- [Installation Prerequisites, page 1-2](#)

Cisco Unified Communications for RTX

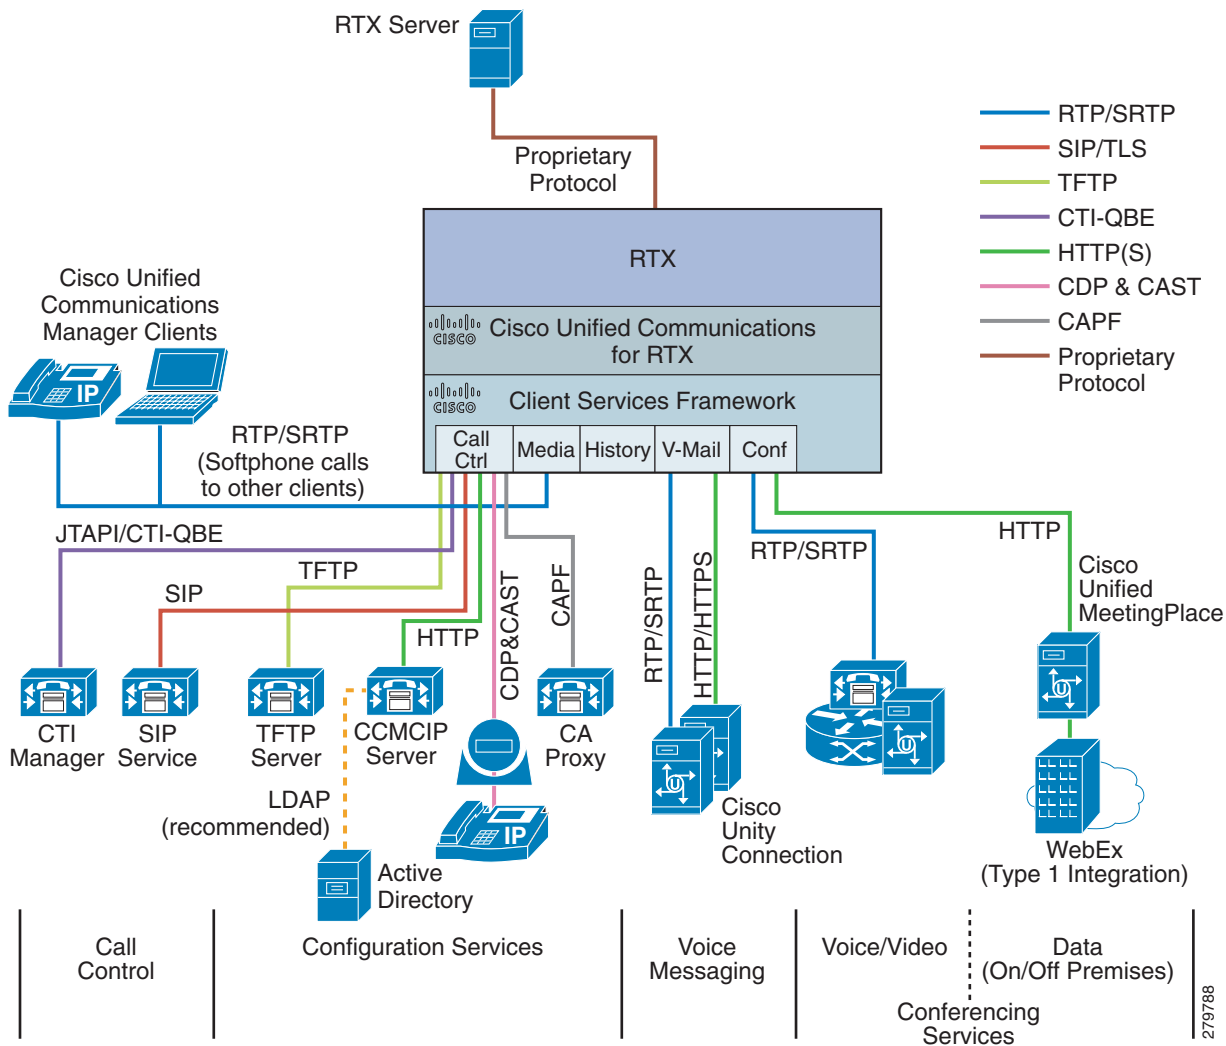

Cisco Unified Communications for RTX (Cisco UC for RTX) adds Cisco Unified Communications (Cisco UC) features to RTX. With Cisco UC for RTX, users can perform the following tasks from RTX:

- Place and receive phone calls, including high-definition video calls.
- Start meetings to talk to, and to share documents with, one or more people.
- Start and participate in conference calls.
- Transfer your calls to other contacts, or depending on your configuration, to a mobile device or other remote device.
- Forward your calls to your voicemail service, another contact, or another number.
- Park your call, then retrieve the call from another device.
- Call your voicemail service.
- Display your conversation history.
- Set options for Cisco UC for RTX.
- Switch from using your computer for phone calls to using your desk phone, and switch back.

Cisco UC for RTX integrates closely with RTX. Cisco UC for RTX updates the availability status of users automatically. Users can send instant messages through RTX to contacts with whom they are currently having a conversation through Cisco UC.

Cisco UC for RTX interacts with servers and applications as shown in [Figure 1-1](#):

Figure 1-1 Cisco UC for RTX Interactions with Network Servers

Cisco UC for RTX provides window management, client security, third-party integration, and Cisco Unified Client Services Framework integration. Client Services Framework provides the engine to provide Cisco telephony and next-generation media services for the desktop.

When you install Cisco UC for RTX, the installation application installs all of the required components.

Installation Prerequisites

Before you install Cisco UC for RTX, check that your system meets all the necessary prerequisites. Ensure that you have the correct versions of all of the required software. See the release notes at the following URL:
