

## Math

The math action element is used to evaluate basic mathematical expressions. The mathematical expression is composed of operators and functions in the form of a string which is passed as a setting to the element, parsed and evaluated at runtime. The result is a double value stored as a string in either element data or session data. All common arithmetic operators are supported. Boolean operators are also fully supported. Boolean expressions are evaluated to be either 1.0 or 0.0 (true or false respectively).

## Element Data

Element data is created only when the type setting is set to Element. In all other cases, no element data is created.

| Name | Type | Notes |
| :--- | :--- | :--- |
| [value of setting "name"] | string | The result of the mathematical expression. |

## Session Data

Session data is created only when the type setting is set to Session. In all other cases, no session data is created.

| Name | Type | Notes |
| :--- | :--- | :--- |
| [value of setting "name"] | string | The result of the mathematical expression. |

## Exit States

| Name | Notes |
| :--- | :--- |
| done | The mathematical expression was evaluated and the result was stored as either <br> element data or session data. |

## Folder and Class Information

| Studio Element Folder Name | Class Name |
