Subflow Return

The `Subflow Return` element is the exit point for the subflow execution. The `Subflow Return` element execution returns the call flow control back to the Call Subflow element. Subflow Return element has no exit state as it is the last element in a subflow execution. The `Subflow Return` element is used to returned data configured to a calling application. Subflow Return Element uses a data model to save its configuration which is implemented in the `SubflowReturnConfig` class. The Element configuration view displays the configuration of Subflow Return element implemented in `SubflowReturnDataPage` class which extends `BaseConfigPage` class. The Subflow Return Data is available in the Element Configuration view. Subflow Call element allows to accept multiple return values of different types from a subflow.
