Viewing List of Normalization Policies

Procedure

- Step 1** Choose Configure > Normalization Policies.
The system displays the Normalization Policies page, containing the fields described in Table 15.
- Step 2** To delete a normalization policy, do the following:
- a. Check the check box next to the name of the normalization policy to delete.
 - b. Click Remove.
 - c. In the Cisco Unified SIP Proxy header, click Commit Candidate Configuration to commit this change.
- Step 3** To revert any changes you have made back to the state they were in at the time of the last commit, do the following:
- a. Check the check box next to the name of the normalization policy that has the changes to revert back to.
 - b. Click **Revert**.

- c. In the Cisco Unified SIP Proxy header, click Commit Candidate Configuration to commit this change.

About Normalization Policies

Normalization policies modify SIP messages to account for incompatibilities between networks.

Normalization Policy Fields

Table 15 lists the fields on the Normalization Policies page.

Table 15 Normalization Policy Parameters

Parameter	Description
State	Can be one of the following: <ul style="list-style-type: none"> New—New record. Will be added to the active configuration when it is committed. Modified—Modified record. Will become the active configuration when it is committed. Deleted—Deleted record. Will be removed from the active configuration when it is committed. Active—Active record and active configuration.
Name	Name of this normalization policy.

Request URI, URI Component Fields

Table 16 lists the fields on the Normalization Policy '<name of normalization policy>' page when the Request URI and URI Component tabs are displayed.

Table 16 Request URI, URI Component Fields

Parameter	Description
Category	There are five boxes on this page, one for each of the following: <ul style="list-style-type: none"> User—Specifies the normalization policy to apply to the user URI component. Phone—Specifies the normalization policy to apply to the phone URI component. Host—Specifies the normalization policy to apply to the host URI component. Host and Port—Specifies the normalization policy to apply to the host-port URI component. URI—Specifies the normalization policy to apply to the full URI. For each box, enter the match pattern and replace value.
Match Pattern	Specifies the regular expression string in the URI component that is matched. If you enter all , the full header is replaced.
Replace Value	Specifies the regular expression string in the URI component that replaces the matched string.

Request URI, URI Conversion Fields

Table 17 lists the fields on the Normalization Policy ‘<name of normalization policy>’ page when the Request URI and URI Conversion tabs are displayed.

Table 17 Request URI, URI Conversion Fields

Parameter	Description
SIP URI to TEL URI Conversion	
Conversion	Whether this conversion is enabled or disabled. The default is disabled.
TEL URI to SIP URI Conversion	
Conversion	Whether this conversion is enabled or disabled. The default is disabled.
Host	Specifies the host of the URI.
Port	Specifies the port of the URI.

Request URI, URI Parameter Fields

Table 18 lists the fields on the Normalization Policy ‘<name of normalization policy>’ page when the Request URI and URI Parameter tabs are displayed.

Table 18 Request URI, URI Parameter Fields

Parameter	Description
Add URI Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
Name	Specifies the URI parameter name to which the normalization rule applies.
Value	Specifies the value to be added to the URI parameter.

Table 18 Request URI, URI Parameter Fields (continued)

Parameter	Description
Remove URI Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
Name	Specifies the URI parameter name.
Update URI Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
Name	Specifies the header parameter name.
Match Pattern	Specifies the regular expression string in the URI parameter that is matched. If you enter all , the full header is replaced.
Replace Value	Specifies the regular expression string in the URI parameter that replaces the matched string.

SIP Headers Fields

Table 19 lists the fields on the Normalization Policy ‘<name of normalization policy>’ page when the SIP Header tabs are displayed.

Table 19 *SIP Header Parameter Fields*

Parameter	Description
Add SIP Headers	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.
SIP Header Instances	The SIP header instances to be added.
Remove SIP Headers	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.
Total Number of Header Instances	Total number of SIP header instances to be removed.
Update SIP Headers	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.

Table 19 SIP Header Parameter Fields (continued)

Parameter	Description
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied to all occurrences.
Match Pattern	Specifies the regular expression string in the header parameter that is matched. If you enter all , the full header is replaced.
Replace Value	Specifies the regular expression string in the header parameter that replaces the matched string.

SIP Header, URI Component Fields

Table 20 lists the fields on the Normalization Policy ‘<name of normalization policy>’ page when the SIP Header and URI Component tabs are displayed.

Table 20 SIP Header, URI Component Fields

Parameter	Description
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given URI component, apply this normalization step only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given URI component, apply this normalization step only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given URI component, apply this normalization step to all occurrences.

Table 20 *SIP Header, URI Component Fields (continued)*

Parameter	Description
URI Component Type	Can be one of the following: <ul style="list-style-type: none"> • URI—Specifies the lookup policy to apply to the full URI. • User (default)—Specifies the lookup policy to apply to the user URI component. • Phone—Specifies the lookup policy to apply to the phone URI component. • Host—Specifies the lookup policy to apply to the host URI component. • Host-Port—Specifies the lookup policy to apply to the host-port URI component.
Match Pattern	Specifies the regular expression string in the URI component that is matched. If you enter all , the full header is replaced.
Replace Value	Specifies the regular expression string in the URI component that replaces the matched string.

SIP Header, URI Conversion Fields

Table 21 lists the fields on the Normalization Policy ‘<name of normalization policy>’ page when the SIP Header and URI Conversion tabs are displayed.

Table 21 *SIP Header, URI Conversion Fields*

Parameter	Description
TEL URI to SIP URI Conversions	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.

Table 21 *SIP Header, URI Conversion Fields (continued)*

Parameter	Description
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given TEL URI, apply this normalization step only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given TEL URI, apply this normalization step only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given TEL URI, apply this normalization step to all occurrences.
Host	Specifies the host of the URI.
Port	Specifies the port of the URI.
SIP URI to TEL URI Conversions	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a specific SIP URI, apply this normalization step only to the first occurrence. • last—Specifies that if there are multiple occurrences of a specific SIP URI, apply this normalization step only to the last occurrence. • all—Specifies that if there are multiple occurrences of a specific SIP URI, apply this normalization step to all occurrences.

SIP Header, URI Parameter Fields

[Table 22](#) lists the fields on the Normalization Policy ‘<name of normalization policy>’ page when the SIP Header and URI Parameter tabs are displayed.

Table 22 *SIP Header, URI Parameter Fields*

Parameter	Description
Add URI Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step to all occurrences.
Parameter Name	Specifies the URI parameter name to which the normalization rule applies.
Value	Specifies the value to be added.
Remove URI Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.

Table 22 SIP Header, URI Parameter Fields (continued)

Parameter	Description
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step to all occurrences.
Parameter Name	Specifies the URI parameter name.
Update URI Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given URI parameter, apply this normalization step to all occurrences.
Parameter Name	Specifies the header parameter name.
Match Pattern	Specifies the regular expression string in the URI parameter that is matched. If you enter all , the full header is replaced.
Replace Value	Specifies the regular expression string in the URI parameter that replaces the matched string.

SIP Header, Header Parameter Fields

Table 23 lists the fields on the Normalization Policy '<name of normalization policy>' page when the SIP Header and Header Parameter tabs are displayed.

Table 23 *SIP Header, Header Parameter Fields*

Parameter	Description
Add Header Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied to all occurrences.
Parameter Name	Name of this add URI parameter.
Value	Value of the add URI parameter.
Remove Header Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.

Table 23 *SIP Header, Header Parameter Fields (continued)*

Parameter	Description
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied to all occurrences.
Parameter Name	Name of this remove URI parameter.
Update Header Parameters	
State	Can be one of the following: <ul style="list-style-type: none"> • New—New record. Will be added to the active configuration when it is committed. • Modified—Modified record. Will become the active configuration when it is committed. • Deleted—Deleted record. Will be removed from the active configuration when it is committed. • Active—Active record and active configuration.
SIP Header Name	Specifies the SIP message header for which the normalization step is applicable. Examples include: From, To, Record-Route, Diversion, Request-URI, and P-Asserted-Identity.
SIP Header Index	Can be one of the following: <ul style="list-style-type: none"> • first—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied only to the first occurrence. • last—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied only to the last occurrence. • all—Specifies that if there are multiple occurrences of a given header parameter, this normalization step is applied to all occurrences.
Parameter Name	Name of this update URI parameter.
Match Pattern	Specifies the regular expression string in the URI component that is matched. If you enter all , the full header is replaced.
Replace Value	Specifies the regular expression string in the URI component that replaces the matched string.

Working With URI Parameters for a Request URI

Procedure

-
- Step 1** Choose **Configure > Normalization Policies**.
- The system displays the Normalization Policies page.
- Step 2** Click the underlined name of the normalization policy to work with.
- The system displays the Normalization Policy ‘<name of normalization policy>’ page.
- Step 3** Click the URI Parameter tab.
- Step 4** To add a URI parameter to the Request URI, do the following:
- a. Under the Add URI Parameters heading, click **New**.
 - b. Enter the name of the parameter and a value.
 - c. Click **Add**.

- Step 5** To remove a parameter from the URI, do the following:
- Under the Remove URI Parameters heading, click **New**.
 - Enter the name of the parameter to remove.
 - Click **Add**.
- Step 6** To update a parameter in the URI, do the following:
- Under the Update URI Parameters heading, click **New**.
 - Enter the name of the parameter to update and the pattern to match. Optionally, you can enter a value to replace the pattern.
 - Click **Add**.
- Step 7** To remove any parameters that you added in [Step 4](#) to [Step 6](#), check the check box next to the parameter and click **Remove**.
- Step 8** To revert to the previous setting for any parameters that you added in [Step 4](#) to [Step 6](#), check the check box next to the parameter and click **Revert**.
- Step 9** To edit the add or update parameters that you added in [Step 4](#) or [Step 6](#), click the name of the parameter and make changes.
- Step 10** In the Cisco Unified SIP Proxy header, click **Commit Candidate Configuration** to commit this change.
