

Rest_Client

• Rest_Client, on page 1

Rest_Client

The Rest_Client element provides a flexible interface in order to interact with REST endpoints. The communication between the REST client and server is made completely secure using two-way Secure Sockets Layer (SSL). The Rest_Client element permits users to send GET, POST, PUT, or DELETE requests to application servers.

For more information about Secure Socket Layer Authentication, see the *User Guide for Cisco Unified CVP VXML Server and Cisco Unified Call Studio* at http://www.cisco.com/c/en/us/support/customer-collaboration/unified-customer-voice-portal/products-user-guide-list.html.

Settings

| Name (Label) | Туре | Req'd | Single Setting Value | Substitution Allowed | Default | Notes |
|-----------------|---------|-------|-------------------------|-------------------------|---------|--|
| Endpoint URL | Boolean | Yes | true | false | Blank | This settings specifies whether SNMP alert to be generated. |
| HTTP method | | Yes | | | GET | Supported HTTP methods: GET (Read); |
| | | | | | | PUT (Update/Replace); |
| | | | | | | POST (Create) DELETE (Delete) |

| Name (Label) | Туре | Req'd | Single Setting Value | Substitution Allowed | Default | Notes |
|-------------------------------------|------|-------|-------------------------|-------------------------|---------|---|
| Parameters | | No | | | Blank | Any additional parameters will be passed along with URL. (such as specifying the response format or the amount returned). |
| | | | | | | Header parameters |
| | | | | | | Path parameters |
| | | | | | | Query string parameters |
| | | | | | | Request body parameters. Example: 'Authentication type': 'Preemptive' |
| Ignore Certificate Validation | | Yes | | | true | The SSL security setting gets enabled when flag is set to false. |
| Require HTTP authentication | | Yes | | | false | The http authentication (options true/false) |
| User Name | | Yes | | | Blank | Username of REST end point to be accessed (available if Require HTTP auth is true). |
| Password | | Yes | | | Blank | Password of REST end point to be accessed (available if Require HTTP auth is true). |

| Name (Label) | Туре | Req'd | Single Setting Value | Substitution Allowed | Default | Notes |
|-----------------|------|-------|-------------------------|-------------------------|---------|-------|
| Headers | | No | | | Blank | |

| Name (Label) | Туре | Req'd | Single Setting Value | Substitution Allowed | Default | Notes |
|-----------------|------|-------|-------------------------|-------------------------|---------|---|
| | | | | | | The meta-data associated with the API request and response. |
| | | | | | | Options: |
| | | | | | | Authorization: Carries credentials containing the authentication information of the client for the resource being requested. |
| | | | | | | WWW-Authenticate: This is sent by the server if it needs a form of authentication before it can respond with the actual resource being requested. Often sent along with a response code of 401, which means 'unauthorized'. Accept-Charset: This is a header which is set with the request and tells the server about which character sets are |
| | | | | | | acceptable by the client. |
| | | | | | | Content-Type: Indicates the media type of the response. Values: |
| | | | | | | text/html Indicates that the request body format is HTML |
| | | | | | | application/json - Indicates that the request body format |

| Name (Label) | Туре | Req'd | Single Setting Value | Substitution Allowed | Default | Notes |
|-----------------|------|-------|-------------------------|-------------------------|---------|--|
| | | | | | | is JSON. application/xml - Indicates that the request body format is XML. apixin/www.fmulmodd - Indicates that the request body is URL encoded. Cache-Control: |
| | | | | | | This is the cache policy defined by the server for this response, a cached response can be stored by the client and re-used till the time defined by the Cache-Control header. |
| Body | | No | | | Blank | |
| Use Proxy | | Yes | | | false | Enable/Disable the proxy server (true/false) |
| Use Host | | Yes | | | false | IP address or hostname of the HTTP proxy server |
| Use Port | | Yes | | | false | Port of the HTTP proxy server |

| Name (Label) | Туре | Req'd | Single Setting Value | Substitution Allowed | Default | Notes |
|---------------------|------|-------|-------------------------|-------------------------|-----------|--|
| XPath / JSONPath | | No | | | Blank | XPath expressions are used in JavaScript to return the values from the XML. JSONPath expressions are used in JavaScript to return the values from the JSON(JavaScript Object Notation). For more information about Xpath/JSONPath Expression, see the User Guide for Cisco Unified CVP VXML Server and Cisco Unified Call Studio |
| Connect Timeout | | Yes | | | 3000 msec | HTTP request timeout |
| Read Timeout | | | | | 5000 msec | |

Element Data

| Name | Туре | Notes |
|---------------|--------|---|
| response_body | string | This element data carries the REST response that is received from the REST end point. |
| status_code | string | This element data carries the REST response code received for the REST operation performed. |

Exit States

| Name | Notes |
|------|----------------------------------|
| done | The element is successfully run. |

Events

| Name (Label) | Notes |
|--------------|--|
| Event Type | Java Exception event handler type can be selected. |
