About Cisco Prime Collaboration Deployment

These release notes describe new features, requirements, restrictions, and caveats for Cisco Prime Collaboration Deployment. These release notes are updated for every maintenance release.

Cisco Prime Collaboration Deployment is an application designed to assist in the management of Unified Communications applications. It allows the user to perform tasks such as migration of older software versions of clusters to new virtual machines, fresh installs, and upgrades on existing clusters.

Cisco Prime Collaboration Deployment has four primary, high-level functions:

- Migrate an existing cluster of Unified Communications servers to a new version of software (this may be MCS 7800 to virtual or virtual to virtual)
- Perform operations on existing clusters (8.6.1 or higher). Examples of these operations include:
 - Upgrade the cluster to a new version of software
 - Switch version
 - Restart the cluster
- Changing IP addresses or hostnames in the cluster on existing Release 10.x or higher clusters
- Fresh install a new Release 10.x or 11.x Unified Communications cluster

Note

Cisco Prime Collaboration Deployment does not support internationalization or languages other than English.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, see [What's New in Cisco Product Documentation](#).

To receive new and revised Cisco technical content directly to your desktop, you can subscribe to the [What's New in Cisco Product Documentation RSS feed](#). RSS feeds are a free service.

New and Changed Information

- [Remote SFTP support for Migration and Fresh Install](#), page 3

Remote SFTP support for Migration and Fresh Install

With this release, Cisco Prime Collaboration Deployment includes remote SFTP server support for migration and installation tasks. This feature allows to leverage a single centralized Prime Collaboration Deployment for the geo-distributed deployment and avoid large ISO files streamed over the network from Prime Collaboration Deployment Virtual Machine to destination Virtual Machine.
