

Agent API

Agents respond to contacts from customers. Use the Agent API to list the agents currently defined in the database, and view and edit existing agents.

Note

Access to this API is different for supervisors and administrators. For more information, see [Access](#).

URL

`https://<server>/unifiedconfig/config/agent/`

Operations

- **get:** Returns one agent, using the URL
`https://<server>/unifiedconfig/config/agent/<id>`.
- **list:** Retrieves a list of agents.
 - **Query parameters:**
 - **selectedAttribute:** Use this query parameter to augment the returned agent parameters with an extra parameter called `selectedAttribute`. This parameter indicates if the agent belongs to the attribute with the ID specified in this query parameter. For example, to find out which agents belong to the specified attribute, add `selectedAttribute=5000`.

Note

Using `selectedAttribute` automatically sets the summary list query parameter to `true`.

- **selectedSkillGroup:** Use this query parameter to augment the returned agent parameters with an extra parameter called `selectedSkillGroup`. This parameter indicates if the agent belongs to the skillgroup with the ID specified in this query parameter. For example, to find out which agents belong to the specified skill group, add `selectedSkillGroup=5001`.

Note

Using `selectedSkillGroup` automatically sets the summary list query parameter to `true`.

- `ignoreRole`: Use this query parameter to allow a supervisor to see a list of all agents in the system, including agents that the supervisor does not supervise. For example, to see all agents, add `ignoreRole=true`.
- Summary list: See [list](#).

- `update`: Updates one agent.

Parameters

- `refURL`: The refURL for the agent. See [Shared Parameters](#).
- `agentId`: The unique peripheral number. Maximum length of 11 characters allowed. Default is an autogenerated 7-digit number.
- `changeStamp`: See [Shared Parameters](#).
- `description`: See [Shared Parameters](#).
- `agentStateTrace`: Indicates if agent state tracing is turned on for the agent. True or false.
- `agentDeskSettings`: A reference to the agent's agentDeskSettings, including the refURL and name. See [References](#).
- `peripheral`: Indicates the peripheral, including the ID and name, on which the agent resides.
- `person`: Required. Includes the following parameters:
 - `firstName`: Agent's first name. Maximum of 32 characters. International characters are allowed.
 - `lastName`: Agent's last name. Maximum of 32 characters. International characters are allowed.
 - `password`: Agent's password. Maximum of 256 ASCII characters. Password is case-sensitive. The password can be used when creating or updating, but is not returned.
If the `ssoEnabled` parameter is set to true, the password is not saved.
 - `userName`: Agent's login name. Maximum of 255 ASCII characters. Must be unique. For supervisors and for agents with single sign-on (SSO) enabled, the username is the user's Active Directory or SSO account username.
 - `loginEnabled`: Whether the agent can log in. True or false. Default is true.
 - `ssoEnabled`: Whether single sign-on is supported at the agent level. True or false. Default is false. This parameter takes effect only when the global level `SSOEnabled` is mixed.
- `supervisor`: Required. Indicates whether the agent is marked as supervisor. True or false.
If set to true, the person `userName` is used for the supervisor username and domain.
- `agentAttributes`: A collection of agent attribute ([Attribute API](#)) references for this agent, including the description, refURL, name, and `dataType` for each associated attribute. Also includes the `attributeValue` parameter which indicates the value (true or false or 1-10) of the attribute for this agent. See [References](#).
- `agentAttributesAdded`: A collection of agent attribute references ([Attribute API](#)) to be added to the agent, including the agent refURL and the `attributeValue` of each attribute. If the `attributeValue` is not specified, it is assigned the default value. Agents that already have this attribute are updated with the specified `attributeValue`. This parameter is update only, and cannot be used with the `agentAttributes` parameter. This parameter can be used with the `agentAttributesRemoved` parameter. See [References](#).

- **agentAttributesRemoved**: A collection of agent attribute references ([Attribute API](#)) to be removed from the agent, including the refURL of each attribute. This parameter is update only, and cannot be used with the agentAttributes parameter. This parameter can be used with the agentAttributesAdded parameter. See [References](#).
- **selectedAttribute**: Indicates if the agent has the specified attribute. Returned only when using the selectedAttribute query parameter. True or false.
- **skillGroups**: A collection of skill group references for this agent, including the refURL and name of each associated skill group. See [References](#).
- **skillGroupsAdded**: A collection of skill group references to be added to the agent, including the refURL of each skill group to be added. This parameter is update only, and cannot be used with the skillGroups parameter on an update as it does not affect existing skill groups. This parameter can be used with the skillGroupsRemoved parameter. See [References](#).
- **skillGroupsRemoved**: A collection of skill group references to be removed from the agent, including the refURL of each skill group to be removed. This parameter is update only, and cannot be used with the skillGroups parameter on an update as it does not affect existing skill groups. This parameter can be used with the skillGroupsAdded parameter. See [References](#).
- **defaultSkillGroup**: A reference to a skill group, including the refURL and name. Identifies the default skill group associated with this agent. See [References](#).
- **selectedSkillGroup**: Indicates if the agent has the specified skill group. Returned only when using the selectedSkillGroup query parameter. True or false.
- **agentTeam**: A reference to the agent's team, including the refURL and name. See [References](#).
- **supervisorTeams**: If this agent has supervisor access, this collection of references is for this supervisor's teams, including the refURL and name of each supervised team. See [References](#).

Search and Sort Values

The following table shows the parameters that are searched and the parameters that are sortable.

Search parameters	Sort parameters
<ul style="list-style-type: none"> • agentId • description • person.firstName • person.lastName • person.userName 	<ul style="list-style-type: none"> • agentId • description • supervisor • agentStateTrace • agentTeam.name • person.firstName • person.lastName • person.userName • person.loginEnabled • person.ssoEnabled • peripheral.name

See [Search](#) and [Sort](#).

Advanced search parameters

There are several advanced searches you can perform on the Agent API, including supervisor, attributes, skillgroups, team, and include and exclude (agentId).

- **supervisor: (true/false)** Find agents that are (or are *not*) supervisors.
 - **q=supervisor:true** Returns all agents who are supervisors.
 - **q=supervisor:false** Returns all agents who are *not* supervisors.
- **attributes: (attr1 & attr2 & attr3, ...)** find *all* agents that have *all* the specified attributes. Up to ten attributes can be specified. The attribute names are fully matched.
- **skillgroups: (skill1 & skill2 & skill3,...)** find *all* agents that have *all* the specified skillgroups. Up to ten skillgroups can be specified. The skillgroup names are fully matched.
- **team: (team1|team2|team3, ...)** find *all* agents who belong to *any* of the specified teams. Up to ten team names can be specified. The team name is fully matched.
- **include: (ID1 & ID2 & ID3, ...)** find *all* specified agents even if they do not meet other search criteria. Each agentId is fully matched.
- **exclude:(ID1 & ID2 & ID3, ...)** exclude *all* specified agents from the results even if they meet all other search criteria. Each agentId is fully matched.

Example Get Response

```
<agent>
  <changeStamp>2877</changeStamp>
  <refURL>/unifiedconfig/config/agent/5017</refURL>
  <agentId>8006</agentId>
  <agentStateTrace>>false</agentStateTrace>
  <peripheral>
    <id>5000</id>
    <name>CUCM_PG_1</name>
  </peripheral>
  <description>an agent</description>
  <person>
    <firstName>Agent2</firstName>
    <lastName>Agent2</lastName>
    <loginEnabled>>true</loginEnabled>
