• trace logsize

## configure

To enter Cisco Unified SIP Proxy configuration mode, use the **configure** command in Cisco Unified SIP Proxy EXEC mode. To exit Cisco Unified SIP Proxy configuration mode, use the **exit** command.

configure

Syntax Description	This command has no arguments o	r keywords.
Command Default	None	
Command Modes	Cisco Unified SIP Proxy EXEC (cu	usp)
Command History	Cisco Unified SIP Proxy Version	Modification
	1.0	This command was introduced.
Usage Guidelines	can enter all configuration submod changes from <i>router-name</i> (cusp)>	nified SIP Proxy configuration mode. From configuration mode you es. After you enter the <b>configure</b> command, the system prompt to <i>router-name</i> (cusp-config)>, indicating that the router is in tion mode. To leave Cisco Unified SIP Proxy configuration mode and any EXEC prompt, enter <b>end</b> .
Examples	• •	e Cisco Unified SIP Proxy module, then enters ode, and finally enters Cisco Unified SIP Proxy configuration mode: ced-service-engine 1/0 session
Related Commands	Command	Description
	cusp	Enters Cisco Unified SIP Proxy EXEC mode.
	end	Exits out of Cisco Unified SIP Proxy configuration mode.

Exits out of a Cisco Unified SIP Proxy configuration mode or

1

submode back to the higher mode.

exit

## copy configuration active

To copy the active configuration to a specified remote file system, use the following syntax of the **copy configuration active** command in Cisco Unified SIP Proxy EXEC mode.

**copy configuration active** {*sftp-url* | *pfs-url* | *tftp-url*}

To copy the specified remote file system to the active configuration, use the following syntax of the **copy configuration active** command in Cisco Unified SIP Proxy EXEC mode.

**copy** {*sftp-url* | *pfs-url* | *tftp-url*} **configuration active** 

Syntax Description	sftp-url	Specifies the SFTP URL that the active configuration will be copied to, or the SFTP URL that will be copied to the active configuration.
	pfs-url	Specifies the Public File System (PFS) URL that the active configuration will be copied to, or the PFS URL that will be copied to the active configuration. PFS URLs must be of the format: pfs:/cusp/config/ <i>file_path</i> .
	tftp-url	Specifies the TFTP URL that the active configuration will be copied to, or the TFTP URL that will be copied to the active configuration.
Command Default	None	
Command Modes	Cisco Unified SIP Pr	coxy EXEC (cusp)
Command History	Cisco Unified SIP Pr	oxy Version Modification
	1.0	This command was introduced.
Usage Guidelines		file system to the active configuration (using the <b>copy</b> { <i>sftp-url</i>   <i>pfs-url</i>   <i>tftp-url</i> } e syntax), then the system must be rebooted.
Examples	The following exam	ple copies an active configuration to a remote file system:
	Address or name of Destination filena Loading configurat [OK - 777 bytes]	<pre>musp) &gt; copy configuration active sftp://192.168.1.47/pub/cusp/mycfg remote host [192.168.1.47]? me [pub/cusp/mycfg]? ion to sftp://192.168.1.47/pub/cusp/mycfg: ! rred in 0.029 secs (26793 bytes/sec) musp) &gt;</pre>
Related Commands	Command	Description
	show configuration	

## rollback

To roll back to the most recently-committed configuration when you reboot the Cisco Unified SIP Proxy module, use the **rollback** command in Cisco Unified SIP Proxy EXEC mode.

rollback

Syntax Description	This command has no arguments or keywords.	

Command Default None

Command Modes Cisco Unified SIP Proxy EXEC (cusp)

 Command History
 Cisco Unified SIP Proxy Version
 Modification

 1.0
 This command was introduced.

**Usage Guidelines** Use the **show configuration active** command to display the committed configuration that is effective after the module is rebooted.

**Examples** The following example configures the system to roll back to the most recently-committed configuration when the Cisco Unified SIP Proxy module is rebooted:

se-10-1-0-0(cusp) > rollback

<b>Related Commands</b>	Command	Description
	rollback factory-default	Rolls back the system to the factory default configuration after the Cisco Unified SIP Proxy module is rebooted.
	show configuration active	Displays the active Cisco Unified SIP Proxy configuration.

## rollback factory-default

To roll back the system to the factory default configuration when you reboot the Cisco Unified SIP Proxy module, use the **rollback factory-default** command in Cisco Unified SIP Proxy EXEC mode.

rollback factory-default

Syntax Description	This command has no arguments or keywords.	
Command Default	None	
Command Modes	Cisco Unified SIP Proxy EXEC (cu	sp)
Command History	Cisco Unified SIP Proxy Version	Modification
	1.0	This command was introduced.
Usage Guidelines	Use the <b>show configuration factory</b> is effective after the module is rebo	y- <b>default</b> command to display the factory-default configuration that oted.
Examples	The following example configures t Cisco Unified SIP Proxy module is	he system to roll back to the factory-default configuration when the rebooted:
	se-10-1-0-0(cusp)> rollback fac	
Related Commands	Command	Description
	rollback	Rolls back to the most recently-committed configuration when you reboot the Cisco Unified SIP Proxy module.
	show configuration factory-default	Displays the factory-default Cisco Unified SIP Proxy configuration.

## show fd statistics

To display the maximum number of open file descriptor counts, use the **show fd statistics** command in Cisco Unified SIP Proxy EXEC mode.

#### show fd statistics

Syntax Description	This command has no arguments or	keywords.
Command Default	None	
Command Modes	Cisco Unified SIP Proxy EXEC (cu	sp)
Command History	Cisco Unified SIP Proxy Version	Modification
	8.5.13 and 9.1.4	This command was introduced.
Usage Guidelines	Use the <b>show fd statistics</b> command	d to display the open file descriptor counts.
Examples	The following is sample output from	n the show fd statistics command:
	<pre>se-10-1-0-0(cusp) &gt; show fd stat MaxOpenFileDescriptorCount: 250 OpenFileDescriptorCount: 35 se-10-1-0-0(cusp)#</pre>	

## show performance-data cps

	Command	Description
	rollback factory-default	Rolls back the system to the factory default configuration after the Cisco Unified SIP Proxy module is rebooted.
	show configuration active	Displays the active Cisco Unified SIP Proxy configuration.
	1 0 0	useful call load troubleshooting information, about the number of calls and ling, use the <b>show performance-data cps</b> command in node.
	show performance-data cps	3
Syntax Description	This command has no arguments	or keywords.
Command Modes	Cisco Unified SIP Proxy EXEC (	cusp)
Command History	Cisco Unified SIP Proxy Version	Modification
	1.1.4	This command was introduced.
Examples	The following example shows Cisse-192-168-20-42 (cusp) > <b>show</b>	sco Unified SIP Proxy performance data: performance-data cps
	Rolling average data- Rolling averages are used for license enforcement and cannot be cleared. Rolling average for last 5 minutes (cps): 10.0 Rolling values (last ten 30-second windows): 300 300 300 300 300 300 300 300 300 300

### show route table

To display Cisco Unified SIP Proxy route information for a given table and key based on a specified lookup rule, use the **show route table** command in Cisco Unified SIP Proxy EXEC mode.

show route table table-name key key rule [exact | prefix | fixed number]

Syntax Description	table table-name	Specifies the route table name.		
	key key	Specifies the route table key. The <i>key</i> argument can contain the * wildcard.		
	rule	Specifies the rule to be used to match: exact, prefix, or fixed.		
	exact	Performs a lookup using the exact match rule of the key in the specified table. Performs a lookup using the longest prefix match rule of the key in the specified table.		
	prefix			
	fixed	Performs a lookup using a fixed number of characters match rule, instead of an exact match, of the key in the specified table.		
	number	The fixed number of characters to match the key in the specified table		
Command Modes	Cisco Unified SIP Proxy EXEC (cu	isp)		
Command History	Cisco Unified SIP Proxy Version	Modification		
	1.1.4	This command was introduced.		
Examples	The following example shows sample output from the <b>show route table</b> command using the prefix match rule:			
Examples	rule:			
Examples	<pre>rule: se-10.0.0.0(cusp) &gt; show route t key 1800 default-sip n1</pre>	able t1 key 1800 rule prefix

Lxumpros	<pre>se-10.0.0.0(cusp) &gt; show route t key 1800 default-sip n1 The following example shows samp</pre>	le output from the <b>show route table</b> command using the exact match st in the route table:		
Related Commands	<pre>se-10.0.0.0(cusp) &gt; show route t key 1800 default-sip n1 The following example shows samp rule, where "key 555" does not exis se-10.0.0.0(cusp) &gt; show route t</pre>	le output from the <b>show route table</b> command using the exact match st in the route table:		
	<pre>se-10.0.0.0(cusp) &gt; show route t key 1800 default-sip n1 The following example shows samp rule, where "key 555" does not exis se-10.0.0.0(cusp) &gt; show route t No matching route found.</pre>	le output from the <b>show route table</b> command using the exact match st in the route table: able t1 key 555 rule exact		
	<pre>se-10.0.0.0(cusp) &gt; show route t key 1800 default-sip n1 The following example shows samp rule, where "key 555" does not exis se-10.0.0.0(cusp) &gt; show route t No matching route found. Command</pre>	le output from the <b>show route table</b> command using the exact match st in the route table: able t1 key 555 rule exact Description Configures the message in the route table to be routed using RFC		

Command	Description
key response	Assigns a response code to a key in a routing table.
key route-uri target-destination	Assigns a route-URI to a lookup key in a routing table and replaces the target destination with the specified value in the outgoing SIP request.
key target-destination	Replaces a target destination with the specified value in an outgoing SIP request.
route table	Creates a route table and enters route table configuration mode.
route table file	Loads the routes for a route table from a file.

### show routes table

To display the possible multiple Cisco Unified SIP Proxy routes for a given table and key, use the **show routes table** command in Cisco Unified SIP Proxy EXEC mode.

show routes table table-name key key [max-size max-size]

Syntax Description	table table-name	Specifies the route table name.	
	key key	Specifies the route table key. The <i>key</i> argument can contain the * wildcard.	
	max-sizeSpecifies the maximum number of routes to return is 100.		
Command Modes	Cisco Unified SIP Proxy EXEC (cu	sp)	
Command History	Cisco Unified SIP Proxy Version	Modification	
	1.0	This command was introduced.	
Examples	The following example shows sample output from the show routes table command: se-10.0.0(cusp) > show routes table t1 key * max-size 10 First 10 matches in the t1 table that match the key *: key k3 default-sip n1 key k2 request-uri-host-port ahost n1 key k1 response 408 The second column in the output is the route table lookup key. ### show status queue

To display the statistics for active SIP queues, use the **show status queue** command in Cisco Unified SIP Proxy EXEC mode.

show status queue

**Syntax Description** This command has no arguments or keywords.

**Command Modes** Cisco Unified SIP Proxy EXEC (cusp)

 Command History
 Cisco Unified SIP Proxy Version
 Modification

 1.0
 This command was introduced.

#### **Examples**

The following example shows sample output from the **show status queue** command:

se-192-168-20-51(cusp) > **show status queue** 

Queue Name	Current Length	Active Threads
timer	0	0
radius	0	0
st-callback	0	0
request	0	0
message	0	0
response	0	0
xcl	0	0

se-192-168-20-51(cusp) >

Table 1 describes the significant fields shown in the display.

#### Table 1show status queue Field Descriptions

Field	Description
Queue Name	The name of the SIP queue.
Current Length	The current length of the SIP queue.
Active Threads	The number of active threads for the SIP queue.

#### **Related Commands**

Command	Description
show configuration active sip network	Displays SIP network interface configuration.
show configuration active sip record-route	Displays SIP record-route configuration.
show status sip	Displays the status of the Cisco Unified SIP Proxy.
sip queue	Creates a SIP queue and enters SIP queue configuration mode.

### show status sip

To display the status of the Cisco Unified SIP Proxy, use the **show status sip** command in Cisco Unified SIP Proxy EXEC mode.

show status sip

**Syntax Description** This command has no arguments or keywords.

Command Modes Cisco Unified SIP Proxy EXEC (cusp)

 Command History
 Cisco Unified SIP Proxy Version
 Modification

 1.0
 This command was introduced.

**Usage Guidelines** This command displays active client and server transactions, as well as TCP/TLS writer thread information. This command displays queues that might not be SIP-related.

**Examples** 

The following example shows sample output from the show status sip command:

se-192-168-20-51(cusp) > show status sip

SIP Stack Status Client Transactions: 7575 Server Transactions: 3473 Total Threads for TCP/TLS Writer: 0 Min Threads for TCP/TLS Writer: 0 Active Threads for TCP/TLS Writer: 0 se-192-168-20-51(cusp) >

Table 2 describes the significant fields shown in the display.

Table 2show status sip Field Descriptions

Field	Description
Client Transactions	The number of active client transactions.
Server Transactions	The number of active server transactions.
Total Threads for TCP/TLS Writer	The total number of TCP/TLS writer threads.
Min Threads for TCP/TLS Writer	The minimum number of TCP/TLS writer threads.
Active Threads for TCP/TLS Writer	The number of active threads for TCP/TLS writers.

Related Commands	Command	Description
	show configuration active sip network	Displays SIP network interface configuration.
	show configuration active sip record-route	Displays SIP record-route configuration.
	show status queue	Displays the statistics for currently active SIP queues.

### show trace options

To display whether trace logging is enabled or disabled, use the **show trace options** command in Cisco Unified SIP Proxy EXEC mode.

show trace options

**Syntax Description** This command has no arguments or keywords.

Command Modes Cisco Unified SIP Proxy EXEC (cusp)

 Command History
 Cisco Unified SIP Proxy Version
 Modification

 1.0
 This command was introduced.

**Usage Guidelines** This command displays levels for any of the configured categories or components.

**Examples** The following example shows that trace is enabled at the debug level with category root.

se-192-168-20-51(cusp) > **show trace options** 

Trace is enabled. Category Level root debug

Related Commands

Command	Description
trace disable	Disables tracing.
trace enable	Enables tracing.
trace level	Sets the trace level.

## trace disable

To disable tracing, use the **trace disable** command in Cisco Unified SIP Proxy EXEC mode. To enable tracing, use the **trace enable** command.

trace disable

Syntax Description	This command has no arguments or	keywords.
Command Default	Trace is enabled.	
Command Modes	Cisco Unified SIP Proxy EXEC (cu	isp)
Command History	Cisco Unified SIP Proxy Version	Modification
	1.0	This command was introduced.
Usage Guidelines	Using the <b>trace disable</b> command h <b>level</b> command with the <b>category</b> r	nas the same effect as setting the trace level to <b>off</b> using the <b>trace</b> oot.
Examples	The following example disables tra-	ce:
	se-192-168-20-51(cusp)> <b>trace d</b>	isable
Related Commands	Command	Description
	show trace options	Displays whether trace is enabled or disabled.
	trace enable	Enables tracing.

Sets the trace level.

trace level

## trace enable

To enable tracing, use the **trace enable** command in Cisco Unified SIP Proxy EXEC mode. To disable tracing, use the **trace disable** command.

trace enable

**Command Default** Trace is enabled.

Command Modes Cisco Unified SIP Proxy EXEC (cusp)

Command History	Cisco Unified SIP Proxy Version	Modification
	1.0	This command was introduced.

#### **Usage Guidelines** After enabling tracing, you must set the trace level using the **trace level** command.

ExamplesThe following example enables trace:<br/>se-192-168-20-51(cusp) > trace enable

<b>Related Commands</b>	Command	Description
	show trace options	Displays whether trace is enabled or disabled.
	trace disable	Disables tracing.
	trace level	Sets the trace level.

## trace level

To set the trace level, use the **trace level** command in Cisco Unified SIP Proxy EXEC mode. To turn off trace level, set the trace level to off.

trace level [debug | default | error | fatal | info | off | warn] category/component category/component-name

category/component-name       Subsystem from which to log messages.         debug       Log messages of debug severity or higher.         default       Use the trace level of the parent.         error       Log messages of fatal severity or higher.         fatal       Log messages of fatal severity or higher.         info       Log messages of fatal severity or higher.         off       Do not log messages.         warn       Log messages of warning severity or higher.         off       Do not log messages.         warn       Log messages of warning severity or higher.         Command Default       Trace level is debug category root.         Command Modes       Cisco Unified SIP Proxy EXEC (cusp)         Command History       Cisco Unified SIP Proxy Version         Modification       1.0         1.1.4       This command was introduced.         1.1.4       This command was modified.         Usage Guidelines       When trace is enabled using the trace levels are:         idebug       info         info       isot logging to least logging, the trace levels are:         idebug       info         info       isot logging to least logging, the trace levels are:         if atal       error	Syntax Description	category/component	Log messages from the <i>category/component-name</i> subsystem only. Components are basically predefined lists of categories.
default       Use the trace level of the parent.         error       Log messages of error severity or higher.         fatal       Log messages of fatal severity or higher.         info       Log messages of info severity or higher.         off       Do not log messages.         warn       Log messages of warning severity or higher.         ommand Default       Trace level is debug category root.         ommand Modes       Cisco Unified SIP Proxy EXEC (cusp)         ommand History       Cisco Unified SIP Proxy Version         1.0       This command was introduced.         1.1.4       This command was modified.         sage Guidelines       When trace is enabled using the trace enable command, the trace level can be set. In the list order most logging to least logging, the trace levels are:         •       debug         •       info         •       warning         •       error		category/component-name	
error       Log messages of error severity or higher.         fatal       Log messages of fatal severity or higher.         info       Log messages of info severity or higher.         off       Do not log messages.         warn       Log messages of warning severity or higher.         ommand Default       Trace level is debug category root.         cisco Unified SIP Proxy EXEC (cusp)         ommand History       Cisco Unified SIP Proxy Version         1.0       This command was introduced.         1.1.4       This command was modified.         sage Guidelines       When trace is enabled using the trace enable command, the trace level can be set. root. Setting the trace level to **debug** has a huge performance impact.

The category or component can be used to only log messages for particular features. Because components are basically predefined lists of categories, we recommend that you debug using the component option. Trace level settings are not persistent and are reset after a reboot. The only category available currently is root. **Examples** The following example enables trace at the category root: se-192-168-20-51(cusp) > trace level debug category root The following example enables trace at the routing component: se-192-168-20-51(cusp) > trace level debug component routing **Related Commands** Command Description Displays whether trace is enabled or disabled. show trace options trace disable Disables tracing.

Enables tracing.

trace enable

## trace logsize

To change the logsize, use the trace logsize command in Cisco Unified SIP Proxy EXEC mode.

trace logSize

Syntax Description	default	Use the trace logsize of the parent.
	<200-5000>	Define the logsize in MB. The range is from 200 to 5000.
ommand Default	By default, this command	l is disabled.
ommand Modes	Cisco Unified SIP Proxy	EXEC (cusp)
ammand Illiatam		/ersion Modification
ommand History	Cisco Unified SIP Proxy V

Command History Usage Guidelines Examples	8.5.8 Use this command to incr The following example d se-10-104-45-249(cusp) default Re <200-5000> Lo 200MB The following example d se-10-106-97-200(cusp) fileCount Sp se-10-106-97-200(cusp) se-10-106-97-200(cusp) <20-500> Nu	This command was introduced. rease the logsize from the default of 200Mb to 5Gb capacity. isplays the two options under the trace logsize command: # trace logsize ? store the default log Size, 200 MB g Size in MB, default 200 MB , min val isplays the logsize and file count defined: # trace logFileSize 200 ? ecify number of files to be generated

Logsize divided by file count is the size of a single log file. The optimal value of this is 10 MB. By default, the command picks up the value of file count so that the file size is 10MB. If you are configuring the file count, there can be performance impact because of this change.

Note

#### **Related Commands**

Command	Description
trace disable	Disables tracing.
trace enable	Enables tracing.
trace level	Sets the trace level.
