System Counters

Cisco Tomcat Connector

The Tomcat Hypertext Transport Protocol (HTTP) and HTTP Secure (HTTPS) Connector object provides information about Tomcat connectors.

A Tomcat HTTP connector represents an endpoint that receives requests and sends responses. The connector handles HTTP/HTTPS requests and sends HTTP/HTTPS responses that occur when application web pages are accessed. The Secure Socket Layer (SSL) status of web application URLs provides the basis for the instance name for each Tomcat HTTP Connector. For example, `https://<IP Address>:8443` for SSL or `http://<IP Address>:8080` for non-SSL.

The following table contains information about the Tomcat HTTP connector counters.

Table 1: Cisco Tomcat Connector

| Counters | Counter Description |
|----------------|---|
| Errors | The total number of HTTP errors (for example, 401 Unauthorized) that the connector encountered. |
| MBytesReceived | The amount of data that the connector received. |
| MBytesSent | The amount of data that the connector sent. |

| Counters | Counter Description |
|--------------|---|
| Requests | The total number of request that the connector handled. |
| ThreadsTotal | The current total number of request processing threads, including available and in-use threads, for the connector. |
| ThreadsMax | <p>The maximum number of request processing threads for the connector.</p> <p>Each incoming request on a web application window requires a thread for the duration of that request. If more simultaneous requests are received than the currently available request processing threads can handle, additional threads are created up to the configured maximum shown in this counter. If still more simultaneous requests are received, they accumulate within the server socket that the connector created, up to an internally specified maximum number. Any further simultaneous requests receive connection refused messages until resources are available to process them.</p> |
| ThreadsBusy | This counter represents the current number of busy/in-use request processing threads for the connector. |

Cisco Tomcat JVM

The Cisco Tomcat Java Virtual Machine (JVM) object provides information about the pool of common resource memory used by web applications such as Cisco Unified Communications Manager Administration, Cisco Unified Serviceability, and Cisco Unity Connection Administration. The dynamic memory block stores all objects that Tomcat and its web applications create.

The following table contains information about the Tomcat JVM counters.

Table 2: Tomcat JVM

| Counters | Counter Description |
|-------------------|---|
| KBytesMemoryFree | <p>The amount of free dynamic memory block (heap memory) in the Tomcat Java Virtual Machine.</p> <p>When the amount of free dynamic memory is low, more memory is automatically allocated, and total memory size (represented by the KbytesMemoryTotal counter) increases but only up to the maximum (represented by the KbytesMemoryMax counter).</p> <p>You can determine the amount of memory in use by subtracting KBytesMemoryFree from KbytesMemoryTotal.</p> |
| KBytesMemoryMax | The amount of free dynamic memory block (heap memory) in the Tomcat Java Virtual Machine. |
| KBytesMemoryTotal | The current total dynamic memory block size, including free and in-use memory, of Tomcat Java Virtual Machine. |

Cisco Tomcat Web Application

The Cisco Tomcat Web Application object provides information about how to run web applications.

The URLs for the web application provide the basis for the instance name for each Tomcat Web Application, as explained in the following examples:

- Cisco Unified Communications Manager Administration (`https://<IP Address>:8443/ccmadmin`) is identified by `ccmadmin`.
- Cisco Unified Serviceability (`https://<IP Address>:8443/ccmservice`) is identified by `ccmservice`.
- Cisco Unified Communications Manager User Options (`https://<IP Address>:8443/ccmuser`) is identified by `ccmuser`.
- Cisco Unity Connection Administration (`https://<IP Address>:8443/cuadmin`) is identified by `cuadmin`.
- URLs that do not have an extension, such as `https://<IP Address>:8443` or `http://<IP Address>:8080`, are identified by `_root`.

The following table contains information on the Tomcat Web Application counters.

Table 3: Tomcat Web Application

| Counters | Counter Description |
|----------------|---|
| Errors | The total number of HTTP errors (for example, 401 Unauthorized) that a Unified Communications Manager-related or Cisco Unity Connection-related web application encounters. |
| Requests | The total number of requests that the web application handles. Each time that a web application is accessed, its Requests counter increments accordingly. |
| SessionsActive | The number of active or in use sessions in the web application. |

Database Change Notification Client

The Database Change Notification Client object provides information about change notification clients. The following table contains information about the Database Change Notification Client counters.

Table 4: Database Change Notification Client

| Counters | Counter Descriptions |
|--------------------|---|
| MessagesProcessed | The number of database change notifications that have been processed. This counter refreshes every 15 seconds. |
| MessagesProcessing | The number of change notification messages that are currently being processed or are waiting to be processed in the change notification queue for this client. This counter refreshes every 15 seconds. |
| QueueHeadPointer | The head pointer to the change notification queue. The head pointer acts as the starting point in the change notification queue. To determine the number of notifications in the queue, subtract the head pointer value from the tail pointer value. By default, this counter refreshes every 15 seconds. |
| QueueMax | The largest number of change notification messages that will be processed for this client. This counter remains cumulative since the last restart of the Cisco Database Layer Monitor service. |

| Counters | Counter Descriptions |
|------------------|---|
| QueueTailPointer | The tail pointer to the change notification queue. The tail pointer represents the ending point in the change notification queue. To determine the number of notifications in the queue, subtract the head pointer value from the tail pointer value. By default, this counter refreshes every 15 seconds |
| TablesSubscribed | The number of tables in which this client has subscribed. |

Database Change Notification Server

The Database Change Notification Server object provides information about different change-notification-related statistics. The following table contains information about the Database Change Notification Server counters.

Table 5: Database Change Notification Server

| Counter | Counter Descriptions |
|------------------------|---|
| Clients | The number of change notification clients (services and servlets) that have subscribed for change notification. |
| CNProcessed | The total number of change notification messages processed by the server since reboot. |
| Queue Delay | <p>The number of seconds that the change notification process has messages to process but is not processing them. This condition is true if:</p> <ul style="list-style-type: none"> • either Change Notification Requests Queued in Database (QueuedRequestsInDB) and Change Notification Requests Queued in Memory (QueuedRequestsInMemory) are non-zero, or • the Latest Change Notification Messages Processed count is not changing. <p>This condition is checked every 15 seconds.</p> |
| QueuedRequestsInDB | The number of change notification records that are in the DBCNQueue (Database Change Notification Queue) table through direct TCP/IP connection (not queued in shared memory). This counter refreshes every 15 seconds. |
| QueuedRequestsInMemory | The number of change notification requests that are queued in shared memory. |

Database Change Notification Subscription

The Database Change Notification Subscription object displays the names of tables where the client receives Change Notifications.

The SubscribedTable object displays the table with the service or servlet that receives change notifications. Because the counter does not increment, this display occurs for informational purposes only.

Database Local DSN

The Database Local Data Source Name (DSN) object and LocalDSN counter provide the DSN information for the local machine. The following table contains information on the Database local DSN.

Table 6: Database Local Data Source Name

| Counters | Counter Descriptions |
|---------------------|--|
| CcmDbSpace_Used | The amount of Ccm DbSpace that is consumed |
| CcmtempDbSpace_Used | The amount of Ccmtemp DbSpace that is consumed. |
| CNDbSpace_Used | The percentage of CN DbSpace that is consumed. |
| LocalDSN | The DSN that is being referenced from the local machine. |
| SharedMemory_Free | The total shared memory that is free. |
| SharedMemory_Used | The total shared memory that is used. |
| RootDbSpace_Used | The amount of RootDbSpace that is consumed. |

DB User Host Information Counters

The DB User Host Information object provides information about DB User Host.

The DB:User:Host Instance object displays the number of connections that are present for each instance of DB:User:Host.

Enterprise Replication DBSpace Monitors

The enterprise replication DBSpace monitors object displays the usage of various ER DbSpaces. The following table contains information about the enterprise replication DB monitors.

Table 7: Enterprise Replication DBSpace Monitors

| Counters | Counter Descriptions |
|------------------|---|
| ERDbSpace_Used | The amount of enterprise replication DbSpace that was consumed. |
| ERSBDbSpace_Used | The amount of ERDbSpace that was consumed. |

Enterprise Replication Perfmon Counters

The Enterprise Replication Perfmon Counter object provides information about the various replication counters.

The ServerName:ReplicationQueueDepth counter displays the server name followed by the replication queue depth.

IP

The IP object provides information on the IPv4-related statistics on your system. The following table contains information about the IP counters.

Note These counters are also part of the IP6 object, which supports Unified Communications Manager and provides information about the IPv6-related statistics on your system.

Table 8: IP Counters

| Counters | Counter Descriptions |
|------------------|---|
| Frag Creates | The number of IP datagrams fragments that are generated at this entity. |
| Frag Fails | The number of IP datagrams that are discarded at this entity because the datagrams cannot be fragmented, such as datagrams where the Do not Fragment flag is set. |
| Frag OKs | The number of IP datagrams that are successfully fragmented at this entity. |
| In Delivers | The number of input datagrams that are delivered to IP user protocols. This counter includes Internet Control Message Protocol (ICMP). |
| In Discards | The number of input IP datagrams where no issues are encountered, but which are discarded. One possible reason is a lack of buffer space. This counter does not include any datagrams that are discarded while awaiting reassembly. |
| In HdrErrors | The number of input datagrams that are discarded with header errors. This counter includes bad checksums, version number mismatch, other format errors, time-to-live exceeded, and other errors that are discovered in processing their IP options. |
| In Receives | The number of input datagrams that are received from all network interfaces. This counter includes datagrams that were received with errors |
| In UnknownProtos | The number of locally addressed datagrams that are received successfully but discarded because of an unknown or unsupported protocol. |

| Counters | Counter Descriptions |
|----------------|--|
| InOut Requests | The number of incoming IP datagrams that are received and the number of outgoing IP datagrams that are sent. |
| Out Discards | The number of output IP datagrams that are not transmitted and are discarded. One possible reason is a lack of buffer space. |
| Out Requests | This counter represents the total number of IP datagrams that local IP user-protocols (including ICMP) supply to IP in requests transmission. This counter does not include any datagrams that were counted in ForwDatagrams. |
| Reasm Fails | <p>The number of IP reassembly failures that the IP reassembly algorithm detected, including time outs and errors.</p> <p>This counter does not represent the discarded IP fragments because some algorithms, such as the algorithm in RFC 815, can lose track of the number of fragments because these algorithms combine fragments as they are received.</p> |
| Reasm OKs | The number of IP datagrams that are successfully reassembled. |
| Reasm Reqds | The number of IP fragments that are received that require reassembly at this entity. |

Memory

The memory object provides information about the usage of physical memory and swap memory on the server. The following table contains information about memory counters.

Table 9: Memory

| Counters | Counter Descriptions |
|--------------|---|
| % Mem Used | <p>Displays the system physical memory utilization as a percentage. The value of this counter is calculated as follows:</p> $\frac{\text{Total KBytes} - \text{Free KBytes} - \text{Buffers KBytes} - \text{Cached KBytes} + \text{Shared KBytes}}{\text{Total KBytes}}$ <p>This value also corresponds to the Used KBytes/Total KBytes</p> |
| % Page Usage | The percentage of active pages. |

| Counters | Counter Descriptions |
|---------------------|--|
| % VM Used | <p>Displays the system virtual memory utilization as a percentage. The value of this counter is calculated as follows:</p> $\frac{\text{Total KBytes} - \text{Free KBytes} - \text{Buffers KBytes} - \text{Cached KBytes} + \text{Shared KBytes} + \text{Used Swap KBytes}}{\text{Total KBytes} + \text{Total Swap KBytes}}$ <p>This value also corresponds to Used VM KBytes/Total VM KBytes.</p> |
| Buffers KBytes | The capacity of buffers in your system in kilobytes. |
| Cached KBytes | The amount of cached memory in kilobytes. |
| Free KBytes | The total amount of memory that is available in your system in kilobytes. |
| Free Swap KBytes | The amount of free swap space that is available in your system in kilobytes. |
| HighFree | <p>The amount of free memory in the high region.</p> <p>The Linux kernel splits the virtual memory address space into memory regions. The high memory is memory above a certain physical address, and its amount depends on the total memory and the type of kernel on the system.</p> <p>For the Unified Communications Manager system with 4 GB memory, the high memory is roughly in the address of 896M to 4096M.</p> |
| HighTotal | <p>The total amount of memory in the high region.</p> <p>The Linux kernel splits the virtual memory address space into memory regions. The high memory is memory above a certain physical address, and its amount depends on the total memory and the type of kernel on the system.</p> <p>For the Unified Communications Manager system with 4 GB memory, the high memory is roughly in the address of 896M to 4096M.</p> |
| Page Faults Per Sec | The number of page faults (both major and minor) that the system makes per second (post 2.5 kernels only). This reading does not necessarily represent a count of page faults that generate input and output (I/O) because some page faults can get resolved without I/O. |
| Low Total | The total low (non-paged) memory for kernel. |

| Counters | Counter Descriptions |
|---------------------------|---|
| Low Free | The total free low (non-paged) memory for kernel. |
| Page Major Faults Per Sec | The number of major faults that the system makes per second that require a memory page from the disk (post 2.5 kernels only). |
| Pages | The number of pages that the system pages in from the disk, plus the number of pages that the system pages out to the disk. |
| Pages Input | The number of pages that the system pages in from the disk. |
| Pages Input Per Sec | The total number of kilobytes that the system pages in from the disk per second. |
| Pages Output | The number of pages that the system pages out to the disk. |
| Pages Output Per Sec | The total number of kilobytes that the system pages out to the disk per second. |
| Shared KBytes | The amount of shared memory in your system in kilobytes. |
| SlabCache | The memory used by created slabcaches by various kernel components, as a macroscopic counter representing the sum of all the individual entries in the proc's slabinfo. |
| SwapCached | The amount of Swap used as cache memory. Memory that once was swapped out, is swapped back in, but is still in the swapfile. |
| Total KBytes | The total amount of memory in your system in kilobytes. |
| Total Swap KBytes | The total amount of swap space in your system in kilobytes. |
| Total VM KBytes | The total amount of system physical and memory and swap space (Total Kbytes + Total Swap Kbytes) that is in use in your system in kilobytes. |

| Counters | Counter Descriptions |
|------------------|---|
| Used KBytes | <p>The amount of in-use physical memory. The value of the Used KBytes counter is calculated as follows:</p> $\text{Total KBytes} - \text{Free KBytes} - \text{Buffers KBytes} - \text{Cached KBytes} + \text{Shared KBytes}.$ <p>The Used KBytes value differs from the Linux term that displays in the top or free command output. The Used value that displays in the top or free command output equals the difference in Total KBytes - Free KBytes and also includes the sum of Buffers KBytes and Cached KBytes.</p> |
| Used Swap KBytes | <p>This counter represents the amount of swap space that is in use on your system in kilobytes.</p> |
| Used VM KBytes | <p>This counter represents the system physical memory and the amount of swap space that is in use on your system in kilobytes. The value is calculated as follows:</p> $\text{Total KBytes} - \text{Free KBytes} - \text{Buffers KBytes} - \text{Cached KBytes} + \text{Shared KBytes} + \text{Used Swap KBytes}$ <p>This value corresponds to Used Mem KBytes + Used Swap KBytes.</p> |

Network Interface

The network interface object provides information about the network interfaces on the system. The following table contains information about network interface counters.

Table 10: Network Interface

| Counters | Counter Descriptions |
|------------|---|
| Rx Bytes | <p>The number of bytes, including framing characters, that are received on this interface.</p> |
| Rx Dropped | <p>The number of inbound packets that are chosen to be discarded even though no errors have been detected. This action prevents the packet from being delivered to a higher-layer protocol. Discarding packets also frees up buffer space.</p> |
| Rx Errors | <p>The number of inbound packets (packet-oriented interfaces) and the number of inbound transmission units (character-oriented or fixed-length interfaces) that contain errors that prevented them from being delivered to a higher-layer protocol.</p> |

| Counters | Counter Descriptions |
|---------------|--|
| Rx Multicast | The number of multicast packets that are received on this interface. |
| Rx Packets | The number of packets that this sublayer delivered to a higher sublayer. This situation does not include the packets that are addressed to a multicast or broadcast address at this sublayer. |
| Total Bytes | The total number of received (Rx) bytes and transmitted (Tx) bytes. |
| Total Packets | The total number of Rx packets and Tx packets. |
| Tx Bytes | The total number of octets, including framing characters, that are transmitted out from the interface. |
| Tx Dropped | The number of outbound packets that are chosen to be discarded even though no errors are detected. This action prevents the packet from being delivered to a higher layer protocol. Discarding a packet also frees up buffer space. |
| Tx Errors | The number of outbound packets (packet-oriented interfaces) and the number of outbound transmission units (character-oriented or fixed-length interfaces) that are transmitted because of errors. |
| Tx Packets | The total number of packets that the higher-level protocols requested for transmission, including those that are discarded or not sent. This situation does not include packets that are addressed to a multicast or broadcast address at this sublayer. |
| Tx QueueLen | The length of the output packet queue (in packets). |

Number of Replicates Created and State of Replication

The Number of Replicates Created and State of Replication object provides real-time replication information for the system. The following table contains information about replication counters.

Table 11: Number of Replicates Created and State of Replication

| Counters | Counter Descriptions |
|------------------------------|--|
| Number of Replicates Created | The number of replicates that are created by Informix for the DB tables. This counter displays information during Replication Setup. |

| Counters | Counter Descriptions |
|-----------------|--|
| Replicate_State | <p>The state of replication. The following list provides possible values:</p> <p>0</p> <p>Initializing. The counter equals 0 when the server is not defined or when the server is defined but realizes the template has not completed.</p> <p>1</p> <p>Replication setup script fired from this node. Cisco recommends that you run utils dbreplication status on the CLI to determine the location and cause of the failure.</p> <p>2</p> <p>Good Replication.</p> <p>3</p> <p>Bad Replication. A counter value of 3 indicates replication in the cluster is bad. It does not mean that replication failed on a particular server in the cluster. Cisco recommends that you run utils dbreplication status on the CLI to determine the location and cause of the failure.</p> <p>4</p> <p>Replication setup did not succeed.</p> |

Partition

The partition object provides information about the file system and its usage in the system. The following table contains information about partition counters. These counters are also available for the spare partition, if present.

Table 12: Partition

| Counters | Counter Descriptions |
|----------------|---|
| % CPU Time | The percentage of CPU time that is dedicated to handling IO requests that were issued to the disk. |
| % Used | The percentage of disk space that is in use on this file system. |
| % Wait in Read | Not Used. The Await Read Time counter replaces this counter. This counter is no longer valid with the counter value -1. |

| Counters | Counter Descriptions |
|---------------------|--|
| % Wait in Write | Not Used. The Await Write Time counter replaces this counter. This counter is no longer valid with the counter value -1. |
| Await Read Time | The average time measured in milliseconds for read requests that are issued to the device to be served. |
| Await Time | The average time measured in milliseconds for input and output (I/O) requests that are issued to the device to be served. This reading includes the time spent by the requests in queue and the time spent servicing them. |
| Await Write Time | The average time measured in milliseconds for write requests that are issued to the device to be served. |
| Queue Length | The average queue length for the requests that are issued to the disk. |
| Read Bytes Per Sec | The amount of data in bytes per second that is read from the disk. |
| Total Mbytes | The amount of total disk space in megabytes that is on this file system. |
| Used Mbytes | The amount of disk space in megabytes that is in use on this file system. |
| Write Bytes Per Sec | The amount of data that is written to the disk in bytes per second. |

Process

The process object provides information about the processes that are running on the system. The following table contains information about process counters.

Table 13: Process

| Counters | Counter Descriptions |
|-----------------|---|
| % CPU Time | This counter, which is expressed as a percentage of total central processing unit (CPU) time, represents the tasks share of the elapsed CPU time since the last update. |
| % MemoryUsage | This counter represents the percentage of physical memory that a task is currently using. |
| Data Stack Size | This counter represents the stack size for task memory status. |

| Counters | Counter Descriptions |
|--------------------|---|
| Nice | <p>This counter represents the nice value of the task.</p> <ul style="list-style-type: none"> • A negative nice value indicates that the process has a higher priority. • A positive nice value indicates that the process has a lower priority. <p>Note If the nice value equals zero, do not adjust the priority when you are determining the dispatchability of a task.</p> |
| Page Fault Count | <p>This counter represents the number of major page faults that a task encounters that requires the data to be loaded into memory.</p> |
| PID | <p>This counter displays the task-unique process ID. The ID periodically wraps, but the value never equals zero.</p> |
| Process Status | <p>This counter displays the process status:</p> <p>0 Running</p> <p>1 Sleeping</p> <p>2 Uninterruptible disk sleep</p> <p>3 Zombie</p> <p>4 Stopped</p> <p>5 Paging</p> <p>6 Unknown</p> |
| Shared Memory Size | <p>This counter displays the amount of shared memory in kilobytes (KB) that a task is using. Other processes could potentially share the same memory.</p> |
| STime | <p>This counter displays the system time (STime), measured in jiffies, that this process has scheduled in kernel mode. A jiffy corresponds to a unit of CPU time and is used as a base of measurement. One second comprises 100 jiffies.</p> |

| Counters | Counter Descriptions |
|---------------------|---|
| Thread Count | This counter displays the number of threads that are currently grouped with a task. A negative value (-1) indicates that this counter is currently not available. This situation happens when thread statistics (which include all performance counters in the Thread object as well as the Thread Count counter in the Process object) are turned off because the system total processes and threads exceed the default threshold value. |
| Total CPU Time Used | This counter displays the total CPU time in jiffies that the task used in user mode and kernel mode since the task started. |
| UTime | This counter displays the time, measured in jiffies, that a task has scheduled in user mode. |
| VmData | This counter displays the virtual memory usage of the heap for the task in KB. |
| VmRSS | This counter displays the virtual memory (Vm) resident set size (RSS) that is currently in physical memory in KB. This reading includes the code, data, and stack. |
| VmSize | This counter displays the total virtual memory usage for a task in KB. This reading includes all code, data, shared libraries, and pages that have been swapped out. Virtual Image = swapped size + resident size |
| Wchan | This counter displays the channel (system call) in which the process is waiting. |

Processor

The processor object provides information about different processor time usage in percentages. The following table contains information about processor counters.

Table 14: Processor

| Counters | Counter Descriptions |
|------------|--|
| % CPU Time | This counter displays the processors share of the elapsed central processing unit (CPU) time, excluding idle time, since the last update. This share is expressed as a percentage of total CPU time. |

| Counters | Counter Descriptions |
|--------------------|--|
| Idle Percentage | This counter displays the percentage of time that the processor is in the idle state and does not have an outstanding disk input and output (I/O) request. |
| IOWait Percentage | This counter represents the percentage of time that the processor is in the idle state while the system had an outstanding disk I/O request. |
| Irq Percentage | This counter represents the percentage of time that the processor spends executing the interrupt request that is assigned to devices, including the time that the processor spends sending a signal to the computer. |
| Nice Percentage | This counter displays the percentage of time that the processor spends executing at the user level with nice priority. |
| Softirq Percentage | This counter represents the percentage of time that the processor spends executing the soft IRQ and deferring task switching to get better CPU performance. |
| System Percentage | This counter displays the percentage of time that the processor is executing processes at the system (kernel) level. |
| User Percentage | This counter displays the percentage of time that the processor is executing normal processes at the user (application) level. |

System

The System object provides information about file descriptors on your system.

The following table contains information about system counters.

Table 15: System

| Counters | Counter Descriptions |
|----------------|---|
| Allocated FDs | The number of allocated file descriptors. |
| Being Used FDs | The number of file descriptors that are currently in use in the system. |
| Freed FDs | The number of allocated file descriptors on the system that are freed. |

| Counters | Counter Descriptions |
|---------------------------|---|
| IOPerSecond | The number of input and output (I/O) operations on all disk partitions per second on this server. If you experience a system performance issue, use the information in this counter to measure the impact of the aggregate I/O operations on this server. |
| IOReadReqMergedPerSecond | The number of read requests merged per second that are queued to all devices on this server. |
| IOWriteReqMergedPerSecond | The number of write requests merged per second that are queued to all devices on this server. |
| IOReadReqPerSecond | The number of read requests per second that are issued to all devices on this server. |
| IOWriteReqPerSecond | The number of write requests per second that are issued to all devices on this server. |
| IOSectorsReadPerSecond | The number of sectors read per second from all devices on this server. |
| IOSectorsWrittenPerSecond | The number of sectors written per second to all devices on this server. |
| IOKBytesReadPerSecond | The number of KBytes read per second from all devices on this server. |
| IOKBytesWrittenPerSecond | The number of KBytes written per second to all devices on this server. |
| IOSectorsReqSizeAvg | The average size in sectors of the requests that are issued to all devices on this server. |
| IOReqQueueSizeAvg | The average queue length of the requests that are issued to all devices on this server. |
| IOAwait | The average time in milliseconds for I/O requests that are issued to all devices to be served. This reading includes the time spent by the requests in queue and the time spent servicing the requests. |
| IOServiceTime | The average service time in milliseconds for I/O requests that are issued to all devices on this server. |
| IOCpuUtil | The percentage of CPU time during which I/O requests are issued to the device (bandwidth utilization for the device) on this server. |
| Max FDs | The maximum number of file descriptors that are allowed on the system. |

| Counters | Counter Descriptions |
|-----------------|--|
| Total CPU Time | The total time in jiffies that the system has been up and running. |
| Total Processes | The number of processes on the system. |
| Total Threads | The number of threads on the system. |

TCP

The TCP object provides information on the TCP statistics on your system.

The following table contains information about the TCP counters.

Table 16: TCP

| Counters | Counter Description |
|---------------|---|
| Active Opens | This counter displays the number of times that the TCP connections make a direct transition to the SYN-SENT state from the CLOSED state. |
| Attempt Fails | This counter displays the number of times that the TCP connections make a direct transition to the CLOSED state from either the SYN-RCVD state or the SYN-RCVD state. The counter also displays the number of times TCP connections make a direct transition to the LISTEN state from the SYS-RCVD state. |
| Curr Estab | This counter displays the number of TCP connections with a current state of ESTABLISHED or CLOSE-WAIT. |
| Estab Resets | This counter displays the number of times that the TCP connections make a direct transition to the CLOSED state from the ESTABLISHED state or the CLOSE-WAIT state. |
| In Segs | This counter displays the total number of segments that are received, including those that are received in error. This count only includes segments that are received on currently established connections. |
| InOut Segs | This counter displays the total number of segments that are sent and the total number of segments that are received. |
| Out Segs | This counter displays the total number of segments that are sent. This count only includes segments that are sent on currently established connections, but excludes retransmitted octets. |

| Counters | Counter Description |
|---------------|---|
| Passive Opens | This counter displays the number of times that TCP connections make a direct transition to the SYN-RCVD state from the LISTEN state. |
| RetransSegs | This counter displays the total number of segments that are retransmitted because the segment contains one or more previously transmitted octets. |

Thread

The Thread object provides a list of running threads on your system.

The following table contains information about the Thread counters.

Table 17: Thread

| Counters | Counter Description |
|------------|--|
| % CPU Time | This counter displays the threads share of the elapsed CPU time since the last update. This counter expresses the share as a percentage of the total CPU time. |
| PID | This counter displays the threads leader process ID. |

AXL Web Service

The AXL Web Service object provides information about the AXL Web Service running on your system.

The following table contains information about the AXL Web Service counters.

Table 18: AXL Web Service

| Counters | Counter Description |
|---------------|--|
| ThrottleCount | This counter represents the number of times Administrative XML Layer (AXL) throttling has been engaged since the last restart of the Cisco AXL Web Service. Throttling occurs when the AXL service receives more change requests than it is able to process. |

| Counters | Counter Description |
|---------------|---|
| ThrottleState | This counter represents whether Administrative XML Layer (AXL) throttling is currently active (throttling is engaged). A value of 1 in this counter indicates that throttling is currently engaged, which means that any application attempting to send a write request to Unified Communications Manager through AXL will be denied due to AXL throttling. Read requests will continue to be allowed and processed while AXL throttling is engaged. A value of zero indicates that throttling is not occurring at this time and all read and write requests will be processed. |

Ramfs

The Ramfs object provides information about the ram file system. The following table contains information on the Ramfs counters.

Table 19: Ramfs

| Counters | Counter Description |
|------------|--|
| FilesTotal | This counter represents the total number of files in the ram-based file system (ramfs). |
| SpaceFree | This counter represents the amount of free data blocks in the ram-based file system (ramfs). A block is a uniformly sized unit of data storage for a filesystem. The block size specifies the size that the file system will use to read and write data. On the Unified Communications Manager system, the block size is 4096 bytes. |
| SpaceUsed | This counter represents the amount of used data blocks in the ram-based filesystem (ramfs). A block is a uniformly sized unit of data storage for a file system. The block size specifies the size that the file system will use to read and write data. On the Unified Communications Manager system, the block size is 4096 bytes. |

Voice and Video Counters

Cisco Analog Access

The Cisco Analog Access object provides information about registered Cisco Analog Access gateways. The following table contains information about CiscoAnalog Access counters.

Table 20: Cisco Analog Access

| Counters | Counter Description |
|----------------------|---|
| OutboundBusyAttempts | This counter represents the total number of times that Unified Communications Manager attempts a call through the analog access gateway when all ports were busy. |
| PortsActive | This counter represents the number of ports that are currently in use (active). A port appears active when a call is in progress on that port. |
| PortsOutOfService | This counter represents the number of ports that are currently out of service. Counter applies only to loop-start and ground-start trunks. |

Cisco Annunciator Device

The Cisco Annunciator Device object provides information about registered Cisco annunciator devices. The following table contains information about CiscoAnnunciator counters.

Table 21: Cisco Annunciator Device

| Counters | Counter Description |
|-------------------|--|
| OutOfResources | This counter represents the total number of times that Unified Communications Manager attempted to allocate an annunciator resource from an annunciator device and failed; for example, because all resources were already in use. |
| ResourceActive | This counter represents the total number of annunciator resources that are currently active (in use) for an annunciator device. |
| ResourceAvailable | This counter represents the total number of resources that are not active and are still available to be used at the current time for the annunciator device. |
| ResourceTotal | This counter represents the total number of annunciator resources that are configured for an annunciator device. |

Cisco Call Restriction

The Cisco Call Restriction object provides information about the number of failures that result due to logical partitioning policy restrictions. The following table contains information about Cisco Call Restriction counters.

Table 22: Cisco Call Restriction

| Counters | Counter Description |
|-------------------------------|--|
| AdHocConferenceFailures | This counter represents the number of attempts that failed to add a participant to an Ad Hoc Conference because the call path between the geolocation of the devices already in conference and the device being invited to the conference was restricted due to a logical partition policy. |
| BasicCallFailures | This counter represents the number of basic calls that have failed because of logical partition policy restrictions between the geolocations of the called and calling parties. A basic call is any call that does not utilize supplementary services such as transfer, forward, and so on. |
| ForwardingFailures | This counter represents the number of attempts to forward an incoming call which failed because of a logical partition policy restriction between the geolocations of the two parties involved. |
| LogicalPartitionFailuresTotal | This counter represents the total number of call attempts that have failed because of a restriction of calls between geolocations of the calling and called parties. This includes the number of failures for Transfer, AdHoc Conference, Meet-Me Conference, PickUp, Call Park, Shared Lines and Basic Calls. |
| MeetMeConferenceFailures | This counter represents the number of attempts that failed to add a participant to a Meet-Me conference because the call path between the geolocation of the devices already in conference and the device attempting to join the conference was restricted due to a logical partition policy. |
| MidCallFailures | This counter represents the number of calls that have failed because of a restriction between the geolocations of the called or connected parties after the initial policy check. |
| ParkRetrievalFailures | This counter represents the number of attempts to perform a Call Park operation that failed because the device that was attempting to retrieve the call had a logical partition policy restriction with the geolocation of the parked party. |
| PickUpFailures | This counter represents the number of attempts to perform a PickUp operation that failed because the device on which the pickup was being attempted had a logical partition policy restriction with the geolocation of the calling device. |

| Counters | Counter Description |
|--------------------|---|
| SharedLineFailures | This counter represents the number of attempts to use a shared line which failed because the caller or callee has a logical partition policy restriction with the geolocation of the devices having the shared lines. |
| TransferFailures | This counter represents the number of call transfer attempts that failed due to restriction of calls between the geolocation of the transferred party and the transferred destination. |

Cisco CallManager

The CiscoCallManager object provides information about calls, applications, and devices that are registered with the Unified Communications Manager. The following table contains information about CiscoCallManager counters.

Table 23: CiscoCallManager

| Counters | Counter Description |
|------------------------------|---|
| AnnunciatorOutOfResources | This counter represents the total number of times that Unified Communications Manager attempted to allocate an annunciator resource from those that are registered to a Unified Communications Manager when none were available. |
| AnnunciatorResourceActive | This counter represents the total number of annunciator resources that are currently in use on all annunciator devices that are registered with a Unified Communications Manager. |
| AnnunciatorResourceAvailable | This counter represents the total number of annunciator resources that are not active and are currently available. |
| AnnunciatorResourceTotal | This counter represents the total number of annunciator resources that are provided by all annunciator devices that are currently registered with Unified Communications Manager. |
| AuthenticatedCallsActive | This counter represents the number of authenticated calls that are currently active (in use) on Unified Communications Manager. An authenticated call designates one in which all the endpoints that are participating in the call are authenticated. An authenticated phone uses the Transport Layer Security (TLS) authenticated Skinny protocol signaling with Unified Communications Manager. |

| Counters | Counter Description |
|---------------------------------------|---|
| AuthenticatedCallsCompleted | This counter represents the number of authenticated calls that connected and subsequently disconnected through Unified Communications Manager. An authenticated call designates one in which all the endpoints that are participating in the call are authenticated. An authenticated phone uses the TLS authenticated Skinny protocol signaling with Unified Communications Manager. |
| AuthenticatedPartiallyRegisteredPhone | This counter represents the number of partially registered, authenticated SIP phones. |
| AuthenticatedRegisteredPhones | This counter represents the total number of authenticated phones that are registered to Unified Communications Manager. An authenticated phone uses the TLS authenticated Skinny protocol signaling with Unified Communications Manager. |
| BRChannelsActive | This counter represents the number of BRI voice channels that are currently in an active call on this Unified Communications Manager. |
| BRISpansInService | This counter represents the number of BRI spans that are currently available for use. |
| CallManagerHeartBeat | This counter represents the heartbeat of Unified Communications Manager. This incremental count indicates that Unified Communications Manager is up and running. If the count does not increment, that indicates that Unified Communications Manager is down. |
| CallsActive | This counter represents the number of voice or video streaming connections that are currently in use (active); in other words, the number of calls that actually have a voice path that is connected on Unified Communications Manager. |
| CallsAttempted | This counter represents the total number of attempted calls. An attempted call occurs anytime that a phone goes off hook and back on hook, regardless of whether any digits were dialed, or whether it connected to a destination. The system considers some call attempts during feature operations (such as transfer and conference) to be attempted calls. |
| CallsCompleted | This counter represents the number of calls that were actually connected (a voice path or video stream was established) through Unified Communications Manager. This number increases when the call terminates. |

| Counters | Counter Description |
|-------------------------------------|--|
| CallsInProgress | <p>This counter represents the number of voice or video calls that are currently in progress on Unified Communications Manager, including all active calls.</p> <p>When a phone that is registered with Skinny Client Control Protocol (SCCP) goes off hook, the CallsInProgress progress counter increments. until it goes back on hook.</p> <p>For Cisco Unified IP Phones 7940, and 7960 that register with SIP, the CallsInProgress counter increments when the dial softkey is pressed.</p> <p>For all other phones that are running SIP, the CallsInProgress counter increments when the first digit is pressed.</p> <p>When all voice or video calls that are in progress are connected, the number of CallsInProgress represents the number of CallsActive. The counter decreases by one when a phone goes back on hook.</p> |
| CM_MediaTermPointsRequestsThrottled | <p>This counter represents the total number of media termination point (MTP) resource requests that have been denied due to throttling (a resource from this MTP was not allocated because, as specified by the Cisco CallManager service parameter, MTP and Transcoder Resource Throttling Percentage, the MTP was being utilized beyond the configured throttle percentage). This counter increments each time a request for an MTP on this Unified Communications Manager node is requested and denied due to MTP throttling and reflects a running total since the start of the Cisco CallManager Service.</p> |
| CM_TranscoderRequestsThrottled | <p>This counter represents the total number of transcoder resource requests that have been denied due to throttling (a resource from this transcoder was not allocated because, as specified by the Cisco CallManager service parameter MTP and Transcoder Resource Throttling Percentage, the transcoder was being utilized beyond the configured throttle percentage). This counter increments each time a request for a transcoder on this Unified Communications Manager node is requested and denied due to transcoder throttling and reflects a running total since the start of the Cisco CallManager Service.</p> |

| Counters | Counter Description |
|------------------------------------|--|
| EncryptedCallsActive | This counter represents the number of encrypted calls that are currently active (in use) on this Unified Communications Manager. An encrypted call represents one in which all the endpoints that are participating in the call are encrypted. |
| EncryptedCallsCompleted | This counter represents the number of encrypted calls that were connected and subsequently disconnected through this Unified Communications Manager. An encrypted call represents one in which all the endpoints that are participating in the call are encrypted. |
| EncryptedPartiallyRegisteredPhones | This counter represents the number of partially registered, encrypted SIP phones. |
| EncryptedRegisteredPhones | This counter represents the total number of encrypted phones that are registered on this Unified Communications Manager. |
| FXOPortsActive | This counter represents the number of FXO ports that are currently in use (active) on a Unified Communications Manager. |
| FXOPortsInService | This counter represents the number of FXO ports that are currently available for use in the system. |
| FXSPortsActive | This counter represents the number of FXS ports that are currently in use (active) on a Unified Communications Manager. |
| FXSPortsInService | This counter represents the number of FXS ports that are currently available for use in the system. |
| HuntListsInService | This counter represents the number of hunt lists that are currently in service on Unified Communications Manager. |
| HWConferenceActive | This counter represents the total number of hardware conference resources that are provided by all hardware conference bridge devices that are currently registered with Unified Communications Manager. |

| Counters | Counter Description |
|-------------------------------|--|
| HWConferenceCompleted | This counter represents the total number of conferences that used a hardware conference bridge (hardware-based conference devices such as Cisco Catalyst 6000, Cisco Catalyst 4000, Cisco VG200, Cisco series 26xx and 36xx) that is allocated from Unified Communications Manager and that have completed, which means that the conference bridge has been allocated and released. A conference activates when the first call connects to the bridge. The conference completes when the last call disconnects from the bridge. |
| HWConferenceOutOfResources | This counter represents the total number of times that Unified Communications Manager attempted to allocate a hardware conference resource from those that are registered to a Unified Communications Manager when none was available. |
| HWConferenceResourceActive | This counter represents the total number of conference resources that are in use on all hardware conference devices (such as Cisco Catalyst 6000, Catalyst 4000, Cisco VG200, Cisco series 26xx and 36xx) that are registered with Unified Communications Manager. System considers conference to be active when one or more calls are connected to a bridge. |
| HWConferenceResourceAvailable | This counter represents the number of hardware conference resources that are not in use and that are available to be allocated on all hardware conference devices (such as Cisco Catalyst 6000, Cisco Catalyst 4000, Cisco VG200, Cisco series 26xx and 36xx) that are allocated from Unified Communications Manager and that have been completed, which means that the conference bridge has been allocated and released. A conference activates when the first call connects to the bridge. The conference completes when the last call disconnects from the bridge. |
| HWConferenceResourceTotal | This counter represents the number of active conferences on all hardware conference devices that are registered with Unified Communications Manager. |

| Counters | Counter Description |
|-------------------------|---|
| InitializationState | <p>This counter represents the current initialization state of Unified Communications Manager. Unified Communications Manager includes the following initialization state values:</p> <p>1-Database, 2-Regions, 3-Locations, 4-QoS Policy, 5-Time Of Day, 6-AAR Neighborhoods, 7-Digit Analysis, 8-Route Plan, 9-Call Control, 10-RSVP Session Manager, 11-Supplementary Services, 12-Directory, 13-SDL Link, 14-Device, 100-Initialization Complete.</p> <p>Not all states display when this counter is used. This display does not indicate that an error occurred; this display simply indicates that the states initialized and completed within the refresh period of the performance monitor.</p> |
| IVRResourceActive | This represents the total number of IVR resources that are currently in use on all IVR devices registered with Unified Communications Manager. |
| IVROutOfResources | This represents the total number of times Unified Communications Manager attempted to allocate an IVR resource from those that are registered to Unified Communications Manager when none were available. |
| IVRResourceAvailable | This represents the total number of IVR resources provided by all IVR devices that are currently registered with Unified Communications Manager. |
| IVRResourceTotal | This represents the total number of IVR resources provided by all IVR devices that are currently registered with Unified Communications Manager. |
| LocationOutOfResources | This counter represents the total number of times that a call through Locations failed due to the lack of bandwidth. |
| MCUConferencesActive | This counter represents the total number of active conferences on all Cisco TelePresence MCU conference bridge devices that are registered with Unified Communications Manager. |
| MCUConferencesCompleted | This counter represents the total number of conferences that used a Cisco TelePresence MCU conference bridge allocated from Unified Communications Manager and completed, implying that the conference bridge was allocated and released. A conference is activated when the first call is connected to the bridge. The conference is completed when the last call is disconnected from the bridge. |

| Counters | Counter Description |
|-------------------------------|--|
| MCUHttpConnectionErrors | This counter represents the total number of times Unified Communications Manager attempted to create HTTP connections to Cisco TelePresence MCU conference bridge device, and failed due to connection errors on the Cisco TelePresence MCU conference bridge side. |
| MCUHttpNon200OKResponse | This counter represents the total number of times Unified Communications Manager received a non 200 OK HTTP Response from Cisco TelePresence MCU conference bridge, for any HTTP query sent. |
| MCUOutOfResources | This counter represents the total number of times Unified Communications Manager attempted to allocate a conference resource from Cisco TelePresence MCU conference bridge device and failed. For example, the attempt to allocate a conference resource fails, if all the resources are already in use. |
| MOHMulticastResourceActive | This counter represents the total number of multicast Music On Hold (MOH) resources that are currently in use (active) on all MOH servers that are registered with a Unified Communications Manager. |
| MOHMulticastResourceAvailable | This counter represents the total number of active multicast MOH connections that are not being used on all MOH servers that are registered with a Unified Communications Manager. |
| MOHOutOfResources | This counter represents the total number of times that the Media Resource Manager attempted to allocate an MOH resource when all available resources on all MOH servers that are registered with a Unified Communications Manager were already active. |
| MOHTotalMulticastResources | This counter represents the total number of multicast MOH resources or connections that are provided by all MOH servers that are currently registered with a Unified Communications Manager. |
| MOHTotalUnicastResources | This counter represents the total number of unicast MOH resources or streams that are provided by all MOH servers that are currently registered with Unified Communications Manager. Each MOH unicast resource uses one stream. |

| Counters | Counter Description |
|-----------------------------|---|
| MOHUnicastResourceActive | This counter represents the total number of unicast MOH resources that are currently in use (active) on all MOH servers that are registered with Unified Communications Manager. Each MOH unicast resource uses one stream. |
| MOHUnicastResourceAvailable | This counter represents the total number of unicast MOH resources that are currently available on all MOH servers that are registered with Unified Communications Manager. Each MOH unicast resource uses one stream. |
| MTPOutOfResources | This counter represents the total number of times that Unified Communications Manager attempted but failed to allocate a media termination point (MTP) resource from one MTP device that is registered with Unified Communications Manager. This also means that no transcoders were available to act as MTPs. |
| MTPResourceActive | This counter represents the total number of MTP resources that are currently in use (active) on all MTP devices that are registered with a Unified Communications Manager. Each MTP resource uses two streams. An MTP in use represents one MTP resource that has been allocated for use in a call. |
| MTPResourceAvailable | This counter represents the total number of MTP resources that are not in use and are available to be allocated on all MTP devices that are registered with Unified Communications Manager. Each MTP resource uses two streams. An MTP in use represents one MTP resource that has been allocated for use in a call. |
| MTPResourceTotal | This counter represents the total number of MTP resources that are provided by all MTP devices that are currently registered with Unified Communications Manager. |
| MTP_RequestsThrottled | This counter represents the total number of MTP resource requests that have been denied due to throttling (a resource from this MTP was not allocated because, as specified by the Cisco CallManager service parameter MTP and Transcoder Resource Throttling Percentage, the MTP was being utilized beyond the configured throttle percentage). This counter increments each time a resource is requested from this MTP and is denied due to throttling. This counter reflects a running total since the MTP device registered with the Cisco CallManager Service. |

| Counters | Counter Description |
|--------------------------------------|--|
| PartiallyRegisteredPhone | This counter represents the number of partially registered phones that are running SIP. |
| PRChannelsActive | This counter represents the number of PRI voice channels that are in an active call on a Unified Communications Manager. |
| PRISpansInService | This counter represents the number of PRI spans that are currently available for use. |
| RegisteredAnalogAccess | This counter represents the number of registered Cisco analog access gateways that are registered with system. The count does not include the number of Cisco analog access ports. |
| RegisteredHardwarePhones | This counter represents the number of Cisco hardware IP phones (for example, Cisco Unified IP Phones 7960, 7940, and so on.) that are currently registered in the system. |
| RegisteredMGCPGateway | This counter represents the number of MGCP gateways that are currently registered in the system. |
| RegisteredOtherStationDevices | This counter represents the number of station devices other than Cisco hardware IP phones that are currently registered in the system (for example, Cisco IP SoftPhone, CTI port, CTI route point, Cisco voicemail port). |
| SIPLineServerAuthorizationChallenges | This counter represents the number of authentication challenges for incoming SIP requests that the Unified Communications Manager server issued to phones that are running SIP. An authentication challenge occurs when a phone that is running SIP with Digest Authentication enabled sends a SIP line request to Unified Communications Manager. |
| SIPLineServerAuthorizationFailures | This counter represents the number of authentication challenge failures for incoming SIP requests from SIP phones to the Unified Communications Manager server. An authentication failure occurs when a SIP phone with Digest Authentication enabled sends a SIP line request with bad credentials to Unified Communications Manager. |

| Counters | Counter Description |
|--|--|
| SIPTrunkAuthorization | This counter represents the number of application-level authorization checks for incoming SIP requests that Unified Communications Manager has issued to SIP trunks. An application-level authorization check occurs when Unified Communications Manager compares an incoming SIP request to the application-level settings on the SIP Trunk Security Profile Configuration window in Cisco Unified Communications Manager Administration. |
| SIPTrunkAuthorizationFailures | This counter represents the number of application-level authorization failures for incoming SIP requests that have occurred on Unified Communications Manager SIP trunks. An application-level authorization failure occurs when Unified Communications Manager compares an incoming SIP request to the application-level authorization settings on the SIP Trunk Security Profile Configuration window in Cisco Unified Communications Manager Administration and finds that authorization for one or more of the SIP features on that window is not allowed. |
| SIPTrunkServerAuthenticationChallenges | This counter represents the number of authentication challenges for incoming SIP requests that Unified Communications Manager issued to SIP trunks. An authentication challenge occurs when a SIP trunk with Digest Authentication enabled sends a SIP request to Unified Communications Manager. |
| SIPTrunkServerAuthenticationFailures | This counter represents the number of authentication challenge failures that occurred for incoming SIP requests from SIP trunks to Unified Communications Manager. An authentication failure occurs when a SIP trunk with Digest Authentication enabled sends a SIP request with bad credentials to Unified Communications Manager. |
| SWConferenceActive | This counter represents the number of active conferences on all software conference devices that are registered with Unified Communications Manager. |
| SWConferenceCompleted | This counter represents the total number of conferences that used a software conference bridge that was allocated from a Unified Communications Manager and that have been completed, which means that the conference bridge has been allocated and released. A conference activates when the first call connects to the bridge. The conference completes when the last call disconnects from the bridge. |

| Counters | Counter Description |
|-------------------------------|--|
| SWConferenceOutOfResources | This counter represents the total number of times that Unified Communications Manager attempted to allocate a software conference resource from those that are registered to Unified Communications Manager when none were available. Counter includes failed attempts to add a new participant to an existing conference. |
| SWConferenceResourceActive | This counter represents the total number of conference resources that are in use on all software conference devices that are registered with Unified Communications Manager. The system considers a conference to be active when one or more calls connect to a bridge. One resource equals one stream. |
| SWConferenceResourceAvailable | This counter represents the number of new software-based conferences that can be started at the same time, for Unified Communications Manager. You must have a minimum of three streams available for each new conference. One resource equals one stream. |
| SWConferenceResourceTotal | This counter represents the total number of software conference resources that are provided by all software conference bridge devices that are currently registered with Unified Communications Manager. |
| SystemCallsAttempted | This counter represents the total number of server-originated calls and attempted calls to the Unity message waiting indicator (MWI). |
| T1ChannelsActive | This counter represents the number of T1 CAS voice channels that are in an active call on a Unified Communications Manager. |
| T1SpansInService | This counter represents the number of T1 CAS spans that are currently available for use. |
| TLSConectedSIPTrunks | This counter represents the number of SIP trunks that are configured and connected through Transport Layer Security (TLS). |
| TLSConectedWSM | This counter represents the number of WSM Connectors that is configured and connected to Motorola WSM through Transport Layer Security (TLS). |

| Counters | Counter Description |
|-----------------------------|---|
| TranscoderOutOfResources | This counter represents the total number of times that Unified Communications Manager attempted to allocate a transcoder resource from a transcoder device that is registered to a Unified Communications Manager when none was available. |
| TranscoderResourceActive | This counter represents the total number of transcoders that are in use on all transcoder devices that are registered with Unified Communications Manager. A transcoder in use represents one transcoder resource that has been allocated for use in a call. Each transcoder resource uses two streams. |
| TranscoderResourceAvailable | This counter represents the total number of transcoders that are not in use and that are available to be allocated on all transcoder devices that are registered with Unified Communications Manager. Each transcoder resource uses two streams. |
| TranscoderResourceTotal | This counter represents the total number of transcoder resources that are provided by all transcoder devices that are currently registered with Unified Communications Manager. |
| VCBConferenceActive | This counter represents the total number of active video conferences on all video conference bridge devices that are registered with Unified Communications Manager. |
| VCBConferenceAvailable | This counter represents the total number of new video conferences on all video conference bridge devices that are registered with Unified Communications Manager. |
| VCBConferenceCompleted | This counter represents the total number of video conferences that used a video conference bridge that is allocated from Unified Communications Manager and that have been completed, which means that the conference bridge has been allocated and released. A conference activates when the first call connects to the bridge. The conference completes when the last call disconnects from the bridge. |
| VCBConferenceTotal | This counter represents the total number of video conferences that are supported on all video conference bridge devices that are registered with Unified Communications Manager. |

| Counters | Counter Description |
|----------------------|--|
| VCBOutOfConferences | This counter represents the total number of times that Unified Communications Manager attempted to allocate a video conference resource from those that are registered to Unified Communications Manager when none was available. |
| VCBOutOfResources | This counter represents the total number of failed new video conference requests. A conference request can fail because, for example, the configured number of conferences is already in use. |
| VCBResourceActive | This counter represents the total number of video conference resources that are currently in use on all video conference devices that are registered with Unified Communications Manager. |
| VCBResourceAvailable | This counter represents the total number of video conference resources that are not active and are currently available. |
| VCBResourceTotal | This counter represents the total number of video conference resources that are provided by all video conference bridge devices that are currently registered with Unified Communications Manager. |
| VideoCallsActive | This counter represents the number of active video calls with active video streaming connections on all video conference bridge devices that are registered with Unified Communications Manager. |
| VideoCallsCompleted | This counter represents the number of video calls that were actually connected with video streams and then released. |
| VideoOutOfResources | This counter represents the total number of times that Unified Communications Manager attempted to allocate a video-streaming resource from one of the video conference bridge devices that is registered to Unified Communications Manager when none was available. |

| Counters | Counter Description |
|-------------------------|--|
| XCODE_RequestsThrottled | This counter represents the total number of transcoder resource requests that have been denied due to throttling (a resource from this transcoder was not allocated because, as specified by the Cisco CallManager service parameter MTP and Transcoder Resource Throttling Percentage, the transcoder was being utilized beyond the configured throttle percentage). This counter increments each time a resource is requested from this transcoder and is denied due to throttling. This counter reflects a running total since the transcoder device registered with the Cisco CallManager Service. |

Cisco CallManager System Performance

The CiscoCallManager System Performance object provides system performance information about Unified Communications Manager. The following table contains information about CiscoCallManager system performance counters.

Table 24: CiscoCallManager System Performance

| Counters | Counter Description |
|---------------------------------|--|
| AverageExpectedDelay | This counter represents the current average expected delay before any incoming message gets handled. |
| CallsRejectedDueToICTThrottling | This counter represents the total number of calls that were rejected since the start of CiscoCallManager service due to Intercluster Trunk (ICT) call throttling. When the threshold limit of 140 calls per 5 seconds is met, the ICT will start throttling (rejecting) new calls. One cause for ICT call throttling occurs when calls across an ICT enter a route loop condition. |
| CallThrottlingGenericCounter3 | This counter represents a generic counter that is used for call-throttling purpose. |
| CodeRedEntryExit | This counter indicates whether Unified Communications Manager has entered or exited a Code state (call-throttling mode). Valid values include 0 (Exit) and 1 (Entry). |
| CodeYellowEntryExit | This counter indicates whether Unified Communications Manager has entered or exited a Code Yellow state (call-throttling mode). Valid values include 0 (Exit) and 1 (Entry). |
| EngineeringCounter1 | Do not use this counter unless directed by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |

| Counters | Counter Description |
|----------------------------|--|
| EngineeringCounter2 | Do not use this counter unless directed by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| EngineeringCounter3 | Do not use this counter unless directed by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| EngineeringCounter4 | Do not use this counter unless directed by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| EngineeringCounter5 | Do not use this counter unless directed by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| EngineeringCounter6 | Do not use this counter unless directed by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| EngineeringCounter7 | Do not use this counter unless directed by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| EngineeringCounter8 | Do not use this counter unless directed by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| QueueSignalsPresent 1-High | This counter indicates the number of high-priority signals in the Unified Communications Manager queue. High-priority signals include timeout events, internal Unified Communications Manager keepalives, certain gatekeeper events, and internal process creation, among other events. A large number of high-priority events will cause degraded performance on Unified Communications Manager and result in slow call connection or loss of dial tone. Use this counter in conjunction with the QueueSignalsProcessed 1-High counter to determine the processing delay on Unified Communications Manager. |

| Counters | Counter Description |
|--------------------------------|--|
| QueueSignalsPresent 2-Normal | <p>This counter indicates the number of normal-priority signals in the Unified Communications Manager queue. Normal-priority signals include call-processing functions, key presses, on-hook and off-hook notifications, among other events. A large number of normal-priority events will cause degraded performance on Unified Communications Manager, sometimes resulting in delayed dial tone, slow call connection, or loss of dial tone. Use this counter in conjunction with the QueueSignalsProcessed 2-Normal counter to determine the call-processing delay on Unified Communications Manager. Remember that high-priority signals must complete before normal-priority signals begin to process, so check the high-priority counters as well to get an accurate picture of the potential delay.</p> |
| QueueSignalsPresent 3-Low | <p>This counter indicates the number of low-priority signals in the Unified Communications Manager queue. Low-priority signals include station device registration (except the initial station registration request message), among other events. A large number of signals in this queue could result in delayed device registration, among other events.</p> |
| QueueSignalsPresent 4-Lowest | <p>This counter indicates the number of lowest priority signals in the Unified Communications Manager queue. Lowest priority signals include the initial station registration request message during device registration, among other events. A large number of signals in this queue could result in delayed device registration, among other events.</p> |
| QueueSignalsProcessed 1-High | <p>This counter indicates the number of high-priority signals that Unified Communications Manager processes for each 1-second interval. Use this counter in conjunction with the QueueSignalsPresent 1-High counter to determine the processing delay on this queue.</p> |
| QueueSignalsProcessed 2-Normal | <p>This counter indicates the number of normal-priority signals that Unified Communications Manager processes for each 1-second interval. Use this counter in conjunction with the QueueSignalsPresent 2-Normal counter to determine the processing delay on this queue. Remember that high-priority signals get processed before normal-priority signals.</p> |

| Counters | Counter Description |
|--------------------------------|---|
| QueueSignalsProcessed 3-Low | This counter indicates the number of low-priority signals that Unified Communications Manager processes for each 1-second interval. Use this counter in conjunction with the QueueSignalsPresent 3-Low counter to determine the processing delay on this queue. The number of signals processed gives an indication of how much device registration activity is being processed in this time interval. |
| QueueSignalsProcessed 4-Lowest | This counter indicates the number of lowest priority signals that Unified Communications Manager processes for each 1-second interval. Use this counter in conjunction with the QueueSignalsPresent 4-Lowest counter to determine the processing delay on this queue. The number of signals that are processed gives an indication of how many devices began the Unified Communications Manager registration process in this time interval. |
| QueueSignalsProcessed Total | This counter provides a sum total of all queue signals that Unified Communications Manager processes for each 1-second period for all queue levels: high, normal, low, and lowest. |
| SkinnyDevicesThrottled | This counter represents the total number of Skinny devices that are being throttled. A Skinny device gets throttled (asked to shut down and reregister) when the total number of events that the Skinny device generated exceeds the configured maximum threshold value (default value specifies 2000 events) within a 5-second interval. |
| ThrottlingSampleActivity | This counter indicates how many samples, out of the configured sample size, have non-zero averageExpectedDelay values. This counter resets when any sample has an averageExpectedDelay value of zero. This process repeats for each batch of samples. A batch represents the configured sample size. |
| TotalCodeYellowEntry | This counter indicates the number of times that Unified Communications Manager call processing enters the code yellow state. This counter remains cumulative from the start of the Unified Communications Manager process. |

Cisco CTIManager

The Cisco CTI Manager object provides information about Cisco CTI Manager. The following table contains information about CiscoCTIManager counters.

Table 25: Cisco CTI Manager

| Counters | Counter Description |
|---------------------|--|
| CcmLinkActive | This counter represents the total number of active Unified Communications Manager links. CTI Manager maintains links to all active servers in a cluster, if applicable. |
| CTIConnectionActive | This counter represents the total number of CTI clients that are currently connected to the CTIManager. This counter increases by one when new connection is established and decreases by one when a connection is released. The CTIManager service parameter MaxCTIConnections determines the maximum number of active connections. |
| DevicesOpen | This counter represents the total number of devices that are configured in Unified Communications Manager that CTI applications control and/or monitor. Devices include hardware IP phones, CTI ports, CTI route points, and so on. |
| LinesOpen | This counter represents the total number of lines that are configured in Unified Communications Manager that control and/or monitor CTI applications. |
| QbeVersion | This counter represents the version number of the Quick Buffer Encoding (QBE) interface that the CTIManager uses. |

Cisco Dual-Mode Mobility

The Cisco Dual-Mode Mobility object provides information about the dual-mode mobility application on Unified Communications Manager. The following table contains information about CiscoDual-Mode Mobility counters.

Table 26: Cisco Dual-Mode Mobility

| Counters | Counter Description |
|--------------------|---|
| CallsAnchored | This counter represents the number of calls that are placed or received on dual-mode phones that are anchored in Unified Communications Manager. The counter increments when a call is received from or placed to a dual-mode phone. The counter increments twice if a dual-mode phone calls another dual-mode phone. |
| DMMSRegistered | This counter represents the number of Dual-mode Mobile Station (DMMS) subscribers that are registered in the wireless LAN (WLAN). |
| FollowMeAborted | This counter represents the number of failed follow-me operations. |
| FollowMeAttempted | This counter represents the number of follow-me operations that Unified Communications Manager attempted. The counter increments when a SIP 302 - Moved Temporarily message is received from the Wireless Service Manager (WSM) and Unified Communications Manager redirects the call to the DMMS in WLAN. |
| FollowMeCompleted | This counter represents the number of follow-me operations that were successfully completed. The counter increments when the DMMS in WLAN answers the call and the media (voice path) is successfully established with the calling device. |
| FollowMeInProgress | This counter represents the number of follow-me operations that are currently in progress. The counter increments when a follow-me is attempted, and it decrements when the follow-me operation is aborted or completed. |
| H1HandOutAttempted | This counter represents the number of H1 hand-out operations that dual-mode phones attempt. The counter increments when Unified Communications Manager processes a call to the H1 number from a DMMS. |
| H1HandOutCompleted | This counter represents the number of successfully completed H1 hand-out operations. The counter increments when the DMMS in WLAN successfully reestablishes a media (voice path). |

| Counters | Counter Description |
|---------------------|--|
| H2HandOutCompleted | This counter represents the number of successfully completed H2 hand-out operations. The counter increments when the DMMS in WLAN successfully reestablishes a media (voice path). |
| H2HandOutsAttempted | This counter represents the number of H2 hand-out operations that dual-mode phones attempt. The counter increments when Unified Communications Manager receives a call to the H2 number from a DMMS. |
| HandInAborted | This counter represents the number of hand-in operations that failed. |
| HandInAttempted | This counter represents the number of hand-in operations that dual-mode phones attempt. |
| HandInCompleted | This counter represents the number of successfully completed hand-in operations. The counter increments when the DMMS in WLAN successfully reestablishes a media (voice path). |
| HandInInProgress | This counter represents the number of hand-in operations that are currently in progress. The counter increments when a hand-in is attempted, and the counter decrements when the hand-in is aborted or completed. |
| HandOutAborted | This counter represents the number of hand-out operations that failed. |
| HandOutInProgress | This counter represents the number of H1 and H2 hand-out operations that are currently in progress. The counter increments when a H1 or H2 hand-out is attempted, and it decrements when the hand-out is aborted or completed. |

Cisco Extension Mobility

The Cisco Extension Mobility object provides information about the extension mobility application. The following table contains information about Cisco Extension Mobility counters.

Table 27: Cisco Extension Mobility Application

| Counters | Counter Description |
|-------------------------------------|---|
| RequestsHandled | This counter represents the total number of HTTP requests that the extension mobility application handled since the last restart of the CiscoCallManager service. A typical login would constitute two HTTP requests: one to query the initial login state of the device and another to log in the user on a device. Similarly, a typical logout also results in two HTTP requests. |
| RequestsInProgress | This counter represents the number of HTTP requests that the extension mobility application currently is handling. A typical login would constitute two HTTP requests: one to query the initial login state of the device and another to log in the user on a device. Similarly, a typical logout also results in two HTTP requests. |
| RequestsThrottled | This counter represents the total number of Login/Logout Requests that failed due to throttling. |
| LoginsSuccessful | This counter represents the total number of successful login requests that were completed through EM Service. |
| LogoutsSuccessful | This counter represents the total number of successful logout requests that were completed through EM Service |
| Total Login/LogoutRequestsAttempted | This counter represents the total number of Login and Logout requests that were attempted through this EM Service. This number includes both successful and unsuccessful attempts. |

Cisco Gatekeeper

The Cisco Gatekeeper object provides information about registered Cisco gatekeeper devices. The following table contains information about Ciscogatekeeper device counters.

Table 28: Cisco Gatekeeper

| Counters | Counter Description |
|--------------|--|
| ACFsReceived | This counter represents the total number of RAS Admission Confirm messages that are received from the configured gatekeeper and its alternate gatekeepers. |

| Counters | Counter Description |
|---------------------|--|
| ARQsAttempted | This counter represents the total number of RAS Admission Request messages that are attempted by using the configured gatekeeper and its alternate gatekeepers. |
| RasRetries | This counter represents the number of retries due to loss or delay of all RAS acknowledgement messages on the configured gatekeeper and its alternate gatekeepers. |
| VideoOutOfResources | This counter represents the total number of video-stream requests to the configured gatekeeper or its alternate gatekeepers that failed, most likely due to lack of bandwidth. |

Cisco H.323

The Cisco H.323 object provides information about registered Cisco H.323 devices. The following table contains information about Cisco H.323 device counters.

Table 29: Cisco H.323

| Counters | Counter Description |
|-------------------------------------|--|
| CallsActive | This counter represents the number of streaming connections that are currently active (in use) on the configured H.323 device; in other words, the number of calls that actually have a voice path that is connected. |
| CallsAttempted | This counter represents the total number of calls that have been attempted on a device, including both successful and unsuccessful call attempts. |
| CallsCompleted | This counter represents the total number of successful calls that were made from a device. |
| CallsInProgress | This counter represents the number of calls that are currently in progress on a device. |
| CallsRejectedDueToICTCallThrottling | This counter represents the total number of calls rejected due to Intercluster Trunk (ICT) call throttling since the start of the CiscoCallManager service. When the system reaches a threshold limit of 140 calls per 5 seconds, ICT will start throttling (rejecting) new calls. One cause for ICT call throttling occurs when calls across an ICT enter a route loop condition. |

| Counters | Counter Description |
|---------------------|--|
| VideoCallsActive | This counter represents the number of video calls with video streaming connections that are currently active (in use) on all H.323 trunks that are registered with a Unified Communications Manager; in other words, the number of calls that actually have video-streaming connections on a Unified Communications Manager. |
| VideoCallsCompleted | This counter represents the number of video calls that were actually connected with video streams for all H.323 trunks that were registered with a Unified Communications Manager. This number increases when the call terminates. |

Cisco Hunt Lists

The Cisco Hunt Lists object provides information about the hunt lists that are defined in Cisco Unified Communications Manager Administration. The following table contains information about Cisco hunt list counters.

Table 30: Cisco Hunt Lists

| Counters | Counter Description |
|-------------------|--|
| CallsAbandoned | This counter represents the number of abandoned calls that occurred through a hunt list. An abandoned call represents one in which a caller hangs up before the call is answered. |
| CallsActive | This counter represents the number of calls that are currently active (in use) that occurred through a hunt list. An active call represents one that gets distributed and answered, and to which a voice path connects. |
| CallsBusyAttempts | This counter represents the number of times that calls through a hunt list were attempted when all members of the line and/or route groups were busy. |
| CallsInProgress | This counter represents the number of calls that are currently in progress through a hunt list. A call in progress represents one that the call distributor is attempting to extend to a member of a line or route group and that has not yet been answered. Examples of a hunt list member include a line, a station device, a trunk device, or a port/channel of a trunk device. |
| CallsRingNoAnswer | This counter represents the total number of calls through a hunt list that rang but that called parties did not answer. |

| Counters | Counter Description |
|-------------------|---|
| HuntListInService | This counter specifies whether the particular hunt list is currently in service. A value of 0 indicates that the hunt list is out of service; a value of 1 indicates that the hunt list is in service. Reasons that a hunt list could be out of service include the hunt list is not running on a primary Unified Communications Manager based on its Unified Communications Manager Group or the hunt list has been disabled in Cisco Unified Communications Manager Administration. |
| MembersAvailable | This counter represents the total number of available or idle members of line and route groups that belong to an in-service hunt list. An available member currently handles a call and will accept a new call. An idle member does not handle any call and will accept a new call. A hunt list member can comprise a route group, line group, or a combination. A member of a line group represents a directory number of a line on an IP phone or a voice-mail port. A member of a route group represents a station gateway, a trunk gateway, or port/channel of a trunk gateway. |

Cisco HW Conference Bridge Device

The Cisco HW Conference Bridge Device object provides information about registered Cisco hardware conference bridge devices. The following table contains information about Cisco hardware conference bridge device counters.

Table 31: Cisco HW Conference Bridge Device

| Counters | Counter Description |
|-----------------------|---|
| HWConferenceActive | This counter represents the number of conferences that are currently active (in use) on a HW conference bridge device. One resource represents one stream. |
| HWConferenceCompleted | This counter represents the total number of conferences that have been allocated and released on a HW conference device. A conference starts when the first call connects to the bridge. The conference completes when the last call disconnects from the bridge. |
| OutOfResources | This counter represents the total number of times that an attempt was made to allocate a conference resource from a HW conference device and failed, for example, because all resources were already in use. |

| Counters | Counter Description |
|-------------------|--|
| ResourceActive | This counter represents the number of resources that are currently in use (active) for this HW conference device. One resource represents one stream. |
| ResourceAvailable | This counter represents the total number of resources that are not active and are still available to be used now for a HW conference device. One resource represents one stream. |
| ResourceTotal | This counter represents the total number of resources for a HW conference bridge device. This counter equals the sum of the counters ResourceAvailable and ResourceActive. One resource represents one stream. |

Cisco IP Manager Assistant

The Cisco IP Manager Assistant (IPMA) Service object provides information about the Cisco Unified Communications Manager Assistant application. The following table contains information on Cisco IPMA counters.

Table 32: Cisco IP Manager Assistant Service

| Counters | Counter Description |
|------------------|---|
| AssistantsActive | This counter represents the number of assistant consoles that are currently active. An active assistant console exists when an assistant is logged in from the assistant console desktop application. |
| LinesOpen | This counter represents the number of phone lines that the Cisco Unified Communications Manager Assistant application opened. An open phone line exists when the application assumes line control from CTI. |
| ManagersActive | This counter represents the current number of managers that the Cisco IPMA is servicing. |
| SessionsCurrent | This counter represents the total number of managers assistants that are currently using the Cisco Unified Communications Manager Assistant application. Each manager and each assistant constitute an active session; so, for one manager/assistant pair, this counter would reflect two sessions. |

Cisco LBM service

The Cisco LBM service object provides information about LBM service that is defined in Unified Communications Manager. The following table contains information on Cisco LBM service counters.

Table 33: Cisco LBM service

| Counters | Counter Description |
|---------------------------------|---|
| Is Hub[1] or Spoke[0] | This counter represents the state of Location Bandwidth Manager. Spoke state is represented by 0 and hub state with a value of 1. |
| LocalHubNodesConnected | This counter represents the number of local hub nodes connected. |
| LocalSpokesNodesConnected | This counter represents the number of local spoke nodes connected. |
| RemoteHubNodesConnectedInsecure | This counter represents the number of insecure remote hub nodes connected. |
| RemoteHubNodesConnectedSecure | This counter represents the number of secure remote hub nodes connected. |

Cisco Lines

The Cisco Lines object represents the number of Cisco lines (directory numbers) that can dial and connect to a device. Lines represent all directory numbers that terminate on an endpoint. The directory number that is assigned to it identifies the line. The Cisco Lines object does not include directory numbers that include wildcards such as a pattern for a Digital or Analog Access gateway.

The Active counter represents the state of the line, either active or not active. A zero indicates that the line is not in use. When the number is greater than zero, this indicates that the line is active, and the number represents the number of calls that are currently in progress on that line. If more than one call is active, this indicates that the call is on hold either because of being placed on hold specifically (user hold) or because of a network hold operation (for example, a transfer is in progress, and it is on transfer hold). This applies to all directory numbers that are assigned to any device.

Cisco Locations LBM

The Cisco Location LBM object provides information about locations that are defined in Unified Communications Manager clusters. The following table contains information on Cisco location counters.

Table 34: Cisco Locations LBM

| Counters | Counter Description |
|--------------------|---|
| BandwidthAvailable | This counter represents the current audio bandwidth in a location or a link between two locations. A value of 0 indicates that no audio bandwidth is available. |

| Counters | Counter Description |
|---|---|
| BandwidthMaximum | This counter represents the maximum audio bandwidth that is available in a location or a link between two locations. A value of 0 indicates that no audio bandwidth is available. |
| BandwidthOversubscription | This represents the current oversubscribed audio bandwidth in a location or link between two locations. A value of zero indicates no bandwidth oversubscription. |
| CallsInProgress | This counter represents the number of calls that are currently in progress on a particular Cisco Location Bandwidth Manager. |
| ImmersiveOutOfResources | This represents the total number of failed immersive video call bandwidth reservations associated with a location or a link between two locations due to lack of immersive video bandwidth. |
| ImmersiveVideoBandwidthAvailable | This counter represents the maximum bandwidth that is available for video in a location or a link between two locations. A value of 0 indicates that no bandwidth is allocated for video. |
| ImmersiveVideoBandwidthMaximum | This counter represents the bandwidth that is currently available for video in a location or a link between two locations. A value of 0 indicates that no bandwidth is available. |
| ImmersiveVideoBandwidthOversubscription | This represents the current immersive video oversubscribed bandwidth in a location or link between two locations. A value of zero indicates no bandwidth oversubscription. |
| OutOfResources | This counter represents the total number of failed audio call bandwidth reservations associated with a given location or a link between two locations due to lack of audio bandwidth. |
| VideoBandwidthAvailable | This counter represents the bandwidth that is currently available for video in a location or a link between two locations. A value of 0 indicates that no bandwidth is available. |
| VideoBandwidthMaximum | This counter represents the maximum bandwidth that is available for video in a location and a link between two locations. A value of 0 indicates that no bandwidth is allocated for video. |

| Counters | Counter Description |
|-----------------------|---|
| VideoOversubscription | This represents the current video oversubscribed bandwidth amount in a location and a link between two locations. A value of zero indicates no bandwidth oversubscription. |
| VideoOutOfResources | This counter represents the total number of failed video call bandwidth reservations associated with a given location or a link between two locations due to lack of video bandwidth. |

Cisco Locations RSVP

The Cisco Location RSVP object provides information about RSVP that is defined in Unified Communications Manager. The following table contains information on Cisco location RSVP counters.

Table 35: Cisco Locations RSVP

| Counters | Counter Description |
|-------------------------------------|--|
| RSVP AudioReservationErrorCounts | This counter represents the number of RSVP reservation errors in the audio stream. |
| RSVP MandatoryConnectionsInProgress | This counter represents the number of connections with mandatory RSVP that are in progress. |
| RSVP OptionalConnectionsInProgress | This counter represents the number of connections with optional RSVP that are in progress. |
| RSVP TotalCallsFailed | This counter represents the number of total calls that failed due to a RSVP reservation failure. |
| RSVP VideoCallsFailed | This counter represents the number of video calls that failed due to a RSVP reservation failure. |
| RSVP VideoReservationErrorCounts | This counter represents the number of RSVP reservation errors in the video stream |

Cisco Media Streaming Application

The Cisco IP Voice Media Streaming Application object provides information about the registered MTPs, MOH servers, conference bridge servers, and annunciators. The following table contains information on Cisco IP Voice Media Streaming Application counters.

Note One object exists for each Unified Communications Manager in the Unified Communications Manager group that is associated with the device pool that the annunciator device is configured to use.

Table 36: Cisco Media Streaming Application

| Counter | Counter Description |
|----------------------|---|
| ANNConnectionsLost | This counter represents the total number of times since the last restart of the Cisco IP Voice Media Streaming Application that a Unified Communications Manager connection was lost. |
| ANNConnectionState | For each Unified Communications Manager that is associated with an annunciator, this counter represents the current registration state to Unified Communications Manager; 0 indicates no registration to Unified Communications Manager; 1 indicates registration to the primary Unified Communications Manager; 2 indicates connection to the secondary Unified Communications Manager (connected to Unified Communications Manager but not registered until the primary Unified Communications Manager connection fails). |
| ANNConnectionsTotal | This counter represents the total number of annunciator instances that have been started since the Cisco IP Voice Media Streaming Application service started. |
| ANNInstancesActive | This counter represents the number of actively playing (currently in use) announcements. |
| ANNStreamsActive | This counter represents the total number of currently active simplex (one direction) streams for all connections. Each stream direction counts as one stream. One internal stream provides the audio input and another output stream to the endpoint device. |
| ANNStreamsAvailable | This counter represents the remaining number of streams that are allocated for the annunciator device that are available for use. This counter starts as 2 multiplied by the number of configured connections (defined in the Cisco IP Voice Media Streaming App service parameter for the Annunciator, Call Count) and is reduced by one for each active stream that started. |
| ANNStreamsTotal | This counter represents the total number of simplex (one direction) streams that connected to the annunciator device since the Cisco IP Voice Media Streaming Application service started. |
| CFBConferencesActive | This counter represents the number of active (currently in use) conferences. |

| Counter | Counter Description |
|---------------------|---|
| CFBConferencesTotal | This counter represents the total number of conferences that started since the Cisco IP Voice Media Streaming Application service started. |
| CFBConnectionsLost | This counter represents the total number of times since the last restart of the Cisco IP Voice Media Streaming Application that a Unified Communications Manager connection was lost. |
| CFBConnectionState | For each Unified Communications Manager that is associated with a SW Conference Bridge, this counter represents the current registration state to Unified Communications Manager; 0 indicates no registration to Unified Communications Manager; 1 indicates registration to the primary Unified Communications Manager; 2 indicates connection to the secondary Unified Communications Manager (connected to Unified Communications Manager but not registered until the primary Unified Communications Manager connection fails). |
| CFBStreamsActive | This counter represents the total number of currently active simplex (one direction) streams for all conferences. Each stream direction counts as one stream. In a three-party conference, the number of active streams equals 6. |
| CFBStreamsAvailable | This counter represents the remaining number of streams that are allocated for the conference bridge that are available for use. This counter starts as 2 multiplied by the number of configured connections (defined in the Cisco IP Voice Media Streaming App service parameter for Conference Bridge, Call Count) and is reduced by one for each active stream started. |
| CFBStreamsTotal | This counter represents the total number of simplex (one direction) streams that connected to the conference bridge since the Cisco IP Voice Media Streaming Application service started. |

| Counter | Counter Description |
|-----------------------|--|
| MOHAudioSourcesActive | <p>This counter represents the number of active (currently in use) audio sources for this MOH server. Some of these audio sources may not be actively streaming audio data if no devices are listening. The exception exists for multicast audio sources, which will always be streaming audio.</p> <p>When an audio source is in use, even after the listener has disconnected, this counter will always have one input stream for each configured MOH codec. For unicast streams, the stream may exist in a suspended state where no audio data is received until a device connects to listen to the stream. Each MOH multicast resource uses one stream for each audio source and codec combination. For example, if the default audio source is configured for multicast, G.711 mu-law and wideband codecs, then two streams get used (default audio source + G.711 mu-law and default audio source + wideband).</p> |
| MOHConnectionsLost | <p>This counter represents the total number of times since the last restart of the Cisco IP Voice Media Streaming Application that a Unified Communications Manager connection was lost.</p> |
| MOHConnectionState | <p>For each Unified Communications Manager that is associated with an MOH, this counter represents the current registration state to Unified Communications Manager; 0 indicates no registration to Unified Communications Manager; 1 indicates registration to the primary Unified Communications Manager; 2 indicates connection to the secondary Unified Communications Manager (connected to Unified Communications Manager but not registered until the primary Unified Communications Manager connection fails).</p> |

| Counter | Counter Description |
|---------------------|---|
| MOHStreamsActive | <p>This counter represents the total number of active (currently in use) simplex (one direction) streams for all connections. One output stream exists for each device that is listening to a unicast audio source, and one input stream exists for each active audio source, multiplied by the number of MOH codecs.</p> <p>When an audio source has been used once, it will always have one input stream for each configured MOH codec. For unicast streams, the stream may exist in a suspended state where no audio data is received until a device connects to listen to the stream. Each MOH multicast resource uses one stream for each audio source and codec combination. For example, if the default audio source is configured for multicast, G.711 mu-law and wideband codecs, then two streams get used (default audio source + G.711 mu-law and default audio source + wideband).</p> |
| MOHStreamsAvailable | <p>This counter represents the remaining number of streams that are allocated for the MOH device that are available for use. This counter starts as 408 plus the number of configured half-duplex unicast connections and is reduced by 1 for each active stream that started. The counter gets reduced by 2 for each multicast audio source, multiplied by the number of MOH codecs that are configured. The counter gets reduced by 1 for each unicast audio source, multiplied by the number of MOH codecs configured.</p> |
| MOHStreamsTotal | <p>This counter represents the total number of simplex (one direction) streams that have connected to the MOH server since the Cisco IP Voice Media Streaming Application service started.</p> |
| MTPConnectionsLost | <p>This counter represents the total number of times since the last restart of the Cisco IP Voice Streaming Application that a Unified Communications Manager connection was lost.</p> |
| MTPConnectionState | <p>For each Unified Communications Manager that is associated with an MTP, this counter represents the current registration state to Unified Communications Manager; 0 indicates no registration to Unified Communications Manager; 1 indicates registration to the primary Unified Communications Manager; 2 indicates connection to the secondary Unified Communications Manager (connected to Unified Communications Manager but not registered until the primary Unified Communications Manager connection fails).</p> |

| Counter | Counter Description |
|---------------------|---|
| MTPConnectionsTotal | This counter represents the total number of MTP instances that have been started since the Cisco IP Voice Media Streaming Application service started. |
| MTPInstancesActive | This counter represents the number of active (currently in use) instances of MTP. |
| MTPStreamsActive | This counter represents the total number of currently active simplex (one direction) streams for all connections. Each stream direction counts as one stream. |
| MTPStreamsAvailable | This counter represents the remaining number of streams that are allocated for the MTP device that are available for use. This counter starts as 2 multiplied by the number of configured connections (defined in the Cisco IP Voice Media Streaming App service parameter for MTP, Call Count) and is reduced by one for each active stream started. |
| MTPStreamsTotal | This counter represents the total number of simplex (one direction) streams that connected to the MTP device since the Cisco IP Voice Media Streaming Application service started. |
| IVRInstancesActive | This represents the number of current active interactive voice responses. |
| IVRStreamsActive | This represents the total number of current active simplex (one direction) stream for all connections. Each stream direction counts as one stream. There is one internal stream providing the audio input and another output stream to the endpoint device. |
| IVRStreamsAvailable | This represents the remaining number of streams allocated for the IVR device that are available for use. This counter starts as 3 multiplied by the number of configured connections (defined in the Cisco IP Voice Media Streaming App service parameter for the IVR, Call Count) and is reduced by one for each active stream started. |
| IVRConnectionsTotal | This represents the total number of IVR instances that have been started since the Cisco IP Voice Media Streaming Application service started. |
| IVRStreamsTotal | This represents the total number of simplex (one direction) streams that have been connected to the IVR device since the Cisco IP Voice Media Streaming Application service started. |

| Counter | Counter Description |
|--------------------|---|
| IVRConnectionsLost | This represents the total number of times the Unified Communications Manager connection was lost, since the last restart of the Cisco IP Voice Media Streaming Application. |
| IVRErrors | This represents the total number of times the IVR failed to play, since the last restart of the Cisco IP Voice Media Streaming Application. |

Cisco Messaging Interface

The Cisco Messaging Interface object provides information about the Cisco Messaging Interface (CMI) service. The following table contains information on Cisco Messaging Interface (CMI) counters.

Table 37: Cisco Messaging Interface

| Counters | Counter Description |
|--------------------------------|--|
| HeartBeat | This counter represents the heartbeat of the CMI service. This incremental count indicates that the CMI service is up and running. If the count does not increase (increment), the CMI service is down. |
| SMDIMessageCountInbound | This counter represents the running count of inbound SMDI messages since the last restart of the CMI service. |
| SMDIMessageCountInbound24Hour | This counter represents the rolling count of inbound SMDI messages in the last 24 hours. |
| SMDIMessageCountOutbound | This counter represents the running count of outbound SMDI messages since the last restart of the CMI service. |
| SMDIMessageCountOutbound24Hour | This counter represents the rolling count of outbound SMDI messages in the last 24 hours. |
| StartTime | This counter represents the time in milliseconds when the CMI service started. The real-time clock in the computer, which simply acts as a reference point that indicates the current time and the time that has elapsed, in milliseconds, since the service started, provides the basis for this time. The reference point specifies midnight, January 1, 1970. |

Cisco MGCP BRI Device

The Cisco Media Gateway Control Protocol (MGCP) Foreign Exchange Office (FXO) Device object provides information about registered Cisco MGCP BRI devices. The following table contains information on CiscoMGCP BRI device counters.

Table 38: Cisco MGCP BRI Device

| Counters | Counter Description |
|----------------------|---|
| CallsCompleted | This counter represents the total number of successful calls that were made from this MGCP Basic Rate Interface (BRI) device |
| Channel 1 Status | This counter represents the status of the indicated B-Channel that is associated with the MGCP BRI device. Possible values: 0 (Unknown) indicates the status of the channel could not be determined; 1 (Out of service) indicates that this channel is not available for use; 2 (Idle) indicates that this channel has no active call and is ready for use; 3 (Busy) indicates an active call on this channel; 4 (Reserved) indicates that this channel has been reserved for use as a D-channel or for use as a Synch-Channel for BRI. |
| Channel 2 Status | This counter represents the status of the indicated B-Channel that is associated with the MGCP BRI device. Possible values: 0 (Unknown) indicates the status of the channel could not be determined; 1 (Out of service) indicates that this channel is not available for use; 2 (Idle) indicates that this channel has no active call and is ready for use; 3 (Busy) indicates an active call on this channel; 4 (Reserved) indicates that this channel has been reserved for use as a D-channel or for use as a Synch-Channel for BRI. |
| DatalinkInService | This counter represents the state of the Data Link (D-Channel) on the corresponding digital access gateway. This value will get set to 1 (one) if the Data Link is up (in service) or 0 (zero) if the Data Link is down (out of service). |
| OutboundBusyAttempts | This counter represents the total number of times that a call through this MGCP BRI device was attempted when no voice channels are available. |

Cisco MGCP FXO Device

The Cisco Media Gateway Control Protocol (MGCP) Foreign Exchange Office (FXO) Device object provides information about registered Cisco MGCP FXO devices. The following table contains information on CiscoMGCP FXO device counters.

Table 39: Cisco MGCP FXO Device

| Counters | Counter Description |
|----------------------|---|
| CallsCompleted | This counter represents the total number of successful calls that were made from the port on an MGCP FXO device. |
| OutboundBusyAttempts | This counter represents the total number of times that a call through the port on this MGCP FXO device was attempted when no voice channels were available. |
| PortStatus | This counter represents the status of the FXO port associated with this MGCP FXO device. |

Cisco MGCP FXS Device

The Cisco MGCP Foreign Exchange Station (FXS) Device object provides information about registered Cisco MGCP FXS devices. One instance of this object gets created for each port on a Cisco Catalyst 6000 24 port FXS Analog Interface Module gateway. For example, a fully configured Catalyst 6000 Analog Interface Module would represent 24 separate instances of this object. The following table contains information on CiscoMGCP FXS device counters.

Table 40: Cisco MGCP FXS Device

| Counters | Counter Description |
|----------------------|---|
| CallsCompleted | This counter represents the total number of successful calls that were made from this port on the MGCP FXS device. |
| OutboundBusyAttempts | This counter represents the total number of times that a call through this port on the MGCP FXS device was attempted when no voice channels were available. |
| PortStatus | This counter represents the status of the FXS port that is associated with a MGCP FXS device. |

Cisco MGCP Gateways

The Cisco MGCP Gateways object provides information about registered MGCP gateways. The following table contains information on CiscoMGCP gateway counters.

Table 41: Cisco MGCP Gateways

| Counters | Counter Description |
|------------------|---|
| BRChannelsActive | This counter represents the number of BRI voice channels that are currently active in a call in the gateway |

| Counters | Counter Description |
|-------------------|---|
| BRISpansInService | This counter represents the number of BRI spans that are currently available for use in the gateway. |
| FXOPortsActive | This counter represents the number of FXO ports that are currently active in a call in the gateway. |
| FXOPortsInService | This counter represents the number of FXO ports that are currently available for use in the gateway. |
| FXSPortsActive | This counter represents the number of FXS ports that are currently active in a call in the gateway. |
| FXSPortsInService | This counter represents the number of FXS ports that are currently available for use in the gateway. |
| PRChannelsActive | This counter represents the number of PRI voice channels that are currently active in a call in the gateway. |
| PRISpansInService | This counter represents the number of PRI spans that are currently available for use in the gateway. |
| T1ChannelsActive | This counter represents the number of T1 CAS voice channels that are currently active in a call in the gateway. |
| T1SpansInService | This counter represents the number of T1 CAS spans that are currently available for use in the gateway. |

Cisco MGCP PRI Device

The Cisco MGCP Primary Rate Interface (PRI) Device object provides information about registered Cisco MGCP PRI devices. The following table contains information on CiscoMGCP PRI device counters.

Table 42: Cisco MGCP PRI Device

| Counters | Counter Description |
|----------------|---|
| CallsActive | This counter represents the number of calls that are currently active (in use) on this MGCP PRI device. |
| CallsCompleted | This counter represents the total number of successful calls that were made from this MGCP PRI device. |

| Counters | Counter Description |
|---|--|
| Channel 1 Status through Channel 15 Status (consecutively numbered) | This counter represents the status of the indicated B-Channel that is associated with a MGCP PRI device. Possible values: 0 (Unknown) indicates that the status of the channel could not be determined; 1 (Out of service) indicates that this channel is not available for use; 2 (Idle) indicates that this channel has no active call and is ready for use; 3 (Busy) indicates that an active call exists on this channel; 4 (Reserved) indicates that this channel has been reserved for use as a D-Channel or for use as a Synch-Channel for E-1. |
| Channel 16 Status | This counter represents the status of the indicated B-Channel that is associated with a MGCP PRI Device. Possible values: 0-Unknown, 1-Out of service, 2-Idle, 3-Busy, 4-Reserved, for an E1 PRI Interface, this channel is reserved for use as a D-Channel. |
| Channel 17 Status through Channel 31 Status (consecutively numbered) | This counter represents the status of the indicated B-Channel that is associated with the MGCP PRI Device. 0-Unknown, 1-Out of service, 2-Idle, 3-Busy, 4-Reserved. |
| DatalinkInService | This counter represents the state of the Data Link (D-Channel) on the corresponding digital access gateway. This value will be set to 1 (one) if the Data Link is up (in service) or 0 (zero) if the Data Link is down (out of service). |
| OutboundBusyAttempts | This counter represents the total number of times that a call through an MGCP PRI device was attempted when no voice channels were available. |

Cisco MGCP T1 CAS Device

The Cisco MGCP T1 Channel Associated Signaling (CAS) Device object provides information about registered Cisco MGCP T1 CAS devices. The following table contains information on CiscoMGCP T1 CAS device counters.

Table 43: Cisco MGCP T1 CAS Device

| Counters | Counter Description |
|----------------|--|
| CallsActive | This counter represents the number of calls that are currently active (in use) on this MGCP T1 CAS device. |
| CallsCompleted | This counter represents the total number of successful calls that were made from this MGCP T1 CAS device. |

| Counters | Counter Description |
|--|---|
| Channel 1 Status through Channel 24 Status (consecutively numbered) | This counter represents the status of the indicated B-Channel that is associated with an MGCP T1 CAS device. Possible values: 0 (Unknown) indicates the status of the channel could not be determined; 1 (Out of service) indicates that this channel is not available for use; 2 (Idle) indicates that this channel has no active call and is ready for use; 3 (Busy) indicates that an active call exists on this channel; 4 (Reserved) indicates that this channel has been reserved for use as a D-Channel or for use as a Synch-Channel for E-1. |
| OutboundBusyAttempts | This counter represents the total number of times that a call through the MGCP T1 CAS device was attempted when no voice channels were available. |

Cisco Mobility Manager

The Cisco Mobility Manager object provides information on registered Cisco Unified Mobility Manager devices. The following table contains information on Cisco Unified Mobility Manager device counters.

Table 44: Cisco Mobility Manager

| Counters | Counter Description |
|------------------------|---|
| MobileCallsAnchored | This counter represents the total number of paths that are associated with single-mode/dual-mode phone call that is currently anchored on a Unified Communications Manager. Call anchoring occurs when a call enters an enterprise gateway and connects to a mobility application that then uses redirection to send the call back out an enterprise gateway. For example, this counter increments twice for a dual-mode phone-to-dual-mode phone call: once for the originating call and once for the terminating call. When the call terminates, this counter decrements accordingly. |
| MobilityHandinsAborted | This counter represents the total number of aborted handins. |
| MobileHandinsCompleted | This counter represents the total number of handins that were completed by dual-mode phones. A completed handin occurs when the call successfully connects in the enterprise network and the phone moves from WAN to WLAN. |
| MobilityHandinsFailed | This counter represents the total number of handins (calls on mobile devices that move from cellular to the wireless network) that failed. |

| Counters | Counter Description |
|--|--|
| MobilityHandoutsAborted | This counter represents the total number of aborted handouts. |
| MobileHandoutsCompleted | This counter represents the total number of handouts (calls on mobile devices that move from the enterprise WLAN network to the cellular network) that were completed. A completed handout occurs when the call successfully connects. |
| MobileHandoutsFailed | This counter represents the total number of handouts (calls on mobile devices that move from cellular to the wireless network) that failed. |
| MobilityFollowMeCallsAttempted | This counter represents the total number of follow-me calls that were attempted. |
| MobilityFollowMeCallsIgnoredDueToAnswerTooSoon | This counter represents the total number of follow-me calls that were ignored before the AnswerTooSoon timer went off. |
| MobilityIVRCallsAttempted | This counter represents the total number of attempted IVR calls. |
| MobilityIVRCallsFailed | This counter represents the total number of failed IVR calls. |
| MobilityIVRCallsSucceeded | This counter represents the total number of successful IVR calls. |
| MobilitySCCPDualModeRegistered | This counter represents the total number of dual-mode SCCP devices that are registered. |
| MobilitySIPDualModeRegistered | This counter represents the total number of dual-mode SIP devices that are registered. |

Cisco Music On Hold (MOH) Device

The Cisco Music On Hold (MOH) Device object provides information about registered Cisco MOH devices. The following table contains information on CiscoMOH device counters.

Table 45: Cisco MOH Device

| Counters | Counter Description |
|---------------------------|---|
| MOHHighestActiveResources | This counter represents the largest number of simultaneously active MOH connections for an MOH server. This number includes both multicast and unicast connections. |

| Counters | Counter Description |
|-------------------------------|---|
| MOHMulticastResourceActive | <p>This counter represents the number of currently active multicast connections to multicast addresses that are served by an MOH server.</p> <p>Each MOH multicast resource uses one stream for each audio source and codec combination. For example, if the default audio source is configured for multicast, G.711 mu-law and wideband codecs, two streams get used (default audio source + G.711 mu-law and default audio source + wideband).</p> |
| MOHMulticastResourceAvailable | <p>This counter represents the number of multicast MOH connections to multicast addresses that are served by an MOH server that are not active and are still available to be used now for the MOH server.</p> <p>Each MOH multicast resource uses one stream for each audio source and codec combination. For example, if the default audio source is configured for multicast, G.711 mu-law and wideband codecs, two streams get used (default audio source + G.711 mu-law and default audio source + wideband).</p> |
| MOHOutOfResources | <p>This counter represents the total number of times that the Media Resource Manager attempted to allocate an MOH resource when all available resources on all MOH servers that are registered with a Unified Communications Manager were already active.</p> |
| MOHTotalMulticastResources | <p>This counter represents the total number of multicast MOH connections that are allowed to multicast addresses that are served by an MOH server.</p> <p>Each MOH multicast resource uses one stream for each audio source and codec combination. For example, if the default audio source is configured for multicast, G.711 mu-law and wideband codecs, two streams get used (default audio source + G.711 mu-law and default audio source + wideband).</p> |
| MOHTotalUnicastResources | <p>This counter represents the total number of unicast MOH connections that are allowed by an MOH server.</p> <p>Each MOH unicast resource uses one stream.</p> |
| MOHUnicastResourceActive | <p>This counter represents the number of active unicast MOH connections to an MOH server.</p> <p>Each MOH unicast resource uses one stream.</p> |

| Counters | Counter Description |
|-----------------------------|---|
| MOHUnicastResourceAvailable | This counter represents the number of unicast MOH connections that are not active and are still available to be used now for an MOH server. Each MOH unicast resource uses one stream. |

Cisco MTP Device

The Cisco Media Termination Point (MTP) Device object provides information about registered Cisco MTP devices. The following table contains information on CiscoMTP device counters.

Table 46: Cisco MTP Device

| Counters | Counter Description |
|-------------------|---|
| OutOfResources | This counter represents the total number of times that an attempt was made to allocate an MTP resource from an MTP device and failed; for example, because all resources were already in use. |
| ResourceActive | This counter represents the number of MTP resources that are currently in use (active) for an MTP device. Each MTP resource uses two streams. An MTP in use represents one MTP resource that has been allocated for use in a call. |
| ResourceAvailable | This counter represents the total number of MTP resources that are not active and are still available to be used now for an MTP device. Each MTP resource uses two streams. An MTP in use represents one MTP resource that has been allocated for use in a call. |
| ResourceTotal | This counter represents the total number of MTP resources that an MTP device provides. This counter equals the sum of the counters ResourceAvailable and ResourceActive. |

Cisco Phones

The Cisco Phones object provides information about the number of registered Cisco Unified IP Phones, including both hardware-based and other station devices.

The CallsAttempted counter represents the number of calls that have been attempted from this phone. This number increases each time that the phone goes off hook and on hook.

Cisco Presence Feature

The Cisco Presence object provides information about presence subscriptions, such as statistics that are related to the speed dial or call list Busy Lamp Field (BLF) subscriptions. The following table contains information on CiscoPresence feature.

Table 47: Cisco Presence

| Counters | Counter Description |
|--|--|
| ActiveCallListAndTrunkSubscriptions | This counter represents the active presence subscriptions for the call list feature as well as presence subscriptions through SIP trunk. |
| ActiveSubscriptions | This counter represents all active incoming and outgoing presence subscriptions. |
| CallListAndTrunkSubscriptionsThrottled | This counter represents the cumulative number of rejected call list and trunk side presence subscriptions due to throttling for the call list feature. |
| IncomingLineSideSubscriptions | This counter represents the cumulative number of presence subscriptions that were received on the line side. |
| IncomingTrunkSideSubscriptions | This counter represents the cumulative number of presence subscriptions that were received on the trunk side. |
| OutgoingTrunkSideSubscriptions | This counter represents the cumulative number of presence subscriptions that were sent on the trunk side. |

Cisco QSIG Feature

The Cisco QSIG Feature object provides information about the operation of various QSIG features, such as call diversion and path replacement. The following table contains information about the Cisco QSIG feature counters.

Table 48: Cisco QSIG Feature

| Counters | Counter Description |
|-------------------------------|---|
| CallForwardByRerouteCompleted | This counter represents the number of successful calls that has been forwarded by rerouting. Call forward by rerouting enables the path for a forwarded call to be optimized (minimizes the number of B-Channels in use) from the originator perspective. This counter resets when the CiscoCallManager service parameter Call Forward by Reroute Enabled is enabled or disabled, or when the Cisco CallManager Service restarts. |

| Counters | Counter Description |
|--------------------------|---|
| PathReplacementCompleted | This counter represents the number of successful path replacements that have occurred. Path replacement in a QSIG network optimizes the path between two edge PINX (PBXs) that are involved in a call. This counter resets when the CiscoCallManager service parameter Path Replacement Enabled is enabled or disabled, or when the Cisco CallManager Service restarts. |

Cisco Signaling Performance

The Cisco Signaling Performance object provides call-signaling data on transport communications on Unified Communications Manager. The following table contains information about the Cisco Signaling Performance counter.

Table 49: Cisco Signaling Performance

| Counters | Counter Description |
|---------------------|---|
| UDPPacketsThrottled | This counter represents the total number of incoming UDP packets that were throttled (dropped) because they exceeded the threshold for the number of incoming packets per second that is allowed from a single IP address. Configure the threshold via the SIP Station UDP Port Throttle Threshold and SIP Trunk UDP Port Throttle Threshold service parameters in Cisco Unified Communications Manager Administration. This counter increments for every throttled UDP packet that was received since the last restart of the Cisco CallManager Service. |

Cisco SIP

The Cisco Session Initiation Protocol (SIP) object provides information about configured SIP devices. The following table contains information on the CiscoSIP counters.

Table 50: Cisco SIP

| Counters | Counter Description |
|----------------|---|
| CallsActive | This counter represents the number of calls that are currently active (in use) on this SIP device. |
| CallsAttempted | This counter represents the number of calls that have been attempted on this SIP device, including the successful and unsuccessful call attempts. |

| Counters | Counter Description |
|---------------------|--|
| CallsCompleted | This counter represents the number of calls that were actually connected (a voice path was established) from a SIP device. This number increments when the call is terminated. |
| CallsInProgress | This counter represents the number of calls that are currently in progress on a SIP device, including all active calls. When all calls that are in progress are connected, the number of CallsInProgress equals the number of CallsActive. |
| VideoCallsActive | This counter represents the number of video calls with streaming video connections that are currently active (in use) on this SIP device. |
| VideoCallsCompleted | This counter represents the number of video calls that were actually connected with video streams for this SIP device. This number increments when the call is terminated. |

Cisco SIP Line Normalization

The Cisco SIP line normalization performance object contains counters that allow you to monitor aspects of the normalization script for SIP lines, including initialization errors, runtime errors, and script status. For SIP lines, each script has only one set of performance counters. This is true even if two endpoints share the same script. The following table contains information about the Cisco SIP line normalization counters.

| Display Names | Description |
|--------------------------|---|
| DeviceResetAutomatically | This counter indicates the number of times that Unified Communications Manager automatically resets the device (SIP phone). Automatic resets occur only if the value specified in Script Execution Error Recovery Action or System Resource Error Recovery Action field is set to Reset Device. This counter increments each time Unified Communications Manager automatically resets a device (SIP phone) due to an error. The count is restarted when the script is reset following a change to the script configuration. |

| Display Names | Description |
|----------------|--|
| ErrorExecution | <p>This counter indicates the number of execution errors that occur while the script executes. Execution errors can occur while a message handler executes. Execution errors can be caused by problems such as resource errors or an argument mismatch in a function call.</p> <p>When an execution error occurs, Unified Communications Manager performs the following actions:</p> <ul style="list-style-type: none"> • Automatically restores the message to the original content before applying additional error-handling actions. • Increments the value of the counter. • Takes appropriate action based on the configuration of the Script Execution Error Recovery Action and System Resource Error Recovery Action fields in Cisco Unified Communications Manager Administration. <p>Check the SIPNormalizationScriptError alarm for details, including the line number in the script that failed. Correct the script problem, upload the corrected script as needed, and reset the script by clicking the Reset button at the top of the script configuration page. The counter increments for each execution error since the last time the script was reset following a change to the script configuration. Both a script configuration change and a script reset must occur to restart the counter.</p> <p>If the counter continues to increment after you fix the script problem, examine the script again.</p> |
| ErrorInit | <p>This counter indicates the number of times a script error occurred after the script was successfully loaded into memory but failed to initialize in Unified Communications Manager. A script can fail to initialize due to resource errors, an argument mismatch in a function call, and so on.</p> <p>Check the SIPNormalizationScriptError alarm for details, including the line number in the script that failed. Correct the script problem, upload the corrected script if needed, and reset the script by clicking the Reset button at the top of the script configuration page. The counter for the script instance increments every time an initialization error occurs. This counter provides a count from the most recent script reset that was accompanied by a change to the script configuration. Both a script configuration change and a script reset must occur to restart the counter. If the counter continues to increment after you fix the script problem, examine the script again. When the error occurs during initialization, Unified Communications Manager automatically disables the script.</p> |
| ErrorInternal | <p>This counter indicates the number of internal errors that have occurred while the script executed. Internal errors are extremely rare. If the value in this counter is higher than zero, there is a defect in the system not related to the script content or execution. Collect SDI traces and contact the Technical Assistance Center (TAC).</p> |

| Display Names | Description |
|---------------|---|
| ErrorLoad | <p>This counter indicates the number of times that a script error occurred while the script loaded into memory in Unified Communications Manager.</p> <p>A script can fail to load due to memory issues or syntax errors; check the SIPNormalizationScriptError alarm for details such as the script line number where the syntax error exists, check the script for syntax errors, upload a corrected script if needed and reset the script by clicking the Reset button at the top of the script configuration page.</p> <p>The counter for the script instance increments for each load error since the last time the script was reset following a change to the script configuration. Both a script configuration change and a script reset must have occurred to restart the counter. If the counter continues to increment after you believe you have fixed the script problem, examine the script again.</p> |
| ErrorResource | <p>This counter indicates whether or not the script encountered a resource error.</p> <p>There are two kinds of resource errors: exceeding the value configured in the Memory Threshold field or exceeding the value configured in the Lua Instruction Threshold field. Both fields display in the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration. If either condition occurs, Unified Communications Manager immediately closes the script and issues the SIPNormalizationScriptError alarm.</p> <p>If a resource error occurs while the script loads or initializes, the script is disabled. If a resource error occurs during execution, the configured system resource error recovery action is taken as configured in the System Resource Error Recovery Action field on the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration.</p> |
| MemoryUsage | <p>This counter indicates the amount of memory, in bytes, that the script consumes based on the accumulation for all SIP phones using this script. This counter increases and decreases to match the amount of memory being utilized by the script. The count gets cleared when the script is closed (because a closed script consumes no memory) and restarts when the script is opened (enabled). A high number in this counter could indicate a resource problem. Check the MemoryUsagePercentage counter and check for a SIPNormalizationResourceWarning alarm, which occurs when the resource consumption exceeds an internally set threshold.</p> |

| Display Names | Description |
|----------------------------|---|
| MemoryUsagePercentage | <p>This counter indicates the percentage of the total amount of memory the script consumes based on the accumulation for all SIP phones using this script.</p> <p>The value in this counter is derived by dividing the value in the MemoryUsage counter by the value in the Memory Threshold field (in the SIP Normalization Script Configuration window) and multiplying that result by 100 to arrive at a percentage value.</p> <p>This counter increases and decreases in accordance with the MemoryUsage counter. This count is cleared when the script is closed (because closed scripts consume no memory) and restarts when the script is opened (enabled). When this counter reaches the internally controlled resource threshold, the SIPNormalizationResourceWarning alarm is issued.</p> |
| MessageRollback | <p>This counter indicates the number of times a message was not modified by the script due to an error while the script executes. This can occur only if the value in the Script Execution Error Recovery Action field is set to Message Rollback Only.</p> <p>When an execution error occurs, Unified Communications Manager automatically restores the message to the original contents prior to applying additional error-handling actions. If error handling specifies Rollback Only, no further action is taken beyond rolling back to the original message prior to the normalization attempt. For the other possible Script Execution Error Recovery Action settings, the action specified occurs after the message restores to the original contents.</p> |
| msgAddContentBody | <p>This counter indicates the number of times that the script adds a content body to the message. Assuming your message variable name is “msg”, if you are using the msg:addContentBody API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors.</p> |
| msgAddHeader | <p>This counter indicates the number of times that the script adds a SIP header to the message. Assuming your message variable name is “msg”, if you are using the msg:addHeader API in the script, this counter increases each time this API executes successfully. If the counter behavior is unexpected, examine the script logic for errors.</p> |
| msgAddHeaderUriParameter | <p>This counter indicates the number of times that the script adds a SIP header URI parameter to a SIP header in the message. Assuming your message variable name is “msg”, if you are using the msg:addHeaderUriParameter API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors.</p> |
| msgAddHeaderValueParameter | <p>This counter indicates the number of times that the script adds a SIP header value parameter to a SIP header in the message. Assuming your message variable name is “msg”, if you are using the msg:addHeaderValueParameter API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors.</p> |

| Display Names | Description |
|-------------------------|---|
| msgApplyNumberMask | This counter indicates the number of times that the script applies a number mask to a SIP header in the message. Assuming your message variable name is “msg”, if you are using the msg:applyNumberMask API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| msgBlock | This counter indicates the number of times that the script blocks a message. Assuming your message variable name is “msg”, if you are using the msg:block API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| msgConvertDiversiontoHI | This counter indicates the number of times that the script converts Diversion headers into History-Info headers in the message. Assuming your message variable name is “msg”, if you are using the msg:convertDiversionToHI API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| msgConvertHItoDiverion | This counter indicates the number of times that the script converts History-Info headers into Diversion headers in the message. Assuming your message variable name is “msg”, if you are using the msg:convertHItoDiversion API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| msgModifyHeader | This counter indicates the number of times that the script modifies a SIP header in the message. Assuming your message variable name is “msg”, if you are using the msg:modifyHeader API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| msgRemoveContentBody | This counter indicates the number of times that the script removes a content body from the message. Assuming your message variable name is “msg”, if you are using the msg:removeContentBody API in the script, this counter increases each time this API successfully executed. If the counter behavior is unexpected, examine the script logic for errors. |
| msgRemoveHeader | This counter indicates the number of times that the script removes a SIP header from the message. Assuming your message variable name is “msg”, if you are using the msg:removeHeader API in the script, this counter increases each time this API is successfully executed. If the counter behavior is unexpected, examine the script logic for errors. |
| msgRemoveHeaderValue | This counter indicates the number of times that the script removes a SIP header value from the message. Assuming your message variable name is “msg”, if you are using the msg:removeHeaderValue API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |

| Display Names | Description |
|---------------------------|--|
| msgRemoveUnreliableSdp | This counter indicates the number of times that the script removes SDP body from an unreliable 18x SIP message. Assuming your message variable name is “msg”, if you are using the msg:removeUnreliableSDP API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| msgSetRequestUri | This counter indicates the number of times that the script modifies the request URI in the message. Assuming your message variable name is “msg”, if you are using the msg:setRequestUri API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| msgSetResponseCode | This counter indicates the number of times that the script modifies the response code or response phrase in the message. Assuming your message variable name is “msg”, if you are using the msg:setResponseCode API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| msgSetSdp | This counter indicates the number of times that the script sets the SDP in the message. Assuming your message variable name is “msg”, if you are using the msg:setSdp API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| ptAddContentBody | This counter indicates the number of times that the script adds a content body to the PassThrough object. Assuming your PassThrough object name is “pt”, if you are using the pt:addContentBody API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| ptAddHeader | This counter indicates the number of times that the script adds a SIP header to the PassThrough object. Assuming your PassThrough object name is “pt”, if you are using the pt:addHeader API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| ptAddHeaderUriParameter | This counter indicates the number of times that the script adds a SIP header URI parameter to the PassThrough object. Assuming your PassThrough object name is “pt”, if you are using the pt:addHeaderUriParameter API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |
| ptAddHeaderValueParameter | This counter indicates the number of times that the script adds a SIP header value parameter to the PassThrough object. Assuming your PassThrough object name is “pt”, if you are using the pt:addHeaderValueParameter API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors. |

| Display Names | Description |
|-----------------------------|---|
| ptAddRequestUriParameter | <p>This counter indicates the number of times that the script adds a request URI parameter to the PassThrough object. Assuming your PassThrough object name is “pt”, if you are using the pt:addRequestUriParameter API in the script, this counter increases each time this API successfully executes. If the counter behavior is unexpected, examine the script logic for errors.</p> |
| ScriptActive | <p>This counter indicates whether the script is currently active (running on SIP phones). A value of 0 indicates that the script is closed (disabled). A value of 1 indicates that the script is open and operational.</p> <p>To open the script that should be running, check for any alarms that might indicate why the script is not open, correct any errors, upload a new script if necessary, and reset the script.</p> |
| ScriptClosed | <p>This counter indicates the number of times that Unified Communications Manager closes the script. When the script closes on one SIP phone, it can still be enabled on other SIP phones. Unified Communications Manager closes the script because the last SIP phone using this script was either reset manually, reset automatically (due to an error), or deleted. This count restarts when the script resets following a change to the script configuration and when Cisco CallManager restarts.</p> |
| ScriptDisabledAutomatically | <p>This counter indicates the number of times that the system automatically disables the script. The values that are specified in the Execution Error Recovery Action or System Resource Error Recovery Action field in the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration determine whether the script is disabled. Automatic script disable occurs if either of these fields are set to Disable Script. The script also gets disabled as a result of script error conditions that are encountered during loading and initialization.</p> <p>This counter provides a count from the most recent manual device reset that involves a script configuration change (a device reset alone does not restart the count; the script must also have changed before the reset occurs). The counter increments each time Unified Communications Manager automatically disables a script due because of script errors.</p> <p>If the number in this counter is higher than expected, perform the following steps:</p> <ul style="list-style-type: none"> • Check for a SIPNormalizationScriptError alarm and SIPNormalizationAutoResetDisabled alarm. • Check for any resource-related alarms and counters in RTMT to determine whether a resource issue is occurring. • Check for any unexpected SIP normalization events in the SDI trace files. |

| Display Names | Description |
|--------------------------|---|
| ScriptOpened | <p>This counter indicates the number of times that Unified Communications Manager attempts to open the script. For the script to open, it must load into memory in Unified Communications Manager, initialize, and be operational. A number greater than 1 in this counter means that Unified Communications Manager has made more than one attempt to open this script either for an expected reason or due to an error during loading or initialization. The error can occur due to execution errors or resource errors or invalid syntax in the script. Expect this counter to be greater than 1 if the ScriptResetAutomatically counter increments.</p> <p>If the number in this counter is higher than expected, perform the following steps:</p> <ul style="list-style-type: none"> • Check for alarms such as the SIPNormalizationScriptClosed, SIPNormalizationScriptError, or SIPNormalizationResourceWarning. • Check resource-related alarms and counters in RTMT to determine whether a resource issue is occurring. • Check for any unexpected SIP normalization events in the SDI trace files. <p>This count restarts when the script resets after a script configuration change and when Unified Communications Manager restarts.</p> |
| ScriptResetAutomatically | <p>This counter indicates the number of times that the system automatically resets the script. The script resets based on the values that are specified in the Script Execution Error Recovery Action and System Resource Error Recovery Action fields in the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration. Automatic resets can occur if the value in either of these fields is Reset Script.</p> <p>This counter specifies the number of times that the system automatically resets the script following the last time the script is reset after a change to the script configuration. The counter increments each time Unified Communications Manager automatically resets a script because of script errors.</p> <p>If the number in this counter is higher than expected, perform the following steps:</p> <ul style="list-style-type: none"> • Check for a SIPNormalizationScriptError alarm. • Check for any resource-related alarms and counters in RTMT to determine whether a resource issue is occurring. • Check for any unexpected SIP normalization events in the SDI trace files. |
| ScriptResetManually | <p>This counter indicates the number of times that the script manually resets in Cisco Unified Communications Manager Administration or by other methods, such as AXL, or a reset on the last SIP phone that used the script. This counter increments when a script is reset due to configuration changes. This counter restarts when the script is deleted, or when Cisco CallManager restarts.</p> |

Cisco SIP Normalization

The Cisco SIP Normalization performance object contains counters that allow you to monitor aspects of the normalization script, including initialization errors, runtime errors, and script status. Each device that has an associated script causes a new instance of these counters to be created. The following table contains Unified Communications Manager the CiscoSIP Normalization counters.

Table 51: Cisco SIP Normalization

| Display Name | Description |
|--------------------------|--|
| DeviceResetAutomatically | This counter indicates the number of times that Unified Communications Manager automatically resets the device (SIP trunk). The device reset is based on the values that are specified in the Script Execution Error Recovery Action and System Resource Error Recovery Action fields on the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration. When the device (SIP trunk) is reset due to script errors, the counter value increments. This count restarts when the device is reset manually. |
| DeviceResetManually | This counter indicates the number of times that the device (SIP trunk) is reset manually in Cisco Unified Communications Manager Administration or by other methods, such as AXL. When the device associated with a script is reset due to configuration changes, the counter value increments. The counter restarts in the following situations: <ul style="list-style-type: none"> • The SIP trunk is deleted. • The script on the trunk gets changed or deleted. • Unified Communications Manager restarts. |

| Display Name | Description |
|----------------|--|
| ErrorExecution | <p>This counter represents the number of execution errors that occurred while the script executed. Execution errors can occur while a message handler executes. Execution errors can be caused by resource errors, an argument mismatch in a function call, and so on.</p> <p>When an execution error occurs, Unified Communications Manager performs the following actions:</p> <ul style="list-style-type: none">• Automatically restores the message to the original content before applying additional error handling actions.• Increments the value of the counter.• Takes appropriate action based on the configuration of the Script Execution Error Recovery Action and System Resource Error Recovery Action fields in Cisco Unified Communications Manager Administration. <p>Check the SIPNormalizationScriptError alarm for details, including the line number in the script that failed. Correct the script problem, upload the corrected script as needed, and reset the trunk. This counter increments every time an execution error occurs. This counter provides a count from the most recent trunk reset that involved a script configuration change. (A device reset alone does not restart the count; the script configuration must also change before the reset occurs.)</p> <p>If the counter continues to increment after you fix the script problem, examine the script again.</p> |

| Display Name | Description |
|---------------|--|
| ErrorInit | <p>This counter represents the number of times a script error occurred after the script successfully loaded into memory, but failed to initialize in Unified Communications Manager. A script can fail to initialize due to resource errors, an argument mismatch in a function call, the expected table was not returned, and so on.</p> <p>Check the SIPNormalizationScriptError alarm for details, including the line number in the script that failed. Correct the script problem, upload the corrected script as needed, and reset the trunk. This counter increments every time an initialization error occurs. This counter provides a count from the most recent trunk reset that was accompanied by a script configuration change. (A device reset alone does not restart the count; the script configuration must also change before the reset occurs.) If the counter continues to increment after you fix the script problem, examine the script again. When the error occurs during initialization, Unified Communications Manager automatically disables the script.</p> |
| ErrorInternal | <p>This counter indicates the number of internal errors that occurred while the script executed. Internal errors are very rare. If the value in this counter is higher than zero, a defect exists in the system that is not related to the script content or execution. Collect SDI traces and contact the Technical Assistance Center (TAC).</p> |
| ErrorLoad | <p>This counter represents the number of times a script error occurred when the script loaded into memory in Unified Communications Manager. A script can fail to load due to memory issues or syntax errors.</p> <p>Check the SIPNormalizationScriptError alarm for details. Check the script syntax for errors, upload the corrected script as needed, and reset the trunk. This counter increments every time a load error occurs. This counter provides a count from the most recent trunk reset that was accompanied by a script configuration change. (A device reset alone will not restart the count; the script configuration must also change before the reset occurs.) If the counter continues to increment even after you fix the script problem, examine the script again.</p> |

| Display Name | Description |
|-----------------------|--|
| ErrorResource | <p>This counter indicates whether the script encountered a resource error.</p> <p>Two kinds of resource errors exist: exceeding the value in the Memory Threshold field and exceeding the value in the Lua Instruction Threshold field. (Both fields display on the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration.) If either condition occurs, Unified Communications Manager immediately closes the script and issues the SIPNormalizationScriptError alarm.</p> <p>If a resource error occurs while the script loads or initializes, the script is disabled. If a resource error occurs during execution, the configured system resource error recovery action is taken. (The setting of the System Resource Error Recovery Action field on the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration defines this action.)</p> |
| MemoryUsage | <p>This counter specifies the amount of memory, in bytes, that the script consumes. This counter increases and decreases to match the amount of memory that the script uses. This count gets cleared when the script closes (because a closed script does not consume memory) and restarts when the script opens (gets enabled). A high number in this counter indicates a resource problem. Check the MemoryUsagePercentage counter and the SIPNormalizationResourceWarning alarm, which occur when the resource consumption exceeds an internally set threshold.</p> |
| MemoryUsagePercentage | <p>This counter specifies the percentage of the total amount of memory that the script consumes.</p> <p>The value in this counter is derived by dividing the value in the MemoryUsage counter by the value in the Memory Threshold field (in the SIP Normalization Script Configuration window) and multiplying the result by 100 to arrive at a percentage.</p> <p>This counter increases and decreases in accordance with the MemoryUsage counter. This count gets cleared when the script closes (because closed scripts do not consume memory) and restarts when the script opens (gets enabled). When this counter reaches the internally controlled resource threshold, the SIPNormalizationResourceWarning alarm is issued.</p> |

| Display Name | Description |
|--------------------------|---|
| MessageRollback | <p>This counter indicates the number of times that the system automatically rolled back a message. The system rolls back the message by using the error handling that is specified in the Script Execution Error Recovery Action field in the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration.</p> <p>When an execution error occurs, Unified Communications Manager automatically restores the message to the original content before applying additional error handling actions. If error handling specifies Rollback only, no further action is taken beyond rolling back to the original message before the normalization attempt. For the other possible Script Execution Error Recovery Actions, message rollback always occurs first, followed by the specified action, such as disabling the script, resetting the script automatically, or resetting the trunk automatically.</p> |
| msgAddContentBody | <p>This counter represents the number of times that the script added a content body to the message. If you are using the msg:addContentBody API in the script, this counter increases each time that the msg:addContentBody API executes successfully. If the counter behavior is not as expected, examine the script logic for errors.</p> |
| msgAddHeader | <p>This counter represents the number of times that the script added a SIP header to the message. If you are using the msg:addHeader API in the script, this counter increases each time that the msg:addHeader API executes successfully. If the counter behavior is not as expected, examine the script logic for errors.</p> |
| msgAddHeaderUriParameter | <p>This counter represents the number of times that the script added a SIP header URI parameter to a SIP header in the message. If you are using the msg:addHeaderUriParameter API in the script, this counter increases each time that the msg:addHeaderUriParameter API executes successfully. If the counter behavior is not as expected, examine the script logic for errors.</p> |

| Display Name | Description |
|----------------------------|--|
| msgAddHeaderValueParameter | This counter represents the number of times that the script added a SIP header value parameter to a SIP header in the message. If you are using the msg:addHeaderValueParameter API in the script, this counter increases each time that the msg:addHeaderValueParameter API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgApplyNumberMask | This counter represents the number of times that the script applied a number mask to a SIP header in the message. If you are using the msg:applyNumberMask API in the script, this counter increases each time that the msg:applyNumberMask API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgBlock | This counter represents the number of times that the script blocked a message. If you are using the msg:block API in the script, this counter increases each time that the msg:block API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgConvertDiversionToHI | This counter represents the number of times that the script converted Diversion headers into History-Info headers in the message. If you are using the msg:convertDiversionToHI API in the script, this counter increases each time that the msg:convertDiversionToHI API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgConvertHIToDiversion | This counter represents the number of times that the script converted Diversion headers into History-Info headers in the message. If you are using the msg:convertDiversionToHI API in the script, this counter increases each time that the msg:convertDiversionToHI API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgModifyHeader | This counter represents the number of times that the script modified a SIP header in the message. If you are using the msg:modifyHeader API in the script, this counter increases each time that the msg:modifyHeader API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |

| Display Name | Description |
|----------------------|---|
| msgRemoveContentBody | This counter represents the number of times that the script removed a content body from the message. If you are using the msg:removeContentBody API in the script, this counter increases each time that the msg:removeContentBody API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgRemoveHeader | This counter represents the number of times that the script removed a SIP header from the message. If you are using the msg:removeHeader API in the script, this counter increases each time that the msg:removeHeader API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgRemoveHeaderValue | This counter represents the number of times that the script removed a SIP header value from the message. If you are using the msg:removeHeaderValue API in the script, this counter increases each time that the msg:removeHeaderValue API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgSetRequestUri | This counter represents the number of times that the script modified the request URI in the message. If you are using the msg:setRequestUri API in the script, this counter increases each time that the msg:setRequestUri API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgSetResponseCode | This counter represents the number of times that the script modified the response code and/or response phrase in the message. If you are using the msg:setResponseCode API in the script, this counter increases each time that the msg:setResponseCode API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| msgSetSdp | This counter represents the number of times that the script set the SDP in the message. If you are using the msg:setSdp API in the script, this counter increases each time that the msg:setSdp API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |

| Display Name | Description |
|---------------------------|--|
| ptAddContentBody | This counter represents the number of times that the script added a content body to the PassThrough (pt) object. If you are using the pt:addContentBody API in the script, this counter increases each time that the pt:addContentBody API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| ptAddHeader | This counter represents the number of times that the script added a SIP header to the PassThrough (pt) object. If you are using the pt:addHeader API in the script, this counter increases each time that the pt:addHeader API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| ptAddHeaderUriParameter | This counter represents the number of times that the script added a SIP header URI parameter to the PassThrough (pt) object. If you are using the pt:addHeaderUriParameter API in the script, this counter increases each time that the pt:addHeaderUriParameter API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| ptAddHeaderValueParameter | This counter represents the number of times that the script added a SIP header value parameter to the PassThrough (pt) object. If you are using the pt:addHeaderValueParameter API in the script, this counter increases each time that the pt:addHeaderValueParameter API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |
| ptAddRequestUriParameter | This counter represents the number of times that the script added a request URI parameter to the PassThrough (pt) object. If you are using the pt:addRequestUriParameter API in the script, this counter increases each time that the pt:addRequestUriParameter API executes successfully. If the counter behavior is not as expected, examine the script logic for errors. |

| Display Name | Description |
|--------------|--|
| ScriptActive | <p>This counter indicates whether the script is currently active (running on the trunk). The following values display for the counter:</p> <ul style="list-style-type: none"> • 0—Indicates that the script is closed (disabled). • 1—Indicates that the script is open and operational. <p>To open the script that should be running on this trunk, perform the following actions:</p> <ol style="list-style-type: none"> 1. Check for any alarms that might indicate why the script is not open. 2. Correct any errors. 3. Upload a new script if necessary. 4. Reset the trunk. |
| ScriptClosed | <p>This counter indicates the number of times that Unified Communications Manager has closed the script.</p> <p>When the script is closed, it is not enabled on this device.</p> <p>Unified Communications Manager closes the script under one of the following conditions:</p> <ul style="list-style-type: none"> • The device was reset manually. • The device was reset automatically (due to an error). • The device was deleted. <p>This count restarts when the SIP trunk is reset after a change to the script configuration and when Unified Communications Manager restarts.</p> |

| Display Name | Description |
|-----------------------------|--|
| ScriptDisabledAutomatically | <p>This counter indicates the number of times that the system automatically disabled the script. The values that are specified in the Script Execution Error Recovery Action and System Resource Error Recovery Action fields in the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration determine whether the script is disabled. The script also gets disabled as a result of script error conditions that are encountered during loading and initialization. This counter provides a count from the most recent manual device reset that involved a script configuration change (a device reset alone does not restart the count; the script must also have changed before the reset occurs). This counter increments every time Unified Communications Manager automatically disables a script due to script errors.</p> <p>If the number in this counter is higher than expected, perform the following actions:</p> <ul style="list-style-type: none">• Check for SIPNormalizationScriptError alarm and SIPNormalizationAutoResetDisabled alarm.• Check for any resource-related alarms and counters in RTMT to determine whether a resource issue is occurring.• Check for any unexpected SIP normalization events in the SDI trace files. |

| Display Name | Description |
|--------------|---|
| ScriptOpened | <p>This counter indicates the number of times that the Unified Communications Manager attempted to open the script. For the a script to open, it must load into memory in Unified Communications Manager, initialize, and be operational. A number greater than one in this counter means that Unified Communications Manager has made more than one attempt to open the script on this SIP trunk, either for an expected reason or due to an error during loading or initialization. The error can occur due to execution errors or resource errors or invalid syntax in the script. Expect this counter to be greater than one if any of these counters increment: DeviceResetManually, DeviceResetAutomatically, or ScriptResetAutomatically. The DeviceResetManually counter increments when an expected event, such as a maintenance window on the SIP trunk, causes the script to close.</p> <p>If the number in this counter is high for an unexpected reason, perform the following actions:</p> <ul style="list-style-type: none"> • Check for alarms, such as the SIPNormalizationScriptClosed, SIPNormalizationScriptError, or SIPNormalizationResourceWarning. • Check resource-related alarms and counters in RTMT to determine whether a resource issue is occurring. • Check for any unexpected SIP normalization events in the SDI trace files. <p>This count restarts when the SIP trunk resets after a script configuration change and when Unified Communications Manager restarts.</p> |

| Display Name | Description |
|--------------------------|---|
| ScriptResetAutomatically | <p>This counter indicates the number of times that the system automatically reset the script. The script resets based on the values that are specified in the Script Execution Error Recovery Action and System Resource Error Recovery Action fields in the SIP Normalization Script Configuration window in Cisco Unified Communications Manager Administration. This counter specifies a count of the number of automatic script resets after the last manual device reset; this counter increments every time the Unified Communications Manager automatically resets a script due to script errors.</p> <p>If the number in this counter is higher than expected, perform the following actions:</p> <ul style="list-style-type: none"> • Check for a SIPNormalizationScriptError alarm. • Check for any resource-related alarms and counters in RTMT to determine whether a resource issue is occurring. • Check for any unexpected SIP normalization events in the SDI trace files. |

Cisco SIP Stack

The Cisco SIP Stack object provides information about Session Initiation Protocol (SIP) stack statistics that are generated or used by SIP devices such as SIP Proxy, SIP Redirect Server, SIP Registrar, and SIP User Agent. The following table contains information on Cisco SIP Stack counters.

Table 52: Cisco SIP Stack

| Counters | Counter Description |
|-----------|--|
| AckIns | This counter represents the total number of ACK requests that the SIP device received. |
| AckOuts | This counter represents the total number of ACK requests that the SIP device sent. |
| ByeIns | This counter represents the total number of BYE requests that the SIP device received. This number includes retransmission. |
| ByeOuts | This counter represents the total number of BYE requests that the SIP device sent. This number includes retransmission. |
| CancelIns | This counter represents the total number of CANCEL requests that the SIP device received. This number includes retransmission. |

| Counters | Counter Description |
|-----------------------|--|
| CancelOuts | This counter represents the total number of CANCEL requests that the SIP device sent. This number includes retransmission. |
| CCBsAllocated | This counter represents the number of Call Control Blocks (CCB) that are currently in use by the SIP stack. Each active SIP dialog uses one CCB. |
| GlobalFailedClassIns | This counter represents the total number of 6xx class SIP responses that the SIP device has received. This number includes retransmission. This class of responses indicates that a SIP device, that is providing a client function, received a failure response message. Generally, the responses indicate that a server had definitive information on a particular called party and not just the particular instance in the Request-URI. |
| GlobalFailedClassOuts | This counter represents the total number of 6xx class SIP responses that the SIP device sent. This number includes retransmission. This class of responses indicates that a SIP device, that is providing a server function, received a failure response message. Generally, the responses indicate that a server had definitive information on a particular called party and not just the particular instance in the Request-URI. |
| InfoClassIns | This counter represents the total number of 1xx class SIP responses that the SIP device received. This includes retransmission. This class of responses provides information on the progress of a SIP request. |
| InfoClassOuts | This counter represents the total number of 1xx class SIP responses that the SIP device sent. This includes retransmission. This class of responses provides information on the progress of processing a SIP request. |
| InfoIns | This counter represents the total number of INFO requests that the SIP device has received. This number includes retransmission. |
| InfoOuts | This counter represents the total number of INFO requests that the SIP device has sent. This number includes retransmission. |
| InviteIns | This counter represents the total number of INVITE requests that the SIP device received. This number includes retransmission. |

| Counters | Counter Description |
|-----------------|--|
| InviteOuts | This counter represents the total number of INVITE requests that the SIP device has sent. This number includes retransmission. |
| NotifyIns | This counter represents the total number of NOTIFY requests that the SIP device has received. This number includes retransmission. |
| NotifyOuts | This counter represents the total number of NOTIFY requests that the SIP device has sent. This number includes retransmission. |
| OptionsIns | This counter represents the total number of OPTIONS requests that the SIP device received. This number includes retransmission. |
| OptionsOuts | This counter represents the total number of OPTIONS requests that the SIP device has sent. This number includes retransmission. |
| PRackIns | This counter represents the total number of PRACK requests that the SIP device has received. This number includes retransmission. |
| PRackOuts | This counter represents the total number of PRACK requests that the SIP device has sent. This number includes retransmission. |
| PublishIns | This counter represents the total number of PUBLISH requests that the SIP device received. This number includes retransmissions. |
| PublishOuts | This counter represents the total number of PUBLISH requests that the SIP device has sent. This number includes retransmission |
| RedirClassIns | This counter represents the total number of 3xx class SIP responses that the SIP device has received. This number includes retransmission. This class of responses provides information about redirections to addresses where the callee may be reachable. |
| RedirClassOuts | This counter represents the total number of 3xx class SIP responses that the SIP device has sent. This number includes retransmission. This class of responses provides information about redirections to addresses where the callee may be reachable. |
| ReferIns | This counter represents the total number of REFER requests that the SIP device has received. This number includes retransmission. |

| Counters | Counter Description |
|-------------------------|---|
| ReferOuts | This counter represents the total number of REFER requests that the SIP device has sent. This number includes retransmission. |
| RegisterIns | This counter represents the total number of REGISTER requests that the SIP device has received. This number includes retransmission. |
| RegisterOuts | This counter represents the total number of REGISTER requests that the SIP device has sent. This number includes retransmission. |
| RequestsFailedClassIns | This counter represents the total number of 4xx class SIP responses that the SIP device has received. This number includes retransmission. This class of responses indicates a request failure by a SIP device that is providing a client function. |
| RequestsFailedClassOuts | This counter represents the total number of 4xx class SIP responses that the SIP device has sent. This number includes retransmission. This class of responses indicates a request failure by a SIP device that is providing a server function. |
| RetryByes | This counter represents the total number of BYE retries that the SIP device has sent. To determine the number of first BYE attempts, subtract the value of this counter from the value of the sipStatsByeOuts counter. |
| RetryCancels | This counter represents the total number of CANCEL retries that the SIP device has sent. To determine the number of first CANCEL attempts, subtract the value of this counter from the value of the sipStatsCancelOuts counter. |
| RetryInfo | This counter represents the total number of INFO retries that the SIP device has sent. To determine the number of first INFO attempts, subtract the value of this counter from the value of the sipStatsInfoOuts counter. |
| RetryInvites | This counter represents the total number of INVITE retries that the SIP device has sent. To determine the number of first INVITE attempts, subtract the value of this counter from the value of the sipStatsInviteOuts counter. |

| Counters | Counter Description |
|------------------------|--|
| RetryNotify | This counter represents the total number of NOTIFY retries that the SIP device has sent. To determine the number of first NOTIFY attempts, subtract the value of this counter from the value of the sipStatsNotifyOuts counter. |
| RetryPRACK | This counter represents the total number of PRACK retries that the SIP device has sent. To determine the number of first PRACK attempts, subtract the value of this counter from the value of the sipStatsPRACKOuts counter. |
| RetryPublish | This counter represents the total number of PUBLISH retries that the SIP device has been sent. To determine the number of first PUBLISHs attempts, subtract the value of this counter from the value of the sipStatsPublishOuts counter. |
| RetryRefer | This counter represents the total number of REFER retries that the SIP device has sent. To determine the number of first REFER attempts, subtract the value of this counter from the value of the sipStatsReferOuts counter. |
| RetryRegisters | This counter represents the total number of REGISTER retries that the SIP device has sent. To determine the number of first REGISTER attempts, subtract the value of this counter from the value of the sipStatsRegisterOuts counter. |
| RetryRel1xx | This counter represents the total number of Reliable 1xx retries that the SIP device has sent. |
| RetryRequestsOut | This counter represents the total number of Request retries that the SIP device has sent. |
| RetryResponsesFinal | This counter represents the total number of Final Response retries that the SIP device has sent. |
| RetryResponsesNonFinal | This counter represents the total number of non-Final Response retries that the SIP device has sent. |
| RetrySubscribe | This counter represents the total number of SUBSCRIBE retries that the SIP device has sent. To determine the number of first SUBSCRIBE attempts, subtract the value of this counter from the value of the sipStatsSubscribeOuts counter. |

| Counters | Counter Description |
|----------------------------------|--|
| RetryUpdate | This counter represents the total number of UPDATE retries that the SIP device has sent. To determine the number of first UPDATE attempts, subtract the value of this counter from the value of the sipStatsUpdateOuts counter. |
| SCBsAllocated | This counter represents the number of Subscription Control Blocks (SCB) that are currently in use by the SIP stack. Each subscription uses one SCB. |
| ServerFailedClassIns | This counter represents the total number of 5xx class SIP responses that the SIP device has received. This number includes retransmission. This class of responses indicates that failure responses were received by a SIP device that is providing a client function. |
| ServerFailedClassOuts | This counter represents the total number of 5xx class SIP responses that the SIP device has sent. This number includes retransmission. This class of responses indicates that failure responses were received by a SIP device that is providing a server function. |
| SIPGenericCounter1 | Do not use this counter unless directed to do so by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| SIPGenericCounter2 | Do not use this counter unless directed to do so by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| SIPGenericCounter3 | Do not use this counter unless directed to do so by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| SIPGenericCounter4 | Do not use this counter unless directed to do so by a Cisco Engineering Special build. Cisco uses information in this counter for diagnostic purposes. |
| SIPHandlerSDLQueueSignalsPresent | This counter represents the number of SDL signals that are currently on the four SDL priority queues of the SIPHandler component. The SIPHandler component contains the SIP stack. |

| Counters | Counter Description |
|-------------------|---|
| StatusCode1xxIns | <p>This counter represents the total number of 1xx response messages, including retransmission, that the SIP device has received. This count includes the following 1xx responses:</p> <ul style="list-style-type: none"> • 100 Trying • 180 Ringing • 181 Call is being forwarded • 182 Queued • 183 Session Progress |
| StatusCode1xxOuts | <p>This counter represents the total number of 1xx response messages, including retransmission, that the SIP device has sent. This count includes the following 1xx responses:</p> <ul style="list-style-type: none"> • 100 Trying • 180 Ringing • 181 Call is being forwarded • 182 Queued • 183 Session Progress |
| StatusCode2xxIns | <p>This counter represents the total number of 2xx response messages, including retransmission, that the SIP device has received. This count includes the following 2xx responses:</p> <ul style="list-style-type: none"> • 200 OK • 202 Success Accepted |
| StatusCode2xxOuts | <p>This counter represents the total number of 2xx response messages, including retransmission, that the SIP device has sent. This count includes the following 2xx responses:</p> <ul style="list-style-type: none"> • 200 OK • 202 Success Accepted |
| StatusCode3xxins | <p>This counter represents the total number of 3xx response messages, including retransmission, that the SIP device has received. This count includes the following 3xx responses:</p> <ul style="list-style-type: none"> • 300 Multiple Choices • 301 Moved Permanently • 302 Moved Temporarily • 303 Incompatible Bandwidth Units • 305 Use Proxy • 380 Alternative Service |

| Counters | Counter Description |
|-------------------|---|
| StatusCode302Outs | This counter represents the total number of 302 Moved Temporarily response messages, including retransmission, that the SIP device has sent. |
| StatusCode4xxIns | <p>This counter represents the total number of 4xx response messages, including retransmission, that the SIP device has received. This count includes the following 4xx responses:</p> <ul style="list-style-type: none"> • 400 Bad Request • 401 Unauthorized • 402 Payment Required • 403 Forbidden • 404 Not Found • 405 Method Not Allowed • 406 Not Acceptable • 407 Proxy Authentication Required • 408 Request Timeout • 409 Conflict • 410 Gone • 413 Request Entity Too Large • 414 Request-URI Too Long • 415 Unsupported Media Type • 416 Unsupported URI Scheme • 417 Unknown Resource Priority • 420 Bad Extension • 422 Session Expires Value Too Small • 423 Interval Too Brief • 480 Temporarily Unavailable • 481 Call/Transaction Does Not Exist • 482 Loop Detected • 483 Too Many Hops • 484 Address Incomplete • 485 Ambiguous • 486 Busy Here • 487 Request Terminated • 488 Not Acceptable Here • 489 Bad Subscription Event • 491 Request Pending |

| Counters | Counter Description |
|-------------------|--|
| StatusCode4xxOuts | <p>This counter represents the total number of 4xx response messages, including retransmission, that the SIP device has sent. This count includes the following 4xx responses:</p> <ul style="list-style-type: none">• 400 Bad Request• 401 Unauthorized• 402 Payment Required• 403 Forbidden• 404 Not Found• 405 Method Not Allowed• 406 Not Acceptable• 407 Proxy Authentication Required• 408 Request Timeout• 409 Conflict• 410 Gone• 413 Request Entity Too Large• 414 Request-URI Too Long• 415 Unsupported Media Type• 416 Unsupported URI Scheme• 417 Unknown Resource Priority• 420 Bad Extension• 422 Session Expires Value Too Small• 423 Interval Too Brief• 480 Temporarily Unavailable• 481 Call/Transaction Does Not Exist• 482 Loop Detected• 483 Too Many Hops• 484 Address Incomplete• 485 Ambiguous• 486 Busy Here• 487 Request Terminated• 488 Not Acceptable Here• 489 Bad Subscription Event• 491 Request Pending |

| Counters | Counter Description |
|-------------------|---|
| StatusCode5xxIns | <p>This counter represents the total number of 5xx response messages, including retransmission, that the SIP device has received. This count includes the following 5xx responses:</p> <ul style="list-style-type: none"> • 500 Server Internal Error • 501 Not Implemented • 502 Bad Gateway • 503 Service Unavailable • 504 Server Timeout • 505 Version Not Supported • 580 Precondition Failed |
| StatusCode5xxOuts | <p>This counter represents the total number of 5xx response messages, including retransmission, that the SIP device has sent. This count includes the following 5xx responses:</p> <ul style="list-style-type: none"> • 500 Server Internal Error • 501 Not Implemented • 502 Bad Gateway • 503 Service Unavailable • 504 Server Timeout • 505 Version Not Supported • 580 Precondition Failed |
| StatusCode6xxIns | <p>This counter represents the total number of 6xx response messages, including retransmission, that the SIP device has received. This count includes the following 6xx responses:</p> <ul style="list-style-type: none"> • 600 Busy Everywhere • 603 Decline • 604 Does Not Exist Anywhere • 606 Not Acceptable |
| StatusCode6xxOuts | <p>This counter represents the total number of 6xx response messages, including retransmission, that the SIP device has sent. This count includes the following 6xx responses:</p> <ul style="list-style-type: none"> • 600 Busy Everywhere • 603 Decline • 604 Does Not Exist Anywhere • 606 Not Acceptable |
| SubscribeIns | <p>This counter represents the total number of SUBSCRIBE requests that the SIP device has received. This number includes retransmission.</p> |

| Counters | Counter Description |
|---------------------|---|
| SubscribeOuts | This counter represents the total number of SUBSCRIBE requests that the SIP device has sent. This number includes retransmission. |
| SuccessClassIns | This counter represents the total number of 2xx class SIP responses that the SIP device has received. This includes retransmission. This class of responses provides information on the successful completion of a SIP request. |
| SuccessClassOuts | This counter represents the total number of 2xx class SIP responses that the SIP device has sent. This includes retransmission. This class of responses provides information on the successful completion of a SIP request. |
| SummaryRequestsIn | This counter represents the total number of SIP request messages that have been received by the SIP device. This number includes retransmissions. |
| SummaryRequestsOut | This counter represents the total number of SIP request messages that the device sent. This number includes messages that originate on the device and messages that are being relayed by the device. When a particular message gets sent more than once, each transmission gets counted separately; for example, a message that is re-sent as a retransmission or as a result of forking. |
| SummaryResponsesIn | This counter represents the total number of SIP response messages that the SIP device received. This number includes retransmission. |
| SummaryResponsesOut | This counter represents the total number of SIP response messages that the SIP device sent (originated and relayed). This number includes retransmission. |
| UpdateIns | This counter represents the total number of UPDATE requests that the SIP device has received. This number includes retransmission. |
| UpdateOuts | This counter represents the total number of UPDATE requests that the SIP device has sent. This number includes retransmission. |

Cisco SIP Station

The Cisco SIP Station object provides information about SIP line-side devices. The following table contains information about the Cisco SIP Station counters.

Table 53: Cisco SIP Station

| Counters | Counter Description |
|----------------------------|---|
| ConfigMismatchesPersistent | This counter represents the number of times that a phone that is running SIP was persistently unable to register due to a configuration version mismatch between the TFTP server and Unified Communications Manager since the last restart of the Unified Communications Manager. This counter increments each time that Unified Communications Manager cannot resolve the mismatch and manual intervention is required (such as a configuration update or device reset). |
| ConfigMismatchesTemporary | This counter represents the number of times that a phone that is running SIP was temporarily unable to register due to a configuration version mismatch between the TFTP server and Unified Communications Manager since the last restart of the Cisco CallManager Service. This counter increments each time Unified Communications Manager is able to resolve the mismatch automatically. |
| DBTimeouts | This counter represents the number of new registrations that failed because a timeout occurred while the system was attempting to retrieve the device configuration from the database. |
| NewRegAccepted | This counter represents the total number of new REGISTRATION requests that have been removed from the NewRegistration queue and processed since the last restart of the Cisco CallManager Service. |
| NewRegQueueSize | This counter represents the number of REGISTRATION requests that are currently on the NewRegistration queue. The system places REGISTRATION requests that are received from devices that are not currently registered on this queue before they are processed. |
| NewRegRejected | This counter represents the total number of new REGISTRATION requests that were rejected with a 486 Busy Here response and not placed on the NewRegistration queue since the last restart of the Cisco CallManager Service. The system rejects REGISTRATION requests if the NewRegistration queue exceeds a programmed size. |

| Counters | Counter Description |
|-------------------|---|
| TokensAccepted | This counter represents the total number of token requests that have been granted since the last Unified Communications Manager restart. Unified Communications Manager grants tokens as long as the number of outstanding tokens remains below the number that is specified in the Cisco CallManager service parameter Maximum Phone Fallback Queue Depth. |
| TokensOutstanding | This counter represents the number of devices that have been granted a token but have not yet registered. The system requires that devices that are reconnecting to a higher priority Unified Communications Manager server be granted a token before registering. Tokens protect Unified Communications Manager from being overloaded with registration requests when it comes back online after a failover situation. |
| TokensRejected | This counter represents the total number of token requests that have been rejected since the last Unified Communications Manager restart. Unified Communications Manager will reject token request if the number of outstanding tokens is greater than the number that is specified in the Cisco CallManager service parameter Maximum Phone Fallback Queue Depth. |

Cisco SW Conf Bridge Device

The Cisco SW Conference Bridge Device object provides information about registered Cisco software conference bridge devices. The following table contains information on the Cisco software conference bridge device counters.

Table 54: Cisco SW Conf Bridge Device

| Counters | Counter Description |
|----------------|--|
| OutOfResources | This counter represents the total number of times that an attempt was made to allocate a conference resource from a SW conference device and failed because all resources were already in use. |
| ResourceActive | This counter represents the number of resources that are currently in use (active) for a SW conference device. One resource represents one stream. |

| Counters | Counter Description |
|-----------------------|---|
| ResourceAvailable | This counter represents the total number of resources that are not active and are still available to be used now for a SW conference device. One resource represents one stream. |
| ResourceTotal | This counter represents the total number of conference resources that a SW conference device provides. One resource represents one stream. This counter equals the sum of the ResourceAvailable and ResourceActive counters. |
| SWConferenceActive | This counter represents the number of software-based conferences that are currently active (in use) on a SW conference device. |
| SWConferenceCompleted | This counter represents the total number of conferences that have been allocated and released on a SW conference device. A conference starts when the first call connects to the bridge. The conference completes when the last call disconnects from the bridge. |

Cisco Telepresence MCU Conference Bridge Device

The Cisco Telepresence MCU Conference Bridge Device provides information about registered MCU conference bridge devices. The following table contains information about the Cisco Telepresence MCU Conference Bridge Device counters.

Table 55: Cisco Telepresence MCU Conference Bridge Device

| Counters | Counter Description |
|----------------------|---|
| ConferencesActive | This counter represents the total number of active conferences on all Cisco Telepresence MCU conference bridge devices that are registered with Unified Communications Manager. |
| ConferencesCompleted | This counter represents the total number of conferences that used a Cisco Telepresence MCU conference bridge allocated from Unified Communications Manager and completed, implying that the conference bridge was allocated and released. A conference is activated when the first call is connected to the bridge. The conference is completed when the last call is disconnected from the bridge. |

| Counters | Counter Description |
|----------------------|--|
| HttpConnectionErrors | This counter represents the total number of times Unified Communications Manager attempted to create HTTP connections to Cisco Telepresence MCU conference bridge device, and failed due to connection errors on the Cisco Telepresence MCU conference bridge side. |
| HttpNon200OKResponse | This counter represents the total number of times Unified Communications Manager received a non 200 OK HTTP Response from Cisco Telepresence MCU conference bridge, for any HTTP query sent. |
| OutOfResources | This counter represents the total number of times Unified Communications Manager attempted to allocate a conference resource from Cisco Telepresence MCU conference bridge device and failed. For example, the attempt to allocate a conference resource fails, if all the resources are already in use. |

Cisco TFTP Server

The Cisco Trivial File Transfer Protocol (TFTP) Server object provides information about the CiscoTFTP server. The following table contains information about Cisco TFTP server counters.

Table 56: Cisco TFTP Server

| Counters | Counter Description |
|-----------------|---|
| BuildAbortCount | This counter represents the number of times that the build process aborted when it received a Build all request. This counter increases when building of device/unit/softkey/dial rules gets aborted as a result of group level change notifications. |
| BuildCount | This counter represents the number of times since the TFTP service started that the TFTP server has built all the configuration files in response to a database change notification that affects all devices. This counter increases by one every time the TFTP server performs a new build of all the configuration files. |

| Counters | Counter Description |
|--------------------|---|
| BuildDeviceCount | <p>This counter represents the number of devices that were processed in the last build of all the configuration files. This counter also updates while processing device change notifications. The counter increases when a new device is added and decreases when an existing device is deleted.</p> <p>Note For 11.5 and above, you can build the configuration files and serve instead of caching.</p> <p>When a build happens, BuildDeviceCount increments. When there is request from the phone, counter increases and never decreases. TFTP stable monitoring is not required.</p> |
| BuildDialruleCount | <p>This counter represents the number of dial rules that were processed in the last build of the configuration files. This counter also updates while processing dial rule change notifications. The counter increases when a new dial rule is added and decreases when an existing dial rule is deleted.</p> |
| BuildDuration | <p>This counter represents the time in seconds that it took to build the last configuration files.</p> |
| BuildSignCount | <p>This counter represents the number of security-enabled phone devices for which the configuration file was digitally signed with the Unified Communications Manager server key in the last build of all the configuration files. This counter also updates while processing security-enabled phone device change notifications.</p> |
| BuildSoftKeyCount | <p>This counter represents the number of softkeys that were processed in the last build of the configuration files. This counter increments when a new softkey is added and decrements when an existing softkey is deleted.</p> |
| BuildUnitCount | <p>This counter represents the number of gateways that were processed in the last build of all the configuration files. This counter also updates while processing unit change notifications. The counter increases when a new gateway is added and decreases when an existing gateway is deleted.</p> |

| Counters | Counter Description |
|-----------------------------|---|
| ChangeNotifications | This counter represents the total number of all the Unified Communications Manager database change notifications that the TFTP server received. Each time that a device configuration is updated in Unified Communications Manager, the TFTP server gets sent a database change notification to rebuild the XML file for the updated device. |
| DeviceChangeNotifications | This counter represents the number of times that the TFTP server received database change notification to create, update, or delete configuration files for devices. |
| DialruleChangeNotifications | This counter represents the number of times that the TFTP server received database change notification to create, update, or delete configuration files for dial rules. |
| EncryptCount | This counter represents the number of configuration files that were encrypted. This counter gets updated each time a configuration file is successfully encrypted |
| GKFoundCount | This counter represents the number of GK files that were found in the cache. This counter gets updated each time a GK file is found in the cache |
| GKNotFoundCount | This counter represents the number of GK files that were not found in the cache. This counter gets updated each time a request to get a GK file results in the cache not finding it |
| HeartBeat | This counter represents the heartbeat of the TFTP server. This incremental count indicates that the TFTP server is up and running. If the count does not increase, this means that the TFTP server is down. |
| HttpConnectRequests | This counter represents the number of clients that are currently requesting the HTTP GET file request. |
| HttpRequests | This counter represents the total number of file requests (such as requests for XML configuration files, phone firmware files, audio files, and so on.) that the HTTP server handled. This counter represents the sum total of the following counters since the HTTP service started: RequestsProcessed, RequestsNotFound, RequestsOverflow, RequestsAborted, and RequestsInProgress. |

| Counters | Counter Description |
|-----------------------|--|
| HttpRequestsAborted | This counter represents the total number of HTTP requests that the HTTP server canceled (aborted) unexpectedly. Requests could get aborted if the requesting device cannot be reached (for instance, the device lost power) or if the file transfer was interrupted due to network connectivity problems. |
| HttpRequestsNotFound | This counter represents the total number of HTTP requests where the requested file was not found. When the HTTP server does not find the requested file, a message gets sent to the requesting device. |
| HttpRequestsOverflow | This counter represents the total number of HTTP requests that were rejected when the maximum number of allowable client connections was reached. The requests may have arrived while the TFTP server was building the configuration files or because of some other resource limitation. The Cisco TFTP advanced service parameter, Maximum Serving Count, sets the maximum number of allowable connections. |
| HttpRequestsProcessed | This counter represents the total number of HTTP requests that the HTTP server successfully processed. |
| HttpServedFromDisk | This counter represents the number of requests that the HTTP server completed with the files that are on disk and not cached in memory. |
| LDFoundCount | This counter represents the number of LD files that were found in the cache. This counter gets updated each time a LD file is found in cache memory. |
| LDNotFoundCount | This counter represents the number of LD files that were not found in cache memory. This counter gets updated each time a request to get an LD file results in the cache not finding it. |
| MaxServingCount | This counter represents the maximum number of client connections that the TFTP can serve simultaneously. The Cisco TFTP advanced service parameter, Maximum Serving Count, sets this value. |
| Requests | This counter represents the total number of file requests (such as requests for XML configuration files, phone firmware files, audio files, and so on.) that the TFTP server handles. This counter represents the sum total of the following counters since the TFTP service started: RequestsProcessed, RequestsNotFound, RequestsOverflow, RequestsAborted, and RequestsInProgress. |

| Counters | Counter Description |
|----------------------|--|
| RequestsAborted | This counter represents the total number of TFTP requests that the TFTP server canceled (aborted) unexpectedly. Requests could be aborted if the requesting device cannot be reached (for instance, the device lost power) or if the file transfer was interrupted due to network connectivity problems. |
| RequestsInProgress | This counter represents the number of file requests that the TFTP server currently is processing. This counter increases for each new file request and decreases for each file request that is completed. This counter indicates the current load of the TFTP server. |
| RequestsNotFound | This counter represents the total number of TFTP requests for which the requested file was not found. When the TFTP server does not find the requested file, a message gets sent to the requesting device. If this counter increments in a cluster that is configured as secure, this event usually indicates an error condition. If, however, the cluster is configured as non-secure, it is normal for the CTL file to be absent (not found), which results in a message being sent to the requesting device and a corresponding increment in this counter. For non-secure clusters, then, this normal occurrence does not represent an error condition. |
| RequestsOverflow | This counter represents the total number of TFTP requests that were rejected because the maximum number of allowable client connections was exceeded, because requests arrived while the TFTP server was building the configuration files, or because of some other resource limitation. The Cisco TFTP advanced service parameter, Maximum Serving Count, sets the maximum number of allowable connections. |
| RequestsProcessed | This counter represents the total number of TFTP requests that the TFTP server successfully processed. |
| SegmentsAcknowledged | This counter represents the total number of data segments that the client devices acknowledged. Files get sent to the requesting device in data segments of 512 bytes, and for each 512-byte segment, the device sends the TFTP server an acknowledgment message. Each additional data segment gets sent upon receipt of the acknowledgment for the previous data segment until the complete file successfully gets transmitted to the requesting device. |

| Counters | Counter Description |
|----------------------------|---|
| SegmentsFromDisk | This counter represents the number of data segments that the TFTP server reads from the files on disk, while serving files. |
| SegmentSent | This counter represents the total number of data segments that the TFTP server sent. Files get sent to the requesting device in data segments of 512 bytes. |
| SEPFoundCount | This counter represents the number of SEP files that were successfully found in the cache. This counter gets updated each time that a SEP file is found in the cache. |
| SEPNotFoundCount | This counter represents the number of SEP files that were not found in the cache. This counter gets updated each time that a request to get a SEP file produces a not found in cache memory result. |
| SIPFoundCount | This counter represents the number of SIP files that were successfully found in the cache. This counter gets updated each time that a SIP file is found in the cache |
| SIPNotFoundCount | This counter represents the number of SIP files that were not found in the cache. This counter gets updated each time that a request to get a SIP file produces a not found in cache memory result. |
| SoftkeyChangeNotifications | This counter represents the number of times that the TFTP server received database change notification to create, update, or delete configuration files for softkeys. |
| UnitChangeNotifications | This counter represents the number of times that the TFTP server received database change notification to create, update, or delete gateway-related configuration files. |

Cisco Transcode Device

The Cisco Transcode Device object provides information about registered Cisco transcoding devices. The following table contains information on Cisco transcoder device counters.

Table 57: Cisco Transcode Device

| Counters | Counter Description |
|-------------------|---|
| OutOfResources | This counter represents the total number of times that an attempt was made to allocate a transcoder resource from a transcoder device and failed; for example, because all resources were already in use. |
| ResourceActive | This counter represents the number of transcoder resources that are currently in use (active) for a transcoder device. Each transcoder resource uses two streams. |
| ResourceAvailable | This counter represents the total number of resources that are not active and are still available to be used now for a transcoder device. Each transcoder resource uses two streams. |
| ResourceTotal | This counter represents the total number of transcoder resources that a transcoder device provided. This counter equals the sum of the counters ResourceActive and ResourceAvailable. |

Cisco Video Conference Bridge

The Cisco Video Conference Bridge object provides information about registered Cisco video conference bridge devices. The following table contains information on Cisco video conference bridge device counters.

Table 58: Cisco Video Conference Bridge

| Counters | Counter Description |
|----------------------|--|
| ConferencesActive | This counter represents the total number of video conferences that are currently active (in use) on a video conference bridge device. The system specifies a conference as active when the first call connects to the bridge. |
| ConferencesAvailable | This counter represents the number of video conferences that are not active and are still available on a video conference device. |
| ConferencesCompleted | This counter represents the total number of video conferences that have been allocated and released on a video conference device. A conference starts when the first call connects to the bridge. The conference completes when the last call disconnects from the bridge. |

| Counters | Counter Description |
|-------------------|---|
| ConferencesTotal | This counter represents the total number of video conferences that are configured for a video conference device. |
| OutOfConferences | This counter represents the total number of times that an attempt was made to initiate a video conference from a video conference device and failed because the device already had the maximum number of active conferences that is allowed (as specified by the TotalConferences counter). |
| OutOfResources | This counter represents the total number of times that an attempt was made to allocate a conference resource from a video conference device and failed, for example, because all resources were already in use. |
| ResourceActive | This counter represents the total number of resources that are currently active (in use) on a video conference bridge device. One resource gets used per participant. |
| ResourceAvailable | This counter represents the total number of resources that are not active and are still available on a device to handle additional participants for a video conference bridge device. |
| ResourceTotal | This counter represents the total number of resources that are configured on a video conference bridge device. One resource gets used per participant. |

Cisco Web Dialer

The Cisco WebDialer object provides information about the Cisco Web Dialer application and the Redirector servlet. The following table contains information on the CiscoWebDialer counters.

Table 59: Cisco Web Dialer

| Counters | Counter Description |
|---------------------------|---|
| CallsCompleted | This counter represents the number of Make Call and End Call requests that the Cisco Web Dialer application successfully completed. |
| CallsFailed | This counter represents the number of Make Call and End Call requests that were unsuccessful. |
| RedirectorSessionsHandled | This counter represents the total number of HTTP sessions that the Redirector servlet handled since the last service startup. |

| Counters | Counter Description |
|------------------------------|--|
| RedirectorSessionsInProgress | This counter represents the number of HTTP sessions that are currently being serviced by the Redirector servlet. |
| RequestsCompleted | This counter represents the number of Make Call and End Call requests that the WebDialer servlet has successfully completed. |
| RequestsFailed | This counter represents the number of Make Call and End Call requests that failed. |
| SessionsHandled | This counter represents the total number of CTI sessions that the Cisco Web Dialer servlet handled since the last service startup. |
| SessionsInProgress | This counter represents the number of CTI sessions that the Cisco Web Dialer servlet is currently servicing. |

Cisco WSM Connector

The WSM object provides information on WSMConnectors that are configured on Unified Communications Manager. Each WSMConnector represents a physical Motorola WSM device. The following table contains information on the Cisco WSM Connector counters.

Table 60: Cisco WSM Connector

| Counters | Counter Description |
|-----------------|--|
| CallsActive | This counter represents the number of calls that are currently active (in use) on the WSMConnector device. |
| CallsAttempted | This counter represents the number of calls that have been attempted on the WSMConnector device, including both successful and unsuccessful call attempts. |
| CallsCompleted | This counter represents the number of calls that are connected (a voice path was established) through the WSMConnector device. The counter increments when the call terminates. |
| CallsInProgress | This counter represents the number of calls that are currently in progress on the WSMConnector device. This includes all active calls. When the number of CallsInProgress equals the number of CallsActive, this indicates that all calls are connected. |

| Counters | Counter Description |
|----------------|--|
| DMMSRegistered | This counter represents the number of DMMS subscribers that are registered to the WSM. |

IME Client

The IME Client object provides information about the Cisco IME client on the Unified Communications Manager server. The following table contains information on the Cisco IME client counters.

Table 61: Cisco IME Client

| Counters | Counter Description |
|-------------------------|--|
| CallsAccepted | This counter indicates the number of Cisco IME calls that the Unified Communications Manager received successfully and that the called party answered, resulting in an IP call. |
| CallsAttempted | This counter indicates the number of calls that the Unified Communications Manager received through Cisco IME. This number includes accepted calls, failed calls, and busy, no-answer calls. The counter increments each time that Unified Communications Manager receives a call through Cisco IME. |
| CallsReceived | This counter indicates the number of calls that Unified Communications Manager receives through Cisco IME. This number includes accepted calls, failed calls, and busy, no-answer calls. The counter increments on call initiation. |
| CallsSetup | This counter indicates the number of Cisco IME calls that Unified Communications Manager placed successfully and that the remote party answered, resulting in an IP call. |
| DomainsUnique | This counter indicates the number of unique domain names of peer enterprises that the Cisco IME client discovered. The counter serves as an indicator of overall system usage. |
| FallbackCallsFailed | This counter indicates the total number of failed fallback attempts. |
| FallbackCallsSuccessful | This counter indicates the total number of Cisco IME calls that have fallen back to the PSTN mid-call due to a quality problem. The counter includes calls initiated and calls received by this Unified Communications Manager. |

| Counters | Counter Description |
|-------------------|--|
| IMESetupsFailed | This counter indicates the total number of call attempts for which a Cisco IME route was available but that were set up through the PSTN due to a failure to connect to the target over the IP network. |
| RoutesLearned | This counter indicates the total number of distinct phone numbers that the Cisco IME has learned and that are present as routes in the Unified Communications Manager routing tables. If this number grows too large, the server may exceed the per-cluster limit, and you may need to add additional servers to your cluster. |
| RoutesPublished | This counter indicates the total number of DIDs that were published successfully into the IME distributed cache across all Cisco IME client instances. The counter provides a dynamic measurement that gives you an indication of your own provisioned usage and a sense of how successful the system has been in storing the DIDs in the network. |
| RoutesRejected | This counter indicates the number of learned routes that were rejected because the administrator restricted the particular number or domain. This counter provides an indication of the number of cases where a VoIP call cannot happen in the future because of the blocked validation. |
| VCRUploadRequests | This counter indicates the number of voice call record (VCR) upload requests that the Unified Communications Manager has sent to the Cisco IME server to be stored in the IME distributed cache. |

IME Client Instance

The IME Client Instance object provides information about the Cisco IME client instance on the Unified Communications Manager server. The following table contains information on the Cisco IME client instance counters.

Table 62: IME Client

| Counters | Counter Description |
|------------------|---|
| IMEServiceStatus | <p>This counter indicates the overall health of the connection to the Cisco IME services for a particular Cisco IME client instance (Unified Communications Manager). The following values may display for the counter:</p> <ul style="list-style-type: none"> • 0—Indicates an unknown state (which may mean that the Cisco IME service is not active). If the value specifies 0, an alert gets generated once per hour while the connection remains in the unknown state. • 1—Indicates a healthy state; that is, the Cisco IME service is active, and the Unified Communications Manager has successfully established a connection to its primary and backup servers for the Cisco IME client instance, if configured. • 2—Indicates an unhealthy state; that is, the Cisco IME service is active, but the Unified Communications Manager has not successfully established a connection to its primary and backup servers for the Cisco IME client instance, if configured. |

SAML Single Sign-On

The following table contains information about SAML Single Sign-On counters.

Table 63: SAML Single Sign-On Counters

| Counter | Counter description |
|----------------|--|
| SAML_REQUESTS | This counter represents the total number of SAML requests sent to the configured Identity Provider. |
| SAML_RESPONSES | This counter represents the total number of SAML responses received from the configured Identity Provider. |

Additionally, the following SAML SSO counters are also displayed in the Unified RTMT but they are not functional in Unified Communications Manager 10.0(1):

- OAUTH_TOKENS_ISSUED
- OAUTH_TOKENS_ACTIVE
- OAUTH_TOKENS_VALIDATED

- OAUTH_TOKENS_EXPIRED
- OAUTH_TOKENS_REVOKED

Cisco IVR Device

This object provides information about registered Cisco Interactive Voice Response (IVR) devices.

| Counters | Counter Description |
|-------------------|---|
| ResourceTotal | This represents the total number of IVR resources configured for this IVR device. |
| ResourceActive | This represents the total number of IVR resources that are currently active for this IVR device. |
| ResourceAvailable | This represents the total number of resources that are not active and are still available to be used at the current time for the IVR device. |
| OutOfResources | This represents the total number of times an attempt was made to allocate an IVR resource from this IVR device and failed, because all the resources were in use. |

IM and Presence Service Counters

Cisco Client Profile Agent

This object provides information about the Cisco Client Profile (SOAP) interface.

The following table contains information about client profile agent counters.

Table 64: Cisco Client Profile Agent counters

| Counters | Counter Descriptions |
|--------------------------|--|
| SoapCrossClusterRedirect | This counter represents the number of login requests received by the Cisco SOAP interface which were redirected to a node in a peer cluster. |
| SoapLoginFailures | This counter represents the number of failed login requests received by the Cisco SOAP interface. |
| SoapNodeRedirect | This counter represents the number of login requests received by the Cisco SOAP interface which were redirected to another node. |

Cisco Presence Engine

The Cisco Presence Engine object provides information about the SIP messages that the Presence Engine receives and sends.

The following table contains information about Cisco Presence Engine performance counters.

Table 65: Cisco Presence Engine counters

| Counters | Counter Description |
|---------------------------------|--|
| Subscribe | |
| SubscribesReceived | This counter represents the number of SUBSCRIBE messages received by the Presence Engine, including initial subscribes, refreshes, fetches & unsubscribes. |
| SubscribesSent | This counter represents the total number of SUBSCRIBE messages sent from the Presence Engine. |
| SubscribesReceivedPresence | This counter represents the number of SUBSCRIBE messages received by the Presence Engine with an event type of presence. |
| SubscribesReceivedProfileConfig | This counter represents the number of SUBSCRIBE messages received by the Presence Engine with an event type of profileconfig. |
| SubscribesInitial | This counter represents the number of initial non-calendar SUBSCRIBE messages received. |
| SubscribesRefresh | This counter represents the number of non-calendar refresh SUBSCRIBE messages received. |
| SubscribesFetch | This counter represents the number of non-calendar fetch SUBSCRIBE messages received. |
| SubscribesRemove | This counter represents the number of non-calendar remove SUBSCRIBE messages received. |
| ActiveSubscriptions | This counter represents the number of non-calendar subscriptions that are currently active. |
| SubscribesRedirect3xx | This counter represents the number of SUBSCRIBE messages redirected with a 3xx response. |
| SubscribesRejected4xx | This counter represents the number of SUBSCRIBE messages rejected with a 4xx response. |
| SubscribesRejected5xx | This counter represents the number of SUBSCRIBE messages rejected with a 5xx response. |
| SubscribesRejected6xx | This counter represents the number of SUBSCRIBE messages rejected with a 6xx response. |

| Counters | Counter Description |
|--|--|
| SubscribesRejectedWith503 | This counter represents the number of SUBSCRIBE messages rejected with a 503 responses. |
| SubscriptionActiveSentForeign | This counter represents the number of active subscriptions sent by the Presence Engine to a foreign domain. |
| SubscriptionActiveReceivedFrom Foreign | This counter represents the number of active subscriptions received by the Presence Engine from a foreign domain. |
| WatcherInfoPresenceSubscriptions | This counter represents the number of watcher-info presence subscriptions. |
| Calendar | |
| ActiveCalendarSubscriptions | This counter represents the number of calendar subscriptions that are currently active. |
| SubscribesSentCalendarInitial | This counter represents the number of initial SUBSCRIBE messages sent by the Presence Engine to the calendar server. |
| SubscribesSentCalendarRefresh | This counter represents the number of refresh SUBSCRIBE messages sent by the Presence Engine to the calendar server. |
| SubscribesSentCalendarRetry | This counter represents the number of retry SUBSCRIBE messages sent by the Presence Engine to the calendar server. |
| SubscribesReceivedCalendar | This counter represents the number of SUBSCRIBE messages received by the Presence Engine with an event type of calendar. |
| NotifiesReceivedCalendar | This counter represents the number of NOTIFY messages by the Presence Engine with an event type of calendar. |
| NotifiesSentCalendar | This counter represents the number of NOTIFY messages sent from the Presence Engine with an event type of calendar. |
| MeetingsStarted | This counter represents the number of meetings that were started through calendar integration. |
| MeetingsEnded | This counter represents the number of meetings that were ended through calendar integration. |
| Publish | |

| Counters | Counter Description |
|---------------------------|--|
| PublicationsProcessed | This counter represents the number of successful publications processed by the Presence Engine. |
| PublishInitial | This counter represents the number of initial PUBLISH messages received. |
| PublishRefresh | This counter represents the number of refresh PUBLISH messages received. |
| PublishModify | This counter represents the number of modify PUBLISH messages received. |
| PublishRemove | This counter represents the number of remove PUBLISH messages received. |
| Notify | |
| NotificationsInQueue | This counter represents the number of the existing number of outgoing NOTIFY messages queued by the Presence Engine. |
| NotifiesSent | This counter represents the number of successful NOTIFY messages sent out by the Presence Engine. |
| NotifiesReceived | This counter represents the number of NOTIFY messages received by the Presence Engine from backend subscriptions. |
| NotifiesSentPresence | This counter represents the number of NOTIFY messages sent from the Presence Engine with an event type of presence. |
| NotifiesSentProfileConfig | This counter represents the number of NOTIFY messages sent from the Presence Engine with an event type of profileconfig. |
| NotifiesRetried | This counter represents the number of NOTIFY messages sent that were retried. |
| NotifiesTimeouts | This counter represents the number of NOTIFY messages that timed out. |
| NotifiesRejected3xx | This counter represents the number of NOTIFY messages rejected with a 3xx response. |
| NotifiesRejected4xx | This counter represents the number of NOTIFY messages rejected with a 4xx response. |
| NotifiesRejected5xx | This counter represents the number of NOTIFY messages rejected with a 5xx response. |
| NotifiesRejected503 | This counter represents the number of NOTIFY messages rejected with a 503 response. |

| Counters | Counter Description |
|----------------------------------|---|
| NotifiesRejected6xx | This counter represents the number of NOTIFY messages rejected with a 6xx response. |
| WatcherInfoPresenceNotifications | This counter represents the number of watcher-info presence notifications. |
| WatcherInfoPresenceSubscriptions | This counter represents the number of watcher-info presence subscriptions. |
| HighWaterMark | |
| HighWaterMark | This counter represents the number of times the load high water mark has been reached. |
| Active Views | |
| ActiveViews | This counter represents the number of Active Views in the Presence Engine. |
| Active Resources | |
| ActiveResources | This counter represents the number of active resources in the Presence Engine. |
| JSM | |
| ActiveJsmSessions | This counter represents the number of client emulation sessions between the Presence Engine and JSM. |
| XMPP | |
| XMPPPresenceReceived | This counter represents the number of XMPP presence packets received. |
| XMPPPresenceFiltered | This counter represents the number of XMPP presence packets received that were filtered. |
| XMPPPresenceNotificationsSent | This counter represents the number of composed presence updates sent to JSM. |
| XMPPIMReceived | This counter represents the number of XMPP Instant Message packets received by the Presence Engine. |
| XMPPIMSent | This counter represents the number of XMPP Instant Message packets sent by the Presence Engine. |
| XMPPIMTcInviteErrors | This counter represents the number of XMPP TC Invites rejected by the Presence Engine. |
| XMPPIMResourceNotFoundErrors | This counter represents the number of XMPP Instant Message packets received for unregistered SIP resources. |

| Counters | Counter Description |
|---------------------------|--|
| XMPPIMIgnored | This counter represents the number of XMPP Instant Message packets dropped by the Presence Engine. |
| XMPPIMGoneGenerated | This counter represents the number of gone messages sent to the RFI on presence events. |
| RFIErrors | This counter represents the number of errors when sending XMPP messages to the RFI layer. |
| RFIMessageQueueSize | This counter represents the current number of XMPP Messages that are queued as the RFI is PAUSED. |
| SIP | |
| SIPIMReceived | This counter represents the number of SIP Instant Message packets received by the Presence Engine. |
| SIPIMSent | This counter represents the number of SIP Instant Message packets sent by the Presence Engine. |
| SIPIMGoneGenerated | This counter represents the number of gone messages sent to the Proxy on presence events. |
| SIPIMRetry | This counter represents the number of SIP Instant Message resent to the Proxy. |
| SIPIMTimeout | This counter represents the number of SIP Instant Message packets that timed out when sending to the Proxy. |
| SIPIMReject3xx | This counter represents the number of 3xx errors when attempting to send SIP Instant Message packets to the Proxy. |
| SIPIMReject4xx | This counter represents the number of 4xx errors when attempting to send SIP Instant Message packets to the Proxy. |
| SIPIMReject5xx | This counter represents the number of 5xx errors when attempting to send SIP Instant Message packets to the Proxy. |
| SIPIMReject6xx | This counter represents the number of 6xx errors when attempting to send SIP Instant Message packets to the Proxy. |
| ActiveIMSessions | This counter represents the number of Active Instant Message sessions between SIP and XMPP. |
| Roster Sync | |
| RosterSyncAddBuddySuccess | This counter represents the number of successful add buddy requests processed by the Roster Sync Agent. |

| Counters | Counter Description |
|-------------------------------|--|
| RosterSyncAddBuddyFailure | This counter represents the number of failed add buddy requests processed by the Roster Sync Agent. |
| RosterSyncUpdateBuddySuccess | This counter represents the number of successful update buddy requests processed by the Roster Sync Agent. |
| RosterSyncUpdateBuddyFailure | This counter represents the number of failed update buddy requests processed by the Roster Sync Agent. |
| RosterSyncDeleteBuddySuccess | This counter represents the number of successful delete buddy requests processed by the Roster Sync Agent. |
| RosterSyncDeleteBuddyFailure | This counter represents the number of failed delete buddy requests processed by the Roster Sync Agent. |
| RosterSyncSubscribeSuccess | This counter represents the number of successful subscribe requests processed by the Roster Sync Agent. |
| RosterSyncSubscribeFailure | This counter represents the number of failed subscribe requests processed by the Roster Sync Agent. |
| RosterSyncUnSubscribeSuccess | This counter represents the number of successful unsubscribe requests processed by the Roster Sync Agent. |
| RosterSyncUnSubscribeFailure | This counter represents the number of failed unsubscribe requests processed by the Roster Sync Agent. |
| PolicyUpdateSent | This counter represents the number of privacy policy update sent to XCP. |
| PolicyUpdateReceived | This counter represents the number of privacy policy update received from XCP. |
| RosterSyncUnSubscribedSuccess | This counter represents the number of successful unsubscribed requests processed by the Roster Sync Agent. |
| RosterSyncUnSubscribedFailure | This counter represents the number of failed unsubscribed requests processed by the Roster Sync Agent. |

Cisco Server Recovery Manager

This object provides information about the Cisco Server Recovery Manager (SRM) state. The following table contains information about SRM counters.

Table 66: Cisco Server Recovery Manager Counters

| Counters | Counter Descriptions |
|----------|---|
| SRMState | <p>This counter represents the state of the SRM.</p> <ul style="list-style-type: none"> • 0 = Unknown • 1 = Initializing • 2 = Idle • 3 = Active Normal • 4 = Backup Activated • 5 = Taking Over • 6 = Taking Back • 7 = Failing Over • 8 = Failed Over • 9 = Failed Over Affected Service • 10 = Falling Back • 11 = Failed • 12 = Down State |

Cisco SIP Proxy

The following table contains information about Cisco SIP Proxy counters.

Table 67: Proxy counters

| Counters | Counter Descriptions |
|----------------------|---|
| CTIGWConferenceReq | This counter represents the number of conference call requests received by CTIGW. |
| CTIGWInboundCalls | This counter represents the number of inbound calls received by CTIGW. |
| CTIGWLineOpenRequest | This counter represents the number of LineOpen requests received by CTIGW. |
| CTIGWMakeCallRequest | This counter represents the number of MakeCall requests received by CTIGW. |

| Counters | Counter Descriptions |
|-------------------------------|--|
| CTIGWRefreshCount | This counter represents the number of INVITE Refreshes received by the IM and Presence server that are sent from the MOC client. |
| CTIGWRetrieveReq | This counter represents the number of retrieve call requests received by CTIGW. |
| CTIGWSip4XXRes | This counter represents the number of SIP 4XX response sent by CTIGW. |
| CTIGWSip5XXRes | This counter represents the number of SIP 5XX response sent by CTIGW. |
| CTIGWSSXrefReq | This counter represents the number of single step transfer call requests received by CTIGW. |
| CTIGWUsersAuthorized | This counter represents the number of users authorized by CTIGW. |
| CTIGWUsersCurrentlyAuthorized | This counter represents the number of users currently logged into MOC client for Remote Call Control. |
| CTIGWXrefReq | This counter represents the number of transfer call requests received by CTIGW. |
| HttpRequests | This counter represents the number of HTTP requests processed. |
| IMCTRLActiveSessions | This counter represents the current number of active federated IM sessions. |
| IMGWActiveSessions | This counter represents the current number of active SIP XMPP IM gateway sessions being maintained by the proxy. |
| IMGWClientMessageSent | This counter represents the current number of SIP Messages sent to SIP client from the XMPP IM gateway. |
| IMGWPeMessageReceived | This counter represents the current number of SIP Messages received from the local PE by the XMPP IM gateway. |
| IMGWPeMessageSent | This counter represents the current number of SIP Messages sent to the local PE for the XMPP IM gateway. |
| Ipc_Requests | This counter represents the number of IPC requests from the TCP process. |
| NumIdleSipdWorkers | This counter represents the number of idle sipd worker processes at a current instance. |

| Counters | Counter Descriptions |
|---------------------------------|---|
| NumSipdWorker | This counter represents the number of sipd worker processes at a current instance. |
| Proxy_Due_Timer_Events | This counter represents the number of past-due timer events that were queued. |
| Proxy_Timer_Events | This counter represents the number of expired timer events. |
| PWSAppUserLoginRequest | This counter represents the number of Application User login requests received by the Presence Web Service Module. |
| PWSAppUserLogoutRequest | This counter represents the number of Application User logout requests received by the Presence Web Service Module. |
| PWSEndpointExpired | This counter represents the number of subscriptions that expire before been refreshed. |
| PWSEndpointRefreshRequest | This counter represents the number of Endpoint refresh requests received by the Presence Web Service Module. |
| PWSEndUserLoginRequest | This counter represents the number of End User login requests received by the Presence Web Service Module. |
| PWSEndUserLogoutRequest | This counter represents the number of End User logout requests received by the Presence Web Service Module. |
| PWSGetPolledPresenceRequest | This counter represents the number of GetPolledPresence requests received by the Presence Web Service Module. |
| PWSGetSubscribedPresenceRequest | This counter represents the number of GetSubscribedPresence requests received by the Presence Web Service Module. |
| PWSPresenceNotifies | This counter represents the number of Presence Notifications sent by the Presence Web Service Module. |
| PWSRegisterEndpointRequest | This counter represents the number of Register Endpoint requests received by the Presence Web Service Module. |
| PWSSetPresenceRequest | This counter represents the number of SetPresence requests received by the Presence Web Service Module. |

| Counters | Counter Descriptions |
|------------------------------|---|
| PWSSipNotifies | This counter represents the number of SIP Notifies received by the Presence Web Service Module. |
| PWSSipPublishRequests | This counter represents the number of SIP Publish requests sent by the Presence Web Service Module. |
| PWSSipSubscribeRequests | This counter represents the number of SIP Subscribe requests sent by the Presence Web Service Module. |
| PWSSipUnpublishRequests | This counter represents the number of SIP Unpublish requests sent by the Presence Web Service Module. |
| PWSSipUnsubscribeRequests | This counter represents the number of SIP Unsubscribe requests sent by the Presence Web Service Module. |
| PWSSubscribeExpired | This counter represents the number of endpoint registrations that expire before been refreshed. |
| PWSSubscribeRefreshRequest | This counter represents the number of Subscribe refresh requests received by the Presence Web Service Module. |
| PWSSubscribeRequest | This counter represents the number of Subscribe requests received by the Presence Web Service Module. |
| PWSUnregisterEndpointRequest | This counter represents the number of Unregister Endpoint requests received by the Presence Web Service Module. |
| PWSUnsubscribeRequest | This counter represents the number of Unsubscribe requests received by the Presence Web Service Module. |
| ServerLoadStatus | This counter represents the Server load status on scale of 0 (idle) to 3 (swamped). |
| SIPClientImMessage | This counter represents the number of SIP Client Instant Messages received by the proxy. |
| SIPClientRegistered | This counter represents the number of SIP Client REGISTER requests received by the proxy. |
| SIPClientRegisterFailed | This counter represents the number of failed SIP Client REGISTER requests received by the proxy. |
| Sip_Tcp_Requests | This counter represents the number of sip requests received over tcp transport. |
| Sip_Udp_Requests | This counter represents the number of sip requests received over udp transport. |

| Counters | Counter Descriptions |
|-----------------------------|---|
| SIPInviteRequestIn | This counter represents the number of INVITE requests received by the proxy. |
| SIPInviteRequestInForeign | This counter represents the current number of INVITE requests received by the proxy across the enterprise boundary. |
| SIPInviteRequestOut | This counter represents the number of INVITE requests sent by the proxy. |
| SIPInviteRequestOutForeign | This counter represents the current number of INVITE requests sent by the proxy across the enterprise boundary. |
| SIPMessageRequestIn | This counter represents the number of MESSAGE requests received by proxy. |
| SIPMessageRequestInForeign | This counter represents the current number of MESSAGE requests received by the proxy across the enterprise boundary. |
| SIPMessageRequestOutForeign | This counter represents the current number of MESSAGE requests sent by the proxy across the enterprise boundary. |
| SIPNotifyRequestIn | This counter represents the number of NOTIFY requests received by the proxy. |
| SIPNotifyRequestInForeign | This counter represents the current number of NOTIFY requests received by the proxy across the enterprise boundary. |
| SIPNotifyRequestOutForeign | This counter represents the current number of NOTIFY requests sent by the proxy across the enterprise boundary. |
| SIPRegisterRequestIn | This counter represents the number of REGISTER requests received by the proxy. |
| SIPRequestInForeign | This counter represents the current number of requests received directly by the proxy across the enterprise boundary. |
| SIPRequestOutForeign | This counter represents the current number of requests sent directly by proxy across the enterprise boundary. |
| SIPRetransmits | This counter represents the number of retransmits executed by the proxy. |
| SIPSubscribeRequestIn | This counter represents the number of SUBSCRIBE requests received by the proxy. |

| Counters | Counter Descriptions |
|-------------------------------|--|
| SIPSubscribeRequestInForeign | This counter represents the current number of SUBSCRIBE requests received by the proxy across the enterprise boundary. |
| SIPSubscribeRequestOutForeign | This counter represents the current number of SUBSCRIBE requests sent by the proxy across the enterprise boundary. |

Cisco Sync Agent

This object provides information about the number of errors that occur during synchronization. The following table contains information about the Cisco Sync Agent counter.

Table 68: Cisco Sync Agent Counter

| Counter | Counter Description |
|--------------------|---|
| NumberOfSyncErrors | This counter displays the number of errors that occur during synchronization. The counter resets to 0 when the Cisco sync agent is restarted. This counter is always 0 on the subscriber node. |

Cisco XCP Auth Component

The following table contains information about Cisco XCP Authentication performance counters.

Table 69: Cisco XCP Auth Component Counters

| Counter | Counter description |
|-----------------------|---|
| SASLPlainSuccess | This counter represents the total number of successful SASL plain authentication attempts. |
| SASLPlainFailed | This counter represents the total number of failed SASL plain authentication attempts. |
| VtgTokenSuccess | This counter represents the number of successful vtg-token authentication attempts. |
| VtgTokenFailed | This counter represents the number of failed vtg-token authentication attempts. |
| FailedLicense | This counter represents the total number of failed authentication attempts due to no license. |
| FailedSASLCredentials | This counter represents the total failed SASL plain authentication attempts due to invalid username and password. |

| Counter | Counter description |
|------------------------|--|
| FailedTokenCredentials | This counter represents the total failed vtg-token authentication attempts due to invalid username and password. |

Cisco XCP CM

The following table contains information about Cisco XCP Connection Manager (CM) performance counters.

Table 70: Cisco XCP CM Counters

| Counter | Counter Description |
|--------------------|--|
| CmConnectedSockets | This counter represents the number of connected sockets in the Web Connection Manager component. |
| CmFailedRequests | This counter represents the total number of failed connection requests. |

Cisco XCP Component Stanza Traffic

The following table provides information about Cisco XCP Component Stanza Traffic performance counters.

Table 71: Cisco XCP Component Stanza Traffic Counters

| Counter | Counter description |
|------------------------------|--|
| CompStanzaBytesSent | This counter represents the number of bytes sent on a per-component basis. |
| CompStanzaBytesRecv | This counter represents the number of bytes received on a per-component basis. |
| CompStanzaErrorsRecv | This counter represents the number of errors sent on a per-component basis. |
| CompStanzaErrorsSent | This counter represents the number of errors received on a per-component basis. |
| CompStanzaPacketsDropped | This counter represents the number of packets dropped on a per-component basis. |
| CompStanzaStanzasSent | This counter represents the number of stanzas sent on a per-component basis. |
| CompStanzaStanzasRecv | This counter represents the number of stanzas received on a per-component basis. |
| CompStanzaMessagePacketsSent | This counter represents the number of message packets sent on a per-component basis. |

| Counter | Counter description |
|-------------------------------|---|
| CompStanzaMessagePacketsRecv | This counter represents the number of message packets received on a per-component basis. |
| CompStanzaPresencePacketsSent | This counter represents the number of presence packets sent on a per-component basis. |
| CompStanzaPresencePacketsRecv | This counter represents the number of presence packets received on a per-component basis. |
| CompStanzaIQPacketsRecv | This counter represents the number of IQ packets received on a per-component basis. |
| CompStanzaIQPacketsSent | This counter represents the number of IQ packets sent on a per-component basis. |

Cisco XCP JDS

The following table contains information about the Cisco XCP JDS performance counters.

Table 72: Cisco XCP JDS Counters

| Counter | Counter description |
|--------------------|--|
| JdsLDAPSuccess | This counter represents the total number of successful LDAP searches. |
| JdsLDAPFailed | This counter represents the total number of failed LDAP searches. |
| JdsInvalidRequests | This counter represents the number of invalid LDAP search requests rejected by Cisco XCP JDS and not sent to LDAP. |

Cisco XCP JSM

The following table contains information about the XCP JSM performance counters.

Table 73: Cisco XCP JSM Counters

| Counter | Counter description |
|----------------|---|
| JsmMessagesIn | This counter represents the number of message stanzas received by the JSM component. |
| JsmMessagesOut | This counter represents the number of message stanzas sent by the JSM component. |
| JsmPresenceIn | This component represents the number of presence stanzas received by the JSM component. |

| Counter | Counter description |
|------------------------------|--|
| JsmPresenceOut | This component represents the number of presence stanzas sent by the JSM component. |
| JsmIMSessions | This counter represents the total number of active JSM sessions on the IM and Presence service. On IM and Presence, the Presence Engine creates a JSM client emulation session for every licensed user at startup time. Additional JSM sessions are also created while users are signed in on their clients. Users may be signed in on multiple clients simultaneously resulting in multiple additional JSM sessions per user. |
| JsmOnlineUsers | This counter represents the number of users with one or more JSM sessions. On IM and Presence, the Presence Engine creates a JSM client emulation session for every licensed user. The value of this counter should therefore match the value of the Presence Engine ActiveJsmSessions counter. |
| JsmLoginRate | This counter represents the current login rate being tracked by the JSM component. |
| JsmSuccessfulLogins | This counter represents the total number of successful logins. |
| JsmFailedLogins | This counter is always 0 on IM and Presence. For details on failed login attempts, see the Cisco XCP Auth Component counters. |
| JsmTotalMessagePackets | This counter represents the total message packets processed by the JSM component. |
| JsmTotalPresencePackets | This counter represents the total presence packets processed by the JSM component. |
| JsmTotalIQPackets | This counter represents the total number of IQ packets processed by the JSM. |
| JsmMsgsInLastSlice | This counter represents the total messages processed by the JSM component in last time slice. |
| JsmAverageMessageSize | This counter represents the average message size processed by the JSM component. |
| JsmTotalStateChangePackets | This counter is always set to 0 on IM and Presence and is reserved for future use. |
| JsmStateChangePacketsInSlice | This counter is always set to 0 on IM and Presence and is reserved for future use. |
| JsmAverageStateChangeSize | This counter is always set to 0 on IM and Presence and is reserved for future use. |

Cisco XCP JSM IQ Namespaces

The following table contains information about the Cisco XCP JSM IQ Namespaces performance counters.

Table 74: Cisco XCP JSM IQ Namespaces

| Counter | Counter description |
|------------------|--|
| JSM IQ Namespace | This counter represents the number of IQ packets handles on a per-namespace basis. |

Cisco XCP JSM Session

The following table contains information about the Cisco XCP JSM Session performance counters.

Table 75: Cisco XCP JSM Session Counters

| Counter | Counter description |
|-----------------------|--|
| JsmSessionIQIn | This counter represents IQ packets received by JSM on a per-session basis. |
| JsmSessionIQOut | This counter represents IQ packets sent by JSM on a per-session basis. |
| JsmSessionMessagesIn | This counter represents message packets received by JSM on a per-session basis. |
| JsmSessionMessagesOut | This counter represents message packets sent by JSM on a per-session basis. |
| JsmSessionPresenceIn | This counter represents presence packets received by JSM on a per-session basis. |
| JsmSessionPresenceOut | This counter represents presence packets sent by JSM on a per-session basis. |
| JsmSessionRosterSize | This counter represents the size of the user's roster on a per-session basis. |

Cisco XCP MA Basic

The following table contains information about the Cisco XCP Message Archiver Basic performance counters.

Table 76: Cisco XCP MA Basic Counters

| Counter | Counter description |
|-----------------|---|
| ReceivedPackets | This counter represents the total number of packets received by IM and Presence and archived by the Message Archiver component. |

| Counter | Counter description |
|---------------------|---|
| SentPackets | This counter represents the total number of packets sent from IM and Presence and archived by the Message Archiver component. |
| SuccessfulDBWriters | This counter represents the confirmed IMs records written to the Database. |
| FailedDBWriters | This counter represents the failed attempts to write to the Database. |
| PacketsDropped | This counter represents the number of packets Message Archiver receives but are not written to the Database, for example, isTyping packets. |
| DBQueueSize | This counter represents the number of packets that Message Archiver has queued pending write to Database. |

Cisco XCP Managed File Transfer

The following table contains information about the Cisco XCP Managed File Transfer performance counters.

Table 77: Managed File Transfer Counters

| Counter | Counter description |
|---------------------------------|---|
| MFTBytesDownloadedLastTimeslice | This counter represents the number of bytes downloaded during the last reporting interval (typically 60 seconds). |
| MFTBytesUpoadedLastTimeslice | This counter represents the number of bytes uploaded during the last reporting interval (typically 60 seconds). |
| MFTFilesDownloaded | This counter represents the total number of files downloaded. |
| MFTFilesDownloadedLastTimeslice | This counter represents the number of files downloaded during the last reporting interval (typically 60 seconds). |
| MFTFilesUploaded | This counter represents the total number of files uploaded. |
| MFTFilesUploadedLastTimeslice | This counter represents the number of files uploaded during the last reporting interval (typically 60 seconds). |

Cisco XCP Router

The following table contains information about the Cisco XCP Router performance counters.

Table 78: Cisco XCP Router Counters

| Counter | Counter description |
|---------------------|---|
| RouterNormalPackets | This counter represents the total number of normal packets handled by the Cisco XCP router. |
| RouterXdbPackets | This counter represents the total number of xdb packets handled by the Cisco XCP router. |
| RouterRoutePackets | This counter represents the total number of route packets handled by the Cisco XCP router. |
| RouterLogPackets | This counter represents the total number of log packets handled by the Cisco XCP router. |

Cisco XCP SIP S2S

The following table contains information about Cisco XCP SIP Server-to-Server (S2S) performance counters.

Table 79: Cisco SIP S2S counters

| Counter | Counter description |
|----------------------------|--|
| SIPS2SIncomingDomains | This counter represents the total foreign domains with incoming subscriptions. |
| SIPS2SOutgoingDomains | This counter represents the total foreign domains with outgoing subscriptions. |
| SIPS2SSubscriptionsOut | This counter represents the total active SIP outgoing subscriptions. |
| SIPS2SSubscriptionsIn | This counter represents the total active SIP incoming subscriptions. |
| SIPS2SSubscriptionsPending | This counter represents the total pending SIP outgoing subscriptions. |
| SIPS2SNotifyIn | This counter represents the total SIP NOTIFY messages received. |
| SIPS2SNotifyOut | This counter represents the total SIP NOTIFY messages sent. |
| SIPS2SMessageIn | This counter represents the total SIP MESSAGE messages received. |

| Counter | Counter description |
|------------------|--|
| SIPS2SMessageOut | This counter represents the total SIP MESSAGE messages sent. |
| SIPS2SByeIn | This counter represents the SIP BYE messages received. |
| SIPS2SInviteIn | This counter represents the SIP INVITE messages received. |
| SIPS2SInviteOut | This counter represents the SIP INVITE messages sent. |

Cisco XCP S2S

The following table contains information about Cisco XCP Server-to-Server (S2S) performance counters.

Table 80: Cisco XCP S2S Counters

| Counters | Counter description |
|----------------------|--|
| S2SIncomingDomains | This counter represents the total foreign domains with incoming subscriptions. |
| S2SOutgoingDomains | This counter represents the total foreign domains with outgoing subscriptions. |
| S2SFailedDialbackIn | This counter represents the total failed incoming dialback attempts. |
| S2SFailedDialbackOut | This counter represents the total failed outgoing dialback attempts. |

Cisco XCP TC

The following table contains information about Cisco XCP Text Conferencing (TC) performance counters.

Table 81: Cisco XCP TC Counters

| Counter | Counter description |
|-------------------|---|
| TcTotalRooms | This counter represents the total number of all types of text chat rooms. |
| TcAdhocRooms | This counter represents the total number of ad hoc text chat rooms. |
| TcPersistentRooms | This counter represents the total number of permanent text chat rooms. |

| Counter | Counter description |
|----------------------|---|
| TcCreatedRooms | This counter represents the total number of created text chat rooms. |
| TcDeletedRooms | This counter represents the total number of deleted text chat rooms. |
| TcMessagesIn | This counter represents the total number of group chat messages received. |
| TcMessagesOut | This counter represents the total number of group chat messages sent. |
| TcDirectedMessagesIn | This counter represents the total number of private and invite messages received. |
| TcMessagesPersisted | This counter represents the total number of messages archived to the external database. |
| TcMessagesIgnored | This counter represents the total number of messages not archived to the external database. |

Cisco XCP TC Room

The following table contains information about the Cisco XCP TC Room performance counters.

Table 82: Cisco XCP TC Room Counters

| Counter | Counter description |
|----------------------|---|
| TCRoomNumOccupants | This counter represents the number of occupants on a per-chat room basis. |
| TCRoomBytesSent | This counter represents the number of bytes sent on a per-chat room basis. |
| TCRoomBytesRecv | This counter represents the number of bytes received on a per-chat room basis. |
| TCRoomStanzasSent | This counter represents the number of stanzas sent on a per-chat room basis. |
| TCRoomStanzasRecv | This counter represents the number of stanzas received on a per-chat room basis. |
| TCRoomMsgPacketSent | This counter represents the number of messages sent on a per-chat room basis. |
| TCRoomMsgPacketsRecv | This counter represents the number of messages received on a per-chat room basis. |

| Counter | Counter description |
|---------------------------|---|
| TCRoomPresencePacketsSent | This counter represents the number of presence packets sent on a per-chat room basis. |
| TCRoomPresencePacketsRecv | This counter represents the number of presence packets received on a per-chat room basis. |
| TCRoomIQPacketsSent | This counter represents the number of IQ packets sent on a per-chat room basis. |
| TCRoomIQPacketsRecv | This counter represents the number of iq packets received on a per-chat room basis. |

Cisco XCP WebCM

The following table contains information about the Cisco XCP Web Connection Manager performance counters.

Table 83: Cisco XCP WebCM Counters

| Counter | Counter description |
|-----------------------|--|
| WebCMConnectedSockets | This counter represents the cumulative total number of connected XMPP client sessions. |
| WebCMFailedRequests | This counter represents the total number of failed connection requests. |

Cisco Unity Connection Counters

CUC Data Store

The CUC Data Store object provides information about registered database usage by Cisco Unity Connection. The following table contains information about CUC Data Store counters.

Table 84: CUC Data Store

| Counters | Counter Descriptions |
|-----------------------|---|
| Allocated Memory [kb] | Amount of database server virtual-address space [in kilobytes]. |
| Database Connections | Total number of connections to the database server. |
| Disk Reads | Total number of disk read operations for all data chunks (rows) in the last 30 seconds. |
| Disk Reads/second | Number of read operations from the disk per second. |

| Counters | Counter Descriptions |
|--------------------|--|
| Disk Writes | Number of write operations to the disk in the last 30 seconds. |
| Disk Writes/second | Number of write operations to the disk per second. |
| Shared Memory [kb] | Amount of database server shared memory used [in kilobytes]. |

CUC Data Store: Databases

The CUC Data: Databases object provides information about the databases that Cisco Unity Connection uses.

Table 85: CUC Data Store: Databases

| Counters | Counter Descriptions |
|-------------------|---|
| Disk Reads/chunk | Number of read operations for the selected data chunk |
| Disk Writes/chunk | Number of write operations for the selected data |

CUC Digital Notifications

The CUC Digital Notifications object provides information about the total number of SMS and SMTP notifications. The following table contains information about CUC Digital Notification counters.

Table 86: CUC Digital Notifications

| Counters | Counter Descriptions |
|--|---|
| SMS Notifications Failed | The total number of SMS notifications failing to connect. |
| SMS Notifications Total | The total number of SMS notifications sent to subscribers by Cisco Unity Connection. |
| SMTP Notifications Total | The total number of SMTP notifications that Cisco Unity Connection sent to subscribers. |
| HTML Notifications with Summary of voice messages | The counter to maintain count of summary notifications. |
| HTML Notifications with Summary of voice messages in Last One Minute | The counter to maintain count of summary notifications sent in last one minute. |
| Scheduled Notifications Total | The counter to maintain count of scheduled summary notifications sent. |
| Scheduled Notifications in Last One Minute | The counter to maintain count of scheduled summary notifications sent in last minute. |

| Counters | Counter Descriptions |
|---|--|
| Scheduled Notifications dropped due to Parent Schedule off | The counter to maintain count of scheduled summary notifications dropped (not sent) because the parent schedule was turned off. |
| Scheduled Notifications dropped due to Parent Schedule off in Last One Minute | The counter to maintain count of scheduled summary notifications dropped (not sent) in last one minute because the parent schedule was turned off. |
| Missed Call Notifications Total | The total number of missed call notifications sent from Cisco Unity Connection. |

CUC Directory Services

The CUC Directory Services object provides information about the performance of the directory services that Cisco Unity Connection uses.

The Directory Search Duration Average [s] counter represents the average time [in seconds] to complete a directory search request for the Cisco Unity Connection server.

CUC Feeder

The CUC Feeder object keeps a count of total requests processed by the Feeder. The following table contains information about CUC Feeder counters.

| Counters | Counter Descriptions |
|---|--|
| Total objects requests processed | The total number of HTTP[S]/CCI objects requests processed by Feeder. |
| Objects requests processed in last 15 minutes | The total number of HTTP[S]/CCI objects requests processed by Feeder in last 15 minutes. |
| Total object requests processed | The total number of HTTP[S]/CCI object requests processed by Feeder. |
| Object requests processed in last 15 minutes | The total number of HTTP[S]/CCI object requests processed by Feeder in last 15 minutes. |

CUC Mailbox Sync

The Mailbox Sync service synchronizes messages between Unity Connection and Exchange.

The following table contains information about Mailbox Sync counters.

| Counters | Counter Description |
|---------------------------|--|
| Active thread count | Cisco Unity Connection maintains threads for synchronization of voicemail from Cisco Unity Connection to Exchange server and vice-versa. At any moment, this counter specifies the number of threads that are actively in use for voicemail synchronization. |
| Background queue size | Mailbox sync has three types of priority queues: Background, Normal, and Time-Sensitive. Background queue is the lowest priority queue. This queue has items that are scheduled because of background re-synchronization of each mailbox hourly. |
| Normal queue size | Normal queue has moderate priority. This queue has items that are scheduled because of messaging operation (such as message CREATE, READ, UNREAD, DELETE) performed by user or any configuration update by administrator on Unified Messaging page on Cisco Unity Connection Administration. |
| Time sensitive queue size | Time sensitive queue has highest priority. This queue has such items that are scheduled because of keep-alive message sent by Cisco Unity Connection to Exchange server to keep subscription alive. This is applicable for 2003 Exchange server only. |
| Total connection errors | It specifies the number of times the CuMbxSync process fails to retrieve or update some data from database. |
| Total Mailbox Adds | It specifies the number of times a user mailbox has been setup for subscription. Any communication error between Unity Connection and Exchange, results in user mailbox remove and re-add. |
| Total Mailbox Removes | It specifies the number of times a user mailbox has been setup for un-subscription. Any communication error between Unity Connection and Exchange, results in user mailbox remove and re-add. |
| Total Resyncs | It specifies the total number of times user mailbox is resynchronized with Exchange server. Cisco Unity Connection does background resynchronization for all the user mailboxes hourly. |

| Counters | Counter Description |
|------------------|--|
| Total Retries | Whenever there is a communication failure between Cisco Unity connection and Exchange server, Unity Connection does mailbox synchronization retry for particular user mailbox. This counter specifies the count of such occurrences. |
| Total Work Items | It specifies number of times any messaging operation, such as CREATE, READ, UNREAD, and DELETE, has been performed on any user mailbox. |

CUC Message Store

The CUC Message Store object provides information about the performance of the Cisco Unity Connection message store. The following table contains information about CUC Message Store counters.

Table 87: CUC Message Store

| Counters | Counter Descriptions |
|---|--|
| Bad Mail Total | Total number of messages sent to the Bad Mail folder since the last restart of the MTA server. |
| Delivery Receipts Total | Total number of delivery receipts since the last restart of the MTA server. |
| Incoming Recalls | Number of incoming requests to recall local copies of messages initiated by remote senders on other network locations. |
| Intersite Messages Delivered Per Minute | Number of intersite messages delivered in the last minute. |
| Intersite Messages Delivered Total | Total number of intersite messages delivered since the last restart of the MTA server. |
| Intersite Messages Received Per Minute | Number of intersite messages received in the last minute. |
| Intersite Messages Received Total | Total number of intersite messages received since the last restart of the MTA server. |
| Intersite Messages Total | Total number of intersite messages that have been delivered and received since the last restart of the MTA server. |
| Local Recalls | Number of message recalls initiated by local senders on this server. |
| Message Size Average [kb] | The average size of the MTA at each sample in kilobytes. |

| Counters | Counter Descriptions |
|---|---|
| Messages Delivered Total | Total number of messages delivered since the last restart of the MTA server. |
| Messages Received Per Minute | Total number of messages received Per Minute by MTA. |
| Messages Received Total | Total number of messages received since the last restart of the MTA server. |
| Non-delivery Receipts Total | Total number of non-delivery receipts since the last restart of the MTA server. |
| Number of Items Recalled | Total number of message recalls. This number includes each individual copy of a message that was sent to multiple recipients, so this number could be much larger than the Total Recalls, Local and Remote performance counter. |
| Queued Messages Current | The number of messages currently queued in the MTA. |
| Read Receipts Total | Total number of read receipts since the last restart of the MTA server. |
| Retries Total | Total number of retries since the last restart of the MTA server. |
| Total dispatch message folder items delivered | Total number of dispatch messages that have been delivered to individual user mailboxes since the MTA started. This number includes a count of each individual copy of a message sent to multiple recipients. |
| Total dispatch messages accepted | Total number of dispatch messages that have been accepted since the last restart of the MTA server |
| Total dispatch messages delivered | Total number of dispatch messages that have been delivered since the MTA started. This number includes each message just once, regardless of the number of recipients. |
| Total dispatch message items rejected | Total number of individual copies of dispatch messages that have been declined since the last restart of the MTA server. |
| Total dispatch messages removed due to acceptance | Total number of dispatch messages that have been removed from user mailboxes due to the message being accepted by another user since the last restart of the MTA server |

| Counters | Counter Descriptions |
|--|---|
| Total recalls, local and remote | Total number of message recalls initiated by local and remote senders. This number should be equal to the total of Incoming Recalls and Local Recalls performance counters. |
| VPIM Message Decode Duration Average [s] | The average time [in seconds] to decode voice messages in MIME format to the original format. |
| VPIM Message Encode Duration Average [s] | The average time [in seconds] to encode voice messages to MIME format. |
| VPIM Messages Delivered Per Minute | The number of VPIM messages that the Cisco Unity Connection Messages Store delivered within a minute. |
| VPIM Messages Delivered Total | The total number of VPIM messages that the Cisco Unity Connection Messages Store delivered. |
| VPIM Messages Received Per Minute | The number of VPIM messages that the Cisco Unity Connection Messages Store received per minute. |
| VPIM Messages Received Total | The total number of VPIM messages that the Cisco Unity Connection Messages Store received. |
| VPIM Messages Total | The total number of VPIM messages that the Cisco Unity Connection Message Store processed. |
| Messages Undelivered Mailbox Quota Full Notification Total | The total number of missed call notification sent when mailbox quota is full. |
| Video Messages Delivered Total | The total number of video messages delivered since the last restart of the MTA server. |
| Video Messages Delivered Per Minute | The total number of video messages delivered per minute since the last restart of the MTA server. |
| Video Messages Processed by MTA Total | The total number of video messages processed (both successful and unsuccessful) by the MTA server since the last restart of the server. |
| Video Messages Processed by MTA Per Minute | The total number of video messages processed (both successful and unsuccessful) by the MTA server per minute since the last restart of the server. |

CUC Message Store: Databases

The CUC Message Store: Databases object provides information about the message store database that Cisco Unity Connection uses.

The Messages Delivered Per Message Store counter represents the total number of messages that were delivered per message store since the last restart of the MTA server.

CUC Personal Call Transfer Rules

The CUC Personal Call Transfer Rules object provides information about the numbers and usage of the personal call transfer rules (PCTR). The following table contains information about CUC Personal Call Transfer Rules counters.

Table 88: CUC Personal Call Transfer Rules

| Counters | Counter Descriptions |
|-----------------------|---|
| Applicable Rule Found | Personal call transfer rule (PCTR) call resulted in rule processing, and an applicable transfer rule is found. |
| Destinations Tried | Number of destinations tried while transfer rules were applied. |
| PCTR Calls | Calls that are subject to personal call transfer rule (PCTR) processing: user assigned COS is enabled for PCTR, user is a Unified Communications Manager user, user has not disabled PCTR. |
| Rules Evaluated | Number of rules that are evaluated during rule processing in a personal call transfer rule (PCTR) call. |
| Subscriber Reached | Number of times that a subscriber was reached while transfer rules were applied. |
| Transfer Failed | Number of times that Cisco Unity Connection fails to transfer a call to a destination while personal call transfer rules were applied. Transfer failures include all conditions except when the called destination is connected, busy, or RNA or times out. A caller hanging up during a transfer gets considered a transfer failure. |
| Voicemail Reached | Number of times that voice mail was reached while transfer rules were applied. |

CUC Phone System

The CUC Phone System object provides information about the performance of the phone system integration. The following table contains information about CUC Phone System counters.

Table 89: CUC Phone System

| Counters | Counter Descriptions |
|--------------------|---|
| Call Count Current | The current number of incoming and outgoing calls to the Cisco Unity Connection server. |
| Call Count Total | The total number of incoming and outgoing calls to the Cisco Unity Connection server. |

| Counters | Counter Descriptions |
|---|---|
| Call Duration Average [s] | The average duration [in seconds] of incoming and outgoing calls from the Cisco Unity Connection server. |
| Call Duration Total [s] | The total duration [in seconds] of incoming and outgoing calls from the Cisco Unity Connection server. |
| Calls Unanswered Total | The total number of unanswered calls on the Cisco Unity Connection server. |
| Incoming Calls CFB Current | The current number of incoming calls that were received as Call Forward Busy. |
| Incoming Calls CFB Total | The total number of incoming calls that were received as Call Forward Busy. |
| Incoming Calls CFNA Current | The current number of incoming calls that were received as Call Forward No Answer. |
| Incoming Calls CFNA Total | The total number of incoming calls that were received as Call Forward No Answer. |
| Incoming Calls Current | The current number of incoming calls. |
| Incoming Calls Direct Current | The current number of incoming calls that were received as direct calls. |
| Incoming Calls Direct Total | The total number of incoming calls that were received as direct calls. |
| Incoming Calls Duration Average [s] | The average duration [in seconds] of all incoming calls to the Cisco Unity Connection server. |
| Incoming Calls Duration Total [s] | The total duration [in seconds] of all incoming calls to the Cisco Unity Connection server. |
| Incoming Calls No Info Total | The total number of incoming calls without integration information. |
| Incoming Calls Total | The total number of incoming calls. |
| Message Notification Duration Average [s] | The average time [in seconds] to complete all message notifications from the Cisco Unity Connection server. |
| Message Notification Duration Total [s] | The total time [in seconds] to complete all message notifications from the Cisco Unity Connection server. |
| Message Notifications Failed | The total number of message notifications that failed to connect to a destination number. |
| Message Notifications Total | The total number of message notifications that Cisco Unity Connection sent to subscribers. |

| Counters | Counter Descriptions |
|---|---|
| MWI Request Duration Average [ms] | The average duration [in milliseconds] of all MWI requests from the Cisco Unity Connection server. |
| MWI Request Duration Total [ms] | The total duration [in milliseconds] of all MWI requests from the Cisco Unity Connection server. |
| MWI Requests Failed Total | The total number of MWI requests that failed to connect to a destination number or complete MWI operation. |
| MWI Requests Total | The total number of MWI requests that Cisco Unity Connection sent. |
| Outgoing Calls Duration Average [s] | The average duration [in seconds] of all outgoing calls from the Cisco Unity Connection server. |
| Outgoing Calls Duration Total [s] | The total duration [in seconds] of all outgoing calls from the Cisco Unity Connection server. |
| Outgoing Calls Release Transfers Completed | The number of completed release transfers from the Cisco Unity Connection server. |
| Outgoing Calls Release Transfers Failed | The number of release transfers from the Cisco Unity Connection server that failed to connect to a destination number. |
| Outgoing Calls Release Transfers Total | The total number of release transfers that were attempted from the Cisco Unity Connection server. |
| Outgoing Calls Supervised Transfers Completed | The number of completed supervised transfers from the Cisco Unity Connection server. |
| Outgoing Calls Supervised Transfers Dropped | The number of supervised transfers from the Cisco Unity Connection server that were dropped while in progress. |
| Outgoing Calls Supervised Transfers Failed | The number of supervised transfers from the Cisco Unity Connection server that failed to connect to a destination number. |
| Outgoing Calls Supervised Transfers Total | The total number of supervised transfers from the Cisco Unity Connection server. |
| Outgoing Calls Transfers Total | The total number of release and supervised transfers that Cisco Unity Connection attempted. |
| Pager Notifications Duration Average [s] | The average time [in seconds] to complete all pager notifications from the Cisco Unity Connection server. |
| Pager Notifications Duration Total [s] | The total time [in seconds] to complete all pager notifications from the Cisco Unity Connection server. |

| Counters | Counter Descriptions |
|--------------------------------|---|
| Pager Notifications Failed | The total number of pager notifications that failed to connect to a destination number. |
| Pager Notifications Total | The total number of pager notifications that Cisco Unity Connection sent to subscribers. |
| Port Idle Duration [s] | The total time [in seconds] that any port remains idle between incoming calls to the Cisco Unity Connection server. |
| Port Idle Duration Average [s] | The average time [in seconds] that any port remains idle between incoming calls to the Cisco Unity Connection server. |
| Ports Idle Current | The current number of integration ports that are not in use by the Cisco Unity Connection server. |
| Ports In Use Current | The current number of integration ports that are in use by the Cisco Unity Connection server. |
| Ports Locked | The current count of the ports that no longer respond or are otherwise unusable by Cisco Unity Connection. |
| Missed Call Total | The total number of missed call notifications triggered by the Cisco Unity Connection server. |

CUC Phone System: Ports

The CUC Phone System: Ports object provides information about the voice messaging ports on Cisco Unity Connection. The following table contains information about CUC Phone System: Ports counters.

Table 90: CUC Phone System: Ports

| Counters | Counter Descriptions |
|---------------------------------|--|
| Port Calls | The total number of calls that were received on this port since the Cisco Unity Connection server was last restarted. This includes all types of calls: Incoming calls, MWI dialouts, Notification dialouts, TRAP dialouts, and VPIM dialouts. |
| Port Idle Percent | The distribution percentage of idle ports on the Cisco Unity Connection server. |
| Port Usage Duration Average [s] | The average time [in seconds] that a port has been actively processing calls. |
| Port Usage Duration Total [s] | The total time [in seconds] that a port has been actively processing calls. |

| Counters | Counter Descriptions |
|--------------------|---|
| Port Usage Percent | The distribution percentage of calls into ports on the Cisco Unity Connection server. |

CUC Replication

The CUC Replication object provides information about the replication for Cisco Unity Connection redundancy. The following table contains information about CUC Replication counters.

Table 91: CUC Replication

| Counters | Counter Descriptions |
|----------------------------------|---|
| File Replication Latency [s] | How long file exists before replication starts. |
| File Replication Latency Max [s] | Maximum file replication latency since the service started. |
| File Transfer Rate [kbytes/s] | Transfer rate for each replicated file. |
| Files Replicated Total | Number of files replicated since the service started. |
| Transfer Rate [bytes/s] | Number of bytes transferred each second. |

CUC Replicator: Remote Connection Locations

The CUC Replicator: Remote Connection Locations object provides information about replication with remote Connection locations. The following table contains information about CUC Replicator: Remote Connection Locations counters.

Table 92: CUC Replicator: Remote Connection Locations

| Counters | Counter Descriptions |
|--------------------------------|--|
| Dependencies Requests Received | The number of replication dependencies requested received from the Connection location. |
| Dependencies Requests Sent | The number of replication dependencies requests sent to the Connection location. |
| Message Receive Failures | The number of replication messages from this Connection location that were not received because of failures. |
| Message Send Failures | The number of replication messages to the Connection location that were not sent because of failures. |
| Messages Received | The number of replication messages received from the Connection location. |

| Counters | Counter Descriptions |
|-----------------------|---|
| Messages Sent | The number of replication messages sent to the Connection location. |
| NDR Messages Received | The number of replication NDR messages received from the Connection location. |
| USN Requests Received | The number of USN request received from the Connection location. This usually indicates that a USN timeout occurred on the remote node. |

Connection REST Tomcat Connector

The Tomcat Hypertext Transport Protocol (HTTP) and HTTP Secure (HTTPS) Connector object provides information about Tomcat connectors.

Connection Rest Tomcat HTTP connector represents an endpoint that receives requests and sends responses. The connector handles HTTP/HTTPS requests and sends HTTP/HTTPS responses that occur when VMREST requests of application are accessed. The Secure Socket Layer (SSL) status of VMREST request URL's provide the basis for instance name for each Rest Tomcat Connector. For example, `https://<IP Address>:8443` for SSL or `http://<IP Address>:8080` for non-SSL.

The following table contains information about the Connection Rest Tomcat connector counters.

| Counter | Counter Description |
|----------------|--|
| Errors | The total number of HTTP errors (for example, 401 Unauthorized) that the connector encountered. |
| MBytesReceived | The amount of data that the connector received. |
| MBytesSent | The amount of data that the connector sent. |
| Requests | The total number of request that the connector handled. |
| ThreadsTotal | The current total number of request processing threads, including available and in-use threads, for the connector. |

| Counter | Counter Description |
|-------------|--|
| ThreadsMax | <p>The maximum number of request processing threads for the connector.</p> <p>Each incoming VMREST request requires a thread for the duration of that request. If more simultaneous requests are received than the currently available request processing threads can handle, additional threads are created up to the configured maximum shown in this counter. If still more simultaneous requests are received, they accumulate within the server socket that the connector created, up to an internally specified maximum number. Any further simultaneous requests receive connection refused messages until resources are available to process them.</p> |
| ThreadsBusy | <p>This counter represents the current number of busy/in-use request processing threads for the connector.</p> |

Connection REST Tomcat JVM

The Cisco Tomcat Java Virtual Machine (JVM) object provides information about the pool of common resource memory used by VMREST requests URL's. The dynamic memory block stores all objects that Tomcat and its VMREST requests create.

The following table contains information about the Connection REST Tomcat JVM counters.

| Counters | Counter Description |
|-------------------|---|
| KBytesMemoryFree | <p>The amount of free dynamic memory block (heap memory) in the Tomcat Java Virtual Machine.</p> <p>When the amount of free dynamic memory is low, more memory is automatically allocated, and total memory size (represented by the KbytesMemoryTotal counter) increases but only up to the maximum (represented by the KbytesMemoryMax counter).</p> <p>You can determine the amount of memory in use by subtracting KBytesMemoryFree from KbytesMemoryTotal.</p> |
| KBytesMemoryMax | <p>The amount of free dynamic memory block (heap memory) in the Tomcat Java Virtual Machine.</p> |
| KBytesMemoryTotal | <p>The current total dynamic memory block size, including free and in-use memory, of Tomcat Java Virtual Machine.</p> |

Connection REST Tomcat Web Application

Cisco Rest Tomcat Web Application object provides information about how to run VMREST request URL's.

VMREST request URL's provide the basis for instance name for each Rest Tomcat Web Application, as explained in the following examples:

- Cisco Unified Communications Manager Administration (<https://<IP Address>:8443/ccmadmin>) is identified by ccmadmin.
- Cisco Unified Serviceability (<https://<IP Address>:8443/cmsservice>) is identified by cmsservice.
- Cisco Unified Communications Manager User Options (<https://<IP Address>:8443/ccmuser>) is identified by ccmuser.
- Cisco Unity Connection Administration (<https://<IP Address>:8443/cuadmin>) is identified by cuadmin.
- URLs that do not have an extension, such as <https://<IP Address>:8443> or <http://<IP Address>:8080>, are identified by _root.

The following table contains information on the Connection Rest Tomcat Web Application counters.

| Counters | Counter Description |
|----------------|---|
| Errors | The total number of HTTP errors (for example, 401 Unauthorized) that a Unified Communications Manager-related or Cisco Unity Connection-related web application encounters. |
| Requests | The total number of VMREST requests that the web application handles. Each time that a web application is accessed, its Requests counter increments accordingly. |
| SessionsActive | The number of active or in use sessions in the web application. |

CUC Sessions: Authz Server

Table 93: CUC Sessions: Authz Server

| Counters | Counter Description |
|---|--|
| CUC Authz Total Validation Requests | Total Number of Authz validation requests. |
| CUC Authz Successful Validation Requests | Total Number of successful Authz validations. |
| CUC Authz Failed Validation Requests | Total Number of failed Authz validations. |
| CUC Authz Total Validation Requests in Last minute | Total Number of Authz validations in Last minute. |
| CUC Authz Successful Validation Requests in Last minute | Total Number of successful Authz validations in last minute. |
| CUC Authz Failed Validation Requests in Last minute | Total Number of failed Authz validations in last minute. |

CUC Sessions: Calendar Access

The CUC Sessions: Calendar Access object provides information about the Cisco Unity Connection calendar integration. The following contains information about CUC Sessions: Calendar Access counters.

Table 94: CUC Sessions: Calendar Access

| Counters | Counter Descriptions |
|---|---|
| Connections To Exchange Failure - Total | Total number of Exchange connection failures. |
| Connections To MP Failure - Total | Total number of MeetingPlace connection failures. |
| Exchange Requests - Total | Total number of Exchange calendar requests. |
| Exchange Response Time [ms] - Current | Current Exchange Response Time in milliseconds. |
| Meeting Join Request - Total | Total number of requests to join the meeting. |
| MP Request - Total | Total number of MeetingPlace calendar requests. |
| MP Response Time [ms] - Current | Current MeetingPlace Response Time in milliseconds. |

CUC Sessions: E-Mail Access

The CUC Sessions: E-mail Access object provides information about e-mail voice sessions. The following table contains information about CUC Sessions: E-mail Access counters.

Table 95: CUC Sessions: E-Mail Access

| Counters | Counter Descriptions |
|-------------------------------|--|
| Messages Read - Total | The total number of e-mail messages that were read since the last restart of Cisco Unity Connection. |
| Session Duration Average [ms] | The average duration [in milliseconds] of all e-mail sessions as measured on a per-call basis. |
| Session Duration Total [ms] | The total duration [in milliseconds] of all e-mail sessions as measured on a per-call basis. |
| Sessions - Current | The number of active e-mail voice sessions. |
| Sessions - Total | The total number of e-mail voice sessions since the last restart of Cisco Unity Connection. |

CUC Sessions: IMAP Server

The CUC Sessions: IMAP Server object provides information about the IMAP server. The following table contains information about CUC Sessions: IMAP Server counters.

Table 96: CUC Sessions: IMAP Server

| Counters | Counter Descriptions |
|-------------------------------|---|
| Commands per minute | The number of IMAP commands per minute. |
| Connection Length Average [s] | The average duration [in seconds] of the connections to the IMAP server in the previous minute. |
| Current IDLE Sessions | The number of idle sessions on the IMAP server. |
| Errors Total | The total number of IMAP errors that the IMAP server returned since the last restart of the IMAP server. |
| EXAMINE Requests Total | The total number of EXAMINE requests to the IMAP server since the last restart of the IMAP server. |
| Failed Login Requests Total | The total number of failed LOGIN requests to the IMAP server since the last restart of the IMAP server. |
| FETCH Requests Total | The total number of FETCH requests to the IMAP server since the last restart of the IMAP server. |
| Login Requests Total | The total number of LOGIN requests to the IMAP server since the last restart of the IMAP server. |
| Logout Requests Total | The total number of LOGOUT requests to the IMAP server since the last restart of the IMAP server. |
| Messages Read Total | The total number of IMAP FETCH commands that have returned the body of the a message since the IMAP was last restarted. |
| Messages Read/hour | The number of IMAP FETCH commands in the previous hour that returned the body of a message. |
| Messages/fetch Average | Average number of messages that the IMAP FETCH command returned. |
| NOOP Requests Total | The total number of NOOP requests to the IMAP server since the last restart of the IMAP server. |
| Response Time [ms] | The response time [in milliseconds] for IMAP commands. |
| SEARCH Requests Total | The total number of SEARCH requests to the IMAP server since the last restart of the IMAP server. |
| Socket Connections Current | The number of active socket connections to the IMAP server. |
| Socket Connections Total | The total number of socket connections that have been made to the IMAP server since it was last restarted. |

| Counters | Counter Descriptions |
|---|--|
| STARTTLS Requests Total | The total number of STARTTLS requests to the IMAP server since the last restart of the IMAP server. This counter also increments when clients connect to the IMAP SSL port directly. |
| STATUS Requests Total | The total number of STATUS requests to the IMAP server since the last restart of the IMAP server. |
| TLS Connections Current | The number of active Transport Layer Security connections to the IMAP server. |
| TLS Errors Total | The total number of failed TLS connections to the IMAP server since the last restart of the IMAP server. |
| Unsolicited Notify Response Time Average [ms] | Average Unsolicited Notify Response Time [in milliseconds] for the IMAP server. |
| Unsolicited Notify Responses Total | Total number of Unsolicited Notify Responses that the IMAP server made since it was last restarted. |

CUC Sessions: RSS

The CUC Sessions: RSS object provides information about RSS sessions. The following table contains information about CUC Sessions: RSS counters.

Table 97: CUC Sessions: RSS

| Counters | Counter Descriptions |
|-----------------------------|---|
| RSS Messages Offered Total | The total number of RSS messages that were offered for streaming. |
| RSS Messages Streamed Total | The total number of RSS messages that the Cisco Unity Connection server streamed. |
| RSS Sessions Current | The current number of RSS sessions. |
| RSS Sessions Total | The total number of RSS sessions. |

CUC Sessions: SMTP Server

The CUC Sessions: SMTP Server object provides information about SMTP server sessions. The following table contains information about CUC Sessions: SMTP Server counters.

Table 98: CUC Sessions: SMTP Server

| Counters | Counter Descriptions |
|--------------------------|--|
| Total Delivered Messages | The number of SMTP messages that were delivered since the start of the system. |
| Total Messages | The number of SMTP messages delivered or received since the start of the system. |
| Total Received Messages | The number of SMTP messages that were received since the start of the system. |

CUC Sessions: SpeechView Processor

The CUC Sessions: SpeechView Processor object provides information about the SpeechView Processor service. The following table contains information about CUC Sessions: SpeechView Processor counters.

Table 99: CUC Sessions: SpeechView Processor

| Counters | Counter Descriptions |
|----------------------|--|
| Average wait time | The average time it takes to receive successful transcriptions from the external service. |
| Total failures | The total number of failed transcriptions since the last restart of the SpeechView Processor service. |
| Total timeouts | The total number transcriptions that timed out since the last restart of the SpeechView Processor service. |
| Transcribed messages | The total number successful transcriptions since the last restart of the SpeechView Processor service. |

CUC Sessions: TRaP

The CUC Sessions: TRaP object provides information about telephone record and playback (TRaP) sessions. The following table contains information about CUC Sessions: TRaP counters.

Table 100: CUC Sessions: TRaP

| Counters | Counter Descriptions |
|---|---|
| Reverse TRaP Session Duration Average [s] | The average duration [in seconds] of all reverse TRaP sessions. |
| Reverse TRaP Session Duration Total [s] | The total duration [in seconds] of all reverse TRaP sessions. |
| Reverse TRaP Sessions Current | The current number of active reverse TRaP sessions. |

| Counters | Counter Descriptions |
|-----------------------------------|---|
| Reverse TRaP Sessions Total | The total number of reverse TRaP sessions since the last start of Cisco Unity Connection. |
| TRaP Session Duration Average [s] | The average duration [in seconds] of all TRaP sessions. |
| TRaP Session Duration Total [s] | The total duration [in seconds] of all TRaP sessions. |
| TRaP Sessions Current | The current number of active TRaP sessions. |
| TRaP Sessions Total | The total number of TRaP sessions since the last start of Cisco Unity Connection. |

CUC Sessions: TTS

The CUC Sessions: TTS object provides information about text-to-speech (TTS) sessions. The following table contains information about CUC Sessions: TTS counters.

Table 101: CUC Sessions: TTS

| Counters | Counter Descriptions |
|------------------------------|--|
| Session Duration Average [s] | The average duration [in seconds] of all TTS sessions. |
| Session Duration Total [s] | The total duration [in seconds] of all TTS sessions. |
| Sessions Current | The current number of active TTS voice sessions. |
| Sessions Total | The total number of TTS voice sessions since the last start of Cisco Unity Connection. |

CUC Sessions: Unified Client

The CUC Sessions: Unified Client object provides information about the Unified Client for Cisco Unity Connection.

The Connections Total counter represents the total number of Unified Client IMAP requests.

CUC Sessions: Video

CUC Sessions Video: Video session object provides information about video sessions with video server. The following table contains information about CUC Sessions: Video

Table 102: CUC Sessions: Video

| Counters | Counter Descriptions |
|------------------------------|---|
| Audio calls Negotiated Total | The total number of Audio calls negotiated despite video offer. |

| Counters | Counter Descriptions |
|--|--|
| Audio Calls Negotiated In Last One Minute | The total number of audio calls negotiated despite video offer in last one minute. |
| Outgoing Video calls Release Transfer | The total number of outgoing video calls transferred as Release to Switch. |
| Supervise Transfer Calls Total | The total number of Supervise transfers initiated from video calls since the last restart of Cisco Unity Connection. |
| Video calls downgraded to Audio Total | The total number of video calls downgraded to audio since the last restart of Unity Connection. |
| Video calls downgraded to Audio In Last One Minute | The total number of video calls downgraded to audio in last one minute. |
| Video calls downgraded with prompt total | Total number of video calls downgraded with prompt "Video services are not available using audio only for duration of this call". |
| Video calls downgraded with prompt in Last One Minute | Total number of video calls downgraded with prompt "Video services are not available using audio only for duration of this call" in last minute. |
| Video Sessions Total | The total number of video session requests sent from Unity Connection to Video Server. |
| Video Sessions Current | The total number of current video session requests sent from Unity Connection to Video Server. |
| Video Session Playbacks Total | The total number of video session playbacks since the last restart of Cisco Unity Connection. |
| Video Session Playbacks Current | The total number of current video session playbacks. |
| Video Media File Playbacks Total | The total number of image playbacks from video server since the last restart of Unity Connection. |
| Video Media File Playbacks Current | The current number of Video Media File playbacks from video server. |
| Video Recordings Total | The total number of Video Recordings saved at video server since the last restart of Unity Connection. |
| Video Recordings Current | The current number of Video Recordings saved at video server. |
| Video Playback Completed Events from MS Total | The total number of Video Playback completed events from video server since the last restart of Unity Connection. |
| Video Playback Completed Events from MS In Last One Minute | The total number of Video Playback completed events from video server since last one minute. |

| Counters | Counter Descriptions |
|---|---|
| Video Keep Alive Total | The total number of Keep Alive sent by Unity Connection to video server since the last restart of Unity Connection. |
| Video Keep Alive In Last One Minute | The total number of Keep Alive sent by Unity Connection to video server since last one minute. |
| Video Get Media Capabilities Total | The total number of GetMediaCapabilities sent by Unity Connection to video server since the last restart of Unity Connection. |
| Video Get Media Capabilities In Last One Minute | The total number of GetMediaCapabilities sent by Unity Connection to video server since last one minute. |
| Video SignIn Total | The total number of SignIn request sent by Unity Connection to video server since the last restart of Unity Connection. |
| Video SignIn Total In Last One Minute | The total number of SignIn sent by Unity Connection to video server since last one minute. |
| KeyFrame Request sent Total | The total number of KeyFrame requests sent during video recording to EndPoint since the last restart of Cisco Unity Connection. |
| KeyFrame Request sent In Last One Minute | The total number of KeyFrame requests sent during video recording to EndPoint since the last restart of Cisco Unity Connection. |
| Video Record Successful Total | The total number of successful Video Recordings since the last restart of Cisco Unity Connection. |
| Video Sessions Failed Total | The total number of video sessions failed since the last restart of Cisco Unity Connection. |
| Video Session Failed In Last One Minute | The total number of video sessions failed in last one minute. |
| Media Sense Timeout Total | The total number of connection timeout errors while connecting to MediaSense server since the last restart of Cisco Unity Connection. This counter is applicable for the following events: <ul style="list-style-type: none"> • During a video call • At the time of sign in • During exchange of media capabilities with the MediaSense server. |
| Video Play Failed Total | The total number of video messages that are played as audio messages since the last restart of Cisco Unity Connection. |

CUC Sessions: Voice

The CUC Sessions: Voice object provides information about voice sessions. The following table contains information on CUC Sessions: Voice counters.

Table 103: CUC Sessions: Voice

| Counters | Counter Descriptions |
|--|---|
| Delay - Directory Search [ms] | The delay [in milliseconds] that a caller experienced when the caller attempted to search through the directory. This counter measures the time between the entered search criteria and the return results. |
| Delay - Opening Greeting [ms] | The delay [in milliseconds] that a caller experienced before any audio was received. This counter measures the time between the system receiving a call and the time audio begins streaming to the caller. |
| Delay - Subscriber Delete Message [ms] | The delay [in milliseconds] that a Cisco Unity Connection subscriber experienced when the subscriber attempted to delete a message. This counter measures the time between the last delete message prompt and the confirmation of the deletion. |
| Delay - Subscriber Logon [ms] | The delay [in milliseconds] that a Cisco Unity Connection subscriber experienced due to authentication. |
| Delay - Subscriber Message Count [ms] | The delay [in milliseconds] that a Cisco Unity Connection subscriber experienced during message counting in the subscriber message box. |
| Delay - Subscriber Message Header [ms] | The delay [in milliseconds] that a caller experienced while Cisco Unity Connection is gathering message header information. |
| Failsafes Total | The total number of times that the failsafe conversation has been played. |
| G.711a Sessions Current | The current number of active G.711 (a-law) voice sessions. |
| G.711a Sessions Total | The total number of active G.711 (a-law) voice sessions since the last restart of Cisco Unity Connection. |
| G.711u Sessions Current | The current number of active G.711 (u-law) voice sessions. |
| G.711u Sessions Total | The total number of active G.711 (u-law) voice sessions since the last restart of Cisco Unity Connection. |

| Counters | Counter Descriptions |
|--|---|
| G.722 Sessions Current | The current number of active G.722 voice sessions. |
| G.722 Sessions Total | The total number of active G.722 voice sessions since the last restart of Cisco Unity Connection. |
| G.729 Sessions Current | The current number of active G.729 voice sessions. |
| G.729 Sessions Total | The total number of active G.729 voice sessions since the last restart of Cisco Unity Connection. |
| iLBC Sessions Current | The current number of active iLBC voice sessions. |
| iLBC Sessions Total | The total number of active iLBC voice sessions since the last restart of Cisco Unity Connection. |
| Meeting search delay delay [ms] | The delay [in milliseconds] that a Cisco Unity Connection subscriber experienced due to looking up meetings. |
| Messages Deleted | The total number of voice messages that were deleted through the TUI from the time Cisco Unity Connection was last restarted. |
| Messages Forwarded | The total number of voice messages that were forwarded through the TUI from the time Cisco Unity Connection was last restarted. |
| Messages Read | The total number of voice messages that were read through the TUI from the time Cisco Unity Connection was last restarted. |
| Messages Replied | The total number of voice messages that received replies through the TUI from the time Cisco Unity Connection was last restarted. |
| Messages Sent | The total number of voice messages that were sent through the TUI from the time Cisco Unity Connection was last restarted. |
| MRCP Define Grammar Delay [ms] | The delay [in milliseconds] between an MRCP define-grammar request and its response. |
| MRCP Define Grammar Delay Average [ms] | The average delay [in milliseconds] between an MRCP define-grammar request and its response. |
| MRCP Define Grammar Delay Max [ms] | The maximum delay [in milliseconds] between an MRCP define-grammar request and its response. |
| MRCP Delay [ms] | The delay [in milliseconds] between an MRCP request and its response. |
| MRCP Delay Average [ms] | The average delay [in milliseconds] between an MRCP request and its response. |

| Counters | Counter Descriptions |
|------------------------------|--|
| MRCP Delay Max [ms] | The maximum delay [in milliseconds] between an MRCP request and its response. |
| OPUS Sessions Current | This displays the current number of active OPUS voice sessions. |
| OPUS Sessions Total | This displays the total number of OPUS voice sessions since the last restart of Cisco Unity Connection. |
| Sessions Current | The current number of all active voice sessions for any codec. |
| Sessions Total | The total number of voice sessions for any codec - G.711 mu-law and G.729 - since the last restart of Cisco Unity Connection. |
| Subscriber Lookup Delay [ms] | The delay [in milliseconds] that a Cisco Unity Connection subscriber experienced due to finding and loading a subscriber by DTMF ID. |

CUC Sessions: VUI

The CUC Sessions: VUI object provides information about the voice user interface (VUI). The following table contains information on CUC Sessions: VUI counters.

Table 104: CUC Sessions: VUI

| Counter | Counter Descriptions |
|--|--|
| Delay - Subscriber Message Access [ms] | The delay [in milliseconds] that a user when experienced when the user attempted to access a message. This counter measures the time between the voice command of intending to listen to a message and the actual playback of the message. |
| Matches Total | The total number of matches in the VUI conversation. |
| Messages Read | The total number of messages that were read through the VUI from the time that Cisco Unity Connection was last restarted. |
| No-matches Total | The total number of no-matches in the VUI conversation. |
| Session Duration Average/call [s] | The average duration [in seconds] of a VUI session as measured on a per-call basis. |
| Session Duration Total [s] | The duration [in seconds] of all VUI sessions. |
| Sessions Current | The current number of active VUI sessions for any codec. |

| Counter | Counter Descriptions |
|----------------|---|
| Sessions Total | The total number of VUI and voice sessions for any codec. |

CUC Sessions: Web

The CUC Sessions: Web object provides information about the Cisco Personal Communications Assistant (Cisco PCA) and Cisco Unity Connection Administration sessions. The following table contains information on CUC Sessions: Web counters.

Table 105: CUC Sessions: Web

| Counters | Counter Descriptions |
|-----------------------------------|---|
| CPCA Authentication Delay Max [s] | The maximum delay [in seconds] in authentication to a user Inbox or Assistant. |
| CPCA Failed Authentications Total | The number of failed authentications. |
| CPCA Pages Served Total | The total number of CPCA pages that the Cisco Unity Connection server served. |
| CPCA Requests In Queue Current | The number of requests in CPCA queue waiting to be processed. |
| CPCA Server Busy Pages Total | The total number of server busy pages that the Cisco Unity Connection server returned. |
| CPCA Sessions Current | The current number of CPCA sessions. |
| CPCA Sessions Total | The total number of CPCA sessions. |
| CUCA Authentication Delay Max [s] | The maximum delay [in seconds] in authentication to the System Administrator window. |
| CUCA Response Time Max [ms] | The maximum time [in milliseconds] for the Tomcat server to respond to any given request. |

CUC Sessions: Web E-Mail Access

The CUC Sessions: Web E-mail Access object provides information about web e-mail access sessions (IMAP). The following table contains information about CUC Sessions: Web E-mail Access counters.

Table 106: CUC Sessions: Web E-Mail Access

| Counters | Counter Descriptions |
|-----------------------|--|
| Messages Read - Total | The total number of e-mail messages that were read since the last restart of Cisco Unity Connection. |

| Counters | Counter Descriptions |
|-------------------------------|--|
| Session Duration Average [ms] | The average duration [in milliseconds] of all e-mail sessions as measured on a per-call basis. |
| Session Duration Total [ms] | The total duration [in milliseconds] of all e-mail sessions as measured on a per-call basis. |
| Sessions - Current | The number of active e-mail voice sessions. |
| Sessions - Total | The total number of e-mail voice sessions since the last restart of Cisco Unity Connection. |

CUC System Agent

The CUC System Agent object records the information about the periodic system tasks. The following table contains information about CUC System Agent counters.

| Counters | Counter Descriptions |
|---|--|
| Message Related Files Shredded Total | The total number of messaging related files that have been shredded. |
| Message Related Files Shredded Failed | The total number of messaging related files that have failed to shred. |
| Total Number of Requests sent by HTTP[S]/CCI Link | The cumulative number of HTTP(S) requests sent by the Reader. |
| Total Number of successful response of HTTP[S]/CCI Requests | The cumulative number of HTTP(S) requests that were successfully processed by the Feeder. |
| Total Number of failure response of HTTP[S]/CCI Requests | The cumulative number of HTTP(S) requests that were not successfully processed by the Feeder. |
| Total Number of Directory Objects Successfully Processed | The cumulative number of Directory Objects that were successfully processed. |
| Directory Objects Processed Successfully In Last One Minute | Directory objects successfully processed per minute. |
| Delete Request sent to Media Sense Total | The total number of delete requests sent to MediaSense server since the last restart of Unity Connection. |
| Media Sense Timeout While Delete Total | The total number of connection timeouts in response to the delete requests sent to MediaSense server since the last restart of Unity Connection. |

CUC VMREST

The CUC VMREST object provides information about internal VMREST requests.

The following table contains information about VMREST counters.

| Counters | Counter Description |
|--|---|
| Total VMREST active threads | To maintain Total Number of active VMREST threads. |
| Total VMREST Throttled Requests | To maintain Total Number of Throttled VMREST requests by Throttle Semaphore. |
| Total VMREST Throttled Requests in last hour | To maintain Total Number of Throttled VMREST requests by Throttle Semaphore in last hour. |

CUC VMREST Container

The CUC VMREST Container object provides information about REST container operations for handling VMREST requests from external clients.

The following table contains information about VMREST Container counters.

| Counters | Counter Description |
|--|--|
| Total VMREST CONTAINER active threads | To maintain Total Number of active VMREST threads for REST container. |
| Total VMREST CONTAINER throttled Requests | To maintain Total Number of Throttled VMREST requests by Throttle Semaphore for REST container. |
| Total VMREST CONTAINER throttled Requests in last hour | To maintain Total Number of Throttled VMREST requests by Throttle Semaphore in last hour for REST container. |

System Alerts

AuditLogOverflowDueToLogRotation

This alarm indicates that the audit log overflow occurred. An existing audit log file is overwritten resulting in overflow and eventual loss of audit data.

Default Configuration

Table 107: Default Configuration for the AuditLogOverflowDueToLogRotation RTMT Alert

| Value | Default Configuration |
|---|---------------------------|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |

| Value | Default Configuration |
|----------------------|---|
| Threshold | Trigger alert when following condition met: AuditLogOverFlowDueToLogRotation event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

AuditLogOverflowDueToLPMPurge

This alarm indicates that overflow occurred due to purge by LPM clean-up logic. When the total disk space usage of log partition crosses the high water mark configured, the LPM tools clean-up logic deletes the oldest files from the log partition so that the new logs can be written.

Default Configuration

Table 108: Default Configuration for the AuditLogOverflowDueToLPMPurge RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: AuditLogOverflowDueToLPMPurge event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

AuditLogsExceedsConfiguredThreshold

This alarm indicates the percentage of disk space configured for application audit logging exceeds the configured threshold. Audit logs files are overwritten sooner or later depends on the frequency of audit logging by the Unified Communications Manager applications.

Default Configuration

Table 109: Default Configuration for the AuditLogsExceedsConfiguredThreshold RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: AuditLogsExceedsConfiguredThreshold event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

AuthenticationFailed

Authentication validates the user ID and password that are submitted during log in. An alarm gets raised when an invalid user ID and/or the password gets used.

Default Configuration

Table 110: Default Configuration for the AuthenticationFailed RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Number of AuthenticationFailed events exceeds: 1 time in the last 1 minute |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |

| Value | Default Configuration |
|----------------------|-----------------------|
| Trigger Alert Action | Default |

CCMEncryptionErrorDetected

This alert occurs when the CCMEncryptionErrorDetected event is generated.

Default Configuration

Table 111: Default Configuration for the CCMEncryptionErrorDetected RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: CCMEncryptionErrorDetected event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

CiscoDRFFailure

This alert occurs when the DRF backup or restore process encounters errors.

Default Configuration

Table 112: Default Configuration for the CiscoDRFFailure RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: CiscoDRFFailure event generated |

| Value | Default Configuration |
|----------------------|-----------------------------|
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

CiscoHAProxyServiceDown

The HAProxy Service Down alarm indicates when the incoming web traffic into Unified Communications Manager and IM and Presence Service is down.

The following table contains information about the CiscoHAProxyServiceDown counter.

Table 113: CiscoHAProxyServiceDown

| Counters | Counter Description |
|---|---|
| Enable Alert | Selected |
| Severity | Warning |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: when HAProxy service down event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

CoreDumpFileFound

This alert occurs when the CoreDumpFileFound event gets generated. This indicates that a core dump file exists in the system.

Default Configuration

Table 114: Default Configuration for the CoreDumpFileFound RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: CoreDumpFileFound event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Trace download Parameters | Not Selected |
| Enable Email | Selected |
| Trigger Alert Action | Default |

CpuPegging

CPU usage gets monitored based on configured thresholds. If the usage goes above the configured threshold, this alert gets generated.

Default Configuration

Table 115: Default Configuration for the CpuPegging RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: 99% |
| Duration | Trigger alert only when value constantly below or over threshold for 60 seconds |
| Frequency | Trigger up to 3 alerts within 30 minutes |
| Schedule | 24 hours daily |

| Value | Default Configuration |
|----------------------|-----------------------|
| Enable Email | Selected |
| Trigger Alert Action | Default |

CriticalServiceDown

The CriticalServiceDown alert gets generated when the service status equals down (not for other states).

Default Configuration

Table 116: Default Configuration for the CriticalServiceDown RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Service status is DOWN |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Trace download Parameters | Enable Trace Download not selected |
| Enable Email | Selected |
| Trigger Alert Action | Default |

DBChangeNotifyFailure

This alert occurs when the Cisco Database Notification Service experiences problems and might stop. This condition indicates change notification requests that are queued in the database got stuck and changes made to the system will not take effect. Ensure that the Cisco Database Layer Monitor is running on the node where the alert exists. If it is, restart the service. If that does not return this alert to safe range, collect the output of **show tech notify** and **show tech dbstateinfo** and contact TAC for information about how to proceed.

Default Configuration

Table 117: Default Configuration for the DBChangeNotifyFailure RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: DBChangeNotify queue delay over 2 minutes |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alert within 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

DBReplicationFailure

This alarm indicates a failure in IDS replication and requires database administrator intervention.

Note Be aware that DBReplicationFailure is based on the replication status perfmon counter (instead of DBReplicationFailure alarm as was previously the case). This alert gets triggered whenever the corresponding replication status perfmon counter specifies a value of **3** (Bad Replication) or **4** (Replication Setup Not Successful).

Default Configuration

Table 118: Default Configuration for the DBReplicationFailure RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: DBReplicationFailure occurred |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|---|
| Frequency | Trigger up to 1 alert within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

DBReplicationTableOutOfSync

Default Configuration

Table 119: Default Configuration for the DBReplicationTableOutOfSync RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: IDSReplicationFailure event with alarm number 888 generated. |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alert within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

HardwareFailure

This alert occurs when a hardware failure event (disk drive failure, power supply failure, and others) has occurred.

Default Configuration

Table 120: Default Configuration for the HardwareFailure RTMT Alert

| Value | Default Configuration |
|--------------|-----------------------|
| Enable Alert | Selected |

| Value | Default Configuration |
|--|--|
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: HardwareFailure event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LogFileSearchStringFound

This alert occurs when the LogFileSearchStringFound event gets generated. This indicates that the search string was found in the log file.

Default Configuration

Table 121: Default Configuration for the LogFileSearchStringFound RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Warning |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: LogFileSearchStringFound event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LogPartitionHighWaterMarkExceeded

This alert occurs when the percentage of used disk space in the log partition exceeds the configured high water mark. When this alert gets generated, LPM deletes files in the log partition (down to low water mark) to avoid running out of disk space.

Note LPM may delete files that you want to keep. You should act immediately when you receive the LogPartitionLowWaterMarkExceeded alert.

Note In the case, when **logpartitionhighwatermarkexceeded** is set to a lower percentage and deletes the cdr/cmr files from the temporary folder then use **RTMT** to ensure that the alert parameter is set back to the default value of 95%.

Default Configuration

Table 122: Default Configuration for the LogPartitionHighWaterMarkExceeded RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Log Partition Used Disk Space Exceeds High Water Mark (95%) |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LogPartitionLowWaterMarkExceeded

This alert occurs when the LogPartitionLowWaterMarkExceeded event gets generated. This indicates that the percentage of used disk space in the log partition has exceeded the configured low water mark.

Note Be aware that this alert is an early warning. The administrator should start freeing up disk space. Using RTMT/TLC, you can collect trace/log files and delete them from the server. The administrator should adjust the number of trace files that are kept to avoid hitting the low water mark again.

Default Configuration

Table 123: Default Configuration for the LogPartitionLowWaterMarkExceeded RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Log Partition Used Disk Space Exceeds Low Water Mark (90%) |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LowActivePartitionAvailableDiskSpace

This alert occurs when the percentage of available disk space on the active partition is lower than the configured value.

Default Configuration

Table 124: Default Configuration for the LowActivePartitionAvailableDiskSpace RTMT Alert

| Value | Default Configuration |
|--|---------------------------|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |

| Value | Default Configuration |
|----------------------|--|
| Threshold | Trigger alert when following condition met: Active Partition available disk space below (4%) Note In customer environments, virtual machines configured with 80 GB disk space and where 91% or more space has been reserved for disk space/active partition, a 6% increase in utilization results in automatic trigger of the LowActivePartitionAvailableDiskSpace alert after the Unified Communications Manager upgrade. Here, the alert is triggered when the Active Partition available disk space is below (2%). You must log in to RTMT to fix this issue manually. |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 3 alerts within 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LowAvailableVirtualMemory

RTMT monitors virtual memory usage. When memory runs low, a LowAvailableVirtualMemory alert is generated.

Default Configuration

Table 125: Default Configuration for the LowAvailableVirtualMemory RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Available virtual memory below (15%) |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|--|
| Frequency | Trigger up to 3 alerts within 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LowInactivePartitionAvailableDiskSpace

This alert occurs when the percentage of available disk space of the inactive partition equals less than the configured value.

Default Configuration

Table 126: Default Configuration for the LowInactivePartitionAvailableDiskSpace RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Inactive Partition available disk space below (4%) |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 3 alerts within 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LowSwapPartitionAvailableDiskSpace

This alert indicates that the available disk space on the swap partition is low.

Note The swap partition is part of virtual memory, so low available swap partition disk space means low virtual memory as well.

Default Configuration

Table 127: Default Configuration for the LowSwapPartitionAvailableDiskSpace RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Swap Partition available disk space below (10%) |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 3 alerts within 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

ServerDown

This alert occurs when a remote node cannot be reached.

Note Unified Communications Manager and IM and Presence Service: The ServerDown alert is generated when the currently active AMC (primary AMC or the backup AMC, if the primary is not available) cannot reach another server in a cluster. This alert identifies network connectivity issues in addition to a server down condition.

Default Configuration

Table 128: Default Configuration for the ServerDown RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: ServerDown occurred |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|---|
| Frequency | Trigger up to 1 alert within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SparePartitionHighWaterMarkExceeded

This alert occurs when the SparePartitionHighWaterMarkExceeded event gets generated. This indicates that the percentage of used disk space in the spare partition exceeds the configured high water mark.

Default Configuration

Table 129: Default Configuration for the SparePartitionHighWaterMarkExceeded RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Spare Partition Used Disk Space Exceeds High Water Mark (95%) |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SparePartitionLowWaterMarkExceeded

This alert occurs when the SparePartitionLowWaterMarkExceeded event gets generated. This indicates that the percentage of used disk space in the spare partition has exceeded the low water mark threshold.

Default Configuration

Table 130: Default Configuration for the SparePartitionLowWaterMarkExceeded RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Spare Partition Used Disk Space Exceeds Low Water Mark (90%) |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SyslogSeverityMatchFound

This alert occurs when the SyslogSeverityMatchFound event gets generated. This indicates that a syslog message with the matching severity level exists.

Default Configuration

Table 131: Default Configuration for the SyslogSeverityMatchFound RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SyslogSeverityMatchFound event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Syslog Severity Parameters | Critical |

| Value | Default Configuration |
|----------------------|-----------------------|
| Enable Email | Selected |
| Trigger Alert Action | Default |

SyslogStringMatchFound

This alert occurs when the SyslogStringMatchFound event gets generated. The alert indicates that a syslog message with the matching search string exists.

Default Configuration

Table 132: Default Configuration for the SyslogStringMatchFound RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SyslogStringMatchFound event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Syslog Alert Parameters | (Text box for search string) |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SystemVersionMismatched

This alert occurs when a mismatch in system version exists.

Default Configuration

Table 133: Default Configuration for the SystemVersionMismatched RTMT Alert

| Value | Default Configuration |
|--------------|-----------------------|
| Enable Alert | Selected |
| Severity | Critical |

| Value | Default Configuration |
|--|---|
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SystemVersionMismatched occurred |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alert within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

TCPRemoteSyslogDeliveryFailed

This alert occurs when delivery of alarms, audits, or syslog generate events to the configured remote syslog servers fails. The reason could be that the configured syslog server is down, or TCP is not configured on port 601, or there is a network failure.

Default Configuration

Table 134: Default Configuration for the TCPRemoteSyslogDeliveryFailed RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: TCPRemoteSyslogDeliveryFailed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

TLSRemoteSyslogDeliveryFailed

This alert occurs when delivery of alarms, audits, or syslog generate events to the configured remote syslog servers fails. The reason could be that the configured syslog server is down, or TLS over TCP is not configured

on port 6514, or there is a network failure, or certificate of the remote syslog server is not uploaded to Unified Communications Manager Tomcat trust.

Default Configuration

Table 135: Default Configuration for the TLSRemoteSyslogDeliveryFailed RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: TLSRemoteSyslogDeliveryFailed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

TotalProcessesAndThreadsExceededThreshold

This alert occurs when the TotalProcessesAndThreadsExceededThreshold event gets generated. The alert indicates that the current total number of processes and threads exceeds the maximum number of tasks that are configured for the Cisco RIS Data Collector Service Parameter. This situation could indicate that a process is leaking or that a process has thread leaking.

Default Configuration

Table 136: Default Configuration for the TotalProcessesAndThreadsExceededThreshold RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: TotalProcessesAndThreadsExceededThreshold event generated |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|-----------------------------|
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

Voice and Video Alerts

BeginThrottlingCallListBLFSubscriptions

This alert occurs when the BeginThrottlingCallListBLFSubscriptions event gets generated. This indicates that the Unified Communications Manager initiated a throttling of the CallList BLF Subscriptions to prevent a system overload.

Default Configuration

Table 137: Default Configuration for the BeginThrottlingCallListBLFSubscriptions RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |

| Severity | Warning |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: CallAttemptBlockedByPolicy event(s) generated. |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 3 alerts every 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

CallProcessingNodeCpuPegging

This alert occurs when the percentage of CPU load on a call processing server exceeds the configured percentage for the configured time.

If the administrator takes no action, high CPU pegging can lead to a Unified Communications Manager crash, especially in CallManager service. The CallProcessingNodeCpuPegging alert gives you time to work proactively to avoid a crash.

During CPU usage spikes, other alarms that may be issued in addition to the CallProcessingNodeCpuPegging alert include: CoreDumpFound, CriticalServiceDown, SDLLinkOutOfService, and NumberOfRegisteredPhonesDropped alarms.

Note Unified Communications Manager VMware installations can experience high CPU usage spikes while performing tasks such as DRF backups and Bulk Administration Tool exports. The processes that are commonly responsible for CPU usage spikes are gzip and DRFLocal.

If your system is generating CallProcessingNodeCpuPegging alarms, add an additional vCPU for the support of 7500 Unified Communications Manager users following the Open Virtualization Archives (OVA) template specifications for your system.

Default Configuration

Table 139: Default Configuration for the CallProcessingNodeCpuPegging RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Processor load over (90%) |
| Duration | Trigger alert only when value constantly below or over threshold for 60 seconds |
| Frequency | Trigger up to 3 alerts within 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

CARIDSEngineCritical

Default Configuration

| Schedule | 24 hours daily |
| Enable Email | Selected |

| Value | Default Configuration |
|----------------------|-----------------------|
| Trigger Alert Action | Default |

CiscoWLCServiceDown

This alert occurs when the exceeded maximum number of devices(50000) in the Switches and Access points.

Default Configuration

Table 148: Default Configuration for the CiscoWLCServiceDown RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: CiscoWLCServiceDown event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

CodeYellow

The AverageExpectedDelay counter represents the current average expected delay to handle any incoming message. If the value exceeds the value that is specified in Code Yellow Entry Latency service parameter, the CodeYellow alarm gets generated. You can configure the CodeYellow alert to download trace files for troubleshooting purposes.

Default Configuration

Table 149: Default Configuration for the CodeYellow RTMT Alert

| Value | Default Configuration |
|--|---------------------------|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |

| Value | Default Configuration |
|---------------------------|--|
| Threshold | Trigger alert when following condition met: Cisco CallManager CodeYellowEntry event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Trace Download Parameters | Enable Trace Download not selected |
| Enable Email | Selected |
| Trigger Alert Action | Default |

DDRBlockPrevention

This alert gets triggered when the `IDSReplicationFailure` alarm with alarm number 31 occurs, which invokes a proactive procedure to avoid denial of service. This procedure does not impact call processing; you can ignore replication alarms during this process.

The procedure takes up to 60 minutes to finish. Check that RTMT replication status equals 2 on each node to make sure that the procedure is complete. Do not perform a system reboot during this process.

Default Configuration

Table 150: Default Configuration for the DDRBlockPrevention RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: <code>IDSReplicationFailure</code> alarm with alarm number 31 generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alert within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

DDRDown

This alert gets triggered when the IDSReplicationFailure alarm with alarm number 32 occurs. An auto recover procedure runs in the background and no action is needed.

The procedure takes about 15 minutes to finish. Check that RTMT replication status equals 2 on each node to make sure the procedure is complete.

Default Configuration

Table 151: Default Configuration for the DDRDown RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: IDSReplicationFailure alarm with alarm number 32 generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alert within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

EMCCFailedInLocalCluster

Default Configuration

Table 152: Default Configuration for the EMCCFailedInLocalCluster RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: EMCCFailedInLocalCluster event(s) generated. |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|---|
| Frequency | Trigger up to 3 alerts every 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

EMCCFailedInRemoteCluster

Default Configuration

Table 153: Default Configuration for the EMCCFailedInRemoteCluster RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Warning |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: EMCCFailedInRemoteCluster event(s) generated. |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 3 alerts every 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

ExcessiveVoiceQualityReports

This alert gets generated when the number of QRT problems that are reported during the configured time interval exceed the configured value. The default threshold specifies 0 within 60 minutes.

Default Configuration

Table 154: Default Configuration for the ExcessiveVoiceQualityReports RTMT Alert

| Value | Default Configuration |
|--------------|-----------------------|
| Enable Alert | Selected |
| Severity | Critical |

| Value | Default Configuration |
|--|---|
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Number of quality reports exceeds 0 times within the last 60 minutes |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

ILSDuplicateURI

This alert occurs when the Unified Communications Manager identifies that it has learned duplicate URI entries through ILS during a call to the URI. Whenever there are duplicate entries for a URI (such as the URI user@example.com existing on two clusters), the call is routed to the cluster from which the URI that was first learned. Calls will not be routed to the other duplicate entries.

Default Configuration

Table 155: Default Configuration for the ILSDuplicateURI RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Alert |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: ILSDuplicateURI event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

ILSHubClusterUnreachable

Default Configuration

Table 156: Default Configuration for the ILSHubClusterUnreachable RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: A connection to the remote ILS server could not be established. |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

ILSPeerLimitApproachingWarning

This alert occurs when the current peer count has reached 90% or more of the ILS network capacity.

Default Configuration

Table 157: Default Configuration for the ILSPeerLimitApproachingWarning RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: ILSPeerLimitApproachingWarning event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |

| Value | Default Configuration |
|----------------------|-----------------------|
| Enable Email | Selected |
| Trigger Alert Action | Default |

ILSPeerLimitExceeded

This alert occurs when the number of peers for this cluster in the ILS network is more than the limit set for ILSP_MSG_PEER_MAX. The system is allowed to add spokes, hubs, and imported catalogs continuously. However, only maximum number of peers are advertised to the ILS network.

Default Configuration

Table 158: Default Configuration for the ILSPeerLimitExceeded RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: The number of peers have exceeded the limit set for ILSP_MSG_PEER_MAX |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

ILSPwdAuthenticationFailed

Default Configuration

Table 159: Default Configuration for the ILSPwdAuthenticationFailed RTMT Alert

| Value | Default Configuration |
|--|---------------------------|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |

| Value | Default Configuration |
|----------------------|--|
| Threshold | Trigger alert when following condition met: Password Authentication Failure with ILS at remote cluster. |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

ILSTLSAuthenticationFailed

Default Configuration

Table 160: Default Configuration for the ILSTLSAuthenticationFailed RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: TLS Failure to ILS at remote cluster. |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

IMEDistributedCacheInactive

This alarm gets generated when a Unified Communications Manager attempts to connect to the Cisco IME server, but the IME distributed cache is not currently active.

Ensure that the certificate for the Cisco IME server is provisioned and that the IME distributed cache has been activated through the CLI.

Default Configuration

Table 161: Default Configuration for the IMEDistributedCacheInactive Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Inactive IME Distributed Cache |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

IMEOverQuota

This alert indicates that the Unified Communications Manager servers that use this Cisco IME service have exceed the quota for published direct inward dialing numbers (DIDs) to the IME distributed cache. The alert includes the name of the Cisco IME server as well as the current and target quota values.

Ensure that you have correctly provisioned the DID prefixes on all of the Unified Communications Manager servers that use this Cisco IME service.

If you have provisioned the prefixes correctly, you have exceeded the capacity of your Cisco IME service, and you need to configure another service and divide the DID prefixes across the Cisco IME client instances (Unified Communications Managers) on different Cisco IME services.

Default Configuration

Table 162: Default Configuration for the IMEOverQuota Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: VAP over quota |

| Value | Default Configuration |
|----------------------|-----------------------------|
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

IMEQualityAlert

This alert gets generated when Unified Communications Manager determines that a substantial number of Cisco IME calls fail back to PSTN or fail to be set up due to IP network quality problems. Two types of events trigger this alert:

- A large number of the currently active Cisco IME calls have all requested fallback or have fallen back to the PSTN.
- A large number of the recent call attempts have gone to the PSTN and not been made over IP.

When you receive this alert, check your IP connectivity. If no problems exist with the IP connectivity, you may need to review the CDRs, CMRs, and logs from the firewalls to determine why calls have fallen back to the PSTN or have not been made over IP.

Default Configuration

Table 163: Default Configuration for the IMEQualityAlert Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Cisco IME link quality problem |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

IMEServiceStatus

This alert indicates the overall health of the connection to the Cisco IME services for a particular Cisco IME client instance (Unified Communications Manager). The alert indicates the following states:

- 0—Unknown. Likely indicates that the Cisco IME service has not been activated.
- 1—Healthy. Indicates that the Unified Communications Manager has successfully established a connection to its primary and backup servers for the Cisco IME client instance, if configured.
- 2—Unhealthy. Indicates that the Cisco IME has been activated but has not successfully completed handshake procedures with the Cisco IME server. Note that this counter reflects the handshake status of both the primary and the secondary IME servers.

Default Configuration

Table 164: Default Configuration for the IMEServiceStatus Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: VAP Connection Problem |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alert every 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

InsufficientFallbackIdentifiers

This alert gets generated when too many Cisco IME calls that are currently in progress use the same fallback DID and no more DTMF digit sequences exist to allocate to a new Cisco IME call that Unified Communications Manager is processing. The new call continues, but the call cannot fallback to the PSTN if voice-quality deteriorates.

If this alert gets generated, note the fallback profile that associates with this call. Check that profile in Cisco Unified Communications Manager Administration, and examine the current setting for the “Fallback Number of Correlation DTMF Digits” field. Increase the value of that field by one, and check whether the new value eliminates these alerts. In general, this parameter should be large enough so that the number of simultaneous Cisco IME calls that are made to enrolled numbers that associate with that profile is always substantially less than 10 raised to the power of this number. For example, if you always have fewer than 10,000 simultaneous

Cisco IME calls for the patterns that associate with this fallback profile, setting this value to 5 (10 to the power of 5 equals 100,000) should keep Unified Communications Manager from generating this alert.

However, increasing this value results in a small increase in the amount of time it takes to perform the fallback. As such, you should set the “Fallback Number of Correlation DTMF Digits” field to a value just large enough to prevent this alert from getting generated.

Instead of increasing the value of the DTMF digits field, you can add another fallback profile with a different fallback DID and associate that fallback profile with a smaller number of enrolled patterns. If you use this method, you can use a smaller number of digits.

Default Configuration

Table 165: Default Configuration for the InsufficientFallbackIdentifiers Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Cannot allocate fallback identifier |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alerts within one minute |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

InvalidCredentials

The alert indicates that the Unified Communications Manager cannot connect to the Cisco IME server because the username and/or password configured on Unified Communications Manager do not match those configured on the Cisco IME server.

The alert includes the username and password that were used to connect to the Cisco IME server as well as the IP address and name of the target Cisco IME server. To resolve this alert, log into the Cisco IME server and check that the configured username and password match the username and password that are configured in Unified Communications Manager.

Default Configuration

Table 166: Default Configuration for the InvalidCredentials Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Credential Failure to Cisco IME server |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LocationOutOfResource

This alert occurs when the number of LocationOutOfResource events exceeds the configure threshold during the configured time interval. This indicates that one or all of audio or video or immersive bandwidth for a location or link is used up.

Default Configuration

Table 167: Default Configuration for the LocationOutOfResource Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Warning |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: LocationOutOfResource event generated 5 times within 60 seconds |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |

| Value | Default Configuration |
|----------------------|-----------------------|
| Enable Email | Selected |
| Trigger Alert Action | Default |

MaliciousCallTrace

This indicates that a malicious call exists in Unified Communications Manager. The malicious call identification (MCID) feature gets invoked.

Default Configuration

Table 168: Default Configuration for the MaliciousCallTrace RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |

| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

MediaListExhausted

This alert occurs when the number of MediaListExhausted events exceeds the configured threshold during the configured time interval. This indicates that all available media resources that are defined in the media list are busy. The default specifies 0 within 60 minutes.

Default Configuration

Table 169: Default Configuration for the MediaListExhausted RTMT Alert

| Value | Default Configuration |
|--------------|-----------------------|
| Enable Alert | Selected |
| Severity | Warning |

| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: RecordingCallSetupFail event(s) generated. |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 3 alerts every 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

RouteListExhausted

This alert occurs when the number of RouteListExhausted events exceeds the configured threshold during the configured time interval. This indicates that all available channels that are defined in the route list are busy. The default specifies 0 within 60 minutes.

Default Configuration

Table 183: Default Configuration for the RouteListExhausted RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Warning |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Number of RouteListExhausted exceeds 0 times within the last 60 minutes |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

RTMTSessionsExceedsThreshold

Default Configuration

Table 184: Default Configuration for the RTMTSessionsExceedsThreshold RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: When number of ast session is more than 250. |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SDLLinkOutOfService

This alert occurs when the SDLLinkOutOfService event gets generated. This event indicates that the local Unified Communications Manager cannot communicate with the remote Unified Communications Manager. This event usually indicates network errors or a non-running remote Unified Communications Manager.

Default Configuration

Table 185: Default Configuration for the SDLLinkOutOfService RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SDLLinkOutOfService event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseAuthorizationExpiringSoon

This alert occurs when the Unified Communications Manager authorization with Cisco Smart Software Manager or Cisco Smart Software Manager satellite is going to expire soon.

Default Configuration

Table 186: Default Configuration for the SmartLicenseAuthorizationExpiringSoon RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Warning |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseAuthorizationExpiringSoon event generated |

| Value | Default Configuration |
|----------------------|-----------------------------|
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseCommunicationError

This alert occurs when Unified Communications Manager is unable to communicate successfully with Cisco Smart Software Manager or Cisco Smart Software Manager satellite.

Default Configuration

Table 187: Default Configuration for the SmartLicenseCommunicationError RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Error |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseCommunicationError event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseExportControlNotAllowed

This alert occurs when Unified Communications Manager is not registered with the Registration Token received from the Smart account or Virtual account that has Allow export-controlled functionality checked and is not licensed to operate in mixed-mode

Default Configuration

Table 188: Default Configuration for the SmartLicenseExportControlNotAllowed RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Alert |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseExportControlNotAllowed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseInEval

This alert occurs when Unified Communications Manager is not registered with Cisco Smart Software Manager or Cisco Smart Software Manager satellite and is operating in Evaluation Mode that is soon going to expire.

Default Configuration

Table 189: Default Configuration for the SmartLicenseInEval RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Warning |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseInEval event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |

| Value | Default Configuration |
|----------------------|-----------------------|
| Trigger Alert Action | Default |

SmartLicenseInOverageAuthorizationExpired

This alert occurs when you do not renew the license authorization for Unified Communications Manager before the authorization expiry date and the license authorization has expired. It runs on the overage period that is soon going to expire.

Default Configuration

Table 190: Default Configuration for the SmartLicenseInOverage_AuthorizationExpired RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseInOverage_AuthorizationExpired event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseInOverageOutOfCompliance

This alert occurs when Cisco Unified Communication Manager operates with insufficient number of licenses and the status is out of compliance. It runs on the overage period that is soon going to expire.

Default Configuration

Table 191: Default Configuration for the SmartLicenseInOverage_OutOfCompliance RTMT Alert

| Value | Default Configuration |
|--------------|-----------------------|
| Enable Alert | Selected |
| Severity | Alert |

| Value | Default Configuration |
|---|--|
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseInOverage_OutOfCompliance event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseNoProvisionAuthorizationExpired

This alert occurs when the license authorization for Unified Communications Manager is not successful and the overage period has expired. You are not allowed to add, update, or delete any users or devices.

Default Configuration

Table 192: Default Configuration for the SmartLicenseNoProvision_AuthorizationExpired RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseNoProvision_AuthorizationExpired event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseNoProvisionEvalExpired

This alert occurs when the Cisco Smart Licensing evaluation period is expired for Unified Communications Manager. You are not allowed to add, update, or delete any users or devices.

Default Configuration

Table 193: Default Configuration for the SmartLicenseNoProvision_EvalExpired RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseNoProvision_EvalExpired event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseNoProvisionOutOfCompliance

This alert occurs when Cisco Unified Communication Manager operates with insufficient number of licenses and the overage period has expired. You are not allowed to add, update, or delete any users or devices.

Default Configuration

Table 194: Default Configuration for the SmartLicenseNoProvision_OutOfCompliance RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseNoProvision_OutOfCompliance event generated |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|-----------------------------|
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseRegistrationExpired

This alert occurs when you do not renew the license registration for Unified Communications Manager before the registration expiry date and the license registration has expired. You are not allowed to add, update, or delete any users or devices.

Default Configuration

Table 195: Default Configuration for the SmartLicenseRegistrationExpired RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Error |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseRegistrationExpired event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseRegistrationExpiringSoon

This alert occurs when the Unified Communications Manager registration with Cisco Smart Software Manager or Cisco Smart Software Manager satellite is going to expire soon.

Default Configuration

Table 196: Default Configuration for the SmartLicenseRegistrationExpiringSoon RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Warning |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseRegistrationExpiringSoon event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseRenewAuthFailed

This alert occurs when the Unified Communications Manager license authorization renewal fails.

Default Configuration

Table 197: Default Configuration for the SmartLicenseRenewAuthFailed RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Error |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseRenewAuthFailed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicenseRenewRegistrationFailed

This alert occurs when the Unified Communications Manager license registration renewal fails.

Default Configuration

Table 198: Default Configuration for the SmartLicenseRenewRegistrationFailed RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Error |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when the following condition is met: SmartLicenseRenewRegistrationFailed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicense_SLR_InEval

This alert occurs when Cisco Unified Communications Manager running in the Evaluation period is enabled for Specified License Reservation and pending installation of reserved authorization code.

Default Configuration

Table 199: Default Configuration for the SmartLicense_SLR_InEval RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Warning |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SmartLicense_SLR_InEval event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |

| Value | Default Configuration |
|----------------------|-----------------------|
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicense_SLR_NoProvision_EvalExpired

This alert occurs when the Unified Communications Manager license Evaluation period is expired and pending installation of Specified license reservation authorization code.

Default Configuration

Table 200: Default Configuration for the SmartLicense_SLR_NoProvision_EvalExpired RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SmartLicense_SLR_NoProvision_EvalExpired event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicense_SLR_InOverage_NotAuthorized

This alert occurs when the Unified Communications Manager is running in Specified License Reservation mode and with insufficient number of licenses and the overage period is active.

Default Configuration

Table 201: Default Configuration for the SmartLicense_SLR_InOverage_NotAuthorized RTMT Alert

| Value | Default Configuration |
|--------------|-----------------------|
| Enable Alert | Selected |

| Value | Default Configuration |
|---|---|
| Severity | Alert |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SmartLicense_SLR_InOverage_NotAuthorized event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicense_SLR_NoProvision_NotAuthorized

This alert occurs when the Unified Communications Manager is running in Specified License Reservation mode and with insufficient number of licenses and the overage period has expired thereby moving into no provision state.

Default Configuration

Table 202: Default Configuration for the SmartLicense_SLR_NoProvision_NotAuthorized RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SmartLicense_SLR_NoProvision_NotAuthorized event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SmartLicense_SLR_ExportControlNotAllowed

This alert occurs when Unified Communication Manager has mixed-mode and Specific License Reservation is enabled, and also when Unified Communication Manager in Evaluation mode, Evaluation period expired, and Registered-Specific License Reservation states.

Default Configuration

Table 203: Default Configuration for the SmartLicense_SLR_ExportControlNotAllowed RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SmartLicense_SLR_ExportControlNotAllowed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SwitchesAndAccessPointReached75PercentCapacity

This alert occurs when the current record count for switches and access points has reached 75% of maximum capacity of 50000 records.

Default Configuration

Table 204: Default Configuration for the SwitchesAndAccessPointReached75PercentCapacity RTMT Alert

| Value | Default Configuration |
|---|--|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SwitchesAndAccessPointReached75PercentCapacity |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|-----------------------------|
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SwitchesAndAccessPointReached90PercentCapacity

This alert occurs when the current record count for switches and access points has reached 90% of maximum capacity of 50000 records.

Default Configuration

Table 205: Default Configuration for the SwitchesAndAccessPointReached90PercentCapacity RTMT Alert

| Value | Default Configuration |
|---|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SwitchesAndAccessPointReached90PercentCapacity |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SwitchesAndAccessPointReached95PercentCapacity

This alert occurs when the current record count for switches and access points has reached 95% of maximum capacity of 50000 records.

Default Configuration

Table 206: Default Configuration for the SwitchesAndAccessPointReached95PercentCapacity RTMT Alert

| Value | Default Configuration |
|--------------|-----------------------|
| Enable Alert | Selected |

| Value | Default Configuration |
|---|---|
| Severity | Critical |
| Enable or Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SwitchesAndAccessPointReached95PercentCapacity |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

TCPSetupToIMEFailed

This alert occurs when Unified Communications Manager cannot establish a TCP connection to a Cisco IME server. This alert typically occurs when the IP address and port of the Cisco IME server are misconfigured in Unified Communications Manager or when an Intranet connectivity problem exists and prevents the connection from being set up.

Ensure that the IP address and port of the Cisco IME server in the alert are valid. If the problem persists, test the connectivity between the Unified Communications Manager servers and the Cisco IME server.

Default Configuration

Table 207: Default Configuration for the TCPSetupToIMEFailed Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Connection Failure to Cisco IME server |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

TLSConnectionToIMEFailed

This alert occurs when a TLS connection to the Cisco IME service could not be established because the certificate presented by the Cisco IME service has expired or is not in the Unified Communications Manager CTL.

Ensure that the Cisco IME service certificate has been configured into the Unified Communications Manager.

Default Configuration

Table 208: Default Configuration for the TLSConnectionToIMEFailed Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: TLS Failure to Cisco IME service |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

UserInputFailure

Default Configuration

Table 209: Default Configuration for the UserInputFailure RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Warning |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: UserInputFailure event(s) generated. |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|---|
| Frequency | Trigger up to 3 alerts every 30 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

IM and Presence Service Alerts

CTIGWModuleNotEnabled

Alert Description

This alert indicates that the Cisco CTI Gateway application is either not fully configured or enabled.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Configure and enable the Cisco CTI Gateway application using the Unified Communications Manager IM and Presence CTI Gateway Settings page.

CTIGWProviderDown

Alert Description

This alert indicates that the CTI provider is down.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the connection to the configured Unified Communications Manager nodes and verify that the Cisco CTI Gateway application is enabled on the Cisco Unified CM IM and Presence Administration GUI CTI Settings page.

CTIGWProviderFailedtoOpen

Type

IM and Presence Service

Alert Description

This alert indicates that the CTI Provider failed to open due to a configuration error.

Unified RTMT Default Threshold

Not Applicable.

Recommended Actions

Verify the Unified Communications Manager addresses and application user credentials on the Administration GUI CTI Settings page.

CTIGWQBFailedRequest

Alert Description

This alert indicates that the Cisco CTI Gateway application received a failed response to a request.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

CTIGWSystemError

Alert Description

This alert indicates Cisco CTI Gateway application system errors.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

CTIGWUserNotAuthorized

Alert Description

This alert indicates that the user failed to authorized due to wrong device or line DN.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Verify user device configuration and MOC settings.

CTIGWUserNotLicenced

Alert Description

This alert indicates that the user failed to authorize due to no license available.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the Cisco CTI Gateway application license and user configuration.

DuplicateDirectoryURI

Alert Description

This alert indicates that there are multiple users within the intercluster deployment that are assigned the same directory URI value when the Directory URI IM Address scheme is configured.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Take immediate action to correct the issue. Each user must be assigned a unique directory URI. Affected users may be homed on an intercluster peer.

DuplicateUserid

Alert Description

This alert indicates that there are duplicate user IDs assigned to one or more users on different clusters within the intercluster deployment.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Take immediate action to correct the issue. Each user must be assigned a unique user ID. The affected users may be homed on an intercluster peer.

EspConfigAgentFileWriteError

Alert Description

This alert indicates that the Cisco Config Agent service cannot write to the file system.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Using Unified RTMT, verify whether the disk space is low or exhausted. This alarm may indicate that the system is overloaded, which may require reassigning users to other nodes in the IM and Presence Service cluster. You can reassign users to other nodes using the Topology page on the IM and Presence Service Administration GUI.

EspConfigAgentHighCPUUtilization

Alert Description

This alert indicates that CPU utilization has exceeded the configured threshold.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Unified RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

EspConfigAgentHighMemoryUtilization

Alert Description

This alert indicates that the virtual memory utilization has exceeded the configured threshold.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Unified RTMT to monitor memory utilization and reduce system load to improve performance if necessary.

EspConfigAgentLocalDBAccessError

Alert Description

This alert indicates that the Cisco Config Agent service failed to read or write to the local IM and Presence Service database.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Verify the system health using Cisco RTMT. Verify that the service A Cisco DB is running.

EspConfigAgentMemAllocError

Alert Description

This alert indicates that the Cisco Config Agent service cannot allocate memory.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Using Unified RTMT, verify if the system memory is low or exhausted. This alarm may indicate that the system is overloaded which may require reassigning users to other nodes in the IM and Presence Service cluster. You can reassign users to other nodes using the Topology page on the IM and Presence Service Administration GUI.

EspConfigAgentNetworkOutage

Alert Description

This alert indicates Cisco Config Agent network outage.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Verify system health and network connectivity using Cisco RTMT.

EspConfigAgentNetworkRestored

Alert Description

This alert indicates that Cisco Config Agent network is restored.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Verify system health and network connectivity using Cisco RTMT.

EspConfigAgentProxyDomainNotConfigured

Alert Description

This alert indicates that the Cisco Config Agent service is not configured. Cisco Config Agent service uses the proxy domain to properly generate ACLs. If not configured it could lead to routing failures.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Go to the Service Parameters drop-down menu on the IM and Presence Service publisher. Select the Cisco SIP Proxy service. Enter the IM and Presence Service domain into the Proxy Domain service parameter and save.

EspConfigAgentRemoteDBAccessError

Alert Description

This alert indicates that the Cisco Config Agent service cannot access a remote IM and Presence Service database.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Verify that the service A Cisco DB is running on the node specified in the alert. Sometimes these errors can be transient. In some cases the Config Agent may be accessing remote nodes that are not available for some reason. If that is the case, then this error is expected. This result would happen in a user reassignment to a node that is not installed or available.

EspConfigAgentSharedMemoryStaticRouteError

Alert Description

This alert indicates that the Cisco Config Agent service failed to access static routes in shared memory. This may indicate that the system is out of memory.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Using Cisco RTMT, verify if the system shared memory is low or exhausted. This alarm may indicate the system is overloaded which may require reassigning users to other nodes in the IM and Presence Service cluster. You can reassign users to other nodes using the Topology page on the Administration GUI.

ESPConfigError

Alert Description

This alert indicates Cisco SIP Proxy service configuration file error.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Verify that the Cisco Config Agent service is running. This service is responsible for writing the proxy configuration file.

ESPConfigNotFound

Alert Description

This alert indicates that Cisco SIP Proxy service configuration file is not found.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Verify that the configuration files `/usr/local/sip/conf/sipd.conf` and `/usr/local/sip/conf/dynamic.sipd.conf` exist on the IM and Presence server.

ESPCreateLockFailed

Alert Description

This alert indicates that lock file has not been created.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPLoginError

Alert Description

This alert indicates that an error occurred while communicating with the login datastore.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPMallocFailure

Alert Description

This alert indicates that memory allocation has failed. This may indicate a low or no memory issue with the server.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Unified RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPNAPTRInvalidRecord

Alert Description

This alert indicates that NAPTR record format error.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPPassedParamInvalid

Alert Description

This alert indicates that invalid parameters were specified. This could be because the parameters were NULL.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Unified RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPRegistryError

Alert Description

This alert indicates that it is not possible to add registration to the SIP Registry because a resource limit was exceeded.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPRoutingError

Alert Description

This alert indicates SIP Route Interface resource limit exceeded error.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPSharedMemAllocFailed

Alert Description

This alert indicates that the Cisco SIP Proxy service failed to allocate shared memory segments while trying to initialize tables.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Use Unified RTMT to check system shared memory, check the Cisco SIP Proxy service trace log file for any detailed error messages and contact Cisco TAC for assistance.

ESPSharedMemCreateFailed

Alert Description

This alert indicates that the Cisco SIP Proxy service failed to create shared memory segments while trying to initialize tables.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Use Unified RTMT to check system shared memory, check the Cisco SIP Proxy service trace log file for any detailed error messages, and contact Cisco TAC for assistance.

ESPSharedMemSetPermFailed

Alert Description

This alert indicates that the Cisco SIP Proxy service failed to set permissions on shared memory segments while trying to initialize tables.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Use Unified RTMT to check system shared memory, check the Cisco SIP Proxy service trace log file for any detailed error messages, and contact Cisco TAC for assistance.

ESPSocketError

Alert Description

This alert indicates network socket errors that could be caused by binding errors such as get socket address failures.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPStatsLogFileOpenFailed

Alert Description

This alert indicates that the Cisco SIP Proxy service stats log file has failed to open.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPStopped

Alert Description

This alert indicates that the Cisco SIP Proxy service child process has stopped.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

If the administrator has not manually stopped the Proxy service, this may indicate a problem. Use Unified RTMT to check for any related alarms and contact Cisco TAC for assistance.

ESPVirtualProxyError

Alert Description

This alert indicates Virtual_Proxy_Domain related error.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPWrongHostName

Alert Description

This alert indicates an invalid IP address or an unresolvable hostname.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ESPWrongIPAddress

Alert Description

This alert indicates that an invalid IP address has been provided.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

ICSACertificateCAConflict

Alert Description

This alert indicates that the Cisco Intercluster Sync Agent service detected a CA certificate conflict.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

A conflicting CA certificate was detected on Unified Communications Manager when auditing certificates. Stop the Cisco Intercluster Sync Agent on all IM and Presence nodes in the cluster. Delete the conflicting certificate on all IM and Presence and Unified Communications Manager nodes and re-upload the valid certificate to each node. Start the Cisco Intercluster Sync Agent.

ICSACertificateCASignedTrustCertFound

Alert Description

This alert indicates that the Cisco Intercluster Sync Agent service has detected a signed CA trust certificate.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Allow only unsigned CA trust certificates.

ICSACertificateFingerprintMismatch

Alert Description

This alert indicates that the Cisco Intercluster Sync Agent service detected a fingerprint mismatch on the certificate being processed.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Use the IM and Presence Service OS Administration GUI to compare the certificates that are loaded on this server with the certificates on the source server. You might need to delete the problem certificates and reload them.

ICSACertificateValidationFailure

Alert Description

This alert indicates that the Cisco Intercluster Sync Agent service detected a validation error on the certificate being processed.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Use the IM and Presence OS Administration GUI to compare the certificates that are loaded on this server with the certificates on the source server. You might need to delete the problem certificates and reload them.

InterclusterSyncAgentAXLConnectionFailed

Alert Description

This alert indicates that the Cisco Intercluster Sync Agent service failed authentication to the remote IM and Presence Service cluster and therefore cannot connect.

Unified RTMT Default Threshold

Not Applicable.

Recommended Actions

Verify that the AXL credentials are correct and whether the Cisco AXL Web service is running on the remote IM and Presence Service cluster.

InterclusterSyncAgentPeerDuplicate

Alert Description

This alert indicates that the Cisco Intercluster Sync Agent service failed to sync user location data from a remote peer. The remote peer is from an IM and Presence Service cluster that already has a peer in the local cluster.

Unified RTMT Default Threshold

Not Applicable.

Recommended Actions

Verify that the hostname of the remote peer is not a secondary node from the identified existing peer. If the new peer is a secondary node, then remove this peer from the IM and Presence Service Administration GUI Inter-cluster details page. You can also run the System Troubleshooter for more details.

InvalidDirectoryURI

Alert Description

This alert indicates that one or more users within the deployment are assigned an empty or invalid directory URI value when the Directory URI IM Address scheme is configured.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Take immediate action to correct the issue. Affected users may be homed on an intercluster peer.

LegacyCUPCLogin

Alert Description

This alert indicates that a legacy Cisco Unified Personal Communicator client has attempted to login to the Cisco Client Profile Agent service.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Upgrade the legacy Cisco Unified Personal Communicator client as it is currently not supported.

NotInCucmServerListError

Alert Description

This alert indicates that the Cisco Sync Agent failed to start because the IM and Presence node is not in the server list on the Unified Communications Manager publisher.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Add the IM and Presence node to the server list on the Unified Communications Manager server and start the Cisco Sync Agent service.

PEAutoRecoveryFailed

Alert Description

This alert indicates that an error occurred during the startup sequence of the Cisco Presence Engine service.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

This error may indicate a possible configuration issue. Correct the problem identified in the failure message.

PEDatabaseError

Alert Description

This alert indicates that the Cisco Presence Engine service encountered an error while retrieving information from the database. This may indicate a problem with the Cisco DB service.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Verify that the Cisco DB service is running. Use Unified RTMT to check the Cisco Presence Engine service logs for errors. Consult Cisco TAC for guidance.

PEIDSQueryError

Alert Description

This alert indicates that the Cisco Presence Engine service has detected an error while querying the IM and Presence Service database.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Restart the Cisco Presence Engine service when convenient. See the associated error message and log files and consult Cisco TAC if the problem persists.

PEIDSSubscribeError

Alert Description

This alert indicates that the Cisco Presence Engine service was unable to subscribe for IM and Presence Service database change notifications.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Restart the Cisco Presence Engine service when convenient. See the associated error message and log files and consult Cisco TAC if the problem persists.

PEIDStoIMDBDatabaseSyncError

Alert Description

This alert indicates that synchronization between the IM and Presence database and the Cisco Presence Engine and a database service has failed (Cisco Login Datastore, Cisco Route Datastore, Cisco Presence Datastore, and Cisco SIP Registration Datastore).

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Restart the Cisco Presence Engine service when convenient. See associated error message and log files and consult Cisco TAC if the problem persists.

PELoadHighWaterMark

Alert Description

This alert indicates that the Cisco Presence Engine service has exceeded CPU utilization threshold.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Inspect the number of active subscription counters using Cisco RTMT: ActiveSubscriptions, ActiveViews, SubscriptionActiveReceivedFromForeign, and SubscriptionActiveSentForeign. If this condition persists, you may consider moving users to a different IM and Presence Service node in the cluster.

PEMemoryHighCondition

Alert Description

This alert indicates that the Cisco Presence Engine service has hit a high memory threshold.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the number of active subscription counters: ActiveSubscriptions, ActiveViews, SubscriptionActiveReceivedFromForeign, and SubscriptionActiveSentForeign using Unified RTMT. If this condition persists, offload some users to a different IM and Presence node in the cluster.

PEPeerNodeFailure

Alert Description

This alert indicates that Cisco Presence Engine service on the peer node of a subcluster has failed.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Use Cisco Unified Serviceability to verify that the Cisco Presence Engine service is running. Consult Cisco TAC for further assistance.

PEsipSocketBindFailure

Alert Description

This alert indicates that the Cisco Presence Engine service cannot connect to the indicated configured interface. No SIP traffic can be processed on this interface.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Verify that the Cisco Presence Engine service listen interface is configured correctly on the IM and Presence Service Administration GUI Application Listener page. Verify that no other process is listening on the same port using netstat.

PEStateDisabled

Alert Description

This alert indicates that the Cisco Presence Engine service is inoperable and cannot process traffic.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the log files and monitor the Cisco Presence Engine service with Unified RTMT.

PEStateLocked

Alert Description

This alert indicates that the Cisco Presence Engine service is administratively prohibited from processing traffic.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

This alert is only for notification purpose. No action is required.

PEWebDAVInitializationFailure

Alert Description

This alert indicates that the Cisco Presence Engine service has failed to initialize the WebDAV library.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Restart the Cisco Presence Engine service.

PWSAboveCPULimit

Alert Description

This alert indicates that the Presence Web Service module running in the Cisco SIP Proxy service has detected that the CPU utilization has exceeded the configured threshold. During this time, new requests are blocked until the CPU utilization drops below the configured threshold.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Using Unified RTMT, inspect the Cisco SIP Proxy service logs for more details.

PWSAboveSipSubscriptionLimit

Alert Description

This alert indicates that the Presence Web Service running in the Cisco SIP Proxy service has detected that the subscription count has exceeded the configured limit. During this time the Presence Web Service will block new incoming SIP subscriptions until the subscription count drops below the configured limit.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Using Cisco RTMT, inspect the Cisco SIP Proxy service logs for more details.

PWSRequestLimitReached

Alert Description

This alert indicates that the Cisco SIP Proxy service request per second limit has been reached.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

You may need to throttle back the incoming request rate.

PWSSCBFindFailed

Alert Description

This alert indicates that a call to find_scb() returned NULL which indicates the SCB lookup failed.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

PWSSCBInitFailed

Alert Description

This alert indicates that SCB init has failed.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Restart the Cisco SIP Proxy service.

ReplicationDefaultIMDomainChangeFailure

Alert Description

This alert occurs when a local default IM domain change fails.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Rerun the local default IM domain change procedure from the Advanced Presence Setting page.

ReplicationIMAddressSchemeChangeFailure

Alert Description

This alert occurs when an IM Address Scheme change fails.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Rerun the IM Address Scheme change procedure from the Advanced Presence Settings page.

SRMFailover

Type

IM and Presence Service

Alert Description

This alert indicates that the Server Recovery Manager is performing an automatic failover.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Verify that the failed node is up and that critical services are running.

SRMFailed

Alert Description

This alert indicates that the Server Recovery Manager is in the Failed state.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

When it is convenient restart the Server Recovery Manager.

SyncAgentAXLConnectionFailed

Alert Description

This alert occurs when the Cisco Sync Agent service failed authentication.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please verify that the AXL credentials are correct and whether the Cisco AXL Web service is activated and running on the remote Unified Communications Manager publisher.

UASCBFindFailed

Alert Description

This alert indicates that a call to find_scb() returned NULL which indicates the SCB lookup failed.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

UASCBGetFailed

Alert Description

This alert indicates that a call to tcbtable_acquire_tcb() returned NULL which indicates a SCB get/create failure.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Use Cisco RTMT to check the Cisco SIP Proxy service trace log file for any detailed error messages.

XcpCmComponentConnectError

Alert Description

This alert indicates that the Cisco XCP Connection Manager is shutting down because it failed to connect to the Cisco XCP Router.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the Cisco XCP Connection Manager log file for more details.

XcpCmPauseSockets

Alert Description

This alert indicates that the outstanding XCP internal packet or database requests have reached configured limit. Client connections will be paused until pending requests have dropped back below threshold. Users will experience lag until issue is resolved. Users may be disconnected if configured timeout is reached before resolution.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the XCP Router log file for more details. Monitor client disconnecting due to timeout from the XCP Connection Managers.

XcpCmStartupError

Alert Description

This alert indicates that the XCP Connection Manager service failed to startup.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the CM log file for more details.

XcpCmXmppdError

Alert Description

This alert indicates that the XCP Connection Manager (CM) service has errors in the XMPP interface.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the CM log file for more details.

XCPConfigMgrConfigurationFailure

Alert Description

This alert indicates that the Cisco XCP Config Manager failed to successfully update XCP configuration.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

See the Cisco XCP Config Manager logs for the root cause. Contact Cisco TAC for assistance.

XCPConfigMgrHostNameResolutionFailed

Alert Description

This alert indicates that the Cisco XCP Config Manager could not resolve a DNS name to allow Cisco XCP Routers to connect to that node.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Verify DNS resolvability of all hostnames and FQDNs in both local and remote clusters. Restart the Cisco XCP Config Manager and then restart the Cisco XCP Router after DNS is resolvable.

XCPCongMgrJabberRestartRequired

Alert Description

This alert indicates that the Cisco XCP Config Manager has regenerated XCP XML files after system halt due to buffer size. The Cisco XCP Router must now be restarted to apply changes.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

When it is convenient to do so, restart the Cisco XCP Router.

XCPCongMgrR2RPasswordEncryptionFailed

Alert Description

This alert indicates that the Cisco XCP Config Manager was unable to encrypt the password that is associated with an Inter-cluster Router-to-Router configuration.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

When it is convenient to do so, restart the Cisco XCP Config Manager and then restart the Cisco XCP Router.

XCPCongMgrR2RRequestTimedOut

Alert Description

This alert indicates that Cisco XCP Config Manager sent an R2R configuration request to the XCP Router, but the XCP Router did not acknowledge the request in the time allowed.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Restart the Cisco XCP Config Manager and then restart the XCP Router.

XcpDBConnectError

Alert Description

Cisco XCP data access layer was unable to connect to the DB. This may indicate that the local or external database is down or the network connectivity to the external database is lost.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the System Troubleshooter for more information. Also check that the external database is running healthy and if there is any problem with the network connectivity to the external database server.

XcpMdnsStartError

Alert Description

This alert indicates that the XCP Router failed to startup the Multicast Domain Name Service (MDNS). This can cause connectivity failures to other routers in the cluster.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the XCP Router log file for more details.

XcpMessArchDBConnectError

Alert Description

This alert occurs when the Cisco XCP data access layer was unable to connect to the dB.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please check the System Troubleshooter for more information. Also check that the external database is running healthy and if there is any problem with the network connectivity to the external database server.

XcpMessArchDBFullError

Alert Description

This alert occurs when the Cisco XCP data access layer was unable to insert data into the dB due to insufficient disk space or tablespace.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please free up the disk space or tablespace on the external dB.

XcpMFTDBConnectError

Alert Description

This alert indicates that the Cisco XCP data access layer was unable to connect to the external database.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Check the System Troubleshooter for more information. Also check that the external database is running healthy and if there is a problem with the network connectivity to the external database server.

XcpMFTDBFullError

Alert Description

This alert occurs when the Cisco XCP data access layer was unable to insert data into the dB due to insufficient disk space or tablespace.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please free up the disk space or tablespace on the dB.

XcpMFTextFsFreeSpaceWarn

Alert Description

This alert indicates that the Cisco XCP File Transfer Manager has detected that the available disk space on the external file server is low.

Unified RTMT Default Threshold

Less than 10% of the file server disk space remains.

Recommended Actions

The alert is cleared by increasing disk space to greater than 15%. Free up space on the external file server by deleting unwanted files from the partition used for file transfers.

XcpMFTextFsMountError

Alert Description

This alert indicates that the Cisco XCP File Transfer Manager has lost its connection to the external file server.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Check the External File Server Troubleshooter for more information. Also check that the external file server is running correctly or if there is a problem with the network connectivity to the external file server.

XcpSIPFedCmComponentConnectError

Alert Description

This alert indicates that the Cisco XCP SIP Federation Connection Manager is shutting down as it failed to connect to the Cisco XCP Router.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the Cisco XCP SIP Federation Connection Manager log file for more details.

XcpSIPFedCmPauseSockets

Alert Description

This alert occurs when the XCP Router has directed the XCP SIP Federation Connection Manager (CM) to pause listening on its socket due to load on the system.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please check the XCP Router log file for more details. Watch for the client disconnecting due to timeout from the XCP Connection Managers.

XcpSIPFedCmStartupError

Alert Description

This alert indicates that the Cisco XCP SIP Federation Connection Manager service has failed to start.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the Cisco XCP SIP Federation Connection Manager log file for more details.

XcpSIPGWStackResourceError

Alert Description

This alert indicates that the maximum supported concurrent SIP Federation subscriptions or SIP Federation IM sessions has been reached, and the Cisco XCP SIP Federation Connection Manager does not have the resources that are required to handle any addition subscriptions or IM sessions.

Unified RTMT Default Threshold

Not Applicable

Recommended Actions

Increase the Pre-allocated SIP stack memory Service Parameter for the Cisco XCP SIP Federation Connection Manager. Note: If you are changing this setting, make sure that you have the memory available. If you do not have enough memory, you may have reached the limit of your hardware capability.

XcpThirdPartyComplianceConnectError

Alert Description

This alert indicates that Cisco XCP Router is unable to connect to the Third Party Compliance Server. This may be because of a network problem or a Third Party Compliance Server configuration or licensing problem.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

This is a serious error that breaks IM on the IM and Presence Service. Check network connection to and configuration(including licensing) on Third Party Compliance Server. To restore IM services set the Compliance Settings option in the Administration GUI to Not Configured until the connection failure cause is identified.

XcpTxtConfComponentConfigError

Alert Description

This alert occurs when the XCP component detected a bad configuration.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please check the component log file for more details.

XcpTxtConfDBConnectError

Alert Description

This alert indicates that the Cisco XCP Text Conferencing data access layer was unable to connect to the external database.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the system troubleshooter for more information. Also check if the external database is running properly and if there is any problem with the network connectivity to the external database server.

XcpTxtConfDBFullError

Alert Description

This alert occurs when the Cisco XCP data access layer was unable to insert data into the dB due to insufficient disk space or tablespace.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please free up the disk space or tablespace on the dB.

XcpTxtConfDbQueueSizeLimitError

Alert Description

This alert occurs when the number of dBrequests has reached the maximum limit specified by the configuration.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the state of the external database server and check that it is accessible over the network. Then restart the Cisco XCP Text Conference Manager on CUP.

XcpTxtConfGearError

Alert Description

This alert indicates that the XCP Text Conference Manager (TC) Service has failed to load a configured component. This can prevent the service to start or behave as expected.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the XCP Text Conference log file for more details.

XcpWebCmComponentConnectError

Alert Description

This alert indicates that the Cisco XCP Web Connection Manager is shutting down as it failed to connect to the Cisco XCP Router.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the Cisco XCP Web Connection Manager log file for more details.

XcpWebCmHttpdError

Alert Description

This alert indicates that the Cisco XCP Web Connection Manager service has errors in the HTTP interface.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the Cisco XCP Web Connection Manager log file for more details.

XcpWebCmPauseSockets

Alert Description

This alert occurs when the XCP Router has directed the XCP Web Connection Manager (CM) to pause listening on its socket due to load on the system.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please check the XCP Router log file for more details. Watch for the client disconnecting due to timeout from the XCP Connection Managers.

XcpWebCmStartupError

Alert Description

This alert indicates that the Cisco XCP Web Connection Manager service has failed to start.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the Cisco XCP Web Connection Manager log file for more details.

XcpXMPPFedCmComponentConnectError

Alert Description

This alert indicates that the Cisco XCP XMPP Federation Connection Manager is shutting down because it failed to connect to the Cisco XCP Router.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Check the Cisco XCP XMPP Federation Connection Manager log file for more details.

XcpXMPPFedCmPauseSockets

Alert Description

This alert occurs when the XCP Router has directed the XCP XMPP Federation Connection Manager (CM) to pause listening on its socket due to load on the system.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please check the XCP Router log file for more details. Watch for the client disconnecting due to timeout from the XCP Connection Managers.

XcpXMPPFedCmStartupError

Alert Description

This alert occurs when the XCP XMPP Federation Connection Manager service failed to startup.

Unified RTMT Default Threshold

Not applicable.

Recommended Actions

Please check the CM log file for more details.

Intercompany Media Engine Alerts

BannedFromNetwork

This alert indicates that network administrators have banned this Cisco IME server from the network (IME distributed cache ring), making this Cisco IME service fully or partly inoperative. Network administrators rarely ban servers but do so if they detect that the server is being used to launch malicious attacks into the network. If you receive this alert in error, contact TAC immediately.

Default Configuration

Table 210: Default Configuration for the BannedFromNetwork Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Cisco IME service banned from network |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

IMEDistributedCacheCertificateExpiring

This alert indicates the number of days that remain until the certificate that is used for the IME distributed cache expires. You must replace the certificate prior to expiration.

Default Configuration

Table 211: Default Configuration for the IMEDistributedCacheCertificateExpiring Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Warning |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Cisco IME distributed cache certificate about to expire. 14 days. |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alerts within 1440 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

IMEDistributedCacheFailure

This alert indicates the health of the IME distributed cache. A value of zero (red) means that the IME distributed cache is suffering from a significant problem such as one of the following conditions:

- The Cisco IME cannot resolve issues after the network was partitioned. In this case, validation attempts may fail.
- The Cisco IME service is not connected to the network at all and is unable to reach the bootstrap servers.

A value of one (yellow) indicates that the Cisco IME network is experiencing minor issues, such as connectivity between bootstrap servers or other Cisco IME network issues. Check for any alarms that may indicate why this counter is 1. A value of two indicates that IME distributed cache is functioning normally and the system is considered healthy.

Default Configuration

Table 212: Default Configuration for the IMEDistributedCacheFailure Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: IME distributed cache failure in states 1: network experience minor issues 0: network in trouble |
| Duration | Trigger alert immediately |
| Frequency | Trigger 1 alert within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

IMESdILinkOutOfService

This alert indicates that the Cisco IME service has lost communication with Cisco IME Config Manager services, such as the Cisco AMC Service or the Cisco CallManager Service.

This alert usually indicates that one of these services has gone down (either intentionally, for maintenance; or unintentionally, due to a service failure or connectivity failure).

Default Configuration

Table 213: Default Configuration for the IMESdILinkOutOfService Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: SDLLinkOOS event generated |
| Duration | Trigger alert immediately |

| Value | Default Configuration |
|----------------------|-----------------------------|
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

InvalidCertificate

This alert indicates that the administrator enabled the IME distributed cache on the Cisco IME server but omitted the configuration of a valid certificate or configured an incorrect certificate.

Default Configuration

Table 214: Default Configuration for the InvalidCertificate Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Alert |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Invalid certificate configured |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

InvalidCredentials

The alert indicates that the Unified Communications Manager cannot connect to the Cisco IME server, because the username and password that are configured on Unified Communications Manager do not match those configured on the Cisco IME server.

The alert includes the username and password that were used to connect to the Cisco IME server as well as the IP address and name of the target Cisco IME server. To resolve this alert, log into the Cisco IME server and check that the username and password that are configured match those configured in Unified Communications Manager.

Default Configuration

Table 215: Default Configuration for the InvalidCredentials Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Invalid or mismatched credentials. |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

MessageOfTheDay

The Cisco IME service generates this alert when the administrators of the Cisco IME network have a message for you.

Default Configuration

Table 216: Default Configuration for the MessageOfTheDay Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Notice |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Message from network administrators |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alert within 1440 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |

| Value | Default Configuration |
|----------------------|-----------------------|
| Trigger Alert Action | Default |

SWUpdateRequired

The Cisco IME server generates this alert when a new version of the Cisco IME server software is required. This alert repeats until you perform the upgrade. To obtain more information about the software update, go to the Cisco website. You should install critical updates within days of receiving this alert.

These upgrades address security vulnerabilities or key functional outages. In some cases, if you do not apply a critical upgrade immediately, the Cisco IME server may become unable to connect to the network.

Default Configuration

Table 217: Default Configuration for the SWUpdateRequired Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Warning |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Software update required |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alerts within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

TicketPasswordChanged

The Cisco IME server generates this alert when the administrator changes the password that is used to generate the validation tickets.

Verify that an authorized administrator changed the password. Unauthorized changes may indicate compromise to the administrative interfaces on the Cisco IME service. If you determine that unauthorized changes have been made, change the administrative passwords on the Cisco IME server immediately to prevent further unauthorized access. To change the administrative password, type **set password admin** in the Cisco IME server CLI.

Default Configuration

Table 218: Default Configuration for the TicketPasswordChanged Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Notice |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Ticket password changed |
| Duration | Trigger alert immediately |
| Frequency | Trigger on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

ValidationsPendingExceeded

This alert indicates the number of pending validations on the Cisco IME server. This number provides an indicator of the backlog of work on the Cisco IME server.

Default Configuration

Table 219: Default Configuration for the ValidationsPendingExceeded Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on the following servers | Enabled on listed servers |
| Threshold | Trigger alert when following condition met: Cisco IME pending validations exceeded 100 |
| Duration | Trigger alert immediately |
| Frequency | Trigger up to 1 alerts within 60 minutes |
| Schedule | 24 hours daily |
| Enable Email | Selected |

| Value | Default Configuration |
|----------------------|-----------------------|
| Trigger Alert Action | Default |

Cisco Unity Connection Alerts

NoConnectionToPeer

(Cisco Unity Connection cluster configuration) This alert is generated when the servers of a Cisco Unity Connection cluster cannot communicate with each other (for example, when the network connection is lost).

Default Configuration

Table 220: Default Configuration for the NoConnectionToPeer RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Critical |
| Enable/Disable this alert on following server(s) | Enabled |
| Threshold | Trigger alert when following condition met: NoConnectionToPeer event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

AutoFailoverSucceeded

(Cisco Unity Connection cluster configuration) This alert is generated in the following conditions:

- When the server with the Secondary status automatically changes its status to Primary (for example, when a critical failure occurs on the server with the Primary status) and assumes responsibility for handling the voice messaging functions and database for the cluster. This alert signals that the following events occurred:
 - The server that originally had the Primary status experienced a serious failure.
 - The server that originally had the Secondary status now has the Primary status and is handling all calls successfully.

- When the server that stopped functioning (described above) is brought back online and the server status automatically changes so that both servers resume sharing responsibility for handling the voice messaging functions and replication.

Default Configuration

Table 221: Default Configuration for the AutoFailoverSucceeded RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Informational |
| Enable/Disable this alert on following server(s) | Enabled |
| Threshold | Trigger alert when following condition met: AutoFailoverSucceeded event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

AutoFailoverFailed

(Cisco Unity Connection cluster configuration) This alert is generated in the following conditions:

- When the server with the Secondary status attempts to automatically change its status to Primary (for example, when a critical failure occurs on the server with the Primary status), but the automatic server status change fails so that the server with the Secondary status keeps the Secondary status.
- When a server that has stopped functioning (for example, a critical failure occurred) is not brought back online. Only one server in the cluster is functioning.

Default Configuration

Table 222: Default Configuration for the AutoFailoverFailed RTMT Alert

| Value | Default Configuration |
|--|-----------------------|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on following server(s) | Enabled |

| Value | Default Configuration |
|----------------------|---|
| Threshold | Trigger alert when following condition met: AutoFailoverFailed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

AutoFailbackSucceeded

(Cisco Unity Connection cluster configuration) This alert is generated when the problem that caused the server with the Primary status to stop functioning (causing the server with the Secondary status to change its status to Primary) is resolved and both servers are again online. Then, the servers automatically change status so that the server that had stopped functioning has the Primary status and the other server has the Secondary status.

Default Configuration

Table 223: Default Configuration for the AutoFailbackSucceeded RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Informational |
| Enable/Disable this alert on following server(s) | Enabled |
| Threshold | Trigger alert when following condition met: AutoFailbackSucceeded event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

AutoFailbackFailed

(Cisco Unity Connection cluster configuration): This alert occurs when the publisher node is not online and the server with the Primary status fails to automatically change status.

Default Configuration

Table 224: Default Configuration for the AutoFailbackFailed RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on following server(s) | Enabled |
| Threshold | Trigger alert when following condition met: AutoFailbackFailed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

SbrFailed (Split Brain Resolution Failed)

When a Cisco Unity Connection cluster is configured, if two servers cannot communicate with each other, they will both have the Primary status at the same time (a “split brain” condition), handle voice messaging functions, save messages to their own message stores, but not perform any replication. Users can retrieve their messages, but only one server knows that these messages have been retrieved.

When both servers are able to communicate with each other, they resolve this split brain condition by determining the correct contents and state of each user mailbox:

- Whether new messages that have been received.
- Whether MWIs for new messages have already been sent.
- Which messages have been listened to.
- Which messages have been deleted.

If the resolution of the split brain condition fails, this alert occurs.

Default Configuration

Table 225: Default Configuration for the SbrFailed RTMT Alert

| Value | Default Configuration |
|----------------------|--|
| Enable Alert | Selected |
| Severity | Informational |
| Threshold | Trigger alert when following condition met: SbrFailed event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

DiskConsumptionCloseToCapacityThreshold

This alert is generated when the hard disk usage on the Cisco Unity Connection server reaches ten percent below the percentage limit that the **System Settings > Advanced > Disk Capacity** window in Cisco Unity Connection Administration specifies. For example, with a capacity threshold limit of 95 percent, the alert gets triggered when usage reaches at least 85 percent.

Default Configuration

Table 226: Default Configuration for the DiskConsumptionCloseToCapacityThreshold RTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on following server(s) | Enabled |
| Threshold | Trigger alert when following condition met: DiskConsumptionCloseToCapacityThreshold event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |

| Value | Default Configuration |
|----------------------|-----------------------|
| Trigger Alert Action | Default |

DiskConsumptionExceedsCapacityThreshold

This alert is generated when the hard disk usage on the Cisco Unity Connection server meets or exceeds the percentage limit that the **System Settings > Advanced > Disk Capacity** window in Cisco Unity Connection Administration specifies.

Default Configuration

Table 227: Default Configuration for the DiskConsumptionExceedsCapacityThresholdRTMT Alert

| Value | Default Configuration |
|--|--|
| Enable Alert | Selected |
| Severity | Error |
| Enable/Disable this alert on following server(s) | Enabled |
| Threshold | Trigger alert when following condition met: DiskConsumptionExceedsCapacityThreshold event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LicenseExpirationWarning

Cisco Unity Connection licenses several features, including users and ports. The system enforces these licenses. If a customer uses a time-limited license to sample a feature, this license includes an expiration date. Before the license expiration date is reached, the system sends a message, and this alert occurs. The log indicates how many days remain until the license expires.

Default Configuration

Table 228: Default Configuration for the LicenseExpirationWarning RTMT Alert

| Value | Default Configuration |
|--------------|-----------------------|
| Enable Alert | Selected |

| Value | Default Configuration |
|--|---|
| Severity | Critical |
| Enable/Disable this alert on following server(s) | Enabled |
| Threshold | Trigger alert when following condition met: LicenseExpirationWarning event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

LicenseExpired

Cisco Unity Connection licenses several features, including users and ports. The system enforces these licenses. If a customer uses a time-limited license to sample a feature, this license includes an expiration date. When the license expiration date is reached, the license becomes invalid, and this alert occurs.

Default Configuration

Table 229: Default Configuration for the LicenseExpired RTMT Alert

| Value | Default Configuration |
|--|---|
| Enable Alert | Selected |
| Severity | Informational |
| Enable/Disable this alert on following server(s) | Enabled |
| Threshold | Trigger alert when following condition met: LicenseExpired event generated |
| Duration | Trigger alert immediately |
| Frequency | Trigger alert on every poll |
| Schedule | 24 hours daily |
| Enable Email | Selected |
| Trigger Alert Action | Default |

System Error Messages

System Error Messages

For a complete list of system error messages, see the *System Error Messages for Cisco Unified Communications Manager* at <https://www.cisco.com/c/en/us/support/unified-communications/unified-communications-manager-callmanager/products-system-message-guides-list.html>.
