Wireless LAN Overview

This feature removes the need for users to configure WiFi parameters on their phones. You can configure WiFi profiles for them. Devices can then automatically download and apply the WiFi configuration from your system. You can configure a network access profile, which contains further security layers that are related to VPN connectivity and HTTP proxy settings.

Wireless LAN Configuration Task Flow

	Command or Action	Purpose
Step 1	Generate a Phone Feature List	Generate a report to identify devices that wireless LAN profiles.
Step 2	Configure a Network Access Profile, on page 2	Optional: Configure a network access profile if you want to configure VPN and HTTP proxy settings that you can link to a wireless LAN profile.
