

About Smart Licensing

Cisco Unified SIP Proxy supports smart licensing. In smart licensing, the purchased licenses are not tied to the hardware and Product Activation Key (PAK). Licenses can be configured by communication to the Smart Manager.

The smart licenses can be configured using the following procedures:

- [Configuring Smart License, on page 1](#)
- [Viewing the Smart License Summary, on page 2](#)

Configuring Smart License

Procedure

- Step 1** Launch Cisco Unified SIP Proxy GUI and choose **Administration > Smart License > Configuration**. The Smart Agent License page appears.
- Step 2** Click **Enable** radio button to configure smart licensing.
- Step 3** Enter the details in the fields. See [Smart Agent License Fields, on page 1](#) for field descriptions.
- Step 4** Check the **Enable Http(s)** check box.
- Step 5** Enter the proxy server address and port number in **Http(s) Proxy Address** field and **Port** fields.
- Step 6** Click **Update**.
-

Smart Agent License Fields

Table 1: Smart Agent License Fields

Parameter	Description
Smart Agent Config	

Parameter	Description
License Count (multiple of 5)	Activates the requested number of licenses. The count should be multiple of 5. The count should be less than or equal to the maximum call rate that the Cisco Unified SIP Proxy can handle.
License Server url	Enter the Smart Manager server URL that connects to the central licensing server. Use the following URL for registering to cloud CSSM: https://tools.cisco.com/its/service/oddce/services/DDCEService . Use an appropriate URL for registering to an on-prem license server.
License Token ID	Specifies the token ID. It can be generated by the license server for the account that the Cisco Unified SIP Proxy instance is registered to.
Transport Mode	Specifies the protocol used to communicate with Smart Software Manager. Call home is the recommended Cisco proprietary secure protocol. HTTP is another optional protocol for communicating with Smart Software Manager. Note Smart Software Manager can be the cloud-based server or an on-premises license server.
Enable Http(s) Proxy	Enables the HTTP(S) proxy mode. You can use a web proxy to provide CUSP with access to CSSM over the Internet.
Http(s) Proxy Address	Sets the HTTP(S) proxy server address for accessing CSSM over the Internet. You can either use an IP address or FQDN.

Viewing the Smart License Summary

The system displays the summary of the configured smart licenses.

Table 2: License Summary

Smart License Client State	<p>Displays the state of the Smart Agent. The following is the list of states:</p> <ul style="list-style-type: none"> • Un-Configured—Smart licensing is not enabled. • Un-Identified—Smart licensing is enabled but the Smart Agent has not contacted Cisco Smart Software Manager (CSSM) to register. • Registered—The Smart Agent has contacted Cisco Smart Software Manager (CSSM) and registered. • Authorized—The Smart Agent enters Authorized state after registration when it receives a in compliance status in response to an entitlement authorization request to the Cisco Smart Software Manager (CSSM). • Out Of Compliance (OOC)—The Smart Agent enters out of compliance state after registration when it receives an Out of Compliance (OOC) status in response to an Entitlement Authorization request to the Cisco licensing authority. • Authorization Expired—If the device cannot communicate with Cisco for an extended period of time, usually 90 days, the agent goes into the Authorization expired state.
Product Serial Number	It's really a randomly generated unique virtual machine ID.
Product ID	Unique identifier for the Cisco Unified SIP Proxy.
License UDI	Combination of product ID and serial number generated randomly for identifying the Cisco Unified SIP Proxy.
License Server Address	Displays the address of the Smart Manager server provided while configuring.
HTTP Proxy Address	The proxy server address used, if configured, to reach the licensing server.
Smart Agent Transport Mode	Displays the protocol used to communicate with Smart Manager.

Licensing State	<p>Displays the licensing entitlement status of this instance. The following are the status:</p> <ul style="list-style-type: none"> • Eval—The Cisco Unified SIP Proxy is in Un-Identified state and the evaluation period has not expired. • InCompliance—The license count requested to the server is within the purchased limits. • OutOfcompliance—The license count requested is more than what is available in Cisco Smart Software Manager. • EvalExpried—Evaluation period of 90 days has expired. Calls are not allowed in EvalExpired state. • AuthorizationExpired—Authorization period has expired. Calls are not allowed in AuthorizationExpired state.
Product License Version	Displays the license version that the product instance is requesting. This is the same as the major software version.
Registration Expiry Date	Displays the expiry date and time when the license service identification certificate expires. Once expires, the device reverts to Un-Identified mode.
Next Auth Date	Displays the date and time for next license renewal.
Evaluation Period(in hrs)	Displays the number of hours left for Cisco Unified SIP Proxy to run on evaluation mode. The counter starts at 2160 (90 days) and counts down while in Un-Identified (unregistered) mode. This counter cannot be reset.
CPS Count Requested	Displays the number of calls per second licenses requested for. One license is used for every 5 calls per second requested.
Registration Successful	Identifies if registration was a success or failure.
Authorization Successful	Identifies if authorization was a success or failure.
Licensing Agent Status	Identifies if the Smart Agent is enabled or disabled.
Evaluation Mode	Identifies if the product is on evaluation mode.
Latest Failure Reason	Provides the reason due to which the latest license registration failed.
