

Paging

- [Paging Overview, on page 1](#)
- [Paging Prerequisites, on page 2](#)
- [Cisco Unified Communications Manager Configuration for Basic Paging Task Flow, on page 3](#)
- [Advanced Notification Paging Configuration Task Flow, on page 12](#)
- [Paging Interactions, on page 18](#)

Paging Overview

Unified Communications Manager can be configured to integrate with Cisco Paging Server to provide basic paging services for Cisco Unified IP Phone and a variety of endpoints. The Cisco Paging Server product is offered through the InformaCast Virtual Appliance and offers the following deployment options:

InformaCast Basic Paging

InformaCast Basic Paging provides phone-to-phone live audio paging to individual Cisco IP phones or groups of up to 50 phones simultaneously. InformaCast Basic Paging is free to all Unified Communications Manager customers and all Cisco Business Edition 6000 and Cisco Business Edition 7000 customers.

InformaCast Advanced Notification

InformaCast Advanced Notification is a full-featured emergency notification and paging solution that allows you to reach an unlimited number of Cisco IP phones and various devices and systems with text and audio messages.

To streamline the configuration process, Unified Communications Manager comes with a provisioning wizard that allows you to quickly configure advanced notifications services.

Some of the features include:

- Text and audio (live or pre-recorded) to Cisco IP Phones and other endpoints
- Analog and IP overhead paging systems integration
- 911 or emergency call monitoring or alerting or recording
- Cisco Jabber integration
- Cisco Spark integration

- Automated weather notifications
- Dynamically triggered emergency conference calls
- Pre-recorded or scheduled broadcasts (school bells or shift changes)
- Event accountability with message confirmation and reporting
- Notification to computer desktops (Windows and Mac OS)
- Facilities integration (control lighting, door locks)
- Security integration (panic or duress buttons, motion detectors, fire)

Purchase a license key to access InformaCast Advanced Notification features.

InformaCast Mobile

InformaCast Mobile is a cloud-based service that allows users to send images, text, and pre-recorded audio to mobile devices running iOS or Android. It also has bi-directional integration with InformaCast Advanced Notification.

Some of the features include:

- The ability to send and receive InformaCast messages via mobile devices running iOS or Android
- Bi-directional integration with InformaCast Advanced Notification
- Message confirmations and read receipts
- No calling or SMS messaging fees

InformaCast Mobile must be purchased direct from Singlewire Software. Please refer to the Singlewire website for additional details and downloads.

If you have already configured Unified Communications Manager to integrate with InformaCast Advanced Notification, no further configuration of Unified Communications Manager is required.

Paging Prerequisites

Cisco Paging Server is designed to work in a multicast environment. You must configure your network for multicast.

For a list of Cisco Unified IP Phones that support paging, refer to the **Cisco Unified IP Phones** section of the Singlewire Compatibility Matrix at:

<http://www.singlewire.com/compatibility-matrix.html>.

Cisco Unified Communications Manager Configuration for Basic Paging Task Flow

Perform the following tasks to configure Unified Communications Manager to integrate with Cisco Paging Server for an InformaCast Basic Paging deployment.

Before you begin

- Learn more about the feature by reviewing the following:
 - [Paging Overview](#), on page 1
 - [InformaCast Basic Paging](#), on page 1
- Review [Paging Prerequisites](#), on page 2
- The configuration in this section is automated when using the [Advanced Notification Paging Configuration Task Flow](#) wizard.

Procedure

	Command or Action	Purpose
Step 1	Enable SNMP Service , on page 4	Configure SNMP in Unified Communications Manager.
Step 2	Set Default Codec to G.711 , on page 5	Set the default codec to G.711.
Step 3	Configure a Device Pool for Paging , on page 6	Configure a device pool.
Step 4	Configure Route Partition for InformaCast Paging , on page 6	Configure a route partition for Basic Paging.
Step 5	Configure Calling Search Space for InformaCast Paging , on page 7	Configure a calling search space for Basic Paging.
Step 6	Configure CTI Ports for Paging , on page 7	Configure CTI ports.
Step 7	Configure Access Control Group with AXL Access , on page 8	Configure an AXL access control group.
Step 8	Configure Application User for Paging , on page 8	Configure an application user.
Step 9	Enable web access for the phone using one of the following procedures: <ul style="list-style-type: none"> • Enable Web Access for a Phone, on page 9 • Enable Web Access for Common Phone Profile, on page 9 • Enable Web Access for Enterprise Phone Configuration, on page 10 	You can enable web access on all phones globally using Enterprise Phone Configuration, a group of phones using a Common Phone Profile, or an individual phone.
Step 10	Configure Authentication URL , on page 10	Configure the Unified Communications Manager authentication URL to point to InformaCast so that when

	Command or Action	Purpose
		InformaCast pushes broadcasts to Cisco Unified IP Phone, the phones will authenticate with InformaCast.

For detailed procedures on how to configure Cisco Unified Communications Manager and Cisco Paging Server, refer to the *InformaCast Virtual Appliance Basic Paging Installation and User Guide* .

Configure SNMP for Paging

Perform the following tasks to configure SNMP services in the cluster.

Procedure

	Command or Action	Purpose
Step 1	Enable SNMP Service, on page 4	Enable the SNMP and other services in the cluster.
Step 2	Create an InformaCast SNMP Community String, on page 4	Configure an SNMP community string.

Enable SNMP Service

To configure paging, you must enable SNMP on every node in the cluster. In addition, you must enable the following services:

- Cisco CallManager SNMP Service—Enable on all nodes in the cluster.
- Cisco CallManager—Enable on at least one node.
- Cisco AXL Web Services—Enable on at least one node.
- Cisco CTIManager—Enable on at least one node.

-
- Step 1** From Cisco Unified Serviceability, choose **Tools > Service Activation**.
- Step 2** From the **Server** drop-down list, choose the server on which you want to configure SNMP.
- Step 3** Check the check boxes that correspond to the **Cisco CallManager SNMP Service**.
- Step 4** For at least one server in the cluster, check the check boxes that correspond to **Cisco CallManager**, **Cisco CTIManager**, and **Cisco AXL Web Service** services.
- Step 5** Click **Save**.
- Step 6** Click **OK**.
- Step 7** Repeat the previous steps for all nodes in the cluster.
-

Create an InformaCast SNMP Community String

Perform this procedure for Basic Paging to set up an SNMP community string.

Before you begin

[Enable SNMP Service, on page 4](#)

-
- Step 1** From Cisco Unified Serviceability, choose **SNMP > V1/V2c > Community String**.
 - Step 2** From the **Server** drop-down list, choose a server and click **Find**.
 - Step 3** Click **Add New**.
 - Step 4** In the **Community String Name** field, enter **ICVA**.
 - Step 5** From the **Access Privileges** drop-down list, select **ReadOnly**.
 - Step 6** Check the **Apply to All Nodes** check box if the check box is active.
 - Step 7** Click **Save**.
 - Step 8** Click **OK**.
-

What to do next

[Set Default Codec to G.711, on page 5](#)

Configure Region for Paging

For Basic Paging, you must set up a region for your paging deployment.

Procedure

	Command or Action	Purpose
Step 1	Set Default Codec to G.711, on page 5	Create a region that uses the G.711 codec for calls to other regions.
Step 2	Configure a Device Pool for Paging, on page 6	Set up a device pool for paging and assign the region that you created to that device pool.

Set Default Codec to G.711

You must create an InformaCast region that uses G.711 as the default codec for calls to other regions.

Before you begin

[Configure SNMP for Paging, on page 4](#)

-
- Step 1** From Cisco Unified CM Administration, choose **System > Region Information > Region**.
 - Step 2** Click **Add New**.
 - Step 3** In the **Name** field, enter **ICVA**.
 - Step 4** Click **Save**.
 - Step 5** In the **Regions** text box, select all regions by pressing the **CTRL** key and clicking all of the selected regions.
 - Step 6** From the **Maximum Audio Bit Rate** drop-down list, select **64 kbps (G.722, G.711)**.

Step 7 From the **Maximum Session Bit Rate for Video Calls** column click the **None** radio button.

Step 8 Click **Save**.

Configure a Device Pool for Paging

Perform this procedure to configure a device pool for your paging deployment.

Before you begin

[Set Default Codec to G.711, on page 5](#)

Step 1 From Cisco Unified CM Administration, choose **System > Device Pool**.

Step 2 Click **Add New**.

Step 3 In the **Device Pool Name** field, enter **ICVA**.

Step 4 From the **Cisco Unified Communications Manager Group** drop-down list, select the group that contains the Cisco Unified Communications Manager cluster with which the InformaCast Virtual Appliance will communicate.

Step 5 From the **Date/Time Group** drop-down list, select a date/time group. Select **CMLocal** unless you are performing dialing restrictions by the time of day.

Step 6 From the **Region** drop-down list, choose **ICVA**.

Step 7 From the **SRST Reference** drop-down list, select **Disable**.

Step 8 Click **Save**.

Configure Partitions and Calling Search Spaces for Paging

Perform the following tasks to configure a partition and calling search space (CSS) for paging as follows:

- For Basic Paging deployments, create a single partition and CSS for InformaCast paging.

Procedure

	Command or Action	Purpose
Step 1	Configure Route Partition for InformaCast Paging, on page 6	Configure a route partition for InformaCast paging.
Step 2	Configure Calling Search Space for InformaCast Paging, on page 7	Configure a calling search space for InformaCast paging.

Configure Route Partition for InformaCast Paging

Create a route partition for InformaCast paging.

Before you begin

[Configure a Device Pool for Paging, on page 6](#)

-
- Step 1** From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Route Partitions**.
- Step 2** Click **Add New**.
- Step 3** In the **Name** field, enter the following name and description for the partition: **ICVA-CTIOutbound, ICVA-Do not add to any phone CSS**.
- Step 4** Click **Save**.
-

Configure Calling Search Space for InformaCast Paging

Perform this procedure to configure a calling search space for InformaCast paging.

-
- Step 1** From Cisco Unified CM Administration, choose **Call Routing > Class of Control > Calling Search Space**.
- Step 2** Click **Add New**.
- Step 3** In the **Name** field, enter **ICVA**.
- Step 4** In the **Available Partitions** list box, use the arrows to move the following partitions to the **Selected Partitions** list box.
- The partition that you created for InformaCast paging
 - The partitions that contain your users' extensions and any analog paging extensions
- Step 5** Click **Save**.
-

Configure CTI Ports for Paging

Perform this procedure to configure CTI ports for your paging deployment. The number of CTI ports that you need depends on your deployment type and your applications' usage:

- For Basic Paging deployments, you must create a minimum of two CTI ports for InformaCast paging.

Before you begin

[Configure Calling Search Space for InformaCast Paging, on page 7](#)

- Step 1** From Cisco Unified CM Administration, choose **Device > Phone**.
- Step 2** Click **Add New**.
- Step 3** From the **Phone Type** drop-down list, choose **CTI Port**.
- Step 4** In the **Device Name** field, enter a name for the CTI Port. For example, **ICVA-IC-001** for an InformaCast port.
- Step 5** In the **Description** field, enter a description for the port. For example, **InformaCast Recording Port** for Call Monitoring.
- Step 6** From the **Device Pool** drop-down list, select **ICVA**.
- Step 7** From the **Calling Search Space** drop-down list, select **ICVA**.
- Step 8** From the **Device Security Profile** drop-down list, select **Cisco CTI Port - Standard SCCP Non-Secure Profile**.
- Step 9** Click **Save**.

- Step 10** Click **OK**.
- Step 11** In the left association area, click **Line [1] - Add a new DN**.
- Step 12** In the **Directory Number** field, enter a directory number. This directory number should not be used for any purpose other than making paging calls. It should not be assigned to a phone and should not be within a direct-inward-dialing range.
- Step 13** In the **Route Partition** drop-down list, select the following ports:
- For InformaCast ports, select **ICVA-CTIOutbound**.
- Step 14** In the **Display (Internal Caller ID)** text box, enter **InformaCast**.
- Step 15** In the **ASCII Display (Internal Caller ID)** text box, enter **InformaCast**.
- Step 16** Click **Save**.
- Step 17** Repeat this procedure for each CTI port that you need.

What to do next

Configure Access Control Group with AXL Access

Perform this procedure to create an access control group that includes AXL access.

- Step 1** From Cisco Unified CM Administration, choose **User Management > User Settings > Access Control Group**.
- Step 2** Click **Add New**.
- Step 3** In the **Name** text box, enter **ICVA User Group**.
- Step 4** Click **Save**.
- Step 5** From the **Related Links** drop-down list, select **Back to Find/List** and click **Go**.
- Step 6** In the **Roles** column, click the **i** icon that corresponds to the new access control group.
- Step 7** Click **Assign Role to Group**.
- Step 8** Click **Find**.
- Step 9** Select **Standard AXL API Access** check box, and click **Add Selected**.
- Step 10** Click **Save**.

Configure Application User for Paging

Perform this procedure to configure an application user:

- For Basic Paging, configure an InformaCast application user.

- Step 1** From Cisco Unified CM Administration, choose **User Management > Application User**.
- Step 2** Click **Add New**.
- Step 3** In the **User ID** text box, enter a user ID for the application user. For example, **ICVA InformaCast**.
- Step 4** Enter a password in the **Password** and **Confirm Password** fields.

- Step 5** In the **Available Devices** list box, click the CTI ports that you created for your deployment and use the arrows to move the devices to the **Controlled Devices** list box. For example, select **ICVA-IC-001** for InformaCast and **ICVA-CA-001** for CallAware.
- Step 6** Click the **Add to Access Control Group**.
- Step 7** Click **Find**.
- Step 8** Check the following check boxes (unless otherwise indicated, select these permissions for all application users):
- ICVA User Group
 - Standard CTI Allow Control of All Devices
 - Standard CTI Allow Control of Phones supporting Connected Xfer and conf
 - Standard CTI Allow Control of Phones supporting Rollover Mode
 - Standard CTI Enabled
- Step 9** Click **Add Selected**.
- Step 10** Click **Save**.
-

Enable Web Access for a Phone

Perform this procedure in Basic Paging to enable web access for a Cisco Unified IP Phone. You can also use a Common Phone Profile to enable web access for a group of phones that use that profile. For details, see [Enable Web Access for Common Phone Profile, on page 9](#).

Before you begin

[Configure Application User for Paging, on page 8](#)

- Step 1** From Cisco Unified CM Administration, choose **Device > Phone**.
- Step 2** Click **Find** and select the phone for which you want to enable web access.
- Step 3** In the **Product Specific Configuration Layout** area, from the **Web Access** drop-down list, select **Enabled**.
- Step 4** Click **Save**.
-

What to do next

[Configure Authentication URL, on page 10](#)

Enable Web Access for Common Phone Profile

Perform this procedure in Basic Paging to enable web access for a group of Cisco Unified IP Phones that use a Common Phone Profile. You can also enable web access on an individual phone. For details, see [Enable Web Access for a Phone, on page 9](#).

Before you begin

[Configure Application User for Paging, on page 8](#)

-
- Step 1** From Cisco Unified CM Administration, choose **Device > Device Settings > Common Phone Profile**.
- Step 2** Click **Find** and select the profile that applies to the group of phones for which you want to enable web access.
- Step 3** In the **Product Specific Configuration Layout** area, from the **Web Access** drop-down list, select **Enable**.
- Step 4** Click **Save**.
- Step 5** Click **Apply Config** to reset the phones that use the Common Phone Profile.
- Step 6** Click **OK**.
-

What to do next

[Configure Authentication URL, on page 10](#)

Enable Web Access for Enterprise Phone Configuration

Perform this procedure in Unified Communications Manager to enable web access for a group of Cisco Unified IP Phone that use a Common Phone Profile. You can also enable web access on an individual phone. For more details, see [Enable Web Access for a Phone, on page 9](#).

Before you begin

[Configure Application User for Paging, on page 8](#).

-
- Step 1** From Cisco Unified CM Administration, choose **System > Enterprise Phone Configuration**.
- Step 2** From the **Web Access** drop-down list, select **Enable**.
- Step 3** Click **Save**.
- Step 4** Click **Apply Config** to reset the phones that use the Common Phone Profile.
- Step 5** Click **OK**.
-

Configure Authentication URL

Perform the following tasks to configure an authentication URL that points to InformaCast so that when InformaCast pushes broadcasts to Cisco Unified IP Phones, the phones authenticate with InformaCast instead of Unified Communications Manager.

Procedure

	Command or Action	Purpose
Step 1	Set Authentication URL, on page 11	Set the Unified Communications Manager authentication URL to point InformaCast.
Step 2	Reset Your Phones, on page 11	Reset the phones in your deployment so that your phones use the new settings.

	Command or Action	Purpose
Step 3	Test Your Phones, on page 11	Verify that the phones in your deployment use the new authentication URL settings.

Set Authentication URL

Perform this procedure to set the Unified Communications Manager authentication URL to point to the InformaCast Virtual Appliance.

-
- Step 1** From Cisco Unified CM Administration, choose **System > Enterprise Parameters**.
- Step 2** Scroll to the **Phone URL Parameters** area, and in the **URL Authentication** field, enter **http://<IP Address>:8081/InformaCast/phone/auth** where <IP Address> is the IP Address of the InformaCast Virtual Appliance.
- Note** Make a note of the existing URL in the **URL Authentication** field. You may need this when you configure InformaCast. See your InformaCast documentation for details.
- Step 3** Scroll to the **Secured Phone URL Parameters** area, and in the **Secured Authentication URL** field, enter **http://<IP Address>:8081/InformaCast/phone/auth** where <IP Address> is the IP Address of the InformaCast Virtual Appliance.
- Step 4** Click **Save**.
-

Reset Your Phones

After you set the authentication URL to point to the InformaCast Virtual Appliance, you must reset your phones. This procedure describes how to manually reset the phones in device pools. There are many methods for resetting your phones. For example, you can also use Bulk Administration Tool to schedule the reset during off hours. See the *Cisco Unified Communications Manager Bulk Administration Guide* for information on the Bulk Administration Tool.

-
- Step 1** From Cisco Unified CM Administration, choose **Device > Phone**.
- Step 2** In the **From Phone Where** box, select **Device Pool**.
- Step 3** Set the other drop-down menus and field items to settings that will bring up the device pools that you contain your phones.
- Step 4** Click **Find**.
- Step 5** Select the device pools that you want to reset.
- Step 6** Click **Reset Selected**.
- Step 7** Click **Reset**.
-

Test Your Phones

Verify that your phones are authenticating with the InformaCast Virtual Appliance.

-
- Step 1** From Cisco Unified CM Administration, choose **Device > Phone**.
- Step 2** Use the drop-down list and fields in the Find and List Phones window to filter your search for a phone that should be using the new authentication URL, and click **Find**.
- Step 3** For the phone that should be using the new settings, click the IP Address link in the **IPv4 Address** column.
- Step 4** Click Network Configuration.
The Network Configuration page appears.
- Step 5** Verify that the **Authentication URL** field displays the InformaCast Virtual Appliance IP address that you entered for the **URL Authentication** enterprise parameter. If the correct URL does not appear, you will need to set the authentication URL.
-

Advanced Notification Paging Configuration Task Flow

Perform the following tasks to integrate InformaCast Paging Server with Unified Communications Manager for IP paging and emergency call alerting. It includes the following features:

- InformaCast advanced notification
- Panic button configuration
- Text and audio notification to IP phones when a user dials an emergency services number (CallAware)

Procedure

	Command or Action	Purpose
Step 1	Install the InformaCast Virtual Appliance, on page 12.	Download the InformaCast OVA file from the Singlewire website and upload it to vSphere.
Step 2	Configure Connection to InformaCast, on page 14.	Configure Unified Communications Manager and InformaCast.
Step 3	Configure Panic Button, on page 15.	Configure a panic button to send a text and audio notification to IP phones.
Step 4	Configure CallAware Emergency Call Alerting, on page 17.	Configure emergency call text and audio notifications.

Install the InformaCast Virtual Appliance

Singlewire supports InformaCast Virtual Appliance on the VMware ESXi platform, which is managed through the vSphere client.

Note To view a list of Singlewire-supported VMware ESXi versions, go to this URL: <https://www.singlewire.com/compatibility-matrix> and click the Server Platforms link under InformaCast Platform section.

Note If you have purchased a license, refer to <https://www.singlewire.com/icva-kb-activate> to activate your license. This will ensure that Emergency Notifications stay active after the 90-day trial.

Note For more details on the installation, including InformaCast screen captures, go to this URL: <https://www.singlewire.com/icva-kb-install>.

Before you begin

Import InformaCast Virtual Appliance using the vSphere client. This can be downloaded from your VMware server.

-
- Step 1** Download the OVA file from the [Singlewire](#) website and then log in to the vSphere client.
- Note** If you are using InformaCast on the Communications Manager Business Edition 6000, you are supplied with a DVD in a package with an OVA on it (physical media).
- The **vSphere Client** window appears.
- Step 2** From the **vSphere Client** window, choose **File > Deploy OVF Template**. The **Deploy OVF Template** dialog box appears.
- Step 3** Click the **Deploy from File** radio button and then click **Browse** to select the saved the OVA file (or to the OVA file on the supplied DVD). After you select the OVA file, click **Open**. The **Source** location is selected in the **Deploy OVF Template** dialog box.
- Step 4** Click **Next** to continue. The **Deploy OVF Template** dialog box refreshes and **OVF Template Details** appears.
- Step 5** Click **Next** to verify the **Name and Location**, and then click **Next** to select the network to store the new virtual machine files.
- Tip** It is good practice to place the Virtual Appliance on the same VLAN as your Cisco Unified Communications Manager.
- Step 6** Click **Next** to continue, and then click **Finish**. The InformaCast Virtual Appliance begins importing.
- Step 7** From the **vSphere Client** window, click **Hosts and Clusters** icon and then select your host server. The **vSphere Client** window refreshes.
- Step 8** Click the **Configuration** tab and select the **Virtual Machine Startup/Shutdown** link in the **Software** section.
- Step 9** Click the **Properties** link. The **Virtual Machine Startup and Shutdown** dialog box appears.
- Step 10** Check the **Allow virtual machines to start and stop automatically with the system** check box under **System Settings**.
- Step 11** Under **Startup Order**, scroll to the **Manual Startup** section and select your virtual machine (by default, this is Singlewire InformaCast VM), and then move it from the **Manual Startup** section to the **Automatic Startup** section, by using the **Move Up** button. After moving it, click **OK**. The InformaCast Virtual Appliance starts and stops automatically with the server on which it is hosted. Now you can turn on InformaCast's virtual machine and set its network configuration.

- Step 12** Choose **View > Inventory > VMs and Templates** and then select your virtual machine.
- Step 13** Choose the **Inventory > Virtual Machine > Open Console**
The Singlewire InformaCast VM console window appears.
- Step 14** InformaCast configuration starts for the first time. During this configuration, perform the following tasks for the InformaCast Virtual Appliance:
- Accept Cisco End User License Agreement (EULA)
 - Accept Singlewire EULA
 - Set up hostname
 - Set up IP address, subnet mask, and default gateway
 - Set up DNS server IP address and domain name
 - Set up NTP server IP address or hostname
 - Set up time zone
 - Set up Secure Socket Layer (SSL) certificate parameters
 - Set up SSL subject alternate names (optional)
 - Set up the OS admin password
 - Set up the InformaCast and PTT (PushToTalk) admin password. This password is required to connect the Cisco Unified Communications Manager and InformaCast in the Cisco Unified CM Administration, **Advanced Features > Emergency Notifications Paging**.
 - Set up security passphrase for backup and communication
- When your configuration is successful, the “Welcome to Singlewire InformaCast” message is displayed.
- Step 15** Click **Continue** to work with Singlewire InformaCast.

Configure Connection to InformaCast

Use this procedure to load the InformaCast certificate to the Unified Communications Manager Tomcat trust store.

Before you begin

[Install the InformaCast Virtual Appliance, on page 12.](#)

- Step 1** From Cisco Unified CM Administration, choose **Advanced Features > Emergency Notifications Paging**.
- Step 2** In the **Introduction to InformaCast Emergency Notifications** page, click **Next** to continue.
The **Installing the InformaCast Virtual Appliance** page appears.
- Step 3** In the **Installing the InformaCast Virtual Appliance** page, click **Next** to continue.
- Note** You should have successfully installed InformaCast Virtual Appliance to configure with the Unified Communications Manager.
- The **Connecting Cisco Unified Communications Manager and InformaCast** page appears.
- Step 4** In the **IP address of InformaCast VM** field, enter either IP address or Hostname.
- Note** By default, the username is stated as `admin` in the **Username to use in InformaCast** field, and it is not editable.
- Step 5** In the **Password for admin app user** field, enter the administrator password of the InformaCast application.

The dialog box displaying the thumbprint of the InformaCast certificate is displayed.

Step 6 Click **OK** to load the InformaCast certificate to the Unified Communications Manager Tomcat trust store. The configuration process starts.

Note When the configuration is successful, the **Status** field displays the completion status.

Step 7 Click **Next**.

The wizard performs the following tasks:

- Activates SNMP service
- Configures SNMP Service with locally generated random credentials
- Activates CTI Manager Service
- Configures Unified Communications Manager for InformaCast
 - Creates new region (1 per cluster)
 - Creates new device pool (1 per cluster)
 - Creates SIP trunk (1 per cluster)
 - Creates route group (1 per cluster)
 - Creates route list
 - Creates role
 - Creates app user
- Configures InformaCast for Unified Communications Manager
 - Creates a cluster
 - Refreshes recipient groups
 - Sets SIP access to deny
 - Creates SIP access

Configure Panic Button

Use this procedure to configure a panic button to send a text and audio notification to IP phones. This allows you to initiate a one click alarm if there is emergency.

Before you begin

[Configure Connection to InformaCast, on page 14.](#)

Step 1 From Cisco Unified CM Administration, choose **Advanced Features > Emergency Notifications Paging**.

Step 2 In the **Introduction to InformaCast Emergency Notifications** page, click **Next** to continue.

Step 3 In the **Installing the InformaCast Virtual Appliance** page, click **Next** to continue.

- Step 4** In the **Connecting Cisco Unified Communications Manager and InformaCast** page, click **Next** to continue. The **Configuring a Panic Button** page appears.
- Step 5** From the **Choose pre-recorded message by name** drop-down list, select the pre-recorded message to be displayed on Cisco Unified IP phones and various devices and systems in emergency.
- Note** You can change the pre-recorded message in InformaCast administration, as required.
- Step 6** In the **Enter DN to trigger the panic button** field, enter the Directory Number (DN), which includes the digits 0 to 9, asterisks (*), and pound signs (#). Default value is ***5.
- Step 7** From the **Route Partition** drop-down list, select a partition to restrict access to the route pattern.
- Note** If you do not want to restrict access to the route pattern, select <None> for the partition.
- Step 8** Click **Choose Phones to Send Notification** button. The **Phones to Send Notification** dialog box appears.
- Step 9** From the **Phones to Send Notification** dialog box, select the Cisco Unified IP phones to send the pre-recorded message. The dial pattern entered by you (for example, ***5) is configured as speed dial on the selected phones. The selected Cisco Unified IP Phone are displayed in the **Selected Phones to Send Notification** list box.
- Step 10** Click **Add Rules**, to create a new rule for the selected Cisco Unified IP Phone to receive notifications.
- Select one of the parameters from the drop-down list. The available options are Device Pool, Description, and Directory Number.
 - In the second drop-down list, select a criteria from the following options:
 - Does
 - Does not
 - In the third drop-down list, select a criteria from the following options:
 - Begins with
 - Ends with
 - Contains
 - In the text box, enter the search criterion.
- Note** Minimum of one new rule and maximum of new five rules can be created. The **Add Rules** button gets disabled when five rules are created.
- Note** To delete a rule, click **Delete Rules**.
- Click **Test Rules**, to validate the created rules. When the test rule is completed with more than zero phones, the **Next** button is enabled.
- Note** Phones added to Cisco Unified Communications Manager at a later date that match this rule will be included as recipients in notifications to this group.
- Step 11** Click **Next**.
The wizard performs the following tasks:

- Adds a speed dial for the entered DN to the selected phones. If the selected phones have unused speed dials assigned to existing phone button templates, this speed dial appears directly on the selected phones. If the selected phones do not have unused speed dial buttons, the panic button speed dial is created, but it does not appear on the phone.
- Adds route pattern for entered DN in selected partition using created route list.
- Creates an InformaCast DialCast entry for the entered DN to send the selected message to the phones matching the selected rules.

Configure CallAware Emergency Call Alerting

Use this procedure to configure the CallAware emergency call alerting details. This sends a text and audio notification to IP phones when an emergency number is dialed. It can also detect calls to numbers other than 911.

Before you begin

[Configure Panic Button, on page 15.](#)

-
- Step 1** From Cisco Unified CM Administration, choose **Advanced Features > Emergency Notifications Paging**.
- Step 2** In the **Introduction to InformaCast Emergency Notifications** page, click **Next** to continue.
- Step 3** In the **Installing the InformaCast Virtual Appliance** page, click **Next** to continue.
- Step 4** In the **Connecting Cisco Unified Communications Manager and InformaCast** page, click **Next** to continue.
- Step 5** In the **Configuring a Panic Button** page, click **Next** to continue.
The **Configuring CallAware Emergency Call Alerting** page appears.
- Step 6** From the **Choose pre-recorded message by name** drop-down list, select the pre-recorded message to be displayed on Cisco Unified IP phones and various devices and systems in emergency.
- Note** You can change the pre-recorded message in InformaCast administration, as required.
- Step 7** Click **Choose Emergency Route Patterns** button.
The **Route Patterns** dialog box appears.
- Step 8** From the **Route Patterns** dialog box, select the route patterns by checking the box next to the desired patterns.
- a) Click the **Save Selected/Changes** button.
The selected route patterns are displayed in the **Selected Route Patterns** list box.
- Step 9** Click **Add Rules**, to create a new rule for the selected Cisco Unified IP Phone to receive notifications.
- a) Select one of the parameters from the drop-down list. The available options are Device Pool, Description, and Directory Number.
 - b) In the second drop-down list, select a criteria from the following options:
 - Does
 - Does not
 - c) In the third drop-down list, select a criteria from the following options:
 - Begins with

- Ends with
- Contains

d) In the text box, enter the search criterion.

Note Minimum of one new rule and maximum of five new rules can be created. The **Add Rules** button gets disabled when five rules are created.

Note To delete a rule, click **Delete Rules**.

e) Click **Test Rules**, to validate the created rules. When the test rule is completed with more than zero phones, the **Finish** button is enabled.

Note Phones added to Unified Communications Manager at a later date that match this rule will be included as recipients in notifications to this group.

Step 10 Click **Finish**.

The wizard performs the following tasks:

- Adds External Call Control profile for InformaCast
- For each selected route pattern, modify that route pattern to reference the External Call Control profile
- Creates a recipient group with rules that match phones to receive the notification
- Creates an InformaCast routing request with the selected message and recipient group

The **Summary** page appears and confirms the successful configuration of InformaCast with Unified Communications Manager. For more information, see <https://www.singlewire.com>.

Paging Interactions

Advanced Notification Paging Interactions

Table 1: Advanced Notification Paging Interactions

Feature	Interaction
Emergency Notifications Paging	<p>You can configure the Emergency Notifications Paging wizard using InformaCast Release 11.5(1)SU3 and later versions in basic paging mode only.</p> <p>You can configure call monitoring to route patterns that contain digits only in the Emergency Notifications Paging wizard. For route patterns that contain wildcard characters, configure in InformaCast.</p>
