Cisco CallManager**.

**Step 5** Under Local Syslogs, in the **Alarm Event Level** drop-down list, choose **Informational**. The **Alarm Configuration** window updates with configuration fields.

**Step 6** Under Local Syslogs, check the **Enable Alarm** check box.

**Step 7** If you want to enable the alarm for all nodes in the cluster, check the **Apply to All Nodes** check box.

**Step 8** To turn on the informational alarm, click **Update**.

---

**What to Do Next**

Configure a **Softkey Template for Malicious Call Identification**, on page 486

---

**Configure a Softkey Template for Malicious Call Identification**

![Image](image.png)

**Note**
Skinny Client Control Protocol (SCCP) IP phones use a softkey to invoke the MCID feature.

**Before You Begin**
Configure **Malicious Call ID Alarms**, on page 485

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Device Settings > Softkey Template**. The **Softkey Template Configuration** window appears.

**Step 2** Perform this step to create a new softkey template; otherwise, proceed to the next step.
   a) Click **Add New**.
   b) Select a default template and click **Copy**.
   c) In the **Softkey Template Name** field, enter a new name for the template.
   d) Click **Save**.

**Step 3** Perform this step to add softkeys to an existing template.
   a) Enter search criteria and click **Find**.
   b) Choose an existing template.

The **Softkey Template Configuration** window appears.

**Step 4** Check the **Default Softkey Template** check box to designate this softkey template as the default softkey template.

**Note** If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.
Step 5 Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

Step 6 In the Select a call state to configure field, choose Connected. The list of Unselected Softkeys changes to display the available softkeys for this call state.

Step 7 In the Unselected Softkeys drop-down list, choose Toggle Malicious Call Trace (MCID).

Step 8 From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

Step 9 Click Save.

What to Do Next
(Optional) Configure a Softkey Template for Malicious Call Identification, on page 486 or Configure Malicious Call Identification Button, on page 489

Associate a Softkey Template with a Common Device Configuration
Optional. There are two ways to associate a softkey template with a phone:

- Add the softkey template to the Phone Configuration.
- Add the softkey template to the Common Device Configuration.

The procedures in this section describe how to associate the softkey template with a Common Device Configuration. Follow these procedures if your system uses a Common Device Configuration to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see Associate a Softkey Template with a Phone, on page 489.

Associate a Common Device Configuration with a Phone

Before You Begin
Add a Softkey Template to a Common Device Configuration, on page 487

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window appears.

Step 2 Find the phone to which to add the softkey template.

Step 3 From the Common Device Configuration drop-down list, choose the common device configuration that contains the new softkey template.

Step 4 Click Save.

Step 5 Click Reset to update the phone settings.
Associate a Softkey Template with a Phone

This procedure is optional. You can use this procedure as an alternative to associating the softkey template with the Common Device Configuration. This procedure also works in conjunction with the Common Device Configuration: use it when you need to assign a softkey template that overrides the assignment in the Common Device Configuration or any other default softkey assignment.

Procedure

<table>

<td>Associate a Button Template with a Phone, on page 490</td>
</tr>
</tbody>
</table>

Configure Malicious Call ID Phone Button Template

Before You Begin

Configure Malicious Call ID Alarms, on page 485
Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Phone Button Template. The Find and List Phone Button Templates window appears.

Step 2 Click Find.
The window displays a list of templates for the supported phones.

Step 3 Perform this step if you want to create a new phone button template; otherwise, proceed to the next step.
   a) Select a default template for the model of phone and click Copy.
   b) In the Phone Button Template Information field, enter a new name for the template.
   c) Click Save.

Step 4 Perform this step if you want to add phone buttons to an existing template.
   a) Enter search criteria and click Find.
   b) Choose an existing template.
The Phone Button Template Configuration window appears.

Step 5 From the Line drop-down list, choose feature that you want to add to the template.

Step 6 Click Save.

Step 7 Perform one of the following tasks:
   • If you modified a template that is already associated with devices, click Apply Config to restart the devices.
   • If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next
Associate a Button Template with a Phone, on page 490

Associate a Button Template with a Phone

Before You Begin
Configure Malicious Call ID Phone Button Template, on page 489

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone.
The Find and List Phones window is displayed.

Step 2 From the Find and List Phones window, click Find.
A list of phones that are configured on the Cisco Unified Communications Manager is displayed.

Step 3 Choose the phone to which you want to add the phone button template.
The Phone Configuration window appears.

**Step 4**  
In the Phone Button Template drop-down list, choose the phone button template that contains the new feature button.

**Step 5**  
Click Save.  
A dialog box is displayed with a message to press Reset to update the phone settings.

**Malicious Call Identification Interactions and Restrictions**

**Malicious Call Identification Interactions**

**Table 38: Malicious Call Identification Interactions**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conference Calls</td>
<td>When a user is connected to a conference, the user can use the MCID feature to flag the call as a malicious call. Cisco Unified Communications Manager sends the MCID indication to the user, generates the alarm, and updates the CDR. However, Cisco Unified Communications Manager does not send an MCID invoke message to the connected network that might be involved in the conference.</td>
</tr>
<tr>
<td>Extension Mobility</td>
<td>Extension Mobility users can have the MCID softkey as part of their user device profile and can use this feature when they are logged on to a phone.</td>
</tr>
<tr>
<td>Call Detail Records</td>
<td>To track malicious calls by using CDR, you must set the CDR Enabled Flag to True in the Cisco CallManager service parameter. When the MCID feature is used during a call, the CDR for the call contains CallFlag=MALICIOUS in the Comment field.</td>
</tr>
</tbody>
</table>
### Alarms

To record alarms for the MCID feature in the Local Syslogs, you must configure alarms in Cisco Unified Serviceability. Under **Local Syslogs**, enable alarms for the **Informational** alarm event level.

When the MCID feature is used during a call, the system logs an SDL trace and a Cisco Unified Communications Manager trace in alarms. You can view the **Alarm Event Log** by using Cisco Unified Serviceability. The traces provide the following information:

- Date and time
- Type of event: Information
- Information: The Malicious Call Identification feature is invoked in Cisco Unified Communications Manager
- Called Party Number
- Called Device Name
- Called Display Name
- Calling Party Number
- Calling Device Name
- Calling Display Name
- Application ID
- Cluster ID
- Node ID

### Cisco ATA 186 analog phone ports

The Cisco ATA 186 analog phone ports support MCID by using the feature code (*39).

Malicious Call ID Troubleshooting

To track and troubleshoot Malicious Call ID, you can use Cisco Unified Communications Manager SDL traces and alarms. For information about setting traps and traces for MCID, see the Cisco Unified Serviceability Administration Guide. For information about how to generate reports for MCID, see the Cisco Unified CDR Analysis and Reporting Administration Guide.
Call Transfer Overview

The transfer feature allows you to redirect a connected call from your phone to another number. After call transfer, your call is disconnected and the transferred call is established as a new call connection. Following are the different types of call transfers:

- **Consult Transfer and Blind Transfer**—In Consult Transfer, a transferring phone user can redirect the caller to a different target address, after consulting with the target phone user that answers the call. That is, the transferring phone user will stay on the call until the target phone user answers the call. In Blind Transfer, the transferring phone user connects the caller to a destination line before the target of the transfer answers the call.

Most phones use hard keys or softkeys for Transfer. Both Consult Transfer and Blind Transfer do not require separate configuration. The difference between the two types of transfer depends on when the transferring party presses the Transfer button a second time. For a consult transfer, the transferring party presses the Transfer button after the target answers, while for a Blind Transfer, the transferring party presses the Transfer button before the target answers.

For SCCP-initiated blind transfers, Cisco Unified Communications Manager provides call progress indications in the form of ring-back to the transferred user.

- **Transfer On-Hook**—In this type of call transfer, the user presses the Transfer softkey, dials the number to which the call will be transferred, and then presses the Transfer softkey again, or simply goes on-hook to complete the transfer operation. You must set the **Transfer On-Hook** service parameter to **True**. This service parameter determines whether a call transfer is completed as a result of the user going on-hook after initiating a transfer operation.

Both Consult Transfer and Blind Transfer use the Transfer On-Hook option.

- **Direct Transfer**—This type of transfer allows a user to join two established calls (the two calls can either be on hold or in the connected state) into one call and then drop the initiator from the transfer.
Direct Transfer does not initiate a consultation call and does not put the active call on hold. The user uses the DirTrfr softkey to join any two established calls and remove the initiator.

**Call Transfer Configuration Task Flow**

**Procedure**

</tbody>
</table>

**Configure a Softkey Template for Transfer**

Transfer softkey is used for consult and blind transfer of a call. The transfer softkey has the following call states:

- connected
- on hold

Use this procedure to make the Trnsfer softkey available:
Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Softkey Template. The Softkey Template Configuration window appears.

Step 2 Perform this step to create a new softkey template; otherwise, proceed to the next step.
   a) Click Add New.
   b) Select a default template and click Copy.
   c) In the Softkey Template Name field, enter a new name for the template.
   d) Click Save.

Step 3 Perform this step to add softkeys to an existing template.
   a) Enter search criteria and click Find.
   b) Choose an existing template.
   The Softkey Template Configuration window appears.

Step 4 Check the Default Softkey Template check box to designate this softkey template as the default softkey template.
   Note If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.

Step 5 Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

Step 6 From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

Step 7 From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

Step 8 To display the softkey in additional call states, repeat the previous step.

Step 9 Click Save.

Step 10 Perform one of the following tasks:
   • If you modified a template that is already associated with devices, click Apply Config to restart the devices.
   • If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next

Perform one of the following procedures:
   • Associate Transfer Softkey Template with a Common Device Configuration, on page 497
   • Associate Transfer Softkey Template with a Phone, on page 499

Associate Transfer Softkey Template with a Common Device Configuration

Optional. There are two ways to associate a softkey template with a phone:
   • Add the softkey template to the Phone Configuration.
• Add the softkey template to the **Common Device Configuration**.

The procedures in this section describe how to associate the softkey template with a **Common Device Configuration**. Follow these procedures if your system uses a **Common Device Configuration** to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see **Associate Transfer Softkey Template with a Phone, on page 499**.

**Before You Begin**

Feature Configuration Guide for Cisco Unified Communications Manager, Release 11.0(1) 507
Interaction

When a switch initiates a call transfer between two segments that have the same precedence level, the segments maintain the precedence level upon transfer. When a call transfer is made between call segments that are at different precedence levels, the switch that initiates the transfer marks the connection at the segment that has the higher precedence level.

Cisco Unified Communications Manager supports this requirement by upgrading the precedence level of a call leg that is involved in a Call Transfer operation. For example, party A calls party B with Priority precedence level. Party B then initiates a transfer to party C and dials the Flash precedence digits when dialing. When the transfer is complete, the precedence level of party A gets upgraded from Priority to Flash.

The Call Transfer feature is enabled automatically when MLPP is enabled, and the phones support the Transfer softkey.

Note: The precedence level upgrade does not work over a trunk device such as an intercluster trunk (ICT) or a PRI trunk.

External Call Transfer Restrictions

- External Call Transfer Restrictions Overview, page 509
- Configure External Call Transfer Restrictions Task Flow, page 510
- External Call Transfer Interactions and Restrictions, page 514

External Call Transfer Restrictions Overview

External Call Transfer Restrictions is a feature that you can use to configure gateways, trunks, and route patterns as OnNet (internal) or OffNet (external) devices at the system level. By setting the devices as OffNet, you can restrict the transferring of an external call to an external device and thus help prevent toll fraud.

If you try to transfer a call on an OffNet gateway or trunk when the service parameter Block OffNet to OffNet Transfer is set to True, a message displays on the user phone to indicate that the call cannot be transferred.

This chapter uses the following terms:

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OnNet Device</td>
<td>A device that is configured as OnNet and considered to be internal to the network.</td>
</tr>
<tr>
<td>OffNet Device</td>
<td>A device that is considered as OffNet and, when routed, is considered to be external to the network.</td>
</tr>
<tr>
<td>Network Location</td>
<td>The location of the device, which is considered as OnNet or OffNet, with respect to the network.</td>
</tr>
<tr>
<td>Originating End</td>
<td>The device that gets transferred. The system considers this device as OnNet or OffNet.</td>
</tr>
<tr>
<td>Terminating End</td>
<td>The device that receives the transferred call. The system considers this device as OnNet or OffNet.</td>
</tr>
</tbody>
</table>
Incoming Call
A call for which only gateways and trunks call classification settings get used to classify it as OnNet or OffNet. Route Pattern call classification settings do not apply.

Outgoing Call
A call for which the call classification setting of the trunk, gateway, and route pattern gets considered. The Allow Device Override setting on the route pattern determines whether the trunk or gateway call classification setting gets used instead of the route pattern call classification setting.

Configure External Call Transfer Restrictions Task Flow

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Configure the Service Parameter for Call Transfer Restrictions, on page 510</td>
<td>Block external calls from being transferred to another external device or number.</td>
</tr>
</tbody>
</table>
| Step 2 | To configure incoming calls perform the following procedures:  
  • Configure the Clusterwide Service Parameter, on page 512  
  • Configure Gateways for Call Transfer Restrictions, on page 512  
  • Configure Trunks for Call Transfer Restrictions, on page 513 | Configure gateways and trunks as OnNet (internal) or OffNet (external) by using Gateway Configuration or Trunk Configuration or by setting a clusterwide service parameter. |
| Step 3 | Configure Outgoing Calls, on page 514 | Configure transfer capabilities with route pattern configuration. |

Configure the Service Parameter for Call Transfer Restrictions
To block external calls from being transferred to another external device or number:
### Procedure

**Step 1** From the Cisco Unified CM Administration user interface choose **System > Service Parameters**.

**Step 2** On the Service Parameter Configuration window choose the Cisco Unified CM server you want to configure from the Server drop-down menu.

**Step 3** Choose **Cisco CallManager (Active)** from the Service drop-down menu.

**Step 4** Choose **True** from the Block OffNet to OffNet Transfer drop-down menu. The default value specifies False.

**Step 5** Click **Save**.

### What to Do Next

Configure the Clusterwide Service Parameter, on page 512

### Configure Incoming Calls Task Flow

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> (Optional) Configure the Clusterwide Service Parameter, on page 512</td>
<td>Configure all gateways or trunks in the Cisco Unified Communications Manager cluster to be OffNet (external) or OnNet (internal).</td>
</tr>
</tbody>
</table>
| **Step 2** Configure Gateways for Call Transfer Restrictions, on page 512 | Configure gateways as OnNet (internal) or OffNet (external) by using Gateway Configuration. When the feature is used in conjunction with the clusterwide service parameter Block OffNet to OffNet Transfer, the configuration determines whether calls can transfer over a gateway. You can configure the following devices as internal and external to Cisco Unified Communications Manager:  
  - H.323 gateway  
  - MGCP FXO trunk  
  - MGCP T1/E1 trunk |
| **Step 3** Configure Trunks for Call Transfer Restrictions, on page 513 | Configure trunks as OnNet (internal) or OffNet (external) by using Trunk Configuration. When the feature is used in conjunction with the clusterwide service parameter Block OffNet to OffNet Transfer, the configuration determines whether calls can transfer over a trunk. You can configure the following devices as internal and external to Cisco Unified Communications Manager:  
  - Intercluster trunk  
  - SIP trunk |
Configure the Clusterwide Service Parameter

To configure all gateways or trunks in the Cisco Unified Communications Manager cluster to be OffNet (external) or OnNet (internal), perform the following steps:

**Before You Begin**
Configure the Service Parameter for Call Transfer Restrictions, on page 510

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>From the Cisco Unified CM Administration user interface choose System &gt; Service Parameters.</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>On the Service Parameter Configuration window choose the Cisco Unified CM server you want to configure from the Server drop-down menu.</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>Choose Cisco CallManager (Active) from the Service drop-down menu.</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Choose either OffNet or OnNet (the default specifies OffNet) from the Call Classification drop-down menu.</td>
<td></td>
</tr>
</tbody>
</table>

**What to Do Next**
Configure Gateways for Call Transfer Restrictions, on page 512

Configure Gateways for Call Transfer Restrictions

To configure the gateway as OffNet, OnNet, or Use System Default, perform the following procedure. The system considers calls that come to the network through that gateway as OffNet or OnNet, respectively.

**Before You Begin**
Configure the Clusterwide Service Parameter, on page 512

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>From Cisco Unified Communications Manager Administration, choose Device &gt; Gateway. The Find and List Gateways window displays.</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>To list the configured gateways, click Find. The gateways that are configured in Cisco Unified Communications Manager display.</td>
<td></td>
</tr>
</tbody>
</table>
Step 3 Choose the gateway that you want to configure as OffNet or OnNet.

Step 4 In the Call Classification field choose OffNet or OnNet. If you have enabled clusterwide restrictions on all gateways, configure each gateway to Use System Default (this reads the setting in the Call Classification service parameter and uses that setting for the gateway).

Step 5 Click Save.

What to Do Next

Configure Trunks for Call Transfer Restrictions, on page 513

Configure Trunks for Call Transfer Restrictions

To configure the trunk as OffNet, OnNet, or Use System Default, perform the following procedure. The system considers calls that come to the network through that trunk as OffNet or OnNet, respectively.

Before You Begin

Configure Gateways for Call Transfer Restrictions, on page 512

Procedure

Step 1 From Cisco Unified Communications Manager Administration, choose Device > Trunk. The Find and List Trunk window displays.

Step 2 To list the configured trunks, click Find. The trunks that are configured in Cisco Unified Communications Manager display.

Step 3 Choose the trunk that you want to configure as OffNet or OnNet.

Step 4 From the Call Classification drop-down list, choose one of the following fields:

- **OffNet** - When you choose this field, this identifies the gateway as an external gateway. When a call comes in from a gateway that is configured as OffNet, the system sends the outside ring to the destination device.

- **OnNet** - When you choose this field, this identifies the gateway as an internal gateway. When a call comes in from a gateway that is configured as OnNet, the system sends the inside ring to the destination device.

- **Use System Default** - When you choose this field, this uses the Cisco Unified Communications Manager clusterwide service parameter Call Classification.

Note If you have enabled clusterwide restrictions on all trunks, configure each trunk to Use System Default (this reads the setting in the Call Classification service parameter and uses that setting for the trunk)

Step 5 Click Save.

What to Do Next

Configure Outgoing Calls, on page 514
Configure Outgoing Calls

To classify a call as OnNet or OffNet, administrators can set the Call Classification field to OnNet or OffNet, respectively, on the Route Pattern Configuration window. Administrators can override the route pattern setting and use the trunk or gateway setting by checking the Allow Device Override check box on the Route Pattern Configuration window.

Before You Begin
Configure Trunks for Call Transfer Restrictions, on page 513

Procedure

Step 1 From Cisco Unified CM Administration, choose Call Routing > Route/Hunt > Route Pattern and click Find to list all route patterns.
Step 2 Choose the route pattern you want to configure, or click Add New.
Step 3 In the Route Pattern Configuration window, use the following fields to configure transfer capabilities with route pattern configuration:
   a) Call Classification—Use this drop-down list to classify the call that uses this route Pattern as OffNet or OnNet.
   b) Provide Outside Dial Tone—If Call Classification is set to OffNet, this check box gets checked.
   c) Allow Device Override—When this check box is checked, the system uses the Call Classification setting of the trunk or gateway that is associated with the route pattern instead of the Call Classification setting on the Route Pattern Configuration window.
Step 4 Click Save.

External Call Transfer Interactions and Restrictions

External Call Transfer Restrictions Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drop Conference</td>
<td>The Drop Conference feature determines whether an existing ad hoc conference should be dropped by checking whether the conference parties are configured as OffNet or OnNet. You use the service parameter Drop Ad Hoc Conference and choose the option When No OnNet Parties Remain in the Conference to configure the feature. You determine OnNet status for each party by checking the device or route pattern that the party is using. For more information, see topics related to Ad Hoc Conference linking in the “Ad Hoc Conferencing” chapter.</td>
</tr>
</tbody>
</table>
Bulk Administration inserts gateway configuration (OffNet or OnNet) on the Gateway Template. For more information, see the Cisco Unified Communications Manager Bulk Administration Guide.

When used to perform digit analysis on a gateway, DNA displays the Call Classification that is configured for the gateway and the route pattern. For more information, see the Cisco Unified Communications Manager Dialed Number Analyzer Guide.

Barge

Barge Overview

Barge allows a user to be added to a remotely active call that is on a shared line. Remotely active calls for a line are the active (connected) calls that are made to or from another device that shares a directory number with the line.

If you configure party entrance tone, a tone plays on the phone when a basic call changes to a barged call or cbarged call. In addition, a different tone plays when a party leaves the multiparty call.

Phones support Barge in the following conference modes:

- Built-in conference bridge at the phone that is barged—This mode uses the Barge softkey. Most Cisco Unified IP Phones include the built-in conference bridge capability.
- Shared conference bridge—This mode uses the cbarge softkey.

By pressing the Barge or cbarge softkey in the remote-in-use call state, the user is added to the call with all parties, and all parties receive a barge beep tone (if configured). If Barge fails, the original call remains active. If no conference bridge is available (built-in or shared), the barge request gets rejected, and a message displays on the Barge initiator device. When network or Cisco Unified Communications Manager failure occurs, the Barge call is preserved.

For a list of Cisco Unified IP Phones that support Barge, log in to Cisco Unified Reporting and run the Unified CM Phone Feature List report. Make sure to select Built In Bridge as the feature. For details, see Generate a Phone Feature List, on page 7.

Single-Button Barge and Single-Button cbarge

The Single-Button Barge and Single-Button cbarge features allow a user to press the shared-line button of the remotely active call, to be added to the call. All parties receive a barge beep tone (if configured). If barge fails, the original call remains active.
Phones support Single-Button Barge and Single-Button cBarge in two conference modes:

- Built-in conference bridge at the phone that is barged—This mode uses the Single-Button Barge feature.
- Shared conference bridge—This mode uses the Single-Button cBarge feature.

By pressing the shared-line button of the remote-in-use call, the user is added to the call with all parties, and all parties receive a barge beep tone (if configured). If barge fails, the original call remains active. If no conference bridge is available (built-in or shared), the barge request gets rejected, and a message is displayed at the Barge initiator device.

**Built-In Conference**

When the user presses the Barge softkey or a shared-line button, a Barge call is set up by using the built-in conference bridge, if available. A built-in conference bridge is advantageous because neither a media interruption nor display changes to the original call occur when the Barge is being set up.

**Shared Conference**

When the user presses the cBarge softkey, or a shared-line button, a barge call is set up by using the shared conference bridge, if available. The original call is split and then joined at the conference bridge, which causes a brief media interruption. The call information for all parties changes to "Barge". The barged call becomes a conference call with the barge target device as the conference controller. It can add more parties to the conference or can drop any party. When any party releases the call, the remaining two parties experience a brief interruption and then get reconnected as a point-to-point call, which releases the shared conference resource.

**Built-In and Shared Conference Differences**

This table describes the differences between barge with built-in conference bridge and shared conference.

<table>

---

**Configure Softkey Template for Built-In Conferencing**

Configure a softkey template for Barge and assign the Barge softkey to that template. You can configure the Barge softkey in the **Remote In Use** call state.

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Device Settings > Softkey Template**. The **Softkey Template Configuration** window appears.

**Step 2** Perform this step to create a new softkey template; otherwise, proceed to the next step.

a) Click **Add New**.
b) Select a default template and click **Copy**.
c) In the **Softkey Template Name** field, enter a new name for the template.
d) Click **Save**.

**Step 3** Perform this step to add softkeys to an existing template.

a) Enter search criteria and click **Find**.
b) Choose an existing template.
The Softkey Template Configuration window appears.

**Step 4** Check the Default Softkey Template check box to designate this softkey template as the default softkey template.

**Note** If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.

**Step 5** Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

**Step 6** From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

**Step 7** From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

**Step 8** To display the softkey in additional call states, repeat the previous step.

**Step 9** Click Save.

**Step 10** Perform one of the following tasks:

- If you modified a template that is already associated with devices, click Apply Config to restart the devices.
- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

---

**What to Do Next**

Perform one of the following procedures:

- Add a Softkey Template to Common Device Configuration, on page 525
- Associate Common Device Configuration with Phone, on page 526

**Configure Softkey Template for Shared Conferencing**

Configure a softkey template for shared conferencing and assign the cBarge softkey to that template. You can configure the cBarge softkey in the Remote In Use call state.

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose Device > Device Settings > Softkey Template. The Softkey Template Configuration window appears.

**Step 2** Perform this step to create a new softkey template; otherwise, proceed to the next step.

a) Click Add New.

b) Select a default template and click Copy.

c) In the Softkey Template Name field, enter a new name for the template.

d) Click Save.

**Step 3** Perform this step to add softkeys to an existing template.

a) Enter search criteria and click Find.
b) Choose an existing template. The Softkey Template Configuration window appears.

Step 4 Check the Default Softkey Template check box to designate this softkey template as the default softkey template.

Note If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.

Step 5 Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

Step 6 From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

Step 7 From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

Step 8 To display the softkey in additional call states, repeat the previous step.

Step 9 Click Save.

Step 10 Perform one of the following tasks:

• If you modified a template that is already associated with devices, click Apply Config to restart the devices.

• If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next

Perform one of the following procedures:

• Add a Softkey Template to Common Device Configuration, on page 525

• Associate Common Device Configuration with Phone, on page 526

Associate Softkey Template with Phone

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window is displayed.

Step 2 Find the phone to which you want to add the softkey template.

Step 3 Perform one of the following tasks:

• From the Common Device Configuration drop-down list, choose the common device configuration that contains the required softkey template.

• In the Softkey Template drop-down list, choose the softkey template that contains the Barge or cBarge softkey.

Step 4 Click Save.
A dialog box is displayed with a message to press Reset to update the phone settings.

**Associate a Softkey Template with Common Device Configuration**

Optional. There are two ways to associate a softkey template with a phone:

- Add the softkey template to the **Phone Configuration**.
- Add the softkey template to the **Common Device Configuration**.

The procedures in this section describe how to associate the softkey template with a **Common Device Configuration**. Follow these procedures if your system uses a **Common Device Configuration** to apply configuration options to phones. This is the most commonly used method for making a softkey template available to phones.

To use the alternative method, see *Associate Softkey Template with Phone*, on page 524.

**Procedure**

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Add a Softkey Template to Common Device Configuration, on page 406</th>

<tr>
<td>Step 3</td>
<td>Perform this step to add the softkey template to an existing Common Device Configuration. a) Enter search criteria and click Find.</td>
</tr>
</tbody>
</table>
b) Choose an existing Common Device Configuration. The **Common Device Configuration** window appears.

**Step 4** In the **Softkey Template** drop-down list, choose the softkey template that contains the softkey that you want to make available.

**Step 5** Click **Save**.

**Step 6** Perform one of the following tasks:

- If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.
- If you modified a Common Device Configuration that is already associated with devices, click **Apply Config** to restart the devices.

---

**What to Do Next**

*Associate Common Device Configuration with Phone*, on page 526

**Associate Common Device Configuration with Phone**

**Before You Begin**

Perform one or both of the following as needed:

- [Configure Softkey Template for Built-In Conferencing](#), on page 522
- [Configure Softkey Template for Shared Conferencing](#), on page 523

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Phone**. The **Find and List Phones** window appears.

**Step 2** Find the phone to which to add the softkey template.

**Step 3** From the **Common Device Configuration** drop-down list, choose the common device configuration that contains the new softkey template.

**Step 4** Click **Save**.

**Step 5** Click **Reset** to update the phone settings.

---

**What to Do Next**

Perform one or both of the following:

- [Configure Barge for Built-In Conferencing](#), on page 527
- [Configure Barge for Shared Conferencing](#), on page 527
Configure Barge for Built-In Conferencing

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose **System > Service Parameters** and set the **Built In Bridge Enable** clusterwide service parameter to **On**.

*Note*  
If this parameter is set to **Off**, configure barge for each phone by setting the **Built in Bridge** field in the **Phone Configuration** window.

**Step 2**
Set the **Party Entrance Tone** clusterwide service parameter to **True** (required for tones) or configure the **Party Entrance Tone** field in the **Directory Number Configuration** window.

**Step 3**
Set the **Single Button Barge/CBarge Policy** to **Barge**.

*Note*  
If this parameter is set to **Off**, configure single-button barge for each phone by setting the **Single Button Barge** field in the **Phone Configuration** window.

**Step 4**
Set the **Allow Barge When Ringing** service parameter to **True**.

**Step 5**
Click **Save**.

Configure Barge for Shared Conferencing

Cisco recommends that you do not configure Barge for shared conferencing (cBarge) for a user who has Barge configured. Choose only one barge method for each user.

**Procedure**

**Step 1**
From Cisco Unified CM Administration, choose **System > Service Parameters** and set the **Built In Bridge Enable** clusterwide service parameter to **On**.

*Note*  
If this parameter is set to **Off**, configure cBarge for each phone by setting the **Built in Bridge** field in the **Phone Configuration** window.

**Step 2**
Set the **Party Entrance Tone** clusterwide service parameter to **True** (required for tones) or configure the **Party Entrance Tone** field in the **Directory Number Configuration** window.

**Step 3**
Set the **Single Button Barge/CBarge Policy** to **cBarge**.

*Note*  
If this parameter is set to **Off**, configure Single-button cBarge for each phone by setting the **Single Button cBarge** field in the **Phone Configuration** window.

**Step 4**
Set the **Allow Barge When Ringing** service parameter to **True**.

**Step 5**
Click **Save**.

Associate User with Device

**Before You Begin**

Perform one or both of the following:

- Configure Barge for Built-In Conferencing, on page 527
- Configure Barge for Shared Conferencing, on page 527
Procedure

Step 1  From Cisco Unified CM Administration, choose User Management > End User.
Step 2  Specify the appropriate filters in the Find User Where field to and then click Find to retrieve a list of users.
Step 3  Select the user from the list.
        The End User Configuration window appears.
Step 4  Locate the Device Information section.
Step 5  Click Device Association.
        The User Device Association window appears.
Step 6  Find and select the CTI remote device.
Step 7  To complete the association, click Save Selected/Changes.
Step 8  From Related Links drop-down list box, choose Back to User, and then click Go.
        The End User Configuration window appears, and the associated device that you chose appears in the Controlled Devices pane.

Barge Interactions and Restrictions

This section describes the interactions and restrictions for barge and privacy features.

Barge Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>cBarge</td>
<td>Cisco recommends that you assign either the Barge or cBarge softkey to a softkey template. By having only one of these softkeys for each device, you can prevent confusion for users and avoid potential performance issues.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> You can enable Single-Button Barge or Single-Button cBarge for a device, but not both.</td>
</tr>
<tr>
<td>Call Park</td>
<td>When the target parks the call, the barge initiator gets released (if using the built-in bridge), or the barge initiator and the other party remain connected (if using the shared conference).</td>
</tr>
<tr>
<td>Join</td>
<td>When the target joins the call with another call, the barge initiator gets released (if using the built-in bridge), or the barge initiator and the other party remain connected (if using the shared conference).</td>
</tr>
</tbody>
</table>
A Barge, cBarge, or Single-Button Barge initiator can barge into a call through a shared line that is configured for Barge and Private Line Automatic Ringdown (PLAR). The initiator can barge into the call if the barge target uses the preconfigured number that is associated with the PLAR line while on the call. Cisco Unified Communications Manager does not send the barge invocation to the PLAR line before connecting the barge call, so the barge occurs regardless of the state of the PLAR destination.

To make Barge, cBarge, or Single-Button Barge function with PLAR, you must configure Barge, cBarge, or Single-Button Barge. In addition, you must configure the PLAR destination, a directory number that is used specifically for PLAR.

### Barge Restrictions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional callers</td>
<td>The Barge initiator cannot conference in additional callers.</td>
</tr>
<tr>
<td>Computer Telephony Interface (CTI)</td>
<td>CTI does not support Barge through APIs that TAPI and JTAPI applications invoke. CTI generates events for Barge when it is invoked manually from an IP phone by using the Barge or cBarge softkey.</td>
</tr>
<tr>
<td>G.711 codec</td>
<td>The original call requires G.711 codec. If G.711 is not available, use cBarge instead.</td>
</tr>
<tr>
<td>Cisco Unified IP Phones</td>
<td>You can assign a softkey template that contains the Barge softkey to any IP phone that uses softkeys; however, some IP phones do not support the Barge feature.</td>
</tr>
<tr>
<td>Encryption</td>
<td>If you configure encryption for Cisco Unified IP Phones 7960 and 7940, those encrypted devices cannot accept a barge request when they are participating in an encrypted call. When the call is encrypted, the barge attempt fails. A tone plays on the phone to indicate that the Barge failed.</td>
</tr>
</tbody>
</table>
### Barge Troubleshooting

#### No Conference Bridge Available

**Problem**
When the Barge softkey is pressed, the message *No Conference Bridge Available* is displayed on the IP phone.

**Possible Cause**
The *Built In Bridge* field in the *Phone Configuration* window for the target phone is not set properly.

**Solution**
To resolve the problem, perform the following steps:

1. From Cisco Unified CM Administration, choose *Device > Phone* and click *Find the phone* to find the phone configuration of the phone that is having the problem.
2. Set the *Built In Bridge* field to *On*.
3. Click *Update*.
4. Reset the phone.

#### Error: Past Limit

**Problem**
The phone displays the message, *Error: Past Limit*.

**Possible Cause**
The number of shared-line users in the conference is equal to or greater than the configuration for the *Maximum Number of Calls* field for the device from which you are attempting to barge.

**Solution**

- Go to *Service Parameter Configuration* window and locate the *Clusterwide Parameters (Feature - Conference)* section. Increase the value of *Maximum Ad Hoc Conference* parameter as required.

- Check the *Maximum Number of Calls* value for the shared lines on the device from which you are attempting to barge and increase the value as required.
Chapter 38

BLF Presence

• BLF Presence Overview, page 531
• BLF Presence Prerequisites, page 532
• BLF Presence Configuration Task Flow, page 532
• BLF Presence Interactions and Restrictions, page 543

BLF Presence Overview

The Busy Lamp Field (BLF) presence feature allows a user who is a watcher to monitor the real-time status of another user at a directory number or Session Initiation Protocol (SIP) uniform resource identifier (URI) from the device of the watcher.

A watcher can monitor the status of the user or BLF presence entity (also called presententity) by using the following options:

• BLF and SpeedDial buttons
• Missed call, placed call, or received call lists in the directories window
• Shared directories, such as the corporate directory

Call lists and directories display the BLF status for existing entries. When you configure BLF and SpeedDial buttons, the BLF presence entity appears as a speed dial on the device of the watcher.

To view the status of a BLF presence entity, watchers send BLF presence requests to Cisco Unified Communications Manager. After administrators configure BLF presence features, real-time status icons appear on the watcher device to indicate whether the BLF presence entity is on the phone, is not on the phone, the status is unknown, and so on.

Extension mobility users can use BLF presence features on phones with extension mobility support.

BLF presence group authorization ensures that only authorized watchers can access the BLF presence status for a destination. Because the administrator ensures that the watcher is authorized to monitor the destination when a BLF or Speed Dial is configured, BLF presence group authorization does not apply to BLF or Speed Dials.
BLF Presence Prerequisites

- Configure the phones that you want to use with the BLF presence feature.
- Configure the SIP trunks that you want to use with the BLF presence feature.

BLF Presence Configuration Task Flow

Before You Begin

- Review BLF Presence Prerequisites, on page 532

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Configure and synchronize cluster-wide enterprise parameters for Busy Lamp Field (BLF). See Configure/Synchronize Cluster-Wide Enterprise Parameters for BLF, on page 533.</td>
<td>Configure BLF options that apply to all devices and services in the same cluster. You can synchronize enterprise-parameter configuration changes with the configured devices in the least-intrusive manner. For example, a reset or restart may not be required on some affected devices.</td>
</tr>
<tr>
<td><strong>Step 2</strong> Configure cluster-wide service parameters for BLF. See Configure Cluster-Wide Service Parameters for BLF, on page 534.</td>
<td>Configure presence service parameters to configure different services on selected servers in Cisco Unified Communications Manager Administration.</td>
</tr>
<tr>
<td><strong>Step 3</strong> Configure BLF presence groups. See Configure BLF Presence Groups, on page 534.</td>
<td>Configure BLF presence groups to control the destinations that watchers can monitor.</td>
</tr>
<tr>
<td><strong>Step 4</strong> To associate BLF presence group with devices and users, perform the following subtasks:</td>
<td>Apply a BLF presence group to a directory number, SIP trunk, phone that is running SIP, phone that is running SCCP, application user (for application users that are sending presence requests over the SIP trunk), or end user.</td>
</tr>
<tr>
<td>• Associate BLF presence groups with phones. See Associate BLF Presence Groups with Phone, on page 536.</td>

</tr>
</tbody>
</table>

**Configure/Synchronize Cluster-Wide Enterprise Parameters for BLF**

Use enterprise parameters for default configuration that apply to all devices and services in the same cluster. A cluster consists of a set of Cisco Unified Communications Managers that share the same database. When you install a new Cisco Unified Communications Manager, it uses the enterprise parameters to set the initial values of its device defaults.

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose System > Enterprise Parameters.

**Step 2** Configure the fields in the Enterprise Parameters Configuration window. See the online help for more information about the fields and their configuration options.

**Tip** For details about an enterprise parameter, click the parameter name or the question mark that appears in the Enterprise Parameter Configuration window.
Step 3  Click Save.
Step 4  (Optional) Click Apply Config to synchronize cluster-wide parameters. The Apply Configuration Information dialog box appears.
Step 5  Click OK.

What to Do Next
Configure Cluster-Wide Service Parameters for BLF, on page 534

Configure Cluster-Wide Service Parameters for BLF

You can configure one or multiple services available in the Service Parameter Configuration window for BLF.

Before You Begin
Configure/Synchronize Cluster-Wide Enterprise Parameters for BLF, on page 533

Procedure

Step 1  In the Cisco Unified CM Administration, choose System > Service Parameters.
Step 2  From the Server drop-down list, choose the server where you want to configure the parameter.
Step 3  Configure the fields in the Service Parameters Configuration window. See the online help for more information about the fields and their configuration options.
   Tip  For details about the service parameters, click the parameter name or the question mark that appears in the Service Parameter Configuration window.
Step 4  Click Save.
   Note  The Default Inter-Presence Group Subscription parameter does not apply to BLF and SpeedDials.

What to Do Next
Configure BLF Presence Groups, on page 534

Configure BLF Presence Groups

You can use BLF presence groups to control the destinations that watchers can monitor. To configure a BLF presence group, create the group in Cisco Unified Communications Manager Administration and assign one or more destinations and watchers to the same group.

When you add a new BLF presence group, Cisco Unified Communications Manager defines all group relationships for the new group with the default cluster field as the initial permission fields. To apply different permissions, configure new permissions between the new group and existing groups for each permission that you want to change.
The system always allows BLF presence requests within the same BLF presence group.

To view the status of a presence entity, watchers send presence requests to Cisco Unified Communications Manager. The system requires watchers to be authorized to initiate status requests for a presence entity with these requirements:

- The watcher BLF presence group be authorized to obtain the status for the presence entity presence group, whether inside or outside of the cluster.
- Unified CM must be authorized to accept BLF presence requests from an external presence server or application.

**Before You Begin**

Configure Cluster-Wide Service Parameters for BLF, on page 534

**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose System > BLF Presence Group.

**Step 2**
Configure the fields in the BLF Presence Group Configuration window. See the Related Topics section for details about the fields and their configuration options.

**Note**
Use the Default Inter-Presence Group Subscription service parameter for the Cisco CallManager service. It sets the clusterwide permissions parameter for BLF presence groups to allow subscription or disallow subscription. This field enables administrators to set a system default and configure BLF presence group relationships by using the default field for the cluster.

**Step 3**
Click Save.

**Note**
The permissions that you configure for a BLF presence group appear in the BLF Presence Group Relationship pane. Permissions that use the system default permission field for the group-to-group relationship do not appear.

**What to Do Next**

Associate BLF presence group with devices and users by performing the following subtasks:

- Associate BLF Presence Groups with Phone, on page 536
- Associate BLF Presence Groups with SIP Trunk, on page 537
- Associate BLF Presence Groups with End User, on page 538
- Associate BLF Presence Groups with Application User, on page 539

**Related Topics**

BLF Presence Group Fields for BLF, on page 535

**BLF Presence Group Fields for BLF**

Presence authorization works with BLF presence groups. The following table describes the BLF presence group configuration fields.
BLF Presence Group Association with Devices and Users

Perform the following procedures to apply a BLF presence group to the phone, SIP trunk, phone that is running SIP, phone that is running SCCP, directory number, application user (for application users that are sending presence requests over the SIP trunk), and end user.

**Note**
The system allows presence requests between members in the same BLF presence group.

**Associate BLF Presence Groups with Phone**

You can use BLF presence for phones and trunks when the phones and trunks have permission to send and receive presence requests.

Cisco Unified Communications Manager handles the BLF presence requests for Cisco Unified Communications Manager users, whether inside or outside the cluster. For a Cisco Unified Communications Manager watcher that sends a BLF presence request through the phone, Cisco Unified Communications Manager responds with the BLF presence status if the phone and BLF presence entity are colocated

**Before You Begin**

Configure BLF Presence Groups, on page 534
**Procedure**

**Step 1**  
In the Cisco Unified CM Administration, choose **Device > Phone**, and click **Add New**. The **Add a New Phone** window appears.

**Step 2**  
From the **Phone Type** drop-down list, select the type of phone that you want to associate BLF presence group to.

**Step 3**  
Click **Next**.

**Step 4**  
Configure the fields in the **Phone Configuration** window. See the online help for information about the fields and their configuration options.  
**Note**  
From the **SUBSCRIBE Calling Search Space** drop-down list, select a SUBSCRIBE calling search space to use for presence requests for the phone. All calling search spaces that you configure in Cisco Unified Communications Manager Administration appear in the **SUBSCRIBE Calling Search Space** drop-down list. If you do not select a different calling search space for the end user from the drop-down list, the value of this field applies the default value as **None**. To configure a SUBSCRIBE calling search space specifically for this purpose, configure a calling search space as you configure all calling search spaces.

**Step 5**  
Click **Save**.

**What to Do Next**

Associate BLF presence group with devices and users by performing the following subtasks:

- Associate BLF Presence Groups with SIP Trunk, on page 537
- Associate BLF Presence Groups with End User, on page 538
- Associate BLF Presence Groups with Application User, on page 539

**Associate BLF Presence Groups with SIP Trunk**

If digest authentication is not configured for the SIP trunk, you can configure the trunk to accept incoming subscriptions, but application-level authorization cannot be initiated, and Unified CM accepts all incoming requests before performing group authorization. When digest authentication is used with application-level authorization, Unified CM also authenticates the credentials of the application that is sending the BLF presence requests.

When there is a BLF presence request for a device that exists outside of the cluster, Cisco Unified Communications Manager queries the external device through the SIP trunk. If the watcher has permission to monitor the external device, the SIP trunk sends the BLF presence request to the external device, and returns BLF presence status to the watcher.

**Tip**  
To use BLF presence group authorization with incoming presence requests on a SIP trunk, configure a presence group for the trunk, such as External_Presence_Serv_Group1, and configure the appropriate permissions to other groups inside the cluster.

If you configure both levels of authorization for SIP trunk presence requests, the BLF presence group for the SIP trunk gets used only when no BLF presence group is identified in the incoming request for the application.
Before You Begin
 Configure BLF Presence Groups, on page 534

Procedure

Step 1  In the Cisco Unified CM Administration, choose Device > Trunk, and click Add New. The Trunk Configuration window appears.

Step 2  From the Trunk Type drop-down list, select the type of phone that you want to associate BLF presence group. The value in the Device Protocol drop-down list populates automatically.

Step 3  Click Next.

Step 4  Configure the fields in the Trunk Configuration window. See the online help for information about the fields and their configuration options.

Note  To authorize the Unified CM system to accept incoming BLF presence requests from the SIP trunk, check the Accept Presence Subscription check box in the SIP Trunk Security Profile Configuration window. To block incoming presence requests on a SIP trunk, uncheck the check box. When you allow SIP trunk BLF presence requests, Unified CM accepts requests from the SIP user agent (SIP proxy server or external BLF presence server) that connects to the trunk. Consider digest authentication as optional when Unified CM is configured to accept BLF presence requests from a SIP trunk.

Step 5  Click Save.

What to Do Next
 Associate BLF presence group with devices and users by performing the following subtasks:

•   Associate BLF Presence Groups with Phone, on page 536
•   Associate BLF Presence Groups with End User, on page 538
•   Associate BLF Presence Groups with Application User, on page 539

Associate BLF Presence Groups with End User

An administrator associates BLF presence groups with end user for user directories and call lists and to configure extension mobility settings.

Before You Begin
 Configure BLF Presence Groups, on page 534

Procedure

Step 1  In the Cisco Unified CM Administration, choose User Management > End User, and click Add New. The End User Configuration window appears.

Step 2  Configure the fields in the End User Configuration window. See the online help for information about the fields and their configuration options.

Step 3  Click Save.
What to Do Next

Associate BLF presence group with devices and users by performing the following subtasks:

• Associate BLF Presence Groups with Phone, on page 536
• Associate BLF Presence Groups with SIP Trunk, on page 537
• Associate BLF Presence Groups with Application User, on page 539

Associate BLF Presence Groups with Application User

An administrator associates BLF Presence groups with an application user for external applications. These external applications send BLF presence requests that is SIP trunk or home on a proxy server which is connected on SIP trunk. For example, Web Dial, Meeting Place, conference servers, and presence servers.

Before You Begin

Configure BLF Presence Groups, on page 534

Procedure

Step 1
In the Cisco Unified CM Administration, choose User Management > Application User, and click Add New.
The Application User Configuration window appears.

Step 2
Configure the fields in the Application User Configuration window. See the online help for information about the fields and their configuration options.

Step 3
Click Save.

What to Do Next

Associate BLF presence group with devices and users by performing the following subtasks:

• Associate BLF Presence Groups with Phone, on page 536
• Associate BLF Presence Groups with SIP Trunk, on page 537
• Associate BLF Presence Groups with End User, on page 538

Accept BLF Presence Requests from External Trunks and Applications

To allow BLF presence requests from outside the cluster, configure the system to accept BLF presence requests from the external trunk or application. You can assign BLF presence groups to trunks and applications outside the cluster to invoke BLF presence group authorization.

Before You Begin

Associate BLF presence group with devices and users by performing the following subtasks:

• Associate BLF Presence Groups with Phone, on page 536
• Associate BLF Presence Groups with SIP Trunk, on page 537
• Associate BLF Presence Groups with End User, on page 538
• Associate BLF Presence Groups with Application User, on page 539

Procedure

Step 1 In the Cisco Unified CM Administration, choose Device > Trunk, and click Add New. The Trunk Configuration window appears.
Step 2 To allow BLF presence requests from a SIP trunk, check the Accept Presence Subscription check box in the SIP Trunk Security Profile Configuration window.
Step 3 To enable application-level authorization for a SIP trunk application in addition to trunk-level authorization, check the following check boxes in the SIP Trunk Security Profile Configuration window:
  • Enable Digest Authentication
  • Enable Application Level Authorization

Note You cannot check Enable Application Level Authorization unless Enable Digest Authentication is checked.
Step 4 Apply the profile to the trunk. Click Reset so that the changes to the trunk can take effect.

Note If you checked Enable Application Level Authorization, check the Accept Presence Subscription check box in the Application User Configuration window for the application.

What to Do Next

Configure a Calling Search Space for Presence Requests, on page 540

Configure a Calling Search Space for Presence Requests

The SUBSCRIBE Calling Search space option allows you to apply a calling search space separate from the call-processing Calling Search Space for BLF presence requests. Select a different calling search space for presence requests, else the SUBSCRIBE Calling Search Space selects the None default option. The SUBSCRIBE Calling Search Space that is associated with an end user is used for extension mobility calls.

You apply the SUBSCRIBE Calling Search Space to the SIP trunk, phone, or end user. The SUBSCRIBE Calling Search Space that is associated with an end user is used for extension mobility calls.

Before You Begin

Accept BLF Presence Requests from External Trunks and Applications, on page 539
**Procedure**

**Step 1**  
From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Calling Search Space**.

**Step 2**  
In the **Calling Search Space configuration** window, choose the calling search space from the **SUBSCRIBE Calling Search Space** drop-down list.

**Step 3**  
Click **Add New**.

**Step 4**  
In the **Name** field, enter a name.

**Step 5**  
(Optional) In the **Description** field, enter a description to identify the calling search space.

**Step 6**  
From the **Available Partitions** list, select one or multiple partitions, and click the arrow keys. The selected partitions appear in the **Selected Partitions** list.

**Step 7**  
(Optional) To add or remove a partition from the **Selected Partitions** list, click the arrow keys next to the list box.

**Step 8**  
Click **Save**.

All calling search spaces that you configure in Cisco Unified Communications Manager Administration appear in the **SUBSCRIBE Calling Search Space** drop-down list in the **Trunk Configuration** or **Phone Configuration** window.

**What to Do Next**

*Configure a Phone Button Template for BLF and SpeedDial Buttons, on page 541*

---

### Configure a Phone Button Template for BLF and SpeedDial Buttons

You can configure BLF and SpeedDial buttons for a phone or user device profile. After you apply the template to the phone or device profile (and save the phone or device profile configuration), the Add a new BLF SD link appears in the **Association Information** pane in Cisco Unified Communications Administration.

---

**Note**

If the template does not support BLF and SpeedDials, the Add a new BLF SD link appears in the **Unassigned Associated Items** pane.

When an administrator decides to add or change a BLF and SpeedDial button for a SIP URI, the administrator ensures that the watcher is authorized to monitor that destination. If the system uses a SIP trunk to reach a SIP URI BLF target, the BLF presence group associated with the SIP trunk applies.

---

**Note**

You do not need to configure BLF presence groups or the Default Inter-Presence Group Subscription parameter for BLF and SpeedDials.

---

**Before You Begin**

*Configure a Calling Search Space for Presence Requests, on page 540*
Procedure

**Step 1** In the Cisco Unified CM Administration, choose Device > Device Settings > Phone Button Template.
**Step 2** Click the Add New button. The Phone Button Template Configuration window appears.
**Step 3** In the Button Template Name field, enter a name for the template.
**Step 4** From the Phone Button Template drop-down list, select a template of phone button.
**Step 5** Click Copy to create a new button template based on the layout of the selected button template.
**Step 6** Click Save.

What to Do Next

Associate Button Template with a Device, on page 542

Associate Button Template with a Device

You configure BLF and SpeedDial buttons for a phone or user device profile. The BLF value does not have to be on the cluster. For information on the Busy Lamp Field (BLF) status icons that display on the phone, see the Cisco Unified IP Phone documentation that supports your phone. To identify whether your phone supports BLF presence, see the Cisco Unified IP Phone documentation that supports your phone and this version of Cisco Unified Communications Manager.

Before You Begin

Configure a Phone Button Template for BLF and SpeedDial Buttons, on page 541

Procedure

**Step 1** In the Cisco Unified CM Administration, choose Device > Device Settings > Device Profile.
**Step 2** Enter the search parameters to find the configured phone button templates, and click Find. The records matching all the search criteria appear.
**Step 3** Click one of the records. The Device Profile Configuration window appears.
**Step 4** From the Phone Button Template list, select a configured phone button template.
**Step 5** (Optional) Modify the values of the configured device.
**Step 6** Click Save.

What to Do Next

Configure User Device Profile, on page 542

Configure User Device Profile

See the “BLF Presence with Extension Mobility” section of BLF Presence Interactions, on page 543 for details.
Before You Begin

Associate Button Template with a Device, on page 542

Procedure

Step 1   In the Cisco Unified CM Administration, choose Device > Device Settings > Device Profile.
Step 2   Click Add New.
         The Device Profile Configuration window appears.
Step 3   Configure the fields in Device Profile Configuration window. See the online help for information about the fields and their configuration options.  
         Note: If the phone button template that you applied to the phone or device profile does not support BLF and SpeedDials, the link does not appear in the Association Information pane, but appears in the Unassigned Associated Items pane.
Step 4   Click Save.

• Call Display Restrictions Configuration Task Flow, page 545
• Call Display Restrictions Interactions, page 555
• Call Display Restrictions Feature Restrictions, page 557

Call Display Restrictions Overview

Cisco Unified Communications Manager provides flexible configuration options that allow and also restrict the display of the number and name information for both calling and connected users. You can restrict connected numbers and names independently of each other.

You can configure connected number and name restrictions on the SIP trunk level or on a call-by-call basis. The SIP trunk level configuration overrides a call-by-call configuration.

For example, in a hotel environment, you may want to see the display information for calls that are made between a guest room and the front desk. However, for calls between guest rooms, you can restrict the call information to display on either phone.

Call Display Restrictions Configuration Task Flow

Before You Begin

• Review Call Display Restrictions Interactions, on page 555

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1 Generate a Phone Feature List, on page 7</td>
<td>Generate a report to identify endpoints that support the Call Display Restrictions feature.</td>
</tr>
<tr>
<td>Step 2 Configure Partitions for Call Display Restrictions, on page 546</td>
<td>Configure partitions to create a logical grouping of directory numbers (DN) and route patterns with similar</td>
</tr>
<tr>
<td>Command or Action</td>
<td>Purpose</td>
</tr>
<tr>
<td>-------------------</td>
<td>---------</td>
</tr>
<tr>
<td>Configure partitions to create a logical grouping of directory numbers (DNs) and route patterns with similar reachability characteristics. Partitions facilitate call routing by dividing the route plan into logical subsets that are based on organization, location, and call type. You can configure multiple partitions.</td>
<td></td>
</tr>
</tbody>
</table>

**Step 1**  
From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Partition**.

**Step 2**  
Click **Add New** to create a new partition.

**Step 3**  
In the **Partition Name, Description** field, enter a name for the partition that is unique to the route plan. Partition names can contain alphanumeric characters, as well as spaces, hyphens (-), and underscore characters (_). See the online help for guidelines about partition names.

**Step 4**  
Enter a comma (,) after the partition name and enter a description of the partition on the same line. The description can contain up to 50 characters in any language, but it cannot include double quotes ("), percentage sign (%), ampersand (&), backslash (\), angle brackets (<>), or square brackets ([ ]). If you do not
enter a description, Cisco Unified Communications Manager automatically enters the partition name in this field.

**Step 5**
To create multiple partitions, use one line for each partition entry.

**Step 6**
From the **Time Schedule** drop-down list, choose a time schedule to associate with this partition. The time schedule specifies when the partition is available to receive incoming calls. If you choose **None**, the partition remains active at all times.

**Step 7**
Select one of the following radio buttons to configure the **Time Zone**:

- **Originating Device**—When you select this radio button, the system compares the time zone of the calling device to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

- **Specific Time Zone**—After you select this radio button, choose a time zone from the drop-down list. The system compares the chosen time zone to the **Time Schedule** to determine whether the partition is available to receive an incoming call.

**Step 8**
Click **Save**.

---

**What to Do Next**

*Configure Calling Search Spaces for Call Display Restrictions*, on page 548

---

**Partition Name Guidelines**

The list of partitions in a calling search space is limited to a maximum of 1024 characters. This means that the maximum number of partitions in a CSS varies depending on the length of the partition names. Use the following table to determine the maximum number of partitions that you can add to a calling search space if partition names are of fixed length.

*Table 40: Partition Name Guidelines*

<table>
<thead>
<tr>
<th>Partition Name Length</th>

<td>...</td>
</tr>
<tr>
<td>10 characters</td>
<td>92</td>
</tr>
<tr>
<td>15 characters</td>
<td>64</td>
</tr>
</tbody>
</table>
Configure Calling Search Spaces for Call Display Restrictions

Configure calling search spaces to identify the partitions that calling devices can search when they attempt to complete a call. Create calling search spaces for rooms, the front desk, other hotel extensions, the PSTN, and the room park range (for call park).

Before You Begin
Configure Partitions for Call Display Restrictions, on page 546

Procedure

Step 1 From Cisco Unified CM Administration, choose Call Routing > Class of Control > Calling Search Space.
Step 2 Click Add New.
Step 3 In the Name field, enter a name. Ensure that each calling search space name is unique to the system. The name can include up to 50 alphanumeric characters and can contain any combination of spaces, periods (.), hyphens (-), and underscore characters (_).
Step 4 In the Description field, enter a description. The description can include up to 50 characters in any language, but it cannot include double-quotes ("), percentage sign (%), ampersand (&), back-slash (\), or angle brackets (<>).
Step 5 From the Available Partitions drop-down list, perform one of the following steps:
   • For a single partition, select that partition.
   • For multiple partitions, hold down the Control (CTRL) key, then select the appropriate partitions.
Step 6 Select the down arrow between the boxes to move the partitions to the Selected Partitions field.
Step 7 (Optional) Change the priority of selected partitions by using the arrow keys to the right of the Selected Partitions box.
Step 8 Click Save.

What to Do Next
Configure the Service Parameter for Connected Number Display Restriction, on page 548

Configure the Service Parameter for Connected Number Display Restriction

The connected number display restriction restricts the connected line ID display to dialed digits only. This option addresses customer privacy issues as well as connected number displays that are meaningless to phone users.

Before You Begin
Configure Calling Search Spaces for Call Display Restrictions, on page 548
Procedure

Step 1  In the Cisco Unified CM Administration, choose **System > Service Parameters**.
Step 2  Select the server where the Cisco CallManager service runs, and then select the Cisco CallManager service.
Step 3  Set the **Always Display Original Dialed Number** service parameter to **True** to enable this feature. The default value is **False**.
Step 4  (Optional) Set the **Name Display for Original Dialed Number When Translated** service parameter. The default field shows the alerting name of the original dialed number before translation. You can change this parameter to show the alerting name of the dialed number after translation. This parameter is not applicable if the **Always Display Original Number** service parameter is set to **False**.
Step 5  Click **Save**.

What to Do Next

*Configure Translation Patterns*, on page 549

Configure Translation Patterns

Cisco Unified Communications Manager uses translation patterns to manipulate dialed digits before it routes a call. In some cases, the system does not use the dialed number. In other cases, the public switched telephone network (PSTN) does not recognize the dialed number. For the Call Display Restrictions feature, calls are routed through different translation patterns before the calls are extended to the actual device.

Before You Begin

*Configure the Service Parameter for Connected Number Display Restriction*, on page 548

Procedure

Step 1  In Cisco Unified CM Administration, choose **Call Routing > Translation Pattern**. The **Translation Pattern Configuration** window appears.
Step 2  Configure the fields in the **Translation Pattern Configuration** window. See the Related Topics section below for more information about the fields and their configuration options.
Step 3  Click **Save**.

</tbody>
</table>
| Calling Line ID Presentation | From the drop-down list, choose one of the following options:  
- **Default**—Choose this option if you do not want to change the presentation of the calling line ID.  
- **Allowed**—Choose this option if you want to display the phone number of the calling party.  
- **Restricted**—Choose this option if you want Cisco Unified Communications Manager to block the display of the calling party phone number. |
| Calling Name Presentation | From the drop-down list, choose one of the following options:  
- **Default**—Choose this option if you do not want to change the presentation of the calling name.  
- **Allowed**—Choose this option if you want to display the name of the calling party.  
- **Restricted**—Choose this option if you want Cisco Unified Communications Manager to block the display of the calling name. |
### Configure Phones for Call Display Restrictions

Use this procedure to associate phones with the partitions and the calling search spaces used for call display restrictions.

#### Before You Begin

*Configure Translation Patterns*, on page 549

#### Procedure

**Step 1**

In the Cisco Unified CM Administration, choose **Device > Phone**.

**Step 2**

Perform one of the following tasks:

a) To modify the fields for an existing phone, enter search criteria and choose a phone from the resulting list. The **Phone Configuration** window appears.

b) To add a new phone, click **Add New**.

---

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Connected Line ID Presentation** | From the drop-down list, choose one of the following options:  
  - **Default**—Choose this option if you do not want to change the presentation of the connected line ID.  
  - **Allowed**—Choose this option if you want to display the phone number of the connected party.  
  - **Restricted**—Choose this option if you want Cisco Unified Communications Manager to block the display of the connected party phone number. |

| **Connected Name Presentation** | From the drop-down list, choose one of the following options:  
  - **Default**—Choose this option if you do not want to change the presentation of the connected name.  
  - **Allowed**—Choose this option if you want to display the name of the connected party.  
  - **Restricted**—Choose this option if you want Cisco Unified Communications Manager to block the display of the connected name. |
The Add a New Phone window appears.

**Step 3** From the **Calling Search Space** drop-down list, choose the calling search space that you want the system to use when it determines how to route a dialed number.

**Step 4** Check the **Ignore presentation indicators (internal calls only)** check box to ignore any presentation restriction on internal calls.

**Step 5** Click **Save**. The phone is added to the database.

**Step 6** To associate the added phone to a directory number, choose **Device > Phone**, enter search parameters to search the phone that you added.

**Step 7** In the **Find and List Phones** window, click the phone name. The **Phone Configuration window** appears.

**Step 8** From the **Association** pane, click the phone name to add or modify the directory number. The **Directory Number Configuration** window appears.

**Step 9** In the **Directory Number Configuration** window, add or modify the value of directory number in the **Directory Number** text box, and select a value in the **Route Partition** drop-down list.

**Step 10** Click **Save**.

---

**Phone Configuration Example**

Configure phone A (Room-1) with partition P_Room and device/line calling search space CSS_FromRoom
{ P_Phones, CSS_FromRoom} : 221/Room-1

Configure phone B (Room-2) with partition P_Room and device/line calling search space CSS_FromRoom
{ P_Phones, CSS_FromRoom} : 222/Room-2

Configure phone C (Front Desk-1) with partition P_FrontDesk and device/line calling search space CSS_FromFrontDesk and Ignore Presentation Indicators check box enabled
{ P_FrontDesk, CSS_FromFrontDesk, IgnorePresentationIndicators set} : 100/Reception

Configure phone D (Front Desk-2) with partition P_FrontDesk and device/line calling search space CSS_FromFrontDesk and Ignore Presentation Indicators check box enabled
{ P_FrontDesk, CSS_FromFrontDesk, IgnorePresentationIndicators set} : 200/Reception

Configure phone E (Club) with partition P_Club and calling search space CSS_FromClub
{ P_Club, CSS_FromClub} : 300/Club

**What to Do Next**

Configure the PSTN Gateway for Call Display Restrictions, on page 552

---

**Configure the PSTN Gateway for Call Display Restrictions**

Associate the PSTN gateway with the partitions and the calling search spaces that you want to use for call display restrictions.
Before You Begin
Configure Phones for Call Display Restrictions, on page 551

Procedure

Step 1
In Cisco Unified CM Administration, choose Device > Gateway.

Step 2
Enter search criteria and choose the PSTN gateway from the resulting list. The Gateway Configuration window appears.

Step 3
From the Calling Search Space drop-down list, choose the calling search space that you want the system to use when it determines how to route an incoming call from the PSTN.

Step 4
Click Save and Reset to apply the configuration changes.

Step 5
(Optional) To associate the available trunk or gateway, in Cisco Unified Communications Manager Administration, choose SIP Route Pattern, and select a SIP trunk or route list from the SIP Trunk/Route List drop-down box.

Gateway Configuration Example
Configure PSTN Gateway E with route pattern P_PSTN and calling search space CSS_FromPSTN {CSS_FromPSTN}, RoutePattern {P_PSTN}

What to Do Next
(Optional) Configure Call Display Restrictions on SIP Trunks, on page 553

Configure Call Display Restrictions on SIP Trunks
You can configure connected number and name restrictions on the SIP trunk level. The SIP trunk-level configuration overrides call-by-call configuration.

Before You Begin
(Optional) Configure the PSTN Gateway for Call Display Restrictions, on page 552

Procedure

Step 1
In the Cisco Unified CM Administration, choose Device > Trunk. The Find and List Trunks window appears.

Step 2
Enter search criteria and click Find.

Step 3
Select the name of the trunk that you want to update.

Step 4
Configure the fields in the SIP Trunk Configuration window. See the Related Topics section below for more information about the fields and their configuration options.

Step 5
Click Save.
SIP Trunk Fields for Call Display Restrictions

### Call Display Restrictions Interactions

This section describes how the Call Display Restrictions feature interacts with Cisco Unified Communications Manager applications and call processing features.
When you use the Call Display Restrictions feature with Call Park, you must configure an associated translation pattern for each individual call park number to preserve the Call Display Restrictions feature. You cannot configure a single translation pattern to cover a range of call park numbers.

Consider the following scenario as an example:

1. The system administrator creates a call park range of 77x and places it in a partition called P_ParkRange. (The phones in the guest rooms can see that the P_ParkRange partition is made visible to the phones in the guest rooms by inclusion of it in the calling search space of the phones [CSS_FrmRoom].)

2. The administrator configures a separate translation pattern for each call park directory number and configures the display fields to Restricted. (In the current scenario, the administrator creates translation patterns for 770, 771, 772...779.)

   **Note** For the Call Display Restrictions feature to work correctly, the administrator must configure separate translation patterns and not a single translation pattern for a range of numbers (such as 77x or 77[0-9]).

3. Room-1 calls Room-2.

4. Room-2 answers the call, and Room-1 parks the call.

5. When Room-1 retrieves the call, Room-2 does not see Room-1 call information display.

See Call Park Overview

<table>

</tr>
</tbody>
</table>
### Call Display Restrictions Feature Restrictions

**Feature** | **Interaction**  
--- | ---  
Extension Mobility | To use Call Display Restrictions with Extension Mobility, enable the Ignore Presentation Indicators (internal calls only) parameter in both the Cisco Unified Communications Manager Administration Phone Configuration window and the Cisco Unified Communications Manager Administration Device Profile Configuration window.  
When you enable Call Display Restrictions with Extension Mobility, the presentation or restriction of the call information depends on the line profile that is associated with the user who is logged in to the device. The configuration that is entered in the user device profile (associated with the user) overrides the configuration that is entered in the phone configuration (of the phone that is enabled for Extension Mobility).  

Call Forwarding | The Connected Number Display restriction applies to all calls that originate in the system. When this value is set to True, this field interacts with existing Cisco Unified Communications Manager applications, features, and call processing. This value applies to all calls that terminate inside or outside the system. The Connected Number Display is updated to show the modified number or redirected number when a call is routed to a Call Forward All or Call Forward Busy destination, or gets redirected through a call transfer or CTI application.  

---

Call Display Restrictions Feature Restrictions  
Translation Patterns—Duplicate entries are not allowed in translation patterns.
Do Not Disturb

This chapter provides details on the Do Not Disturb feature.

- Do Not Disturb Overview, page 559
- Do Not Disturb Configuration Task Flow, page 560
- Do Not Disturb Interactions and Restrictions, page 568
- Do Not Disturb Troubleshooting, page 571

Do Not Disturb Overview

Do Not Disturb (DND) provides the following options:

- Call Reject—This option specifies that the incoming call gets rejected. Depending on how you configure the DND Incoming Call Alert parameter, the phone may play a beep, or display a flash notification of the call.
- Ringer Off—This option turns off the ringer, but incoming call information gets presented to the device, so that the user can accept the call.

When DND is enabled, all new incoming calls with normal priority honor the DND settings for the device. High-priority calls, such as Cisco Emergency Responder (CER) calls, or calls with Multilevel Precedence and Preemption (MLPP), ring on the device. Also, when you enable DND, the Auto Answer feature gets disabled.

Users can activate Do Not Disturb on the phone in the following ways:

- Softkey
- Feature button
- Cisco Unified Communications Self-Care Portal

Note: You can also enable or disable the feature on a per-phone basis from within Cisco Unified Communications Manager.
Phone Behavior

When you enable Do Not Disturb, the Cisco Unified IP Phone displays the message “Do Not Disturb is active”. Some Cisco Unified IP Phones display DND status icons. For details on how individual phone models use Do Not Disturb, consult the user guide for that particular phone model.

When you activate DND, you can still receive incoming call notifications on the phone as specified by the Incoming Call Alert settings in Cisco Unified Communications Manager Administration, but the phone will not ring, except for high-priority calls (such as Cisco Emergency Responder and MLPP calls). Also, if you enable DND while the phone is ringing, the phone stops ringing.

Status Notifications

Do Not Disturb is supported on both SIP and Cisco Skinny Call Control Protocol (SCCP) devices.

SIP phones use the SIP PUBLISH method to signal a DND status change to Cisco Unified Communications Manager. Cisco Unified Communications Manager uses a Remote-cc REFER request to signal a DND status change to the SIP phone.

SCCP phones use SCCP messaging to signal a DND status change to Cisco Unified Communications Manager.

Do Not Disturb Configuration Task Flow

Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>

</tr>
</tbody>
</table>
Configure Busy Lamp Field Status

Configure how the Busy Lamp Field (BLF) status depicts Do Not Disturb by setting the **BLF Status Depicts DND** service parameter. To set the BLF status, do the following:

**Before You Begin**
Generate a Phone Feature List, on page 7

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Configure a Do Not Disturb Softkey, on page 565</td>
<td>Purpose</td>
</tr>
</tbody>
</table>

**Step 1**
In Cisco Unified CM Administration, choose **System > Service Parameters**.

**Step 2**
Choose the **Cisco CallManager** service for the server that you want to configure.

**Step 3**
In the Clusterwide Parameters (System - Presence) pane, specify one of the following values for the **BLF Status Depicts DND** service parameter:

- **True**—If Do Not Disturb is activated on the device, the BLF status indicator for the device or line appearance reflects the Do Not Disturb state.
- **False**—If Do Not Disturb is activated on the device, the BLF status indicator for the device or line appearance reflects the actual device state.

**What to Do Next**
Perform one of the following procedures:
Configure Do Not Disturb on a Common Phone Profile, on page 561
Apply Do Not Disturb Settings to the Phone, on page 562

**Configure Do Not Disturb on a Common Phone Profile**

Common Phone Profiles allow you to configure Do Not Disturb settings and then apply those settings to a group of phones in your network that use that profile.

**Before You Begin**
Configure Busy Lamp Field Status, on page 561
Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Common Phone Profile.

Step 2  From the DND Option drop-down list box, choose how you want the Do Not Disturb feature to handle incoming calls.

- **Call Reject**—No incoming call information gets presented to the user. Depending on how you configure the DND Incoming Call Alert parameter, the phone may play a beep or display a flash notification of the call.

- **Ringer Off**—This option turns off the ringer, but incoming call information gets presented to the device, so the user can accept the call.

Note For mobile phones and dual-mode phones, you can only choose the Call Reject option.

Step 3  From the Incoming Call Alert drop-down list box, choose how you want to alert phone users of incoming calls while Do Not Disturb is turned on.

- **Disable**—Both beep and flash notification of a call are for disabled. If you configured the DND Ringer Off option, incoming call information still gets displayed. However, for the DND Call Reject option, no call alerts display, and no information gets sent to the device.

- **Flash Only**—The phone flashes for incoming calls.

- **Beep Only**—The phone displays a flash alert for incoming calls.

Step 4  Click Save.

What to Do Next

Apply Do Not Disturb Settings to the Phone, on page 562

Apply Do Not Disturb Settings to the Phone

This procedure describes how to apply Do Not Disturb settings on your Cisco Unified IP Phones. You can apply DND settings through the **Phone Configuration** window in Cisco Unified CM Administration, or you can apply DND settings to a Common Phone Profile and then apply that profile to your phone.

Before You Begin

If you are using a Common Phone Profile, complete Configure Do Not Disturb on a Common Phone Profile, on page 561.

Otherwise, complete Configure Busy Lamp Field Status, on page 561
Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone
Step 2 Click Find and select the phone on which you want to configure Do Not Disturb.
Step 3 If you want to apply Do Not Disturb settings from a Common Phone Profile, from the Common Phone Profile drop-down list box, choose the profile on which you have configured Do Not Disturb.
Step 4 Check the Do Not Disturb check box to enable Do Not Disturb on the phone.
Step 5 In the DND Option drop-down list box, specify from the following options how you want the DND feature to handle incoming calls.
  • Call Reject—No incoming call information gets presented to the user. Depending on the configuration, the phone either plays a beep or displays a flash notification.
  • Ringer Off—Incoming call information gets presented to the device so that the user can accept the call, but the ringer is turned off.
  • Use Common Profile Setting—The Do Not Disturb setting for the Common Phone Profile that is specified for this device gets used.

Note For 7940/7960 phones that are running SCCP, you can only choose the Ringer Off option. For mobile devices and dual-mode phones, you can only choose the Call Reject option. When you activate DND Call Reject on a mobile device or dual-mode phone, no call information gets presented to the device.
Step 6 In the DND Incoming Call Alert drop-down list box, specify from the following options how you want the phone to display an incoming call when DND is turned on.
  • None—The DND Incoming Call Alert setting from the Common Phone Profile gets used for this device.
  • Disable—For DND Ringer Off, both beep and flash notifications are disabled, but incoming call information is still displayed. For Call Reject, beep and flash notifications are disabled, and no incoming call information gets passed to the device.
  • Beep only—For incoming calls, the phone plays a beep tone only.
  • Flash only—For incoming calls, the phone displays a flash alert.

Step 7 Click Save.

What to Do Next
Complete either of the following procedures:
Configure a Do Not Disturb Feature Button, on page 563
Configure a Do Not Disturb Softkey, on page 565

Configure a Do Not Disturb Feature Button
Follow these steps to add a Do Not Disturb feature button to your Cisco Unified IP Phone.
Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Configure Phone Button Template for Do Not Disturb, on page 564</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Associate a Button Template with a Phone, on page 239</td>
</tr>
</tbody>
</table>

Configure Phone Button Template for Do Not Disturb

Follow this procedure to configure a phone button template that includes the Do Not Disturb button.

Procedure

**Step 1**
From Cisco Unified CM Administration, choose Device > Device Settings > Phone Button Template. The Find and List Phone Button Templates window appears.

**Step 2**
Click Find. The window displays a list of templates for the supported phones.

**Step 3**
Perform this step if you want to create a new phone button template; otherwise, proceed to the next step.

a) Select a default template for the model of phone and click Copy.
b) In the Phone Button Template Information field, enter a new name for the template.
c) Click Save.

**Step 4**
Perform this step if you want to add phone buttons to an existing template.
a) Enter search criteria and click Find.
b) Choose an existing template. The Phone Button Template Configuration window appears.

**Step 5**
From the Line drop-down list, choose feature that you want to add to the template.

**Step 6**
Click Save.

**Step 7**
Perform one of the following tasks:

- If you modified a template that is already associated with devices, click Apply Config to restart the devices.
- If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next

Associate a Button Template with a Phone, on page 239
Associate a Button Template with a Phone

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window is displayed.

Step 2 From the Find and List Phones window, click Find. A list of phones that are configured on the Cisco Unified Communications Manager is displayed.

Step 3 Choose the phone to which you want to add the phone button template. The Phone Configuration window appears.

Step 4 In the Phone Button Template drop-down list, choose the phone button template that contains the new feature button.

Step 5 Click Save. A dialog box is displayed with a message to press Reset to update the phone settings.

Configure a Do Not Disturb Softkey

Optional. If your phone uses softkeys, perform the tasks in the following task flow to add a Do Not Disturb softkey to the phone.

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Create a softkey template that includes the Do Not Disturb softkey.</td>
</tr>
<tr>
<td>Configure Softkey Template for Do Not Disturb, on page 565</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Step 2</strong></th>
<th>You can associate the softkey to a Common Device Configuration and then associate that configuration to a group of phones, or you can associate the softkey template directly to a phone.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Perform either of the following procedures:</td>
<td></td>
</tr>
<tr>
<td>• Associate a Softkey Template with a Common Device Configuration, on page 566</td>
<td></td>
</tr>
<tr>
<td>• Associate Softkey Template with a Phone, on page 568</td>
<td></td>
</tr>
</tbody>
</table>

Configure Softkey Template for Do Not Disturb

Perform these steps to configure a softkey template that includes the Do Not Disturb softkey.
Procedure

Step 1  From Cisco Unified CM Administration, choose Device > Device Settings > Softkey Template. The Softkey Template Configuration window appears.

Step 2  Perform this step to create a new softkey template; otherwise, proceed to the next step.
   a) Click Add New.
   b) Select a default template and click Copy.
   c) In the Softkey Template Name field, enter a new name for the template.
   d) Click Save.

Step 3  Perform this step to add softkeys to an existing template.
   a) Enter search criteria and click Find.
   b) Choose an existing template.
   The Softkey Template Configuration window appears.

Step 4  Check the Default Softkey Template check box to designate this softkey template as the default softkey template.
   Note  If you designate a softkey template as the default softkey template, you cannot delete it unless you first remove the default designation.

Step 5  Choose Configure Softkey Layout from the Related Links drop-down list in the upper right corner and click Go.

Step 6  From the Select a Call State to Configure drop-down list, choose the call state for which you want the softkey to display.

Step 7  From the Unselected Softkeys list, choose the softkey to add and click the right arrow to move the softkey to the Selected Softkeys list. Use the up and down arrows to change the position of the new softkey.

Step 8  To display the softkey in additional call states, repeat the previous step.

Step 9  Click Save.

Step 10  Perform one of the following tasks:
   • If you modified a template that is already associated with devices, click Apply Config to restart the devices.
   • If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.

What to Do Next
Perform one of the following procedures to add the softkey template to a phone.

Associate a Softkey Template with a Common Device Configuration, on page 566
Associate Softkey Template with a Phone, on page 568

Associate a Softkey Template with a Common Device Configuration
When you associate the Do Not Disturb (DND) softkey template to a Common Device Configuration you can add the DND softkey to a group of Cisco Unified IP Phones that use that Common Device Configuration.
Before You Begin

Configure Softkey Template for Do Not Disturb, on page 565

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Add Softkey Template to Common Device Configuration, on page 567</td>
<td>Associate the DND softkey template to a Common Device Configuration.</td>
</tr>
<tr>
<td><strong>Step 2</strong> Associate Common Device Configuration with Phone, on page 568</td>
<td>Add the DND softkey to a phone by associating the Common Device Configuration to the phone.</td>
</tr>
</tbody>
</table>

Add Softkey Template to Common Device Configuration

Procedure

**Step 1**
From Cisco Unified CM Administration, choose **Device > Device Settings > Common Device Configuration**. The **Find and List Common Device Configuration** window appears.

**Step 2**
Perform this step to create a new Common Device Configuration and associate the softkey template with it; otherwise, proceed to the next step.

a) Click **Add New**.
b) In the **Name** field, enter a name for the Common Device Configuration.
c) Click **Save**.

**Step 3**
Perform this step to add the softkey template to an existing Common Device Configuration.

a) Enter search criteria and click **Find**.
b) Choose an existing Common Device Configuration. The **Common Device Configuration** window appears.

**Step 4**
In the **Softkey Template** drop-down list, choose the softkey template that contains the softkey that you want to make available.

**Step 5**
Click **Save**.

**Step 6**
Perform one of the following tasks:

- If you created a new Common Device Configuration, associate the configuration with devices and then restart them. See the What to Do Next section for more information.
- If you modified a Common Device Configuration that is already associated with devices, click **Apply Config** to restart the devices.

What to Do Next

Associate Common Device Configuration with Phone, on page 568
**Associate Common Device Configuration with Phone**

**Before You Begin**

Associate a Softkey Template with a Common Device Configuration, on page 566

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Phone**. The **Find and List Phones** window appears.

**Step 2** Find the phone to which to add the softkey template.

**Step 3** From the **Common Device Configuration** drop-down list, choose the common device configuration that contains the new softkey template.

**Step 4** Click **Save**.

**Step 5** Click **Reset** to update the phone settings.

---

**Associate Softkey Template with a Phone**

Perform this procedure if you have configured a softkey template with the Do Not Disturb softkey and you want to associate that softkey template to a phone.

**Before You Begin**

Configure Softkey Template for Do Not Disturb, on page 565

**Procedure**

**Step 1** From Cisco Unified CM Administration, choose **Device > Phone**. The **Find and List Phones** window appears.

**Step 2** Choose the phone to which you want to add the softkey template. The **Phone Configuration** window appears.

**Step 3** From the **Softkey Template** drop-down list, choose the template that contains the new softkey.

**Step 4** Click **Save**.

**Step 5** Press **Reset** to update the phone settings.

---

**Do Not Disturb Interactions and Restrictions**

This section provides information about Do Not Disturb interactions and restrictions.

**Interactions**

The following table describes feature interactions with the Do Not Disturb (DND) feature. Unless otherwise stated, the interactions apply to both the DND Ringer Off and the DND Call Reject option.
Interaction with Do Not Disturb Feature

On Cisco Unified IP Phones, the message that indicates that the Do Not Disturb (DND) feature is active takes priority over the message that indicates that the user has new voice messages. However, the message that indicates that the Call Forward All feature is active has a higher priority than DND.

**Call Forward All**

For locally parked calls, Park Reversion overrides DND. If Phone A has DND turned on, and a call is parked, the park reversion to Phone A occurs and Phone A rings.

For remotely parked calls, DND overrides Park Reversion:

- If Phone A activates DND Ringer Off and shares a line with Phone A-prime, when Phone A-prime parks the call, park reversion on Phone A honors the DND settings and does not ring.
- If Phone A activated DND Call Reject, the park reversion is not presented to Phone A.

**Park Reversion**

For locally placed Pickup requests, Pickup overrides DND. If Phone A has DND turned on, and has initiated any type of Pickup, the Pickup call presents normally, and Phone A rings.

For remotely placed Pickup requests, DND overrides Pickup as follows:

- If Phone A is in DND Ringer Off mode and shares a line with Phone A-prime, when Phone A-prime initiates Pickup, the Pickup call to Phone A honors the DND settings and Phone A does not ring.
- If Phone A is in DND Call Reject mode, the Pickup call is not presented to Phone A.

**Pickup**

Hold Reversion and Intercom override DND, and the call gets presented normally.

**Hold Reversion and Intercom**

MLPP and CER

Multilevel Precedence and Preemption (phones that are running SCCP) and Cisco Emergency Responder calls override DND. Multilevel Precedence and Preemption and Cisco Emergency Responder calls get presented normally, and the phone rings.

**MLPP and CER**

---

**Feature Configuration Guide for Cisco Unified Communications Manager, Release 11.0(1)**
Interaction with Do Not Disturb Feature

For the originating side, callback overrides DND. When the activating device is on DND mode, the callback notification (both audio and visual) is still presented to the user.

For the terminating side, DND overrides callback as follows:

- When the terminating side is on DND Ringer Off, the Callback Available screen is sent after the terminating side goes off hook and on hook.
- When the terminating side is on DND Call Reject, and is available, a new screen is sent to the activating device as "<DirectoryNumber> has become available but is on DND-R" if the activating device is in same cluster. Callback available notification is sent only after the terminating side disables DND Call Reject.

CallBack

For the DNDRinger Off option, only visual notification gets presented to the device.

For the DNDCall Reject option, no notification gets presented to the device.

 Pickup Notification

For the DND Ringer Off option, only visual notification gets presented to the device.

For the DND Call Reject option, no notification gets presented to the device.

Hunt List

If a device in a Hunt List has DND Ringer Off activated, the call is still presented to the user. However, the DND Incoming Call Alert settings would still apply.

If a device in a Hunt List has DND Call Reject activated, any calls to that Hunt List will go to the next member and will not get sent to this device.

Extension Mobility

For Extension Mobility, the device profile settings include DND incoming call alert and DND status. When a user logs in and enables DND, the DND incoming call alert and DND status settings get saved, and these settings get used when the user logs in again.

Note When a user who is logged in to Extension Mobility modifies the DND incoming call alert or DND status settings, this action does not affect the actual device settings.

Restrictions

Some restrictions apply to DND usage, depending on the phone or device type in use.

- The following phone models and devices that are running SCCP support only the DND Ringer Off option:
  - Cisco Unified IP Phone 7940
  - Cisco Unified IP Phone 7960
  - Cisco IP Communicator
Cisco Unified IP Phones 7940 and 7960 that run SIP use their own implementation of Do Not Disturb, which is backward compatible.

- The following phone models and devices support only the DND Call Reject option:
  - Mobile devices (dual mode)
  - Remote Destination Profile
  - Cisco Unified Mobile Communicator

**Do Not Disturb Troubleshooting**

This section provides troubleshooting information for Cisco Unified IP Phones (SCCP and SIP).

For SIP phones, use the following information for troubleshooting:

- `debugs`: sip-dnd, sip-messages, dnd-settings
- `show`: config, dnd-settings
- sniffer traces

For SCCP phones, use the following information for troubleshooting:

- `debug`: jvm all info
- sniffer traces

**Troubleshooting Errors**

The following table describes how to troubleshoot errors with Do No Disturb.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>DND softkey does not display or DND feature button does not display</td>
<td>- Verify that the softkey or button template for this phone includes DND.</td>
</tr>
<tr>
<td></td>
<td>- Capture a sniffer trace and verify that the phone gets the correct softkey or button template.</td>
</tr>
<tr>
<td></td>
<td>- Verify that the phone firmware is Version 8.3(1) or later.</td>
</tr>
<tr>
<td>BLF speed dial does not show DND status</td>
<td>- Verify that the BLF DND is set to enabled in Enterprise parameters.</td>
</tr>
<tr>
<td></td>
<td>- Capture a sniffer trace and verify that the phone gets the correct notification message.</td>
</tr>
<tr>
<td></td>
<td>- Verify that the phone firmware is Version 8.3(1) or later.</td>
</tr>
</tbody>
</table>
Do Not Disturb Troubleshooting
Privacy Overview

The Privacy feature allows you to enable or disable the capability of users with phones that share the same line (DN) to view call status and to barge into the call. You can enable or disable privacy for each phone or for all phones. By default, the system enables privacy for all phones in the cluster.

When the device that is configured for privacy registers with Cisco Unified Communications Manager, the feature button on the phone that is configured with privacy gets labeled, and the status is indicated through an icon. If the button has a lamp, it comes on.

When the phone receives an incoming call, the user makes the call private (so the call information does not display on the shared line) by pressing the Privacy feature button. The Privacy feature button toggles between On and Off.

To verify if your Cisco Unified IP Phone supports Privacy, see the user documentation for your phone model.

Privacy on Hold

Privacy on Hold allows you to enable or disable the capability of users with phones that share the same line (DN) to view call status and retrieve calls on hold.

You can enable or disable Privacy on Hold for specific phones or all the phones. Privacy on Hold activates automatically on all private calls when Privacy on Hold is enabled. By default, the system disables Privacy on Hold for all phones in the cluster.

To activate Privacy on Hold, users press the Hold softkey or Hold button while on a private call. To return to the call, users press the Resume softkey. The phone that puts the call on hold displays the status indicator for a held call; shared lines display the status indicators for a private and held call.
Privacy Configuration Task Flow

### Procedure

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

### Enable Privacy Cluster-wide

Perform these steps to enable Privacy by default for the entire cluster.

### Procedure

- **Step 1** From Cisco Unified CM Administration, choose System > Service Parameters. The Service Parameter Configuration window appears.
- **Step 2** From the Server drop-down list, choose the server that is running the Cisco CallManager service.
- **Step 3** From the Service drop-down list, choose Cisco CallManager.
- **Step 4** From the Privacy Setting drop-down list, choose True.
- **Step 5** Click Save.

### Enable Privacy for a Device

### Before You Begin

Ensure that the phone model supports Privacy. For more information, see Generate a Phone Feature List, on page 7.
Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone.
Step 2 Specify search criteria and click Find. The phone search results appear.
Step 3 Select the phone.
Step 4 From the Privacy drop-down list, select Default.
Step 5 Click Save.

What to Do Next
Configure Privacy Phone Button Template, on page 575

Configure Privacy Phone Button Template

Before You Begin
Enable Privacy for a Device, on page 574

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Device Settings > Phone Button Template. The Find and List Phone Button Templates window appears.
Step 2 Click Find. The window displays a list of templates for the supported phones.
Step 3 Perform this step if you want to create a new phone button template; otherwise, proceed to the next step.
  a) Select a default template for the model of phone and click Copy.
  b) In the Phone Button Template Information field, enter a new name for the template.
  c) Click Save.
Step 4 Perform this step if you want to add phone buttons to an existing template.
  a) Enter search criteria and click Find.
  b) Choose an existing template.
  The Phone Button Template Configuration window appears.
Step 5 From the Line drop-down list, choose feature that you want to add to the template.
Step 6 Click Save.
Step 7 Perform one of the following tasks:
  • If you modified a template that is already associated with devices, click Apply Config to restart the devices.
  • If you created a new softkey template, associate the template with the devices and then restart them. See the What to Do Next section for more information.
What to Do Next

Associate Privacy Phone Button Template with a Phone

Before You Begin
Configure Privacy Phone Button Template, on page 575

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window is displayed.
Step 2 From the Find and List Phones window, click Find. A list of phones that are configured on the Cisco Unified Communications Manager is displayed.
Step 3 Choose the phone to which you want to add the phone button template. The Phone Configuration window appears.
Step 4 In the Phone Button Template drop-down list, choose the phone button template that contains the new feature button.
Step 5 Click Save. A dialog box is displayed with a message to press Reset to update the phone settings.

What to Do Next
Configure Shared Line Appearance, on page 576

Configure Shared Line Appearance

Before You Begin
Associate Privacy Phone Button Template with a Phone, on page 576

Procedure

Step 1 From Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window appears.
Step 2 To locate a specific phone, enter search criteria and click Find. A list of phones that match the search criteria is displayed.
Step 3 Choose the phone for which you want to configure shared line appearance. The Phone Configuration window is displayed.
Step 4 Click Add a new DN link in the Association Information area on the left side of the Phone Configuration window.
The Directory Number Configuration window appears.

**Step 5**
Enter the Directory Number and choose the Route Partition to which the directory number belongs.

**Step 6**
Configure the remaining fields in the Directory Number Configuration window. See the online help for more information about the fields and their configuration options.

**Step 7**
Repeat Step 3, on page 576 to Step 6, on page 577 for all the phones for which you want to create a shared line appearance.

**Note**
Ensure that you assign the same directory number and route partition to all the phones that are part of the shared line appearance.

Private Line Automatic Ringdown

- Private Line Automatic Ringdown Overview, page 579
- Private Line Automatic Ringdown Configuration Task Flow for SCCP Phones, page 579
- Private Line Automatic Ringdown Configuration Task Flow for SIP Phones, page 582
- Private Line Automatic Ringdown Troubleshooting, page 584

Private Line Automatic Ringdown Overview

The Private Line Automatic Ringdown (PLAR) feature configures a phone so that when the user goes off hook (or the NewCall softkey or line key gets pressed), the phone immediately dials a preconfigured number. The phone user cannot dial any other number from the phone line that gets configured for PLAR.

PLAR works with features such as Barge, cBarge, or single button Barge. If you use PLAR with a feature, you must configure the feature as described in the feature documentation, and you must configure the PLAR destination, which is a directory number that is used specifically for PLAR.

Private Line Automatic Ringdown Configuration Task Flow for SCCP Phones

Perform the following tasks to configure Private Line Automatic Ringdown (PLAR) on SCCP phones.

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Create Partition, on page 580</td>
<td>Create a partition for the PLAR destination. The only directory number that you can assign to this partition is the PLAR destination.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Assign Partitions to Calling Search Spaces, on page 580</td>
<td>Assign the partition to a unique CSS, and a CSS that includes the PLAR destination device.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Assign Partition to the Private Line Automatic Ringdown Destination, on page 581</td>
<td>Assign the null partition and a CSS to your PLAR destination directory number.</td>
</tr>
</tbody>
</table>
### Create Partition

Create a new partition for the Private Line Automatic Ringdown (PLAR) destination. For the feature to work, only the null translation pattern that you configure for PLAR can be assigned to this partition.

#### Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>In Cisco Unified CM Administration, choose <strong>Call Routing &gt; Class of Control &gt; Partition</strong>.</td>
<td>Create an null translation pattern and assign it to your PLAR destination directory number.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Click <strong>Add New</strong>.</td>
<td></td>
</tr>
<tr>
<td>Step 3</td>
<td>In the <strong>Name</strong> field, enter a partition name and a description separated by a comma.</td>
<td></td>
</tr>
<tr>
<td>Step 4</td>
<td>Click <strong>Save</strong>.</td>
<td></td>
</tr>
</tbody>
</table>

#### What to Do Next

**Assign Partitions to Calling Search Spaces, on page 580**

### Assign Partitions to Calling Search Spaces

For Private Line Automatic Ringdown (PLAR) on SCCP phones, you must configure two calling search spaces (CSS):

- The first CSS should include the new partition for the null translation pattern as well as a partition that routes to the destination phone.
- The second CSS should include only the new partition for the null translation pattern.

#### Before You Begin

**Create Partition, on page 580**
Procedure

Step 1  In Cisco Unified CM Administration, choose Call Control > Class of Control > Calling Search Space.
Step 2  Click Find and select the calling search space for the PLAR destination device.
Step 3  Use the arrows to move both of the following partitions to the Selected Partitions list box: the new partition that you created for the null translation pattern and a partition that routes to the destination device.
Step 4  Click Save.
Step 5  Click Add New.
Step 6  Enter a name and description for the calling search space.
Step 7  Use the arrows to move the new partition to the Selected Partitions list box.
Step 8  Click Save.

What to Do Next

Assign Partition to the Private Line Automatic Ringdown Destination, on page 581

Assign Partition to the Private Line Automatic Ringdown Destination

When configuring Private Line Automatic Ringdown (PLAR) on SCCP phones, assign a null partition to the directory number that you want to use as the PLAR destination.

Note

Each PLAR destination directory number must have its own unique partition. Do not add any other directory numbers to the null partition that you created for the PLAR destination.

Before You Begin

Assign Partitions to Calling Search Spaces, on page 580

Procedure

Step 1  In Cisco Unified CM Administration, choose Call Routing > Directory Number.
Step 2  Click Find and select the directory number that you want to use as the PLAR destination.
Step 3  In the Route Partition field, select a partition that you created for your PLAR destination.
Step 4  In the Calling Search Space drop-down list box, select the CSS that includes both the null partition and the destination device.
Step 5  Click Save.

What to Do Next

Configure Translation Pattern for Private Line Automatic Ringdown on Phones, on page 582
Configure Translation Pattern for Private Line Automatic Ringdown on Phones

To configure Private Line Automatic Ringdown (PLAR) on phones, configure a null translation pattern and assign the PLAR destination number to that translation pattern.

**Before You Begin**

Assign Partition to the Private Line Automatic Ringdown Destination, on page 581

**Procedure**

1. In Cisco Unified CM Administration, choose Call Routing > Translation Pattern.
2. Click Add New to create a new translation pattern.
3. Leave the Translation Pattern field empty.
4. From the Partition drop-down list box, select the new partition that you created for the null translation pattern.
5. From the Calling Search Space drop-down list box, select a calling search space that includes both the new partition and the partition for the PLAR destination device.
6. In the Called Party Transformation Mask field, enter the PLAR destination directory number.
7. Click Save.

Private Line Automatic Ringdown Configuration Task Flow for SIP Phones

Perform these tasks to configure Private Line Automatic Ringdown (PLAR) on SIP Phones.

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1 Create SIP Dial Rule for Private Line Automatic Ringdown, on page 582</td>
<td>Create a SIP dial rule for PLAR.</td>

Secure Tone

Secure Tone Overview

The Secure Tone feature can configure a phone to play a secure indication tone when a call is encrypted. The tone indicates that the call is protected and that confidential information may be exchanged. The 2-second tone comprises three long beeps. If the call is protected, the tone begins to play on a protected phone as soon as the called party answers.

When the call is not protected, the system plays a nonsecure indication tone, which comprises six short beeps, on a protected phone.

Note

Only callers on protected phones can hear secure and nonsecure indication tones. Callers on phones that are not protected cannot hear these tones.

The secure and nonsecure indication tones are supported on the following types of calls:

- Intracluster to IP-to-IP calls
- Intercluster protected calls
- IP-to-Time-Division-Multiplexing (TDM) calls through a protected MGCP E1 PRI gateway

For video calls, the system plays secure and nonsecure indication tones on protected devices.

Note

For video calls, the user may first hear secure indication tone for the audio portion of the call and then nonsecure indication tone for overall nonsecure media.
A lock icon that is displayed on a Cisco Unified IP Phone indicates that the media are encrypted, but does not indicate that the phone has been configured as a protected device. However, the lock icon must be present for a protected call to occur.

**Protected Device Gateways**

You can configure only supported Cisco Unified IP Phones and MGCP E1 PRI gateways as protected devices in Cisco Unified Communications Manager.

Cisco Unified Communications Manager can also direct an MGCP Cisco IOS gateway to play secure and nonsecure indication tones when the system determines the protected status of a call.

Protected devices provide these functions:

- You can configure phones that are running SCCP or SIP as protected devices.
- Protected devices can call nonprotected devices that are either encrypted or nonencrypted. In such cases, the call specifies nonprotected and the system plays nonsecure indication tone to the phones on the call.
- When a protected phone calls another protected phone, but the media is not encrypted, the system plays a nonsecure indication tone to the phones on the call.

**Secure Tone Prerequisites**

- You must configure the MGCP gateway for SRTP encryption. Configure the gateway with this command: `mgcp package-capability srtp-package`.
- The MGCP gateway must specify an Advanced IP Services or Advanced Enterprise Services image (for example, c3745-adventerprisek9-mz.124-6.T.bin).

**Secure Tone Configuration Task Flow**

**Before You Begin**

- Review Secure Tone Prerequisites, on page 586

**Procedure**

Configure Phone As a Protected Device

**Before You Begin**

Generate a Phone Feature List, on page 7

**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose Device > Phone. The Find and List Phones window is displayed.

**Step 2**
Click the phone for which you want to set secure tone parameters. The Phone Configuration window is displayed.

**Step 3**
From the Softkey Template drop-down list in the Device Information portion of the window, choose Standard Protected Phone. Note: You must use a new softkey template without supplementary service softkeys for a protected phone.

**Step 4**
Set the Join Across Lines option to Off.

**Step 5**
Check the Protected Device check box.

**Step 6**
From the Device Security Profile drop-down list (in the Protocol Specific Information portion of the window), choose a secure phone profile that is already configured in the Phone Security Profile Configuration window (System > Security Profile > Phone Security Profile).

**Step 7**
Click Save.

**What to Do Next**

Perform one of the following procedures:

- Configure Directory Number for Secure Tones, on page 587
- Configure MGCP E1 PRI Gateway, on page 588

**Configure Directory Number for Secure Tones**

**Before You Begin**

Configure Phone As a Protected Device, on page 587

---

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 5</strong> (Optional) Configure MGCP E1 PRI Gateway, on page 588</td>
<td>This configuration allows the system to pass protected status of the call between Cisco Unified IP Phone endpoints and the protected PBX phones that connect to the MGCP gateway.</td>
</tr>
</tbody>
</table>
**Procedure**

**Step 1** Locate the Association section on the Phone Configuration window.

**Step 2** Select Add a new DN.

The Directory Number Configuration window is displayed.

**Step 3** Specify a directory number in the Directory Number field.

**Step 4** In the Multiple Call/Call Waiting Settings on Device [device name] area of the Directory Number Configuration window, set the Maximum Number of Calls and Busy Trigger options to 1.

**Step 5** Configure the remaining fields in the Directory Number Configuration window. See the online help for more information about the fields and their configuration options.

**Step 6** Click Save.

**What to Do Next**

*Configure Secure Tone Service Parameters*, on page 588

### Configure Secure Tone Service Parameters

**Procedure**

**Step 1** In Cisco Unified Communications Manager Administration, choose System > Service Parameters.

**Step 2** From the Server drop-down list box, choose a server.

**Step 3** From the Service drop-down list box, choose Cisco CallManager.

**Step 4** In the Clusterwide Parameters (Feature - Secure Tone) area, set the Play Tone to Indicate Secure/Non-Secure Call Status option to True.

**Step 5** Click Save.

### Configure MGCP E1 PRI Gateway

If you want the system to pass the protected status of the call between Cisco Unified IP Phone endpoints and the protected PBX phones that connect to the MGCP gateway, follow these steps:

**Before You Begin**

*Configure Phone As a Protected Device*, on page 587

**Procedure**

**Step 1** In Cisco Unified Communications Manager Administration, choose Device > Gateway.

**Step 2** Specify the appropriate search criteria and click Find.

**Step 3** Choose a MGCP gateway.
The Gateway Configuration window appears.

**Step 4** Set Global ISDN Switch Type to Euro.

**Step 5** Configure the fields in the Gateway Configuration window. See the online help for more information about the fields and their configuration options.

**Step 6** Click Save.

**Step 7** Click the Endpoint icon that appears to the right of subunit 0 in the window. The Enable Protected Facility IE check box appears. Check this check box.

Client Matter Codes and Forced Authorization Codes Overview

With client matter codes (CMCs) and forced authorization codes (FACs), you can effectively manage call access and accounting. CMCs assist with call accounting and billing for clients, and FACs regulate the types of calls that certain users can place.

CMCs force the user to enter a code; this action specifies that the call relates to a specific client matter. You can assign client matter codes to customers, students, or other populations for call accounting and billing purposes. FACs force the user to enter a valid authorization code that is assigned at a certain access level before the call is completed.

Client Matter Codes and Forced Authorization Codes Prerequisites

- Cisco Unified IP Phones that are running SCCP and SIP support CMC and FAC.
- The CMC and FAC tones play only on Cisco Unified IP Phones that are running SCCP or SIP; TAPI/JTAPI ports; and MGCP FXS ports.

Client Matter Codes and Forced Authorization Codes Configuration Task Flow

You can implement CMCs and FACs separately or together. For example, you may authorize users to place certain classes of calls, such as long distance calls, and also assign the class of calls to a specific client. CMC and FAC tones sound the same to the user; if you configure both codes, the feature prompts the user to enter the FAC after the first tone and enter the CMC after the second tone.

### Client Matter Codes and Forced Authorization Codes Interactions

**Table 43: Client Matter Codes and Forced Authorization Codes Interactions**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>CDR Analysis and Reporting (CAR)</td>
<td>CDR Analysis and Reporting (CAR) allows you to run reports that provide call details for client matter codes (CMCs), forced authorization codes (FACs), and authorization levels.</td>
</tr>
<tr>
<td>CTI, JTAPI, and TAPI applications</td>
<td>In most cases, your system can alert a CTI, JTAPI, or TAPI application that the user must enter a code during a call. When a user places a call, creates an ad hoc conference, or performs a consult transfer through a CMC- or FAC-enabled route pattern, the user must enter a code after receiving the tone. When a user redirects or blind transfers a call through a CMC- or FAC-enabled route pattern, the user receives no tone, so the application must send the codes to Cisco Unified Communications Manager. If your system receives the appropriate codes, the call connects to the intended party. If your system does not receive the appropriate codes, Cisco Unified Communications Manager sends an error to the application that indicates which code is missing.</td>
</tr>
</tbody>
</table>
Cisco Web Dialer

Web Dialer supports CMCs and FACs in the following ways:

- A user can enter the destination number in the dial text box of the WD HTML page or SOAP request, and then manually enter the CMC or FAC on the phone.
- A user can enter the destination number followed by the FAC or CMC in the dial text box of the WD HTML page or SOAP request.

For example, if the destination number is 5555, the FAC is 111, and the CMC is 222, a user can make a call by dialing 5555111# (FAC), 5555222# (CMC), or 5555111222# (CMC and FAC).

**Note**

- **WebDialer does not handle any validation for the destination number. The phone handles the required validation.**
- **If a user does not provide a code or provides the wrong code, the call will fail.**
- **If a user makes a call from the WebApp with a DN that contains special characters, the call goes successfully after stripping the special characters. The same rules do not work in SOAP UI.**

Speed Dial and Abbreviated Speed Dial

You can use speed dial to reach destinations that require a FAC, CMC, dialing pauses, or additional digits (such as a user extension, a meeting access code, or a voicemail password). When the user presses the configured speed dial, the phone establishes the call to the destination number and sends the specified FAC, CMC, and additional digits with dialing pauses inserted.

### Client Matter Codes and Forced Authorization Codes Restrictions

**Table 44: Client Matter Codes and Forced Authorization Codes Restrictions**

<table>
<thead>
<tr>

Custom Phone Rings

This chapter describes how to configure and upload customized phone ring types for your Cisco Unified IP Phones.

- Custom Phone Rings Overview, page 601
- Custom Phone Rings Prerequisites, page 601
- Custom Phone Rings Configuration Task Flow, page 602

Custom Phone Rings Overview

Custom Phone Rings allows you to create customized phone rings and upload the customized files to the Cisco Unified Communications Manager TFTP server where they can be accessed by Cisco Unified IP Phones. Cisco Unified IP Phones ship with default ring types that are implemented in hardware: Chirp1 and Chirp2. In addition, Cisco Unified Communications Manager provides the capability of uploading the following files to phones:

**PCM Files**
Cisco Unified Communications Manager provides a default set of phone ring sounds that are implemented in software as pulse code modulation (PCM) audio files. Each PCM file specifies a single ring type.

**Ringlist.xml File**
The Ringlist.xml file describes the list of ring options that are available for phones.

You can upload customized PCM audio files, such as custom ring tones and call back tones, as well as the modified Ringlist.xml file to the TFTP directory in Cisco Unified Communications Manager.

Custom Phone Rings Prerequisites

The following prerequisites apply to Custom Phone Rings:

- In order to upload your custom phone rings, the Cisco TFTP service must be running.

<td>Step 4</td>
<td>Click <em>Restart</em>.</td>
</tr>
</tbody>
</table>

**PCM File Format Requirements**

PCM files for phone rings must meet a set of requirements for proper playback on Cisco Unified IP Phones. When creating or modifying your PCM files, you can use any standard audio editing packages that support the following file format requirements:

- Raw PCM
- 8000 samples per second
- 8 bits per sample
- mu-law compression
- Maximum ring size: 16080 samples
• Number of samples in the ring must be evenly divisible by 240
• Ring starts and ends at the zero crossing

Ringlist.xml File Format Requirements

The Ringlist.xml file defines an XML object that contains a list of phone ring types. Each ring type contains a pointer to the PCM file that is used for that ring type and the text that will display on the Ring Type menu on a Cisco Unified IP Phone for that ring.

The CiscoIPPhoneRinglist XML object uses the following simple tag set to describe the information:

```xml
<CiscoIPPhoneRinglist>  <Ring>
    <DisplayName/>
    <FileName/>
  </Ring>
</CiscoIPPhoneRinglist>
```

The following characteristics apply to the definition names:

• **DisplayName** defines the name of the custom ring for the associated PCM file that will display on the Ring Type menu of the Cisco Unified IP Phone.

• **FileName** specifies the name of the PCM file for the custom ring to associate with DisplayName.

**Tip**
The DisplayName and FileName fields must not exceed 25 characters.

The following example shows a Ringlist.xml file that defines two phone ring types:

```xml
<CiscoIPPhoneRinglist>  <Ring>
    <DisplayName>Analog Synth 1</DisplayName>
    <FileName>Analog1.raw</FileName>
  </Ring>
  <Ring>
    <DisplayName>Analog Synth 2</DisplayName>
    <FileName>Analog2.raw</FileName>
  </Ring>
</CiscoIPPhoneRinglist>
```

**Tip**
You must include the required DisplayName and FileName for each phone ring type. The Ringlist.xml file can include up to 50 ring types.
Music On Hold

- Music On Hold Overview, page 605
- Music On Hold Prerequisites, page 609
- Music On Hold Configuration Task Flow, page 609
- Music On Hold Interactions and Restrictions, page 635
- Music On Hold Troubleshooting, page 638

Music On Hold Overview

Use the integrated Music On Hold (MOH) feature to place on-net and off-net users on hold with music from a streaming source. This source makes music available to any on-net or off-net device that you place on hold. On-net devices include station devices and applications that an interactive voice response (IVR) or call distributor places on hold, consult hold, or park hold. Off-net users include those users who are connected through Media Gateway Control Protocol (MGCP) or Skinny Call Control Protocol (SCCP) gateways, Cisco IOS H.323 gateways, and Cisco IOS Media Gateway Control Protocol gateways. The system also makes the Music On Hold feature available for Cisco IP POTS phones that connect to the Cisco IP network through Foreign Exchange Station (FXS) ports on Cisco IOS H.323 or MGCP and for Cisco MGCP or SCCP gateways.

Start Cisco Unified Communications Manager to create a media resource manager. Music On Hold server registers to the media resource manager with its music on hold resources. Music On Hold server is a software application that provides music on hold audio sources and connects a music on hold audio source to multiple streams.

When an end device or feature places a call on hold, Cisco Unified Communications Manager connects the held device to a music resource. When the held device is retrieved, it disconnects from the music on hold resource and resumes normal activity.

Caller-Specific Music On Hold

For SIP calls that a phone receives over the SIP trunk, Cisco Unified Communications Manager can use a different MOH audio source.

An external application, such as the Cisco Unified Customer Voice Portal (CVP) contact center solution, determines the most appropriate MOH audio source based on the caller ID, dialed number, or IVR interaction when a call is received from the public switched telephone network (PSTN).

**Increased Capacity of IP Voice Media Streaming Application and Expanded MOH Audio Source**

Cisco IP Voice Media Streaming application is installed automatically when you install Cisco Unified Communications Manager. Activate this application to enable the Music On Hold (MOH) feature.

With this release, the capacity of Cisco Unified Communications Manager to support unique and concurrent MOH audio sources, while the Music On Hold service is running on the MOH server, is increased from 51 to 501. The MOH audio sources are numbered from 1 to 501 with the fixed MOH audio source remaining at the number 51.

The fixed MOH device cannot use an audio source that connects through a USB MOH device, because Cisco Unified Communications Manager does not support USB when running on VMware. Use of the fixed MOH USB device is not supported on VMware. However, provision the external sound device for use with deployments that utilize Cisco Unified Survivable Remote Site Telephony (SRST) multicast MOH.

You can configure each MOH audio source to use a custom announcement as an initial greeting and/or an announcement that is played periodically to callers who are hearing the music. Cisco Unified Communications Manager provides 500 custom announcements that you can use on one or multiple MOH audio sources. These announcements are not distributed between the Cisco Unified Communications Manager servers within a cluster. You have to upload these custom announcement files to each server that provides the MOH and announcement services. You must also upload each custom music file for MOH audio sources to each server.

**Performance Impact of Media Devices with Services**

The Cisco IP Voice Media Streaming application runs as a service for four media devices—annunciator (ANN), software conference bridge, Music On Hold (MOH), and software media termination point. Activate this service on a Cisco Unified Communications Manager server as coresident with call processing. When you activate this service, ensure that you configure these media devices for limited capacity to avoid any impact on the call processing. The default settings for the media devices are defined based on this coresident operation. You can adjust these settings by reducing the use of one or more media devices to increase other settings.

For example, if you are not using software media termination point devices, you can choose the Run Flag setting for the SW MTP to False, select System > Service Parameters > Cisco IP Voice Media Streaming App service > MTP Parameters, and add the MTP Call Count setting to Media Resource > MOH Server > Maximum Half Duplex Streams configuration. Depending on the call traffic, you can modify the default settings. However, monitor the server performance activity for CPU, memory, and IO wait. For higher capacity clusters, such as the ones using 7500 user OVA configuration, it is possible to increase the default media device settings for Call Count by 25%.

For installations where you expect high usage of the media devices, such as Music On Hold, or where high call volumes require higher number of media connections, activate the Cisco IP Voice Media Streaming application service on one or more of the Cisco Unified Communications Manager servers which do not have call processing activated. Activating this service limits the impact of media device usage to other services, such as call processing. Then, you can increase the configuration settings for maximum number of calls for the media devices.

When you activate Cisco IP Voice Media Streaming application as co-resident with Cisco Unified Communications Manager service, it can impact call processing performance. To increase the capacity settings
for Music On Hold or annunciator from the default settings, it is suggested to activate Cisco IP Voice Media Streaming application on a server without activating Cisco Unified Communications Manager. The CPU performance is impacted by MOH when active callers are on hold or when multicast MOH audio streams are configured.

Table 45: General Performance Results

<table>
<thead>
<tr>
<th>Configuration Notes</th>
<th>CPU Performance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dedicated MOH server, 1000 held calls, 500 MOH sources with greeting and periodic announcements.</td>
<td>25–45% (7500 user OVA configuration)</td>
</tr>
<tr>
<td>Native call queuing with dedicated MOH server and annunciator server, 1000 queued calls, 500 MOH sources with greeting and periodic announcements. An annunciator can play up to 300 simultaneous greeting announcements.</td>
<td>25–45% (7500 user OVA configuration)</td>
</tr>
<tr>
<td>Dedicated MOH server, 500 held calls, 500 MOH sources with greeting and periodic announcements.</td>
<td>15–35% (7500 user OVA configuration)</td>
</tr>
</tbody>
</table>

Table 46: Extrapolated Recommendations

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Recommendation Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>When Cisco IP Voice Media Streaming application is co-resident with Cisco Unified Communications Manager on 2500 OVA (moderate call processing).</td>
<td>MOH: 500 held callers, 100 MOH sources, and 48 to 64 annunciator callers.</td>
</tr>
<tr>
<td>When Cisco IP Voice Media Streaming application is a dedicated server on 2500 OVA.</td>
<td>MOH: 750 held callers, 250 MOH sources, and 250 annunciator callers.</td>
</tr>
<tr>
<td>When Cisco IP Voice Media Streaming application is co-resident with Cisco Unified Communications Manager on 7500/10K OVA (moderate call processing).</td>
<td>MOH: 500 held callers, 250 MOH sources, and 128 annunciator callers.</td>
</tr>
<tr>
<td>When Cisco IP Voice Media Streaming application is a dedicated server on 7500/10K OVA.</td>
<td>MOH: 1000 held callers, 500 MOH sources, and 300-700 annunciator callers (with 1 MOH codec). <strong>Note</strong> Reduce annunciator to 300 for two MOH codecs.</td>
</tr>
</tbody>
</table>

---

**Note** These recommendations are specific to MOH/ANN devices. If you combine these devices with the software media termination point (MTP) and call forward busy (CFB) devices, reduce the limits to provide streams.
Configuration Limitations for Capacity Planning

The Cisco IP Voice Media Streaming application and Self Provisioning IVR services use a media kernel driver to create and control Real-time Transfer Protocol (RTP) streams. This media kernel driver has a capacity of 6000 streams. These streams allow the media devices and IVR to make resource reservations.

These reservations are based on the following capacity calculations:

<table>
<thead>
<tr>
<th>Media Device</th>
<th>Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Annunciator</td>
<td>(Call Count service parameter) * 3</td>
</tr>
<tr>
<td></td>
<td>Where 3 indicates total of receiving (RX) and transmitting (TX) calls for</td>
</tr>
<tr>
<td></td>
<td>endpoint and 1 for .wav file.</td>
</tr>
<tr>
<td>Software Conference Bridge</td>
<td>(Call Count service parameter) * 2</td>
</tr>
<tr>
<td></td>
<td>Where 2 indicates total streams of RX and TX endpoints.</td>
</tr>
<tr>
<td>Software Media Termination</td>
<td>(Call Count service parameter) * 2</td>
</tr>
<tr>
<td>Point</td>
<td>Where 2 indicates total streams of RX and TX endpoints.</td>
</tr>
<tr>
<td>Music On Hold</td>
<td>((Maximum Half Duplex Streams) * 3) + (501 * 2 * [number of enabled MOH</td>
</tr>
<tr>
<td></td>
<td>codecs])</td>
</tr>
<tr>
<td></td>
<td>Where:</td>
</tr>
<tr>
<td></td>
<td>• (Maximum Half Duplex Streams) is a configuration setting on the MOH</td>
</tr>
<tr>
<td></td>
<td>device configuration administration web page.</td>
</tr>
<tr>
<td></td>
<td>• 3 indicates total streams of RX, TX, and greeting announcement .wav</td>
</tr>
<tr>
<td></td>
<td>file.</td>
</tr>
<tr>
<td></td>
<td>• 501 indicates the maximum number of Music On Hold (MOH) sources.</td>
</tr>
<tr>
<td></td>
<td>• 2 indicates music .wav stream and possible multicast TX stream.</td>
</tr>
<tr>
<td></td>
<td>• [number of enabled MOH codecs] is based on how many MOH codecs are</td>
</tr>
<tr>
<td></td>
<td>enabled in the Cisco IP Voice Media Streaming application service</td>
</tr>
<tr>
<td></td>
<td>parameters.</td>
</tr>
<tr>
<td>Self Provisioning IVR Service</td>
<td>(500 * 2)</td>
</tr>
<tr>
<td></td>
<td>Where 500 indicates callers, and 2 indicates total streams from RX and TX</td>
</tr>
<tr>
<td></td>
<td>streams.</td>
</tr>
</tbody>
</table>

Hence, to enable MOH to support a maximum of 1000 callers, use the following equation: 1000 * 3 + 501 * 2 * 1 = 4002 driver streams with one enabled codec and 1000 * 3 + 501 * 2 * 2 = 5004 with two enabled codecs. Reduce the remaining devices and deactivate the Self Provisioning IVR service to limit total reservations to 6000, which allows the MOH device to make these reservations. It may also require that you do not activate the Self Provisioning IVR service on the same server with Cisco IP Voice Media Streaming application.

If configuration settings of the media devices exceed the capacity of the media device driver, the media devices that register with the device driver first will be able to reserve their required stream resources. The media
devices that register later are restricted to fewer than requested stream resources. The later registered media devices result in logging some alarm messages and automatically reducing the call count for the restricted media device.

Note

A media kernel driver with a capacity of 6000 streams might not support that many simultaneous media device connections.

Music On Hold Prerequisites

- A Cisco Unified Communications Manager system that is configured to use the Music On Hold (MOH) streams that the MOH server provides when a call is placed on hold.

- Before you configure multicast, ensure that you configure MOH server and audio sources. If you want to use fixed audio source, configure it before you configure multicast.

Music On Hold Configuration Task Flow

Before You Begin

</tbody>
</table>

### Enable Music on Hold

When you install Cisco Unified Communications Manager, the Cisco IP Voice Media Streaming application is installed automatically. However, you need to enable the Music On Hold feature to use it.

**Note**

During installation, Cisco Unified Communications Manager installs and configures a default Music On Hold audio source. Music On Hold functionality can proceed by using the default audio source.

### Procedure

**Step 1**
In Cisco Unified Serviceability, choose [Application > Serviceability Webpage](#), and enter a valid username and password.

**Step 2**
Choose [Tools > Service Activation](#).
The Service Activation window appears.

**Step 3**
Choose a server from the [Server](#) drop-down list.

**Step 4**
From the CM Services section, check the [Cisco IP Voice Media Streaming App](#) check box. The Music On Hold service is enabled.

### What to Do Next

[Configure Music On Hold Server](#), on page 611

### Configure Music On Hold Server

**Before You Begin**

- [Enable Music on Hold](#), on page 611.
- Make sure one or multiple Music On Hold (MOH) servers are available.

**Note**

The Cisco Unified Communications Manager MOH server is automatically added when the Cisco IP Voice Media Streaming Application service is activated.
Procedure

Step 1  In the Cisco Unified CM Administration, choose Media Resources > Music On Hold Server. The Find and List Music On Hold Servers window appears.

Step 2  Choose the two drop-down list boxes to search for a music on hold server.

Step 3  Choose the Music On Hold server that you want to update. The Music On Hold (MOH) Server Configuration window appears.

Step 4  Configure the fields from the Music On Hold (MOH) Server Configuration window. See the Related Topics section for more information about the fields and their configuration options.

Step 5  Click Save. The Music On Hold server is updated in the database. When a server is updated, Cisco Unified Communications Manager adds the media termination point, conference bridge, annunciator, and Music On Hold devices to the database.

What to Do Next

Configure Music On Hold Audio. Perform the following procedures:

- Upload Music On Hold Audio File, on page 616
- Convert Music On Hold Files, on page 616
- Configure Music On Hold Audio Source, on page 617

<td>Device is trusted</td>
<td>If the device is trusted, a green checkmark appears.</td>
</tr>
<tr>
<td>Host Server</td>
<td>Displays the IP address of the existing host server.</td>
</tr>
<tr>
<td>Music On Hold Server Name</td>
<td>Enter a unique name for the MOH server. The name can comprise up to 15 characters. You can form the name by using letters, numbers, spaces, dashes, dots (periods), and underscores.</td>
</tr>
</tbody>
</table>
Enter a description for the MOH server. The description can include up to 50 characters. Ensure that this field does not contain ampersand (&), double quotes ("), brackets ([]), less than (<), greater than (>%), or the percentage (%).

Choose a device pool for the Music On Hold server from the drop-down arrow and choose a device pool from the list that appears.

Use locations to implement call admission control (CAC) in a centralized call-processing system. CAC enables you to regulate audio quality and video availability by limiting the amount of bandwidth that is available for audio and video calls over links between locations. The location specifies the total bandwidth that is available for calls to and from this location.

From the drop-down list, choose the appropriate location for this MOH server.

The **Hub_None** location field indicates that the locations feature does not keep track of the bandwidth that this MOH server consumes. The **Phantom** location field indicates a location that enables successful CAC across intercluster trunks that use H.323 or SIP protocol.

To configure a new location, use the **System > Location** menu option.

Enter a number in this required field for the maximum number of unicast Music On Hold streams that this Music On Hold server supports. This value determines the maximum number of devices that can be on unicast Music On Hold that is streamed from this Music On Hold server at any given time. Valid values range from 0 to 1000.

Enter a number in this required field for the maximum number of multicast Music On Hold streams that this Music On Hold server supports. This value determines the maximum number of devices that can be on multicast music on hold that is streamed from this Music On Hold server at any given time. Valid values range from 1 to 999999.

Enter the device name of the fixed audio source device. This device serves as the per-server override that is used if the server has a special sound device installed.
From the drop-down list, enable or disable whether Cisco Unified Communications Manager inserts a trusted relay point (TRP) device with this media endpoint. Choose one of the following values:

- **Off**—Disables the use of a TRP with this device.
- **On**—Enables the use of a TRP with this device.

A trusted relay point (TRP) device designates an Media Transfer Protocol (MTP) or transcoder device that is labeled as Trusted Relay Point.

Cisco Unified Communications Manager places the TRP closest to the associated endpoint device if more than one resource is needed for the endpoint (for example, a transcoder or RSVP Agent).

If both TRP and MTP are required for the endpoint, TRP is used as the required MTP.

If both TRP and RSVP Agent are needed for the endpoint, Cisco Unified Communications Manager first tries to find an RSVP Agent that can also be used as a TRP.

If both TRP and transcoder are needed for the endpoint, Cisco Unified Communications Manager first tries to find a transcoder that is also designated as a TRP.

<table>
<thead>
<tr>
<th>Field</th>

| Run Flag               | Use this required field to choose a run flag for the Music On Hold server.  |
|                        | To do so, click the drop-down arrow and choose Yes or No. Choosing No disables the music on hold server. |

**Table 48: Multicast Audio Source Information**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Multicast Audio Sources on this MOH Server</td>
<td>Check or uncheck this check box to enable or disable the multicast of audio sources for this Music On Hold server.</td>
</tr>
<tr>
<td><strong>Note</strong></td>
<td>If this MOH server belongs to a multicast media resource group, a message asks you to enable multicast on this MOH server or to update the specified media resource groups either by removing this MOH server or by changing the multicast field of each listed group.</td>
</tr>
</tbody>
</table>
If multicast support is needed, enter the base multicast IP address in this field. Valid IP addresses for multicast range from 224.0.1.0 to 239.255.255.255.

**Note**  
IP addresses between 224.0.1.0 and 238.255.255.255 are in the reserved range of IP multicast addresses for public multicast applications. Use of these addresses may interfere with existing multicast applications on the Internet. We strongly recommend using IP addresses that are in the range that is reserved for administratively controlled applications on private networks (239.0.0.0 – 239.255.255.255).

If multicast support is needed, enter the base multicast port number in this field. Valid multicast port numbers include even numbers that range from 16384 to 32766.

**Note**  
Use multicast by incrementing IP address as the preferred method in firewall situations. This results in a unique IP address for each multicast audio source and helps to avoid network saturation.

---

### Table 49: Selected Multicast Audio Sources

<table>

**Music On Hold Audio Source Configuration**

- [Upload Music On Hold Audio File](#), on page 616
- [Convert Music On Hold Files](#), on page 616
- [Configure Music On Hold Audio Source](#), on page 617
Upload Music On Hold Audio File

When you upload an audio file, it is available for use as a Music On Hold audio source. If you use the Media Resources > Music On Hold Audio Source menu option to add a new audio source, the addition makes the newly uploaded audio file available in the MOH Audio Source File drop-down list.

**Note**
You must upload Music On Hold audio source files to each MOH server.

**Before You Begin**
Configure Music On Hold Server, on page 611

**Procedure**

**Step 1**
In the Cisco Unified CM Administration, choose Media Resources > MOH Audio File Management. The Music On Hold Audio File Management window appears.

**Step 2**
Click Upload File. The Upload File popup window appears.

**Step 3**
If you know the path to a file that specifies an audio file, enter the path in the File field. If you do not know the path and file name, search for the audio file by clicking Browse to the right of the File field. After you find the audio file, click the desired audio file and click Open. The path to the chosen audio file appears in the File field of the Upload File popup window.

**Step 4**
Click Upload to upload the specified audio file. After the audio file gets uploaded, the Upload Result window shows the result of the upload.

**Note**
The uploading procedure uploads the file to the Cisco Unified Communications Manager server and performs audio conversions to create codec-specific audio files for MOH. Depending on the size of the original file, processing may take several minutes to complete.

**Note**
Uploading an audio source file to an MOH server uploads the file only to one MOH server. You must upload an audio source file to each MOH server or each server in a cluster by using Cisco Unified Communications Manager Administration on each server. MOH audio source files do not automatically propagate to other MOH servers in a cluster.

**Step 5**
(Optional) Click Close to close the Upload Result window.

**What to Do Next**

- Convert Music On Hold Files, on page 616
- Configure Music On Hold Audio Source, on page 617

**Convert Music On Hold Files**

When you import an audio source file, Cisco Unified Communications Manager processes the file and converts the file to the proper formats for use by the Music On Hold server.
These are some examples of a valid input audio source files:

- 16-bit PCM .wav file
- Stereo or mono
- Sample rates of 48 kHz, 44.1 kHz, 32 kHz, 16 kHz, or 8 kHz

**Before You Begin**

Upload Music On Hold Audio File, on page 616

**What to Do Next**

- Configure Music On Hold Audio Source, on page 617

**Configure Music On Hold Audio Source**

Perform the following procedure to add or update a Music On Hold audio source, to associate an existing audio source with an audio stream number, or to upload a new custom audio source.

**Note**

If a new version of an audio source file is available, perform the update procedure to use the new version.

**Procedure**

**Step 1**

From Cisco Unified CM Administration, choose Media Resources > Music On Hold Audio Source. The Find and List Music On Hold Audio Sources window appears.

**Step 2**

Enter search criteria to update an existing audio source. To list all records in the database, ensure that the dialog box is empty. Click Find.

**Step 3**

Click Add New to add a new Music On Hold audio source.

**Step 4**

Configure the fields in the Music On Hold Audio Source Configuration window.
• For the Audio Stream Number, choose from a list of available MOH source numbers that are not already provisioned. You can provision Audio source number 51 in the MOH Fixed Audio Source menu.

• The MOH Audio Source File drop-down list displays all the MOH source files that have been uploaded and are available for assignment to an MOH Audio Stream Number.

• The MOH Audio Source Name is available to provide a description for this MOH Audio Source Number.

• The Initial Announcement is optional and the drop-down list shows the available announcements. You can use the Announcements menu to add new custom greeting announcements or change the audio .wav file that is associated with an announcement.

• If you have to use the MOH Audio Source with the Native Call Queuing feature, the Initial Announcement may be configured to be played before routing to a hunt member. Use the Played before routing to Hunt Member option in the Native Call Queuing feature by using an Annunciator. If you select the Play when call is queued option for configuring the Initial Announcement or if you are not using the MOH Audio Source with Native Call Queuing, the initial announcement is played to the queued or held caller by the MOH device when the caller is queued or placed on hold.

• Use the Periodic Announcement option to choose an announcement to be played on a periodic basis while callers are listening to the MOH Audio Source File.

• Use the Locale Announcement configuration to choose which language to be used for the announcements if you have provisioned multiple language announcements. A MOH Audio Source supports only one language (locale).

Step 5  Click Save.
The list box at the bottom of the window shows the new Music On Hold audio source. The MOH Audio Source File Status pane shows the MOH audio translation status for the added source.

Audio Source Fields for Music On Hold

</thead>
<tbody>
<tr>
<td>(list of MoH audio sources)</td>
<td>This list box shows the MOH audio source that you add. Select the audio stream number of an MOH audio source to configure that MoH audio source. Audio source ID is an ID that represents an audio source in the Music On Hold server. The audio source can include either a file on a disk or a fixed device from which a source stream Music On Hold server obtains the streaming data. An MOH server can support up to 51 audio source IDs. Each audio source, represented by an audio source ID, can stream as unicast and multicast mode, if needed. If you select <code>&lt;None&gt;</code>, the system default MoH audio source service parameter (Default Network Hold MoH Audio Source ID) is used for the MoH audio source.</td>
</tr>
<tr>
<td>Upload File</td>
<td>To upload an MOH audio source file that does not appear in the drop-down list, click <strong>Upload File</strong>. In the <strong>Upload File</strong> window, either enter the path of an audio source file or navigate to the file by clicking <strong>Browse</strong>. After you locate the audio source file, click the <strong>Upload File</strong> button to complete the upload. After the audio file gets uploaded, the Upload Result window displays the result of the upload. Click <strong>Close</strong> to close this window. When you upload a file, the file is uploaded to the Cisco Unified Communications Manager server and performs audio conversions to create codec-specific audio files for MOH. Depending on the size of the original file, processing may take several minutes to complete. Uploading an audio source file to an MOH server uploads the file only to one MOH server. You must upload an audio source file to each MOH server in a cluster by using Cisco Unified Communications Manager Administration on each server. MOH audio source files do not automatically propagate to other MOH servers in a cluster.</td>
</tr>
</tbody>
</table>

Configure Fixed Music On Hold Audio Source

The Music On Hold server supports one fixed-device stream source in addition to the file stream sources. This source represents the fixed audio source, which you configure in the **Fixed MOH Audio Source Configuration** window. The fixed audio source originates from a fixed device that uses the local computer audio driver.

For each cluster, you may define one fixed audio source. You must set up the fixed audio source that is configured per cluster on each MOH server. To do so, connect a Cisco USB MOH sound adapter (which must be ordered separately) into the USB port for each MOH server in the cluster that you want to provide the fixed audio source.
For virtual servers, the fixed Music On Hold device cannot specify an audio source that connects through a USB, because Cisco Unified Communications Manager does not support USB when running on VMware. However, internal Music On Hold is supported on VMware.

Before You Begin
Configure Music On Hold Audio. Perform the following procedures:

- Upload Music On Hold Audio File, on page 616
- Convert Music On Hold Files, on page 616
- Configure Music On Hold Audio Source, on page 617

Procedure

Step 1
In the Cisco Unified CM Administration, choose Media Resources > Fixed MOH Audio Source. The Fixed MOH Audio Source Configuration window appears.

Step 2
Configure the fields in the Fixed MOH Audio Source Configuration window. See the Related Topics section for more information about the fields and their configuration options.

Step 3
Click Save.

What to Do Next
Configure Media Resource Group, on page 624

Configure Media Resource Group

Media Resource Group is a logical grouping of media servers. You may associate a media resource group with a geographical location or a site, as required. You can also form media resource groups to control server usage, or unicast or multicast service type.

Before You Begin

Configure Music On Hold Audio. Perform the following procedures:

• Upload Music On Hold Audio File, on page 616
• Convert Music On Hold Files, on page 616
• Configure Music On Hold Audio Source, on page 617

(Optional) Configure Fixed Music On Hold Audio Source, on page 621

Procedure

Step 1 In the Cisco Unified CM Administration, choose Media Resources > Media Resource Group.

Step 2 Click Add New if you have to configure a new Media Resource Group. The Media Resource Group Configuration window appears.

Step 3 Enter search parameters to find a Media Resource Group if you have to configure an existing Media Resource Group. The system displays the records that match all the criteria in the Media Resource Group Configuration window.

Step 4 Configure the following fields in the Media Resource Group Configuration window:

• Name—Enter a name for the media resource group.
• Available Media Resources—From this list, select one or multiple media resources.
• Selected Media Resources—Using the arrow key, select one or multiple media resources to use for multicasting.

Step 5 Click Save. This media resource group is then configured to be a member of a Media Resource Group List (MRGL). The MRGL is associated with devices, such as phones.

What to Do Next

Configure Media Resource Group List, on page 624

Configure Media Resource Group List

Media Resource Group List lists the prioritized media resource groups. An application can select required media resources from among ones that are available according to the priority order that is defined in a media resource group list.
• Held parties determine the media resource group list that a Cisco Unified Communications Manager uses to allocate a Music On Hold resource.

• Following are the two levels of prioritized media resource group list selection:
  ◦ Level two media resource group list—Provides the higher priority level, which is device based. Cisco Unified Communications Manager uses the media resource group list at the device level if this media resource group list is defined.
  ◦ Level one media resource group list—Provides the lower priority level, which is an optional DevicePool parameter. Cisco Unified Communications Manager uses the DevicePool level media resource group list only if no media resource group list is defined in the device level for that device.

• If no media resource group lists are defined, Cisco Unified Communications Manager uses the system default resources. System default resources comprise resources that are not assigned to any existing media resource group. Ensure that system default resources are unicast.

Before You Begin
Configure Media Resource Group, on page 624

Procedure

Step 1  In Cisco Unified CM Administration, choose Media Resources > Media Resource Group List.

Step 2  Click Add New if you have to configure a new Media Resource Group List. The Media Resource Group List Configuration window appears.

Step 3  Enter search parameters to find a Media Resource Group List if you have to configure an existing Media Resource Group List. The system displays the records that match all the criteria.

Step 4  Configure the following fields in the Media Resource Group List Configuration window:
  ◦ Name—Enter a name for the media resource group list.
  ◦ Available Media Resource Groups—From this list, select one or multiple media resource groups.
  ◦ Selected Media Resource Groups—Using the arrow key, select one or multiple media resource groups.

Step 5  Click Save.

What to Do Next
View Music on Hold Audio File, on page 625

View Music on Hold Audio File

Perform the following procedure to view music on hold audio files that are stored on the system.

Before You Begin
Configure Media Resource Group List, on page 624
Procedure

**Step 1** In Cisco Unified CM Administration, choose **Media Resources > MOH Audio File Management**. The **Music On Hold Audio File Management** window appears.

**Step 2** View the following information for each record:

- **Check box**—If the audio file can be deleted, a check box appears before the **FileName** column.
- **FileName**—This column displays the audio file name.
- **Length**—This column displays the audio file length in minutes and seconds.
- **File Status**—This column displays one of the following statuses of an audio file:
  - **Translation Complete**—This status appears after a file is uploaded successfully and is available for use as audio files for a music on hold audio source.
  - **In Use**—This status appears after you add a Music On Hold audio source that uses this audio file as its MOH audio source file.

**Note** You cannot delete a file with **In Use** status.

---

**What to Do Next**

Enable Security for Music On Hold, on page 626

---

**Enable Security for Music On Hold**

You can enable the security mode of an MOH server in a cluster. Select a value in the **Cluster Security Mode** enterprise parameter so that the Music On Hold devices are automatically enabled for security. Enter one of the following values for this parameter:

- **0**—Implies Non Secure, which means that the cluster allows the phones to register with no security.
- **1**—Implies Mixed, which means that the cluster allows the registration of both secure devices and non-secure devices.

**Note** The **Cluster Security Mode** enterprise parameter is a noneditable parameter. To change the cluster security mode, you must run the Certificate Trust List (CTL) Client plugin. Then, you must restart Cisco Unified Communications Manager for the parameter change to take effect.

---

**Before You Begin**

View Music on Hold Audio File, on page 625
**Procedure**

**Step 1**
In Cisco Unified CM Administration, choose System > Enterprise Parameters.

**Step 2**
In the Security Parameters section, set the Cluster Security Mode option to 1.

---

**What to Do Next**

(Optional) Enable Secured Music On Hold through SRTP, on page 627

Configure multicast by performing the following subtasks:

- Plan Music On Hold Server Capacity, on page 629
- Verify Music On Hold Service Parameters, on page 630
- Configure Multicast Music On Hold Audio Sources/Fixed MOH Audio Source, on page 631
- Configure Multicast Music On Hold Server, on page 631
- Configure a Multicast-Enabled Media Resource Group, on page 633
- Configure Multicast Music On Hold over H.323 Intercluster Trunks, on page 633

---

**Enable Secured Music On Hold through SRTP**

Cisco Unified Communications Manager enhances the Cisco IP Voice Media Streaming application service to support Secure Real-Time Protocol (SRTP). Hence, when you enable the Cisco Unified Communications Manager cluster or system for security, the MOH server registers with Cisco Unified Communications Manager as an SRTP capable device. If the receiving device is also SRTP-capable, the music media is encrypted before streaming to the receiving device.

---

**Note**

Before You Begin
Enable Security for Music On Hold, on page 626

---

**Before You Begin**
Enable Security for Music On Hold, on page 626

---

**Enable Secured Music On Hold through SRTP**

Cisco Unified Communications Manager enhances the Cisco IP Voice Media Streaming application service to support Secure Real-Time Protocol (SRTP). Hence, when you enable the Cisco Unified Communications Manager cluster or system for security, the MOH server registers with Cisco Unified Communications Manager as an SRTP capable device. If the receiving device is also SRTP-capable, the music media is encrypted before streaming to the receiving device.

---

**Note**

Before You Begin
Enable Security for Music On Hold, on page 626

**Before You Begin**
Enable Security for Music On Hold, on page 626

---

**Enable Secured Music On Hold through SRTP**

Cisco Unified Communications Manager enhances the Cisco IP Voice Media Streaming application service to support Secure Real-Time Protocol (SRTP). Hence, when you enable the Cisco Unified Communications Manager cluster or system for security, the MOH server registers with Cisco Unified Communications Manager as an SRTP capable device. If the receiving device is also SRTP-capable, the music media is encrypted before streaming to the receiving device.

---

**Procedure**

**Step 1**
In the Cisco Unified CM Administration, choose System > Enterprise Parameters.

**Step 2**
In Enterprise Parameters window, set the Cluster Security Mode parameter to Mixed Mode.

**Note**

The media streaming between the devices is done through SRTP. When calls are secure, an icon with a secured lock appears on the Cisco Unified IP Phone, indicating that the call is protected for both signaling and media.

This parameter indicates the security mode of the cluster. A value of 0 indicates Non Secure (phones register in nonsecure mode); 1 indicates Mixed (the cluster allows the registration of both secure devices and nonsecure
devices). Because this parameter is read-only, to change the cluster security mode, you must run the CTL Client plugin.

**Step 3**  Click **Save**, and restart Cisco Unified Communications Manager for the parameter change to take effect.

---

**What to Do Next**

Configure multicast by performing the following subtasks:

- Plan Music On Hold Server Capacity, on page 629
- Verify Music On Hold Service Parameters, on page 630
- Configure Multicast Music On Hold Audio Sources/Fixed MOH Audio Source, on page 631
- Configure Multicast Music On Hold Server, on page 631
- Configure a Multicast-Enabled Media Resource Group, on page 633
- Configure Multicast Music On Hold over H.323 Intercluster Trunks, on page 633

---

**Unicast and Multicast Audio Sources**

Unicast Music On Hold is the system default option. However, you need to configure for multicast, if required. Both multicast and unicast configurations present the same audio-source behavior to held parties. Each audio source is used once, and the stream is split internally and is sent to the held parties. The only difference between multicast and unicast, in this case, is how the data is sent over the network.

**Table 55: Differences Between Unicast and Multicast Audio Sources**

<table>
<thead>
<tr>
<th>Unicast Audio Source</th>
<th>Multicast Audio Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consists of streams that are sent directly from the MOH server to the endpoint that requests an MOH audio stream.</td>
<td>Consists of streams that are sent from the MOH server to a multicast group IP address. Endpoints that request an MOH audio stream can join multicast MOH, as needed.</td>
</tr>
<tr>
<td>A unicast MOH stream is a point-to-point, one-way audio RTP stream between the server and the endpoint device.</td>
<td>A multicast MOH stream is a point-to-multipoint, one-way audio RTP stream between the server and the multicast group IP address.</td>
</tr>
<tr>
<td>Unicast MOH uses a separate source stream for each user or connection. As more endpoint devices go on hold through a user or network event, the number of MOH streams increases.</td>
<td>Enables multiple users to use the same audio source stream to provide MOH.</td>
</tr>
<tr>
<td>An MOH audio source may be configured with an initial (greeting) announcement, which will be played to unicast held parties. For unicast MOH users, this announcement is heard from the beginning.</td>
<td>For multicast users, this announcement is not heard.</td>
</tr>
</tbody>
</table>
Multicast Audio Source | Unicast Audio Source  
---|---  
The additional MOH streams can have a negative effect on network throughput and bandwidth. | Multicast MOH conserves system resources and bandwidth.  
Extremely useful in networks in which multicast is not enabled or devices are incapable of multicast. | Can be problematic in situations in which a network is not enabled for multicast or the endpoint devices are incapable of processing multicast.  
Includes managing devices only. | Includes managing devices, IP addresses, and ports.  
No requirement to define the Music On Hold server. | Administrators must define at least one audio source to allow multicasting. To define Music On Hold servers for multicast, first define the server to allow multicasting.  
Functions without configuring MOH audio source, MOH server, or media resource group list. | Functions only if both media resource groups and media resource group lists are defined to include a multicast Music On Hold server. For media resource groups, you must include a Music On Hold server that is set up for multicast. These servers are labeled as (MOH) [Multicast]. Also, check the Use Multicast for MOH Audio check box when you define a media resource group for multicast.

**Note**  
The Multicast MOH Direction Attribute for SIP service parameter determines whether Cisco Unified Communications Manager sets the direction attribute of the Session Description Protocol (SDP) in its multicast Music On Hold (MOH) INVITE message to sendOnly or recvOnly.

If your deployment uses SIP phone uses Release 8.4 and earlier for Cisco Unified IP Phones 7940 and 7960, or SIP phone uses Release 8.1(x) and earlier for Cisco Unified IP Phones 7906, 7911, 7941, 7961, 7970, and 7971, set this parameter to sendOnly. Otherwise, leave this parameter set to the default value, recvOnly.

**Multicast Configuration**

**Plan Music On Hold Server Capacity**

It is crucial to plan the capacity of the deployed and configured hardware and to ensure the support it can provide for the anticipated call volume of the network. You need to know the hardware capacity for MOH resources and consider the implications of multicast and unicast MOH in relation to this capacity. Ensure that network call volumes do not exceed these limits. When MOH sessions reach these limits, an additional load can result in poor MOH quality, erratic MOH operation, or loss of MOH functionality.
Before You Begin

- Enable Security for Music On Hold, on page 626
- (Optional) Enable Secured Music On Hold through SRTP, on page 627

Procedure

Step 1 In Cisco Unified CM Administration, choose Media Resources > Music on Hold Server.

Step 2 In the Find and List Music On Hold Servers window, enter the search parameters and click Find. The system displays the records that match all the criteria.

Step 3 Check the check box of the MOH Server for which you want to plan the capacity. The Music On Hold (MOH) Server Configuration window appears.

Step 4 Configure the following fields in the Music On Hold (MOH) Server Configuration window:

  - **Maximum Half Duplex Streams**—This parameter determines the number of devices that you can place on unicast MOH. By default, this value is set to 250. Set this parameter to the value that is derived from the following formula:

    \[(\text{Server and deployment capacity}) - ([\text{Number of multicast MOH sources}] \times \lceil \text{Number of enabled MOH codecs} \rceil)\]

    The value of this parameter should be set according to the platform and deployment type (coresident or standalone).

    **Note** Regarding the maximum suggested number of MOH streams (250 MOH streams on Cisco MCS 7815 and 7825 Series and 500 MOH streams on Cisco MCS 7835 and 7845 Series) – Count each multicast audio source as two MOH streams. For example, for Cisco MCS 7835 and 7845 Series, if three multicast MOH audio sources and four codecs are enabled, no more than 476 unicast MOH streams should be generated at the same time (2 * 3 * 4 + 476 = 500).

  - **Maximum Multi-cast Connections**—This parameter determines the number of devices that you can place on multicast MOH. By default, this value is set to 30,000. Set this parameter to a value that ensures that all devices can be placed on multicast MOH, if necessary. Although the MOH server can generate only a finite number of multicast streams (a maximum of 204), many held devices can join each multicast stream. This parameter should be set to a number that is greater than or equal to the number of devices that might be placed on multicast MOH at any given time.

Step 5 Click Save. The changes take place when the streaming to the device is idle.

What to Do Next

Verify Music On Hold Service Parameters, on page 630

Verify Music On Hold Service Parameters

Perform the following procedure to verify the Music On Hold server and its service parameters:

Before You Begin

Plan Music On Hold Server Capacity, on page 629
**Procedure**

**Step 1** In Cisco Unified CM Administration, choose System > Service Parameters. The Service Parameter Configuration window appears.

**Step 2** Select a server from the Server drop-down list. After you select a server, the Service field appears.

**Step 3** Select a service from the Service drop-down list. The server and service parameters appear in the Service Parameter Configuration window.

**Step 4** Verify the server and service parameters. **Note** All the parameters apply only to the current server except the parameters that are in the cluster-wide groups.

**Step 5** Click Save.

**What to Do Next**

Configure Multicast Music On Hold Audio Sources/Fixed MOH Audio Source, on page 631

**Configure Multicast Music On Hold Audio Sources/Fixed MOH Audio Source**

For multicast to be available, configure the Cisco Unified Communications Manager services to allow multicasting on MOH audio sources or fixed MOH audio source.

**Before You Begin**

Verify Music On Hold Service Parameters, on page 630

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose Media Resources > Music On Hold Audio Source.

**Step 2** Enter search parameters to find a Music On Hold audio source. The system displays the records that match all the criteria.

**Step 3** In the Music On Hold Audio Source Configuration window, check the Allow Multi-casting checkbox to allow multicasting.

**Step 4** Click Save.

**What to Do Next**

Configure Multicast Music On Hold Server, on page 631

**Configure Multicast Music On Hold Server**

After you allow multicast Music On Hold (MOH) on audio sources, you must enable the MOH server for multicast Music on Hold.

When you use multicast MOH and when the devices that listen to multicast MOH streams are not in the same IP network, you must enable multicast routing in the IP network. Take care when you enable the multicast
routing to avoid the potential flooding of parts of the network with wrongly sent multicast packets (specially, across WAN links). Disable multicasts on interfaces on which the multicast MOH packets are not required and use the Max Hops parameter.

Note
To use multicast MOH when you use Media Resource Group and Media Resource Group Lists to implement media-resources access control and when you assign a multicast MOH server to a Media Resource Group, you must also enable multicast MOH for the Media Resource Group.

Before You Begin
Configure Multicast Music On Hold Audio Sources/Fixed MOH Audio Source, on page 631

Procedure

Step 1 In Cisco Unified CM Administration, choose Media Resources > Music On Hold Server.

Step 2 Enter search parameters to find a Music On Hold server. The system displays the records that match all the criteria.

Step 3 In the Music On Hold (MOH) Server Configuration window, check the Enable Multi-cast Audio Sources on this MOH Server checkbox. The Base Multi-cast IP Address, Base Multi-cast Port Number, and Increment Multi-cast On fields are populated automatically. You can modify these values as desired.

Step 4 (Optional) Configure the following fields in the Music On Hold (MOH) Server Configuration window:

- **Base Multi-cast IP Address**—Enter the multicast IP addresses that range from 224.0.1.0 to 239.255.255.255.
  
  **Note** IP addresses between 224.0.1.0 and 238.255.255.255 fall in the reserved range of IP multicast addresses for public multicast applications. Use of such addresses may interfere with existing multicast applications on the Internet. Use IP addresses in the range that is reserved for administratively controlled applications on private networks (239.0.0.0 - 239.255.255.255).

- **Base Multi-cast Port Number**—Enter the multicast port numbers that include even numbers and range from 16384 to 32766.
  
  **Note** Increment multicast on IP address instead of on port number. Doing so results in each multicast audio source to have a unique IP address and helps to avoid network saturation in firewall situations.

- **Increment Multi-cast On**—Click Port Number to increment multicast on port number or click IP Address to increment multicast on IP address.

  **Note** All MOH audio sources that you configure to allow multicasting are listed in the Selected Multicast Audio Sources section of the Music On Hold (MOH) Server Configuration window.

Step 5 Click Save.

What to Do Next
Configure a Multicast-Enabled Media Resource Group, on page 633
Configure a Multicast-Enabled Media Resource Group

Multicast Music On Hold (MOH) works only if you assign the Multicast-enabled MOH server to a Multicast-enabled Media Resource Group. Configure this Media Resource Group to be a member of a Media Resource Group List. Then, you can associate the Media Resource Group List with devices, such as phones.

Before You Begin

• Assign a multicast-enabled MOH server to a multicast-enabled Media Resource Group for the multicast MOH to work.
  • Configure Multicast Music On Hold Server, on page 631

Procedure

Step 1 In Cisco Unified CM Administration, choose Media Resources > Media Resource Group.
Step 2 Enter search parameters to find a Media Resource Group. The system displays the records that match all the criteria.
Step 3 Configure the following fields in the Media Resource Group Configuration window:
  • Name—Enter a name for the media resource group
  • Available Media Resources—From this list, select one or multiple media resources.
  • Selected Media Resources—Using the arrow key, select one or multiple media resources to use for multicasting.
Step 4 Check the Use Multi-cast for MOH Audio check box, if at least one multicast resource is available.
Step 5 Click Save.
This media resource group is then configured to be a member of a Media Resource Group List (MRGL). The MRGL is associated with devices, such as phones.

What to Do Next

Configure Multicast Music On Hold over H.323 Intercluster Trunks, on page 633

Configure Multicast Music On Hold over H.323 Intercluster Trunks

Using the multicast MOH over H.323 intercluster trunk feature, you can multicast MOH to work over H.323 intercluster trunks (ICT).

Consider these guidelines for configuring multicast MOH:

• This feature does not work if any middle box between Cisco Unified Communications Managers does not pass the new fields in Terminal Capability Set (TCS) and OLC message.
• This feature requires no additional configuration for field up multicast MOH, and applies only between Cisco Unified Communications Managers that support single-transmitter multicast.
The feature remains active by default. To turn off the feature, set the value of the Send Multicast MOH in H.245 OLC Message service parameter to False. Setting this value can resolve interoperability issues that the feature might cause.

Procedure

**Step 1** In Cisco Unified CM Administration, choose System > Service Parameters.

**Step 2** In the Service Parameter Configuration window, select a server and the CallManager service.

**Step 3** In the Clusterwide Parameters (Service) section, set the value of Send Multicast MOH in H.245 OLC Message service parameter to True.

**Step 4** Click Save.

---

**Reset or Restart a Music On Hold Server**

Perform the following procedure to reset or restart an existing Music On Hold server.

**Before You Begin**
Configure multicast by performing the following subtasks:

- Plan Music On Hold Server Capacity, on page 629
- Verify Music On Hold Service Parameters, on page 630
- Configure Multicast Music On Hold Audio Sources/Fixed MOH Audio Source, on page 631
- Configure Multicast Music On Hold Server, on page 631
- Configure a Multicast-Enabled Media Resource Group, on page 633
- Configure Multicast Music On Hold over H.323 Intercluster Trunks, on page 633

**Procedure**

**Step 1** In Cisco Unified CM Administration, choose Media Resources > Music On Hold Server.

**Step 2** Check the check box for the Music On Hold server that you want to reset, and click Reset. A popup window shows an information message.

**Step 3** Click Restart to restart the Music On Hold server, or click Reset to reset the Music On Hold server.

**What to Do Next**
(Optional) Synchronize Music On Hold Server, on page 635
Synchronize Music On Hold Server

To synchronize a Music on Hold Server with the most recent configuration changes, perform the following procedure. After you perform this procedure any outstanding configuration is applied in the least-intrusive manner possible. For example, a reset or restart may not be required on few affected devices.

Procedure

<table>
<thead>
<tr>
<th>Step 1</th>
<th>In Cisco Unified CM Administration, choose Media Resources &gt; Music On Hold Server.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Enter search parameters to find a Music On Hold server, and click Find. The system displays the search results for the records that match all the criteria.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Check the check boxes next to the Music On Hold servers that you want to synchronize. To select all MOH servers in the window, check the check box in the matching records title bar.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Click Apply Config to Selected.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Click OK.</td>
</tr>
</tbody>
</table>

Music On Hold Interactions and Restrictions

Music On Hold Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multicast Music On Hold over H.323 Intercluster Trunks</td>
<td>Using the multicast MOH over H.323 intercluster trunk feature, you can multicast MOH to work over H.323 intercluster trunks (ICT). When a call connects over an intercluster trunk and one of the parties presses the Hold key, MOH streams over the intercluster trunk. If you have turned on the multicast MOH and have configured the holding party and trunk to use the multicast MOH server, MOH streams with multicast. Only one multicast MOH stream streams over the trunk regardless of the number of calls that are put on hold on this trunk.</td>
</tr>
<tr>
<td>Music On Hold Failover and Fallback</td>
<td>The MOH server supports Cisco Unified Communications Manager lists and failover as implemented by the software conference bridge and media termination point. Upon failover, the system maintains connections to a backup Cisco Unified Communications Manager, if available. When a Music On Hold server fails during an active Music On Hold session, the held party hears no music from this point. However, this situation does not affect normal call functions.</td>
</tr>
</tbody>
</table>
Music On Hold Interactions and Restrictions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call Park and Directed Call Park</td>
<td>Music On Hold allows users to place calls on hold with music that a streaming source provides. Music On Hold allows two types of hold:</td>
</tr>
<tr>
<td></td>
<td>• User hold—The system invokes this type of hold when a user presses the Hold button or Hold softkey.</td>
</tr>
<tr>
<td></td>
<td>• Network hold—This type of hold takes place when a user activates the Transfer, Conference, or Call Park feature, and the hold automatically gets invoked. This hold type applies to directed call park because directed call park is a transfer function. However, Directed Call Park uses the Cisco Call Manager service parameter, Default Network Hold MOH Audio Source, for the audio source.</td>
</tr>
<tr>
<td>Extension Mobility Cross Cluster—Media resources for the visiting phone</td>
<td>Examples include RSVP Agent, TRP, Music On Hold (MOH), MTP, transcoder, and conference bridge. Media resources are local to the visiting phone (other than RSVP Agents).</td>
</tr>
<tr>
<td>Hold Reversion</td>
<td>Cisco Unified Communications Manager supports MOH on a reverted call if MOH is configured for a normal held call.</td>
</tr>
</tbody>
</table>

Music On Hold Restrictions

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multicast Music On Hold Support</td>
<td>Computer Telephony Integration (CTI) and media termination point (MTP) devices do not support the multicast Music On Hold feature. If you configure CTI or MTP devices with a multicast MoH device in the media resource group list of the CTI device, call control issues may result. CTI and MTP devices do not support multicast media streaming.</td>
</tr>
<tr>
<td>Distribution of fixed-device audio sources</td>
<td>Cisco Unified Communications Manager does not support distribution of fixed-device (hardware) audio sources across Music On Hold servers within a media resource group.</td>
</tr>
<tr>
<td>Restriction</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Unacceptable Audio Quality with G.729a codec</td>
<td>Because the G.729a codec is designed for human speech, if you use it with Music On Hold for music, it may not provide acceptable audio quality.</td>
</tr>
<tr>
<td>Cisco Unified Communications Manager System Support</td>
<td>A Cisco Unified Communications Manager cluster or system supports only virtualized deployments on Cisco Unified Computing System (UCS) servers or other Cisco-approved third-party server configurations. You cannot use the Music On Hold feature with an external source (USB audio dongle) for the nodes that provide MOH from an external source.</td>
</tr>
<tr>
<td>Multicast Support</td>
<td>The administrator can designate a Music On Hold server as either unicast or multicast, provided that resources exist to support multicast.</td>
</tr>
<tr>
<td>Caller-specific MOH Support</td>
<td>Caller-specific MOH is not supported when calls are received or transferred over QSIG tunneling-enabled SIP trunks.</td>
</tr>
<tr>
<td>MP3 Format Support</td>
<td>The Music On Hold feature does not support the MP3 format.</td>
</tr>
<tr>
<td>Interoperability between H.323 and SIP Protocols</td>
<td>Multicast MOH does not support interoperability between H.323 and SIP protocols.</td>
</tr>
<tr>
<td>SRTP Support</td>
<td>Multicast MoH audio streams are not encrypted and do not support SRTP.</td>
</tr>
<tr>
<td>Multicast Streams</td>
<td>MTPs do not support multicast streams.</td>
</tr>
<tr>
<td>Encryption of Multicast Music On Hold RTP Streams</td>
<td>Cisco Unified Communications Manager does not support encryption of multicast Music On Hold RTP streams. For secure MOH audio, you should not configure multicast audio sources.</td>
</tr>
<tr>
<td>Fixed Music On Hold Device</td>
<td>The fixed Music On Hold device cannot specify an audio source that connects through a USB, because Cisco Unified Communications Manager does not support USB when running on VMware. However, VMware supports internal Music On Hold.</td>
</tr>
<tr>
<td>MOH Server Failure</td>
<td>Cisco Unified Communications Manager takes no action when a Music On Hold server fails during an active Music On Hold session.</td>
</tr>
<tr>
<td>Multicast MOH</td>
<td>When an MTP resource gets invoked in a call leg at a site that is using multicast MOH, Cisco Unified Communications Manager falls back to unicast MOH instead of multicast MOH.</td>
</tr>
<tr>
<td>Provisioning</td>
<td>If you do not provision the user and network MOH audio source identifiers, or if one or both values are invalid, the caller-specific MOH information in the SIP header is ignored. The call reverts to tone on hold and an invalid MOH audio source alarm is raised.</td>
</tr>
</tbody>
</table>
### Music On Hold Troubleshooting

#### Music On Hold Does Not Play on Phone

**Problem**

Phone user cannot hear Music On Hold.

**Possible Cause**

- G.729a codec is used with MOH for music, which may not provide acceptable audio quality.
- An MTP resource is invoked in a call leg at a site that is using multicast MoH.

**Solution**

- Verify the IP addressing mode of the device where Music On Hold is played. If the IP addressing mode for the device is IPv6 Only and if Music On Hold is configured for unicast Music On Hold, ensure that a dual-stack MTP is configured and available for media translation.

---

<table>
<thead>
<tr>
<th>Restriction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Header Values</td>
<td>• When both the user and network MOH audio source identifiers are present in the header, any invalid value is replaced by the default value (0).&lt;br&gt;• If both values are zero, or the only value is zero, the header in the incoming INVITE is ignored.</td>
</tr>
<tr>
<td>MOH Audio Source Identifier</td>
<td>• If you provide only one MOH audio source identifier in the SIP header, including if a comma appears before or after the MOH audio source identifier value, the same MOH ID is used for both user and network MOH. The SIP trunk populates both the user and the network MOH audio source identifiers in the SIP header so that Call Control always receive both values.&lt;br&gt;• If there are more than two MOH audio source identifier values separated by a comma in the header, then the first two values are used. Subsequent values are ignored.</td>
</tr>
<tr>
<td>Administrators for Consistent Caller-specific MOH Configurations</td>
<td>Administrators are responsible to maintain consistent caller-specific MOH configurations when multiple Cisco Unified Communications Manager clusters are involved.</td>
</tr>
<tr>
<td>Original Incoming Caller</td>
<td>The original incoming caller to the call center cannot change during the course of the entire call.</td>
</tr>
<tr>
<td>MOH Information</td>
<td>The Music On Hold information is shared only across SIP trunks.</td>
</tr>
</tbody>
</table>
• When an MTP resource gets invoked in a call leg at a site that is using multicast MoH, the caller receives silence instead of Music On Hold. To avoid this scenario, configure unicast MoH or Tone on Hold instead of multicast MoH.
Self Care Portal

- Self Care Portal Overview, page 641
- Self Care Portal Task Flow, page 642

Self Care Portal Overview

From the Cisco Unified Communications Self Care Portal, users can customize and control phone features and settings.

As the administrator, you control access to the Self Care Portal. You must also provide information to your users so that they can access the Self Care Portal.

Before a user can access the Cisco Unified Communications Self Care Portal, you must add the user to a standard Cisco Unified Communications Manager End User Group.

You must provide users with the following information:

- Use one of the following URLs to access the application:
  - http://<server_name:portnumber>/ucmuser/, where server_name is the host on which the web server is installed and portnumber is the port number on that host.
  - http://<ip address>/ucmuser/ or http://<ip address>/ccmuser/, where ip address is the host on which the web server is installed.

- A user ID and default password to access the application.

- An overview of the tasks that users can accomplish with the portal.

These settings correspond to the values that you enter when you add the user to Cisco Unified Communications Manager End User Group.
Self Care Portal Task Flow

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Grant Access to the Self Care Portal, on page 642</td>
<td>Use this procedure to enable a user to access the Self Care Portal.</td>
</tr>
<tr>
<td><strong>Step 2</strong> Configure the Self Care Portal Display, on page 642</td>
<td>Use this procedure to choose the Self Care Portal default server and to choose which features and settings are enabled on the Self Care Portal display.</td>
</tr>
</tbody>
</table>

Grant Access to the Self Care Portal

Use this procedure to enable a user to access the Self Care Portal.

**Procedure**

**Step 1** From Cisco Unified Communications Manager Administration, select **User Management > End User**.

**Step 2** Search for the user for whom you want to provide access to the Self Care Portal and click the user ID link.

**Step 3** In the **End User** section, ensure that the user has a password and PIN configured. Usually these credentials are entered when a new user is added.

**Step 4** In the **Permission Information** section, click **Add to Access Control Group**.

**Step 5** From the list, choose **Standard CCM End Users** to add to the **Groups** box.

**Step 6** Select **Save**.

**What to Do Next**

Configure the Self Care Portal Display, on page 642

Configure the Self Care Portal Display

The Self Care Portal parameters that you enable or disable apply to all of the Self Care Portal pages on the Self Care Portal server.

**Before You Begin**

Grant Access to the Self Care Portal, on page 642
Procedure

Step 1  From Cisco Unified Communications Manager Administration, select System > Enterprise Parameters.

Step 2  In the Self Care Portal area, set the Self Care Portal Default Server by selecting one of the available servers from the drop-down list. This parameter determines which Cisco Unified CM server Jabber uses to display embedded Self Care options pages. If you select None, Jabber defaults to the Publisher.

Step 3  Enable or disable the parameters that the users can access in the portal. For descriptions of the parameters, see the Enterprise Parameters section in the Online Help.

Step 4  Select Save.
Emergency Call Handler

• Emergency Call Handler Overview, page 645
• Emergency Call Handler Prerequisites, page 646
• Emergency Call Handler Task Flow, page 646
• Emergency Call Handler Interactions and Restrictions, page 653
• Emergency Call Handler Troubleshooting, page 655

Emergency Call Handler Overview

Emergency Call Handler helps you to manage emergency calls in your telephony network while following local ordinances and regulations.

When an emergency call is made the following is required:

• The emergency call must be routed to the local Public-Safety Answering Point (PSAP) based on the location of the caller.

• The caller's location information must be displayed at the emergency operator terminal. The location information can be obtained from an Automatic Location Information (ALI) database.

The caller's location is determined by the Emergency Location Identification Number (ELIN). An ELIN is a Direct Inward Dial (DID) number that the PSAP can dial to reconnect to the emergency caller if the emergency call is cut off or if the PSAP needs to talk to the caller again. The emergency call is routed to the PSAP based on the location information that is associated with this number.

For multiline phone systems, such as an office system, the ELIN can be associated with more than one telephone by grouping the phones in an ELIN group. An ELIN group in Emergency Call Handler identifies a location. The ELINs under this ELIN group must be mapped to the location in the ALI database.

Each location should have as many ELINs created as are needed to support simultaneous emergency calls. For example, to support five simultaneous calls five ELINs would be needed in an ELIN group.

Note

Emergency Call Handler supports a maximum of 100 ELIN groups per cluster.

The following types of phone are supported to use ELIN groups:
• SIP and SCCP IP phones
• CTI ports
• MGCP and SCCP analog phones
• H.323 phones

Emergency Call Handler Prerequisites

Before deploying Emergency Call Handler in your network, we recommend that you test the ALI submission process. With your service provider's help, test that the PSAP can successfully call back into your network using the ALI data.

Reserve the ELIN number from your local PSAP. Ordinances and regulations can differ across different locations and across different companies, so research your security and legal needs before deploying this feature.

Emergency Call Handler Task Flow

Before You Begin

• Review Emergency Call Handler Prerequisites, on page 646

Procedure

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Enable the Emergency Call Handler feature on Cisco Unified Communications Manager. Emergency Call Handler provides essential emergency call features and supports a limited number of locations with phone location assignment by static configuration. If you require advanced emergency call features, such as a greater amount of specific locations or dynamic location assignment, consider Cisco Emergency Responder.</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Configure an Emergency Location (ELIN) Group for a particular site or location.</td>
</tr>
<tr>
<td><strong>Step 3</strong></td>
<td>Configure device pools to use an Emergency Location (ELIN) Group.</td>
</tr>
<tr>
<td><strong>Step 4</strong> (Optional)</td>
<td>Configure a particular device to use a particular Emergency Location (ELIN) Group. If you want to use the device pool ELIN Group that is associated for this device, you can ignore this section.</td>
</tr>
</tbody>
</table>

**Note** Configurations that are made at the device level will overwrite any configurations that were made at the device pool level.
Enable Emergency Call Handler

Enable the Emergency Call Handler feature on Cisco Unified Communications Manager. Emergency Call Handler provides essential emergency call features and supports a limited number of locations with phone location assignment by static configuration. If you require advanced emergency call features, such as a greater amount of specific locations or dynamic location assignment, consider Cisco Emergency Responder.

Procedure

**Step 1**  From Cisco Unified CM Administration, choose **Call Routing > Emergency Call Handler > Emergency Location Configuration**.

**Step 2**  From the Emergency Location Configuration window:
• To enable the Emergency Call Handler feature, check the **Enable Emergency Location (ELIN) Support** check box. The setting default is Disabled. When enabled, the settings related to this feature appear in the Related Settings pane. You must configure these settings for the feature to work. Refer to the tasks below for further details on how to configure these related settings.

• To disable the Emergency Call Handler feature, uncheck the **Enable Emergency Location (ELIN) Support** check box.

**Note**  If you disable this feature, all related settings that are configured will be removed. See the Related Settings Pane for all configured settings.

**Note**  If you want to disable the feature and you have more than 500 devices associated with ELIN Groups, then you must manually delete the associations until there are fewer than 500 associations before you can disable the feature.

---

**Step 3**  Click **Save**.

---

**What to Do Next**

Configure Emergency Location Groups, on page 648

---

**Configure Emergency Location Groups**

Configure an Emergency Location (ELIN) Group for a particular site or location.

**Before You Begin**

Enable Emergency Call Handler, on page 647

**Procedure**

**Step 1**  From Cisco Unified CM Administration, choose **Call Routing > Emergency Call Handler > Emergency Location (ELIN) Group**.

**Step 2**  In the **Emergency Location (ELIN) Group Configuration** window, enter a name for the group in the **Name** field.

**Step 3**  In the **Number** field, enter the pool of DID numbers that are registered in the Public Safety Answering Point (PSAP).

**Step 4**  Click **Save**.

---

**What to Do Next**

Add a Device Pool to an Emergency Location Group, on page 648

---

**Add a Device Pool to an Emergency Location Group**

Configure device pools to use an Emergency Location (ELIN) Group.

**Before You Begin**

Configure Emergency Location Groups, on page 648
Procedure

**Step 1**  From Cisco Unified CM Administration, choose System > Device Pool.

**Step 2**  In the Find and List Device Pools window, if you are adding an existing device pool, click Find and choose the device pool from the list. If you are adding a new device pool click Add New.

**Step 3**  In the Device Pool Configuration window, choose the ELIN group to which you want to add the device pool from the Emergency Location (ELIN) Group drop-down list. If you are adding a new device pool, fill out any other required fields.

**Step 4**  Click Save.

**What to Do Next**

Add Device to an Emergency Location Group, on page 649

**Add Device to an Emergency Location Group**

Configure a particular device to use a particular Emergency Location (ELIN) Group. If you want to use the device pool ELIN Group that is associated for this device, you can ignore this section.

**Note**  Configurations that are made at the device level will overwrite any configurations that were made at the device pool level.

**Note**  The devices that you add to the ELIN Group, should be added to the ELIN Group that represents the particular location at which those devices are located.

**Before You Begin**

Add a Device Pool to an Emergency Location Group, on page 648

**Procedure**

**Step 1**  From Cisco Unified CM Administration, choose Device > Phone.

**Note**  If you are using a type of phone that is not an IP phone, go to the relevant configuration page for that type of phone.
Step 2  In the Find and List Phones window, if you are adding an existing device, click Find and choose the device you want to configure from the list. If you are adding a new device, click Add New.

Step 3  If you are adding a new phone, choose the type of phone you want to add from the Phone Type drop-down list and click Next.

Step 4  In the Phone Configuration window, choose the ELIN group to which you want to add the device from the Emergency Location (ELIN) Group drop-down list. If you are adding a new device, fill out any other required fields.

Step 5  Click Save.

What to Do Next

Enable Route Patterns and Translation Patterns, on page 650

Enable Route Patterns and Translation Patterns

Enable the Emergency Location (ELIN) service for a route pattern or a translation pattern.

Note

It is mandatory that you enable either route patterns or translation patterns, but it is possible to enable both.

Before You Begin

Add Device to an Emergency Location Group, on page 649

Procedure

Step 1  From Cisco Unified CM Administration, choose one of the following:

- To enable a route pattern, choose Call Routing > Route/Hunt > Route Pattern.
- To enable a translation pattern, choose Call Routing > Translation Pattern.

Step 2  In the Find and List Route Patterns or Find and List Translation Patterns window, click Find and choose a route pattern or translation pattern from the list.

Step 3  In the Route Pattern Configuration or Translation Pattern Configuration window, check the Is an Emergency Services Number check box.

Note  Check this check box only if you are using Emergency Call Handler and not another external emergency calling solution such as Cisco Emergency Responder.

Step 4  Click Save.

Bulk Administration of Emergency Location Groups and Phones

- Bulk Administration of Emergency Location Groups and Phones Task Flow, on page 651
Bulk Administration of Emergency Location Groups and Phones Task Flow

This section provides information about the Bulk Administration tasks you can use to update ELIN group information and to add phones to new ELIN groups. For more information about Bulk Administration, see the Cisco Unified Communications Manager Bulk Administration Guide, Release 11.0(1).

Before you perform these procedures, make sure that you have enable the Emergency Call Handler feature. See Enable Emergency Call Handler, on page 647.

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Import Emergency Location Group Information, on page 651</td>
<td>Import Emergency Location (ELIN) Group information using the Bulk Administration Tool.</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Export Emergency Location Group Information, on page 651</td>
<td>Export Emergency Location (ELIN) Group information using the Bulk Administration Tool.</td>
</tr>
<tr>
<td><strong>Step 3</strong></td>
<td>Update Phones with a new Emergency Location Group, on page 652</td>
<td>Find and list multiple phones and configure them with a new Emergency Location (ELIN) Group.</td>
</tr>
</tbody>
</table>

**Import Emergency Location Group Information**
Import Emergency Location (ELIN) Group information using the Bulk Administration Tool.

**Procedure**

- **Step 1** From Cisco Unified CM Administration, choose Bulk Administration > Import/Export > Import.
- **Step 2** From the File Name drop-down list, choose the name of the .tar file you want to import, and click Next.
- **Step 3** The Import Configuration section lists all the components of the .tar file. Check the ELIN Group-related check boxes for the options that you want to import.
- **Step 4** Choose to run the job immediately or later by clicking the corresponding radio button.
- **Step 5** To create a job for importing the selected data, click Submit. A message in the Status section notifies you know that the job was submitted successfully.
- **Step 6** Use the Job Scheduler option in the Bulk Administration main menu to schedule or activate this job.

**What to Do Next**
Export Emergency Location Group Information, on page 651

**Export Emergency Location Group Information**
Export Emergency Location (ELIN) Group information using the Bulk Administration Tool.
Before You Begin

Import Emergency Location Group Information, on page 651

Procedure

Step 1  From Cisco Unified CM Administration, choose Bulk Administration > Import/Export > Export.
Step 2  In the Export Data window, in the Job Information pane, enter the .tar file name, without the extension, in the Tar File Name field. BPS uses this filename to export the configuration details.
Note All files that are exported at the same time get bundled together (.tar) and can be downloaded from the server.
Step 3  To export ELIN Group information, check the Elin Group check box on the Select items to Export pane.
Step 4  (Optional) Perform these steps:
  • To export device pools with ELIN Groups configured, check the Device Pools check box.
  • To export phones with ELIN Groups configured, check the Phone check box.
Step 5  In the Job Description field, enter the description that you want to override for the job. Export Configuration is the default description.
Step 6  You can choose to run the job immediately or later by clicking the corresponding radio button.
Step 7  To create a job for exporting the selected data, click Submit. A message in the Status pane notifies you that the job was submitted successfully.
Step 8  Use the Job Scheduler option in the Bulk Administration main menu to schedule or activate this job.

What to Do Next

Update Phones with a new Emergency Location Group, on page 652

Update Phones with a new Emergency Location Group
Find and list multiple phones and configure them with a new Emergency Location (ELIN) Group.

Before You Begin

Export Emergency Location Group Information, on page 651

Procedure

Step 1  From Cisco Unified CM Administration, choose Bulk Administration > Phones > Update Phone > Query.
Step 2  In the Find and List Phones To Update window, set the parameters for your search and click Find.
Note To update all phones, click Find and do not specify a query.
Step 3  The Find and List Phones To Update window displays the details of the phones that you chose. Click Next.
Step 4  In the Update Phones window, check the Emergency Location (ELIN) Group check box, and choose a new ELIN Group from the drop-down list.
Step 5  Click Submit.
Emergency Call Handler Interactions and Restrictions

• Interactions, on page 653
• Restrictions: None

Interactions

<table>
<thead>
<tr>
<th>Feature</th>
<th>Interaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do Not Disturb Call Reject</td>
<td>Calls made by PSAP CallBack will overwrite a Do Not Disturb (DND) configuration of a destination device.</td>
</tr>
<tr>
<td></td>
<td>If DND Call Reject is enabled, when the emergency number is dialed using the translation pattern, an ELIN will be associated for this outbound emergency call. If the call is disconnected and the ELIN is called back using PSAP CallBack, the call is routed to the phone irrespective of the phone's DND settings.</td>
</tr>
<tr>
<td>Call Forward All</td>
<td>Calls made by PSAP CallBack will overwrite Call Forward All (CFA) settings of the destination device.</td>
</tr>
<tr>
<td></td>
<td>If a phone has CFA enabled and if the emergency number using the translation pattern is dialed, an ELIN will be associated for this outbound emergency call. If the call is disconnected and the ELIN is called back using PSAP CallBack, the call is routed to the phone irrespective of the phone's CFA settings.</td>
</tr>
<tr>
<td>Single Number Reach</td>
<td>PSAP CallBack will ignore the Single Number Reach (SNR) configuration.</td>
</tr>
<tr>
<td></td>
<td>When a phone has SNR enabled with the Remote Destination pointing to a mobile number. If the emergency number is dialed using the translation pattern, an ELIN will be associated for this outbound emergency call. If the call is disconnected, and the ELIN number is called back using PSAP CallBack, the call is routed to the phone and not to the remote destination.</td>
</tr>
</tbody>
</table>
### Interaction Feature

**Interaction**

**Extension Mobility**

PSAP CallBack call will consider Extension Mobility (EM) status.

If you log in with EM profile credentials and dial the emergency number using the translation pattern, an ELIN will be associated for this outbound emergency call. If the call is disconnected and the ELIN where the user is still logged in is called back using PSAP CallBack, the call is routed to the device which initiated the call.

**Note**  
This is the device on which the user is still logged in.

PSAP CallBack will fail if a user logs out of EM before a PSAP CallBack is performed.

When a user logs in with EM profile credentials, and the emergency number is dialed using the translation pattern, an ELIN will be associated for this outbound emergency call. If the call is disconnected and is called back using PSAP CallBack, if the user has since logged out, the call will not route to the device that initiated the call and will fail.

PSAP CallBack with a user logged in on a different device.

When a user logs in with EM profile credentials at Phone A and dials the emergency number using the translation pattern, an ELIN will be associated for this outbound emergency call. If the call is disconnected, the user should log out from Phone A. If the user then logs in to another phone, Phone B, with the same profile, and the ELIN is called back using PSAP CallBack, the call is then be routed to Phone B with normal priority, meaning CFA settings will be ignored and DND settings will not be ignored.

PSAP CallBack call with multiple logins.

When a user logs in with EM profile credentials at Phone A and dials the emergency number using the translation pattern, an ELIN number will be associated for this outbound emergency call. If the call is disconnected and the user logs in to another phone, Phone B, with the same profile while the user is still logged in on Phone A, and the ELIN is called back using PSAP CallBack, then the call is routed to Phone A only, the device on which the call originated.
### Device Mobility

A roaming device will use the Roaming Device Pool’s ELIN Group for an outbound emergency call.

Move a device with Device Mobility enabled from its home location to the Roaming location, a change in IP subnet, so that it gets associated with the Roaming device pool. If the emergency number is dialed using the translation pattern, an ELIN is associated for this outbound emergency call. The ELIN belongs to the ELIN Group that is associated with the Roaming Device Pool.

### Shared Lines

PSAP CallBack rings only on the device which made the emergency call even if the line is shared by different devices.

Phone A and Phone B share a Directory Number (DN). If the emergency number is dialed using the translation pattern, an ELIN is associated for this outbound emergency call. If the call is disconnected, and the ELIN is called back using PSAP CallBack, the call is routed to Phone A only, the device from which the call originated.

## Emergency Call Handler Troubleshooting

### About Emergency Call Handler Troubleshooting Scenarios

This section provides information about some Emergency Call Handler troubleshooting scenarios in the following areas:

- Configuration Scenarios
- Outgoing Calls Scenarios
- Incoming Calls Scenarios

### Configuration Scenarios

**Emergency Calls Get Busy Signals and Are Not Routed**

**Problem:**

Emergency calls get busy signals and are not routed.

**Solution:**

If a user who is dialing the emergency call is running a reorder tone, perform the following checks:
• Check whether the translation or route pattern for the emergency call has been used. This may require checking for the device or phone on CSS.

• Check whether the **Is an Emergency Services Number** check box has been checked for the translation or route pattern of the emergency call, and that it is correctly routing to the gateway.

If the user who is dialing the emergency call is not reaching the correct gateway or Public Service Answering Point (PSAP), check that the settings or device pool settings for the phone or device are configured with the correct Emergency Location (ELIN) Group.

**Emergency Location Numbers Are Dialed from Outside Running a Reorder Tone**

**Problem:**
Emergency Location (ELIN) numbers are dialed from outside while running a reorder tone.

**Cause:**
In this case the ELINs have been set as DID which is used to identify a caller's location. This should not be used on any phone or for any other purpose.

**Solution:**
Check the ELIN configuration information, and unset the ELINs that have been set as DID.

**Outgoing Calls Scenarios**

**Outgoing Emergency Call Does Not Contain Calling Party as Emergency Location Number**

**Problem:**
An outgoing emergency call does not contain the calling party as an Emergency Location (ELIN) number.

**Cause:**
The translation pattern or route pattern for this ELIN was not configured correctly.

**Solution:**
Check that the translation pattern or route pattern settings are correctly configured for this ELIN, and make sure that the **Is an Emergency Services number** check box is checked on the relevant translation pattern or route pattern configuration page.

**Outgoing Emergency Call Contains Modified Emergency Location Number**

**Problem:**
An outgoing emergency call contains a modified Emergency Location (ELIN) number.

**Cause:**
The outgoing trunk or route list contains extra transformations that are not required for ELINs.

**Solution:**
Check the transformations that were applied for the call, and make sure that only the required transformations for ELINs are present on the outgoing trunk or route list.
Incoming Calls Scenarios

Incoming PSAP Callback Call Fails

**Problem:**
An incoming PSAP Callback call fails.

**Cause:**
The device that made the original emergency call was not registered correctly.

**Solution:**
Check whether the device that made the original emergency call is still registered and whether any Extension Mobility is involved.

Incoming PSAP Callback Call is Not Routed as Expected

**Problem:**
An incoming PSAP Callback call does not get routed as expected.

**Cause:**
The Emergency Location (ELIN) number does not match the number of the original dialed party.

**Solution:**
For an ELIN to be successfully reverse mapped to the original dialed party, these two numbers must match. If there are already transformations at the incoming Gateway or Trunk and significant digits configured, make sure that the final transformed called party matches the ELIN number.
Enterprise Groups

- Enterprise Groups Overview, page 659
- Enterprise Groups Deployment Models, page 660
- Enterprise Groups Prerequisites, page 662
- Enterprise Groups Configuration Task Flow, page 663
- Enterprise Groups Limitations, page 665

Enterprise Groups Overview

Cisco Jabber users can search for enterprise groups in Microsoft Active Directory and add them to their contact lists. If a group that is already added to the contact list is updated, the contact list is automatically updated. Cisco Unified Communications Manager synchronizes its database with Microsoft Active Directory groups at specified intervals. The interval at which Cisco Unified Communications Manager synchronizes the groups is determined by the LDAP Directory Synchronization Schedule parameters in the LDAP Directory Configuration window.

Currently, the Enterprise Groups feature is supported only on the Microsoft Active Directory server. It is not supported on Active Directory Lightweight Directory Services (AD LDS) and other corporate directories. If a Cisco Jabber user wants to add a group to the contact list while the Enterprise Groups feature is enabled, the Cisco Jabber client sends a group request to the IM and Presence Service node. The IM and Presence Service node provides the following information for each group member:

- Display Name
- User ID
- Title
- Phone number
- Mail ID
Only the group members that are assigned to the IM and Presence Service nodes can be added to the contact list. Other group members are discarded.

If you disable the Enterprise Groups feature, Cisco Jabber users cannot search Microsoft Active Directory groups or see the groups that they already added to their contact lists. If a user is already logged in when you disable the Enterprise Groups feature, the group will be visible until the user logs out. When the user logs in again, the group will not be visible.

**Maximum Allowed Entries**

The maximum number of entries that are allowed in a contact list is the sum of the number of entries in the contact list and the number of entries in groups that are already added to the contact list.

\[
\text{Maximum entries in contact list} = (\text{number of entries in contact list}) + (\text{number of entries in groups})
\]

When the Enterprise Groups feature is enabled, Cisco Jabber users can add the groups to the contact list if the number of entries in the contact list is less than the maximum allowed entries. If the maximum allowed entries is exceeded while the feature is disabled, the users are not restricted until the feature is enabled. If the user continues to be logged in after the feature is enabled, no error message is displayed. When the user logs out and logs in again, an error message is displayed that asks the users to clear the excess entries.

**Enterprise Groups Deployment Models**

The Enterprise Groups feature offers two deployment options for Active Directory.

**Important**

Ensure that Cluster 1 and Cluster 2 have a unique set of UserGroup, UserGroupMember, and UserGroupWatcherList records before synchronizing data through the Cisco Intercluster Sync Agent service. If both the clusters have unique sets of records, both the clusters will have a super set of all the records after synchronization.
Enterprise Groups Deployment Model 1

In this deployment model, Cluster 1 and Cluster 2 synchronize different subsets of users and groups from Microsoft Active Directory. The Cisco Intercluster Sync Agent service replicates the data from Cluster 2 into Cluster 1 to build the complete database of users and groups.

Figure 1: Enterprise Groups Deployment Model 1

Enterprise Groups Deployment Model 2

In this deployment model, Cluster 1 synchronizes all the users and groups from Microsoft Active Directory. Cluster 2 synchronizes only users from Microsoft Active Directory. The Cisco Intercluster Sync Agent service replicates groups information from Cluster 1 into Cluster 2.
If you are using this deployment model, ensure that you synchronize the groups data in only one cluster. The Enterprise Groups feature will not work as expected if you fail to do so.

**Figure 2: Enterprise Groups Deployment Model 2**

Enterprise Groups Prerequisites

This feature assumes that you already have an LDAP Directory sync schedule configured with the below conditions. For details on how to configure an LDAP Directory sync, see the "Import Users from LDAP Directory" chapter of the System Configuration Guide for Cisco Unified Communications Manager.

- TheCisco DirSync service must be activated
- The LDAP Directory sync must include both users and groups
- Regular LDAP Directory syncs, as configured with the **LDAP Directory Synchronization Schedule** must be scheduled.

**Supported LDAP Directories**

Only Microsoft Active Directory is supported with enterprise groups.
Enterprise Groups Configuration Task Flow

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Enable Enterprise Groups, on page 663</td>
<td>Complete this task to enable Cisco Jabber users to search for enterprise groups in Microsoft Active Directory and add them to their contact lists.</td>
</tr>
<tr>
<td>Step 2</td>
<td>View User Groups, on page 664</td>
<td>(Optional) View Microsoft Active Directory user groups that are synchronized with Cisco Unified Communications Manager database.</td>
</tr>
</tbody>
</table>

Start Directory Sync Service

Before you can sync Enterprise Groups, the Cisco DirSync service must be running.

<table>
<thead>
<tr>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
</tr>
<tr>
<td>Step 2</td>
</tr>
<tr>
<td>Step 3</td>
</tr>
</tbody>
</table>

What to Do Next

Enable Enterprise Groups, on page 663

Enable Enterprise Groups

The enterprise parameter **Directory Group Operations on Cisco IM and Presence** in the **Enterprise Parameter Configuration** window allows you to enable or disable the Enterprise Groups feature. Follow these steps to enable the Enterprise Groups feature.

Before You Begin

The Cisco DirSync feature service must be running.

<table>
<thead>
<tr>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
</tr>
</tbody>
</table>
The **Enterprise Parameters Configuration** window appears.

**Step 2**  
In the **User Management Parameters** section, from the **Directory Group Operations on Cisco IM and Presence** drop-down list, select **Enabled**.

**Step 3**  
(Optional) From the **Syncing Mode for Enterprise Groups** drop-down list, choose one of the following:

- **None**—If you choose this option, the Cisco Intercluster Sync Agent service does not synchronize the enterprise groups and the group membership records between IM and Presence Service clusters.

- **Differential Sync**—This is the default option. If you choose this option, after all the enterprise groups and group membership records from remote IM and Presence Service cluster are synchronized, the subsequent syncs synchronize only the records that were updated since the last sync occurred.

- **Full Sync**—If you choose this option, after all the enterprise groups and group membership records from the remote IM and Presence Service cluster are synchronized, all the records are synchronized during each subsequent sync.

**Note**  
If the Cisco Intercluster Sync Agent service is not running for more than 24 hours, we recommend that you select the **Full Sync** option to ensure that the enterprise groups and group membership records synchronize completely. After all the records are synchronized, that is, when the Cisco Intercluster Sync Agent has been running for about 30 minutes, choose the **Differential Sync** option for the subsequent syncs. Keeping the value of this parameter set to 'Full Sync' for a longer period could result in extensive CPU usage and therefore we recommend that you use the **Full Sync** option during off-business hours.

**Step 4**  
(Optional) Set the **LDAP Directory Synchronization Schedule** parameters in the **LDAP Directory Configuration** window to configure the interval at which Microsoft Active Directory groups are synchronized with Cisco Unified Communications Manager. For more information, see the online help.

**Step 5**  
Click **Save**.

---

**What to Do Next**  
(Optional) [View User Groups, on page 664](#).

---

**View User Groups**

You can view the Active Directory user groups that are synchronized with the Cisco Unified Communications Manager database using the following steps.

**Procedure**

**Step 1**  
From Cisco Unified CM Administration, choose **User Management > User Settings > User Group**. The **Find and List User Groups** window appears.

**Step 2**  
Enter search criteria and click **Find**. A list of user groups that match the search criteria is displayed.

**Step 3**  
To view a list of users that belong to a user group, click on the required user group. The **User Group Configuration** window appears.

**Step 4**  
Enter search criteria and click **Find**. A list of users that match the search criteria is displayed.
If you click on a user in the list, the **End User Configuration** window appears.

## Enterprise Groups Limitations

### Table 56: Enterprise Groups Limitations

<table>
<thead>
<tr>
<th>Limitation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intercluster peering with a 10.x cluster</td>
<td>Enterprise Groups is supported for releases 11.0(1) and higher. If the synced group includes group members from a 10.x intercluster peer, users on the higher cluster cannot view the presence of synced members from the 10.x cluster. This is due to database updates that were introduced in 11.0(1) for the Enterprise Groups sync. These updates are not a part of the 10.x releases. To guarantee that users homed on the higher cluster can view the presence of group members homed on the 10.x cluster, users on the higher cluster should manually add the 10.x users to their contact lists. There are no presence issues for manually added users.</td>
</tr>
<tr>
<td>Security groups</td>
<td>The Enterprise Groups feature allows you to synchronize only distribution groups. Synchronization of security groups is not supported in this release.</td>
</tr>
<tr>
<td>Multilevel grouping</td>
<td>Multilevel grouping is not allowed for the group sync.</td>
</tr>
<tr>
<td>Group-only synchronization</td>
<td>When a user group and users are present in the same search base, group-only synchronization is not allowed. Instead, the user group as well as the users are synchronized.</td>
</tr>
<tr>
<td>Maximum number of user groups</td>
<td>You can synchronize a maximum of 15000 user groups from Microsoft Active Directory server to the Unified Communications Manager database. Each user group can include a maximum of 100 users. The maximum number of user accounts in the database cannot exceed 160,000.</td>
</tr>
<tr>
<td>User group migration</td>
<td>If a user group is moved from one organization unit to another, you must perform a full sync on the original unit followed by a full sync on the new unit.</td>
</tr>
<tr>
<td>Local groups</td>
<td>Local groups are not supported. Only groups synchronized from Microsoft Active Directory are supported.</td>
</tr>
<tr>
<td>Group members not assigned to IM and Presence Service nodes</td>
<td>Group members that are not assigned to IM and Presence Service nodes display in the contact list with the presence bubble greyed out. However, these members are considered when calculating a maximum numbers of users allowed in the contact list.</td>
</tr>
</tbody>
</table>
## Enterprise Groups Limitations

<table>
<thead>
<tr>
<th>Limitation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Migration from Microsoft Office Communication Server</td>
<td>During migration from Microsoft Office Communication Server, the Enterprise Groups feature is not supported until users are fully migrated to the IM and Presence Service node.</td>
</tr>
<tr>
<td>LDAP synchronization</td>
<td>If you change the synchronization option in the <strong>LDAP Directory Configuration window</strong> while the synchronization is in progress, the existing synchronization remains unaffected. For example, if you change the synchronization option from <strong>Users and Groups</strong> to <strong>Users Only</strong> when the synchronization is in progress, the users and groups synchronization still continues.</td>
</tr>
<tr>
<td>Group search functionality over the Edge</td>
<td>Group search functionality over the Edge is offered in this release, but has not been fully tested. As a result, full support for group searches over the Edge cannot be guaranteed. Full support is expected to be offered in a future release.</td>
</tr>
<tr>
<td>Cisco Intercluster Sync Agent service periodic synchronization</td>
<td>If a group name or a group member name is updated in the external LDAP directory, it gets updated on the Cisco Jabber contact list only after the periodic Cisco Intercluster Sync Agent service synchronization. Typically, the Cisco Intercluster Sync Agent service synchronization occurs every 30 minutes.</td>
</tr>
<tr>
<td>Synchronization of users and user groups through different synchronization agreements in LDAP configuration</td>
<td>If users and user groups are synchronized into the Cisco Unified Communications Manager database as part of the same synchronization agreement, the user and group association gets updated as expected in Cisco Unified Communications Manager database after synchronization. However, if a user and user group are synchronized as part of different synchronization agreements, the user and the group may not get associated in the database after the first synchronization. The user and group association in the database depends on the sequence in which the synchronization agreements are processed. If the users are synchronized ahead of the groups, then the groups may not be available in the database for association. In such cases, you must ensure that the synchronization agreement with groups is scheduled ahead of the synchronization agreement with the users. Otherwise, after the groups synchronize into the database, the users will get associated with the groups after the next manual or periodic sync.</td>
</tr>
