### set account enable

This command enables the OS user account that was disabled because of password inactivity.

set account enable user-id

Syntax Description	Parameters Description
	<i>user-id</i> Specifies the user ID of the account that was disabled.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 4
	Allowed during upgrade: No
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Cisco Unity Connection

### set account name

This command sets up a new account on the operating system.

set account name name

Syntax Description	Parameters	Description				
	name	Represents the username for the new account.				
	Enter a name comprised of only alphabets or characters comprised of alphanumeric ch (a-z, A-D, 0-9).					
		Note Umlaut characters are not supported.				
Command Modes	Administrat	or (admin:)				
Usage Guidelines	•	ter the username, the system prompts you to enter the privilege level (0 or 1) and password for ount. The privilege levels definitions are as follows:				
	Privilege le	Privilege level 0				
	Specifi level 0	es an ordinary privilege level. Users with ordinary privileges can run CLI commands with privilege only.				
	Privilege level 1					
	-	es an advanced privilege level. Users with advanced privileges can run CLI commands with ge level 1 and below.				
		• The administrator account that the system creates during Unified Communications Manager installation has a privilege level of 4. The administrator can run all commands in the CLI.				
	The set acc	ount name command includes the following new prompts:				

- Anow this User to login to SAML SSO-enabled system through the Recovery URL ? (Yes / No) — Level 4 administrators can enable or disable the access to the recovery URL sign-in option for new platform administrators by typing 'Yes' or 'No' on the CLI. The value can be configured to 'Yes' if a user chooses to sign-in using the Recovery URL.
- 'To authenticate a platform login for SSO, a Unique Identifier (UID) must be provided that identifies this user to LDAP (such as sAMAccountName or UPN). Please enter the appropriate LDAP Unique Identifier (UID) for this user:[UID]' Level 4 administrator can type the unique identifier value for each platform administrator for this prompt.

 Note
 Only the Level 4 administrator has privileges to run all the CLI commands.

The administrator must ensure to perform the following tasks:

- Type either 'Yes' or 'No' for the 'Allow this User to login to SAML SSO-enabled system through Recovery URL ? (Yes / No)' prompt. If this prompt value is blank, an error message appears.
- Type a value for the 'To authenticate a platform login for SSO, a Unique Identifier (UID) must be provided that identifies this user to LDAP (such as sAMAccountName or UPN). Please enter the appropriate LDAP Unique Identifier (UID) for this user:[UID]' prompt. If the prompt value is duplicate, an error message appears. You can hit the Enter key and then, the user account name is saved by default. After the account is created successfully, the administrator will see the message Account created successfully. Log in to the CLI and update the password before you log in to OS Administration.
- In the case of SAML SSO login for Operating System Admin pages, if LDAP user consists of '&' character, make sure you create platform user without '&' and then map to LDAP user consisting of '&' character.
- In the case of SAML SSO login for Operating System Admin pages, if LDAP attribute value for User ID is telephonenumber, make sure you create platform user using consisting of alphanumeric characters or English alphabets only. Do not include platform user name with only numeric values. Then, map to the appropriate LDAP user having the UID value as telephone number.

#### Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Cisco Unity Connection

### set accountlocking

This command enables or disables account locking for the current administration accounts.

 set accountlocking {enable | disable}

 Syntax Description

 Parameters
 Description

 enable
 Enable account locking.

 disable
 Disable account locking.

**Command Modes** Administrator (admin:)

#### **Usage Guidelines**

**Note** After you run this command with **enable**, the system automatically enables account lockout notification after the system enables the audit logging function.

When the Administration account locking feature is enabled, and the user enters the wrong password more than the accountlocking count, the account gets locked for a set period. The message that the account is locked is only seen on the VM console and secure logs.

#### Requirements

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Cisco Unity Connection

## set accountlocking count

This command sets the global consecutive failed sign-in attempt count that triggers locking a user account.

Syntax Description	Parameters	Description			
	attempts	Represents the number of consecutive sign-in attempts before the system locks the account.			
		Value Range: 2-5			
		Default value: 3			
Command Modes	Administrator (admin:)				
Usage Guidelines	To change the global value for co execute this command.	onsecutive failed sign-in attempts before the system locks a user account,			
		when account locking is enabled. If account locking is disabled, the system doe ocking value and uses the default value, 3, after you enable account locking.			
	Requirements				
	Command privilege level: 1				
	Allowed during upgrade: Yes				
	Applies to: Unified Communicati Cisco Unity Connection	ons Manager, IM and Presence Service on Unified Communications Manager,			

set accountlocking count attempts

## set accountlocking unlocktime

disable

This command configures the unlock time for the current Unified Communications Manager admin accounts.

set accountlocking unlocktime seconds

Syntax Description	Pai	rameters	Description				
	sec	onds	Specifies the unlock time in seconds.				
			Value Range: 30-3600				
			Default value: 300				
	Note	• The account gets auto	matically unlocked only after the configured unlock time.				
			valid when account locking is enabled. If account locking is disabled, the system e account locking unlock time and uses the default value, 300, after you enable				
Command Modes	Adr	ninistrator (admin:)					
	Req	Requirements					
	Con	Command privilege level: 0					
	Allo	Allowed during upgrade: No					
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Cisco Unity Connection						
set accol	int s	sorecoveryu	rlaccess				
	This	s command enables or disab	les the SSO recovery URL access for platform administrators.				
	Note		ministrator Level 4 has access to the recovery URL. If the platform administrator the recovery URL access for own self, an error appears.				
	set	set account ssorecoveryurlaccess {enable   disable}userid					
Syntax Description	Pai	rameters	Description				
	ena	able	Enable the recovery sign-in option for platform administrators.				

Disable the recovery sign-in option for platform administrators.

I

	Parameters userid Administrator (admin:)		Description
			Specifies a particular Cisco Unified Operating System Administrator account.
Command Modes			
Usage Guidelines			
	Note	• If you enable or disal	ble the recovery sign-in option, which is already enabled or disabled, an error appears
			ccount that the system creates when Unified Communications Manager installs has 4. The administrator can run all commands in the CLI.
	Requirements		
	Com	mand privilege level: 4	
	Allo	wed during upgrade: No	

set account ssouidvalue

This command updates the unique identifier value for the existing platform administrators.

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager

#### set account ssouidvalue userid

Syntax Description	Para	ameters	Description
	user	id	Specifies a particular Cisco Unified Operating System Administrator account whose unique identifier value needs to be updated.
Command Modes	Adm	inistrator (admin:)	
Usage Guidelines			
	Note		set account ssouidvalue userid command, a prompt appears to provide the UID value. s blank, then samaccountname is saved as ssouidvalue by default.
		• If a duplicate UID	value exists, an error appears.
	Requ	irements	

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager

## set cert bulk consolidate

This command consolidates all the certificates that are available on the unit.

set cert bulk consolidate unit

Syntax Description	Parameters	Description	-
	unit	Represents the unit name.	-
Command Modes	Administrat	tor (admin:)	
Usage Guidelines	You must sj	pecify the SFTP server in	formation to use for cert bulk operations.
	Requireme	nts	
	Command J	privilege level: 1	
	Allowed du	iring upgrade: Yes	
		Unified Communications I Jnity Connection.	Manager, IM and Presence Service on Unified Communications Manager,
	Related Top set cer	<b>bics</b> t bulk sftp, on page 10	

## set cert bulk export

This command exports all the certificates that are available on the unit.

set cert bulk export unit

Syntax Description	Parameters	Description
	export	Exports all the available certificates for this unit in this cluster to the preconfigured SFTP location.
	unit	Represents the unit name.
Command Modes	Administra	tor (admin:)
Usage Guidelines	You must s	pecify the SFTP server information to use for cert bulk operations.
	Requireme	nts
	Command	privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

```
admin:set cert bulk export all
Successfully exported tomcat certificate(s) to sftp server.
Successfully exported tftp certificate(s) to sftp server.
```

#### **Related Topics**

set cert bulk sftp, on page 10

set cert bulk import unit

### set cert bulk import

This command imports the certificates that are in the SFTP location into the specified unit trust-store.

**Syntax Description Parameters Description** Represents the unit unit name. Administrator (admin:) **Command Modes** You must specify the SFTP server information to use for cert bulk operations. **Usage Guidelines** Requirements Command privilege level: 1 Allowed during upgrade: Yes Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection. **Example** admin:set cert bulk import all Successfully imported tomcat certificates.

#### **Related Topics**

set cert bulk sftp, on page 10

Successfully imported tftp certificates.

### set cert bulk sftp

This command prompts for the SFTP server information to use for bulk operations.

	set cert bulk sftp
Command Modes	Administrator (admin:)
Usage Guidelines	You must specify the SFTP server information to use for cert bulk operations.
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set cert default-ca-list disable

This command disables all or particular default CA certificates from all servers in the cluster.

When you try to execute this command, a warning message appears displaying that this operation disables all or particular default Cisco CA certificates.

set cert default-ca-list disable {all |common-name}

Note

 Please ensure that you are executing this command from the Unified Communications Manager publisher node.

• The default CA certificate names can be obtained by executing the show cert default-ca-list command.

Syntax Description	Parameters	Description		
	all	Deletes all the default CA certificates from all servers in the cluster.		
	common-name	Deletes the particular default CA certificate from all servers in the cluster.		
Command Modes	Administrator (admin:)			
Usage Guidelines	Consider the following information after you disable all the default CA certificates.			
	• Restart the "Cisco Tomcat", "Cisco CallManager", "Cisco Tftp", and "Cisco Certificate Authority Proxy Function" services.			
	Consider the following information after you disable the specific default CA certificate.			
	• Restart the "Cisco CallManager", "Cisco Tftp", and "Cisco Certificate Authority Proxy Function" services.			
	• If you are disabling "VeriSign C Tomcat" service is sufficient.	Class 3 Secure Server CA - G3" certificate, then restarting of only "Cisco		

#### Requirements

Command privilege level: 1

Applies to: Unified Communications Manager

#### Example

admin:set cert default-ca-list disable all

WARNING: This operation will disable all Cisco CA certificates that have been installed by default. You can use the "show cert default-ca-list" to view the list of default Cisco CA certificates. You must restart the "Cisco Tomcat", "Cisco CallManager", "Cisco Tftp" and "Cisco Certificate Authority Proxy Function" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? **yes** Successfully disabled the default Cisco CA certificates. Please wait for a few min to UI to reflect the correct status.

admin:set cert default-ca-list disable common-name Enter the Common Name of Default CA Certificate : **CAP-RTP-001** WARNING: This operation will disable the "CAP-RTP-001" Cisco CA certificate. You must restart the "Cisco CallManager", "Cisco Certificate Authority Proxy Function" and "Cisco Tftp" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? **yes** Successfully disabled default "CAP-RTP-001" certificate.

admin:set cert default-ca-list disable common-name Enter the Common Name of Default CA Certificate : **VeriSign Class 3 Secure Server CA - G3** WARNING: This operation will disable the "VeriSign Class 3 Secure Server CA - G3" Cisco CA certificate. You must restart the "Cisco Tomcat" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? **yes** Successfully disabled default "VeriSign Class 3 Secure Server CA - G3" certificate.

admin:set cert default-ca-list enable common-name Enter the Common Name of Default CA Certificate : **capf** The capf certificate is not in the list of default Cisco CA certificates. admin:

### set cert default-ca-list enable

This command enables all or particular default CA certificates except CAPF-trust on all servers in the cluster. CAPF-trust certificate enable only on the Unified Communications Manager publisher node not across the cluster.

When you try to execute this command, a warning message appears displaying that this operation enables all or particular default Cisco CA certificates as a trusted certificate.

```
set cert default-ca-list enable {all | common-name}
```

I

	Note	node.	ames can be obtained by executing the <b>show cert default-ca-list</b> command.			
Syntax Description	Para	imeters	Description			
	all		Enables all the default CA certificates on all servers in the cluster.			
	com	mon-name	Enables the particular default CA certificate on all servers in the cluster.			
Command Modes	Adm	inistrator (admin:)				
Usage Guidelines	Cons	ider the following information	after you enable all the default CA certificates.			
	• Restart the "Cisco Tomcat", "Cisco CallManager", "Cisco Tftp", and "Cisco Certificate Authority Proxy Function" services.					
	Consider the following information after you enable the specific default CA certificate.					
	•	• Restart the "Cisco CallManager", "Cisco Tftp", and "Cisco Certificate Authority Proxy Function" services.				
		• If you are enabling "VeriSign Class 3 Secure Server CA - G3" certificate, then restarting of only "Cisco Tomcat" service is sufficient.				
	Requirements					
	Com	Command privilege level: 1				
	Applies to: Unified Communications Manager					
	Example					
	admin:set cert default-ca-list enable all					
	WARNING: This operation will enable all default Cisco CA certificates as trusted certificates for all nodes in this cluster. You can use the "show cert default-ca-list" to view the list of default Cisco CA certificates. You must restart the "Cisco Tomcat", "Cisco CallManager", "Cisco Tftp" and "Cisco Certificate Authority Proxy Function" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes no)? <b>yes</b> Successfully enabled the default Cisco CA certificates. Please wait for a few minutes for the UI to reflect the correct status.					
	Ente: WARN for a	ING: This operation will i all nodes in this cluster.	: enable common-name alt CA Certificate : <b>CAP-RTP-002</b> nstall the "CAP-RTP-002" certificate as a trusted certificate You must restart the "Cisco CallManager", Proxy Function" and "Cisco Tftp" services after running this			

command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? yes Successfully enabled default "CAP-RTP-002" certificate.

admin:set cert default-ca-list enable common-name Enter the Common Name of Default CA Certificate : **VeriSign Class 3 Secure Server CA - G3** WARNING: This operation will install the "VeriSign Class 3 Secure Server CA - G3" certificate as a trusted certificate for all nodes in this cluster. You must restart the "Cisco Tomcat" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? **yes** Successfully enabled default "VeriSign Class 3 Secure Server CA - G3" certificate.

```
admin:set cert default-ca-list enable common-name
Enter the Common Name of Default CA Certificate : CAP-RTP-003
The CAP-RTP-003 certificate is not in the list of default Cisco CA certificates.
admin:
```

## set cert delete

This command deletes a specific certificate file from the trust unit.

set cert delete unit name

Syntax Description	Parameters	Description
	unit	Specifies the name of the trust category, as "own" or "trust".
	name	Certificate file name.
Command Modes	Administra	tor (admin:)
	Requireme	nts
	Command J	privilege level: 1
	Allowed du	ring upgrade: Yes
	11	Unified Communications Manager, IM and Presence Service on Unified Communications Manage Jnity Connection.
	Example	
	admin:set	cert delete cucm siptest.pem

### set cert import

This command imports the specified certificate for the specified certificate type.

set cert import type name [caCert]

Syntax Description	Parameters	Description
	type	Specifies the certificate type as "own" or "trust".
	name	Represents the unit name.
	[caCert]	Represents the name of the CA certificate file name.

Command Modes Administrator (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

```
admin:set cert import trust tomcat
Successfully imported certificate for tomcat.
Please restart services related to tomcat for the new certificate to
become active.
```

### set cert regen

This command regenerates the certificate for the specified unit.

Syntax Description	Parameters	Description
	name	Represents the unit
		name.

set cert regen name

Command Modes Administrator (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

```
admin:set cert regen tomcat
Successfully regenerated certificate for tomcat.
```

### set cert regen ITLRecovery

This command regenerates the ITLRecovery certificate for the specified unit.

After you type this command, a warning message appears displaying that if you are using a tokenless CTL and if the you are regenerating the CallManager certificate, ensure that the CTL file has the updated CallManager certificate and that certificate is updated to endpoints. To regenerate the certificate, type **yes** or else type **no**.

set cert regen ITLRecovery

Syntax Description	Parameters	Description
	ITLRecovery	Represents the ITLRecovery certificate.

**Command Modes** Administrator (admin:)

#### Requirements

∕!∖

Caution

• You must restart the services related to ITLRecovery for the regenerated certificates to become active.

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

admin:set cert regen ITLRecovery

WARNING: If you are using a tokenless CTL and if the CallManager certificate is recently generated, please ensure that the CTL File already has the new CallManager certificate and is

updated to the endpoints, before generating the ITL Recovery certificate. Are you sure want

to proceed?

Proceed with regeneration (yes|no)? yes

Successfully Regenerated Certificate for ITLRecovery.

You must restart the services related to ITLRecovery for the regenerated certificates to become active.

## set cli pagination

For the current CLI session, this command turns automatic pagination On or Off.

Syntax Description	Parameters	Description	-
	on	Turns pagination on.	-
	off	Turns pagination off.	-
Command Modes	Administra	tor (admin:)	-
	Requireme	nts	
	Command	privilege level: 1	
	Allowed du	ring upgrade: No	
		Unified Communicati Jnity Connection.	ons Manager, IM and Presence Service on Unified Communications Manager,

#### set cli pagination $\{on \mid off\}$

admin:set cli pagination off Automatic pagination is turned off

set cli session timeout minutes

# set cli session timeout

This command sets the time, in minutes, after which an active CLI session times out and disconnects.

Syntax Description	Parameters	Description
		Specifies the time, in minutes, that can elapse before an active CLI session times out and disconnects.
		Value range: 5-99999 minutes
		• Default value: 30 minutes
Command Modes	Administrate	or (admin:)
Usage Guidelines	Be aware that the new session timeout value becomes effective immediately for a new CLI session; h active sessions retain their original timeout value. Also the show cli session timeout command refle new value, even if the current session does not use that value.	
_		

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set commandcount

This command changes the CLI command prompt, so it displays how many CLI commands have executed.

Syntax Description	Parameters	Description	
	enable	Turns on command count.	
	disable	Turns off command count.	
Command Modes	Administra	tor (admin:)	
	Requireme	nts	
	Command J	privilege level: 1	
	Allowed du	ring upgrade: No	
		Unified Communications M Jnity Connection.	anager, IM and Presence Service on Unified Communications Manag

### set csr gen

This command generates the csr for the unit name.

set csr gen name

Syntax Description	Parameters	Parameters Description	
	name	Specifies the unit on which the certificate is generated.	
Command Modes	Administra	tor (admin:)	
	Requirements		
	Applies to:	Unified Communications Manager, IM and Presence Service	

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

L

#### Example

admin:set csr gen tomcat Successfully Generated CSR for tomcat.

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

# set cuc jetty stderrlog

This command enables or disables the error log getting generated while any standard error occurs during communicating with the Jetty server. This error log gets generated and is available at the path /var/log/active/jetty/.

set cuc jetty stderrlog {enable | disable}

Syntax Description	Parameters	Description
	enable	Enables the error log on the Jetty server. Be aware that enable is case sensitive. Disables the error log on the Jetty server. Be aware that disable is case sensitive.
	disable	
Command Modes	Administrator (admin:)	
Usage Guidelines  Cau	Image: Markow with the services after enabling or dimensional services after enabling or dimensiona services after enabling or dimensiona services afte	sabling the error log on the Jetty server.
	Requirements	
	Command privilege level: 0	
	Allowed during upgrade: No	
	Applies to: Cisco Unity Connection only.	
	Enable Error Log on Jetty Server Example	
	admin:set cuc jetty stderrlog enable	
	Command is executed successfully To effect changes restart jetty server	

Restart Jetty Server through Unity Connection Serviciabilty .

Go to Tools -> Service Management -> Restart Connection Jetty Service. Check the logs that should not be generated after running above command. Check the requestlog by sending one voice message through webinbox. Notifications should not come in logs

## set cuc jetty stdoutlog

This command enables or disables the standard input and output log getting generated while communicating with Jetty server. This standard input and output log gets generated and is available at the path /var/log/active/jetty/.

set cuc jetty stdoutlog {enable | disable}

Syntax Description	Parameters	Description
	enable	Enables the standard input and output log on the Jetty server. Be aware that enable is case sensitive.
	disable	Disables the standard input and output log on the Jetty server. Be aware that disable is case sensitive.

Command Modes Administrator (admin:)

#### **Usage Guidelines**

<u>/!\</u>

**Caution** You must restart the Jetty services after enabling or disabling the standard input and output log on the Jetty server.

#### Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unity Connection only.

#### Enable Standard Input and Output Log on Jetty Server Example

```
admin:set cuc jetty stdoutlog enable
```

Command is executed successfully To effect changes restart jetty server Restart Jetty Server through Unity Connection Serviciabilty . Go to Tools -> Service Management -> Restart Connection Jetty Service. Check the logs that should not be generated after running above command. Check the requestlog by sending one voice message through webinbox. Notifications should not come in logs

## set cuc jetty requestlog

This command enables or disables the request log getting generated from the Jetty server while any request is raised for notifications. This request log gets generated and is available at the path /usr/local/jetty/logs/.

set cuc jetty requestlog {enable | disable}

Syntax Description	Parameters	Description	
	enable	Enables the request log on the Jetty server. Be aware that "enable" is case sensitive.	
	disable	Disables the request log on the Jetty server. Be aware that "disable" is case sensitive.	
Command Modes	Administrator (admin:)		
Usage Guidelines	_ 		
(	You must restart the Jetty services after enabling or disabling the request log on the Jetty server.		
	Requirements		

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unity Connection only.

#### **Enable Request Log on Jetty Server Example**

admin:set cuc jetty requestlog enable Command is executed successfully To effect changes restart jetty server Restart Jetty Server through Unity Connection Serviciabilty . Go to Tools -> Service Management -> Restart Connection Jetty Service. Check the logs that should not be generated after running above command. Check the requestlog by sending one voice message through webinbox. Notifications should not come in logs

### set cuc sditrace

This command enables or disables the SDI traces on Unity Connection.

#### set cuc sditrace {enable | disable}

#### Table 1: Syntax Description

Parameters	Description
enable	Enables SDI traces.
disable	Disables SDI traces and also deletes existing trace files.

Administrator (admin:) **Command Modes** 

**Usage Guidelines** 

1. In case of cluster, this CLI should be executed on both the nodes.

2. After an upgrade or reinstallation, this CLI should be run again to enable the SDI traces.

#### Requirements

Command privilege level: 1

Allowed during upgrade : No

Applies to: Cisco Unity Connection.

## set cuc speechview registration certificate size

This command sets up new certificate bit size for Speech to Text service registration and Voicemail transcription with Nuance server.

set cuc speechview registration certificate size bit\_size

Syntax Description	Parameters Description			
	bit_size	Specifies the bit_size of certificate. Its allowed values are 1k, 2k or 4k.		
Command Modes	Administrator (admin:)			
Usage Guidelines	To set the desired certificate bit size, use the <b>set cuc speechview registration certificate size</b> (Cisco Unity Connection Only) command. The CLI must be executed on the publisher. It will restart the Connection SpeechView Processor service.			
	Requirements			

Command privilege level: 4

### set cuc srsv timeout

This command sets the value for SRSV session timeout.

Syntax Description	Parameters	Description
	timeout_value	Sets the time for session logout.
Command Modes	Administrator (admin:)	
	Requirements	
	Command priv	vilege level: 1
	Allowed durin	ng upgrade: No
		sco Unity Connection

#### set cuc srsv timeout timeout\_value

### set cuc trace

This command enables or disables the specified traces and trace levels.

set cuc trace {enable | disable} trace\_name level

Syntax Description	Parameters	Description		
-	enable	Enables Connection traces.		
-	disable	Disables Connection traces.		
	trace_name	Specifies the name of the trace to enable or disable. Be aware that trace names are case sensitive.		
	<i>level</i> Specifies the level or levels of trace_name that you want to enable or disable. Each trace comprises up to 31 levels, numbered 0 to 30; each level provides a different type of information for the specified trace. When you enable or disable multiple levels, use a comma to separate levels and a hyphen to indicate a range of levels. Do not include spaces.			
Command Modes	Administrat	tor (admin:)		
obugo duraonnoo	1 2	a list of the traces and trace levels that are currently enabled, use the <b>show cuc trace levels</b> (Cisco nection Only) command.		
	Requiremer	nts		
	Command privilege level: 1			
	Allowed during upgrade: No			
	Applies to: Cisco Unity Connection only.			
I	Enable VUI	Traces 1, 13, and 17 Through 20 Example		
		cuc trace enable VUI 1,13,17-20 levels are now set to: 1,13,17-20		

#### Disable VUI Traces 17 Through 20 While VUI Trace Levels 1 and 13 Remain Set Example

```
admin:set cuc trace disable VUI 17-20 VUI trace levels are now set to: 1,13
```

#### **Related Topics**

show cuc trace levels

### set date

This command changes the time and date on the server.

set date HH:mm:ss:MM/DD/YY

**Syntax Description Parameters Description** *HH:mm:ss* Represents the time format (24 hours format). MM/DD/YY Represents the date format. Note Date format MM/DD/YYYY is also accepted. Administrator (admin:) **Command Modes** If the server is configured to synchronize with external NTP servers, this command requires the user to remove **Usage Guidelines** all of those NTP servers. Requirements Applies to: Unified Communications Manager and Cisco Unity Connection. Set Date and Time to 2:10:33 Pm April 13th 2012 Example admin:set date 14:10:33:04/13/12 Requirements Command privilege level: 1

Allowed during upgrade: No

## set dscp defaults

This command sets the factory default DSCP settings for all of the port tags.

set dscp defaults

	- A devinistant of (a devin)			
Command Modes	Administrator (admin:)			
Usage Guidelines	All non-default DSCP settings get removed after you run this command.			
	You can use the command show dscp defaults to see the factory default DSCP settings.			
	Requirements			
	Command privilege level: 1			
	Allowed during upgrade: No			
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.			
eat dear				
ser nsch				
ser nsch	This command enables or disables DSCP marking on outgoing TCP or UDP packets. You can enable or disable DSCP on a single port tag, or on all port tags at once.			
set dscp				
	disable DSCP on a single port tag, or on all port tags at once.			
Set uscp	disable DSCP on a single port tag, or on all port tags at once. <pre>set dscp {enable   disable} {allport_tag}</pre>

# set dscp marking

This command sets DSCP markings on port tags by using well-known DSCP classes and numeric values.

set dscp marking port\_tag value

Syntax Description	Parameters	Description			
	<i>port_tag</i> Represents a DSCP port tag, which is a string that is mapped to a TCP or UDP port to iden the application that uses the port. This value is for the portTag field displayed when you use command <b>show dscp defaults</b> . The set of port tags is predefined.				
	value	A DSCP value. You can enter the name of a well-known DSCP class or a numeric value in decimal or hexadecimal format. Precede hexadecimal values with 0x or 0X.			
Command Modes	Administra	tor (admin:)			
Usage Guidelines	The valid c	lass names as defined by DSCP are:			
	Class Selector: values CS0, CS1, CS2, CS3, CS5, CS6, CS7				
	The cla Preced	ass selector (CS) values correspond to IP Precedence values and are fully compatible with IP lence.			
	• Exped	ited Forwarding: value EF			
		B is ideally suited for applications such as VoIP that require low bandwidth, guaranteed bandwidth, elay, and low jitter.			
	• Best E	Effort: value BE			
	Also c	called default PHB, this value essentially specifies that a packet be marked with 0x00, which gets			
	the traditional best-effort service from the network router.				
	• Assure	ed Forwarding: values AF11, AF12, AF13, AF21, AF22, AF23, AF41, AF42, AF43			
	There	are four types of Assured Forwarding classes, each of which has three drop precedence values.			
	These	precedence values define the order in which a packet is dropped (if needed) due to network			
	conges	stion. For example, packets in AF13 class are dropped before packets in the AF12 class.			
	Requireme	nts			

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

# set ipsec policy\_group

This command enables ipsec policies with the specified policy group name.

```
set ipsec policy_group {ALLgroup}
```

Syntax Description	Parameters	Description
	ALL	Enables all ipsec policy groups.

	Parameters	Description	
	group	Specifies the name of a particular ipsec policy group to enable.	
Command Modes	Administrator (admin:)		
	Requirements		
	Command privilege level: 1		
	Allowed during upgrade: No		
	Applies to: Unified Communications	Manager and Cisco Unity Connection.	

# set ipsec policy\_name

This command enables the specified IPSec policy.

set ipsec policy\_name { policy\_group policy\_name }

Syntax Description	Parameters	Description	
	policy_group	Specifies the name of a particular ipsec policy group to enable.	
	policy_name	Specifies the name of a particular ipsec policy to enable.	
Command Modes	Administrator (admin:)		

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager and Cisco Unity Connection.

## set key regen authz encryption

Run this command on the Unified Communications Manager publisher node to regenerate the symmetric encryption key that encrypts OAuth access tokens and refresh tokens that are used in Cisco Jabber authentication.

Command Modes Administrator (admin:)

#### Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager and the IM and Presence Service.

## set key regen authz signing

Run this command on the Unified Communications Manager publisher node to regenerate the asymmetric RSA key pair for signing the OAuth access tokens and refresh tokens that are used in Cisco Jabber authentication.

Command Modes	Administrator (admin:)			
Usage Guidelines	 Requirements			
	Command privilege level: 4			
	Allowed during upgrade: No			
	Applies to: Unified Communications Manager and the IM and Presence Service.			

## set logging

This command allows you to enable or disable CLI Admin logs.

	set logging	g {enable   disable}
Syntax Description	Parameter	s Description
	enable	Turns on logging.
	disable	Turns off
		logging.
Command Modes	Administra	ator (admin:)
	Requireme	ents
	Command	privilege level: 0
	Allowed d	uring upgrade: No
		Unified Communicat Unity Connection.

## set Login Grace Timeout

This command allows you to configure the LoginGraceTimeout value to the mentioned value.

set Login Grace Timeout LoginGraceTimeout value

Syntax Description	Parameters	Description
	LoginGraceTimeout value	Sets the LoginGraceTimeout value for login grace timeout.
Command Modes	Administrator (admin:)	
	Requirements	
	Command privilege level:	1
	Allowed during upgrade: Y	/es

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network cluster publisher

This command sets the network cluster publisher hostname and IP address.

set network cluster publisher {hostname | ip} name

Syntax Description	Parameters	Description
	hostname	Specifies the hostname of the network cluster.
	ip	Specifies the ip address of the network cluster.
	name	Hostname or IP address to assign to the network cluster publisher.

Command Modes Administrator (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network cluster subscriber details

Use this command to add subscriber to the processnode or appserver table when Tomcat Webserver is server down and GUI is inaccessible.

set network cluster subscriber details servertype hostname ip domainname

Syntax Description	Parameter	Description
	servertype	Choose one of these products for this parameter— Unified Communications Manager, IM and Presence Service, and Cisco Unity Connection. This field is mandatory.
	hostname	The hostname of the node that you add to the cluster. The hostname is supported on the same domain. This field is mandatory.
	ip	The IPv4 address of the node that you add to the cluster. This field is mandatory for IM and Presence publisher and Cisco Unity Connection.
	domainname	The domain name of the IM and Presence Service publisher. This field is mandatory for IM and Presence publisher.
Command Modes	Administrator (admin:)	
	Requirements	
	Command privilege level: 1	
	Allowed during upgrade: Yes	

Applies to Unified Communications Manager, IM and Presence Service, and Cisco Unity Connection

## set network cluster subscriber dynamic-cluster-configuration

Use this command to enable the Dynamic Cluster Configuration on the publisher. Use this command to specify the duration in which you can add subscriber nodes to the publisher server table. The addition of subscriber nodes is authenticated immediately and those nodes need not wait for the publisher details during the installation of the subscriber nodes.

Syntax Description	Parameter	Description
	default	Enables the Dynamic Cluster Configuration for 24 hours.
	no. of hours	Specifies a value from 1 to 24 hours.
Command Modes	Administrate	or (admin)
	Requirement	ts

Applies to Unified Communications Manager, IM and Presence Service, and Cisco Unity Connection

# set network dhcp eth0

This command enables or disables DHCP for Ethernet interface 0. You cannot configure Ethernet interface 1.

set network dhcp eth0 {enable | disable } {node\_ipnet\_maskgateway\_ip }

Syntax Description	Parameters	Description
	eth0	Specifies Ethernet interface 0.
	enable	This enables DHCP.
	disable	This disables DHCP.
	node_ip	Represents the static IP address for the server.
	net_mask	Represents the subnet mask for the server.
	gateway_ip	Represents the IP address of the default gateway.
Command Modes	Administrator (admin:)	
Usage Guidelines	Administrator (admin:)	nd causes the system to restart. We also recommend that you restart all node
Usage Guidelines	Administrator (admin:)	nd causes the system to restart. We also recommend that you restart all node
Usage Guidelines	Administrator (admin:)	nd causes the system to restart. We also recommend that you restart all node
Usage Guidelines	Administrator (admin:)  Administrator (admin:)  If you continue, this commar whenever any IP address gets  Requirements	nd causes the system to restart. We also recommend that you restart all node

This command sets the IP address for the primary or secondary DNS server.

	set network dns {primary   secondary} addr	
Syntax Description	Parameters	Description
	primary	
	secondary	

I

	Parameters	Description		
	addr	Represents the IP address of the primary or secondary DNS server.		
command Modes	Administrator (admin:)			
	Requirements			
	Command privilege level: 1			
	Allowed during upgrade: No			
	Applies to: Unified Communications Manager, IM and Presence and Cisco Unity Connection.	Service on Unified Communications Manager,		
	<b>Note</b> If you change the IP address for the DNS servers, you must CLI command.	t reboot the server through the <b>utils system resta</b>		

# set network dns options

This command sets DNS options.

set network dns options [{timeoutseconds}] [{attemptsnumber}] [{rotate}]

Syntax Description	Parameters	Description	
	timeout	Sets the DNS timeout.	
	attempts	Sets the number of times to attempt a DNS request.	
	rotate	Causes the system to rotate among the configured DNS servers and distribute the load.	
	seconds	Specifies the DNS timeout period in seconds.	
	number	Specifies the number of attempts.	
Usage Guidelines	Running thi	is command causes an automatic system restart.	
Command Modes	Administrator (admin:)		
	Requiremen	nts	
	Command p	privilege level: 0	
	Allowed during upgrade: Yes		
		Unified Communications Manager, IM and Presence Service on Unified Communications Manager Jnity Connection.	

### set network domain

This command sets the domain name for the system.

	cer aut	anging the domain name triggers an automatic regeneration of all Unified Communications Manager tificates, including any third party signed certificates that have been uploaded. After the server reboots omatically, phones running in secure (mixed) mode cannot connect to the server until after the CTL client dates the new CTL file to the phones.
	cha	boot the servers one at a time in order for the phones to register correctly. For more information about anging the domain name, see <i>Changing the IP Address and Hostname for Cisco Unified Communications inager</i> .
	set netw	work domain [domain-name]
Syntax Description	Parame	eters Description
	domain_	_name Represents the system domain that you want to assign.
Command Modes	Adminis	strator (admin:)
Usage Guidelines	The syst	tem asks whether you want to continue to execute this command.
	$\triangle$	
C	nution If y	you continue, this command causes a temporary loss of network connectivity.

If you use the **set network domain** *domain-name* command to change the domain name, you must manually regenerate all of your security certificates in Cisco Unified Operating System Administration. The list of certificates depends on your software release but may include cup.pem, cup-xmpp.pem, cup-xmpp-s2s.pem, tomcat, ipsec and so on. Note that you must restart the tomcat service after the tomcat cert is regenerated and you can only restart this service using the CLI. For more information about regenerating security certificates, see the *Cisco Unified Communications Operating System Administration Guide* (on Cisco.com).

After you regenerate your security certificates, you must reboot all the servers in the cluster. This will ensure that database replication keeps working correctly. After the servers have rebooted, confirm that there are no issues reported on the Cisco Unified Reporting report for Database Replication. After you reboot the server, we recommend that you manually delete old certificates that have become disassociated by the domain name change. For every ICSA peer that exists on the local node, you must either update the ICSA entry for the peer node with the new FQDN hostname, or delete that entry and add a new ICSA peer entry with the new FQDN hostname.

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network failover

This command enables and disables Network Fault Tolerance on the Media Convergence Server network interface card.

Syntax Description	Parameters	Description
	ena	Enables Network Fault Tolerance
	dis	Disables Network Fault Tolerance.
Command Modes	Administra	tor (admin:)
	Requireme	nts
	Command ]	privilege level: 1
	Allowed du	ring upgrade: No

set network failover {ena | dis}

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network gateway

This command enables you to configure the IP address of the network gateway.

	set	network	gateway	addr
--	-----	---------	---------	------

Syntax Description	on Parameters	Description
	addr	Represents the IP address of the network gateway that you want to assign
Command Modes	Administra	tor (admin:)
Usage Guidelines	The system	a asks whether you want to continue to execute this command.
	Caution If you	continue, this command causes the system to restart.

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set network hostname

This command allows an administrator to set the network host name, change the IP address of the node, and restart the system.

Before attempting this command, the administrator should have a valid DRF backup. Additionally, before attempting a Hostname (or Hostname and IP address) change, the administrator should perform the following:

- verify the cluster configuration does not have any configuration problems by executing **show hcs cluster verify detailed**
- update the cluster configuration by executing set hcs cluster config
- validate the cluster configuration by executing show hcs cluster verify detailed

#### set network hostname hostname

Syntax Description	Parameters	escription		
	hostname	Represents the new network hostname of the system.		
		an alphabetic character, e	w the rules for ARPANET host names. It must start with and with an alphanumeric character, and consist of and hyphens. The host name can have a maximum length	
Command Modes	Administrat	admin:)		
Jsage Guidelines	The system	s whether you want to continue to e	execute this command.	
	$\wedge$			
Cai	ution If you	tinue, this command causes the syst	tem to restart.	
	Requiremen			
	Command p	ilege level: 1		
	Allowed du	g upgrade: No		

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

```
admin:set network hostname
WARNING: Changing this setting will invalidate software license
```

```
on this server. The license will have to be re-hosted.
Continue(y/n):
Continue (y/n)?y
ctrl-c: To quit the input.
*** W A R N I N G ***
Do not close this window without first canceling the command.
This command will automatically restart system services.
The command should not be issued during normal operating
hours.
_____
Note: Please verify that the new hostname is a unique
name across the cluster and, if DNS services are
utilized, any DNS configuration is completed
before proceeding.
_____
Security Warning : This operation will regenerate
all CUCM Certificates including any third party
signed Certificates that have been uploaded.
Enter the hostname:: app-lfwelty5
Would you like to change the network ip address at this time [yes]::
Warning: Do not close this window until command finishes.
ctrl-c: To quit the input.
                  * * *
* * *
    WARNING
_____
Note: Please verify that the new ip address is unique
      across the cluster.
Note: Changing the IP address will automatically restart
      system services cluster wide.
Note: The command should not be issued during normal operating hours.
```

\_\_\_\_\_

Note

The administrator can change both the hostname and IP address by responding **yes**. To change just the hostname, respond **no**.

### set network ip eth0

This command sets the IP address for Ethernet interface 0. You cannot configure Ethernet interface 1.

Before attempting this command, the administrator should have a valid DRF backup. Also, before attempting an IP address change, the administrator should perform the following:

- verify that the cluster configuration does not have any configuration problems by executing **show hcs cluster verify detailed**
- update the cluster configuration by executing set hcs cluster config
- validate the cluster configuration by executing show hcs cluster verify detailed

#### set network ip eth0 addr mask gw

Syntax Description	Parameters	Description
	eth0	Specifies Ethernet interface 0.
	addr	Represents the IP address that you want to assign.
	mask	Represents the IP mask that you want to assign.
	gw	Represents the IP default GW that you want to assign.
	Administrator (admin:)	ntinue to execute this command

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

### set network ipv6 dhcp

This command sets the DHCPv6 client on the server and enables IPv6 support. For changes to take effect, you must restart the server.

set network	ipv6 dhc	p {enabl	le   disable	} [re	eboot]	
-------------	----------	----------	--------------	-------	--------	--

Syntax Description **Parameters Description** dhcp Sets the DHCPv6 client on the server. By default, the server does not restart after you enable the DHCPv6 client. For your changes to take effect, you must restart the server by either entering the reboot parameter or manually restarting the server. enable Enables IPv6 support. disable Disables IPv6 support. reboot (Optional) Causes the server to automatically restart after you enter the command. Administrator (admin:) **Command Modes Requirements** Command privilege level: 1 Allowed during upgrade: No Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set network ipv6 gateway

This command sets the IPv6 gateway for the server. For changes to take effect, you must restart the server.

set network ipv6 gateway addr [reboot]

Syntax Description	Parameters	Description
	gateway	Sets the IPv6 gateway for the server. By default, the server does not restart after you set the IPv6 gateway for the server. For your changes to take effect, you must restart the server by either entering the reboot parameter or manually restarting the server.
	addr	The IPv6 gateway address.

	Parameters Description
	<b>reboot</b> (Optional) Causes the server to automatically restart after you enter the command.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: No
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.
	<b>Note</b> IPv6 is not supported in Cisco Business Edition 5000.

# set network ipv6 service

This command enables or disables the IPv6 service on the server. For changes to take effect, you must restart the server.

### set network ipv6 service {enable | disable} [reboot]

Syntax Description	Parameters	Description
	service	Sets the IPv6 service on the server. By default, the server does not restart after you enable or disable the IPv6 service on the server. For your changes to take effect, you must restart the server by either entering the reboot parameter or manually restarting the server.
	enable	Enables IPv6 service on the server.
	disable	Disables IPv6 service on the server.
	reboot	(Optional) Causes the server to automatically restart after you enter the command.
Command Modes	Administrat	or (admin:)
	Requiremen	Its
	Command p	privilege level: 1
	Allowed du	ring upgrade: No
		Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Jnity Connection.
-	Note IPv6 is	not supported in Cisco Business Edition 5000.

Set Commands

## set network ipv6 static\_address

This command assigns the static IPv6 address to the server. For changes to take effect, you must restart the server.

set network ipv6 static\_address addr mask [reboot]

Syntax Description	Parameters	Description
	static_address	Assigns a static IPv6 address to the server. By default, the server does not restart after you assign the static IPv6 address. For your changes to take effect, you must restart the server by either entering the reboot parameter or manually restarting the server.
	addr	Specifies the static IPv6 address you assign to the server.
	mask	Specifies the IPv6 network mask (0-128).
	reboot	(Optional) Causes the server to automatically restart after you enter the command.
Command Modes	Administrator (	admin:)

### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

# set network max\_ip\_conntrack

This command sets the ip\_conntrack\_max value.

set network max\_ip\_conntrack ip\_conntrack\_max value

Syntax Description	Parameters	Descript	ion
	ip_conntrack_max value	Specifie	s the value for ip_conntrack_max.
		Note	The value of ip_conntrack_max cannot be less than 65536.
Command Modes	Administrator (admin:)		
	Requirements		
	Command privilege level	1: 0	
	Allowed during upgrade:	No	

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

admin:set network max\_ip\_conntrack 65536

## set network mtu

This command sets the maximum MTU value.

set network mtu mtu\_max

	-		
Syntax Description	Parameters	Descripti	on
	mtu_max	Specifies	the maximum MTU value. The system default MTU value equals 1500.
		Caution	When packets on UDP port 8500 that have the DF bit set are exchanged between nodes, if there is any policy on the WAN router to clear the DF bit and fragment large packets, this may cause dbreplication issues.
Command Modes	Administrat	or (admin:	)
Usage Guidelines	The system	asks wheth	her you want to continue to execute this command.
-	Â		
Z	<u></u>		
Cauti	ion If you o	continue, tl	he system loses network connectivity temporarily.
	Requiremen	ıts	
	Command p	rivilege le	vel: 1
	Allowed du	ring upgrad	de: No
	Applies to: U and Cisco U		nmunications Manager, IM and Presence Service on Unified Communications Manager, ection.
	Example		
	admin:set	network m	ITII 576 WARNING

```
This will cause the system to temporarily lose network connectivity
Do you want to continue ?
Enter "yes" to continue or any other key to abort
yes
executing...
```

## set network name-service hosts cache-enable

This command enables the nscd related cache.

set network name-service hosts cache-enable value

Syntax Description	Parameters Description
	<i>value</i> The boolean value must be either <i>yes</i> or <i>no</i> .
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network name-service hosts max-db-size

This command sets the maximum allowed size for a service.

set network name-service hosts max-db-size value

Syntax Description	Parameters	B Description
	value	Enter the number of bytes for the database size.
Command Modes	Administra	tor (admin:)
	Requireme	nts

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network name-service hosts negative-time-to-live

This command sets the time-to-live (TTL) for negative entries or unsuccessful queries in the specified cache for service. So, using this command improves the performance if there are various files owned by user IDs (UIDs) and are unavailable in system databases. For example, files that are available in the Linux kernel

sources as root. To reduce the cache coherency problems, the number of such files should be kept to the minimum.

set network name-service hosts negative-time-to-live value

Syntax Description	Parameters Description	
	<i>value</i> Enter the number of seconds.	
Command Modes	Administrator (admin:)	
	Requirements	
	Command privilege level: 1	
	Allowed during upgrade: Yes	
	Applies to: Unified Communications Mana	or IM and Procence Service on Unified C

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set network name-service hosts persistent

This command retains the content of the cache for service over server restarts. This command is useful when *paranoia* mode is configured.

set network name-service hosts persistent value

Syntax Description	Paramete	rs Description
	value	Enter a value for a service.
Command Modes	Administ	rator (admin:)
	Requirem	ents
	Comman	d privilege level: 1
	Allowed	during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set network name-service hosts positive-time-to-live

This command sets the time-to-live (TTL) for positive entries or successful queries in the specified cache for service. Configure the value in seconds. Larger values increase cache hit rates and reduce mean response times. However, such values increase problems with cache coherence.

set network name-service hosts positive-time-to-live value

Syntax Description	Parameters Description	
	value	Enter the number of seconds.
Command Modes	Administrator (admin:)	
	Requirements	

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network name-service hosts suggested-size

This command changes the internal hash table size.

set network name-service hosts suggested-size value

Parameters Description
<i>value</i> Enter a prime number for optimum efficiency.
Administrator (admin:)
Requirements
Command privilege level: 1
Allowed during upgrade: Yes
Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network name-service services cache-enable

This command enables the nscd related cache.

set network name-service services cache-enable value

Syntax Description	Parameters	Description
	value	The boolean value must be either <i>yes</i> or <i>no</i> .
Command Modes	Administrat	or (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network name-service services max-db-size

This command sets the maximum allowed size for the service.

set network name-service services max-db-size value

Syntax Description	Parameters	s Description
	value	Enter the value in number of bytes.
Command Modes	Administra	ntor (admin:)
	Requireme	nts
	Command	privilege level: 1
	Allowed d	uring upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set network name-service services negative-time-to-live

This command sets the time-to-live (TTL) for negative entries or unsuccessful queries in the specified cache for service. So, using this command improves the performance if there are various files owned by user IDs (UIDs) and are unavailable in system databases. For example, files that are available in the Linux kernel sources as root. To reduce the cache coherency problems, the number of such files should be kept to the minimum.

set network name-service services negative-time-to-live value

Syntax Description	Parameters	Description
	value	Enter a prime number for optimum efficiency.
Command Modes	s Administrator (admin:)	
	Requirements	
	Command privilege level: 1	
	Allowed du	ring upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network name-service services persistent

This command retains the content of the cache for service over server restarts. This command is useful when *paranoia* mode is configured.

set network name-service services persistent value

Syntax Description	Parameters Description	
	value	Enter a value for a service.
Command Modes	Administrator (admin:)	
	Requirem	ients
	Comman	d privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network name-service services positive-time-to-live

This command sets the time-to-live (TTL) for positive entries or successful queries in the specified cache for service. If you enter a large value for this command, it increases cache hit rates and reduces mean response times. However, a large value increases issues with cache coherence.

IM and Presence Service on Unified Communications Manager,

Syntax Description	Parameters Description	
	value	Enter the number of seconds.
Command Modes	Administ	rator (admin:)
	Requirements	
	Comman	d privilege level: 1
	Allowed	during upgrade: Yes
		<ul> <li>D: Unified Communications Manager,</li> <li>D Unity Connection.</li> </ul>

set network name-service services positive-time-to-live value

# set network name-service services suggested-size

This command sets the internal hash table size.

set network name-service services suggested-size value

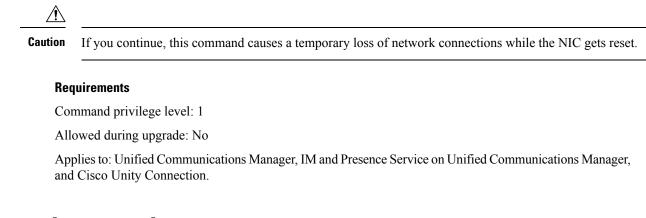

Syntax Description	Parameters Description
	<i>value</i> Enter a prime number for optimum efficiency.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

# set network nic eth0

This command sets the properties of the Ethernet Interface 0. You cannot configure Ethernet interface 1.

 $set \ network \ nic \ eth0 \quad \{auto \ \mid \ \{en \ \mid \ dis\}\} \quad \{speed \ \mid \ \{10 \ \mid \ 100\}\} \quad \{duplex \ half \ \mid \ \{half \ \mid \ full\}\}$ 

Syntax Description	Parameters	Description	
	eth0	Specifies Ethernet interface 0.	
	auto	Specifies whether auto negotiation gets enabled or disabled.	
	speed	Specifies whether the speed of the Ethernet connection: 10 or 100 Mb/s.	
	duplex	Specifies half-duplex or full-duplex.	
Command Modes	Administrator (admin:)		
Usage Guidelines	The system asks whether you want to continue to execute this command.		
	Note You can enable only one active NIC at a	a time.	

## set network ntp option

This command adds the *noquery* option to the /etc/config file.

#### set network ntp option

**Command Modes** Administrator (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network pmtud state

This command enables and disables Path MTU Discovery.

Syntax Description	Parameters	Description	
	enable	Enables Path MTU Discovery.	
	disable	Disables Path MTU Discovery.	
Command Modes	Administrat	or (admin:)	
Usage Guidelines	The system	asks whether you want to contin	ue to execute this command.
	À		
(	Caution If you	continue, the system loses netwo	k connectivity temporarily.

#### **Requirements**

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

```
admin:set network pmtud state enable W A R N I N G
This will cause the system to temporarily lose network connectivity
Do you want to continue ?
Enter "yes" to continue or any other key to abort
yes
executing...
```

## set network restore

This command configures the specified Ethernet port to use a specified static IP address.

Syntax Description	Parameters	Description
	eth0	Specifies Ethernet interface 0.
	ip-address	Represents the IP address of the primary or secondary DNS server, or the network gateway that you want to assign. If you continue, this command causes a temporary loss of network connectivity. If you change the IP address for the primary DNS server, you must also restart the Cisco Tomcat service. For more information, see the <b>utils service</b> command. We also recommend that you restart all nodes whenever any IP address gets changed.
	network-mask	Represents the subnet mask for the server.
	gateway	Specifies the IP address of the default gateway.
	ip-address	Represents the IP address of the primary or secondary DNS server, or the network gateway that you want to assign. If you continue, this command causes a temporary loss of network connectivity. If you change the IP address for the primary DNS server, you must also restart the Cisco Tomcat service. For more information, see the <b>utils service</b> command. We also recommend that you restart all nodes whenever any IP address gets changed.

set network restore eth0 ip-address network-mask gateway

Command Modes Administrator (admin:)

#### **Usage Guidelines**

**Caution** Only use this command option if you cannot restore network connectivity through any other set network commands. This command deletes all previous network settings for the specified network interface, including Network Fault Tolerance. After you run this command, you must restore your previous network configuration manually.

Ń

Caution

The server temporarily loses network connectivity after you run this command.

#### Requirements

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

admin:set network restore eth0 10.94.150.108 255.255.255.0 10.94.150.1

### set network status eth0

This command sets the status of Ethernet 0 to up or down. You cannot configure Ethernet interface 1.

set network status eth0 {up | down}

Syntax Description	on Parameters	s Description	
	eth0	Specifies Ethernet interface 0.	
	up	Sets the status of Ethernet interface 0 to up.	
	down	Sets the status of Ethernet interface 0 to down.	
Command Modes Usage Guidelines	, 	ator (admin:) n asks whether you want to continue to execute	his command.
	Â		
	Caution If you	a continue, the system loses network connectivit	y temporarily.
	Requireme	ents	

Command privilege level: 1

L

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set network name-service

This command displays name service cache attributes.

set network name-service [attribute] [value]

Syntax Description	Attribute	Value
	Paranoia	Bool must be either Yes or No. Enabling paranoia mode causes Name Service to restart itself periodically.
	debug-level	If level is higher than 0, Name Service will create some debug output. Higher the level, more verbose the output.
	reload-count	Sets the number of times a cached record is reloaded before it is pruned from the cache. Each cache record has a timeout. When that timeout expires Name Service will either reload it (query the NSS service again if the data hasn't changed) or drop it.
	restart-interval	Sets the restart interval to time seconds if periodic restart is enabled by enabling paranoia mode. The default value is 3600.
Command Modes	Administrator (a	dmin:)
	Requirements	

Command privilege level: 1

Allowed during upgrade: No

## set password complexity minimum-length

This command modifies the value of minimum password length for the OS administration accounts.

Note		Use this command after you enable the character complexity of passwords.		
	set	password complexity minimum-length max-repeat		
Syntax Description	Pa	rameters Description		
	va	<i>Lue</i> Enter a value of or greater than 6.		
Command Modes	Adı	ninistrator (admin:)		

### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set password age

This command modifies the value for password age, in days, for Cisco Collaboration Communication OS (C3OS) accounts.

set password age {maximum | minimum} days

Syntax Description	Parameters	Description
	maximum	Specifies the maximum age.
	minimum	Specifies the minimum age.
	days	Specifies the maximum password age and must be greater-than or equal-to 90 days.

### Command Modes Administrator (admin:)

### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set password change-at-login

Use this command to force new or existing users to change their password when they sign in to the system the next time.

set password change-at-login {disable | enable} userid

Syntax Description Parameters Description		Description
<b>disable</b> This does not force users to change their password.		This does not force users to change their password.
<b>enable</b> This forces users to change their password when they sign in to the system of		This forces users to change their password when they sign in to the system the next time.
	userid	Specifies the affected user account.

### Command Modes Administrator (admin:)

**Usage Guidelines** By default, this command is enabled for new users, so users have to change their password the first time they sign in to the system.

### Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: IM and Presence Service on Unified Communications Manager only.

## set password complexity character

Use this command to enable or disable password complexity rules for the type of characters in a password.

**Note** After you enable password complexity, this command also enables password history if it has not already been enabled (for more information, see the **set password history** command). If you had not previously enabled password history, the password history number parameter value gets set to 10. If you previously enabled password history with a value of less than 10, the value gets reset to 10 after you execute this command. If you previously enabled password history with a value of 10 or greater, the value remains unchanged after you execute this command.

set password complexity character {disable | enable} num-char

Syntax Description	Parameters	Description
	disable	This turns off password complexity for character types.
	enable	This turns on password complexity for character types.
		Note When you disable password complexity, you also turn off <b>password character difference</b> , <b>password character max-repeat</b> , and <b>password history</b> .
	num-char	This specifies the number of characters required from each of the four character sets: lowercase, uppercase, numbers, and special characters.
		• Value range: 0-8
		• Default value: 1
Command Modes	Administra	ator (admin:)
Usage Guidelines	When you	enable password complexity, you must follow these guidelines when you assign a password:
-	• It mus	st have at least the current setting, num-chars, of lower-case character.
	• It mus	st have at least the current setting, num-chars, of uppercase characters.

- It must have at least the current setting, num-chars, of digit characters.
- It must have at least the current setting, num-chars, of special characters.
- You cannot use adjacent characters on the keyboard; for example, qwerty.
- You cannot reuse any of the previous passwords that match the passwords retained by password history.
- By default, the admin user password can be changed only once in a 24-hour day.

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set password complexity character difference

This command specifies the number of characters that the character sequence in a new password must differ from the character sequence in the old password.

Syntax Description	Parameters Description
	<i>num-char</i> This specifies the number of characters that the character sequence in a new password must differ from the character sequence in the old password.
	• Value range: 0-31
Command Modes	Administrator (admin:)
Usage Guidelines	Enter 0 to indicate no difference.
	Note The maximum password length is 31 characters.
	Requirements

set password complexity character difference num-char

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

# set password complexity character max-repeat

This command specifies the number of times you can consecutively repeat a single character in a new password.

set password complexity character max-repeat max-repeat

Syntax Description	Parameters Description
	<i>max-repeat</i> This specifies the number of times you can consecutively repeat a single character in a new password.
	• Value range: 0 – 10
	Default value: 0
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: No
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

## set password expiry maximum-age

This command enables or disables the password expiry maximum age settings for Cisco Collaboration Communication OS (C3OS) Administrator accounts.

### set password expiry maximum-age {enable | disable}

Syntax Description Pa	rameters	Description
en	able	Turns on password expiry maximum age settings for Cisco Unified Operating System administrator accounts. The set password expiry enable command sets the value of <b>maximum</b> <b>password age</b> to 3650 days (10 yrs) for Cisco Unified Operating System Administrator accounts.

Parameters	Description
disable	Turns off password expiry maximum age settings for Cisco Unified Operating System administrator accounts. The set password expiry disable comman results in Cisco Unified Operating System Administrator accounts never expiring.

### Command Modes Administrator (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

admin:set password expiry maximum-age disable Operation Successful.

## set password expiry user maximum-age configure

This command modifies the value of the maximum password age for a particular Cisco Collaboration Communication OS Administration account in days.

Syntax Description	Parameters	Description
	userid	Enter Cisco Collaboration Communication OS (C3OS) Administrator account.
	maximum password age	Enter the maximum password age in days. This value must be equal to or greater than 10 days but less than 3650 days (10 years).
	Administrator (admin:)	
	Requirements	
	Command privilege level: 1	
	Allowed during upgrade: Yes	

set password expiry user maximum-age configure userid maximum password age

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

# set password expiry minimum-age

This command enables or disables the password expiry minimum age settings for Cisco Unified Operating System Administrator accounts.

set password expiry minimum-age {enable | disable}

Syntax Description	Parameters	Description
	enable	Turns on password expiry minimum age settings for Cisco Unified Operating System administrator accounts. The set password expiry enable command sets the value of minimum password age to one day (24 hrs) for Cisco Collaboration Communication OS (C3OS) Administrator accounts.
	disable	Turns off password expiry minimum age settings for Cisco Collaboration Communication OS (C3OS) administrator accounts. This means that passwords for administrator accounts can be changed at any interval.

### **Command Modes**

Administrator (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

admin:set password expiry minimum-age disable Operation Successful.

## set password expiry user maximum-age

This command disables the maximum age password expiry for a particular Cisco Unified Operating System Administrator account.

set password expiry user maximum-age {enable | disable}userid

Syntax Description	Parameters	Description
	enable	Turns on the maximum age password expiry settings for a particular Cisco Collaboration Communication OS (C3OS) administrator account. The set password expiry user enable command sets the value of maximum password age to 3650 days (10 yrs) for the Cisco Unified Operating System Administrator account.
	disable	Turns on the maximum age password expiry settings for a particularCisco Collaboration Communication OS (C3OS) administrator account. The set password expiry user enable command sets the value of maximum password age to 3650 days (10 yrs) for the Cisco Unified Operating System Administrator account.
	userid	Specifies a particular Cisco Collaboration Communication OS (C3OS) Administrator account.
Command Modes	Administrat	or (admin:)
	Requiremen	its
	Command p	privilege level: 1
	Allowed du	ring upgrade: No
	Applies to: U	Unified Communications Manager, IM and Presence Service on Unified Communications Manager,

#### Example

admin:set password expiry user maximum-age enable Operation Successful.

# set password expiry user minimum-age

and Cisco Unity Connection.

This command enables or disables the maximum age password expiry for a particular Cisco Unified Operating System Administrator account.

set password expiry user minimum-age {enable | disable} userid

L

Syntax Description	Parameters	Description
Command Modes	enable	Turns on the minimum age password expiry settings for a particular Cisco Unified Operating System administrator account.
	disable	Turns off the minimum age password expiry settings for a particular Cisco Unified Operating System administrator account.
	userid	Specifies a particular Cisco Unified Operating System Administrator account.
	Administrator (admin:)	
	Requirements	

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### Example

admin:set password expiry user minimum-age disable Operation Successful.

# set password history

This command modifies the number of passwords that get maintained in the history for OS admin accounts. New passwords matching remembered passwords get rejected.

Syntax Description	Parameters Description	
	<i>number</i> Specifies the mandatory number of passwords to maintain in history	
Command Modes	Administrator (admin:)	
Usage Guidelines	• To disable, enter 0.	
	• Default specifies 10.	
	• Upper limit specifies 20.	

set password history number

### Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

# set password inactivity

set password inact	tivity {enable	disable	period }	days
--------------------	----------------	---------	----------	------

Syntax Description	Parameters	Description	
	enable	Enable the password inactivity globally and update individual OS users according to the setting.	
	disable	Disable the password inactivity globally and update individual OS users according to the setting.	
	period	Configure the password inactivity period globally and update individual OS users according to the setting.	
	days	Specify the number of days of inactivity after a password has expired before the account gets disabled. Valid range is 1 - 99.	
Command Modes	Administrat	tor (admin:)	
Usage Guidelines		ble password inactivity globally, execute the set password inactivity enable command. This and enables the password inactivity globally and updates individual OS users according to the .	
		able password inactivity globally, execute the set password inactivity disable command. This and disables the password inactivity globally and updates individual OS users according to the .	
	A user whose account is disabled must contact the system administrator to use the system again.		
	• To configure the password inactivity period execute the set password inactivity period days command. This command configures the password inactivity globally and updates individual OS users according to the setting.		
	Requiremen	nts	
	Command privilege level: 0		
	Allowed du	ring upgrade: No	
		Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Jnity Connection.	

## set password system bootloader encryptHash

Use this command to configure the encrypted password in the grub.conf file for the system boot loader.

set password system bootloader encryptHash

Command Modes Administrator (admin:)

#### Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set password user admin

This command allows you to change the administrator password.

	set password user admin
Command Modes	Administrator (admin:)
Usage Guidelines	The systems prompts you for the old and new passwords.

Note

• You can change the password only for the administrator account that you logged in to.

• The password must contain at least six characters, and the system checks it for strength.

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set password user security

This command allows you to change the security password.

set password user security

Administrator (admin:) **Command Modes** The systems prompts you for the old and new passwords. **Usage Guidelines** Ŵ Note The password must contain at least six characters, and the system checks it for strength. Servers in a cluster use the security password to authenticate communication between servers. You must reset the cluster after you change the security password. Note We recommend that you restart each server after the password is changed on that server. 1. Change the security password on the publisher server (first node) and then reboot the server (node). 2. Change the security password on all the subsequent servers and nodes to the same password that you created on the first node and restart subsequent nodes, including application servers, to propagate the password change. Note Failure to reboot the servers (nodes) causes system service problems and problems with the Cisco Collaboration Communication OS (C3OS) Administration windows on the subscriber servers. Requirements Command privilege level: 1 Allowed during upgrade: No

> Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

# Set replication-sync monitor

This command enables or disables replication monitoring by the Cisco Replication Watcher service. The Cisco Replication Watcher service blocks other services from starting until database replication is setup and functioning normally.

set replication-sync monitor {enable | disable}

Syntax Description	Parameters	Description
	enable	Turns on the replication monitoring service.
	disable	Turns off the replication monitoring service
Command Modes	Administra	tor (admin:)

**Command Modes** 

Set Commands

### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: IM and Presence Service on Unified Communications Manager only

## set samltrace level

This command sets the SAML trace level.

set samltrace level trace level

Syntax Description	Parameters Description
	trace level Specifies the trace level. The available options are:
	• DEBUG
	• INFO
	• WARNING
	• ERROR
	• FATAL
	<b>Note</b> The default trace level is INFO.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 0
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager and Cisco Unity Connection.

# set session maxlimit

This command sets the upper limit for concurrent sessions.

set session maxlimit	[value]
----------------------	---------

Syntax Description	Parameters	Description
	maxlimit	This command sets the upper limit for concurrent sessions. Acceptable values are 1 - 10.
		If no upper limit is entered, the default value of 10 is assigned to sshd_config param.

I

	Parameters Description
	<i>value</i> Acceptable values are 1 - 10.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager and Cisco Unity Connection.
set smtp	
	This command sets the SMTP server hostname.
	set smtp hostname
Syntax Description	set smtp hostname Parameters Description
Syntax Description	
Syntax Description Command Modes	Parameters Description
	Parameters       Description         hostname       Represents the SMTP server name.
	Parameters       Description         hostname       Represents the SMTP server name.         Administrator (admin:)
	Parameters       Description         hostname       Represents the SMTP server name.         Administrator (admin:)         Requirements

## set strace enable

This command enables the service trace and sets the trace level.

**set strace enable** [all]tracevalue servicename

Syntax Description	Parameters	Description
	all	Optional parameter to propagate the service trace settings change to all nodes.
	tracevalue	Represents allowed trace values. Allowed trace values are [Info Debug Warn Error Fatal]
	servicename	Represents the service for which the trace is enabled.

### **Command Modes** Administrator (admin:)

### Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Unified Communications Manager and IM and Presence Service on Unified Communications Manager

## set strace disable

This command disables the service trace.

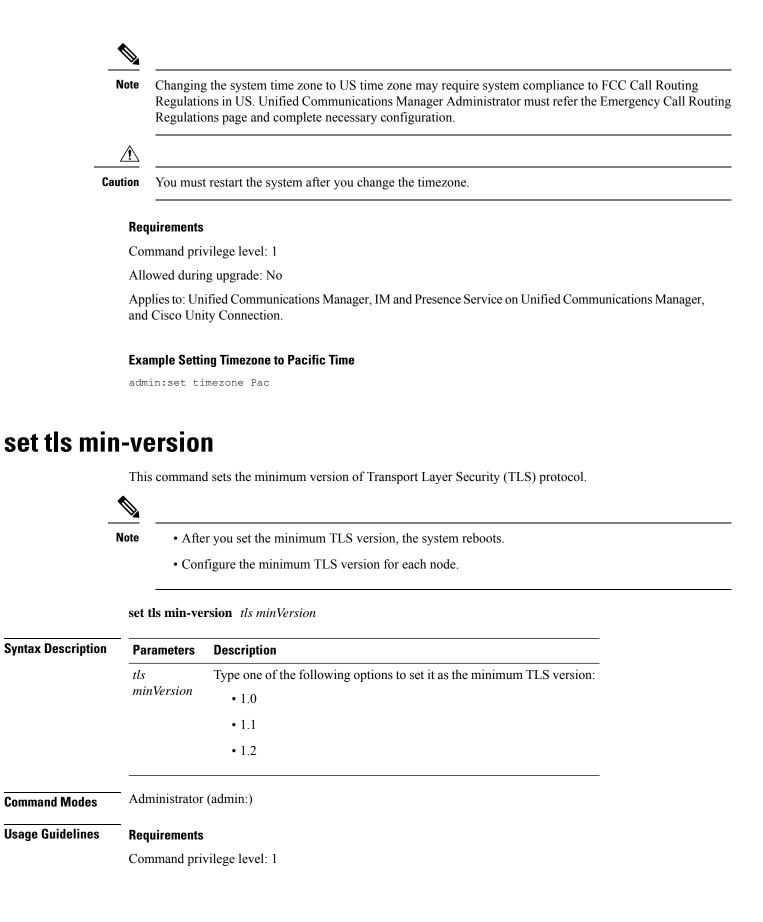

set strace disable [all] servicename

Syntax Description	Parameters	Description	
	all	Optional parameter to propagate the service trace settings change to all nodes.	
	servicename	Represents the service for which the trace is enabled.	
Command Modes	Administrate	or (admin:)	
	Requirements		
	Command p	rivilege level: 0	
	Allowed dur	ing upgrade: No	
	Applies to: U Manager	Unified Communications Manager and IM and Presence Service on Unified Communicati	

# set timezone

This command lets you change the system timezone.

	set timezone zone		
Syntax Description	Parameters	Description	
	zone	Specifies the new timezone. Enter the appropriate string or zone index id to uniquely identify the timezone. To view a list of valid timezones, use the CLI command: <b>show timezone list</b> .	
Command Modes	Administrat	or (admin:)	
Usage Guidelines	Enter characters to uniquely identify the new timezone. Be aware that the timezone name is case-sensitive.		

Allowed during upgrade: Yes

Applies to: Unified Communications Manager and IM and Presence Service on Unified Communications Manager

### Example

admin: set tls min-version 1.1

### set trace disable

This command unsets trace activity for the specified task.

Syntax Description	Parameters	Description
	disable	Unsets the task trace settings.
	tname	Represents the task for which you want to disable traces.
Command Modes	Administra	tor (admin:)
	Requireme	nts
	Command ]	privilege level: 1
	Allowed du	ring upgrade: No
	11	Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Jnity Connection.

set trace disable tname

## set trace enable

This command sets trace activity for the specified task.

set trace enable {Arbitrary | Detailed | Entry\_exit | Error | Significant | Special | State\_Transition} tname

Syntax Description	Parameters	Description
	Arbitrary	Sets task trace settings to the arbitrary level.
	Detailed	Sets task trace settings to the detailed level.
	Entry_exit	Sets task trace settings to the entry_exit level.
	Error	Sets task trace settings to the error level.
	Significant	Sets task trace settings to the significant level.
	Special	Sets task trace settings to the special level.
	State_transition	Sets task trace settings to the state transition level.
	tname	Represents the task for which you want to disable traces.

### **Command Modes** Administrator (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

# set tlsresumptiontimeout

This command sets the number of seconds after which TLS resumption will not work and sessions are invalidated.

set tlsresumptiontimeout seconds

Syntax Description	Parameters Description		
	seconds Enter a value up to 3600 seconds. The TLS sessions are invalid after the configured value.		
Command Modes	Administrator (admin:)		
	Requirements		
	Command privilege level: 1		
	Allowed during upgrade: Yes		
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.		

L

## set tlstrace\*

Unified Communications Manager Release 11.0 onwards, you can enable or disable TLS tracing for services. Currently, Tomcat is the only supported service. Use the CLI commands to view the reasons of connection failure of TLS connections to Unified Communications Manager.

Following TLS-based CLI commands are added for TLS tracing:

### set tlstrace disable

This CLI command disables the TLS tracing for a service.

set tlstrace disable service

Specifies the service that you use to disable TLS tracing.
tlstrace disable tomcat ng is disabled for: tomcat
ents
privilege level: 1
uring upgrade: No

### set tistrace enable

This CLI command enables the TLS tracing for a service.

set tlstrace enable service

Syntax Description	Parameters	Description
	service	Specifies the service that you use to enable TLS tracing.
Command Modes	Administrat	or (admin:)
	Example	
		tlstrace enable tomcat g is enabled for: tomcat

### Requirements

Command privilege level: 1

Allowed during upgrade: No

# set web-security

This command sets the web security certificate information for the operating system.

set web-security orgunit orgname locality state [country] [alternatehostname]

Syntax Description	Parameters	Description			
	orgunit Represents the organizational unit (OU) name.				
	You can use this command to enter multiple organizational units. To enter more that organizational unit name, separate the entries with a comma. For entries that alread contain a comma, enter a backslash before the comma that is included as part of the To enter multiple values for organizational unit, enclose them in quotation marks, a shown in the example for this command.				
		<b>Note</b> For OU's that already contains a backslash, do not enter one more backslash as SLM registration and CSR generation fails during the time of installation.			
	orgname	Represents the organizational name.			
	locality	Represents the organization location.         Represents the organization state.         (Optional) Represents the organization country.			
	state				
	country				
	alternatehostna	<i>(Detional)</i> Specifies an alternate name for the host when you generate a web-server (Tomcat) certificate.			
		You can use alternatehostname to set subject alternate hostname for self signed certificates. Subject alternate hostname for CSR is defined in the Certificate Management page. If you have set the alternate hostname for CSR using this command, the CSR generation process replaces the set alternate hostname.			
		eb-security command when adding in the alternate hostname will apply and will be added to all nerated CSR's including, Tomcat, CallManager, CAPF, TVS, and IPsec.			
Command Modes	Administrator (admin:)				
Usage Guidelines	In case you are planning to rebuild the Unified CM server, ensure that you should use the same OU subject parameters. Else, this will create discrepancies when you execute the command <b>show web-security</b> . This is because the platformConfig.xml file will not have the saved parameters information provided before the rebuild as this file is not backed up during DRS backup.				

#### Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

#### Example

This example shows the web-security command with multiple organizational unit names using comma separators. The certificate has three OU fields:

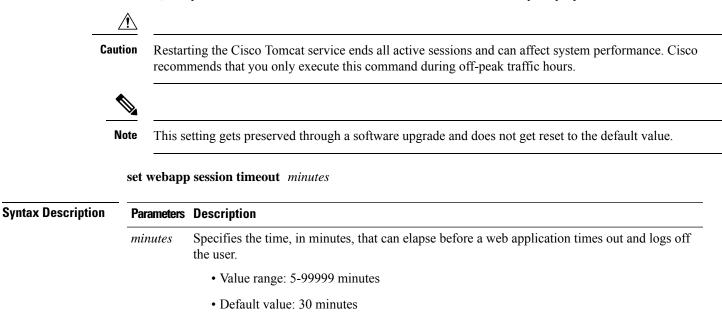

- OU=accounting
- OU=personnel, CA
- OU=personnel, MA

```
admin:set web-security "accounting,personnel\,CA,personnel\,MA" Cisco Milpitas
CA
set web-security "Voice\Video" "Cisco" "RTP" NC
```

### set webapp session timeout

This command sets the time, in minutes, that can elapse before a web application, such as Unified Communications Manager Administration, times out and logs off the user.

For the new webapp session timeout setting to become effective, you must restart the Cisco Tomcat service. Until you restart the Cisco Tomcat service, the **show webapp session timeout** command reflects the new values, but system continues to use and reflect the old values. This command prompts you to restart the service.

### Command Modes Administrator (admin:)

#### Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

### set webapp session maxlimit

This command sets the maximum limit for concurrent web application sessions per user. This applies to the following interfaces:

- Cisco Unified CM Administration
- Cisco Unified Serviceability
- Cisco Unified Reporting
- Cisco Unified Communications Self Care Portal
- · Cisco Unified CM IM and Presence Administration
- Cisco Unified IM and Presence Serviceability
- Cisco Unified IM and Presence Reporting

For the session maximum limit setting to become effective, the administrator must restart the Cisco Tomcat service.

Caution

Restarting the Cisco Tomcat service ends all active sessions and can affect the system performance. Cisco recommends that you only execute this command during off-peak traffic hours.

Note

e This setting gets preserved through a software upgrade and does not get reset to the default value.

set webapp session maxlimit number

Syntax Description	Parameters	Descriptio	n
	TI D If m ch at	Specifies t	he number to limit the concurrent web application sessions.
		The value	ranges from 1 to 10.
		Default va	lue is 10.
		more detai chapter in at https://w	<b>EnhancedSecurityMode</b> is enabled, then the session limit is restricted to 3. For Is on how to Configure Enhanced Security Mode, see the "FIPS 140-2 Mode Setup" the <i>Security Guide for Cisco Unified Communications Manager, Release</i> 11.5(1)SU1 www.cisco.com/c/en/us/support/unified-communications/ mmunications-manager-callmanager/products-maintenance-guides-list.html.
		Note	• When you exceed the defined sign-in sessions maximum limit, then the interface sign-in page displays the Logon Status message as: The Session limit has already been reached for <username>. Please logout from those sessions or wait 30 minutes for inactive sessions to be automatically closed.</username>
			• When Enhanced Security Mode is enabled, then the session limit is restricted to 3. However, Administrator can change the session limit using the <b>set webapp session maxlimit</b> command to any value ranging from 1 to 10.

Command Modes Administrator (admin:)

#### Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager, Unified Communications Manager IM and Presence Service and Cisco Unity Connection.

#### Example

This example details on how to set webapp session maxlimit to 4:

admin:set webapp session maxlimit 4

### This example details on how to enable utils EnhancedSecurityMode:

admin:utils EnhancedSecurityMode enable

The system is operating in NON-FIPS and NOT operating in Enhanced Security Mode.

Enhanced Security Mode can be enabled only when the system is operating in FIPS mode Do you wish to enable FIPS mode as well (yes/no) ? yes

Warning : This operation will modify the password policies

Password Length should be between 14 to 127 characters.
 Password should have at least 1 lowercase, 1 uppercase, 1 digit and 1 special character.
 Any of the previous 24 passwords cannot be reused.
 Minimum age of the password is 1 day and Maximum age of the password is 60 days.
 Any newly generated password's character sequence will need to differ by at least 4 characters from the old password's character sequence.

Warning : This mode will limit the total number of concurrent web application sessions to 3.

The system is already operating in contact search authentication enable mode; no change required. Exiting.

#### The concurrent web application session limit has been successfully set to 3.

Setting password restrictions as part of Enhanced Security Mode enable

Calling fips enable

Security Warning : The operation will regenerate certificates for

1)CallManager 2)Tomcat 3)IPsec 4)TVS 5)CAPF 6)SSH 7)ITLRecovery

# set workingdir

This command sets the working directory for active, inactive, and installation logs.

set workingdir {activelog | inactivelog | tftp} directory

Syntax Description	Parameters	Description
	activelog	Sets the working directory for active logs. Choose a valid sub-directory of activelog.
	inactivelog	Set the working directory for inactive logs. Choose a valid sub-directory of inactivelog.
	tftp	Sets the working directory for TFTP files.
	directory	Represents the current working directory.
Command Modes	Administrat	or (admin:)
	Requiremen	Its

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.
