Paging

Restrictions for Paging

- Paging is not supported on IP phones without speaker phones.
- Paging is not supported on Cisco Unified 3905 SIP IP phones.
- Paging is only supported on G711ulaw codec.
- Cisco Unified IP Conference Phone 8831 does not support paging when busy.
- Paging Group is supported in Unified CME, but not in Unified SRST.
- Paging is not supported on Cisco Unified 3905 SIP IP phones.
- Cisco Unified SCCP IP phones do not support Whisper Paging. Only idle IP phones can receive paging requests.

Information About Paging

Audio Paging

A paging number can be defined to relay audio pages to a group of designated phones. When a caller dials the paging number (ephone-dn), each idle IP phone that has been configured with the paging number automatically answers using its speaker-phone mode. Displays on the phones that answer the page show the caller ID that has been set using the name command under the paging ephone-dn. When the caller finishes speaking the message and hangs up, the phones are returned to their idle states.
Audio paging provides a one-way voice path to the phones that have been designated to receive paging. It does not have a press-to-answer option like the intercom feature. A paging group is created using a dummy ephone-dn, known as the paging ephone-dn, that can be associated with any number of local IP phones. The paging ephone-dn can be dialed from anywhere, including on-net.

After you have created two or more simple paging groups, you can unite them into combined paging groups. By creating combined paging groups, you provide phone users with the flexibility to page a small local paging group (for example, paging four phones in a store’s jewelry department) or to page a combined set of several paging groups (for example, by paging a group that consists of both the jewelry department and the accessories department).

The paging mechanism supports audio distribution using IP multicast, replicated unicast, and a mixture of both (so that multicast is used where possible, and unicast is used for specific phones that cannot be reached using multicast).

Figure 1: Paging Group, on page 2 shows a paging group with two phones.

**Figure 1: Paging Group**

1. To page all the phones in the shipping department, a person at any phone dials the number associated with the paging ephone-dn for the shipping department. This paging ephone-dn has a number that does not appear on any phone (in this example, extension 4444).

2. A one-way voice connection is automatically made with all E.164 phones that are configured with paging ephone-dn 4. In the example, this is phones 1 and phone 2. Both phones answer the call in speakerphone mode. The voice of the calling party is heard through the speaker, and the phone displays the caller ID (name) of paging ephone-dn 4 (“Paging Shipping”).

```
sphone-dn 4
  number 4444
  name Paging Shipping
  paging ip 10.0.0.32 port 6000
  ephone-dn 4
  number 2112
  ephone-dn 22
  number 2222

sphone 1
  mac-address 0010.0020.0030
  button 1,1
  paging-dn 4

sphone 2
  mac-address 0010.0020.0030
  button 1,22
  paging-dn 4
```

**Paging Group Support for Cisco Unified SIP IP Phones**

Paging provides a one-way voice path from the paging phone to the paged phone. The paged phone automatically answers the page in speaker-phone mode with Mute activated.
The paged phone receives a page when it is idle or busy. When it is busy with a connected call, the user of the paged phone can hear both the active conversation and whisper paging.

Before Cisco Unified CME 9.0, you can specify a paging-dn tag and dial the paging extension number to page the Cisco Unified SCCP IP phone associated with the paging-dn tag or paging group using the `paging-dn` command in ephone or ephone-template configuration mode. You can also page a combined paging group composed of two or more previously established paging groups of Cisco Unified SCCP IP phone directory numbers using the `paging group` command in ephone-dn configuration mode.

In Cisco Unified CME 9.0 and later versions, support is extended so that you can specify a paging-dn tag and dial the paging extension number to page the Cisco Unified SIP IP phone associated with the paging-dn tag or paging group using the `paging-dn` command in voice register pool or voice register template configuration mode. Paging on Cisco Unified SIP IP phones support both unicast and multicast paging in the same way that these features are supported on Cisco Unified SCCP IP Phones.

In Cisco Unified CME 9.0 and later versions, support is also extended so that you can create a combined paging group composed of two or more previously established paging groups of ephone and voice register directory numbers using the same `paging group` command used for paging groups of Cisco Unified SCCP IP phone directory numbers.

Note

The paging port for Cisco Unified SIP IP phones is an even number from 20480 to 32768. If you enter a wrong port number, a SIP REFER message request is sent to the IP phone but the Cisco Unified SIP IP phone is not paged.

With a paging-dn, there is only one paging endpoint and there is only one paging number for both Cisco Unified SCCP and Cisco Unified SIP IP phones. However, when paging to a Cisco Unified SIP shared line, each phone on the shared line is treated separately.

A phone that can be paged by two paging-dns receives the page from the first paging-dn and ignores the page from the second paging-dn. When the first paging-dn is disconnected, the phone can receive the page from the second paging-dn.

The paging group support for Cisco Unified SIP IP phones uses an ephone paging-dn to dial the paging number before branching out to each Cisco Unified SCCP and Cisco Unified SIP IP phone.

The `show ephone-dn paging` command displays which paging-dn is specified and which phone is being paged.

Because paging is not considered a call, a paging phone that is in a connected state can press another line to make a call using the phone’s softkeys.

The Cisco Unified SIP IP phone Paging feature also supports:

- multicast paging (default)
- unicast paging

For more information, see Configure Paging Group Support for SIP IP Phones, on page 8.
# Configure Paging

## Configure a Simple Paging Group on SCCP Phones

To set up a paging number that relays incoming pages to a group of phones, perform the following steps.

**Restriction**

IP phones do not support multicast at 224.x.x.x addresses.

### SUMMARY STEPS

1. **enable**  
2. **configure terminal**  
3. **ephone-dn paging-dn-tag**  
4. **number number**  
5. **name name**  
6. **paging [ip multicast-address port udp-port-number]**  
7. **end**

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables privileged EXEC mode.  
  - Enter your password if prompted. |
| Example:  
  Router> enable | |
| **Step 2** configure terminal | Enters global configuration mode.  
  Example:  
  Router# configure terminal | |
| **Step 3** ephone-dn paging-dn-tag | Enters ephone-dn configuration mode.  
  - paging-dn-tag—A unique sequence number that identifies this paging ephone-dn during all configuration tasks. This is the ephone-dn that is dialed to initiate a page. This ephone-dn is not associated with a physical phone. Range is 1 to 288.  
  - **Note** Do not use the dual-line keyword with this command. Paging ephone-dns cannot be dual-line. |
| Example:  
  Router(config)# ephone-dn 42 | |
| **Step 4** number number | Defines an extension number associated with the paging ephone-dn. This is the number that people call to initiate a page.  
  Example:  
  Router(config-ephone-dn)# number 3556 | |
<table>
<thead>
<tr>
<th>Step 5</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>name name</td>
<td>Assigns to the paging number a name to appear in caller-ID displays and directories.</td>
</tr>
<tr>
<td>Example:</td>
<td>Router(config-ephone-dn)# name paging4</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Step 6</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Paging</td>
<td>ip multicast-address port udp-port-number</td>
<td>Specifies that this ephone-dn is to be used to broadcast paging messages to the idle IP phones that are associated with the paging dn-tag. If the optional keywords and arguments are not used, IP phones are paged individually using IP unicast transmission (to a maximum of ten IP phones). The optional keywords and arguments are as follows:</td>
</tr>
<tr>
<td>Example:</td>
<td>Router(config-ephone-dn)# paging ip 239.1.1.10 port 2000</td>
<td></td>
</tr>
</tbody>
</table>

- `ip multicast-address port udp-port-number`—Specifies multicast broadcast using the specified IP address and UDP port. When multiple paging numbers are configured, each paging number must use a unique IP multicast address. We recommend port 2000 because it is already used for normal non-multicast RTP media streams between phones and the Cisco Unified CME router. |

- Note: IP phones do not support multicast at 224.x.x.x addresses. |

- Note: The correct paging port for the paging-dn of Cisco Unified SIP IP phones is an even number from 20480 to 32768. If you enter a wrong port number, a SIP REFER message request is sent to the IP phone but the Cisco Unified SIP IP phone is not paged. |

<table>

<td>Router(config-telephony)# end</td>
<td></td>
</tr>
</tbody>
</table>

**Configure a Combined Paging Group for SCCP Phones**

To set up a combined paging group consisting of two or more simple paging groups, perform the following steps.

**Before you begin**
Simple paging groups must be configured. See **Configure a Simple Paging Group on SCCP Phones, on page 4.**

**SUMMARY STEPS**

1. enable
Configure a Combined Paging Group for SCCP Phones

2. `configure terminal`
3. `ephone-dn paging-dn-tag`
4. `number number`
5. `name name`
6. `paging group paging-dn-tag, paging-dn-tag [ [ paging-dn-tag ] ... ]`
7. `exit`
8. `ephone phone-tag`
9. `paging-dn paging-dn-tag { multicast | unicast }`
10. `exit`
11. Repeat Step 8 to Step 10 to add additional IP phones to a paging group.
12. `end`

DETAILED STEPS

</tr>
<tr>
<td>Step 4</td>
<td><code>number number</code></td>
<td>Defines an extension number associated with the combined group paging ephone-dn. This is the number that people call to initiate a page to the combined group.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
<td>Router(config-ephone-dn)# number 3556</td>
</tr>
<tr>
<td>Step 5</td>
<td><code>name name</code></td>
<td>(Optional) Assigns to the combined group paging number a name to appear in caller-ID displays and directories.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
<td>Router(config-ephone-dn)# name paging4</td>
</tr>
<tr>
<td>Step 6</td>
<td><code>paging group paging-dn-tag, paging-dn-tag [ [ paging-dn-tag ] ... ]</code></td>
<td>Sets the paging directory number for a combined group. This command combines the individual paging group ephone-dns that you specify into a combined group so that a page can be sent to more than one paging group at a time.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Command or Action</td>
<td>Purpose</td>
<td></td>
</tr>
<tr>
<td>------------------</td>
<td>---------</td>
<td></td>
</tr>
<tr>
<td><code>Router(config-ephone-dn)# paging group 20,21</code></td>
<td><strong>paging-dn-tag</strong>—Unique sequence number associated with the paging number for an individual paging group. Lists the paging-dn-tags of all the individual groups that you want to include in this combined group, separated by commas. You can include up to ten paging ephone-dn tags in this command.</td>
<td></td>
</tr>
</tbody>
</table>

**Note** Configure the paging command for all ephone-dns in a paging group before configuring the paging group command for that group.

<table>
<thead>
<tr>
<th>Step 7</th>
<th>exit</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Example:</strong></td>
<td><code>Router(config-ephone-dn)# exit</code></td>
</tr>
</tbody>
</table>

Exits ephone-dn configuration mode.

<table>
<thead>
<tr>
<th>Step 8</th>
<th>ephone <code>phone-tag</code></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Example:</strong></td>
<td><code>Router(config)# ephone 2</code></td>
</tr>
</tbody>
</table>

Enters ephone configuration mode to add IP phones to the paging group.

- **phone-tag**—Unique sequence number of a phone to receive audio pages when the paging ephone-dn is called.

| Step 9 | `paging-dn paging-dn-tag {multicast | unicast}` |
|--------|-----------------------------------------------|
| **Example:** | `Router(config-ephone)# paging-dn 42 multicast` |

Associates this ephone with an ephone-dn tag that is used for a paging ephone-dn (the number that people call to deliver a page). Note that the paging ephone-dn tag is not associated with a line button on this ephone.

The paging mechanism supports audio distribution using IP multicast, replicated unicast, and a mixture of both (so that multicast is used where possible and unicast is allowed to specific phones that cannot be reached through multicast).

- **paging-dn-tag**—Unique sequence number for a paging ephone-dn.
- **multicast**—(Optional) Multicast paging for groups. By default, paging is transmitted to the Cisco Unified IP phone using multicast.
- **unicast**—(Optional) Unicast paging for a single Cisco Unified IP phone. This keyword indicates that the Cisco Unified IP phone is not capable of receiving paging through multicast and requests that the phone receive paging through a unicast transmission directed to the individual phone.

**Note** The number of phones supported through unicast is limited to a maximum of ten phones.
### Purpose

</table>

### Configure Paging Group Support for SIP IP Phones

To configure Paging group support for Unified SIP IP Phones, perform the following steps.

**Before you begin**

Cisco Unified CME 9.0 or a later version.

**SUMMARY STEPS**

1. **enable**
2. **configure terminal**
3. **ephone-dn dn-tag**
4. **number number**
5. **paging [ip multicast-address port udp-port-number]**
6. Repeat Step 3 to Step 5 to add more Cisco Unified SCCP IP phones to the paging group. Skip Step 7 for each IP phone except for the last one.
7. **paging group paging-dn-tag, paging-dn-tag**
8. **exit**
9. **voice register dn dn-tag**
10. **number number**
11. **exit**
12. Repeat Step 9 to Step 11 to associate more telephone or extension numbers with Cisco Unified SIP IP phones.
13. **voice register pool pool-tag**
14. **id mac address**
15. **type phone-type**
16. **number tag dn dn-tag**
17. **paging-dn paging-dn-tag**
18. Repeat Step 13 to Step 17 to register additional Cisco Unified SIP IP phones to ephone-dn paging directory numbers. Exit from voice register pool configuration mode after each additional phone is registered. After the last phone is added, go directly to Step 19.
19. **end**
<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td><em>enable</em></td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>Router&gt; enable</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td><em>configure terminal</em></td>
<td>Router# configure terminal</td>
</tr>
<tr>
<td><strong>Step 3</strong></td>
<td>Enters ephone-dn configuration mode.</td>
</tr>
<tr>
<td><em>ephone-dn dn-tag</em></td>
<td>• <em>dn-tag</em>—Unique number that identifies an ephone-dn during configuration tasks. Range is 1 to the number set by the max-dn command.</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>Router(config)# ephone-dn 20</td>
</tr>
<tr>
<td><strong>Step 4</strong></td>
<td>Associates a telephone or extension number with this ephone-dn.</td>
</tr>
<tr>
<td><em>number number</em></td>
<td>• <em>number</em>—String of up to 16 characters that represents an E.164 telephone number. Normally, the string is composed of digits, but the string may contain alphabetic characters when the number is dialed only by the router, as with an intercom number. One or more periods (.) can be used as wildcard characters.</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>Router(config-ephone-dn)# number 2000</td>
</tr>
<tr>
<td><strong>Step 5</strong></td>
<td>Defines an extension (ephone-dn) as a paging extension that can be called to broadcast an audio page to a set of Cisco Unified IP phones.</td>
</tr>
<tr>
<td><em>paging [ip multicast-address port udp-port-number]</em></td>
<td>• <em>ip multicast-address</em>—(Optional) Uses an IP multicast address to multicast voice packets for audio paging; for example, 239.0.1.1.</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>Router(config-ephone-dn)# paging ip 239.0.1.20 port 20480</td>
</tr>
</tbody>
</table>

Note: IP phones do not support multicast at 224.x.x.x addresses. Default is that multicast is not used and IP phones are paged individually using IP unicast transmission (up to ten phones).

**Note:** If any of the paged phones is a Cisco Unified SIP IP phone, the correct paging port for the paging-dn is an even number from 20480 to 32768. If you enter a wrong port number, a SIP REFER message request is sent to the IP phone but the Cisco Unified SIP IP phone is not paged.
<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td><strong>Step 6</strong></td>
<td>Repeat Step 3 to Step 5 to add more Cisco Unified SCCP IP phones to the paging group. Skip Step 7 for each IP phone except for the last one.</td>
</tr>
</tbody>
</table>
| 7    | **Step 7**        | Creates a combined paging group from two or more previously established paging sets.  
  • *paging-dn-tag*—Comma-separated list of paging-dn-tags that have previously been associated with the paging extension of a paging set using the `paging-dn` command. You can include up to ten paging-dn-tags separated by commas; for example, 4, 6, 7, 8. |
|      | *paging group paging-dn-tag, paging-dn-tag*  
  Example:  
  Router(config-ephone-dn)# paging group 20 |
| 8    | **Step 8**        | Exits ephone-dn configuration mode. |
|      | `exit`            | |
|      | Example:  
  Router(config-ephone-dn)# exit |
| 9    | **Step 9**        | Enters voice register dn configuration mode.  
  • *dn-tag*—Unique sequence number that identifies a particular directory number during configuration tasks. Range is 1 to 150 or the maximum defined by the `max-dn` command. |
|      | *voice register dn dn-tag*  
  Example:  
  Router(config)# voice register dn 1 |
| 10   | **Step 10**       | Associates a telephone or extension number with a Cisco Unified SIP IP phone in a Cisco Unified CME system.  
  • *number*—String of up to 16 characters that represents an E.164 telephone number. Normally, the string is composed of digits, but the string may contain alphabetic characters when the number is dialed only by the router, as with an intercom number. |
|      | *number*  
  Example:  
  Router(config-register-dn)# number 1201 |
| 11   | **Step 11**       | Exits voice register dn configuration mode. |
|      | `exit`            | |
|      | Example:  
  Router(config-register-dn)# exit |
| 12   | **Step 12**       | Repeat Step 9 to Step 11 to associate more telephone or extension numbers with Cisco Unified SIP IP phones. |
| 13   | **Step 13**       | Enters voice register pool configuration mode and creates a pool configuration for a Cisco Unified SIP IP phone in Cisco Unified CME.  
  • *pool-tag*—Unique number assigned to the pool. Range: 1 to 100.  
  **Note** For Cisco Unified CME systems, the upper limit for this argument is defined by the `max-pool` command. |
|      | *voice register pool pool-tag*  
  Example:  
  Router(config)# voice register pool 1 |
<table>

Step 2  Use the show telephony-service ephone-dn and show telephony-service ephone commands to display only the configuration information for ephone-dns and ephones.

---

**Configuration Examples for Paging**

**Example for Configuring Simple Paging Group**

The following example sets up an ephone-dn for multicast paging. This example creates a paging number for 5001 on ephone-dn 22 and adds ephone 4 as a member of the paging set. Multicast is set for the paging-dn.

```
ephone-dn  22
  name Paging Shipping
  number 5001
  paging ip 239.1.1.10 port 2000

ephone  4
  mac-address 0030.94c3.8724
  button 1:1 2:2
  paging-dn  22 multicast
```

In this example, paging calls to 2000 are multicast to Cisco Unified IP phones 1 and 2, and paging calls to 2001 go to Cisco Unified IP phones 3 and 4. Note that the paging ephone-dns (20 and 21) are not assigned to any phone buttons.

```
ephone-dn  20
  number 2000
  paging ip 239.0.1.20 port 2000

ephone-dn  21
  number 2001
  paging ip 239.0.1.21 port 2000

ephone  1
  mac-address 3662.024.6ae2
  button 1:1
```
Example for Configuring Combined Paging Groups

This example sets the following paging behavior:

- When extension 2000 is dialed, a page is sent to ephones 1 and 2 (single paging group).
- When extension 2001 is dialed, a page is sent to ephones 3 and 4 (single paging group).
- When extension 2002 is dialed, a page is sent to ephones 1, 2, 3, 4, and 5 (combined paging group).

Ephones 1 and 2 are included in paging ephone-dn 22 through the membership of ephone-dn 20 in the combined paging group. Ephones 3 and 4 are included in paging ephone-dn 22 through membership of ephone-dn 21 in the combined paging group. Ephone 5 is directly subscribed to paging-dn 22.
Example for Configuring a Combined Paging Group of Cisco Unified SIP IP Phones and Cisco Unified SCCP IP Phones

The following example shows how to configure a combined paging group composed of Cisco Unified SIP IP phones and Cisco Unified SCCP IP phones.

In the following configuration tasks, paging sets 20 and 21 are defined and then combined into paging group 22. Paging set 20 has a paging extension of 2000. When someone dials extension 2000 to deliver a page, the page is sent to Cisco Unified SCCP IP phones (ephones) 1 and 2. Paging set 21 has a paging extension of 2001. When someone dials extension 2001 to deliver a page, the page is sent to ephones 3 and 4. Paging group 22 combines sets 20 and 21, and when someone dials its paging extension, 2002, the page is sent to all the phones in both sets and to ephone 5, which is directly subscribed to the combined paging group.

```plaintext

```
The following configuration tasks show how to configure a combined paging group composed of Cisco Unified SCCP IP phone directory numbers only.

When extension 2000 is dialed, a page is sent to ephones 1 and 2 (first single paging group). When extension 2001 is dialed, a page is sent to ephones 3 and 4 (second single paging group). Finally, when extension 2002 is dialed, a page is sent to ephones 1, 2, 3, 4, and 5, producing the combined paging group (composed of the first single paging group, the second single paging group, and ephone 5).

Ephones 1 and 2 are included in paging ephone-dn 22 through the membership of ephone-dn 20 as paging group 20 in the combined paging group. Ephones 3 and 4 are included in paging ephone-dn 22 through membership of ephone-dn 21 as paging group 21 in the combined paging group. Ephone 5 is directly subscribed to paging-dn 22.

ephone-dn 20
   number 2000
   paging ip 239.0.1.20 port 20480

ephone-dn 21
   number 2001

button 1:9
paging-dn 21
ephone 5
mac-address BB93.9345.0031
button 1:10
paging-dn 22

In the following configuration tasks, the **paging group** command is used to configure combined paging groups composed of ephone and voice register directory numbers.

When extension 2000 is dialed, a page is sent to ephones 1 and 2 and voice register pools 1 and 2 (new first single paging group). When extension 2001 is dialed, a page is sent to ephones 3 and 4 and voice register pools 3 and 4 (new second single paging group). Finally, when extension 2002 is dialed, a page is sent to ephones 1, 2, 3, 4, and 5 and voice register pools 1, 2, 3, 4, and 5 (new combined paging group).

Ephones 1 and 2 and voice register pools 1 and 2 are included in paging ephone-dn 22 through the membership of ephone-dn 20 as paging group 20 in the combined paging group. Ephones 3 and 4 and voice register pools 3 and 4 are included in paging ephone-dn 22 through membership of ephone-dn 21 as paging group 21 in the combined paging group. Ephone 5 and voice register pool 5 are directly subscribed to paging-dn 22.

Where to Go Next

Intercom

The intercom feature is similar to paging because it allows a phone user to deliver an audio message to a phone without the called party having to answer. The intercom feature is different than paging because the audio path between the caller and the called party is a dedicated audio path and because the called party can respond to the caller. See Intercom Lines.

Speed Dial

Phone users who make frequent pages may want to include the paging ephone-dn numbers in their list of speed-dial numbers. See Speed Dial.

Feature Information for Paging

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
