## Trace Levels

Support personnel who debug the Unified Communication solution need not know the details of trace levels across Unified Communication solution applications. If debugging a problem requires more detailed debug information, three levels of trace setting exist that can map internally to a particular application or application component. The intent is not to revamp existing trace setting values but to map the levels to the relevant and existing trace settings for a particular component. Use the following defined trace levels with the Diagnostic Framework Portico and the Unified System CLI tools.

The following trace levels are defined for the Unified Communication solution:

Trace Level	Trace Value	Description
Default	0	Default install, should have no or minimal performance impact
Warning	1	Log more detailed (plus default level) trace messages, small performance impact
Error	2	Log more detailed (plus warning and default level) trace messages, medium performance impact
Debug	3	Log most detailed (plus error and warning and default level) trace messages, high performance impact.

**Note** If you have enabled the debug trace levels, disable them after collecting the logs to avoid an unnecessary performance impact to your solution.

If the trace level does not match any of the defined levels, it displays custom (99).

Most EMSTraceMasks are based on this registry key: HKLM\SOFTWARE\Cisco Systems, Inc.\ICM\<Instance>\<Component>\EMS\CurrentVersion\Library\Processes\<process>\EMSTraceMask

Get and Set trace level and collect trace files are supported only for the following processes.

**Note** If the trace mask is the same for multiple levels, the GetTraceLevel returns the highest level. For example, GetTraceLevel returns Level 3 for Logger/baimport.

## Trace-All Nodes

You can set trace levels on these processes:

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3 (Debug)
NM	0x00	0x0F	0x0F	0xFF
NMM	0x00	0x0F	0x0F	0xFF

The Diagnostic Framework does not support the Administrator Workstation.

## Trace-Administration and Data Server (Previously Known as the Distributor Administrator Workstation)

You can set trace levels on these processes for the Administration and Data Server:

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3 (Debug)
CONFIGLOGGER	0x00	0x0F	0xFF	0xFFF
CMSNODE	0x00	0x00	0x00	0xFFFFFFFF
CMS_JSERVER	0x00	0x00	0x00	0xFFFFFFFF
REPLICATION	0x00	0x0F	0xFF	0xFFF
RTCLIENT	0x00	0x0F	0xFF	0xFFF
RTDIST	0x00	0x0F	0xFF	0xFFF

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3 (Debug)
UPDATEAW	0x00	0x0F	0xFF	0xFFF
ISEMAN	0x00	0x00	0x00	0x01

**Note** The minimum and default trace level for the CMS, CMSJServer and ISE components is 2.

## Trace-Router

You can set trace levels on these processes for the Router:

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3 (Debug)	Notes
APPGW	0x00	0x01	0x07	0x3F	—
CCAGENT	0x00	0x03	0x0F	0xFF	—
DBAGENT	0x00	0x01	0xFF	0xFF	—
DBWORKER	0x00	0x01	0xFF	0xFF	—
MDSPROC	0x00	0x07	0xFF	0xFF	—
ROUTER *	Turn off everything	Route Requests	- Network VRU - Trans Route - VRU Bank - CIC Request - Script Select	- Call Queuing - Agent changes - Call Type Real Time	Use RTRTRACE or RTRTEST  Note: If you restart the Router process, the settings return to the default level.
RTSVR	0x00	0x0F	0xFF	0xFFF	—

## Trace-Logger

You can set trace levels on these processes for the Logger:

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3(Debug)
BAIMPORT	0xFF EMSTraceMask = 0xFFFF	0xFF EMSTraceMask = 0xFFFF	0xFF EMSTraceMask = 0xFFFF	0xFF EMSTraceMask = 0xFFFF
CAMPAIGN MANAGER	0xFF EMSTraceMask = 0xFFFF	0xFF EMSTraceMask = 0xFFFF	0xFF EMSTraceMask = 0xFFFF	0xFF EMSTraceMask = 0xFFFF
CONFIGLOGGER	0x00	0x0F	0xFF	0xFFF
CSFS	0x00	0x00	0x00	0xFF
CW2KFEED	0x00	0x00	0x00	0x07
DTP	0x00	0x04	0x06	0x0F
HISTLOGGER	0x00	0x0F	0xFFF	0xFFF
RECOVERY	0x00	0x0F	0xFFF	0xFFF
REPLICATION	0x00	0x0F	0xFFF	0xFFF

## Trace-Peripheral Gateway

You can set trace levels on these processes for the PG:

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3 (Debug)
JTAPIGW *	JT_JTAPI_EVENT_USED JT_TPREQUESTS JT_PIM_EVENT JT_ROUTE_MESSAGE	JT_CONNECTION *CONF*	JT_JTAPI* JT_HEX JT_ROUTE* JT_TERM* JT_LOW*	JT*
MDSPROC	0x00	0x07	0x0F	0xFF
MSGIS	0x00	0x00	0x00	0x3F
OPC **	Default, cstacerEMSTraceMask = 0x40	agent, incmsg, closedcalls, tpmsg, routing EMSTraceMask = 0x40 Note: Remove "default" tracing set in Default(0) level, but include cstacer.	Calls, NCT, simplified EMSTraceMask = 0x40 Note: Remove "default" tracing set in Default(0) level, but include Level 1.	Missingdata, halfhour EMSTraceMask = 0x40 Note: Remove "default" tracing set in Default(0) level, but include Level 2.

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3 (Debug)
PGAGENT	0x00	0x03	0x0F	0xFF
EAGTPIM *	tp* precall *event csta* call_object teld_agent_state opcrequest	periph* jtapi_dialed*	autoconfig* teld* call_match_timing timer*	lock* universal* service* threadid jtapi*

## Trace–Web Setup

You can set trace levels on the Web Setup process.

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3 (Debug)
Web Setup	EMERGENCY	CRITICAL	WARNING	DEBUG

Websetup uses log4j.net for logging. Websetup uses a XML file (log4j.xml) through which you can set the trace levels. The XML file also contains other information you require for logging.

You can find the log4j.xml file here: <InstallDrive>:\icm\tomcat\webapps\setup\WEB-INF\classes\log4j.xml

## Trace–Diagnostic Framework

You can set trace levels on the Diagnostic Framework.

Process	Level 0 (Default - Error)	Level 1 (Warning)	Level 2 (Informational)	Level 3 (Debug)	Notes
Diagnostic Framework	Info	Info	Info	Debug	

When the Diagnostic Framework receives a request for its own trace level, if the trace level is at Info, Level 2 is returned. When the Diagnostic Framework receives a request to be set for Level 0, Level 1, or Level 2, the trace level is set to Info.

## Trace–SADLib

You can set trace levels on SADLib.

Process	Trace Level	Trace Value	Description
SADLib	0	NO	No logs are generated.
	1	WARNING	The Warning and Error logs are generated.
	2	INFO	The Warning, Error, and Info logs are generated.
	3	DEBUG	The Warning, Error, Info, and Debug logs are generated.

## EMS Log Compression

To collect logs that span a greater period of time, EMS log files from the CTI OS Server and the following PG components are zipped:

- CTI OS Server
- OPC-CCE
- OPC-TDM
- CTISVR
- EAGTPIM
- JTAFIGATEWAY
- VRUPIM
- BADIALER

**Note** These are the only components that currently support EMS log compression.

## Dumplog

Dumplog handles the compressed EMS files and can be used in the normal way. Dumplog looks for gzip.exe in <Install Drive>\icm\bin to unzip compressed EMS files before dumping logs. To dump logs from compressed EMS files (with .gz extension) outside of a PG or CTI OS Server, unzip the EMS files before you use dumplog.

## EMS File Compression Control

Use the EMSZipCompressionEnabled registry key in \EMS\CurrentVersion\Library\Processes\<process name> to enable or disable compression of EMS log files. Do not modify this registry key. This key takes effect only on components that support EMS file compression.

## Other Registry Keys

The following two other registry keys are also available in  
...\\EMS\\CurrentVersion\\Library\\Processes\\<node name>

EMSZipFormat  
EMSZipExtension

---

**Note** Do not modify these registry keys.

---

## Set Router Tracing

To set the Unified ICM/CCE Router, use the Router Trace utility. This utility is a single-form Windows GUI utility that is loaded on the Unified ICM/Unified CCE server.

---

**Note** The router process must be running before you set router tracing or attempt to retrieve router traces. This requirement applies to any tool which sets or retrieves router tracing, including, for example, RTTEST, RTRTRACE, and System CLI. (The router process must be running because the router trace settings are only stored in memory.)

---

All trace settings using “RTRTRACE” take effect immediately in the Router.

You can observe specific status of call routing, call type, skill group, and schedule target variables using the following RTTEST command: `rttest /cust <instance>`

Also, the RTTEST “watch” command is useful.

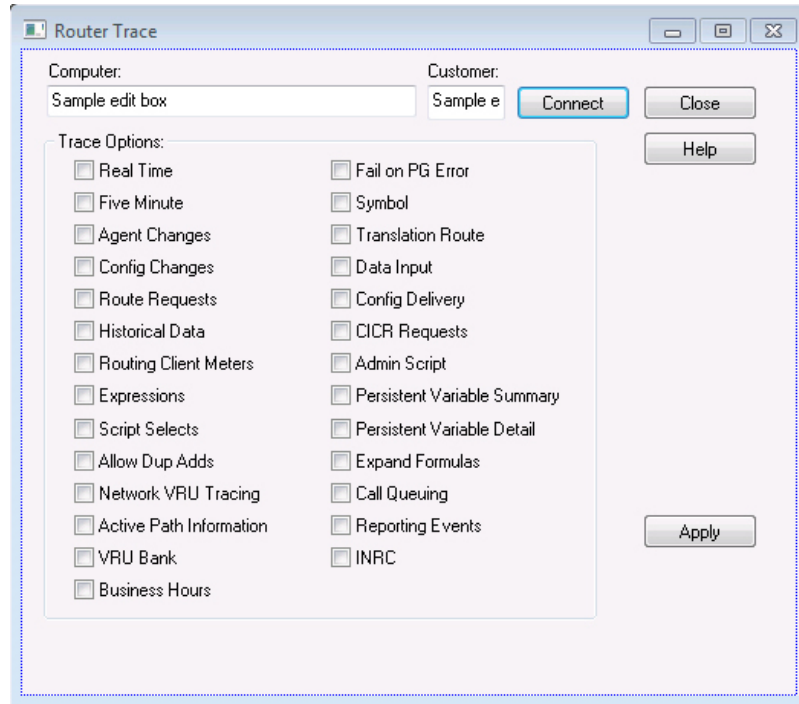

### Procedure

---

- Step 1** Connect to server through remote desktop or go to local console.
- Step 2** Run command `C:> \icm\bin\rtrtrace` to invoke RTRTRACE from ICM\BIN

Figure 1: Router Trace Utility

**Step 3** Set trace options.

When a call routing failure occurs, the basic traces should at the minimum be “Route Requests” and “Translation Route” if you use translation routing.

Also, enable the other tracing depending on the specific problems you see.

For...	Enable...
Any type of VRU	<b>Network VRU Tracing</b>
NAM-CICM (Hosted)	<b>CICR Requests</b>
Suspected queuing issues	<b>Call Queuing</b>
Call type reporting problems	<b>Call Type Real Time</b>
Agent issues	<b>Agent Changes</b>

## How to Set OPC Tracing

To set Unified ICM/Unified CCE OPC tracing, use the OPCTEST utility. This is a command-line utility and you require remote desktop or local console access.

Command Syntax (launch):

```
C:> opctest /cust <instance> /node <node>
```

Where <instance> is the Unified ICM/Unified CCE instance name and <node> is the desired node name (for example, /cust cust1 /node PG1A).

After you invoke the instance name, you are presented with an opctest: prompt where you can enter commands according to the syntax expected. To display all commands, enter a “?” at the opctest: prompt. However, OPCTEST is a powerful utility and if you use it incorrectly, it can have a negative effect on a production system in operation. Do not execute a command against a production system unless you are absolutely certain of the impact it can introduce.

Use the following commands to alter default trace levels. Before using the commands, understand your current utilization to ensure there is sufficient capacity to accommodate the added tracing.

## General Diagnostics

```
opctest:debug /on
```

## Diagnosing Network Transfer Issues

```
opctest:debug /on
opctest:debug /NCT
```

---

**Note** Dialog ID in network transfer call flows appear as a negative number in OPC logs. This is applicable for other components like Router and VRU PIM as well. This is to ensure that Router generated DialogID's do not conflict with DialogID's originated from the pre-routing client (also referred to as NIC DialogID). This pre-routing client can either be a NIC or a VRU PIM integrated with CVP. While the router-assigned DialogID can be any unique number with the most significant bit set, the router will use the expired NIC DialogID value as a troubleshooting aid.

---

## Diagnosing Multimedia Issues

```
opctest:debug /on
opctest:debug /task /passthru
```

## Diagnosing VRU PG Issues

```
opctest:debug /on
opctest:debug /passthru
```

The default is:

```
opctest:debug /routing /agent /closedcalls /cstacer /rcmsg /tpmsg /simplified /inrcmsg
and
```

```
EMSTracemask = 0x40
```

EMSTracemask is reset in the Windows registry.

TAC directs you to alter or add additional tracing based upon the analysis of collected logs.

## How to Restore Default Trace Levels

```
opctest:debug /on
```

This parameter turns on the /default tracing, modifies the EMSTracemask to 0x40, and turns off all other enabled tracing.

## How to Display Trace Levels

```
opctest:debug /showtrace
```

This parameter displays current trace levels enabled on the peripheral.

## How to Set Unified CCM PIM Tracing

To reset trace levels with the Unified Communications Manager Peripheral Interface Manager component (for example, “EAGTPIM”), use the ProcMon (process monitoring) utility. This is a command-line utility and you require remote desktop or local console access.

**Table 1: Setting Unified CCM PIM Tracing**

Command Syntax (launch)	C:> ProcMon <instance> <node> pim<pim number>
Example	C:> ProcMon acme PG1A pim1
Commands	>>>debug /on

## How to Set JTAPI Gateway Tracing

To reset trace levels for the Unified Contact Center JTAPI (Java Telephony Applications Programming Interface) Gateway component (for example, “JTAPIGW”), use the ProcMon (process monitoring) utility. This is a command-line utility and you require remote desktop or local console access.

**Table 2: Setting JTAPI Gateway Tracing**

Command Syntax (launch)	C:> ProcMon <instance> <node> jgw<jtapigw number>
Example	C:> ProcMon acme PG1A jgw1
Commands	>>>trace * /off >>>debug /on

## How to Set JTAPI Gateway Default Tracing

The default tracing for JTAPI gateway consists of a set of tracing levels that currently exist.

To enable only the default tracing, enter the following commands in ProcMon:

trace \* /off

Note: debug /on does not turn off non-default tracing so you need this first.

debug /on This enables only default tracing.

To turn off debug tracing, enter the following command in ProcMon:

debug /off This turns off only default tracing. All other tracing is not affected.

## How to Set Contact Sharing Tracing

The Contact Sharing service is an optional process which runs under the main Router service (when enabled through web setup on an Contact Director deployment). Tracing levels for this process are set through a ProcMon connection as detailed in the following table.

**Table 3: Setting Contact Sharing Tracing**

Command Syntax (launch)	C:>ProcMon <customer name> <ra or rb> <csn> <systemname>
Example	C:>ProcMon bos01 ra csn boston-p-cc
Commands	>>>trace <bit> /on >>>trace <bit> /off

**Note** "ra" and "rb" = Router A or B  
"csn" = Contact Sharing Node

## How to Set CTI Server Tracing

To reset trace levels with the Unified ICM/Unified CCE CTI Server (for example, CTI Gateway or CG), use the Microsoft Registry Editor (regedit) to modify the trace mask saved in the Windows registry.

**Table 4: Setting CTI Server Tracing**

Registry Key	HKLM\SOFTWARE\Cisco Systems, Inc.\ICM<instance>\<CG#A/B>\EMS\CurrentVersion\Library\Processes\ctisvr
Example	HKLM\SOFTWARE\Cisco Systems, Inc.\ICM\acme\CG1A\EMS\CurrentVersion\Library\Processes\ctisvr
Item	EMSTraceMask
Value	F0 (hex) This is the default value. The value of F0 provides sufficient tracing information to troubleshoot most issues.

## Setting CTI Server Default Tracing

The default tracing level for CTI Server is EMSTraceMask = 0xF0. Do not enable any other tracing at the default trace level. EMSUserData should be NULL.

ProcMon debug commands:

debug /on sets the EMSTraceMask to the default value of 0xF0 and NULL out EMSUserData. No other command is needed to set default tracing.

debug /off sets EMSTraceMask to 0x00 and NULL out EMSUserData.

## Setting CTI OS Tracing

Resetting trace levels with the Unified ICM/Unified CCE Cisco Computer Telephony Integration Option (CTI OS) is accomplished by altering the trace mask saved in the Windows registry. Use the Windows REGEDIT utility to change this numeric value.

**Table 5: Setting CTI Server Tracing**

Registry Key	HKLM\SOFTWARE\Cisco Systems, Inc.\ICM\ <instance&gt;\ctios\ems\currentversion\library\processes\ctios< td=""> </instance&gt;\ctios\ems\currentversion\library\processes\ctios<>
Example	HKLM\SOFTWARE\Cisco Systems, Inc.\ICM\acme\CTIOS\EMS\CurrentVersion\Library\Processes\ctios
Item	EMSTraceMask
Value	60A0F (hex) Increasing the trace levels (other than the Default 0x00060A0F) impacts the CTI OS Server performance. You must revert High Tracemask to the default trace levels after collecting the required logs.
Levels	Level 0: 0x00060A0F Level 1: 0x00240A2F Level 2: 0x00260A2F Level 3: 0x002E0A2F

## Setting VRU PIM Tracing

Resetting trace levels with the Unified ICM/Unified CCE VRU Peripheral Interface Manager (PIM) is accomplished by altering the trace mask and user data values saved in the Windows registry. Use the Windows REGEDIT utility to change these numeric values.

**Table 6: Setting VRU PIM Tracing**

Registry Key	HKLM\SOFTWARE\Cisco Systems, Inc.\ICM\ <instance&gt;\pg&lt;pg b&gt;\ems\currentversion\library\processes\pim&lt;pim="" number&gt;<="" number&gt;\a="" or="" td=""> </instance&gt;\pg&lt;pg>
Example	HKLM\SOFTWARE\Cisco Systems, Inc.\ICM\acme\PG2A\EMS\CurrentVersion\Library\Processes\pim1

Item	EMSUserData
Value	7F F7 E0 (hex)
Item	EMSTraceMask
Value	0 (zero)

When you collect the trace logs, collect both VRU PIM trace logs and the VRU trace capture file. To obtain VRU trace capture files, run the VRUTRACE tool in the following directory:

```
\icm\<inst>\<pg><pg number><a or b>\vrucap
```

For example: \icm\acme\pg2a\vrucap

## Setting VRU PIM Default Tracing

The default tracing for VRU PIM consists of a set of tracing levels that currently exist.

ProcMon debug commands:

debug /off turns off all tracing

debug /on enables default tracing only and turns off any previously enabled tracing

## Setting Outbound Option Tracing

The utility tools provide centralized control to set up each component trace level. Additionally, you can manually modify the registry key values.

## How to Reset CampaignManager Tracing

To reset CampaignManager trace levels, use the Microsoft Registry Editor (regedit) to modify the trace mask saved in the Windows registry.

Registry Key:

```
HKLM\SOFTWARE\Cisco Systems,
Inc.\ICM<instance>\LoggerA\EMS\CurrentVersion\Library\Processes\CampaignManager
```

Example:

```
HKLM\SOFTWARE\Cisco Systems,
Inc.\ICM\m3pc1\LoggerA\EMS\CurrentVersion\Library\Processes\CampaignManager
```

## How to Reset baImport Tracing

To reset baImport trace levels, use the Microsoft Registry Editor (regedit) to modify the trace mask saved in the Windows registry.

Registry Key:

```
HKLM\SOFTWARE\Cisco Systems,
Inc.\ICM\<instance>\LoggerA\EMS\CurrentVersion\Library\Processes\baImport
```

Example:

```
HKLM\SOFTWARE\Cisco Systems,
Inc.\ICM\m3pc1\LoggerA\EMS\CurrentVersion\Library\Processes\baImport
```

## How to Reset Dialer Tracing

To reset Dialer trace levels, use the Microsoft Registry Editor (regedit) to modify the trace mask saved in the Windows registry.

Registry Key:

```
HKLM\SOFTWARE\Cisco Systems,
Inc.\ICM\<instance>\Dialer\EMS\CurrentVersion\Library\Processes\baDialer
```

Example:

```
HKLM\SOFTWARE\Cisco Systems, Inc.\ICM\m3pc1\Dialer\EMS\CurrentVersion\Library\Processes\baDialer
```

## Trace File Retention Settings

You can modify several Windows registry values to adjust the trace log retention parameters, for example, increase the amount of trace data – extend the trace retention window. To modify the trace log parameters, use the Microsoft Registry Editor (regedit).

Unified ICM/Unified CCE Event Management System (EMS) tracing is stored in a binary format in a set of files in a directory on the local drive following a specific structure.

### Trace log file location

```
[Drive]:\icm\<instance>\<node>\logfiles
```

### Example

```
C:\icm\acme\pg1a\logfiles
```

### Trace log file names

```
Process_YYMMDD_HHMMSS.ems
```

### Example

```
opc_090713_123025.ems
```

This is an OPC trace log file that was created 13 July, 2009 at 12:30:25.

Under the control of the Event Management System, the following rules apply while traces are written to the trace log files:

- If the size of this file is greater than or equal to the maximum (configured) size that a single EMS trace log file is allowed, the file is closed and a new file is created.
- If the maximum number of trace log files for this process is greater than the maximum (configured) number of trace log files, then the oldest trace log file is deleted.
- If the total combined size of all process trace log files is greater than or equal to the maximum (configured) total size of all process trace log files, then the oldest trace log files are deleted until the total size is less than the configured maximum size.

## Registry Items

You can change the following registry item values to increase or decrease the amount of disk space allocated for a single process.

### Registry key

```
HKLM\SOFTWARE\Cisco Systems,
Inc.\ICM\

```

### Example

```
HKLM\SOFTWARE\Cisco Systems,
Inc.\ICM\acme\PG1A\EMS\CurrentVersion\Library\ Processes\opc
```

### Items

#### EMSLogFileMax

The maximum size, in bytes, of a single trace log file for this process.

#### EMSLogFileCountMax

The maximum number of trace log files permitted for this process.

#### EMSAIILogFilesMax

The total space allowed for all trace log files (combined size) for this process.

#### Note

EMSLogFileMax multiplied by EMSLogFileCountMax may be greater than EMSAIILogFilesMax and it often is by default; this is to ensure trace log files created by frequent process restarts (where a number of small trace log files are created) are not lost when the max count is exceeded but very little disk space is used. EMSAIILogFilesMax is used to guarantee that under any circumstances, the maximum amount of disk space allocated is never exceeded.

The default values of these items are evaluated with every release of the Unified ICM/Unified CCE to determine the optimal limits based on disk usage of the application and typical disk capacity of servers available at the time of release. In nearly all cases, the default values are increased over time as disk drive sizes increase.

## Router Full Dump Enabled by Default

In Release 10.0(1), router full dump is enabled by default. This change to the default setting is intended to provide more information to help troubleshoot the issue if a critical process crashes.

The registry key that sets this default is **EMSGenerateSmallMemoryDump**, which is located here:

```
HKLM\SOFTWARE\Cisco Systems,
Inc.\ICM<instanceID>\RouterA\EMS\CurrentVersion\Library\Processes\rtr.
```

The value of 0x20000032 for this registry key indicates a router full dump will be generated. To generate a mini-dump rather than a full dump, change the last digit to 1 so that the value is 0x20000031.

The middle six digits of the registry key value determine the number of dumps that are kept. If, for example, these digits are all zeros (0x20000002), CCE by default keeps only the last five generated dumps for any component. For the CCE router, however, only the three latest dumps are kept (0x20000032) by default, since the size of the full dump can be up to 2GB. Keep disk space usage in mind when selecting the number of dumps you want to retain.

If the CCE Router crashes, provide the full dump (the `.mdmp` file generated under the `icm\<instanceid>ra\logfiles` directory), the PDB file (for example, `router.pdb`) from the `icm\bin` directory, and the associated executable (`router.exe`) from the `icm\bin` directory.

---

**Note** The registry key value is set to the default value of `0x20000032` on a new install or upgrade, or whenever you run Web Setup.
