Java Runtime Environment Minor Update

Java Runtime Environment Minor Update

Use the JREUpdate.bat script to install a minor update of Java Runtime Environment (JRE) version on your Unified CVP Server. For example, you can install a minor update of JRE version 1.7.0_63 to 1.7.0_67.

Download the JREUpdate.zip from the following location:

https://software.cisco.com/download/
release.html?mdfid=270563413&softwareid=280840592&release=10.5%281%29&relind=AVAILABLE&rellifecycle=&reltype=latest

Note   The script does not support a major upgrade of JRE versions. For example, the script does not allow a major upgrade of JRE Version 1.7 to 1.8.

Procedure

Step 1   Download and install the preferred Java Development Kit (JDK) version on your personal machine.

Step 2   Copy the JRE folder from the installed JDK to a known location on the Unified CVP Server. For example, `C:\JRE`.

    Note   The jre folder is available in the JDK root folder. For example: `C:\jdk1.7.0_67\jre`.

Step 3   Right-click the JREUpdate.zip file and extract the files to a known location on your Unified CVP Server. For example, `C:\Cisco\CVP\bin`.

Step 4   Run this script from the command prompt: **C:\Cisco\CVP\bin >JREUpdate.bat apply C:\JRE**.
The script runs and Unified CVP JRE is updated to the new version.

Step 5   Ensure that the script output displays the updated JRE version.

The JREUpdate.bat script takes a backup of the old JRE to `C:\Cisco\CVP\jre.old` folder location. To revert to the previous backup version of JRE, run this script from the command prompt: **C:\Cisco\CVP\bin>JREUpdate.bat revert** .
