THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The following information is for FCC compliance of Class A devices: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to correct the interference at their own expense.

The following information is for FCC compliance of Class B devices: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If the equipment causes interference to radio or television reception, which can be determined by turning the equipment off and on, users are encouraged to try to correct the interference by using one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Modifications to this product not authorized by Cisco could void the FCC approval and negate your authority to operate the product

The Cisco IP Phone 8800 Series

The Cisco IP Phones 8811, 8841, 8845, 8851, 8851NR, 8861, 8865, and 8865NR deliver easy-to-use, highly-secure voice communications.

Your phone must be connected to a network and configured to connect to a call control system. The phones support many functions and features, depending on the call control system. Your phone may not have all functions available, based on the way your administrator has set up the phone.

When you add features to your phone, some features require a line button. But each line button on your phone can support only one function (a line, a speed dial, or a feature). If your phone's line buttons are already in use, your phone won't display any additional features.

To check which phone model you have, press Applications and select Phone information. The Model number field shows your phone model.

## New and Changed Information

You can use the information in the following sections to understand what has changed in the document. Each section contains the major changes.

### New Information for Firmware Release 12.1(1)SR1

Phone Setup

Typically, your administrator sets up your phone and connects it to the network. If your phone is not set up and connected, contact your administrator for instructions.

Adjust the Handset Rest

If your phone is wall-mounted or if the handset slips out of the cradle too easily, you may need to adjust the handset rest to ensure that the receiver does not slip out of the cradle.
Procedure

**Step 1** Remove the handset from the cradle and pull the plastic tab from the handset rest.

**Step 2** Rotate the tab 180 degrees.

**Step 3** Hold the tab between two fingers, with the corner notches facing you.

**Step 4** Line up the tab with the slot in the cradle and press the tab evenly into the slot. An extension protrudes from the top of the rotated tab.

**Step 5** Return the handset to the handset rest.

### Change the Viewing Angle of Your Phone

You can change the angle of the phone to eliminate glare on the screen. If your phone has a video camera, you can change the angle to improve the camera view.

**Procedure**

**Step 1** Hold the receiver in the cradle with one hand.

**Step 2** Move the footstand with the other hand to change the angle.

**Step 3** (Optional) Adjust the footstand on the key expansion module and ensure that the phone and key expansion module are stable.

**Step 4** (Optional) Press **Self-view** to check the camera angle.

### Connect to the Network

You need to connect the phone to the network.

- Wired network connection—The phone is plugged into the network with an Ethernet cable.

- Wireless connection—The Cisco IP Phone 8861 and 8865 can connect to a Wireless Access Point using Wi-Fi.

- Virtual Private Network (VPN)—After the phone is connected to the network, it is set up to automatically connect into a protected network.

Mobile and Remote Access Through Expressway—If your administrator sets up Mobile and Remote Access Through Expressway and you connect your phone to the network, it connects to the Expressway server automatically.

### Set Up Wi-Fi Client

The Cisco IP Phone 8861 and 8865 can access a Wi-Fi network. You need a power adapter to power the phone. The Cisco IP Phone 8865NR cannot be used with a Wi-Fi network.
The phone PC port is disabled when Wi-Fi is enabled on your phone.

**Before you begin**

Your administrator needs to configure settings on the call control system to enable Wi-Fi access.

**Procedure**

**Step 1**  
If the phone is plugged into the Ethernet, unplug the Ethernet cable.

**Step 2**  
Press **Applications**.

**Step 3**  
Navigate to **Admin settings > Network setup > Wi-Fi client setup > Wi-Fi sign in access**.

**Step 4**  
Navigate to **Wireless** and press **On**.

**Step 5**  
Navigate to **Wi-Fi sign in access** and press **On**.

**Step 6**  
Press **Apply** to save the changes, or press **Revert** to cancel the changes.

**Connect to a Preconfigured Wi-Fi Network**

You can connect to a Wi-Fi network with your Cisco IP Phone 8861 and 8865. But the Cisco IP Phone 8865NR does not support Wi-Fi.

Depending upon how your phone is configured, you could be required to sign in when you join a Wi-Fi network or when your phone powers up.

You cannot dismiss the Wi-Fi sign-in window without entering the correct username and password.

**Procedure**

**Step 1**  
Enter your Wi-Fi credentials when prompted.

**Step 2**  
Select **Sign-in**.

**Connect to a VPN**

You connect to your VPN in one of two ways:

- By entering credentials (username and password, or just a password)
- With a certificate

If you have a certificate installed on your phone, you do not need to do anything. Your phone automatically connects to the VPN.
## Set up a Phone for Use with VPN

**Before you begin**

To complete this procedure, you must have a valid TFTP server address. If you do not have this information, contact your administrator.

You cannot use the Wi-Fi client with the Cisco IP Phone 8865NR.

### Procedure

<table>
<thead>
<tr>
<th>Step 1</th>
<th>When prompted, enter your VPN credentials.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Select <strong>Sign-in</strong>.</td>
</tr>
</tbody>
</table>

---

## Connect to Expressway

You can use Mobile and Remote Access Through Expressway to connect into your corporate network when you are working away from your office. Because your phone does not have a TFTP address configured, the phone displays a Welcome screen to begin the sign-in process.

**Before you begin**

If you have been using your phone at the office or with a VPN, reset your service mode before you connect to Expressway.

If you need to connect to Mobile and Remote Access Through Expressway on-premise, restart your phone and press **Select** when prompted.
Procedure

Step 1 Enter your activation code or service domain on the Welcome screen and press Continue.
Step 2 Enter your username and password.
Step 3 Press Submit.

Activate Your Phone Automatically with a QR Code

If your phone has a camera, you can scan a QR code to activate the phone. If you inadvertently press Enter manually, press Back to return to the QR code screen.

Before you begin

You need the QR code from your welcome message.

If the code from your welcome message has expired, generate an activation code for your device with the Self Care portal or request an activation code from your administrator.

Procedure

Step 1 Make the QR code ready with one of these methods:
   • Print the email with the QR code and hold the paper in front of the phone camera.
   • Display the QR code on your mobile device and hold the device in front of the phone camera.
   • Display the QR code on your computer and hold the phone in front of the computer screen.
Step 2 Turn the ring around the camera clockwise to open the shutter.
Step 3 Scan the QR code.
When the scan succeeds, your phone registers with the server, and you’re ready to make your first call.

Secure the Phone with a Cable Lock

You can secure your Cisco IP Phone 8800 Series with a laptop cable lock up to 20 mm wide.

Procedure

Step 1 Take the looped end of the cable lock and wrap it around the object to which you want to secure your phone.
Step 2 Pass the lock through the looped end of the cable.
Step 3 Unlock the cable lock.
Step 4 Press and hold the locking button to align the locking teeth.
Step 5 Insert the cable lock into the lock slot of your phone and release the locking button.
Step 6 Lock the cable lock.
Activate and Sign In to Your Phone

You may need to activate or sign in to your phone. Activation happens once for your phone, and connects the phone to the call control system. Your administrator gives you your sign-in and activation credentials.

Sign In to Your Phone

Before you begin
Get your user ID and PIN or password from your administrator.

Procedure

Step 1  Enter your user ID in the User ID field.
Step 2  Enter your PIN or password in the PIN or Password field, then press Submit.

Sign In to Your Extension from Another Phone

You can use Cisco Extension Mobility to sign in to a different phone in your network and have it act the same as your phone. After you sign in, the phone adopts your user profile, including your phone lines, features, established services, and web-based settings. Your administrator sets you up for the Cisco Extension Mobility service.

Before you begin
Get your user ID and PIN from your administrator.

Procedure

Step 1  Press Applications.
Step 2  Select Extension Mobility (name can vary).
Step 3  Enter your user ID and PIN.
Step 4  If prompted, select a device profile.

Sign Out of Your Extension from Another Phone

Procedure

Step 1  Press Applications.
Step 2  Select Extension Mobility.

Step 3  Press Yes to sign out.

Self Care Portal

You can customize some phone settings with the Self Care portal web site, which you access from your computer. The Self Care portal is part of your organization's Cisco Unified Communications Manager.

Your administrator gives you the URL to access the Self Care portal, and provides your user ID and password.

In the Self Care portal, you can control features, line settings, and phone services for your phone.

- Phone features include speed dial, do not disturb, and your personal address book.
- Line settings affect a specific phone line (directory number) on your phone. Line settings can include call forwarding, visual and audio message indicators, ring patterns, and other line-specific settings.
- Phone services can include special phone features, network data, and web-based information (such as stock quotes and movie listings). Use the Self Care Portal to subscribe to a phone service before you access it on your phone.

If you have a Cisco IP Phone 8800 Key Expansion Module connected to your phone, you can also configure the expansion module buttons for speed dial and other phone services.

The following table describes some specific features that you configure with the Self Care portal. For more information, see the Self Care portal documentation for your call control system.

<table>
<thead>
<tr>
<th>Features</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call forward</td>
<td>Use the number that will receive calls when call forward is enabled on the phone. Use the Self Care portal to set up more complicated call forward functions, for example, when your line is busy.</td>
</tr>
</tbody>
</table>
| Additional phones| Specify additional phones (your mobile and other phones) that you want to use to make and receive calls with the same directory numbers as your desk phone. You can also define blocked and preferred contacts to restrict or allow calls from certain numbers to be sent to your mobile phone. When you set up additional phones, you can also set up these features:  
  - Single number reach—Specify whether the additional phone should ring when someone calls your desk phone.  
  - Mobile calls—If the additional phone is a mobile phone, you can set it up to allow you to transfer mobile calls to your desk phone or desk phone calls to your mobile phone. |
| Speed dial       | Assign phone numbers to speed-dial numbers so that you can quickly call that person. |

Related Topics

  - Forward Calls, on page 48
Speed-Dial Numbers

When you dial a number on your phone, you enter a series of digits. When you set up a speed-dial number, the speed-dial number must contain all the digits you need to make the call. For example, if you need to dial 9 to get an outside line, you enter the number 9 and then the number you want to dial.

You can also add other dialed digits to the number. Examples of additional digits include a meeting access code, an extension, a voicemail password, an authorization code, and a billing code.

The dial string can contain the following characters:

- 0 to 9
- Pound (#)
- Asterisk (*)
- Comma (,)—This is the pause character, and gives a 2-second delay in the dialing. You can have several commas in a row. For example, two commas (,,) represent a pause of 4 seconds.

The rules for dial strings are:

- Use the comma to separate the parts of the dial string.
- An authorization code must always precede a billing code in the speed-dial string.
- A single comma is required between the authorization code and the billing code in the string.
- A speed-dial label is required for speed dials with authorization codes and additional digits.

Before you configure the speed dial, try to dial the digits manually at least once to ensure that the digit sequence is correct.

Note

Your phone does not save the authorization code, billing code, or extra digits from the speed dial in the call history. If you press Redial after you connect to a speed-dial destination, the phone prompts you to enter any required authorization code, billing code, or additional digits manually.

Example

To set up a speed-dial number to call a person at a specific extension, and if you need an authorization code and billing code, consider the following requirements:

- You need to dial 9 for an outside line.
- You want to call 5556543.
- You need to input the authorization code 1234.
- You need to input the billing code 9876.
- You must wait for 4 seconds.
- After the call connects, you must dial the extension 56789#.

In this scenario, the speed-dial number is 9556543, 1234, 9876, , 56789#.
The Cisco IP Phone 8800 Series has two distinct hardware types:

- Cisco IP Phones 8811, 8841, 8851, 8851NR, and 8861—do not have a camera.
- Cisco IP Phones 8845, 8865, and 8865NR—have a built-in camera.

The following figure shows the Cisco IP Phone 8845.

**Figure 1: Cisco IP Phone 8845 Buttons and Hardware**

</tbody>
</table>

**Navigation**

Use the outer ring of the Navigation cluster to scroll through menus and to move between fields. Use the inner **Select** button of the Navigation cluster to select menu items.

If a menu item has an index number, you can enter the index number with the keypad to select the item.
Softkey, Line, and Feature Buttons

You can interact with the features on your phone in several ways:

- Softkeys, located below the screen, give you access to the function displayed on the screen above the softkey. The softkeys change depending on what you are doing at the time. The More ... softkey shows you that more functions are available.

- Feature and line buttons, located on either side of the screen, give you access to phone features and phone lines.
  - Feature buttons—Used for features such as Speed dial or Call pickup, and to view your status on another line.
  - Line buttons—Used to answer a call or resume a held call. When not used for an active call, used to initiate phone functions, such as the missed calls display.

Feature and line buttons illuminate to indicate status:

- Green, steady—Active call or two-way intercom call
- Green, flashing—Held call
- Amber, steady—Privacy in use, one-way intercom call, Do Not Disturb (DND) active, or logged into a Hunt Group
- Amber, flashing—Incoming call or reverting call
- Red, steady—Remote line in use (shared line or Line Status)
- Red, flashing—Remote line on hold

Your administrator can set up some functions as softkeys or as feature buttons. You can also access some functions with softkeys or the associated hard button.

Phone Screen Features

The phone screen shows information about your phone such as directory number, active call and line status, softkeys, speed dials, placed calls, and phone menu listings. The screen is made up of three sections: the header row, the middle section, and the footer row.
Clean the Phone Screen

Procedure

If your phone screen gets dirty, wipe it with a soft, dry cloth.

Caution  Do not use any liquids or powders on the phone because they can contaminate the phone components and cause failures.

Badged Icons

If you have missed calls, the missed call icon, and a counter showing the number of missed calls, display on your phone desktop. If you receive a voicemail, the missed call icon changes to the voicemail icon and voicemail counter until you listen to your messages.

In addition, if you have more than one call on a line, either the held icon or the off hook icon change to show the number of calls.

Differences Between Phone Calls and Lines

We use the terms lines and calls in very specific ways to explain how to use your phone.
• Lines—Each line corresponds to a directory number or intercom number that others can use to call you. You have as many lines as you have directory numbers and phone line icons. Depending upon how your phone is configured, you could have up to 16 lines.

• Calls—Each line can support multiple calls. By default, your phone supports four connected calls per line, but your administrator can adjust this number according to your needs.

Only one call can be active at any time; other calls are automatically placed on hold.

Here is an example: If you have two lines and each line supports four calls, then you could have up to eight connected calls at one time. Only one of those calls is active and the other seven are held calls.

USB Ports

Your phone may have one or more USB ports. Each USB port supports a maximum of five USB devices. Each device connected to the port is included in the maximum device count, including any Key Expansion Modules.

For example, your phone can support five USB devices on the side port and five additional standard USB devices on the back port. Many third-party USB products contain more than one USB device, and thus count as more than one device.

If you use a USB hub and remove the USB cable from the phone during an active call, your phone might restart.

Related Topics

The Cisco IP Phone 8800 Series, on page 1

Mobile Device Charging

You can use the USB ports on your phone to charge your mobile device if the device has a USB connection. The following ports support USB charging:

• Side port—Provides standard device charging.

• Back port (Cisco IP Phone 8861, 8865, and 8865NR only)—Provides standard device charging as well as fast-charging.

Your phone continues to charge the mobile device while it is in power-saving mode but stops charging in Power Save Plus mode.

When you use your phone to charge your mobile device, the following conditions apply:

• A short delay may occur before charging begins.

• In some situations, your device will not display the charging icon. For example, the icon may not display when the device is fully charged.

• When more than one Cisco IP Phone 8800 Key Expansion Module is attached to your phone, the back USB port cannot fast-charge the device.

If you unplug your tablet and immediately plug in a USB headset to the phone, a 3-second delay occurs before the phone recognizes the USB headset.
Bluetooth and Your Phone

If your phone supports Bluetooth, use a Bluetooth headset and connect your mobile phone or tablet to the phone.

Bluetooth connections work best when you're within 3 to 6 feet (1 to 2 meters) from your phone, but you might be able to be as far away as 66 feet (20 meters). The Bluetooth connection can degrade if you have a barrier (wall, door, window), large metal object, or other electronic devices between your phone and the connected device.

To connect a mobile device or headset to your phone with Bluetooth, start by pairing the device with your phone. You can pair up to 50 mobile devices and Bluetooth headsets with the phone.

After the headset or mobile device is paired, the phone connects to the headset or mobile device when the headset or mobile device is turned on.

When you use a Bluetooth headset and mobile devices with your phone, keep these things in mind:

- The last Bluetooth headset or mobile device connected with the phone is the default device that the phone uses.

- You can connect one mobile device (phone or tablet) and one Bluetooth headset at the same time.

- The phone can connect to only one paired mobile device at a time. If your mobile phone is connected and you turn on your tablet, the tablet connects to the phone and the mobile phone disconnects.

- When your Bluetooth headset and your mobile device are connected to the phone, you cannot use the Bluetooth headset to answer desk phone calls from the mobile device.

Accessibility Features for the Cisco IP Phone 8800 Series

The Cisco IP Phones 8811, 8841, 8845, 8851, 8851NR, 8861, and 8865 provide accessibility features for the blind, and the visually, hearing, and mobility impaired. Because many of these features are standard, they can be used by users with disabilities without requiring any special configuration.

In this document, the term phone support pages refers to the web pages that users can access to set up certain features. For Cisco Unified Communications Manager (Release 10.0 and later), these pages are the Self Care Portal. For Cisco Unified Communications Manager (Release 9.1 and earlier), these pages are the User Options web pages.

Cisco is committed to designing and delivering accessible products and technologies to meet the needs of your organization. You can find more information about Cisco and its commitment to accessibility at this URL: http://www.cisco.com/go/accessibility
Hearing-Impaired Accessibility Features

Your phone comes with standard accessibility features that require little or no setup.

Your administrator can also change your settings. |
| 4    | Inline-amplifier support (handset) | Cisco IP Phone handsets support third-party inline amplifiers. You attach an amplifier to the handset and cord and it sits between the handset and the IP phone. |
| 5    | Hearing aid compatible (HAC) handset | Supports these accessibility features:  
- Hearing-aid compatible.  
- Magnetic coupling of the hearing aid.  
- Federal Communications Commission (FCC) loudness requirements for the Americans with Disabilities Act (ADA).  
- Section 508 loudness requirements, which are met by using industry-standard inline handset amplifiers. |
| 6    | Acoustic coupled TTY and TDD support (handset) | Cisco IP Phones support these TTY and TDD features:  
- Acoustic or direct connect TTYs from industry-leading manufacturers.  
- Real-time text transmission over phone lines.  
- Hearing and voice carry over phones (HCO/VCO).  
- VoIP network operating at G.711.  
For information about setting up TTY, contact your administrator. |

**Adjustable Footstand**

You can adjust the footstand to provide optimum phone display viewing and easy access to all buttons and keys.

**Voice Feedback**

Voice Feedback helps people who have trouble seeing use their Cisco IP phone. When enabled, a voice prompt helps you navigate your phone buttons, and to use and configure phone features. The voice also reads out incoming Caller IDs, displayed screens and settings, and button functions.

A few important items to keep in mind as you use this feature.

- Voice Feedback is enabled and disabled with the Select button that is located in the center of the Navigation cluster. When the phone is idle, quickly tap Select three times to turn this feature on or off. A voice prompt alerts you to the feature status.
- Push a softkey once, and Voice Feedback reads out the feature that is associated with the key. Quickly push the softkey twice to execute the feature.
- Hardkeys such as the Contacts, Applications, and Messages buttons are treated differently. Push a hardkey once, and a voice reads out the screen name followed by the application or setting this is displayed on the phone.

Volume is adjusted with the Volume button. To adjust your handset volume, lift the receiver from the cradle, and press Volume. If you use a headset, select the Headset button, and then Volume. If you use the speakerphone, select Speakerphone and Volume.

You may not hear Voice Feedback if you select the Headset button, but don't have a connected headset. Select Speakerphone and you hear Voice Feedback again.

When on a call, only you hear Voice Feedback so your privacy is assured. Voice Feedback is only available for English language users. If this feature is not available to you, then it is disabled on your phone.

**Related Topics**

- Enable Voice Feedback from Accessibility, on page 86
Mobility-Impaired Accessibility Features

Your phone comes with standard accessibility features that require little or no setup.

To check which phone model you have, press Applications and select Phone information. The Model number field shows your phone model.

Cisco IP Phone 8800 Series Wall Mount Kit Accessibility

The Cisco IP Phone 8800 Series phones can be mounted on a wall using one of the following wall mount kits:

• Wallmount Kit for Cisco IP Phone 8800 Series—used to mount a single phone on the wall.

• Wallmount Kit for Cisco IP Phone 8800 Series with single KEM—used to mount a single phone with one attached key expansion module on a wall.

• Wallmount Kit for Cisco IP Phone 8800 Video Series—used to mount a single video phone on the wall.
The Wallmount Kit for Cisco IP Phone 8800 Series and Wallmount Kit for Cisco IP Phone 8800 Series with single KEM meet the 307.2 Protrusion Limits section of the Americans with Disabilities Act (ADA) ADAAG requirement for mounting a phone on the wall.

The Wallmount Kit for Cisco IP Phone 8800 Video Series is slightly larger and does not meet the 307.2 Protrusion Limits section of the Americans with Disabilities Act (ADA) ADAAG requirement for mounting a phone on the wall.

The following figure shows a side view of the phone with the wall mount kit installed.

*Figure 6: Side View of the Phone Installed with the Wall Mount Kit*

---

**Phone Firmware and Upgrades**

Your phone comes with firmware already installed, which is specific to the call control system that your phone uses.

Occasionally, your administrator upgrades the phone firmware for you. This upgrade happens when you are not using your phone because the phone resets to use the new firmware.

**Postpone a Phone Upgrade**

When new firmware is available, the **Ready to upgrade** window is displayed on your phone and a timer begins a 15-second countdown. If you do nothing, the upgrade proceeds.

You can postpone your firmware upgrade for 1 hour and up to 11 times. The upgrade is also postponed if you make or receive a phone call.

**Procedure**

Select **Delay** to postpone a phone upgrade.
View the Progress of a Phone Firmware Upgrade

During a phone firmware upgrade, you can view the upgrade progress.

Energy Savings

Your administrator can reduce the amount of power your phone screen uses when you're not using your phone.

Your administrator can set up these energy-saving levels on your phone:

- **Power Save**—The backlight or screen turns off when the phone is inactive for a set interval.
- **Power Save Plus**—Your phone screen turns on and off at times that are based on your work schedule. If your work hours or work days change, you can contact your administrator to reconfigure your phone.

For example, your administrator can set your phone to alert you 10 minutes before it turns off. You see the **Select** button light up and you get a message that your phone is turning off soon. You get notifications at these intervals:

- Four rings at 10 minutes before power off
- Four rings at 7 minutes before power off
- Four rings at 4 minutes before power off
- 15 rings at 30 seconds before power off

If your phone is active, it waits until it has been inactive for a set interval before it notifies you of the pending power shutdown.

Turn On Your Phone

When your phone turns off to save energy, the phone screen is blank and the **Select** button lights up.

**Procedure**

Press **Select** to turn your phone back on.
Phone Line Modes

Your phone can be set up in one of these modes:

- Normal line mode—In this mode, the buttons to the left and right of the screen have different functions. Usually, the left buttons are the line buttons and the right buttons are the feature buttons. The line and feature buttons are reversed for locales that read from right to left. This mode is also known as session line mode.

- Enhanced line mode—In this mode, the buttons on the left and right of the screen can be set up as line buttons. This mode increases the number of phone lines that you can see and use. You see an alert for an incoming call.

Normal Line Mode

When your phone is set up for normal (Session) line mode, you interact with the phone in these ways:

- Use the New call window to place a call.
- Select **Answer** to answer a call, unless your phone is set up for an Incoming Call alert. If your phone is set up for an Incoming Call alert, select **Answer**, **Decline**, or **Ignore**.
- Five line keys are available. If your phone is connected to your mobile device or tablet with Bluetooth, only four line keys are available.

Enhanced Line Mode

When your phone is set up for Enhanced Line mode, you interact with the phone in these ways:

- Select a phone line and enter the phone number to make calls. The Recents list displays phone numbers similar to the number being dialed.
- Select **Answer**, **Decline**, or **Ignore** to answer calls.
- Ten line keys are available.

You can see your missed calls by selecting a line key to view the missed calls for that line in the call window. The missed call counter clears when you return to the idle screen.

If you use Enhanced line mode and have Actionable Incoming Call Alert disabled, you will see the line label display the following information for incoming calls:

- To—The line receiving the call.
- From—The line that is used to make the call.

Forwarded calls are also identified.

This action occurs on the Cisco IP Phone 8800 Series phone, as well as the Cisco IP Phone 8851/8861 Key Expansion Module and the Cisco IP Phone 8865 Key Expansion Module.
Additional Help and Information

If you have questions about the functions available on your phone, contact your administrator.

The Cisco website (https://www.cisco.com) contains more information about the phones and call control systems.

• For quick start guides and end-user guides in English, follow this link:

• For guides in languages other than English, follow this link:

• For licensing information, follow this link:

Accessibility Features

Cisco IP Phones provide accessibility features for the vision impaired, the blind, and the hearing and mobility impaired.

You can also find more information about accessibility at this Cisco website:
http://www.cisco.com/web/about/responsibility/accessibility/index.html

Troubleshooting

You may experience issues related to the following scenarios:

• Your phone cannot communicate with the call control system.

• The call control system has communication or internal problems.

• Your phone has internal problems.

If you experience problems, your administrator can help troubleshoot the root cause of the problem.

Find Information About Your Phone

Your administrator may ask for information about your phone. This information uniquely identifies the phone for troubleshooting purposes.
## Procedure

### Step 1
Press **Applications**

### Step 2
Select **Phone information**.

### Step 3
(Optional) Press **Show detail** to view the active load information.

### Step 4
Press **Exit**.

## Report Call Quality Issues

Your administrator may temporarily configure your phone with the Quality Reporting Tool (QRT) to troubleshoot performance problems. Depending on the configuration, use the QRT to:

- Immediately report an audio problem on a current call.
- Select a general problem from a list of categories and choose reason codes.

## Procedure

### Step 1
Press **Report quality**.

### Step 2
Scroll and select the item that closely matches your problem.

### Step 3
Press the **Select** softkey to send the information to your system administrator.

## Report All Phone Issues

You can use the Cisco Collaboration Problem Report Tool (PRT) to collect and send phone logs, and to report problems to your administrator. If you see a message that the PRT upload has failed, the problem report is saved on the phone and you should alert your administrator.

## Procedure

### Step 1
Press **Applications**

### Step 2
Select **Phone information > Report problem**.

### Step 3
Enter the date and time that you experienced the problem in the Date of problem and Time of problem fields.

### Step 4
Select **Problem description**.

### Step 5
Select a description from the displayed list, then press **Submit**.

## Lost Phone Connectivity

Sometimes your phone can lose its connection to the call control system. When this connection is lost, your phone displays a message.
If you are on an active call when the connection is lost, the call continues. However, you do not have access to all normal phone functions because some functions require information from the call control system. Your softkeys might not work as you expect.

When the phone reconnects to the call control system, you'll be able to use your phone normally again.

**Cisco One-Year Limited Hardware Warranty Terms**

Special terms apply to your hardware warranty and services that you can use during the warranty period.

Your formal Warranty Statement, including the warranties and license agreements applicable to Cisco software, is available on Cisco.com at this URL: [https://www.cisco.com/go/hwwarranty](https://www.cisco.com/go/hwwarranty).

Make Calls

Your phone works just like a regular phone. But we make it easier for you to make calls.

Make a Call

Use your phone just like any other phone to make a call.

Procedure

Enter a number and pick up the handset.

Make a Call with the Speakerphone

Use your speakerphone for hands-free calling. Keep in mind that your coworkers might be able to hear your call too.
Make a Call with a Headset

Use your headset for hands-free calling that won't disturb your coworker and gives you some privacy.

**Procedure**

**Step 1** Enter a number using the keypad.
**Step 2** Press Speakerphone.

Make a Call with a Phone or Video Address

Sometimes, instead of just having someone's phone number, you might also have a phone or video address that you can use to place the call instead.

This address might look like an email address, such as `username1@example.com`, or it might contain numbers like `username2@209.165.200.224`.

If you and the person you're calling have video phones, you'll be able to see each other.

**Procedure**

**Step 1** Press New call.
**Step 2** Press ABC and you'll be able to enter text using the keypad.
**Step 3** Press a number on the keypad to see the available options, and then press the number again to move through the choices.
   - For example, press the number 1 three times to enter the @ symbol.
**Step 4** Press Call.

---

Redial a Number

You can call the most recently dialed phone number.
Procedure

Step 1  (Optional) Select a line.
Step 2  Press Redial.

Speed Dial

You can assign buttons or codes to quickly dial the numbers of people you call often. Before you can use speed-dial features on your phone, set up speed dial in the Self Care portal.

Depending on your setup, your phone can support these features:

• Speed-dial buttons—Dial a phone number from one or more line buttons set up for speed dialing.
• Speed-dial codes—Dial a phone number from a code (sometimes referred to as abbreviated dialing).

Make a Call with a Speed-Dial Button

To check which phone model you have, press Applications and select Phone information. The Model number field shows your phone model.

You can see only as many speed-dial numbers as you have speed-dial buttons. For example, you add 15 speed-dial numbers in the Self Care portal but your phone has five speed-dial buttons. You can see only the first five speed-dial numbers from the list of speed-dial numbers in your Self Care portal.

When you add features to your phone, some features require a line button. But each line button on your phone can support only one function (a line, a speed dial, or a feature). If your phone's line buttons are already in use, your phone won't display any additional features.

You can see all the speed-dial numbers that you add in the Self Care portal. Use the up and down buttons in the navigation cluster to scroll through your speed-dial numbers, then select a speed-dial number.

You can see all the speed-dial numbers that you add in the Self Care portal. Use the down button in the navigation cluster to scroll through your speed-dial numbers, then select a speed-dial number.

Before you begin

Set up speed-dial codes in the Self Care portal.

Procedure

Press a speed-dial button.

Add a Speed Dial Button from Your Phone

You can use your phone to configure a line key as a speed-dial button, if you cannot access the Self Care Portal. This method is quick way to add a favorite phone number as a speed-dial to your phone.

In addition to being supported on the Cisco IP Phones 8800 Series, this method of adding speed-dial buttons is supported on the following key expansion modules:

- Cisco IP Phone 8800 Key Expansion Module
- Cisco IP Phone 8851/8861 Key Expansion Module
- Cisco IP Phone 8865 Key Expansion Module

A Reset All clears any speed-dial buttons created from your phone.

Procedure

**Step 1** Press and hold a line key for 2 seconds. The Define favorites screen displays.
**Step 2** In the Name field, enter the name of the speed-dial number.
**Step 3** In the Number field, enter the phone number. Include all the digits required to complete the call.
**Step 4** Select **Apply** to save your speed-dial number.

Modify a Speed Dial Button from Your Phone

You can use your phone to modify or edit a speed-dial button, if you cannot access the Self Care Portal. But it does not apply to speed-dial buttons created from the Self Care Portal, or from the Cisco Unified Communications Manager by your administrator.

Procedure

**Step 1** Press and hold a line key for 2 seconds. The Define favorites screen displays.
**Step 2** In the Name field, enter the new name of the speed-dial number, if required.
**Step 3** In the Number field, enter the new phone number, if required. Include all the digits required to complete the call.
**Step 4** Select **Apply** to save your speed-dial number.

Delete a Speed Dial Button from Your Phone

You can use your phone to delete a speed-dial button. This method only works if you added the speed-dial buttons from the phone. It does not apply to speed-dial buttons added from the Self Care Portal, or from the Cisco Unified Communications Manager by your administrator.
### Make a Call With a Speed-Dial Code

**Before you begin**
Set up speed-dial codes in the Self Care portal.

**Procedure**

1. Enter the speed-dial code and press **Speed Dial**.

**Related Topics**
- Self Care Portal, on page 11

### Make a Call With a Fast-Dial Button

**Before you begin**
You need to set up the fast-dial codes in your personal directory.

**Procedure**

1. Press **Fast Dial**.
2. Sign in to Personal Directory.
3. Select **Personal Fast Dials**.
4. Select a fast-dial code and then press the **Dial** softkey.

**Related Topics**
- Assign a Fast-Dial Code to a Contact, on page 69

### Dial an International Number

You can dial international calls when you prefix the phone number with a plus (+) sign.
## Get Notified When a Contact is Available

If you call someone and their line is busy or they do not answer, you can be notified with a special ringtone and a message when they are available.

### Procedure

1. **Step 1** Press **Callback** while you are listening to the busy tone or ring sound.
2. **Step 2** Press **Exit** to exit the confirmation screen.
3. **Step 3** When you hear the ringtone that the person is available and see the message, press **Dial** to place the call again.

## Calls That Require a Billing Code or Authorization Code

Your administrator may require that you enter a billing code or authorization code (or both codes) after you dial a phone number. The billing code, called a Client Matter Code, is used for accounting or billing purposes. The authorization code, called a Forced Authorization Code, controls access to certain phone numbers.

- **When a billing code is required**, the phone displays **Enter Client Matter Code**, the dialed number changes to “********”, and you hear a special tone.
- **When an authorization code is required**, the phone displays **Enter Authorization Code**, the dialed number changes to “********”, and you hear a special tone. For security reasons, the phone displays a “*” instead of the number entered.

When both a billing code and an authorization code are required, you are prompted for the authorization code first. Then you are prompted for the billing code.

## Secure Calls

Your administrator can take steps to protect your calls from tampering by people outside your company. When a lock icon is displayed on your phone during a call, your phone call is secure. Depending upon how your phone is configured, you may have to sign on before you make a call or before a security tone plays over your handset.
Answer Calls

Your Cisco IP Phone works just like a regular phone. But we make it easier for you to answer calls.

Answer a Call

Procedure

When your phone rings, press the flashing line button to answer the call.

Answer Call Waiting

When you are on an active call, you know that a call is waiting when you hear a single beep and see the line button flash.

Procedure

Step 1
Press the line button.

Step 2
(Optional) If you have more than one call waiting, select an incoming call.

Decline a Call

You can send a ringing call to your voicemail system or to a preset phone number.

Procedure

Decline a call by performing one of the following actions:

- Press Decline.
- If you have multiple incoming calls, highlight the incoming call and press Decline.

Ignore a Call

If you do not want to be disturbed, you can ignore an incoming call. The call goes to voicemail.
Procedure

Ignore a call by performing one of the following actions:

- Select Ignore.
- Press Volume down once to silence the incoming (ringing) call, and then let the incoming call go to your voicemail or to a preset phone number.

Turn On Do Not Disturb

Use do not disturb (DND) to silence your phone and ignore incoming call notifications when you need to avoid distractions.

When you turn on DND, your incoming calls are forwarded to another number, such as your voicemail, if it is set up.

When DND is turned on, the header section of the phone screen changes color and Do not disturb is displayed on the phone screen.

When you turn on DND, it affects all lines on your phone. However, you will always receive intercom and emergency calls, even when DND is turned on.

If multilevel precedence and preemption (MLPP) is set up for your phone, priority calls will ring your phone with a special ringtone, even when DND is turned on.

Procedure

Step 1
Press Do not disturb to turn on DND.

Step 2
Press Do not disturb again to turn off DND.

Answer a Coworker's Phone (Call Pickup)

If you share call handling tasks with your coworkers, you can answer a call that is ringing on a coworker’s phone. First, your administrator has to assign you to at least one call pickup group.

Answer a Call Within Your Group (Pickup)

You can answer a call that rings on another phone within your call pickup group. If multiple calls are available for pickup, you'll answer the call that has been ringing for the longest time.

Procedure

Step 1
(Optional) Press the line button.

Step 2
Press PickUp to transfer an incoming call within your pickup group to your phone.
Answer a Call from Another Group (Group Pickup)

Group pickup allows you to answer a call on a phone that is outside your call pickup group. You can use the group pickup number to pick up the call, or you can use the number of the phone line that is ringing.

**Procedure**

**Step 1**  
(Optional) Press the line button.

**Step 2**  
Press **Group PickUp**.

**Step 3**  
Do one of the following actions:

- Enter the number of the phone line with the call that you want to pick up.
  
  For example, if the call is ringing on line 12345, enter **12345**.

- Enter the group pickup number.

**Step 4**  
Press **Answer** to connect to the call when the call rings.

Answer a Call From an Associated Group (Other Pickup)

**Procedure**

**Step 1**  
(Optional) Press the line button.

**Step 2**  
Press **PickUp** to answer a call in your pickup group or in a group that is associated with your phone.

**Step 3**  
If the call rings, press **Answer** to connect to the call when the call rings.

Answer a Call Within Your Hunt Group

Hunt groups, also known as line groups, allow organizations that receive many incoming calls to share the call load. Your administrator sets up a hunt group with a series of directory numbers. Phones ring based on the hunt sequence that your administrator specifies for a hunt group. If you are a member of a hunt group, you sign in to a hunt group when you want to receive calls. You sign out of the group when you want to prevent calls from ringing on your phone.

**Before you begin**

You must be signed into the hunt group to receive hunt group calls.
Procedure

When a hunt group call rings on your phone, answer the call.

Sign In and Out of a Hunt Group

Sign out of your hunt group to stop receiving calls from it. You continue receiving calls placed directly to you.

Procedure

Step 1  Press Hunt Group to sign in.
Step 2  Press Hunt Group again to sign out.

View the Call Queue in a Hunt Group

You can use the queue statistics to check the status of the hunt group queue. The queue status display provides the following information:

• The phone number used by the hunt group
• Number of queued callers on each hunt group queue
• Longest waiting time

Procedure

Step 1  Press Queue Status.
Step 2  Press Update to refresh the statistics.
Step 3  Press Exit.

Answer Calls Automatically

If your phone is set up to answer calls automatically, you don't do anything when your phone rings. After one ring, you're automatically connected to the call using the speakerphone.

If you prefer to use your headset to answer the call, set up your headset first.

If you automatically answer calls on your speakerphone and you change the call to the headset, your next incoming call automatically answers on the headset. If you automatically answer calls on your headset and you change the call to the speakerphone, your next incoming call automatically rings on the speakerphone. Automatic answer ensures that the call is answered; it does not change the location you used for the previous call.
Procedure

Step 1  Connect your headset to your phone.
Step 2  Make sure that the Headset button lights up.
Step 3  When your phone automatically answers the incoming call, talk to the caller using your headset.
If you don't want to use your headset anymore, press the Headset button to turn it off, and use the handset or speakerphone instead.

Headsets, on page 91

Trace a Suspicious Call

If you receive unwanted or harassing calls, use malicious call identification (MCID) to alert your administrator. Your phone sends a silent notification message to your administrator with information about the call.

Procedure

Press Report caller.

Video Calls

Cisco IP Phones 8845, 8865, and 8865NR support video calls with a built-in video camera.
You can make an audio call into a video call by opening your camera shutter.

Related Topics
Video Settings, on page 84

Make a Video Call

Cisco IP Phones 8845, 8865, and 8865NR support video calls as long as the person you're calling also has a video phone. The ring on the outside of the camera controls the shutter.

Procedure

Step 1  Turn the ring around the camera clockwise to open the shutter.
Step 2  (Optional) Press Self-view and move the camera up and down to improve the perspective.
Step 3  Make your call.
Stop Your Video

When you are on a video call, you can stop the camera from sending video. The ring on the outside of the camera controls the shutter. When you close the shutter, the person you're talking to won't see you anymore, but they'll still be able to hear you.

If you close the shutter, you will continue receiving video from the other party on the call.

If both people on a call close their camera shutters, the call becomes an audio call.

Procedure

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Turn the shutter ring counterclockwise to close the camera shutter and stop sharing your video.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Turn the shutter ring clockwise to open the video camera shutter and share your video again.</td>
</tr>
</tbody>
</table>

Toggle Between Phone and Video Display

If you need to see your phone's desktop while you're on a video call, you can easily switch between the video and the desktop. When you hide the video, it blurs and moves to the background.

Procedure

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Press Hide video to hide the video.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Press Show video to show the video.</td>
</tr>
</tbody>
</table>

Adjust the Picture-In-Picture Position

When you are on a video call, you can view your incoming and your outgoing video at the same time, which is known as Picture-in-Picture (PiP). Typically, the incoming video displays on the full screen and a small inset screen shows the video from your camera.

When PiP is on, you can move the inset picture to a different quadrant of the screen. You can also change the view so that your camera video displays on the full screen and the inset displays the incoming video.

Procedure

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Press PiP to turn on PiP.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Press PiP again to move the PiP window counter-clockwise around your phone screen. When the window returns to the default lower right position, PiP automatically turns off.</td>
</tr>
<tr>
<td>Step 3</td>
<td>(Optional) Press Swap to toggle between the full-screen view and the PiP view.</td>
</tr>
</tbody>
</table>
Video Calls and Security

Your administrator can take steps to protect your video calls from tampering by people outside your company. If you see the Secure icon displayed during a video call, your administrator has taken steps to ensure your privacy.

Related Topics
Secure Calls, on page 38

Mute Your Call

While you are on a call, you can mute the audio, so that you can hear the other person, but they cannot hear you.
If you have a video phone, when you mute your audio, your camera continues to transmit video.

Procedure

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Press Mute</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Press Mute again to turn mute off.</td>
</tr>
</tbody>
</table>

Hold Calls

Put a Call on Hold

You can put an active call on hold and then resume the call when you're ready. When you place a video call on hold, video transmission is blocked until you resume the call.

Procedure

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Press Hold</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>To resume a call from hold, press Hold again.</td>
</tr>
</tbody>
</table>

Answer a Call Left on Hold for Too Long

When you've left a call on hold too long, you'll be notified with these cues:

- Single ring, repeating at intervals
- Flashing amber line button
- Flashing message indicator on the handset
• Visual notification on the phone screen

**Procedure**

Press the flashing amber line button or **Answer** to resume the held call.

---

**Swap Between Active and Held Calls**

You can easily switch between active and held calls.

**Procedure**

Press **Swap** to switch to the held call.

---

**Call Park**

You can use your phone to park a call. You can then retrieve the call either from your phone or another phone, such as a phone at a coworker's desk or in a conference room.

There are two ways you can park a call: call park and directed call park. You'll only have one type of call park available on your phone.

A parked call is monitored by your network so you won't forget about it. If the call remains parked for too long, you hear an alert. You can then answer, decline to answer, or ignore the call on your original phone. You can also continue retrieving it from another phone.

If you don't answer the call within a certain length of time, it's routed to voicemail or another destination, as set by your administrator.

A parked call occupies one line.

**Place a Call on Hold with Call Park**

You can park an active call that you answered on your phone and then use another phone in the call control system to retrieve the call.

You can park only one call at the call park number.

**Before you begin**

Your call must be active.

**Procedure**

**Step 1** Press **Park**, and then hang up.
Your phone displays the number where the system parked the call. The parked call is put on hold, and you can press Resume to resume the call on your phone.

**Step 2**
(Optional) Communicate the parked number to the person who needs to answer the call.

---

**Retrieve a Call on Hold with Call Park**

You can pick up a parked call from anywhere in your network.

**Before you begin**

You need the number that was used to park the call.

**Procedure**

Enter the number where the call is parked to retrieve the call.

---

**Place a Call on Hold with Assisted Directed Call Park**

You can park and retrieve an active call using a dedicated call park number. Using assisted directed call park, you use a button to park an active call. Your administrator sets up the button as a speed-dial line. With this type of directed call, you can use line status indicators to monitor the status of the line (in-use or idle).

**Procedure**

Press BLF Directed Call Park on a line that displays an idle line status indicator for an assisted directed call park.

---

**Retrieve a Call on Hold with Assisted Directed Call Park**

**Procedure**

Press BLF Directed Call Park.

---

**Place a Call on Hold with Manual Directed Call Park**

You can park and retrieve an active call using a dedicated call park number. Using manual directed call park, you transfer an active call to a directed call park number, which your administrator sets up.
Retrieve a Call on Hold with Manual Directed Call Park

You can pick up a call that was parked to a dedicated call park number.

**Before you begin**

You need the directed call park number and the park retrieval prefix.

**Procedure**

**Step 1** Dial the park retrieval prefix.

**Step 2** Dial the directed call park number.

---

Forward Calls

You can forward calls from any line on your phone to another number. Call forward is phone-line specific. If a call reaches you on a line where call forwarding is not enabled, the call rings as usual.

There are two ways of forwarding your calls:

- Forward all calls
- Forward calls in special situations, such as when the phone is busy or there is no answer.

When a line is forwarded, you see the Forward all icon with the line.

**Procedure**

**Step 1** When the line to be forwarded is inactive, press Fwd All.

**Step 2** Enter the call forward target number exactly as you would dial it from your phone, or select an entry from your list of recent calls.

**Related Topics**

Self Care Portal, on page 11
Transfer a Call to Another Person

When you transfer a call, you can stay on the original call until the other person answers. This way, you can talk privately with the other person before you remove yourself from the call. If you don't want to talk, transfer the call before the other person answers.

You can also swap between both callers to consult with them individually before you remove yourself from the call.

Procedure

| Step 1 | From a call that is not on hold, press Transfer. |
| Step 2 | Enter the other person's phone number. |
| Step 3 | (Optional) Wait until you hear the line ring or until the other person answers the call. |
| Step 4 | Press Transfer again. |

Conference Calls and Meetings

You can talk with several people in a single call. You can dial another person and add them to the call. If you have multiple phone lines, you can join two calls across two lines.

When you add more than one person to a conference call, wait a few seconds between adding participants.

As the conference host, you can remove individual participants from the conference. The conference ends when all participants hang up.

Add Another Person to a Call

When you add more than one person to a call, wait a few seconds between adding participants.

Procedure

| Step 1 | From an active call, press Conference. |
| Step 2 | Add the other person to the call by doing one of the following: |
| Step 3 | Press Conference. |
Swap Between Calls Before You Complete a Conference

You can talk to a person before you add them to a conference. You can also swap between the conference call and the call with the other person.

Procedure

Step 1  Call a new conference participant, but do not add the participant to the conference.
        Wait until the call is connected.
Step 2  Press Swap to toggle between the participant and the conference.

View and Remove Conference Participants

If you create a conference, you can view the details of the last 16 participants who join the conference. You can also remove participants.

Procedure

Step 1  While you are in a conference, press Show Details to view a list of participants.
Step 2  (Optional) Highlight a participant and press Remove to drop the participant from the conference.

Scheduled Conference Calls (Meet Me)

You can host or join a conference call at a scheduled time.

The conference call does not start until the host dials in, and it ends when all participants hang up. The conference does not automatically end when the host hangs up.

Host a Meet-Me Conference

Before you begin
Get a meet-me phone number from your administrator, and distribute the number to the conference participants.

Procedure

Step 1  Lift the handset to get a dial tone and press Meet Me.
Step 2  Dial the meet-me phone number.
Join a Meet-Me Conference

You cannot join a meet-me conference until the conference hosts dials in. If you hear a busy tone, the host has not dialed into the conference. Hang up and try your call again.

Procedure

Dial the meet-me phone number that the conference host provides.

Sign-in to a WebEx Meeting

If you are using WebEx for your online meetings, you can use your phone to join an online meeting instead of your PC. This option can save you time and effort, and is useful if your PC is not available.

Before you begin

Know your meeting number before you attempt to sign in to your meeting. Depending upon how your host has configured your meeting, you could need a password also.

Procedure

Step 1 Select WebEx.
Step 2 Enter your sign-in information
Step 3 Select Join.

Intercom Calls

You can use an intercom line to place and receive one-way calls.

When you place an intercom call, the recipient’s phone answers the call automatically with mute activated (whisper mode). Your message is broadcast through the recipient’s speakerphone, headset, or handset, if one of these devices is active.

After receiving the intercom call, the recipient can start two-way audio (connected mode) to allow for further conversation.

Make an Intercom Call

When you place an intercom call, your phone enters whisper mode until the recipient accepts the intercom call. In whisper mode, the other person can hear you, but you can't hear them. If you are on an active call, that call is placed on hold.
Answer an Intercom Call

You can answer an intercom call to talk to the other person.

**Before you begin**

You receive a message on your phone screen, and an audible alert. Your phone answers the intercom call in whisper mode.

**Procedure**

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Press Intercom to switch to connected mode. In connected mode, you can speak to the intercom caller.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Press Intercom to end the call.</td>
</tr>
</tbody>
</table>

Supervise and Record Calls

You can supervise and record a call. But you must have a minimum of three people on a line: the person calling, the chaperone, and the person called.

The chaperone answers a call, creates a conference call, and monitors and records the conversation.

The chaperone performs the following tasks:

- Records the call.
- Conferences in the first participant only. Other participants add people as needed.
- Ends the call.

The conference ends when the chaperone hangs up the call.

Set Up a Supervised Call

**Procedure**

| Step 1 | Answer an incoming call. |
**Record** is displayed if the system determines that the call must be chaperoned and recorded.

**Step 2**  
Press **Conference** to create a conference call.

**Step 3**  
Enter the phone number for the supervisor and press **Call**.

**Step 4**  
Press **Conference** when the supervisor answers.

**Step 5**  
Press **End Call** to end the call.

---

**Record a Call**

You can record a call. You might hear a notification tone as you record the call.

**Procedure**

Press **Record** to start or stop recording.

---

**Prioritized Calls**

In your job, you might need to handle urgent or critical situations with your phone. You can identify calls as very important; these have a higher priority than normal calls. The priorities range from level 1 (low) to level 5 (high). This system of priorities is called multilevel precedence and preemption (MLPP).

Your administrator sets up the priorities that you can use and determines whether you need special sign-in information.

When a high-priority call rings on your phone, you see the priority level on the phone screen and the call appears at the top of the call list. If you are on a call when a high-priority call comes to your phone, the high-priority call preempts the current call and you hear a special preemption ringtone. You should hang up from your current call to answer the high-priority call.

If you have turned on do not disturb (DND), a priority call will still ring your phone with a special ringtone.

When you are on a high-priority call, the priority of the call does not change when you:

- Put the call on hold
- Transfer the call
- Add the call to a three-way conference
- Use call pickup to answer the call.

**Table 12: Multilevel Precedence and Preemption Priority Levels**

<table>
<thead>
<tr>
<th>MLPP icon</th>
<th>Priority Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>![1]</td>
<td>Level 1—Priority call</td>
</tr>
<tr>
<td>![2]</td>
<td>Level 2—Medium priority (Immediate) call</td>
</tr>
<tr>

</tr>
</tbody>
</table>

**Make a Priority Call**

To make a priority call, you might need to sign in with your special credentials. You have three chances to enter these credentials, and you're notified if you've entered them incorrectly.

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Pick up the handset.</td>
</tr>
<tr>
<td>2</td>
<td>Press <strong>PrecLevel</strong>.</td>
</tr>
<tr>
<td>3</td>
<td>Select a priority level for the call.</td>
</tr>
<tr>
<td>4</td>
<td>(Optional) Enter your credentials on the authorization screen.</td>
</tr>
<tr>
<td>5</td>
<td>Enter the destination number.</td>
</tr>
</tbody>
</table>

You see the precedence level icon on the phone screen and you hear the precedence ringback tone.

**Answer a Priority Call**

If you hear a special ring that's faster than usual, you are receiving a priority call.

**Procedure**

Press the flashing amber session button when you hear the special ringtone for a precedence call.

**Answer a Priority Call While on Another Call**

If you hear a continuous tone that interrupts your call, you or your coworker are receiving a priority call. Hang up immediately and let the higher priority call go to the intended person.

**Procedure**

Press **Release** or hang up the handset.
Your call ends, and the higher priority call rings on the appropriate phone.

---

**Multiple Lines**

If you share phone numbers with other people, you could have multiple lines on your phone. When you have multiple lines, you have more calling features available to you.

**Answer the Oldest Call First**

You can answer the oldest call available on all your phone lines, including Hold Reversion and Park Reversion calls that are in an alerting state. Incoming calls always have priority over Held or Park Reversion calls.

When working with multiple lines, you typically press the line button for the incoming call you want to answer. If you just want to answer the oldest call regardless of line, press **Answer**.

**View All Calls on Your Phone**

You can view a list of all your active calls—from all your phone lines—sorted in chronological order, oldest to newest.

The list of all calls is useful if you have multiple lines or if you share lines with other users. The list displays all your calls together.

You can also display your active calls on your primary line, which is useful if you want all your calls displayed on a single screen.

**Procedure**

Press **All Calls** or the session button for your primary line.

**View Important Calls**

You can view a list of all Alert Calls in chronological order (oldest to most recent). An Alert Call is a phone number that you consider important. You want to be alerted when you receive a call from or make a call to this number.

**Procedure**

Press **Alert call**.
Display Call Notifications on Select Lines with Line Filters

You can configure your phone so you are alerted when somebody calls a high priority phone number or line. For example, a senior executive's phone line or a customer help line. This tool is useful if you work with multiple phone lines and a high number of calls.

Depending upon how your administrator has configured your phone, you may be able to use a line filter during specific times of the day also.

Create a Line Filter

Procedure

Step 1  Press Applications.
Step 2  Select Settings > Call notifications > Add new filter.
        The maximum number of custom filters is 20. If you have already created the maximum number of custom filters, delete a filter before continuing with this procedure.
Step 3  Press Select to make the text editable.
Step 4  Accept the default name for the new filter, or enter a new one.
Step 5  Select the lines to add to the new filter.
        All available lines are displayed in the list. If you require a line that is not in the list, contact your administrator.
Step 6  Click Apply.
Step 7  To view the filter, press Back.

Use a Line Filter

Procedure

Step 1  Press Applications.
Step 2  Select Settings > Call notifications.
Step 3  Highlight the filter to apply and press Select.

Change a Line Filter

You can change the line filters that you control. Your administrator controls the All Calls filter and the Daily schedule filter.
**Shared Lines**

You can share a single phone number with one or more of your coworkers. For example, as an administrative assistant, you may be responsible for screening calls for the person you support.

When you share a phone number, you can use that phone line just like any other line. Be aware of these special characteristics about shared lines:

- The shared phone number appears on all phones that share the number.
- If your coworker answers the call, the shared line button and the session button are solid red on your phone.
- If you put a call on hold, your line button is solid green and the session button pulses green. But your coworker's line button is solid red and the session button pulses red.

**Add Yourself to a Call on a Shared Line**

You or your coworker can join a call on the shared line. Your administrator needs to enable the feature on your phone.

If you try to add yourself to a call on a shared line and see a message that you cannot be added, try again.

If a user with whom you share a line has privacy turned on, you can't see their line settings and you can't add yourself to their call.

**Procedure**

**Step 1**
Press the line button for the shared line or select the line and press **Barge**.

**Note**
You need to press **Calls** to add yourself to a call on a shared line.

**Step 2**
(Optional) If you see a confirmation message, press **Yes** to add yourself to the call.

**Get Notified Before You Join a Call on a Shared Line**

You can set up your phone to alert you when you barge in to a call. By default, the alert prompt is turned Off.
Enable Privacy on a Shared Line

Privacy prevents others who share your line from seeing information about your calls.
Privacy applies to all shared lines on your phone. If you have multiple shared lines and privacy is enabled, others cannot view any of your shared lines.
If the phone that shares your line has privacy enabled, you can make and receive calls using the shared line as usual.
Visual confirmation is displayed on your phone screen for as long as the feature is enabled.

Procedure

Step 1 Press Applications to enable the feature.
Step 2 Press Privacy again to turn off the feature.

Mobile Devices and Your Desk Phone

If you have a mobile device (phone or a tablet), you can connect the mobile device to your desk phone. This connection allows you to make and answer phone calls on either the mobile device or the desk phone.
Cisco IP Phone 8851 and 8861 support this feature.
Do not pair two or more Cisco IP Phone 8800 Series desk phones.

Phone Calls with Intelligent Proximity

When you use Bluetooth, you can pair your mobile device (phone or tablet) to your desk phone. After you pair and connect the mobile device, your phone displays an additional phone line, which is your mobile line (your mobile phone number). You can place and receive calls on this mobile line from your desk phone. This ability to use the mobile line on your desk phone is called Intelligent Proximity.

Pair a Mobile Device with Your Desk Phone

After you pair your mobile device to your desk phone, the phone connects to the mobile device when the device is in range. It disconnects from the mobile device when the device is out of range.
If you have both a Bluetooth headset and a mobile device connected, you cannot use the Bluetooth headset to answer the audio from the mobile device.
After the mobile device and phone are connected, you can save your mobile contacts and call history on your desk phone.

**Before you begin**

Make sure that your mobile device has Bluetooth turned on and that it is discoverable. Check the documentation included with your mobile device if you need help.

**Procedure**

**Step 1** On your desk phone, press Applications.

**Step 2** Select Bluetooth > Add Bluetooth device.

**Step 3** Select the mobile device from the available devices list to pair.

**Step 4** Verify the passkey on the mobile device.

**Step 5** Verify the passkey on the desk phone.

**Step 6** (Optional) Choose to make your mobile device contacts and call history available on your desk phone.

**Related Topics**

Bluetooth and Your Phone, on page 18
The Cisco IP Phone 8800 Series, on page 1

**Switch Connected Mobile Devices**

If you have more than one paired mobile device in range of your Cisco IP Phone, you can choose which mobile device to connect.

**Procedure**

**Step 1** Press Applications.

**Step 2** Select Bluetooth.

**Step 3** Select a mobile device from the available devices list.

**Delete a Mobile Device**

You can delete a mobile device, so that it does not automatically connect using Bluetooth.

**Procedure**

**Step 1** Press Applications.

**Step 2** Select Bluetooth.

**Step 3** Select the mobile device in the available devices list.
Step 4
Select Delete.

**View Your Paired Bluetooth Devices**

A paired mobile device displays in the list of paired devices. You'll see this device listed until you unpair it from the desk phone.

**Procedure**

**Step 1**
Press **Applications**.

**Step 2**
Select **Bluetooth**.

**Intelligent Proximity for Mobile Phones**

You can share your mobile contacts and call history with the desk phone, and move calls between your mobile phone and desk phone. You can also view signal strength and battery level of the mobile device on the desk phone.

**Handle an Incoming Mobile Call**

**Before you begin**
Your mobile phone is paired to your desk phone.

**Procedure**

When a call rings on your mobile phone, do one of these actions on your desk phone:

- Press **Answer** to answer the call.
- Press **Decline** to decline the call and send it to your voicemail.
- Press **Ignore** to silence the ringer and decline the call.

**Make a Mobile Call**

**Before you begin**
Your mobile phone is paired to your desk phone.

**Procedure**

**Step 1**
Select a mobile line on your desk phone.

**Step 2**
Enter a phone number.
Step 3  Press Call.

---

**Move a Call Between the Desk Phone and a Mobile Device**

You can use your desk phone to move an active call to or from your mobile device.

**Before you begin**

Your mobile phone is paired to your desk phone.

**Procedure**

Press Move audio to move a call from your desk phone to your mobile device or in the opposite direction.

---

**Adjust the Mobile Device Volume**

Volume controls on your phone and mobile device are synchronized. Synchronization only occurs when there is an active call.

**Before you begin**

Your mobile phone is paired to your desk phone.

**Procedure**

Perform one of these options:

- Press Volume + on your desk phone. Press the + to increase the volume or - to decrease the volume.
- Press the Volume button on your mobile device.

---

**View Your Mobile Contacts on Your Desk Phone**

Use your desk phone to view the contacts list on your mobile phone. This is a convenient way to view a contact without accessing your mobile phone.

**Before you begin**

Before you can use your mobile device with your desk phone, use Bluetooth to pair the two phones. Select the option to share the mobile contacts.

**Procedure**

Step 1  On the desk phone, press Contacts 📞.
Save Contacts from Your Mobile Device on Your Desk Phone

You can save the contact list from your mobile device to your desk phone. This mobile contact list remains on your desk phone, even if you disconnect or unpair your mobile device.

**Before you begin**
Your mobile phone is paired to your desk phone.

**Procedure**

**Step 1** Press Contacts.
**Step 2** Select your mobile phone.

Delete Contacts in Your Mobile Device Contact List

You can remove your mobile contacts list from your desk phone. The contacts list on your mobile phone remains intact.

**Before you begin**
Your mobile phone is paired to your desk phone.

**Procedure**

**Step 1** Press Contacts.
**Step 2** Select your mobile phone.
**Step 3** Check Delete.

View Your Mobile Call History on Your Desk Phone

You can view on your desk phone the recent calls placed or received from your mobile phone.

**Before you begin**
Before you can see the mobile call history on your desk phone, use Bluetooth to pair the mobile phone with your desk phone. Select the option to share your mobile call history with your desk phone.
On the desk phone, press **New Call**.

**Intelligent Proximity for Tablets**

If you have a tablet, you can use Bluetooth to pair the tablet to your desk phone. After pairing, audio from a phone app on the tablet can be played on the desk phone. You can't use as many calling features on your tablet as you can with a mobile phone.

The desk phone supports connections from Android and iOS tablets.

**Move the Audio from Your Tablet to Your Desk Phone**

**Before you begin**

Your tablet is paired to your desk phone and you receive a call on the tablet.

**Procedure**

- **Step 1** On the tablet, set the audio path to use Bluetooth.
- **Step 2** Use the headset, handset, or speakerphone to listen to the audio on the phone.

**Move the Audio from Your Desk Phone to Your Tablet**

**Before you begin**

Your tablet is paired to your desk phone and you are on a call on the tablet with the audio on the desk phone.

**Procedure**

Do one of the following actions:

- Hang up the handset.
- Press **Release**.
- Answer another call on the desk phone.

**Phone Calls with Mobile Connect**

You can use your mobile phone to handle calls that are associated with your desk phone number. This service is called Mobile Connect.

You associate your mobile phone with your desk phone in the Self Care portal, as an additional phone. You can control which calls are sent to your mobile phone.
When you enable additional phones:

- Your desk phone and your additional phones receive calls simultaneously.
- When you answer the call on your desk phone, the additional phones stop ringing, disconnect, and display a missed call message.
- When you answer the call on one additional phone, the other additional phones and desk phone stop ringing and disconnect. A missed call message shows on the other additional phones.
- You can answer the call on an additional phone and switch the call to a desk phone that shares the line. If you do so, the desk phones that share the same line display a Remote In Use message.

**Related Topics**

*Self Care Portal*, on page 11

## Enable Mobile Connect

### Procedure

**Step 1** Press **Mobility** to display the current remote destination status (Enabled or Disabled).

**Step 2** Press **Select** to change the status.

---

## Move a Call from Your Desk Phone to Your Mobile Phone

You can move a call from your desk phone to your mobile phone. The call is still connected to the line on your desk phone, so you cannot use that line for other calls. The line remains in use until the call ends.

**Before you begin**

You need to enable Mobile Connect on your desk phone.

### Procedure

**Step 1** Press **Mobility**.

**Step 2** Press **Select** to send a call to your mobile phone.

**Step 3** Answer the active call on your mobile phone.

---

## Move a Call from Your Mobile Phone to Your Desk Phone

You can move a call from your mobile phone to your desk phone. The call is still connected to your mobile phone.

**Before you begin**

You need to enable Mobile Connect on your desk phone.
Procedure

Step 1  Hang up the call on your mobile phone to disconnect the mobile phone, but not the call.
Step 2  Press the line on your desk phone within 5 to 10 seconds to resume the call on your desk phone.

Transfer a Call from Your Mobile Phone to Your Desk Phone

You can transfer a call from your mobile phone to your desk phone.

Before you begin

You need to enable Mobile Connect on your desk phone.
Get the access code from your administrator.

Procedure

Step 1  On the mobile phone, enter the access code for the hand-off feature.
Step 2  Hang up the call on your mobile phone to disconnect the mobile phone, but not the call.
Step 3  Press Answer on your desk phone within 10 seconds and start talking on the desk phone.
Transfer a Call from Your Mobile Phone to Your Desk Phone
Contacts

- Corporate Directory, on page 67
- Personal Directory, on page 67
- Cisco Web Dialer, on page 71

Corporate Directory

You can look up a coworker's number from your phone, which makes it easier to give them a call. Your administrator sets up and maintains the directory.

Dial a Contact in the Corporate Directory

Procedure

Step 1 Press Contacts.
Step 2 Select Corporate Directory.
Step 3 Select a search criteria.
Step 4 Enter your search criteria and press Submit.
Step 5 Select the contact and press Dial.

Personal Directory

Use the personal directory to store the contact information for friends, family, or coworkers. You can add your own contacts to the personal directory. You can add special speed-dial codes for people who you often call.

You can set up your personal directory from your phone or from the Self Care portal. Use your phone to assign speed-dial codes to the directory entries.

Sign In and Out of a Personal Directory

Before you begin
Before you can sign in to your personal directory, you need your user ID and PIN. Contact your administrator if you don't know this information.

Procedure

Step 1
Press Contacts.

Step 2
Select Personal directory.

Step 3
Enter your user ID and PIN, and press Submit.

Step 4
To sign out, select Log out, press Select, and then press OK.

Add a New Contact to Your Personal Directory

Procedure

Step 1
Press Contacts.

Step 2
Sign in to your personal directory.

Step 3
Select Personal Address Book and press Submit.

Step 4
Press New.

Step 5
Enter first name, last name, and optionally a nickname.

Step 6
Press Phones, enter the phone number along with any required access codes, and then press Submit.

Search for a Contact in Your Personal Directory

Procedure

Step 1
Press Contacts.

Step 2
Sign in to your personal directory.

Step 3
Select Personal Address Book.

Step 4
Select a search criteria.

Step 5
Enter your search criteria and press Submit.
Call a Contact in Your Personal Directory

</tbody>
</table>
Select the required fast-dial code and press Call.

Edit a Contact in Your Personal Directory

Procedure

Step 1 Press Contacts.
Step 2 Sign in to your Personal directory.
Step 3 Select Personal address book and search for an entry.
Step 4 Press Select, then Edit.
Step 5 Modify the entry information.
Step 6 Press Phones to modify a phone number.
Step 7 Press Update.

Remove a Contact from Your Personal Directory

Procedure

Step 1 Press Contacts.
Step 2 Sign in to your personal directory.
Step 3 Select Personal Address Book and search for an entry.
Step 4 Press Select, then Edit, then Delete.
Step 5 Press OK to confirm the deletion.

Delete a Fast-Dial Code

Procedure

Step 1 Press Contacts.
Step 2 Sign in to your personal directory.
Step 3 Select Personal Fast Dials and search for a fast-dial code.
Step 4 Select the required code and press Remove.
Step 5 Select the index and press Remove.
Cisco Web Dialer

You can use Cisco Web Dialer, a web browser, and your Cisco IP phone to make calls from web and desktop applications. Use your web browser and go to a website or your company directory, and then click a hyperlinked phone number to begin your call.

You need a user ID and password to make a call. Your administrator can give you this information. First-time users have to configure their preferences before a call.

Recent Calls

Recent Calls List

Use the Recents list to see the 150 most recent individual calls and call groups.

If your Recents list reaches the maximum size, the next new entry overwrites the oldest entry in the list.

Calls in the Recents list are grouped if they are to and from the same number and are consecutive. Missed calls from the same number also get grouped.

View Your Recent Calls

Check to see who's called you recently.

Procedure

Step 1  Press Applications.
Step 2  Select Recents.

When the phone is in the idle state, you can also view the Recent calls list by pressing the Navigation cluster up.

Step 3  If you have more than one line, select a line to view.

If two lines on your phone are configured for the same number, only the line that receives the call shows the call details in the call history.
Return a Recent Call

You can easily call someone who has called you.

Procedure

Step 1
Press Applications.

Step 2
Select Recents.

Step 3
(Optional) Select All lines or the required line.

Step 4
Select the number that you want to dial.

Step 5
(Optional) Press EditDial to edit the number.

Step 6
Press Call.

Clear the Recent Calls List

You can clear the Recents list on your phone.

Procedure

Step 1
Press Applications.

Step 2
Select Recents.

Step 3
(Optional) Select All Lines or the required line.

Step 4
Press Clear.

Step 5
Press Delete.

Delete a Call Record

You can edit Recents to remove a single call from your history. This helps preserve important contact information because Recents holds only 150 calls.

Procedure

Step 1
Press Applications.

Step 2
Select Recents.

Step 3
(Optional) Select All Lines or the required line.

Step 4
Highlight the individual record or call group that you want to delete.
**Step 5**  Press **Delete**.

**Step 6**  Press **Delete** again to confirm.
Delete a Call Record
Voicemail

Your Voicemail Account

You can access your voice messages directly from your phone. But your administrator must set up your voicemail account and set up your phone to access the voicemail system.

The Messages button on your phone acts as a speed dial into the voicemail system.

The voicemail system is not part of the phone. The voicemail system is a separate system that the phone and the call server communicate with to give you voicemail capability.

When you aren’t at your desk, you can call your voicemail system to access your voicemail. Typically, your voicemail system has a phone number that you can dial directly and then follow the prompts to log into your voice mailbox. Your administrator can give you the voicemail system phone number.

Because each voicemail system is different, we can't tell you how to use your voicemail system. For information and help with your voicemail commands, see the voicemail system user documentation or contact your administrator or IT department.

Check for New Voice Messages

To find out if you have new voicemail messages, look for one of these signs:

- The light strip on your handset is solid red.
- The number of missed calls and voicemail messages is displayed on your screen. If you have more than 99 new messages, a plus (+) sign is displayed.

You will also hear a stutter tone played from your handset, headset, or speakerphone when you use a phone line. This stutter tone is line-specific. You only hear it when you use a line that has voice messages.

Related Topics

Self Care Portal, on page 11
Access Voicemail

Procedure

Step 1 If you have more than line, press the appropriate line key.
Step 2 Press Messages.
Step 3 Follow the voice prompts.

Visual Voicemail

Visual Voicemail is an alternative to audio voicemail that might be available to you, depending on your voicemail system. You use the screen on your phone to work with your messages, rather than respond to audio prompts. You can view a list of your messages and play your messages. You can also compose, reply to, forward, and delete messages.

Depending upon your voicemail system, you may be able to access your audio voicemail by selecting Audio inbox. Use this feature if you occasionally work with audio prompts, but you have the visual prompts set up as your default.

Access Audio Voicemail

Depending upon how your administrator has set up your phone, you can retrieve your voicemail without viewing a list of messages. This option is useful if you prefer a list of voicemail messages, but you occasionally access your messages without the visual prompts.

Procedure

Step 1 In the screen, press the Audio softkey.
Step 2 When prompted, enter your voicemail credentials.
Applications

- Available Applications, on page 79
- View Active Applications, on page 79
- Switch to Active Applications, on page 79
- Close Active Applications, on page 80

Available Applications

Cisco phones don't include these applications by default. But your company might have added applications such as the weather, stock information, company news, to-do lists, or similar information and services.

View Active Applications

You can easily see what applications you already have open.

Procedure

Step 1  Press Applications.
Step 2  Select Running applications.
Step 3  Press Exit.

Switch to Active Applications

Procedure

Step 1  Press Applications.
Step 2  Select Running applications.
Step 3  Select a running application and press Switch to open and use the selected application.
Step 4  Press Exit.

## Close Active Applications

### Procedure

- Adjust the Phone Ringer Volume, on page 86
- Enable Voice Feedback from Accessibility, on page 86
- Adjust Voice Speed, on page 86
- Phone Display Language, on page 87

**Change the Wallpaper**

Your administrator may allow you to change the wallpaper on your phone.

**Procedure**

**Step 1** Press **Applications**.

**Step 2** Select **Settings > Wallpaper**.

**Step 3** Select a wallpaper option and perform any of the steps:
- Press **Preview** to see the wallpaper on your phone screen.
- Press **Set** to apply the wallpaper to the phone.

**Step 4** Press **Exit**.
Change the Ringtone

You can change the sound that your phone uses for incoming calls.

Procedure

- **Step 1** Press *Applications*. Press *Applications*.
- **Step 2** Select *Settings > Ringtone*. Select *Settings > Ringtone*.
- **Step 3** Select a line.
- **Step 4** Scroll through the list of ringtones and press *Play* to hear a sample.
- **Step 5** Press *Set* to use the ringtone.

Adjust the Screen Brightness

You can change the brightness of the phone screen to make it easier to read.

Procedure

- **Step 1** Press *Applications*. Press *Applications*.
- **Step 2** Select *Settings > Brightness*. Select *Settings > Brightness*.
- **Step 3** Press the Navigation cluster left to decrease, or right to increase, the brightness.
- **Step 4** Press *Save*.

Adjust the Contrast

You can change the contrast of your Cisco IP Phone 8811 to make the screen easier to read.

To check which phone model you have, press *Applications* and select *Phone information*. The *Model number* field shows your phone model.

Procedure

- **Step 1** Press *Applications*. Press *Applications*.
- **Step 2** Select *Settings > Contrast*. Select *Settings > Contrast*.
- **Step 3** Select *Contrast*.
- **Step 4** Press the Navigation cluster left to decrease, or right to increase the contrast.
Change the Font Size

You can change the font size on your phone to make the screen easier to read. However, if you increase the font size, some messages might be truncated.

The font size affects the following labels:
- call screen (caller name and feature key labels)
- caller name in Recents
- line labels on the phone screen

Procedure

Step 1 Press Applications.
Step 2 Select Settings > Font Size.
Step 3 Select a font size and press Set.
Step 4 Press Exit to return to the Applications window.

Change the Phone Name

You can change the name of the phone from the default name. Your mobile device displays this name when you pair your mobile device with your desk phone.

Procedure

Step 1 Press Applications.
Step 2 Select Settings > Phone name.
Step 3 Use the keypad to enter a name.
Step 4 Press Apply.
Step 5 Press Exit.

Adjust the Headset Feedback

When you use a headset, you can hear your own voice in the earpiece, which is called headset sidetone or headset feedback. You can control the amount of headset sidetone on your phone.
Headsets connect to your phone with either the USB or the auxiliary port. Depending upon your model of headset, you have to adjust your phone's audio settings for the best audio experience, including the headset sidetone setting.

**Procedure**

**Step 1** Press **Applications**.
**Step 2** Select **Settings > Headset sidetone**.
**Step 3** Select a setting.
**Step 4** Wait one minute and then reboot the phone.

**Video Settings**

If you have a video phone, you have settings to control the video.

**Adjust the Video Brightness**

If the lighting in your office makes it hard to see the video, you can adjust the brightness.

**Procedure**

**Step 1** Turn the ring around the camera clockwise to open the shutter.
**Step 2** Press **Applications**.
**Step 3** Select **Settings > Video > Exposure**.
**Step 4** Press the Navigation cluster left to decrease, or right to increase, the brightness.
**Step 5** Press **Save**.

**Adjust the Video Bandwidth**

During a video call, your video can suddenly stop or lag behind the audio. The lag is often caused by a busy network.

By default, your phone automatically selects a bandwidth setting that balances the audio and video network requirements. If you frequently see a video lag, you can select a fixed bandwidth. We suggest that you start at the lowest setting, and only increase the setting if the video lag continues.

**Procedure**

**Step 1** Press **Applications**.
**Step 2** Select **Settings > Video > Bandwidth**.
Step 3 Select a bandwidth setting.
Step 4 Press Save to set the bandwidth.

View Video Calls on Your Computer

You can view the video part of a call on your computer instead of the phone screen. The audio part of the call remains on your phone.

Before you begin

Connect the computer to the PC port of your phone with an Ethernet cable, and login to Cisco Jabber for Windows or Cisco Jabber for Mac. The phone must be connected to the first network interface card (NIC1) in the computer.

Note

The phone PC port is disabled when Wi-Fi is enabled on your phone.

You need the latest version of Cisco Media Services Interface (MSI) and one of the following products:

- Cisco Jabber for Windows 9.7(5) or later
- Cisco Jabber for Mac 10.8.1 or later

Contact your administrator if you do not have the latest version of Cisco Jabber or MSI. For a list of hardware and software requirements, see:

Procedure

Step 1 Press Applications.
Step 2 Select Settings > Video.
Step 3 Select Video through computer.
Step 4 Select On to enable the video.

Adjust the Volume During a Call

If the sound in your handset, headset, or speakerphone is too loud or too soft, you can change the volume while you are listening to the other person. When you change the volume during a call, the change only affects
the speaker you're using at the time. For example, if you adjust the volume while you're using a headset, the handset volume doesn't change.

**Procedure**

Press **Volume** right or left to adjust the volume while you are on a call.

---

### Adjust the Phone Ringer Volume

If your phone ringer is too loud or too soft when you get an incoming call, you can change the ringer volume. Changes to the ringer volume do not affect the call volume you hear when you are on a call.

**Procedure**

Press **Volume** right or left to adjust the ringer volume when the phone rings.

---

### Enable Voice Feedback from Accessibility

You can enable or disable the Voice Feedback feature by pushing the Select button on the Navigation ring three times. But you can also access this feature from the Accessibility setting on your phone.

With Voice Feedback enabled, you press your Softkey buttons twice to use or configure a feature.

**Procedure**

1. Press **Applications**.
2. Select **Accessibility** > **Voice Feedback**.
3. Select **On** to enable the feature.
4. Select **Exit** twice to save your settings and return to **Applications**.

**Related Topics**

Voice Feedback, on page 24

---

### Adjust Voice Speed

You can customize the speed of Voice Feedback if it reads too quickly or too slowly. Voice Feedback must be enabled before you can select a Voice Speed.
**Procedure**

**Step 1**  Press **Applications**.

**Step 2**  Select **Accessibility > Voice Speed**.

**Step 3**  Press the Navigation cluster up and down to navigate. Press **Select** to choose a speed.

**Step 4**  Select **Save** twice to save your settings and return to **Accessibility**.

**Step 5**  Select **Exit** twice to return to **Applications**.

- Cisco IP Phone 8800 Key Expansion Module, on page 102

Supported Accessories

You can use your phone with different types of accessories, such as headsets, microphones, and speakers. This table shows you which ones you can use with your particular phone.

In the following table, an X indicates support for an accessory by a particular phone model and a dash (-) indicates no support.

To check which phone model you have, press Applications and select Phone information. The Model number field shows your phone model.

When you add features to your phone, some features require a line button. But each line button on your phone can support only one function (a line, a speed dial, or a feature). If your phone's line buttons are already in use, your phone won't display any additional features.

View the Accessories Associated with Your Phone

You can use headset jack, Bluetooth, or USB port to connect external hardware to your phone. The accessory list, by default, contains an analog headset that can be set up to enable wideband audio.

Procedure

Step 1  Press Applications
Step 2  Select one of the following options:
   • Accessories
   • Bluetooth
Step 3  (Optional) Select an accessory and press Show detail.
Step 4  Press Exit.

Headsets

Check with the headset manufacturer to confirm whether you can use it with your Cisco phone.
If you plug a headset into the phone during an active call, the audio path automatically changes to the headset.

Important Headset Safety Information

⚠️ High Sound Pressure—Avoid listening to high volume levels for long periods to prevent possible hearing damage.

When you plug in your headset, lower the volume of the headset speaker before you put the headset on. If you remember to lower the volume before you take the headset off, the volume will start lower when you plug in your headset again.

Be aware of your surroundings. When you use your headset, it may block out important external sounds, particularly in emergencies or in noisy environments. Don’t use the headset while driving. Don’t leave your headset or headset cables in an area where people or pets can trip over them. Always supervise children who are near your headset or headset cables.

Cisco Headset 500 Series

The Cisco Headset 531 and Cisco Headset 532 are two headsets developed for Cisco IP Phones and devices. The 531 headset features a single earpiece, and offers lightweight comfort. The 532 headset features two earpieces for use in a noisy environment or busy office.

The Cisco Headset 531 and 532 can be used as standard headsets on the phones. You plug the headset into the headset port using the RJ connector.
The Cisco Headset USB Adapter is available for use with the Cisco Headset 531 and 532. With the adapter, you can test your headset, and customize your bass and treble, gain or microphone volume, and sidetone or feedback settings. The adapter also retains your settings if you switch between phones.

The adapter makes it easy to use basic and advanced call features. With a single tap of the headset button, you can answer an incoming call. A quick double tap, and an incoming call is sent to your voicemail account. To make a call, tap once and enter the phone number using your phone keypad. Another single tap and your active call is placed on hold. Press and hold for 2 seconds, and your call ends.

The Cisco USB adapter is supported on Cisco IP Phone 8851, 8851NR, 8861, 8865, and 8865NR. To check your phone model, press Applications and select Phone information. The Model number field shows your phone model.

The Cisco Headset 531 and Cisco Headset 532 require Firmware Release 12.1(1) and higher. Upgrade your phones to the latest firmware before using these headsets.

Cisco Headset USB Adapter

The Cisco Headset USB Adapter is available for use with the Cisco Headset 531 and 532. With the adapter, you can test your headset, and customize your bass and treble, gain or microphone volume, and sidetone or feedback settings. The adapter also retains your settings if you switch between phones.

The adapter makes it easy to use basic, and advanced call features. With a single tap of the headset button, you can answer an incoming call. A quick double tap, and an incoming call is sent to your voicemail account. To make a call, tap once and enter the phone number using your phone keypad. Another single tap and your active call is placed on hold. Press and hold for 2 seconds, and your call is ended.

The Cisco USB adapter is supported on Cisco IP Phone 8851, 8851NR, 8861, 8865, and 8865NR. To check your phone model, press Applications and select Phone information. The Model number field shows your phone model.
The Cisco Headset USB Adapter requires Firmware Release 12.1(1) and higher. Upgrade your phones to the latest firmware before using the adapter.

Figure 8: Cisco Headset USB Adapter

Adjust Your Bass and Treble

Customize your headset by adjusting the bass and treble. If you like a headset with a lot of bass, then adjust toward the warm setting. If you prefer more treble, then adjust toward the bright setting.

Procedure

Step 1  Press Applications.
Step 2  Select Accessories.
Step 3  Navigate Setup > Speaker > Tuning.
Step 4  Press the Navigation cluster left, or right, to adjust the tuning.

Adjust Your Speaker Feedback

Feedback, also called sidetone, is the term for hearing your own voice in your headset. Some people find it distracting to hear their own voice during a call, while other people want to know that their headset is working.
Procedure

Step 1  Press Applications.
Step 2  Select Accessories.
Step 3  Navigate Setup > Speaker > Sidetone.
Step 4  Press the Navigation cluster left or right to adjust the sidetone.
Step 5  Select Set to apply your settings.

Adjust Your Microphone Volume

Microphone volume is also known as gain, and this setting is used when you are on a call with a variety of loud and soft voices. This setting equalizes the voices heard in your earpiece by making loud voices softer, and quiet voices louder.

Procedure

Step 1  Press Applications.
Step 2  Select Accessories.
Step 3  Navigate Setup > Microphone > Gain.
Step 4  Press the Navigation cluster, left or right, to adjust the gain.

Test Your Microphone

Check your microphone when you first install it, and before you begin a call.

Procedure

Step 1  Press Applications.
Step 2  Select Accessories.
Step 3  Navigate to Setup > Microphone > Test.
Step 4  Press Record and speak into the microphone.
Step 5  Press Stop rec when you finish speaking.
Step 6  Press Play to review your test recording.

Third Party Headsets

Cisco Systems performs internal testing of third-party headsets for use with Cisco IP Phones. But Cisco does not certify or support products from headset or handset vendors.
Headsets connect to your phone using either the USB or the auxiliary port. Depending upon your headset model, you have to adjust your phone's audio settings for the best audio experience, including the headset sidetone setting.

If you have a third party headset, and you apply a new sidetone setting, then wait one minute and reboot the phone so the setting is stored in flash.

The phone reduces some background noise that a headset microphone detects. You can use a noise canceling headset to further reduce the background noise and improve the overall audio quality.

If you are considering a third party headset, we recommend the use of good quality external devices; for example, headsets that are screened against unwanted radio frequency (RF) and audio frequency (AF) signals. Depending on the quality of headsets and their proximity to other devices, such as mobile phones and two-way radios, some audio noise or echo may still occur. Either the remote party or both the remote party and the Cisco IP Phone user may hear an audible hum or buzz. A range of outside sources can cause humming or buzzing sounds; for example, electric lights, electric motors, or large PC monitors.

Note

Sometimes, use of a local power cube or power injector may reduce or eliminate hum.

Environmental and hardware inconsistencies in the locations where Cisco IP Phones are deployed mean that no single headset solution is optimal for all environments.

We recommend that customers test headsets in the intended environment to determine performance before making a purchasing decision to deploy on a large scale.

You can use only one headset at a time. The most-recently connected headset is the active headset.

Audio Quality

Beyond physical, mechanical, and technical performance, the audio portion of a headset must sound good to the user and to the party on the far end. Sound quality is subjective, and we cannot guarantee the performance of any headsets. However, various headsets from leading headset manufacturers are reported to perform well with Cisco IP Phones.

For additional information, see https://www.cisco.com/c/en/us/products/unified-communications/uc_endpoints_accessories.html

Wired Headsets

A wired headset works with all Cisco IP Phone features, including the Volume and Mute buttons. These buttons adjust the earpiece volume and mute the audio from the headset microphone.

When you install a wired headset, make sure you press the cable into the channel in the phone.

Caution

Failure to press the cable into the channel in the phone can lead to cable damage.

Bluetooth Wireless Headsets

Cisco IP Phone 8845, 8851, 8861 and 8865 support Bluetooth. For a list of supported third party headsets, see http://www.cisco.com/c/en/us/products/unified-communications/uc_endpoints_accessories.html.
Bluetooth enables low-bandwidth wireless connections within a range of 66 feet (20 meters). The best performance is in the 3- to 6-foot (1- to 2-meter) range. Bluetooth wireless technology operates in the 2.4 GHz band, which is the same as the 802.11b/g band. Interference issues can occur. We recommend that you:

- Use 802.11a, 802.11n, or 802.11ac that operates in the 5 GHz band.
- Reduce the proximity of other 802.11b/g devices, Bluetooth devices, microwave ovens, and large metal objects.

The Cisco IP Phone uses a shared key authentication and encryption method to connect with headsets. The Cisco IP Phone can connect with up to 50 headsets, one at a time. The last connected headset is used as the default. Pairing is typically performed once for each headset.

After a device is paired, the Bluetooth connection is maintained as long as both devices (phone and headset) are enabled and within range of each other. The connection typically reestablishes itself automatically if either of the devices powers down then powers up. However, some headsets require user action to reestablish the connection.

The Bluetooth icon indicates that Bluetooth is on, whether a device is connected or not.

Potential interference issues can occur. We recommend that you reduce the proximity of other 802.11b/g devices, Bluetooth devices, microwave ovens, and large metal objects. If possible, configure other 802.11 devices to use the 802.11a channels.

For a Bluetooth wireless headset to work, it does not need to be within direct line-of-sight of the phone. But some barriers such as walls or doors can affect the connection. Interference from other electronic devices can also affect performance.

When headsets are more than 30 feet (10 meters) away from the Cisco IP Phone, Bluetooth drops the connection after a 15- to 20-second timeout. The paired headset reconnects when it is comes back into range of the Cisco IP Phone. For certain phone types that operate in power-save modes, you can wake up the headset by tapping on the operational button.

Enable the headset before you add it as a phone accessory.

The phone supports various Handsfree Profile features that allow you to use devices such as Bluetooth wireless headsets for certain tasks. For example, instead of pressing Redial on the phone, you can redial a number from the Bluetooth wireless headset by following instructions from the headset manufacturer.

Cisco IP Phone 8811, 8841, 8851NR, and 8865NR do not support Bluetooth wireless headsets. These hands-free features apply to Bluetooth wireless headsets that are used with the Cisco IP Phone 8845, 8851, 8861 and 8865:

- Answer a call
- End a call
- Change the headset volume for a call
- Redial
- Caller ID
- Divert
- Hold and Accept
- Release and Accept
Hands-free devices have different feature activation methods. Device manufacturers may also use different terms when referring to the same feature.

---

**Important**

Only one headset type works at any given time. If you use both a Bluetooth headset and an analog headset that are attached to the phone, enabling the Bluetooth headset disables the analog headset. To enable the analog headset, disable the Bluetooth headset. Plugging a USB headset into a phone that has Bluetooth headset enabled disables both the Bluetooth and analog headset. If you unplug the USB headset, you can either enable the Bluetooth headset or disable the Bluetooth headset to use the analog headset.

For information about how to use your Bluetooth wireless headset, see:

- Cisco IP Phone 8811, 8841, 8851, 8851NR, and 8861 User Guide for Cisco Unified Communications Manager
- User Guides provided with your headset

**Wireless Headsets**

Refer to your wireless headset documentation for information about connecting the headset and using the features.

**Standard Headsets**

You can use a standard headset with your desk phone. Standard headsets plug into the back of the phone with an RJ-type connector.

**Connect a Standard Headset**

Standard headsets plug into the back of the phone.

**Procedure**

Plug the headset into the jack on the back of the phone and press the cable into the cable channel.
Failure to press the cable into the channel in the phone can damage the printed circuit board inside the phone. The cable channel reduces the strain on the connector and the printed circuit board.

**Set Up a Wideband Standard Headset**

You can use a headset that supports wideband audio. Wideband audio improves the quality of the sound you hear in the headset.

**Procedure**

1. Press **Applications**.
2. Select **Accessories > Analog headset > Setup**.
3. Press **On** or **Off** to enable or disable wideband for the analog headset.
4. Press **Return**.

**USB Headsets**

You can use a USB headset for your calls if your phone has a USB port.

For a list of supported headsets, see *Unified Communications Endpoint and Client Accessories*. USB headsets that are not listed may not function properly if you attach them to the USB port. For more information, see the documentation from your USB headset manufacturer.

**Connect a USB Headset**

When you use USB headsets with your phone, keep in mind:

- You can use only one headset at a time. The most-recently connected headset is the active headset.
• If you are on an active call and unplug a USB headset, the audio path does not change automatically. You need to press the **Speakerphone** button or pick up the handset.

**Procedure**

Required: Plug the USB headset plug into the USB port on the phone.

---

**Bluetooth Headsets**

You can use a Bluetooth headset for your calls if your phone supports Bluetooth.

When you use Bluetooth headsets with your phone, keep in mind:

• If you have both a Bluetooth headset and a standard headset attached to the phone, only one type of headset works at any time. When you enable one headset, the other is automatically disabled.

• If you use a USB headset, both the Bluetooth and analog headset are disabled. If you unplug the USB headset, you need to enable the Bluetooth or standard headset.

• For optimum headset coverage, use your Bluetooth headset within 10 feet (3 meters) of the phone.

• Your phone supports the Bluetooth Handsfree Profile. If your Bluetooth headset supports these features, you can use your headset to:
  • Answer a call
  • End a call
  • Change the headset volume for a call
  • Redial a number
  • View Caller ID
  • Reject a call
  • Divert a call
  • Place a call on hold by answering an incoming call
  • End a call by answering an incoming call

For more information, see the documentation from your Bluetooth headset manufacturer.

---

**Turn Bluetooth On or Off**

When Bluetooth is active, the Bluetooth icon ✨ appears in the phone screen header.
Add a Bluetooth Headset

Procedure

Step 1 Press Applications.
Step 2 Select Bluetooth.
Step 3 Press On or Off.

Add a Bluetooth Headset

Procedure

Step 1 Make your Bluetooth headset discoverable.
Step 2 Press Applications.
Step 3 Select Bluetooth > Add Bluetooth device.
Your phone searches for discoverable accessories.
Step 4 Select your headset and press Connect.
Step 5 (Optional) If prompted, enter the PIN for your headset.

Disconnect a Bluetooth Headset

You should disconnect your Bluetooth headset before you use it with another device.

Procedure

Step 1 Press Applications.
Step 2 Select Bluetooth.
Step 3 Select a Bluetooth headset.
Step 4 Press Disconnect.

Remove a Bluetooth Headset

Remove your Bluetooth headset if you aren't going to use it with your phone again.

Procedure

Step 1 Press Applications.
Step 2 Select Bluetooth.
Step 3 Select a Bluetooth headset and press Delete.
Wireless Headsets

You can use most wireless headsets with your phone. For a list of supported headsets, see http://www.cisco.com/c/en/us/products/unified-communications/uc_endpoints_accessories.html.

Refer to your wireless headset documentation for information about connecting the headset and using its features.

Enable an E-Hookswitch Headset

Electronic Hookswitch headsets use a base station and a wireless headset. The base station plugs into your phone headset jack. After installing the headset, you enable it on the Cisco Unified Communications Manager.

Procedure

Step 1 Press Applications.
Step 2 Navigate to Settings > E-Hookswitch connected.
Step 3 Select Yes.

Swap Headsets While on a Call

You can connect an analog headset, a Bluetooth headset, and a USB headset simultaneously to your phone. However, you can use only one headset at a time.

When you connect multiple headsets to the phone, you can switch among the headsets during a call by pressing the Headset key on the phone. Though the phone is connected to multiple devices, you see a specific headset is selected as the preferred audio device in the following priority order:

- When you connect a USB headset, a Bluetooth, and an analog headset to the phone, you can make your USB headset the preferred audio device.
- When you connect a Bluetooth and an analog headset to the phone, you can make your Bluetooth device the preferred audio device. The Bluetooth headset takes priority over wired headset, so audio is sent or received from Bluetooth headset and there will be no audio on wired headset.
- When you connect only an analog headset to the phone, you make your analog headset the preferred audio device.

Procedure

Step 1 Before you make or answer a call, press Headset.
Step 2 (Optional) If you place a call, dial the number.
Cisco IP Phone 8800 Key Expansion Module

A key expansion module allows you to add extra line appearances or programmable buttons to your phone. The programmable buttons can be set up as phone line buttons, speed-dial buttons, or phone feature buttons. Simplified dialing is not supported on the expansion modules.

There are 3 expansion modules available:

- Cisco IP Phone 8800 Key Expansion Module—Single LCD screen module, 18 line keys, 2 pages, configure with one or two column displays.
- Cisco IP Phone 8851/8861 Key Expansion Module—Dual LCD screen module for audio phones, 14 line keys, 2 pages, configure with one-column display only. If you are in Enhanced line mode, and you receive a call on a key expansion line, then a Call Alert displays on the phone, and the Caller ID displays on the expansion module line.
- Cisco IP Phone 8865 Key Expansion Module—Dual LCD screen module for video phones, 14 line keys, 2 pages, configure with one-column display only. If you are in Enhanced line mode, and you receive a call on a key expansion line, then a Call Alert displays on the phone, and the Caller ID displays on the expansion module line.

Cisco IP Phone 8851/8861 Key Expansion Module require firmware release 12.0(1) or later, and Cisco Unified Communications Manager 10.5(2) or later to function. Enhanced line mode (ELM) is supported only on the Cisco IP Phone 8851/8861 Key Expansion Module and the Cisco IP Phone 8865 Key Expansion Module. ELM is not supported on the single LCD expansion modules.

If you are using more than one expansion module, all the modules must be the same type. You cannot combine different expansion modules on your phone.

When you configure your wallpaper on your Cisco IP Phone 8800 Series device, it also displays on your dual LCD key expansion modules. It is not supported on the single LCD expansion modules. Custom background images may not be supported.

<table>
<thead>
<tr>
<th>Cisco IP Phone Model</th>
<th>Supported Single LCD Key Expansion Modules</th>
<th>Supported Dual LCD Key Expansion Modules</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco IP Phone 8851 and 8851NR</td>
<td>2; providing 72 lines or buttons</td>
<td>2; providing 56 lines or buttons</td>
</tr>
<tr>
<td>Cisco IP Phone 8861</td>
<td>3; providing 108 lines or buttons</td>
<td>3; providing 84 lines or buttons</td>
</tr>
<tr>
<td>Cisco IP Phone 8865 and 8865NR</td>
<td>3; providing 108 lines or buttons</td>
<td>3; providing 84 lines or buttons</td>
</tr>
</tbody>
</table>

When multiple key expansion modules are attached to the phone, they are numbered according to the order in which they are connected to the phone. For example:

- Key expansion module 1 is the closest unit to the phone.
- Key expansion module 2 is the unit in the middle.
- Key expansion module 3 is the farthest unit from the phone.
The slots in the side of the phone are designed only for use with the spine connectors on the key expansion module. Insertion of other objects permanently damages the phone.

When you use key expansion modules, check with your administrator about power requirements.
Key Expansion Module Buttons and Hardware

The following table describes the features of the key expansion module.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LCD screen</td>
<td>Displays the phone number, speed-dial number (or name or other text label), phone service, or phone feature assigned to each button. Icons that indicate line status resemble (in both appearance and function) the icons on the phone to which the key expansion module is attached.</td>
</tr>
</tbody>
</table>
| Lighted buttons | 18 line buttons. Depending on the mode, each button or pair of buttons corresponds to one line (same as on the phone). For mode information, see the descriptions of 1-column and 2-column mode that follow this table. The lights beneath each button indicate the state of the corresponding line as follows:  
  - light off—Line available or a call is ringing on an inactive page.  
  - green steady—Line in use by you, you have a call on hold, or a call being transferred.  
  - red steady—Line in use by someone else or someone else has a call on hold on a shared line.  
  - amber steady—Line ringing. |
| Shift buttons | 2 buttons. The button for page 1 is labeled as 1 and the button for page 2 is labeled as 2. The lights in each button indicate the state of the page as follows:  
  - green steady—Page is in view.  
  - light off—Page is not in view.  
  - amber steady—Page is not in view with one or more alerting calls on the page. |

Your administrator sets up the key expansion module to display in one-column or two-column mode.
One-Column Mode

In one-column mode, each row in the display corresponds to one line. You can access this line by either the button on the left or the button on the right. In this configuration, the key expansion module displays nine lines on page 1, and nine lines on page 2.

Figure 12: Key Expansion Module with One Column

Two-Column Mode

If you are using a single-LCD screen expansion module, you can set up the module in two-column mode. In two-column mode, each button on the left and right of the screen is assigned to a different phone number, speed-dial number (or name or other text label), phone service, or phone feature. In this configuration, the key expansion module displays up to 18 items on page 1, and up to 18 items on page 2.

Safety and Performance Information

Power Outage

Your access to emergency service through the phone requires that the phone receive power. If a power interruption occurs, service or emergency calling service dialing does not function until power is restored. If a power failure or disruption occurs, you may need to reset or reconfigure the equipment before you can use service or emergency calling service dialing.

Regulatory Domains

The radio frequency (RF) for this phone is configured for a specific regulatory domain. If you use this phone outside of the specific regulatory domain, the phone will not function properly, and you might violate local regulations.

Health-Care Environments

This product is not a medical device and uses an unlicensed frequency band that is susceptible to interference from other devices or equipment.

External Devices

We recommend that you use good-quality external devices that are shielded against unwanted radio frequency (RF) and audio frequency (AF) signals. External devices include headsets, cables, and connectors.

Depending on the quality of these devices and their proximity to other devices, such as mobile phones or two-way radios, some audio noise may still occur. In these cases, we recommend that you take one or more of these actions:
Bluetooth Wireless Headset Performance

Cisco IP phones support Bluetooth Class 2 technology when the headsets support Bluetooth. Bluetooth enables low-bandwidth wireless connections within a range of 30 feet (10 meters). The best performance is in the 3-to 6-foot (1- to 2-meter) range. You can connect up to five headsets, but only the last one connected is used as the default.

Because of potential interference issues, we recommend that you move 802.11b/g devices, Bluetooth devices, microwave ovens, and large metal objects away from the wireless headset.

The Bluetooth wireless headset does not need to be within direct line-of-sight of the phone. However, some barriers, such as walls or doors, and interference from other electronic devices, can affect the connection.

Ways to Provide Power to Your Phone

You can provide power to your phone in one of two ways:

- Use the power adapter that comes with your phone.
- If your network supports Power over Ethernet (PoE), you can plug your phone into the network. Plug an Ethernet cable into the Ethernet phone port and into the network.

If you are not sure whether your network supports PoE, check with your administrator.

Phone Behavior During Times of Network Congestion

Anything that degrades network performance can affect phone voice and video quality, and in some cases, can cause a call to drop. Sources of network degradation can include, but are not limited to, the following activities:

- Administrative tasks, such as an internal port scan or security scan
- Attacks that occur on your network, such as a Denial of Service attack
UL Warning

The LAN/Ethernet cable or other cables attached to the device should not be extended outside of the building.

Compliance Statements

Compliance Statements for the European Union

CE Marking

The following CE mark is affixed to the equipment and packaging.

RF Exposure Statement for the European Union

This device has been evaluated and found compliant in accordance with EU EMF Directive 2014/53/EU.

Compliance Statements for Canada

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Avis de Conformité Canadien

Ce dispositif est conforme aux normes CNR exemptes de licence d'Industrie Canada. Le fonctionnement de ce dispositif est autorisé sous réserve des deux conditions suivantes : (1) il ne doit pas produire de brouillage et (2) l’utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

Canadian RF Exposure Statement

THIS DEVICE MEETS THE LIMITS AS REFERENCED BY ISED RSS-102 R5 FOR EXPOSURE TO RADIO WAVES

Your device includes a radio transmitter and receiver. It is designed not to exceed the General populace (uncontrolled) limits for exposure to radio waves (radio frequency electromagnetic fields) as referenced in RSS-102 which references Health Canada Safety Code 6 and include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

As such the systems are designed to be operated as to avoid contact with the antennas by the end user. It is recommended to set the system in a location where the antennas can remain at least a minimum distance as specified from the user in accordance to the regulatory guidelines which are designed to reduce the overall exposure of the user or operator.
The device has been tested and found compliant with the applicable regulations as part of the radio certification process.

**Déclaration d'Exposition aux RF Canadienne**

**CE PÉRIPHÉRIQUE RESPECTE LES LIMITES DÉCRITES PAR LA NORME RSS-102 R5 D'EXPOSITION À DES ONDES RADIO**

Votre appareil comprend un émetteur et un récepteur radio. Il est conçu pour ne pas dépasser les limites applicables à la population générale (ne faisant pas l'objet de contrôles périodiques) d'exposition à des ondes radio (champs électromagnétiques de fréquences radio) comme indiqué dans la norme RSS-102 qui sert de référence au règlement de sécurité n°6 sur l'état de santé du Canada et inclut une marge de sécurité importantes conçue pour garantir la sécurité de toutes les personnes, quels que soient leur âge et état de santé.

En tant que tels, les systèmes sont conçus pour être utilisés en évitant le contact avec les antennes par l'utilisateur final. Il est recommandé de positionner le système à un endroit où les antennes peuvent demeurer à au moins une distance minimum préconisée de l'utilisateur, conformément aux instructions des réglementations qui sont conçues pour réduire l'exposition globale de l'utilisateur ou de l'opérateur.

Le périphérique a été testé et déclaré conforme aux réglementations applicables dans le cadre du processus de certification radio.

**Compliance Statement for Argentina**

**Advertencia**

No utilizar una fuente de alimentación con características distintas a las expresadas ya que podría ser peligroso.

**Compliance Information for Brazil**

**Art. 6º - 506**

This equipment is a secondary type device, that is, it is not protected against harmful interference, even if the interference is caused by a device of the same type, and it also cannot cause any interference to primary type devices.

For more information, go to this URL: [http://www.anatel.gov.br](http://www.anatel.gov.br)

Este equipamento opera em caráter secundário, isto é, não tem direito a proteção contra interferência prejudicial, mesmo de estações do mesmo tipo, e não pode causar interferência a sistemas operando em caráter primário.

FCC Compliance Statements

The Federal Communications Commission requires compliance statements for the following:

FCC Part 15.19 Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Part 15.21 Statement

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

FCC RF Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance. This transmitter must be at least 20 cm from the user and must not be collocated or operating in conjunction with any other antenna or transmitter.

FCC Receivers and Class B Digital Statement

This product has been tested and complies with the specifications for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used according to the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.
If this equipment does cause harmful interference to radio or television reception, which is found by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment or devices
- Connect the equipment to an outlet other than the receiver's
- Consult a dealer or an experienced radio/TV technician for assistance

Cisco Product Security Overview

This product contains cryptographic features and is subject to U.S. and local country laws that govern import, export, transfer, and use. Delivery of Cisco cryptographic products does not imply third-party authority to import, export, distribute, or use encryption. Importers, exporters, distributors, and users are responsible for compliance with U.S. and local country laws. By using this product, you agree to comply with applicable laws and regulations. If you are unable to comply with U.S. and local laws, return this product immediately.

Further information regarding U.S. export regulations can be found at https://www.bis.doc.gov/policiesandregulations/ear/index.htm.
