utils auditd

This command starts, stops, and provides the status of the system auditing service.

utils auditd {enable| disable| status}

Syntax Description	Parameters	Description
	enable	Enables the collection of audit logs. When enabled, the system monitors and records user actions as well as Linux events such as the creation and removal of users, as well as the editing and deleting of files .
	disable	Disables the collection of audit logs.

Parameters	Description
status	Displays the status of audit log collection. Cisco recommends that you retrieve the audit log by using the Real-Time Monitoring Tool, but you can also retrieve it by using the CLI.

Command Modes Administrator (admin:)

Usage Guidelines After the service has been enabled, it monitors and logs activity on the system. Be aware that the system auditing service logs a lot of information. Care must be taken not to overfill the disk.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils contactsearchauthentication*

utils contactsearchauthentication disable

This command disables the secure contact search authentication mode. After this mode is disabled, you need to reset the phone for the changes to take effect.

utils contactsearchauthentication disable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils contactsearchauthentication enable

This command enables the secure contact search authentication mode. After this mode is enabled, reset the phone for the changes to take effect.

utils contactsearchauthentication enable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils contactsearchauthentication status

This command shows whether the system is operating in contact search authentication enable mode or contact search authentication disable mode.

utils contactsearchauthentication status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils core*

utils core analyze

This command generates a backtrace for a core file, a thread list, and the current value of all CPU registers.

utils core {active| inactive} analyze [core_filename]

Syntax Description	Parameters	Description
	active	Specifies an active version
	inactive	Specifies an inactive version
	core_filename	Specifies the name of the core file from which to generate the stack trace.

Command Modes Administrator (admin:)

Usage Guidelines This command creates a file of the same name as the core file, with a .txt extension, in the same directory as the core file. After you execute this command on a core file created by cimserver, an unexpected message displays. This message is a known limitation of the command.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils core list

This command displays all active or inactive core files.

utils core {active| inactive} list

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils capf*

utils capf cert import

utils capf cert import

Use this command to upload signed phone certificates to your system.

Usage Guidelines You can choose to import your signed certificates through either FTP or TFTP.

Requirements

Command privilege level: 1 Allowed during upgrade: No Applies to: Cisco Unified Communications Manager

utils capf csr

utils capf csr {dump| count| delete}

This command helps you manage third-party CA signed certificates on your system.

Syntax Description	Parameters	Description
	count	View the number of certificates and CSRs available on your system.
	delete	Remove all certificates and CSRs on your system.
	dump	After all CSRs are signed by the CA, download them to your local server with this parameter.

Usage Guidelines

lines For information about how to use this command set, see the "Generate and Import Third Party CA-Signed LSCs" procedure in the *Cisco Unified Communications Manager Security Guide* at http://www.cisco.com/c/en/us/support/unified-communications/unified-communications-manager-callmanager/products-maintenance-guides-list.html.

Requirements

Command privilege level: 0 for the count parameter, 1 for delete and dump parameters.

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager

utils create report

This command creates reports about the server in the platform/log directory.

utils create report {hardware| platform| security}

Syntax Description	Parameters	Description
	hardware	Creates a system report that contains disk array, remote console, diagnostic, and environmental data.

	Parameters	Description
	platform	Collects the platform configuration files into a TAR file.
	security	Collects the diagnostic reports and creates a TAR file that you can download for troubleshooting purposes. You can retrieve this file with the file get command.
Command Modes	Administrator (admi	n:)
Usage Guidelines	You are prompted to	o continue after you enter the command.
		port, use the command file get activelog platform/log / <i>filename</i> command, to get the <i>ne</i> specifies the report filename that displays after the command completes.
	Requirements	
	Command privilege	level: 1
	Allowed during upgr	rade: No
	**	nified Communications Manager, IM and Presence service on Cisco Unified anager, and Cisco Unity Connection.

utils create report database

This command collects all log the files that are needed for database troubleshooting.

utils create report {hardware| platform| security}

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils ctl

I

utils ctl {set-cluster mixed-mode| set-cluster non-secure-mode| update CTLFile}

This command changes the cluster security mode or updates the CTL file in each of the nodes.

set-cluster mixed-mode	Updates the CTL file and sets the cluster to mixed mode (db secure mode is set to 1).
	If the cluster is already in mixed mode, this command shows that Unified Communications Manager is in mixed mode and Autoregistration is active. You will need to confirm your action.
set-cluster non-secure-mode	Updates the CTL file and set the cluster to non-secure mode.
	If the cluster is already in mixed mode, this command shows that Unified Communications Manager is in non-secure mode.
ıpdate CTLFile	Updates the CTL file in each of the nodes of the cluster.
5	et-cluster non-secure-mode

Command Modes Administrator (admin:)

Usage Guidelines

The CLI must be executed on the publisher. On all other nodes, this CLI command is disabled.

After you regenerate the CTL file, you must restart CallManager and TFTP services across the cluster.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager.

utils ctl reset localkey

This command is used to regenerate the CTL file and sign it with the secondary SAST role (ITLRecovery). Use this command where the CallManager certificate that was used to sign the original CTL file has changed and so, the endpoints are locked out.

utils ctl reset {localkey}

Syntax Description

localkey

Generates a new CTL file, updates the CTL file on the publisher. The command signs the CTL file with ITLRecovery key.

Command Modes Administrator (admin:)

Usage Guidelin

Note

• You must run this command on the Unified Communications Manager publisher node.

 After the endpoints receive the new CTL file, which is signed by ITLrecovery and contains the new CallManager certificate, execute the CTL update command again to sign it with the new CallManager certificate. The CTL file is regenerated but signed by the new CallManager certificate, which is then trusted by the endpoints.

Requirements

Command privilege level: 4 Allowed during upgrade: No Applies to: Unified Communications Manager

utils cuc*

utils cuc activate CUSRSV

This command converts the standalone Cisco Unity Connection server to Cisco Unity Connection SRSV server.

utils cuc activate CUSRSV

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1 Allowed during upgrade: No Applies to: Cisco Unity Connection

utils cuc cluster activate

This command activates this server in a Cisco Unity Connection cluster.

utils cuc cluster activate

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1 Allowed during upgrade: Yes Applies to: Cisco Unity Connection

utils cuc cluster deactivate

This command deactivates this server in a Cisco Unity Connection cluster.

utils cuc cluster deactivate

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unity Connection

utils cuc cluster makeprimary

This command forces the specified server to take the primary server status in a Cisco Unity Connection cluster.

utils cuc cluster makeprimary

Syntax Description	Parameters	Description	
	server	Specifies the name of the server to take the primary server status in a Cisco Unity Connection cluster.	
Command Modes	Administrator (admin:)		
	Requirements		
	Command privilege level: 1		
	Allowed during ungrade: Ves		

Allowed during upgrade: Yes Applies to: Cisco Unity Connection

utils cuc cluster overwritedb

This command overwrites the data on the server with the data on the other server in a Cisco Unity Connection cluster.

utils cuc cluster overwritedb

Command Modes Administrator (admin:)

Usage Guidelines This command overwrites the database on the server on which you run this command with the database from the other server in the Connection cluster. Replication restarts after the database is overwritten. This method is used when you restore one server from a backup and must copy the restored data to the other server.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unity Connection

utils cuc cluster renegotiate

This command creates a cluster relationship with the publisher server in a Connection cluster after the server was replaced or the Connection was reinstalled on the publisher server. This command overwrites all data on the publisher server with data from the subscriber server and initializes replication between the servers.

utils cuc cluster renegotiate

Command Modes Administrator (admin:)

Usage Guidelines Run this command on the subscriber server in a Connection cluster to set up a trust with a publisher server that has been replaced or on which Connection has been reinstalled.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unity Connection

utils cuc create report

This command collects data that is helpful to technical support staff for troubleshooting the system. Data collected includes version information, cluster status, service information, database information, trace files, log files, disk information, memory information, and restart information.

utils cuc create report

- **Command Modes** Administrator (admin:)
- **Usage Guidelines** After the command completes, detailed information gets saved in a .zip file, and the location of the zip file displays. Use the **file get** command to move the file to a computer on which you can uncompress the file and view the contents.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unity Connection only

Example

```
admin: utils cuc create report
Getting unity connection version. Please wait...Done
Getting cluster status. Please wait...Done
Getting service information. Please wait...Done
Getting installed locales. Please wait...Done
Getting database schema version. Please wait...Done
Getting database integrity. Please wait...Done
Getting database diagnostic log. Please wait...Done
Getting database message log. Please wait...Done
Getting trace files. Please wait...Done
Getting log files. Please wait...Done
Getting platform status. Please wait...Done
Compressing 75 files. Please wait...Done
Output is in file: cuc/cli/systeminfo_080318-140843.zip
To free disk space, delete the file after copying it to another computer
```

utils cuc dbreplication*

utils cuc dbreplication 01_tear_down

This command breaks the replication and connectivity between two Unity Connection servers in a cluster. Running this command on both the servers ensures ideal cleanup before establishing a good replication between the servers.

utils cuc dbreplication 01 tear down

Command Modes

Administrator (admin:)

Usage Guidelines

In case of long Unity Connection database CDR queue buildup, this command cleans the buildup for providing clean ground to establish server connectivity and replication between the two servers in the cluster.

It is recommended to :

- Take the system backup before running the command.
- Collect the screen log information along with command line logs if the command fails and escalate it to Cisco TAC.
- Ensure that only Cisco TAC runs the command.
- Run the command on the server with obsolete data as the synchronization process deletes the data that clashes with the information on the other server.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unity Connection

utils cuc dbreplication 02_define_servers

This command establishes the network connectivity between the two Unity Connection servers in a cluster.

utils cuc dbreplication 02_define_servers

Command Modes

Administrator (admin:)

Usage Guidelines

You can use this command to track and report the CDR traffic from one server to another in a Unity Connection cluster. During SBR process, this command helps in defining the roles of the two server in a cluster.

It is recommended to :

- · Take the system backup before running the command.
- Collect the screen log information along with command line logs if the command fails and escalate it to Cisco TAC.
- Ensure that only Cisco TAC runs the command.
- Run the command on the server with obsolete data as the synchronization process deletes the data that clashes with the information on the other server.

Note You should run this command on the server that has obsolete data in a Unity Connection cluster.

Requirements

I

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unity Connection

utils cuc dbreplication 03_define_db_template

This command creates the replication record of the set of tables in Unity Connection databases for replication synchronization. This command also negotiates the table templates of Unity Connection database on which the replication scheme needs to be established.

utils cuc dbreplication 03_define_db_template

Command Modes

Administrator (admin:)

Usage Guidelines

This command lists all the tables and defines templates on basis of which the data is negotiated and synchronized between the two servers in a Unity Connection cluster.

Note It is recommended to :

- Take the system backup before running the command.
- Collect the screen log information along with command line logs if the command fails and escalate it to Cisco TAC.
- Ensure that only Cisco TAC runs the command.
- Run the command on the server with obsolete data as the synchronization process deletes the data that clashes with the information on the other server.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unity Connection

utils cuc dbreplication 04_sync_database

This command synchronizes the database from the remote server to the server on which the command is executed.

utils cuc dbreplication 04_sync_database

Command Modes

Administrator (admin:)

Usage Guidelines

You should run this command on the server that has obsolete data in a Unity Connection cluster to copy the recent data from the remote server on the current server.

It is recommended to :

- Take the system backup before running the command.
- Collect the screen log information along with command line logs if the command fails and escalate it to Cisco TAC.
- · Ensure that only Cisco TAC runs the command.
- Run the command on the server with obsolete data as the synchronization process deletes the data that clashes with the information on the other server.

Requirements

Command privilege level: 1 Allowed during upgrade: No Applies to: Cisco Unity Connection

utils cuc dbreplication reset_all

This command performs all the tasks, such as tear down and defining servers required to reset database replication between the two servers in a Unity Connection cluster.

utils cuc dbreplication reset_all

Command Modes

Administrator (admin:)

Usage Guidelines

This command executes the following commands sequentially to successfully reset database replication between the two servers in a Unity Connection cluster:

- utils cuc dbreplication01_tear_down
- utils cuc dbreplication 02_define_servers
- utils cuc dbreplication 03_define_db_template
- utils cuc dbreplication 04_sync_database

Note It is recommended to :

- Take the system backup before running the command.
- Collect the screen log information along with command line logs if the command fails and escalate it to Cisco TAC.
- Ensure that only Cisco TAC runs the command.
- Run the command on the server with obsolete data as the synchronization process deletes the data that clashes with the information on the other server.

Requirements

Command privilege level: 1 Allowed during upgrade: No Applies to: Cisco Unity Connection

utils cuc jetty ssl disable

This command allows you to set the status of SSL (Disabled) on the Jetty Server for notifications.

utils cuc jetty ssl disable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unity Connection

Example

admin: utils cuc jetty ssl disable

After successful execution of this command restart of Jetty server is required, which will result in loss of current event subscriptions. Are you sure? Enter (yes/no)? yes

```
Command completed successfully.
Please restart Connection Jetty Service.
In case of cluster, run this command on the other node also.
```

utils cuc jetty ssl enable

This command allows you to set the status of SSL (Enabled) on the Jetty Server for notifications.

utils cuc jetty ssl enable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unity Connection

Example

admin: utils cuc jetty ssl enable

```
After successful execution of this command restart of Jetty server is required, which will result in loss of current event subscriptions. Are you sure? Enter (yes/no)? yes
```

Command completed successfully. Please restart Connection Jetty Service. In case of cluster, run this command on the other node also.

utils cuc networking clear_replication

This command stops all Digital Networking replication activities on the server.

utils cuc networking clear replication

Command Modes Administrator (admin:)

Usage Guidelines This command stops the Connection Digital Networking Replication Agent and Connection SMTP service, deletes the drop, queue, and pickup replication folders, clears the status of in-progress directory pushes to or pulls from this server, and restarts the Connection Digital Networking Replication Agent and Connection SMTP service. Depending on the size of the replication folders, this operation may take several minutes.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unity Connection

utils cuc networking dscp

This command causes Connection either to start or to stop including a DSCP value of 18 in packets sent between the Connection servers in a cluster, so a router configured to prioritize packets based on their DSCP value can prioritize Connection data and voice messages.

utils cuc networking dscp {on| off}

Syntax Description	Parameters	Description
	on	Causes Connection to start including a DSCP value of 18 packets sent over the network.
	off	Causes to stop including a DSCP value of 18 in packets sent over the network. 18 is the default value.
Command Modes	Administrator (adn	nin:)
Usage Guidelines	This command makes the DSCP value available in the packets being passed between the Connect in a cluster. For the information to be used, you must configure the router. The command lets you whether a DSCP value is included in outgoing packets, but you can not change the value.	
	Requirements	
	Command privilego	e level: 1
	Allowed during up	grade: Yes
	Applies to: Cisco U	Jnity Connection only

utils cuc reset password

This command resets the password for a specified user account. If Connection locked the account because of too many failed sign-in attempts, this command also unlocks the account.

utils cuc reset password

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: Yes

Applies to: Cisco Unity Connection only

Example

```
admin: utils cuc reset password jdoe
Enter password:
Re-enter password:
jdoe
07/29/2008 12:41:14.704 : Update SUCCESSED
```

utils cuc set PinExpiry_PromptTime "Authentication Rule Name"

This Command enables the Cisco Unity Connection telephone user interface (touchtone conversation) PIN feature and allows you to update the time interval during when the conditional expiry warning prompt will be played.

Requirements

If the value is set to:

- 0: disabled
- 1: enabled
 - Enter the time interval

For more information on utilscuc set PinExpiry_PromptTime "Authentication Rule Name" CLI command, see the Cisco Unity Connection telephone user interface (touchtone conversation) PIN section in Release Notes for Cisco Unity Connection 10.0(1).

utils dbreplication*

utils dbreplication clusterreset

This command resets replication on an entire cluster.

utils dbreplication clusterreset

Administrator (admin:)

Note

Before you run this command, run the command **utils dbreplication stop** first on all subscribers servers and then on the publisher server.

You can use this command to debug database replication. However, you should only use it if you have already tried **utils dbreplication reset all**, and it failed to restart replication on the cluster. This command tears down and rebuilds replication for the entire cluster. After you use this command, you must restart each subscriber server. After all subscriber servers have been restarted, you must go to the publisher server and issue the CLI command **utils dbreplication reset all**.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication dropadmindb

This command drops the Informix syscdr database on any server in the cluster.

	utils dbreplication dropadmindb		
Command Modes	Administrator (admin:)		
Usage Guidelines	You should run this command only if database replication reset or cluster reset fails and replication cannot be restarted.		
	Requirements		
	Command privilege level: 1		
	Allowed during upgrade: No		
	Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection		

utils dbreplication forcedatasyncsub

This command forces a subscriber server to have its data restored from data on the publisher server.

utils dbreplication forcedatasyncsub nodename [offloadpub] [timeoutvalue]

Syntax Description	Parameters	Description
	nodename	Specifies a particular subscriber server to have its data restored from data on the publisher server. Enter all to restore data on all subscriber servers.
	offloadpub	Minimizes the usage of the publisher server during the forcedatasyncsub process.NoteAdding this option increases the time taken for forcedatasyncsub to finish
	timeoutvalue	Specifies the recovery timeout value for each node in minutes (should be greater than the default timeout).
		Default: 40 minutes.

Command Modes Administrator (admin:)

Usage Guidelines

Use this command only after you have run the **utils dbreplication repair** command several times, but the utils dbreplication status command still shows non-dynamic tables that are not in sync

Note

Do not run this command if only dynamic tables are out of sync; dynamic tables can be out of sync during normal system operation.

You can only run this command from the publisher server. Enter **all** to force sync on all subscriber servers in the cluster. If only one subscriber server is out of sync, use the *nodename* parameter.

Note

This command erases all existing data on the subscriber server and replaces it with the database from the publisher server. This erasure makes it impossible to determine the root cause for the subscriber server tables going out of sync.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication quickaudit

This command runs a quick database check on selected content on dynamic tables.

utils dbreplication quickaudit {nodename| all}

Syntax Description	Parameters	Description
	nodename	Specifies the node on which the quick audit should be run.
	all	Causes the audit to be run on all nodes

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication rebuild

After you change the hostname of a Unified Communications Manager publisher or subscriber node, you must run this command to set up database replication across the cluster. This command will run the following commands on the specified nodes:

- utils dbreplication stop
- utils dbreplication dropadmindb or dropadmindbforce
- utils dbreplication reset

utils dbreplication rebuild {[nodename]] all}

Syntax Description	Parameters	Description
	nodename	Specifies the node or nodes on which database replication will be rebuilt.
	all	Specifies that database replication will be rebuilt on all nodes in the cluster.

Command Modes Administrator (admin:)

Usage Guidelin

Caution

This command can affect performance of other nodes in your cluster. We recommend that you run this command during a system maintenance window.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication repair

This command repairs database replication.

utils dbreplication repair {nodename| all}

Syntax Description	Parameters	Description
	nodename	Specifies a particular subscriber server for data repair.

I

	Parameters	Description	
	all	Causes data repair to take place on all subscriber servers.	
Command Modes	Administrator (admin:))	
Usage Guidelines	If the command utils dbreplication status shows that servers are connected but one or more tables have data that is out of sync, the utils dbreplication repair repairs the data on the subscriber servers so that the data is in sync with the data on the publisher server.		
	Specify all to repair all parameter.	nodes in the cluster, or if only one subscriber server is out of sync, specify the nodename	
	Requirements		
	Command privilege lev	vel: 1	
	Allowed during upgrade: Yes		
		ied Communications Manager, IM and Presence service on Cisco Unified ager, Cisco Unity Connection	

utils dbreplication repairreplicate

This command repairs mismatched data between cluster nodes and changes the node data to match the publisher data.

utils dbreplication repairreplicate replicatename [nodename] all]

ntax Description	Parameters	Description
	replicatename	Specifies the replicate to repair.
	nodename	Specifies the node on which to repair replication.
	all	Specifies to fix replication on all nodes.
ommand Modes	Administrator (admin:)	
Command Modes Jsage Guidelines		nay not specify the publisher; any subscriber node name is acceptable.
		nay not specify the publisher; any subscriber node name is acceptable.

Note

This command does not repair replication setup

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication repairtable

This command repairs mismatched data between cluster nodes and changes the node to match the publisher data.

utils dbreplication repairtable tablename [nodename] all]

Syntax Description	Parameters	Description
	tablename	Specifies the table to repair
	nodename	Specifies the node on which to repair replication.
	all	Specifies to fix replication on all nodes.

Command Modes Administrator (admin:)

Note

This command does not repair replication setup.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication reset

This command resets and restarts database replication. You can use this command to rebuild replication when the system has not set up replication properly.

utils dbreplication reset {nodename| all}

Syntax Description	Parameters	Description
	nodename	Specifies a particular subscriber server to on which to have replication rebuilt.
	all	Specifies that all subscriber servers in the cluster have replication rebuilt.
Command Modes	Administrator (admin:)	
Usage Guidelines	This command is the best option to use when servers sh shows an RTMT state of 4, you may reset that server by entire cluster, use the all parameter.	
ρ		
Tip	Before you run this command, first run the command u that are reset and then on the publisher server.	tils dbreplication stop on all subscriber servers
	Requirements	

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication runtimestate

I

This command monitors progress of the database replication process and provides replication state in the cluster.

utils dbreplication runtimestate nodename

Syntax Description	Parameters	Description
	nodename	Specifies the node to monitor.
Command Modes	Administrator (admin:)	
Usage Guidelines	If you provide a node name, th	e system provides the replication state from the context of the selected node.
	Requirements	
	Command privilege level: 0	
	Allowed during upgrade: Yes	
	Applies to: Cisco Unified Com Communications Manager, Cis	munications Manager, IM and Presence service on Cisco Unified co Unity Connection

utils dbreplication setprocess

This command improves replication performance of clusters that have nodes separated by WANs with delay (Clustering over WAN configuration).

utils dbreplication setprocess [process]

Syntax Description	Parameters	Description
	process	The new database replication . Ensure that the value is between 1 and 40.
		Default value: 1

Command Modes Administrator (admin:)

Usage Guidelin

Caution

Setting the PROCESS option to near maximum consumes more system resources.

Changes made to this setting after an upgrade but before the switch-over to the new version will need to be manually re-applied.

Requirements

Command privilege level: 1

Allowed during upgrade: No

utils dbreplication setrepltimeout

This command sets the timeout for database replication on large clusters.

utils dbreplication setrepltimeout timeout

Syntax Description	Parameters	Description
	timeout	The new database replication timeout, in seconds. Ensure that the value is between 300 and 3600.
		Default value: 300 (5 minutes)

Command Modes Administrator (admin:)

Usage Guidelines After the first subscriber server requests replication with the publisher server, the system sets this timer. After the timer expires, the first subscriber server, plus all other subscriber servers that requested replication within that time period, begin data replication with the publisher server in a batch. If you have several subscriber servers, batch replication is more efficient than individual server replication. For large clusters, you can use the command to increase the default timeout value, so that more subscriber servers are included in the batch.

Tip

Cisco recommends that you restore this value back to the default of 300 (5 minutes) after you finish upgrading the entire cluster, and the subscriber servers have successfully set up replication.

Note

After you upgrade the publisher server and restart it on the upgraded partition, you should set this timer value before you switch the first subscriber server to the new release. After the first subscriber server requests replication, the publisher server sets the replication timer based on the new value.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication status

This command shows the status of database replication and indicates whether the servers in the cluster are connected and the data is in sync.

utils dbreplication status {all| node| replicate}

Syntax Description	Parameters	Description
	all	Specifies to show the status of all servers.
	node	Specifies the node for which to show status.
	replicate	Specifies the replicate for which to show status.

Command Modes Administrator (admin:)

Usage Guidelin

Note

You should run this command only on the first node (publisher server) of a cluster.

Requirements

Command privilege level: 0

Allowed during upgrade: No

utils dbreplication stop {nodename| all}

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils dbreplication stop

This command stops the automatic setup of database replication. Run this command on subscriber and publisher servers before executing the CLI command **utils dbreplication reset** or **utils dbreblication clusterreset**. You can run this command on the subscriber servers simultaneously, before you run it on the publisher server.

Syntax Description	Parameters	Description
	nodename	Specifies the name of the node on which to stop the automatic setup of database replication.
	all	Stops database replication on all nodes.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils imdb_replication replication status

This command validates that In Memory Database (IMDB) replication between the node pairs in each subcluster of the deployment has run correctly.

The command performs writes and reads on IMDB tables in each relevant Datastore using a utility from the calling IM and Presence Service node.

utils imdb_replication status

- **Command Modes** Administrator (admin:)
- **Usage Guidelines** For the utility to run successfully, ports 6603, 6604, and 6605 must be opened on any firewalls that are configured between the nodes on the IM and Presence Service clusters.

This is not required for the normal operation of the IMDB.

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: IM and Presence Service

utils diagnose

This command enables you to diagnose and attempt to automatically fix system problems.

utils diagnose {fix| list| module| test| version} [module_name]

Syntax Description	Parameters	Description
	fix	Runs all diagnostic commands and attempts to fix problems.
	list	Lists all available diagnostic commands.
	module	Runs a single diagnostic command or group of commands and attempts to fix problems

Parameters	eters Description	
test	Runs all diagnostic commands but does not attempt to fix problems.	
version	Displays the diagnostic framework version.	
module_name	Specifies the name of a diagnostics module.	

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0 for version and 1 for all other parameters

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery*

utils disaster_recovery backup network

Displays information about the backup files that are stored on a remote server.

utils disaster_recovery backup network [featurelist][path][servername][username]

Syntax Description	Parameters	Description
	[featurelist]	Specifies a list of features to back up, separated by commas.
	[path]	Represents the location of the backup files on the remote server.
	[servername]	Represents the IP address or hostname of the server where you stored the backup files.
	[username]	Represents the username that is needed to log in to the remote server.
Command Modes	Administrator (admin:)	
Usage Guidelines	The system prompts you to enter the password for the account on the remote server.	
	Requirements	
	Command privilege leve	sl· 1

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery cancel_backup

This command cancels the ongoing backup.

utils disaster_recovery cancel_backup [confirm]

Command Modes Administrator (admin:)

Usage Guidelines After you enter the command, you must confirm that you want to cancel the backup. Enter **Y** to cancel the backup or any other key to continue the backup.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

Example

```
admin: utils disaster_recovery cancel_backup yes
Cancelling backup...
Backup cancelled successfully.
```

utils disaster_recovery device add network

This command adds the backup network device.

utils disaster_recovery device add network *devicename path server_namei/ip_address username* [*Number_of_backups*]

Syntax Description	Parameters	Description
	devicename	Specifies the name of the backup device to be added (mandatory).
	path	Specifies the path to retrieve the backup device (mandatory).
	server_name/ip_address	Specifies the hostname or IP address of the server where the backup file is stored (mandatory).
	username	Specifies the userid required to connect to the remote machine (mandatory).

Parameters	Description
[Number_of_backups]	Specifies the number of backups to store on the Network Directory (default 2). This parameter is optional.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

Example

admin: utils disaster_recovery device add network networkDevice /root 10.77.31.116 root 3

utils disaster_recovery device delete

This command deletes the specified device.

utils disaster_recovery device delete device_name | *

Syntax Description	Parameters	Description
	device_name	Name of the device to be deleted.
	*	Deletes all existing devices except for the ones associated to a schedule.

Command Modes Administrator (admin:)

Usage Guidelines

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery device list

Displays the device name, device type, and device path for all the backup devices.

utils disaster_recovery device list

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery estimate_tar_size

This command provides the estimated size of last successful backup from SFTP or local device.

utils disaster_recovery estimate_tar_size utils disaster_recovery device list

Syntax Description	Parameters	Description	
	featurelist	Specifies a list of features to back up, separated by commas.	
Command Modes	Administrator (admin:)		
	Requirements		
	Command privilege level: 1		
	Allowed during upgrade: No		
	Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection		

utils disaster_recovery history

I

This command displays the history of previous backups and restores.

utils disaster_recovery history [operation]

Specifies backup or restore. tor (admin:) nts privilege level: tring upgrade: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified ations Manager, and Cisco Unity Connection Lls disaster_recovery history backup ame: Backup Device: Completed On: Result: Backup Type: Features Backed Up: D-14-53-32.tar TAPE Fri Oct 30 14:55:31 CDT 2009 ERROR MANUAL D-10-30-17.tar TAPE Thu Dec 10 10:35:22 CST 2009 SUCCESS MANUAL CDR_CAR, CCM

ery jschLogs operation and enables and disables the detailed JSch logging.		
utils disaster_recovery jschLogs operation [operation]		
s Description		
Specifies the name of operation—enable or disable.		
tor (admin:)		
Requirements		
Command privilege level: 1		
Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified		

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery prepare restore pub_from_sub

This command handles the tasks to prepare for restore of a publisher node from a subscriber node.

 Note	This command is applicable only when a publisher node is rebuilt and restored from the subscriber node database. A specific procedure is used for restore instead of restoring the data from the remote backup source. After a publisher node is rebuilt, you must use this command prior to the insertion of process node information.
	utils disaster_recovery prepare restore pub_from_sub
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery restore network

This command restores a remote server. You must restore the Cisco Unified Communications Manager publisher node before you restore subscriber nodes in the same cluster. If you are restoring IM and Presence Service nodes, you must restore the database publisher node before you restore subscriber nodes in the same cluster.

utils disaster_recovery restore network restore server tarfilename devicename

Syntax Description

Parameters	Description
restore_server	Specifies the hostname of the remote server that you want to restore.
tarfilename	Specifies the name of the file to restore.
devicename	Specifies the name of the device on which to restore files.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery schedule add

This command adds the configured schedules.

utils disaster_recovery schedule add schedulename devicename featurelist datetime frequency

Parameters	Description
schedulename	Represents the name of the scheduler (mandatory).
devicename	Represents the name of the device for which scheduling is done (mandatory).
featurelist	Represents the comma-separated feature list to back up (mandatory).
datetime	Represents the date when the scheduler is set (mandatory). Format specified (yyyy/mm/dd-hh:mm) 24-hr clock.
frequency	Represents the frequency at which the schedule is set to take a backup. Examples: once, daily, weekly and monthly.
	schedulename devicename featurelist datetime

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery schedule

This command enables or disables the specified schedule.

utils disaster_recovery schedule {enable| disable} [schedulename]

Syntax Description

ription	Parameters	Description
	enable	Enables the specified schedule.

Parameters	Description
disable	Disables the specified schedule.
schedulename	Represents the name of the scheduler.

Command Modes Administrator (admin:)

Requirements

Command privilege level:1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

Example

```
admin: utils disaster_recovery schedule enable schedule1 Schedule enabled successfully.
```

utils disaster_recovery schedule delete

This command deletes the configured schedules.

utils disaster_recovery schedule delete schedulename

Syntax Description	Parameters	Description
	schedulename	Represents the name of the schedule that is to be deleted.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils disaster_recovery schedule disable

This command disables the configured schedules.

utils disaster_recovery schedule disable schedulename

Syntax Description	-			
oyntax bescription	Parameters	Description		
	schedulename	Represents the name of the schedule that is to be disabled.		
Command Modes	Administrator (admin	n:)		
	Requirements			
	Command privilege l	level: 1		
	Allowed during upgr	rade: No		
	Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection			
utils disaste	r_recovery sc	hedule list		
	Displays the schedule	es that are configured.		
	utils disaster_recove	ery schedule list		
Command Modes	Administrator (admin	n:)		
	Requirements			
	Command privilege l	level: 1		
	Allowed during upgr	rade: Yes		
	Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection			
	Example			
	schedule name devi	ster_recovery schedule list ice name Schedule Status		
	schedule1 dev	vice 1 enabled vice 2 disabled		
utils disaste	r_recovery sh	iow_backupfiles		

This command retrieves the information of backup files, which are available at storage location.

utils disaster_recovery show_backupfiles devicename

Syntax Description	Parameters	Description	
	devicename	Represents the name of the device to show backup files at the storage location.	
	Administrator (admin:)		
	Requirements		
	Command privilege level: 0		
	Allowed during upgrade: Yes		
	Applies to: Cisco Unified Com Communications Manager, and	munications Manager, IM and Presence service on Cisco Unified Cisco Unity Connection	

utils disaster_recovery show_registration

This command displays the registered features and components on the specified server.

utils disaster_recovery show_registration hostname

Parameters	Description
hostname	Specifies the server for which you want to display registration information.
Administrator (admin:)	
Requirements	
Command privilege level: 1	
Allowed during upgrade: No	
	hostname Administrator (admin:) Requirements

utils disaster_recovery status

This command displays the status of the current backup or restore job.

utils disaster_recovery status operation

Syntax Description	Parameters	Description
	operation	Specifies the name of the ongoing operation: backup or restore.
Command Modes	Administrator (admin:)	
	Requirements	
	Command privilege level: 1	
	Allowed during upgrade: No	
	Applies to: Cisco Unified Communi Communications Manager, and Cisc	cations Manager, IM and Presence service on Cisco Unified o Unity Connection
utils Enha	ncedSecurityMod	e*

utils EnhancedSecurityMode disable

The command disables the EnhancedSecurityMode mode on the system. The system reboots after this mode is disabled.

utils EnhancedSecurityMode disable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils EnhancedSecurityMode enable

The command enables the EnhancedSecurityMode mode on the system. The system reboots after this mode is enabled.

utils EnhancedSecurityMode enable

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils EnhancedSecurityMode status

The command displays whether the system is operating in EnhancedSecurityMode or non-EnhancedSecurityMode mode.

utils EnhancedSecurityMode status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils filebeat*

utils filebeat config

The command configures the Logstash server details for downloading the information.

utils filebeat configIP addressport numberlog type

Syntax Description

Parameters	Description
IP address	Enter the IP address of the Logstash server.
port number	Enter the port number of Logstash server.
log type	Enter the log type that you have to uploaded to the Logstash server.

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils filebeat disable

The command disables the filebeat configuration on the system.

utils filebeat disable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils filebeat enable

Command Mod

The command enables the filebeat configuration on the system.

	utils filebeat disable
es	Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils filebeat status

The command shows whether the filebeat is running or not and its configuration values.

utils filebeat status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils fior*

utils fior

This command allows you to monitor the I/O on the server. The File I/O Reporting service provides a kernel-base daemon for collecting file I/O per process.

utils fior

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils fior disable

This command disables I/O statistics monitoring and deletes all the monitoring data collected on the system. Use this command to disable monitoring and free up disk space that is used by the monitoring data.

utils fior disable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils fior enable

This command enables I/O statistics monitoring.

Note	Use this command before monitoring begins.		
	utils fior enable		
Command Modes	Administrator (admin:)		
	Requirements		
	Command privilege level: 1		
	Allowed during upgrade: Yes		
	Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection		
utils fior list			
	This command displays a list of the I/O events for all processes.		
	utils fior list		
Command Modes	Administrator (admin:)		

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils fior start

This command starts the I/O statistics utility monitoring and data collection. After the monitoring starts, the I/O statistics data is collected in the platform logs. This data can range up to 25 MB per day. Data is rotated after 7 days of data collection. This data is deleted after you disable the I/O statistics utility monitoring.

Enable the I/O statistics utility monitoring begins before the monitoring begins.

utils fior start

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils fior status

This command provides the status of the I/O statistics monitoring utility.

utils fior status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils fior stop

This command stops the I/O statistics monitoring and data collection. However, this command does not delete the collected data.

If I/O statistics are no longer needed, disable the cleanup of the monitoring data from the platform logs.

utils fior stop

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1 Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils fior top

This command displays a list of I/O statistics for I/O bound processes at the time that you run this command.

utils fior top

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils fips

Caution

FIPS mode is only supported on releases that have been through FIPS compliance. Be warned that FIPS mode should be disabled before you upgrade to a non-FIPS compliance version of Cisco Unified Communications Manager.

For information about which releases are FIPS compliant and to view their certifications, see the *FIPS 140* document at http://www.cisco.com/web/strategy/government/security_certification/net_business_benefit_seccert_fips140.html.

This command enables, disables, or displays the status of FIPS 140-2 mode. FIPS 140-2 mode is disabled by default; only an administrator can enable FIPS.

utils fips {enable| disable| status}

Parameters	Description
enable	Activates FIPS 140-2 mode.
disable	Deactivates FIPS 140-2 mode.
status	Displays the status of FIPS 140-2 mode.
	enable disable

Usage Guidelines

Before enabling FIPS mode, we recommend that you perform a system backup. If FIPS checks fail at start-up, the system halts and requires a recovery CD to be restored.

Consider the following information before you enable FIPS 140-2 mode:

- When you switch from non-FIPS to FIPS mode, the MD5 and DES protocols will not be functional.
- After FIPS mode is enabled on a server, please wait until the server reboots and the phones re-register successfully before enabling FIPS on the next server.
- In FIPS mode, the IM and Presence service uses Red Hat Openswan (FIPS validated) in place of Racoon (non-FIPS validated). If the security policies in Racoon contain functions that are not FIPS approved, the CLI command asks you to redefine the security policies with FIPS approved functions and abort.

Note

Certificates and SSH key are regenerated automatically, in accordance with FIPS requirements.

Consider the following information before you disable FIPS 140-2 mode: In multiple server clusters, each server must be disabled separately; FIPS mode is not disabled cluster-wide but on a per server basis.

Consider the following information after you enable FIPS 140-2 mode: If you have a single server cluster and chose to apply "Prepare Cluster for Rolback to pre 8.0" enterprise parameter before enabling FIPS mode, disable this parameter after making sure that all the phones registered successfully with the server.

Consider the following information before you enable or disable FIPS 140-2 mode for IM and Presence Service: After you enable or disable FIPS 140-2 mode for IM and Presence Service, the Tomcat certificate is regenerated and the node reboots. The Intercluster Sync Agent syncs the new Tomcat certificate across the cluster; this can take up to 30 minutes. Until the new Tomcat certificate is synced across the cluster, an IM and Presence Servicee subscriber node cannot access information from the IM and Presence Service database publisher node. For example, a user who is logged into the Cisco Unified Serviceability GUI on a subscriber node will not be able to view services on theIM and Presence Service database publisher node. Users will see the following error message until the sync is complete: Connection to server cannot be established (certificate exception)

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils firewall*

utils firewall ipv4 debug

This command turns IPv4 firewall debugging on or off. If you do not enter a time parameter, this command turns on debugging for 5 minutes.

utils firewall ipv4 debug {off| [time]}

Syntax Description	Parameters	Description
	off	Turns off the IPv4 firewall debugging. If you do not enter the time parameter, this command disables the firewall for 5 minutes.
	time	(Optional) Sets the duration for which the firewall debugging is to be enabled in the following formats:
		• Minutes: 0–1440m
		• Hours: 0–23h
		• Hours and minutes: 0–23h 0–60m

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils firewall ipv4

This commands enables and disables IPv4 firewall.

utils firewall ipv4 {enable| disable| [time]}

Syntax Description		<u> </u>
Gyntax Description	Parameters	Description
	enable	Turns on the IPv4 firewall.
	disable	Turns off the IPv4 firewall. If you do not enter the time parameter, this command disables the firewall for 5 minutes.
	time	(Optional) Sets the duration for which the firewall is to be disabled in the following formats:
		• Minutes: 0–1440m
		• Hours: 0–23h
		• Hours and minutes: 0–23h 0–60m

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils firewall ipv4 list

This commands displays the current configuration of the IPv4 firewall.

utils firewall ipv4 list

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils firewall ipv4 status

This command displays the current status of the IPv4 firewall.

utils firewall ipv4 status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils firewall ipv6 debug

This command turns IPv6 firewall debugging on for the configured time period. The default value of time period is 5 minutes.

utils ipv6 firewall debug {off| [time]}

Syntax Description	Parameters	Description
	off	(Optional) Turns off the IPv6 firewall debugging. If you do not enter the time parameter, this command disables the firewall as per the default time period value.
	time	(Optional) Sets the duration for which the firewall debugging is to be enabled in the following formats:
		• Minutes: 0–1440m
		• Hours: 0–23h
		• Hours and minutes: 0–23h 0–60m

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1 Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager, and Cisco Unity Connection.

utils firewall ipv6

This commands enables and disables IPv6 firewall.

utils firewall ipv6 {enable| disable| [time]}

Syntax Description	Parameters	Description
	enable	Turns on the IPv6 firewall.
	disable	Turns off the IPv6 firewall. If you do not enter the time parameter, this command disables the firewall for 5 minutes.

Description
(Optional) Sets the duration for which the firewall is to be disabled in the following formats:
• Minutes: 0–1440m
• Hours: 0–23h
• Hours and minutes: 0–23h 0–60m

Command Modes Administrator (admin:)

Usage Guidelines You can use this command to enable or disable firewall tables. If you are testing the Unified Communications Manager for compliance with the USGv6 Profile, you must disable the IPv6 firewall tables for a duration of 23 hours before you begin the test.

Requirements

Command privilege level: 0 Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager and Cisco Unity Connection.

utils firewall ipv6 list

Command Modes

I

This commands displays the current configuration of the IPv6 firewall.

utils firewall ipv6 list
Administrator (admin:)
Requirements
Command privilege level: 0
Allowed during upgrade: Yes
Applies to: Cisco Unified Communications Manager and Cisco Unity Connection.

utils firewall ipv6 status

This command displays the current status of the IPv6 firewall.

utils firewall ipv6 status

I

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0 Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager and Cisco Unity Connection.

utils ha*

utils ha failover

This command initiates a manual failover for a specified node, where the Cisco Server Recovery Manager stops the critical services on the failed node and moves all users to the backup node.

For IM and Presence nodes, the backup node must be another IM and Presence server. Two servers must be assigned to the same presence redundancy group before you specify the backup server. The back-up server you specify is the other server that is assigned to the presence redundancy group.

utils ha failover {node name}

Syntax Description Parameters Description node name Specifies the node on which to perform the manual failover.

Command Modes Administrator (admin:)

Requirements

Applies to: Cisco Unified Communications Manager and IM and Presence service on Cisco Unified Communications Manager

Failover Example

```
admin: ha failover shorty-cups
Initiate Manual Failover for Node > shorty-cups
Request SUCCESSFUL.
Subcluster Name: DefaultCluster
Node 1 Name : kal-cup1 State: Taking Over Reason: On Admin Request
Node 2 Name : shorty-cups State: Failover Reason: On Admin Request
```

utils ha fallback

This command initiates a manual fallback for a specified node, where the Cisco Server Recovery Manager restarts the critical services on the active node and moves users back to the active node.

utils ha fallback node name

Syntax Description	Parameters	Description
	node name	Specifies the node on which to perform a manual fallback.

Command Modes Administrator (admin:)

Requirements

Applies to: Cisco Unified Communications Manager and IM and Presence service on Cisco Unified Communications Manager

Fallback Example

```
admin: ha fallback shorty-cups
Initiate Manual fallback for Node >shorty-cups<
Request SUCCESSFUL.
Subcluster Name: DefaultCluster
Node 1 Name : kal-cupl State: Falling Back Reason: On Admin Request
Node 2 Name : shorty-cups State: Taking Back Reason: On Admin Request
```

utils ha recover

This command initiates a manual recovery of the presence redundancy group (when nodes are in a Failed state), where IM and Presence restarts the Cisco Server Recovery Manager service in that presence redundancy group.

utils ha recover presence redundancy group name

Syntax Description	Parameters	Description
	presence redundancy group name	Specifies the presence redundancy group on which to monitor HA status. If no presence redundancy group name is provided, all cluster information is provided.

Requirements

Applies to: Cisco Unified Communications Manager and IM and Presence service on Cisco Unified Communications Manager

Recover Example

```
admin: ha recover Defaultcluster
Stopping services... Stopped
Starting services... Started
admin:
```

utils ha status

This command displays the HA status for a specified presence redundancy group.

utils ha status presence redundancy group name

Syntax Description	Parameters	Description
	presence redundancy group name	Specifies the presence redundancy group for which to monitor HA status. If no presence redundancy group name is provided, all cluster information is displayed.

Command Modes Administrator (admin:)

Requirements

Applies to: Cisco Unified Communications Manager and IM and Presence service on Cisco Unified Communications Manager

Status Example with HA Not Enabled

```
admin: ha status
Subcluster Name: DefaultCluster
Node 1 Name : kal-cup1 State: Unknown Reason: High Availability Not Enabled
Node 2 Name : shorty-cups State: Unknown Reason: High Availability Not Enabled
```

Status Example with HA Enabled

```
admin: ha status
Subcluster Name: DefaultCluster
Node 1 Name : kal-cup1 State: Normal
Node 2 Name : shorty-cups State: Normal
```

Status Example with a Critical Service Down

admin: ha status Subcluster Name: DefaultCluster Node 1 Name : kal-cup1 State: Failed Over with Critical Services not Running Reason: Critical Service Down Node 2 Name : shorty-cups State: Running in Backup Mode Reason: Critical Service Down

Status Example Failed

```
admin: ha status
Subcluster Name: DefaultCluster
Node 1 Name : kal-cup1 State: Failed Reason: Critical Service Down
Node 2 Name : shorty-cups State: Failed Reason: Critical Service Down
```

utils ils showpeerinfo

This command returns the peer info vector for either a single cluster in an ILS network, or for all the clusters in an ILS network.

utils ils showpeerinfo clustername

Syntax Description	Parameters	Description	
	clustername	Specifies the fully qualified domain name of the publisher node for a Cisco Unified Communications Manager cluster in an ILS network.	
Command Modes	Administrator (admin:)		
Usage Guidelines	The peer info vector contains information about a cluster in an ILS network. The available information includes clustername, cluster ID and IP addresses for the cluster nodes. If you want information about a specific cluster in an ILS network, enter the <i>clustername</i> parameter. If you want information on all the clusters in the network, leave the <i>clustername</i> parameter empty		
	Requirements		
	Command privilege level: 0		
	Allowed during upgrade: No		
	Applies to: Cisco Unifi	ed Communications Manager	
utils impor	t config		
		ta from the platformConfig.xml file on the virtual floppy drive and modifies the system tion file. The system reboots after the command successfully completes.	
	utils import config		

Command Modes Administrator (admin:)

I

Usage Guidelines This command can be executed on any VMware deployment.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

Execute utils import config in Vmware Deployment

Procedure

utils iostat

This command displays the iostat output for the given number of iterations and intervals.

Syntax Description	Parameters	Description
	interval	Sets the seconds between two iostat readings. You must set this value if you are using the iteration parameter
	iterations	Sets the number of iostat iterations. You must set this value if you are using the interval parameter.
	filename	Redirects the output to a file.

utils iostat {interval| iterations| filename}

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils iothrottle

This command allows you to manage and monitor IO throttling on the server.

utils iothrottle {enable| disable| status}

Syntax Description	Parameters	Description
	Enable	Enables I/0 throttling enhancements which lowers the impact of upgrades on an active system.
	Disable	Disables I/0 throttling enhancements.
	Status	Displays the status of I/0 throttling enhancements.
Command Modes Usage Guidelines	Administrator (admin:) Disabling I/0 throttling o	enhancements can adversely affect the system during upgrades.
	Requirements Command privilege level: 1 for Enable and Disable , 0 for Status	

utils itl reset

This command is used when endpoints are unable to validate their configuration files.

utils itl reset {localkey| remotekey}

Syntax Description	localkey	Generates a new ITL file by taking the existing ITL file on the publisher. The command replaces the signature of that ITL file and signs the new ITL file with the ITL recovery key.
	remotekey	Generates a new ITL file after importing the PKCS 12 bag that contains the recovery certificate key pair from the remote location. It then signs the newly generated ITL file with the recovery private key.
		remotekey has the following parameters:
		• IP address or hostname
		• User ID
		• ITLRecovery.p12

Command Modes Administrator (admin:)

I

I

Usage Guidelin Note

You must run this command on the Unified Communications Manager publisher node.

Requirements

Command privilege level: 4 Allowed during upgrade: No Applies to: Unified Communications Manager

Example

utils Idap config

This command configures the system LDAP authentication.

utils ldap config {fqdn| ipaddr}

Syntax Description	Parameters	Description
	fqdn	Configures the system to use an FQDN for LDAP authentication.
	ipaddr	Configures the system to use an IP address for LDAP authentication

Usage Guidelines

Utils Commands

- **utils ldap config fqdn**—This command is preferred for LDAP authentication, however, you can only use this command if DNS is configured on the system; if the system is not configured to use DNS, use **utils ldap config ipaddr**.
- **utils ldap config ipaddr**—This command is not preferred and should only be used if the system is not, or can not be, configured to use DNS; if the system is configured to use DNS, use **utils ldap config** fqdn.

Requirements

Command privilege level: 1

Applies to: Cisco Unified Communications Manager and Cisco Unity Connection

utils Idap config status

This command displays the utils ldap configuration status.

utils ldap config status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0 Allowed during upgrade: Yes

utils network*

utils network arp delete

This command deletes an entry in the Address Resolution Protocol table.

utils network arp delete host

Syntax Description	Parameters	Description
	host	(Optional) Represents the host name or IP address of the host to delete from the table.

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

Delete Example

admin:utils network arp delete myhost

utils network arp set

This command sets an entry in the Address Resolution Protocol table.

utils network arp set {*host*} {*addr*}

Syntax Description	Parameters	Description
	host	Represents the host name or IP address of the host to add to the table.
	addr	Represents the hardware address (MAC) of the host to be added in the format: XX:XX:XX:XX:XX:XX

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

Set Example

admin:utils network arp set myhost 11:22:33:44:55:66

utils network arp list

This command lists the contents of the Address Resolution Protocol table.

utils network arp list host hostname [options]

Syntax Description	Parameters	Description
	host	
	hostname	
	options	(Optional) page, numeric
		• Page: Pauses to display the output one page at a time.
		• Numeric: Shows hosts as dotted IP addresses.
ommand Modes	Administrator (admin:)	
lsage Guidelines	In the Flags column, C=cached, M=permanent, P=published.	
	Requirements	
	Command privilege leve	el: 0
	Allowed during upgrade	e: Yes
		ed Communications Manager, IM and Presence service on Cisco Unified ger, and Cisco Unity Connection.
	List example	
	Flags Mask Iface sjc21-3f-hsrp.cisco. eth0	etwork arp listAddress HWtype HWaddress com ether 00:00:0C:07:AC:71 C er 00:D0:B7:85:98:8E C
	eth0	

utils network capture

I

This command captures IP packets on the specified Ethernet interface.

Entries: 2 Skipped: 0 Found: 2

utils network capture eth0 [page] [numeric] [file| fname] [count| num] [size| bytes] [src| addr] [dest| addr] [port| num]

Syntax Description	Parameters	Description
	eth0	Specifies Ethernet interface 0.

Parameters	Description		
page	(Optional) Displays the output one page at a time.		
	When you use the page or file options, the complete capture of all requested packets must occur before the command completes.		
numeric	(Optional) Displays hosts as dotted IP addresses.		
file fname	(Optional) Outputs the information to a file.		
	The file option saves the information to platform/cli/fname.cap. The filename cannot contain the "." character.		
countnum	(Optional) Sets a count of the number of packets to capture.		
	For screen output, the maximum count equals 1000, and, for file output, the maximum count equals 10,000.		
sizebytes	(Optional) Sets the number of bytes of the packet to capture.		
	For screen output, the maximum number of bytes equals 128, for file output, the maximum of bytes can be any number or ALL.		
src addr	(Optional) Specifies the source address of the packet as a host name or IPV4 address		
destaddr	(Optional) Specifies the destination address of the packet as a host name or IPV4 address.		
portnum	(Optional) Specifies the port number of the packet, either source or destination.		

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils network capture-rotate

This command captures IP packets beyond the 100,000 packet limit of utils network capture.

utils network capture-rotate {file| *fname*} [size| *bytes*] [sizePerFile| *megabytes*] {maxFiles | *num*}[src| *addr*] [dest| *addr*] [port| *num*][host protocol| *addr*]

Syntax Description	Parameters	Description
	file fname	Outputs the information to a file.
		Note The file will be saved in platform/cli/fname. fname should not contain the "." character.
	sizebytes	The number of bytes of the packet to capture. Valid values include any number up to 65535 or ALL. The default is ALL.
	sizePerFile megabytes	The sizePerFile sets the value for the size of the log files. (Unit is millions of bytes.) The default value of sizePerFile is 25 MB.
	maxFiles num	the maxFiles indicates the maximum number of log files to be created. The default value of maxFiles is 10.
	src addr	(Optional) Specifies the source address of the packet as a hostname or IPV4 address.
	dest addr	(Optional) Specifies the destination address of the packet as a host name or IPV4 address.
	port num	(Optional) Specifies the port number of the packet, either source or destination.
	host protocol addr	(Optional) Limits capture to traffic to and from a specific host. Options for <i>protocol</i> are IP, arp, rarp, all, and <i>addr</i> must be in IPv4 or hostname format. If host is used, do not provide src or dest .

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils network connectivity

I

This command verifies the node network connection to the first node in the cluster. Be aware that this connection is only valid on a subsequent node.

utils network connectivity [reset] [hostname/ip address]

Syntax Description	Parameters	Description
	connectivity	This command verifies the node network connection to the first node in the cluster.
	reset	(Optional) Clears previous return codes.
	hostname/ip address	(Optional) Hostname or ip address of cluster node.
Command Modes	Administrator (admin:)	
	Requirements	
	Command privilege level: 0	

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils network host

This command resolves a host name to an address or an address to a host name.

utils network host name [server| serv] [page] [detail] [srv]

Syntax Description	Parameters	Description
	name	Represents the host name or IP address that you want to resolve.
	serv	(Optional) Specifies an alternate domain name server.
	[page]	(Optional) Displays the output one screen at a time.
	[detail]	(Optional) Displays a detailed listing.
	[srv]	(Optional) Displays DNS SRV records.

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils network ipv6 host

This command does an IPv6 host lookup (or IPv6 address lookup) for the specified host name or IPv6 address.

utils network ipv6 host {host_name| ipv6_address}

Syntax Description	Parameters	Description
	host_name	Specifies the name of the server.
	ipv6_address	Specifies the IPv6 address of the server.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0 Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager and Cisco Unity Connection.

utils network ipv6 traceroute

This command to traces an IPv6 address or hostname.

utils network ipv6 traceroute [ipv6-address| hostname]

Syntax Description	Parameters	Description
	ipv6-address	Specifies IPv6 address that you want to trace.
	hostname	Specifies the host name that you want to trace.

Requirements

Command privilege level: 0 Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager and Cisco Unity Connection.

utils network ipv6 ping

This command allows you to ping an IPv6 address or hostname.

utils network ipv6 ping destination [count]

Syntax Description	Parameters	Description
	destination	Specifies a valid IPv6 address or host name that you want to ping.
	[count]	Specifies the number of times to ping the external server. The default count equals 4.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0 Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager and Cisco Unity Connection.

utils network ping

This command allows you to ping another server.

utils network ping destination [count] [size]

Syntax Description	Parameters	Description
	destination	Represents the ip address or host name of the server that you want to ping.
	[count]	Specifies the number of times to ping the external server. The default count is 4.
	[size]	Specifies the size of ping packets in bytes. The default value is 56.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils network traceroute

This command traces IP packets that are sent to a remote destination.

utils network traceroute [destination]

Syntax Description	Parameters	Description
	destination	Represents the hostname or IP address of the server to which you want to send a trace.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection.

utils network name-service {hosts|services} cache invalidate

This command clears the name service cache.

utils network name-service {hosts \ services} [cache invalidate]

Syntax Description	Parameters	Description
	Hosts	Host services cache
	Services	Services service cache

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Consider the following example for flushing/clearing the cache: admin:utils network name-service hosts cache invalidate admin: Successful

utils ntp*

utils ntp server add

The command adds a maximum of five specified NTP servers.

utils ntp server add s1 [s1| s2| s3| s4| s5] [norestart]

Syntax Description	Parameters	Description	
	s1	Specifies the NTP servers.	
	norestart	Causes the NTP service to not restart after you add the servers.	
Command Modes	Administrator (admin:)		
Usage Guidelines	If you use norestart , an explicit restart of the NTP service is required for the changes to take effect.		
	Requirements		
	Command privilege level: 0		
	Allowed during upgrade: Yes		
	Applies to: Cisco Unified Communications Manager		
	Example: Attempting to Add Ser	vers with Incorrect Command Line Parameters	
	Incorrect number of paramet	ver add s1 s2 s3 s4 s5 s6 s7 s8 vers entered for add a s1 [s2 s3 s4 s5] [norestart]	

Example: Attempting to Add a Server Using norestart Without Specifying a Server

```
admin: utils ntp server add s1 s2 s3 s4 s5 s6 s7 s8
Incorrect number of parameters entered for add
usage: utils ntp server add s1 [s2 s3 s4 s5] [norestart]
```

Example: Adding servers without norestart

admin: utils ntp server add clock1.cisco.com clock2.cisco.com clock1.cisco.com : added successfully. clock2.cisco.com : added successfully. Restarting NTP on the server.

Example: Adding Servers That Are Already Added, Without norestart

admin: utils ntp server add clock1.cisco.com clock2.cisco.com clock1.cisco.com : [The host has already been added as an NTP server.] clock2.cisco.com : [The host has already been added as an NTP server.]

Example: Adding Server to Self Without norestart

admin: utils ntp server add bglr-ccm26 bglr-ccm26 : [This server cannot be added as an NTP server.]

Example: Adding Inaccessible Server Without norestart

admin: utils ntp server add clock3.cisco.com clock3.cisco.com : [Inaccessible NTP server. Not added.]

Example: Adding Servers with norestart

admin: utils ntp server add ntp01-syd.cisco.com ntp02-syd.cisco.com clock.cisco.com norestart ntp01-syd.cisco.com : added successfully. ntp02-syd.cisco.com : added successfully. clock.cisco.com : added successfully. The NTP service will need to be restarted for the changes to take effect.

Example: Adding Servers When Five Are Already Configured

admin:utils ntp server add clock3.cisco.com The maximum permissible limit of 5 NTP servers is already configured.

utils ntp server delete

This command deletes NTP servers that are configured.

utils ntp server delete

Command Modes Administrator (admin:)

Usage Guidelines This command allows you to delete a configured NTP server or all of them. When you choose the server to delete, you are prompted to indicate if you want to restart the NTP service. If you choose no, the NTP service does not get restarted after the server is deleted.

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager

Example: Deleting Servers with Incorrect Command Line Parameters

admin: utils ntp server delete clock1.cisco.com clock2.cisco.com Incorrect number of optional parameters entered for delete usage: utils ntp server delete

Example: Deleting Single Server with NTP Restart

admin: utils ntp server delete 1: clock1.cisco.com 2: clock2.cisco.com 3: ntp01-syd.cisco.com 4: ntp02-syd.cisco.com 5: clock.cisco.com a: all q: quit Choice: 1

Restart NTP (y/n): y

clock1.cisco.com will be deleted from the list of configured NTP servers. Continue $\left(y/n\right) ?y$

clock1.cisco.com : deleted successfully. Restarting NTP on the server.

Example: Deleting All Servers Without NTP Restart

```
admin: utils ntp server delete
1: clock1.cisco.com
2: clock2.cisco.com
3: ntp01-syd.cisco.com
4: ntp02-syd.cisco.com
5: clock.cisco.com
a: all
q: quit
Choice: a
Restart NTP (y/n): n
This will result in all the configured NTP servers being deleted.
Continue (y/n)?y
clock1.cisco.com : deleted successfully.
clock2.cisco.com : deleted successfully.
ntp01-syd.cisco.com : deleted successfully.
ntp02-syd.cisco.com : deleted successfully.
clock.cisco.com : deleted successfully.
The NTP service will need to be restarted for the changes to take effect.
```

Example: Deleting All Servers When No Servers Are Configured

```
admin: utils ntp server delete There are no NTP servers configured to delete.
```

utils ntp config

This command displays the current configuration of the NTP client and server.

To avoid potential compatibility, accuracy, and network jitter problems, the external NTP servers that you specify for the primary node should be NTP v4 (version 4). If you are using IPv6 addressing, external NTP servers must be NTP v4.

utils ntp config

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence server on Cisco Unified Communications Manager, Cisco Unity Connection

utils ntp restart

This command restarts the NTP service.

utils ntp restart

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils ntp server list

This command lists all NTP servers.

utils ntp server list

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: IM and Presence server on Cisco Unified Communications Manager

utils ntp start

This command starts the NTP service if it is not already running.

Note	

You can not stop the NTP service from the command line interface. Use this command when the utils ntp status command returns stopped.

utils ntp start

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence server on Cisco Unified Communications Manager, and Cisco Unity Connection

utils ntp status

This command displays the current status of NTP.

utils ntp status

Command Modes Administrator (admin:)

Requirements

Command privilege level:

Allowed during upgrade:

Applies to: IM and Presence service on Cisco Unified Communications Manager.

utils os*

utils os kerneldump

This command configures kerneldump to provide a kernel crash dumping mechanism. The kernel captures the dump to the local disk, in case of a kernel crash.

```
Note
```

The netdump commands have been removed from release 8.6(1) and have been replaced with the kerneldump commands.

utils os kerneldump {enable| disable}

Command Modes Administrator (admin:)

Usage Guidelines If a kernel crash occurs, the capture kernel dumps the core on the local disk of the server. The primary kernel reserves 128MB of physical memory that the capture kernel uses to boot. The kerneldump uses the kexec command to boot into a capture kernel whenever the kernel crashes.

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager and Cisco Unity Connection

Example

```
admin: utils os kerneldump enable
         ******WARNING***
Enabling kerneldump requires system reboot
Would you like to boot the machine (y/n):y
kerneldump enable operation succeeded
System going for a reboot
```

utils os kerneldump ssh

This command enables, disables, or displays the status of an external SSH server.

utils os kerneldump ssh {enable| disable| status}

Syntax D	escription
----------	------------

Parameters	Description
enable	Configures an external SSH server as a kerneldump server to kernel dumps.

	Parameters	Description
	disable	Removes support of the external SSH server that is configured to collect kernel dumps.
	status	Indicates whether an external SSH server is configured or not, to collect kernel dumps.
Command Modes	Administrator (admin	:)
Usage Guidelines	s If external SSH server has the kerneldump service enabled and a kernel crash occurs, the capture kernel the core on the external server that is configured to collect the dump. Enabling and disabling kernel require a system reboot for the changes to come into effect.	
	Requirements	
	Command privilege le	evel: 1
	Allowed during upgra	ide: Yes
	Applies to: Cisco Uni	fied Communications Manager and Cisco Unity Connection
	Example	
	admin: utils os ke Disabling kerneldu Would you like to v	operation succeeded

utils os kerneldump status

This command provides the status of the kdump service.

utils os kerneldump status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils os secure

This command is used to specify the level of security provided by selinux.

utils os secure {enforce| permissive| status}

Syntax Description	Parameters Description		
	enforce		
	permissive		
	status		
Command Modes	Administrator (admin:)		
Usage Guidelines	Note that selinux does not handle rate limiting. Rate limiting is handled by ipprefs and ip tables.		
	Requirements		
	Command privilege level: 1		
	Allowed during upgrade: No		

Applies to: IM and Presence service on Cisco Unified Communications Manager

utils PlatformWebAccess*

utils PlatformWebAccess disable

Use this command to restrict the user sign-in to Cisco OS Administration and Disaster Recovery System applications when SSO is enabled.

utils PlatformWebAccess disable

Command Modes Administrator (admin:)

I

Requirements

Command privilege level: 4

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils PlatformWebAccess enable

Use this command to enable the user sign-in to Cisco OS Administration and Disaster Recovery System applications.

utils PlatformWebAccess enable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils PlatformWebAccess status

Use this command to display the status of the web access of the system—whether the platform web access is enabled or disabled for Cisco OS Administration and Disaster Recovery System applications.

utils PlatformWebAccess status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils processCoreDumps*

utils processCoreDumps disable

This command disables the process core dumps.

utils processCoreDumps disable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils processCoreDumps enable

This command enables the process core dumps.

utils processCoreDumps enable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils processCoreDumps status

This command provides the status of the kdump service.

utils processCoreDumps status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils remote_account*

utils remote_account create

This command creates a remote account.

I

utils remote_account create

Command Modes Administrator (admin:)

Usage Guidelines A remote account generates a pass phrase that allows Cisco Systems support personnel to get access to the system for the specified life of the account.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils remote_account disable

This command allows you to disable a remote account.

utils remote_account disable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils remote_account enable

This command allows you to enable a remote account.

utils remote_account enable

Command Modes Administrator (admin:)

Usage Guidelines You can have only one remote account that is enabled at a time.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils remote_account status

This command allows you to check the status of a remote account.

utils remote_account status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils remotesyslog set protocol*

utils remotesyslog set protocol tcp

This command configures the protocol for communication with remote syslog server as TCP on the system. Restart the node for changes to take effect.

utils remotesyslog set protocol tcp

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils remotesyslog set protocol udp

This command configures the protocol for communication with remote syslog server as UDP on the system. Restart the node for changes to take effect.

utils remotesyslog set protocol udp

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils remotesyslog show protocol

This command shows whether the protocol for communication with remote syslog server is TCP or UDP on the system.

utils remotesyslog show protocol

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils reset_application_ui_administrator_name

This command resets the application user interface administrator name.

utils reset_application_ui_administrator_name

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils reset_application_ui_administrator_password

This command resets the application user interface administrator password.

utils reset_application_ui_administrator_password

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils restore_application_ui_administrator_account

This command restores the application user interface administrator account.

utils restore_application_ui_administrator_account

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils scheduled-task*

utils scheduled-task disable

This command disables the scheduled-task.

utils scheduled-task disable scheduled-task

Syntax Description	Parameters	Description
	scheduled-task	Enter the name of the task that you need to disable.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils scheduled-task enable

This command enables the scheduled-task.

utils scheduled-task enable scheduled-task

Syntax Description	Parameters	Description
	scheduled-task	Enter the name of the task that you need to enable.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils scheduled-task list

This command lists all the scheduled tasks.

utils scheduled-task list

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0 Allowed during upgrade: No Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils set urlpattern*

utils set urlpattern disable

This command disables the URL pattern and modifies the zzz20_product_profile.sh file. After the URL pattern is disabled, this command appends the following line:

export TOMCAT_EXCLUDE_URLPATTERNS="/ucmuser"

utils set urlpattern disable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils set urlpattern enable

This command enables the URL pattern and modifies the zzz20_product_profile.sh file. After the URL pattern is enabled, this command appends the following line:

export TOMCAT_EXCLUDE_URLPATTERNS=""

utils set urlpattern enable

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils service*

utils service

This command activates, deactivates, starts, stops, or restarts a service.

utils service {activate| deactivate| start| stop| restart} service name

Syntax Description	Parameters	Description
	service_name	Represents the name of the service you want to affect, for example:
		• System NTP
		• System SSH
		Service Manager
		• A Cisco DB
		Cisco Database Layer Monitor
		Cisco Unified Serviceability
		This list is not exhaustive. For a full list of services for the node enter the command: utils service list
		Note If you want to restart the Cisco Tomcat service for standalone Cisco Prime License Manager, execute the following command or reboot the server: utils service restart Cisco Prime LM Server.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils service list

This command retrieves a list of all services.

utils service list [page]

Syntax Description	Parameters	Description	
	[page]	Displays the output one page at a time.	
Command Modes	Administrator (admin:)		
	Requirements		
	Command privilege level: 0		
	Allowed during upgrade: No		
	Applies to: IM and Presence service on Cisco Unified Communications Manager		

utils service auto-restart

This command starts or stops a specified service.

utils service auto-restart {enable| disable| show} service-name

Syntax Description	Parameters	Description
	enable	Starts auto-restart.
	disable	Stops auto-restart.
	show	Shows the status of a service.
	service-name	Represents the name of the service that you want to start, stop, or show:
		System NTP
		System SSH
		Service Manager
		• A Cisco DB
		Cisco Tomcat
		Cisco Database Layer Monitor
		Cisco Unified Serviceability

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils service start

This command starts a service.

utils service start

Syntax Description	Parameters	Description
	service	Enter the name of a service, which can consist of multiple words.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils service stop

This command stops a service.

utils service stop

Syntax Description	Parameters	Description
	service	Enter the name of a service, which can consist of multiple words.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service onCisco Unified Communications Manager, and Cisco Unity Connection

utils snmp*

utils snmp config 1/2c community-string

This interactive command adds, deletes, lists or updates a community string.

utils snmp config 1/2c community-string {add | delete | list | update}

Syntax Description	Parameters	Description
	add	Adds a new community string.
	delete	Deletes a community string.
	list	Lists all community strings.
	update	Updates a community string.

Command Modes Administrator (admin:)

Usage Guidelines The system prompts you for the parameters.

The SNMP Master Agent service is restarted for configuration changes to take effect. Do not abort command after execution until restart is complete. If the command is aborted during service restart, verify service status of "SNMP Master Agent" by using utils service list. If service is down, start it by using utils service start SNMP Master Agent

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp config 1/2c inform

This interactive command adds, deletes, lists or updates inform notification destinations.

utils snmp config 1/2c inform {add | delete | list | update}

Syntax Description	Parameters	Description
	add	Adds a notification destination.
	delete	Deletes a notification destination.
	list	Lists all notification destinations.
	update	Updates a notification destination.

Command Modes Administrator (admin:)

Requirements

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp config 1/2c trap

This interactive command affects trap notifications.

utils snmp config 1/2c trap {add| delete| list| update}

Parameters	Description
add	Adds a new v1/2c trap notification destination associated with a configured v1/2c community string.
delete	Deletes the configuration information for an existing v1/2c trap notification destination.
list	Lists the v1/2c trap notifications currently configured.
update	Updates configuration information for an existing $v1/2c$ trap notification destination.
	add delete list

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1 Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager and Cisco Unity Connection

utils snmp config 3 inform

This interactive command affects the v3 inform notification.

utils snmp config 3 inform {add | delete | list | update}

Syntax Description	Parameters	Description
	add	Adds a new v3 inform notification destination associated with a configured v3 username.
	delete	Deletes the configuration information for an existing v3 inform notification destination.
	list	Lists the v3 inform notifications currently configured.
	update	Updates configuration information for an existing v3 inform notification destination.

Command Modes Administrator (admin:)

Usage Guidelines

The system prompts you for the parameters.

The SNMP Master Agent service is restarted for configuration changes to take effect. Do not abort command after execution until restart is complete. If the command is aborted during service restart, verify service status of "SNMP Master Agent" by using utils service list. If service is down, start it by using utils service start SNMP Master Agent

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp config mib2

This interactive command affects the Mib2 configuration information.

utils snmp config mib2 {add | delete | list | update}

Syntax Description	Parameters	Description
	add	Adds the Mib2 configuration information.
	delete	Deletes the Mib2 configuration information.
	list	Lists the Mib2 configuration information.
	update	Updates the Mib2 configuration information.
Command Modes	Administrator (admin:)	

Usage Guidelines The system prompts you for the parameters.

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp config 3 trap

This interactive command affects trap notifications.

utils snmp config 3 trap {add | delete | list | update}

Syntax Description	Parameters	Description
	add	Adds a new v3 trap notification destination associated with a configured v3 username.
	delete	Deletes the configuration information for an existing v 3 trap notification destination.
	list	Lists the v3 trap notifications currently configured.

	Parameters	Description
	update	Updates configuration information for an existing v3 trap notification destination.
Command Modes	Administrator (adm	in:)
Usage Guidelines	, , , , , , , , , , , , , , , , , , ,	s you for the parameters.
	Requirements	
	Command privilege	level: 1
	Allowed during upg	rade: Yes
		nified Communications Manager, IM and Presence service on Cisco Unified anager, Cisco Unity Connection

utils snmp config 3 user

This interactive command affects v3 user configuration.

utils snmp config 3 user {add | delete | list | update}

Parameters	Description	
add	Adds a new v3 user with the v3 authentication and privacy passwords.	
delete	Deletes the configuration information for an existing v3 user.	
list	Lists the v3 users currently configured.	
update	Updates configuration information for an existing v3 user.	
	add delete list	

Usage Guidelines The system prompts you for the parameters.

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp get

This interactive command gets the SNMP data using the specified version for the specified MIB OID.

utils snmp get version

Syntax Description	Parameters	Description		
	version	Specifies the SNMP version. Possible values include 1, 2c or 3.		
	community	Specifies the SNMP community string.		
	ip-address	Specifies the IP address of the server. Enter 127.0.0.0 to specify the local host. You can enter the IP address of another node in the cluster to run the command on that node.		
	object	Specifies the SNMP Object ID (OID) to get.		
	file	Specifies a file in which to save the command output.		
Command Modes	Administrator (admin:)			
Usage Guidelines	If you run the command on a specific OID (leaf) in the MIB, you get get the system uptime: iso.3.6.1.2.1.25.1.1.0 = Timeticks: (19)	-		
	If you provide the IP address of a remote host, the command gets executed on the remote host.			
	The IP address is required. You cannot use a domain name.			
	Requirements			
	Command privilege level: 1			
	Allowed during upgrade: Yes			
	Applies to: Cisco Unified Communications Manager, IM and Presenc Communications Manager, Cisco Unity Connection	e Service on Cisco Unified		

utils snmp get 1

This command gets the SNMP data using version 1 for the specified MIB OID.

utils snmp get 1 version

Syntax Description	Parameters	Description
	version	Specifies the SNMP version. Possible values include 1, 2c or 3.
	community	Specifies the SNMP community string.
	ip-address	Specifies the IP address of the server. Enter 127.0.0.0 to specify the local host. You can enter the IP address of another node in the cluster to run the command on that node.
	object	Specifies the SNMP Object ID (OID) to get.
	file	Specifies a file in which to save the command output.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp get 2c

I

This command gets the SNMP data using version 2c for the specified MIB OID.

utils snmp get 2c version

Syntax Description	Parameters	Description
	version	Specifies the SNMP version. Possible values include 1, 2c or 3.
	community	Specifies the SNMP community string.
	ip-address	Specifies the IP address of the server. Enter 127.0.0.0 to specify the local host. You can enter the IP address of another node in the cluster to run the command on that node.

Parameters	Description
object	Specifies the SNMP Object ID (OID) to get.
file	Specifies a file in which to save the command output.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp get 3

This command gets the SNMP data for the specified MIB OID.

utils snmp get 3 version

Syntax Description	Parameters	Description
	version	Specifies the SNMP version. Possible values include 1, 2c or 3.
	community	Specifies the SNMP community string.
	ip-address	Specifies the IP address of the server. Enter 127.0.0.0 to specify the local host. You can enter the IP address of another node in the cluster to run the command on that node.
	object	Specifies the SNMP Object ID (OID) to get.
	file	Specifies a file in which to save the command output.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp hardware-agents

This command affects the SNMP agents on the server.

utils snmp hardware-agents {status | start | stop | restart}

Syntax Description	Parameters	Description
	status	Displays the status of the SNMP agents provided by the vendor of the hardware.
		Note Only agents that provide status get displayed by this command. Not all hardware agents provide status.
	stop	Stops all SNMP agents provided by the hardware vendor.
	restart	Restarts all of the SNMP agents provided by the vendor of the hardware.
	start	Starts all of the SNMP agents provided by the vendor of the hardware.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp test

This command sends sample alarms to local syslog and remote syslog.

utils snmp test

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

Example

```
admin: admin:utils snmp test
Service Manager is running
Test SNMP Trap starts with Local Host Name, Specify a Remote Sever Name to test Remote
Syslog
TestAlarmInformational sent [Returncode=0]
TestAlarmEmergency sent [Returncode=0]
TestAlarmAlert sent [returncode=0]
TestAlarmCritical sent [Returncode=0]
TestAlarmDebug sent [Returncode=0]
TestAlarmNotice sent [Returncode=0]
TestAlarmWarning sent [Returncode=0]
TestAlarmError sent [Returncode=0]
TestAlarmWindows sent [Returncode=0]
Message from syslogd@ipcbu-plat44 at Sat Jul 17 03:56:11 2010 ...

```

utils snmp walk

This interactive command command walks through the SNMP MIB using the specified version, starting with the specified OID.

Syntax Description	Parameters	Description
	version	Specifies the SNMP version. Possible values include 1, 2c or 3.
	community	Specifies the SNMP community string.
	ip-address	Specifies the IP address of the server. Enter 127.0.0.0 to specify the local host. You can enter the IP address of another node in the cluster to run the command on that node.
	object	Specifies the SNMP Object ID (OID) to walk
	file	Specifies a file in which to save the command output.

utils snmp walk version

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, Cisco Unity Connection

Example

If you run snmp walk on a leaf in the MIB, you basically get what you want with utils snmp get ... command. Here in the example we are getting the system's uptime.

iso.3.6.1.2.1.1.1.0 = STRING: "Hardware:7825H, 1 Intel(R) Pentium(R) 4 CPU 3.40GHz, 2048
MB Memory: Software:UCOS 2.0.1.0-62"
iso.3.6.1.2.1.1.2.0 = OID: iso.3.6.1.4.1.9.1.583
iso.3.6.1.2.1.1.3.0 = Timeticks: (15878339) 1 day, 20:06:23.39
iso.3.6.1.2.1.1.4.0 = ""
iso.3.6.1.2.1.1.5.0 = STRING: "bldr-ccm34.cisco.com"
iso.3.6.1.2.1.1.6.0 = ""
iso.3.6.1.2.1.1.7.0 = INTEGER: 72
iso.3.6.1.2.1.2.1.0 = INTEGER: 3
iso.3.6.1.2.1.2.2.1.1.1 = INTEGER: 1
iso.3.6.1.2.1.2.2.1.1.2 = INTEGER: 2
iso.3.6.1.2.1.2.2.1.1.3 = INTEGER: 3
iso.3.6.1.2.1.2.2.1.1.3 = INTEGER: 3
iso.3.6.1.2.1.2.2.1.1.4 = STRING: "lo"
Press <enter> for 1 line, <space> for one page, or <q> to quit

utils snmp walk 1

This interactive command walks through the SNMP MIB using SNMP version 1 starting with the specified OID

utils snmp walk 1 version

Syntax Description	Parameters	Description
	version	Specifies the SNMP version. Possible values include 1, 2c or 3.
	community	Specifies the SNMP community string.
	ip-address	Specifies the IP address of the server. Enter 127.0.0.0 to specify the local host. You can enter the IP address of another node in the cluster to run the command on that node.
	object	Specifies the SNMP Object ID (OID) to walk
	file	Specifies a file in which to save the command output.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp walk 2c

This interactive command walks through the SNMP MIB using SNMP version 2c starting with the specified OID.

utils snmp walk 2c version

Syntax Description	Parameters	Description
	version	Specifies the SNMP version. Possible values include 1, 2c or 3.
	community	Specifies the SNMP community string.
	ip-address	Specifies the IP address of the server. Enter 127.0.0.0 to specify the local host. You can enter the IP address of another node in the cluster to run the command on that node.
	object	Specifies the SNMP Object ID (OID) to walk
	file	Specifies a file in which to save the command output.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, Cisco Unity Connection

utils snmp walk 3

This interactive command walks through the SNMP MIB starting with the specified OID.

utils snmp walk 3 version

Parameters	Description
version	Specifies the SNMP version. Possible values include 1, 2c or 3.
community	Specifies the SNMP community string.
object	Specifies the SNMP Object ID (OID) to walk
	version community

Parameters	Description	
ip-address	Specifies the IP address of the server. Enter 127.0.0.0 to specify the local host. You can enter the IP address of another node in the cluster to run the command on that node.	
file	Specifies a file in which to save the command output.	

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence Service on Cisco Unified Communications Manager, Cisco Unity Connection

utils soap realtimeservice test

This command executes a number of test cases on the remote server.

utils soap realtimeservice test [remote-ip]remote-httpsremote https-password

Parameters	Description
remote-ip	Specifies the IP address of the server under test.
remote-https-user	Specifies a username with access to the SOAP API.
remote-https-password	Specifies the password for the account with SOAP API access.

Command Modes Adm

Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on IM and Presence, Cisco Unity Connection

utils sso*

utils sso

This command provides information about SAML SSO authentication.

utils sso {enable| disable| status}

Syntax DescriptionParametersDescriptionenableProvides the location in Cisco Unified CM Administration where you can
enable SAML SSO.disableDisables SAML SSO based authentication.statusProvides the status of SAML SSO.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

Example

```
Admin: utils sso enable
*** W A R N I N G ***
SSO cannot be enabled using CLI command
To enable Cluster wide SAML SSO please access
Cisco Unified CM Administration Page->System->SAML Single Sign On
```

utils sso recovery-url

This command enables or disables recovery URL for SAML SSO based authentication.

utils sso recovery-url {enable| disable}

Syntax Description	Parameters	Description
	enable	Enables recovery URL for SAML SSO based authentication.
	disable	Disables recovery URL for SAML SSO based authentication.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence service on Unified Communications Manager, and Cisco Unity Connection

utils system*

utils system restart

This command allows you to restart the system on the same partition.

utils system restart

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils system shutdown

This command allows you to shut down the system.

utils system shutdown

Command Modes Administrator (admin:)

Usage Guidelines

This command has a five-minute timeout. If the system does not shut down within five minutes, the command gives you the option of doing a forced shutdown.

/!\

Caution If the server is forced to shutdown and restart from your virtual machine, the file system may become corrupted.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils system switch-version

This command allows you to restart the system on the inactive partition.

utils system switch-version

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils system boot

This command redirects where the system boot output gets sent.

utils system boot {console| serial}

Syntax Description	Parameters	Description
	console	Redirects the system boot output to the console.
	serial	Redirects the system boot output to the COM1 (serial port 1).

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0 Allowed during upgrade: Yes Applies to: Cisco Unified Communications Manager and Cisco Unity Connection

utils system upgrade

This command allows you to install upgrades and Cisco Option (COP) files from both local and remote directories.

utils system upgrade {initiate| cancel| status}

Syntax Description	Parameters	Description
	cancel	Cancels the active upgrade.
	initiate	Starts a new upgrade wizard or assumes control of an existing upgrade wizard. The wizard prompts you for the location of the upgrade file.
	status	Displays the status of an upgrade.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection

utils update dst

I

This command updates the daylight saving time (DST) rules for the current year.

utils update dst

Command Modes Administrator (admin:)

Usage Guidelines

This command takes a backup of the existing DST rules file and creates a new DST rules file for the current year.

n Restart the phones after you execute the command. Not restarting the phones results in wrong DST start and stop dates.

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to Unified Communications Manager and IM and Presence service.

utils users validate

This command checks user records across all nodes and clusters in the deployment to identify duplicate or invalid userid or directory URI values.

utils users validate {all| userid| uri}

Syntax Description	Parameters	Description
	all	Validate the userid and directory URI values for all users in the nodes and clusters.
	userid	Validate the userid value for all users in the nodes and clusters.
	uri	Validate the directory URI value for all users in the nodes and clusters.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: IM and Presence Service on Cisco Unified Communications Manager

utils vmtools*

utils vmtools refresh

This command refreshes the currently installed VMware Tools to the latest version that is prescribed by the ESXi host for that VM.

utils vmtools refresh

Command Modes Administrator (admin:)

Usage Guidelines To update the current version of the VMware Tools, select Guest > Install/Upgrade VMWare Tools > Interactive Tools Upgrade.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

admin:utils vmtools refresh VMware Tools match host. Upgrade allowed, though not required.

```
*** WARNING ***
Running this command will update your current version of VMware Tools
to the latest version prescribed by the ESXi host on which this VM is
running. The tools install will cause your system to reboot twice.
```

utils vmtools upgrade

This command updates the currently installed VMware Tools to the latest version prescribed by the ESXi host for that VM.

utils vmtools upgrade

Command Modes Administrator (admin:)

Requirements

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, and Cisco Unity Connection

utils system boot status

This command shows the location where the system boot messages are to be sent. The location is either console or serial port one.

utils system boot status

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Cisco Unified Communications Manager, IM and Presence service on Cisco Unified Communications Manager, Cisco Unity Connection
