Revision History

Date	Revision
October 06, 2017	Updated information related to documentation defect CSCvg10775.
October 23, 2017	Added important note on bandwidth allocations for 88xx phones.
October 27, 2017	Added a note on regenerating the self signed certificate with new key size.
November 2, 2017	Added important note on route filters and associated route patterns.
November 10, 2017	Added a note about the SIP Route Pattern name.
November 28, 2017	Updated information about blocking inbound calls in an ILS-based network.
December 13, 2017	Added topics on missing ENUM values for CSCvd71818 and CSCvg70867.
January 30, 2020	Added Important Note on gateway support.

Introduction

These release describe new features, restrictions, and caveats for Cisco Unified Communications Manager (Unified Communications Manager) and Cisco Unified Communications Manager IM & Presence Service (IM and Presence Service). The release notes are updated for every maintenance release but not for patches or hot fixes.

Unified Communications Manager, the call-processing component of the Cisco Unified Communications System, extends enterprise telephony features and capabilities to IP phones, media processing devices, VoIP gateways, mobile devices, and multimedia applications.

IM and Presence Service collects information about user availability, such as whether users are using communications devices (for example, a phone) at a particular time. IM and Presence Service can also collect information about individual user communication capabilities, such as whether web collaboration or video conferencing is enabled. Applications such as Cisco Jabber and Unified Communications Manager use this information to improve productivity among employees. It helps employees connect with colleagues more efficiently and determine the most effective way to engage in collaborative communication.

Note In the past, export licenses, government regulations, and import restrictions have limited our supply of Unified Communications Manager and IM and Presence Service worldwide. We have obtained an unrestricted U.S. export classification to address this issue; IM and Presence Service supports an export unrestricted (XU) version only. The unrestricted version differs from previous releases of IM and Presence Service in that it does not contain strong encryption capabilities.

After you install an unrestricted release, you can never upgrade to a restricted version. You are not allowed to perform a fresh installation of a restricted version on a system that contains an unrestricted version.

Documentation for Release 11.5(1)

To find out information about what's new and changed for this release, refer to the [New and Changed Features](#) chapter of this guide.

For information on the documentation that is available for this release, refer to the *Documentation Guide for Cisco Unified Communications Manager and IM and Presence Service, Release 11.5(1)* at:
