

# Deployment

---

- [Deployment Options, on page 1](#)
- [Requirements, on page 1](#)

## Deployment Options

You can deploy Cisco Prime License Manager in one of the following ways:

- Coresident deployments—Cisco Prime License Manager is installed automatically as part of the installation of Cisco Unified Communications Manager and Cisco Unity Connection. You may choose to run Cisco Prime License Manager on one of these servers in a coresident configuration. Refer to the latest release of the platform-specific installation document for more information:
  - [Installing Cisco Unified Communications Manager](#)
  - [Installation Guide for Cisco Unity Connection](#)
  - [Installing Cisco Business Edition 6000](#)
- Standalone deployments—You need two files to install Cisco Prime License Manager:
  - A virtual machine template (OVA file) is available from Software Download Center.
  - An ISO file is available via electronic software download after you purchase Cisco Unified Communications Manager or Cisco Unity Connection.

## Requirements

### System Requirements

Here are the server requirements as defined in the virtual machine template that should be used to install a standalone instance of Cisco Prime License Manager.

Requirement	Details
Version	11.0(1)

Requirement	Details
CPU	1 vCPU with 1800 Mhz reservation
Memory	4 GB (RAM) with 4 GB reservation
Hard Drive	1 - 50 GB disk
