

Gateway insertions

This chapter provides information to insert Cisco-supported gateways into Cisco Unified Communications Manager database.

- [CSV data file creation for Cisco VG200 gateways, page 1](#)
- [Create CSV data file for Cisco Catalyst 6000 \(FXS\) ports, page 3](#)
- [CSV data files creation for Cisco VG224 gateways and ports, page 4](#)
- [CSV data file creation for Cisco VG202 and VG204 gateways, page 6](#)
- [Insert gateways and ports to Cisco Unified Communications Manager, page 8](#)

CSV data file creation for Cisco VG200 gateways

You can create a CSV data file to insert Cisco VG200 gateways and ports in the Cisco Unified Communications Manager database. Use either the BAT spreadsheet or a text editor to create the CSV data file.

Related Topics

[Create text-based CSV file for Cisco VG200 gateways](#)

[Create CSV data files for Cisco VG200 gateways and T1 CAS, T1 PRI, E1 PRI, FXS or FXO ports using BAT spreadsheet, on page 1](#)

Create CSV data files for Cisco VG200 gateways and T1 CAS, T1 PRI, E1 PRI, FXS or FXO ports using BAT spreadsheet

Use the BAT spreadsheet to create the CSV data file that contains the details, such as domain name, MGCP description, and port identifier, for individual T1 CAS, T1 PRI, E1 PRI, FXS or FXO ports.

For T1 CAS only, the ports that you specify in the BAT spreadsheet must be the same ports that you specified in the VG200 template. In the CSV data file, you can specify none, some, or all ports that were configured in the template. Do not configure any ports in the CSV data file that were not also configured in the template, or an error will result when you attempt to insert the BAT VG200 template and the CSV file.

For example, if you configured ports 1,2,3, and 4 in the template, you could configure none of the ports, or ports 1, 2, 3, and 4, or only ports 1 and 2 in the CSV file, and the insertion would be accepted. But if you

configured ports 5 and 6 in the CSV file when they are not configured in the template, you will receive an insertion error in BAT.

After you are finished editing the fields for the gateway ports in the BAT spreadsheet, export the file. The system saves the file to C:\XLSDataFiles or to your choice of another existing folder on your local workstation using the following default filename:

```
VG200Gateways#timestamp.txt
```

where “timestamp” represents the precise date and time that the file was created.

Attention If you enter a comma in one of the fields, BAT.xlt encloses that field entry in double quotes when you export to BAT format. If you enter a blank row in the spreadsheet, the system treats the empty row as the end of the file. Data that is entered after a blank line does not get converted to the BAT format.

Procedure

- Step 1** To open the BAT spreadsheet, locate and double-click BAT.xlt file
- Step 2** When prompted, click **Enable Macros** to use the spreadsheet capabilities.
- Step 3** Click the **VG200 T1-Pri T1-Cas E1-Pri FXSFXO** tab.
- Step 4** For T1 CAS endpoints only, scroll to the right until you see the **Number of Port Identifiers** field. Enter the number of port identifiers that you want to add for each Cisco VG200 gateway. If you want only one port identifier, skip this step.
- Step 5** In each row, provide the information for the following fields.

Table 1: VG200 gateway T1 CAS, T1-PRI, E1-PRI, FXS and FXO ports field settings

Field	Description
MGCP Domain Name	Enter a name, from 1 to 64 characters that identifies the gateway. Use the Domain Name System (DNS) host name if it is configured to resolve correctly; otherwise, use the host name as defined on the Cisco MGCP gateway. The host name must match exactly the host name that is configured on the Cisco IOS gateway. For example, if the host name is configured on the gateway to resolve to vg200-1 and the IP domain name is not configured, enter the host name in this field (in this case, vg200-1). If the host name is configured on the gateway as vg200-1 and the IP domain name is configured on the gateway as cisco.com, enter vg200-1.cisco.com in this field.
MGCP Description	Enter a description, up to 100 characters for the gateway. Use a specific description that helps you locate the gateway.
Port Description	Enter a description for port 1, up to 50 characters. Use a description to help identify the port in a list of ports. This applies to the description field for port 2 through port 4.

Field	Description
Port Directory Number	Enter the directory number, up to 24 numerals and special characters, for this port. This applies to the directory number field for port 2 through port 4. Attention Port 1 Directory Number and Partition fields are required for FXS ports only. For FXO ports, leave these fields blank.
Slot	Enter the slot number that you are trying to configure. For VG200, it is always 1.
Subunit	Enter an integer for the subunit value.
Port Number	Enter an integer for the Port Number.

Step 6 To transfer the data from the BAT Excel spreadsheet into a CSV file, click **Export to BAT Format**. The system saves the file using the default filename `VG200Gateways#timestamp.txt` to `C:\XLSDataFiles` or to your choice of another existing folder on your local workstation, where “timestamp” represents the precise date and time that the file was created.

Note For information on how to read the exported CSV data file, click the link to **View Sample File** in the **Insert Gateways** window in BAT.

What to Do Next

You must upload the CSV data file to the first node of the Cisco Unified Communications Manager server, so BAT can access the data input file.

Create CSV data file for Cisco Catalyst 6000 (FXS) ports

You can create the CSV data file to insert Cisco Catalyst 6000 (FXS) ports, such as directory number and a description of the port, in the Cisco Unified Communications Manager database. Use either the BAT spreadsheet or a text editor to create the CSV data file.

Procedure

- Step 1** To open the BAT Spreadsheet, locate and double-click `BAT.xlt` file.
- Step 2** When prompted, click **Enable Macros** to use the spreadsheet capabilities.
- Step 3** Click the **Catalyst 6000 (FXS) Ports** tab.
- Step 4** Enter information for each port record in a row.

Complete all mandatory fields and any relevant, optional fields. Each column heading specifies the length of the field.

- MAC Address—Enter the 12-character MAC address for the gateway.
- Port Number—Enter the numeric port number (1 through 24) that you want to add to the gateway.
- Directory Number—Enter a directory number, up to 24 numerals and special characters, for this port. You must enter a directory number if you have specified a partition.(Optional)
- Partition—Enter the route partition, up to 50 characters, to which you want this port to belong. Do not specify a partition unless you also have specified a directory number. (Optional)

Caution The system treats blank rows in the spreadsheet as End of File and discards subsequent records.

Step 5 To transfer the data from the BAT Excel spreadsheet into a CSV file, click **Export to BAT Format**. The system saves the file to C:\XLSDataFiles\ or to your choice of another existing folder.

Note For information on how to read the exported CSV data file, click the link to **View Sample File** in the **Insert Gateways** window in BAT.

What to Do Next

You must upload the CSV data file to the first node of the Cisco Unified Communications Manager server, so BAT can access the data input file. For more information, see [Upload and download files](#).

CSV data files creation for Cisco VG224 gateways and ports

You can create a CSV data file to insert VG224 gateways and ports in the Cisco Unified Communications Manager database. Use either the BAT spreadsheet or a text editor to create the CSV data file.

Related Topics

- [Create CSV data files for Cisco VG224 FXS gateways and ports using BAT spreadsheet, on page 4](#)
- [Create text-based CSV file for Cisco VG224 gateways](#)

Create CSV data files for Cisco VG224 FXS gateways and ports using BAT spreadsheet

Use the BAT spreadsheet to create the CSV data file that contains the details, such as domain name, MGCP description, and port identifier, for individual FXS ports.

After you are finished editing the fields for the gateway ports in the BAT spreadsheet, export the file. The system saves the file to C:\XLSDataFiles\ or to your choice of another existing folder on your local workstation using the following default filename:

```
VG224Gateways#timestamp.txt
```

where “timestamp” represents the precise date and time that the file was created.

Tip

If you enter a comma in one of the fields, BAT.xlt encloses that field entry in double quotes when you export to BAT format. If you enter a blank row in the spreadsheet, the system treats the empty row as the end of the file. Data that is entered after a blank line does not get converted to the BAT format.

Procedure

- Step 1** To open the BAT spreadsheet, locate and double-click BAT.xlt file
- Step 2** When prompted, click **Enable Macros** to use the spreadsheet capabilities.
- Step 3** Click the **VG224** tab.
- Step 4** For MGCP protocol, click the **MGCP** radio button and for SCCP protocol, click the **SCCP** radio button.
- Step 5** Do one of the following:
- a) If you choose MGCP, skip to [Step 6, on page 5](#).
 - b) If you choose SCCP, a **Create File Format** button appears in the spreadsheet.
 - 1 Click **Create File Format**, the **Field Selection** window displays.
 - 2 From the **Device Fields** box, select the required device fields and click on the >> button to move them to the **Selected Device Fields** box.
 - 3 From the **Line Fields** box, select the line fields and click the >> button to move them to the **Selected Line Fields** box.
 - 4 Click the Up and Down buttons to rearrange the selected fields.
 - 5 You can click the << button to remove any of the selected fields from the selected fields list.
 - 6 When you are done selecting the required fields, click **Create** to add the selected fields to the VG224 sheet.
- Step 6** In each row, provide the information for the following fields:
- **Domain Name**—Enter a name, from 1 to 64 characters that identifies the gateway. Use the Domain Name System (DNS) host name if it is configured to resolve correctly; otherwise, use the host name as defined on the Cisco MGCP gateway.
The host name must match exactly the host name that is configured on the Cisco IOS gateway. For example, if the host name is configured on the gateway to resolve to vg224-1 and the IP domain name is not configured, enter the host name in this field (in this case, vg224-1). If the host name is configured on the gateway as vg224-1 and the IP domain name is configured on the gateway as cisco.com, enter vg224-1.cisco.com in this field.
 - **Description**—Enter a description, up to 100 characters for the gateway. Use a specific description that helps you locate the gateway.
 - **Port Description**—Enter a description for port 1, up to 50 characters. Use a description to help identify the port in a list of ports. This applies to the description field for port 2 through port 4.
 - **Port Directory Number**—Enter the directory number, up to 24 numerals and special characters, for this port. This applies to the directory number field for port 2 through port 4.
- Note** Port 1 Directory Number and Partition fields are required for FXS ports only. For FXO ports, leave these fields blank.

- Slot 2—Enter the slot number that you are trying to configure. For VG224, the slot is always 2.
- Subunit—Enter an integer for the subunit value. For VG224, the subunit is always 0.
- Port Number—Enter an integer for the Port Number.

Step 7 To transfer the data from the BAT Excel spreadsheet into a CSV file, click **Export to BAT Format**. The system saves the file using the default filename `VG224Gateways#timestamp.txt` to `C:\XLSDataFiles` or to your choice of another existing folder on your local workstation.

Note For information on how to read the exported CSV data file, click the link to **View Sample File** in the **Insert Gateways** window in BAT.

What to Do Next

You must upload the CSV data file to the first node of the Cisco Unified Communications Manager server, so BAT can access the data input file.

Create CSV data files for Cisco VG202 and VG204 FXS gateways and ports using BAT spreadsheet

Use the BAT spreadsheet to create the CSV data file that contains the details, such as domain name, MGCP description, and port identifier, for individual FXS ports.

After you are finished editing the fields for the gateway ports in the BAT spreadsheet, export the file. The system saves the file to `C:\XLSDataFiles` or to your choice of another existing folder on your local workstation using the following default filename:

`VG202Gateways#timestamp.txt` OR `VG204Gateways#timestamp.txt`

where “timestamp” represents the precise date and time at which the file was created.

**Tip**

If you enter a comma in one of the fields, BAT.xlt encloses that field entry in double quotes when you export to BAT format. If you enter a blank row in the spreadsheet, the system treats the empty row as the end of the file. Data that is entered after a blank line does not get converted to the BAT format.

Procedure

-
- Step 1** To open the BAT spreadsheet, locate and double-click BAT.xlt file
- Step 2** When prompted, click **Enable Macros** to use the spreadsheet capabilities.
- Step 3** Click the **VG202-VG204** tab.
- Step 4** For MGCP, click the **MGCP** radio button and for SCCP, click the **SCCP** radio button.
- Step 5** Do one of the following:
- If you choose MGCP, proceed to [Step 6, on page 7](#).
 - If you choose SCCP, a **Create File Format** button appears in the spreadsheet.
 - Click Create File Format; the Field Selection window displays.
 - From the Device Fields box, select the required device fields and click on the >> button to move them to the Selected Device Fields box.
 - From the Line Fields box, select the line fields and click the >> button to move them to the Selected Line Fields box.
 - To rearrange the selected fields, click the Up and Down buttons.
 - You can click the << button to remove any of the selected fields from the selected fields list.
 - When you are done selecting the required fields, click Create to add the selected fields to the VG224 sheet.
- Step 6** In each row, provide the information for the following fields:
- Domain Name/MAC Address—Enter a name, from 1 to 64 characters, that identifies the gateway. Use the Domain Name System (DNS) host name if it is configured to resolve correctly; otherwise, use the host name as defined on the Cisco MGCP gateway. For SCCP gateways, use the MAC address. The host name must match exactly the host name that is configured on the Cisco IOS gateway. For example, if the host name is configured on the gateway to resolve to vg204-1 and the IP domain name is not configured, enter the host name in this field (in this case, vg204-1). If the host name is configured on the gateway as vg204-1 and the IP domain name is configured on the gateway as cisco.com, enter vg204-1.cisco.com in this field.
 - Description—Enter a description, up to 100 characters for the gateway. Use a specific description that helps you locate the gateway.
 - Slot—Enter the slot number that you are trying to configure. For VG202 and VG204, the slot always equals 0.
 - Subunit—Enter an integer for the subunit value. For VG202 and VG204, the subunit always equals 0.
 - Port Directory Number—Enter the directory number, up to 24 numerals and special characters, for this port. This applies to the directory number field for port 2 through port 4.

Note Be aware that Port 1 Directory Number and Partition fields are required for FXS ports only.
 - Port Number—Enter an integer for the Port Number.

- Port Description—Enter a description for port 1, up to 50 characters. Use a description to help identify the port in a list of ports. This applies to the description field for port 2 through port 4.

Step 7 To transfer the data from the BAT Excel spreadsheet into a CSV file, click **Export to BAT Format**. The system saves the file using the default filename `VG202Gateways#timestamp.txt` or `VG204Gateways#timestamp.txt` to `C:\XLSDataFiles` on your local workstation or to your choice of another existing folder.

Note For information on how to read the exported CSV data file, click the link to **View Sample File** in the **Insert Gateways** window in BAT.

What to Do Next

You must upload the CSV data file to the first node of the Cisco Unified Communications Manager server, so BAT can access the data input file.

Insert gateways and ports to Cisco Unified Communications Manager

You can use the BAT spreadsheet to add Cisco gateways and ports to Cisco Unified Communications Manager.

Before You Begin

- If you want to insert a Cisco VG200 gateway, you must have a Cisco VG200 gateway template for the trunks or ports and a CSV data file for the VG200 gateway ports. See [Create Cisco VG200 gateway template](#) and [CSV data file creation for Cisco VG200 gateways](#), on page 1.
- If you want to insert a Cisco Catalyst 6000 Port, you must have a Cisco Catalyst 6000 Ports template and a CSV data file that contains port details for this bulk transaction. See [Create Cisco Catalyst 6000 \(FXS\) gateway template](#) and [Create CSV data file for Cisco Catalyst 6000 \(FXS\) ports](#), on page 3.
- If you want to insert a Cisco VG224 gateway, you must have a Cisco VG224 gateway template for the trunks or ports and a CSV data file for the VG224 gateway ports. See [Create Cisco VG200 gateway template](#) and [CSV data file creation for Cisco VG200 gateways](#), on page 1.
- If you want to insert a Cisco VG202 or VG204 gateway, you must have a Cisco VG202 or VG204 gateway template for the trunks or ports and a CSV data file for the VG202 or VG204 gateway ports. See [Create Cisco VG202 or VG204 gateway template](#) and [CSV data file creation for Cisco VG202 and VG204 gateways](#), on page 6.

Procedure

Step 1 Choose **Bulk Administration > Gateways > Insert Gateways**.

The **Insert Gateways Configuration** window displays.

- Step 2** From the **Gateway Type** drop-down list box, choose type of gateway you want to insert. The **Insert Gateway Configuration** window displays.
- Step 3** In the **File Name** field drop-down list box, select the name of the CSV data file that contains the Cisco VG200 gateway information to be added.
- Step 4** In the **Gateway Template Name** field, select the name of the VG200 or the FXS gateway template that you created for this type of bulk transaction.
- Step 5** Checking the **Override the existing configuration** check box, overwrites the existing gateway settings with the information that is contained in the file that you want to insert.
- Step 6** In the **Job Information** area, enter the Job description.
- Step 7** Choose an insert method. Do one of the following:
- a) Click **Run Immediately** to insert the gateway immediately.
 - b) Click **Run Later** to insert the gateway at a later time.
- Step 8** To create a job for inserting the gateways, click **Submit**.
Use the Job Scheduler option in the **Bulk Administration** main menu to schedule and/or activate this job.
-
