## Configuring TCPIP Transport Services

TCP/IP transport services are used in CTI client/server communications. From the Windows Socket interface, enable the TCP “linger” option and set it to zero to close TCP connections immediately upon request without waiting for previously transmitted data to be acknowledged. This ensures that communications can be re-established quickly after a failure.

If possible, disable the Nagle transmit delay algorithm of TCP to ensure timely delivery of all data. (Disabling the Nagle algorithm is sometimes referred to as the TCP\_NODELAY option.) Disabling this algorithm ensures that messages are always transmitted immediately upon request.

## Connection Management

You should configure the CTI clients with two sets of hostname/port number pairs; one for the IP address and TCP port number of the CTI Server on side “A” and the other for the corresponding CTI Server on side “B”. The CTI clients should alternately attempt to connect to each side until a connection is established. Once a connection between the CTI client and the CTI Server has been established, the connection remains in place until a failure occurs or the client closes the connection. Connection failures may be detected by the TCP layer or by the heartbeat message mechanism described later in this chapter. If a failure occurs, the CTI client should again alternately attempt to establish a connection to either side until a new connection is established.

## Session Initialization

Once a TCP connection has been established, you can attempt to initialize a communications session by sending an OPEN\_REQ message to the CTI Server. The CTI Server responds with an OPEN\_CONF message to confirm the successful establishment of a session. This figure depicts the message flow.

Figure 1: Session Initialization Message Flow

## CTI Service Masks

This table shows the CTI Service masks.

Table 1: CTI Service Masks

MaskName	Description	Value
CTI_SERVICE_DEBUG	Causes all messages exchanged during the current session to be captured to a file for later analysis.	0x80000000
CTI_SERVICE_CLIENT_EVENTS	Client receives call and agent state change events associated with a specific ACD phone.	0x00000001
CTI_SERVICE_CALL_DATA_UPDATE	Client may modify call context data.	0x00000002
CTI_SERVICE_CLIENT_CONTROL	Client may control calls and agent states associated with a specific ACD phone.	0x00000004
CTI_SERVICE_CONNECTION_MONITOR	Establishment and termination of this session cause corresponding Unified CCE Alarm events to be generated.	0x00000008
CTI_SERVICE_ALL_EVENTS	Client receives all call and agent state change events (associated with any ACD phone).	0x00000010
CTI_SERVICE_PERIPHERAL_MONITOR	Client may dynamically add and remove devices and calls for which it wishes to receive call and agent state events.	0x00000020

MaskName	Description	Value
CTI_SERVICE_CLIENT_MONITOR	Client receives notification when all other CTI client sessions are opened and closed, and may monitor the activity of other CTI client sessions.	0x00000040
CTI_SERVICE_SUPERVISOR	Client may request supervisor services.	0x00000080
CTI_SERVICE_SERVER	Client identifies itself as server application.	0x00000100
CTI_SERVICE_AGENT_REPORTING	Client may request reporting and routing ARM(Agent Reporting And Management) messages.	0x00000400
CTI_SERVICE_ALL_TASK_EVENTS	Client receives all task events.	0x00000800
CTI_SERVICE_TASK_MONITOR	Client receives monitored task events.	0x00001000
CTI_AGENT_STATE_CONTROL_ONLY	Client can change agent state only. Call control is not allowed. If a client requests for CTI_SERVICE_CLIENT_CONTROL, the server may grant this flag to indicate that only agent state change is allowed.	0x00002000
Unused		0x00004000
CTI_SERVICE_UPDATE_EVENTS	Requests that this client receive update notification events. (No data)	0x00080000
CTI_SERVICE_IGNORE_DUPLICATE_AGENT_EVENTS	Request to suppress duplicate agent state events.	0x00100000
CTI_SERVICE_IGNORE_CONF	Do not send confirmations for third-party requests.	0x00200000
CTI_SERVICE_ACD_LINE_ONLY	Request not to send events for non-ACD lines. (Unified CCE only)	0x00400000

## OPEN\_REQ Message

This table defines the OPEN\_REQ message.

Table 2: OPEN\_REQ Message Format

Field Name	Value	Data Type	Byte Size
<b>Fixed Part</b>			
MessageHeader	Standard message header. MessageType = 3.	MHDR	8
InvokeID	An ID for this request message, to be returned in the corresponding confirm message.	UINT	4
VersionNumber	The version number of the interface requested by the CTI client. This defines the version of all messages in the message set.	UINT	4
IdleTimeout	The session idle timer, expressed in seconds. If the session is idle (no messages received) for this time, the CTI Server resets the TCP connection and awaits the establishment of a new session. This value is typically 4 times the heartbeat interval used by the CTI client. If the CTI client does not use the HEARTBEAT_REQ message, set this field to 0xFFFFFFFF.	UINT	4
PeripheralID	The Peripheral ID of the ACD whose events are of interest to the client. Required for Client Events service; otherwise, set this field to 0xFFFFFFFF.	UINT	4
ServicesRequested	A bitwise combination of the CTI Services listed in that the CTI client is requesting.	UINT	4
CallMsgMask	A bitwise combination of the Unsolicited Call Event Message Masks listed that the CTI client wishes to receive.	UINT	4
AgentStateMask	A bitwise combination of Agent State Masks that the CTI client wishes to receive.	UINT	4
ConfigMsgMask	A bitwise combination of Configuration Event Masks that the CTI client wishes to receive.  For bit mask values, see the CONFIG_REQUEST_EVENT message ConfigInformation field.	UINT	4
Reserved1	Reserved for future use; set to zero.	UINT	4
Reserved2	Reserved for future use; set to zero.	UINT	4
Reserved3	Reserved for future use; set to zero.	UINT	4
<b>Floating Part</b>			
ClientID (required)	The user ID of the CTI client.	STRING	64

Field Name	Value	Data Type	Byte Size
ClientPassword (required)	The password of the user identified by ClientID. ClientID and Client Password are optionally used to authenticate the CTI client making the session open request. This field must be present even if authentication is not being used (it may be of length zero).	UNSPEC	64
ClientSignature (optional)	A character string appended to the Call Client History list when this CTI client becomes associated with a call. If not provided, the ClientID is used.	STRING	64
AgentExtension	The agent's ACD teletext extension. For CLIENT EVENTS service, the CTI Client must provide at least one of AgentExtension, AgentID, or AgentInstrument.	STRING	16
AgentID	The agent's ACD sign-in ID. For CLIENT EVENTS service, the CTI Client must provide at least one of AgentExtension, AgentID, or AgentInstrument.	STRING	12
AgentInstrument	The agent's ACD instrument number. For CLIENT EVENTS service, the CTI Client must provide at least one of AgentExtension, AgentID, or AgentInstrument.	STRING	64
ApplicationPathID	The ID of an application path which contains configured MRD Peripheral combinations for this Unified CCE-configured application instance.	INT	4

CALL_REACHED_NETWORK_MASK	Set when client wishes to receive CALL_REACHED_NETWORK_EVENT messages.	0x00020000
CALL_DEQUEUED_MASK	Set when client wished to receive CALL_DEQUEUED_EVENT messages.	0x00040000
AGENT_PRE_CALL_MASK	Set when client wished to receive AGENT_PRE_CALL_EVENT messages.	0x00080000

Mask Name	Description	Value
AGENT_PRE_CALL_ABORT_MASK	Set when client wished to receive AGENT_PRE_CALL_ABORT_EVENT messages.	0x00100000
RTP_STARTED_MASK	Set when client wished to receive RTP_STARTED_EVENT messages.	0x00200000
RTP_STOPPED_MASK	Set when client wished to receive RTP_STOPPED_MASK_EVENT messages.	0x00400000
AGENT_TEAM_CONFIG_MASK	Set when client wished to receive AGENT_TEAM_CONFIG_MASK_EVENT messages.	0x00800000
AGENT_LEGACY_PRE_CALL_MASK	Set when client wishes to receive AGENT_LEGACY_PRE_CALL_EVENT messages.	0x01000000
CALL_ATTRIBUTE_CHANGE_MASK	CALL_ATTRIBUTE_CHANGE_EVENT messages.	0x02000000
CALL_TERMINATION_MASK	Reserved	0x04000000
CALL_AGENT_GREETING_MASK	Set when client wishes to receive CALL_AGENT_GREETING_EVENT messages.	0x08000000

## Agent State Masks

This table lists the agent state masks.

**Table 4: Agent State Masks**

Mask Name	Description	Value
AGENT_LOGIN_MASK	Set when client wishes to receive “login” AGENT_STATE_EVENT messages.	0x00000001
AGENT_LOGOUT_MASK	Set when client wishes to receive “logout” AGENT_STATE_EVENT messages.	0x00000002
AGENT_NOT_READY_MASK	Set when client wishes to receive “not ready” AGENT_STATE_EVENT messages.	0x00000004
AGENT_AVAILABLE_MASK	Set when client wishes to receive “available” AGENT_STATE_EVENT messages.	0x00000008
AGENT_TALKING_MASK	Set when client wishes to receive “talking” AGENT_STATE_EVENT messages.	0x00000010
AGENT_WORK_NOT_READY_MASK	Set when client wishes to receive “work not ready” AGENT_STATE_EVENT messages.	0x00000020

Mask Name	Description	Value
AGENT_WORK_READY_MASK	Set when client wishes to receive “work ready” AGENT_STATE_EVENT messages.	0x00000040
AGENT_BUSY_OTHER_MASK	Set when client wishes to receive “busy other” AGENT_STATE_EVENT messages.	0x00000080
AGENT_RESERVED_MASK	Set when client wishes to receive “reserved” AGENT_STATE_EVENT messages.	0x00000100
AGENT_HOLD_MASK	Set when client wishes to receive “hold” AGENT_STATE_EVENT messages.	0x00000200
AGENT_ACTIVE_MASK	Set when client wishes to receive “active” AGENT_STATE_EVENT messages.	0x00000400
AGENT_PAUSED_MASK	Set when client wishes to receive “paused” AGENT_STATE_EVENT messages.	0x00000800
AGENT_INTERRUPTED_MASK	Set when client wishes to receive “interrupted” AGENT_STATE_EVENT messages.	0x00001000
AGENT_NOT_ACTIVE_MASK	Set when client wishes to receive “not active” AGENT_STATE_EVENT messages.	0x00002000

## OPEN\_CONF Message

This table defines the OPEN\_CONF message.

*Table 5: OPEN\_CONF Message Format*

Field Name	Value	Data Type	Byte Size
<b>Fixed Part</b>			
MessageHeader	Standard message header. MessageType = 4.	MHDR	8
InvokeID	Set to the value of the InvokeID from the corresponding OPEN_REQ message.	UINT	4
ServicesGranted	A bitwise combination of the CTI Services listed in that the CTI client has been granted. Services granted may be less than those requested.	UINT	4
MonitorID	The identifier of the event monitor created by the OPEN_REQ, or zero if no monitor was created.	UINT	4

Field Name	Value	Data Type	Byte Size
PGStatus	The current operational status of the Peripheral Gateway. Any nonzero indicates a component failure or communication outage that prevents normal CTI operations.	UINT	4
ICMCentral ControllerTime	The current Central Controller date and time.	TIME	4
PeripheralOnline	The current Unified CCE on-line status of the agent's peripheral, when Client Events service has been granted. Otherwise, set this value to TRUE only when all peripherals monitored by the PG are on-line.	BOOL	2
PeripheralType	<p>The value is set as the first condition that applies:</p> <ol style="list-style-type: none"> <li>1. Type of the peripheral that matches with the PeripheralID (if client sends the PeripheralID in the OPEN_REQ) in the OPEN_REQ.</li> <li>2. For the ClientEvents service clients, the type of the peripheral to which the agent belongs. (CTI_SERVICE_CLIENT_EVENTS gets the agent information from the OPEN_REQ.)</li> <li>3. If none of the above is present, the type of the agent peripheral that is configured in the PG for that CTI Server.</li> </ol> <p><b>Note</b> Unified CCE does not support multiple agent peripherals on one PG. For such an unsupported configuration, the PeripheralType that is chosen might be incorrect.</p>	USHORT	2
AgentState	The current state of the associated agent phone (Client Events Service only).	USHORT	2
DepartmentID	Department ID of the Agent	INT	4
<b>Floating Part</b>			

Field Name	Value	Data Type	Byte Size
AgentExtension (Client Events Service Only)	The agent's ACD device extension, when Client Events service has been granted and the agent is currently signed in on the ACD.	STRING	16
AgentID (Client Events Service Only)	The agent's ACD sign-in ID, when Client Events service has been granted and the agent is currently signed in on the ACD.	STRING	12
AgentInstrument (Client Events Service Only)	The agent's ACD instrument number, when Client Events service has been granted and the agent is currently signed in on the ACD.	STRING	64
NumPeripherals	The number of PeripheralID/info (FltPeripheralID/MultilineAgentControl) pairs specified in the floating part of the message. This field is 0 for non-CCE peripherals, or if PeripheralID is specified in the OPEN_REQ message.	USHORT	2
FltPeripheralID	The peripheralID for the next field (MultilineAgentControl).	UINT	4
MultilineAgentControl	Specifies if multiline agent control is available on the peripheral named in the preceding FltPeripheralID field. 0 = single line only, 1 = multiline enabled.	USHORT	2

If the CTI Server determines that a new session should not be opened, it responds to the OPEN\_REQ message with a FAILURE\_CONF message. If necessary floating data has not been provided, a FAILURE\_CONF message is returned with the status code set to E\_CTI\_REQUIRED\_DATA\_MISSING.

A CTI client might try to open a session for Client Events service and the provide device information items that are inconsistent with each other. Then, a FAILURE\_CONF message is returned with the status code set to E\_CTI\_INCONSISTENT\_AGENT\_DATA. If the ACD device is already associated with a different CTI client, the CTI Server refuses to open the new session and returns a FAILURE\_CONF message. The status code in the message is set to E\_CTI\_DEVICE\_IN\_USE. If the ACD device is already associated with the same CTI client, the existing session is terminated and the CTI Server opens the new session.

During an OPEN\_REQ of an ALL\_EVENTS client session, the CTI Server responds with an OPEN\_CONF message to confirm the successful establishment of a session. In addition to the OPEN\_CONF, SYSTEM\_EVENT messages are sent to the ALL\_EVENTS client, per peripheral, to indicate the status of each peripheral associated with the PG.

If the CTI Server rejects an OPEN\_REQ message, reset the TCP connection. The status code received in the rejection indicates the message data to correct before retrying to establish a session.

Normally, you receive a response to the OPEN\_REQ message within 5 seconds. Some failure scenarios cause all connected CTI clients to lose their connection to the CTI Server. This causes them to then reconnect and reopen their sessions. In the worst case situations, there could be hundreds or even thousands of simultaneous

OPEN\_REQ messages sent to the CTI Server, causing significant response delays. For this reason, allow at least 30 seconds before considering a lack of response to the OPEN\_REQ message as a failure to open the session. In larger configurations of more than 500 clients, allow 60 seconds or more. Then reset the TCP connection, reconnect, and retry the OPEN\_REQ after a short delay.

[Constants and Status Codes](#)

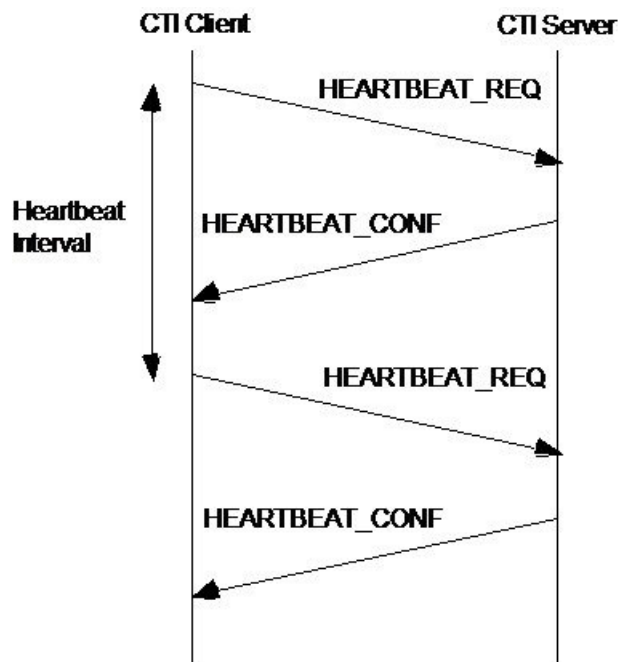

## Session Maintenance

Compared to some other protocols, TCP/IP is relatively slow at detecting and recovering from communication path failures. If an IP packet is dropped within the network, retransmission does not occur until the sender notices a time-out. This time-out period is long enough to allow for worst-case round-trip delays and network congestion. If you need more rapid error detection, you may send an optional HEARTBEAT\_REQ message to the CTI Server whenever no heartbeat interval messages have been sent. Upon receipt of a HEARTBEAT\_REQ message, the CTI Server immediately responds with a HEARTBEAT\_CONF message. If three heartbeats go unconfirmed, the CTI client declares a session failure and resets the TCP connection.

You determine the appropriate heartbeat interval for a production environment—It depends on the application and the environment. Find a reasonable balance between the speed of failure detection and the network bandwidth consumed by heartbeat messages and confirmations. In cases with few CTI clients, such as a CTI Bridge, the minimum heartbeat interval of 5 seconds should suffice. Workstation (desktop) clients usually need a larger heartbeat interval (at least 90 seconds), since there are typically hundreds or thousands of clients. A Heartbeat Interval of -1 disables heartbeats. The default setting for application developers is -1. However, if the TCP/IP time-out period is adequate or if the application can do nothing during a failure, you can choose to disable heartbeats in a production environment.

This figure depicts the heartbeat message flow.

*Figure 2: Heartbeat Message Flow*

This table defines the HEARTBEAT\_REQ message:

**Table 6: HEARTBEAT\_REQ Message Format**

Field Name	Value	Data Type	Byte Size
MessageHeader	Standard message header. MessageType = 5.	MHDR	8
InvokeID	An ID for this request message, to be returned in the corresponding confirm message.	UINT	4

This table defines the HEARTBEAT\_CONF message:

**Table 7: HEARTBEAT\_CONF Message Format**

Field Name	Value	Data Type	Byte Size
MessageHeader	Standard message header. MessageType = 6.	MHDR	8
InvokeID	Set to the value of the InvokeID from the corresponding HEARTBEAT_REQ message.	UINT	4

The CTI Server does not begin HEARTBEAT\_REQ messages. The CTI Server detects failures using the IdleTimeout value from the OPEN\_REQ message. If you are using heartbeat messages, the CTI client should set the IdleTimeout value to four times the heartbeat interval. If the CTI Server receives no messages (including HEARTBEAT\_REQ messages) for this period, the CTI Server declares a session failure and resets the TCP connection.

The CTI Server may respond to a HEARTBEAT\_REQ message with a FAILURE\_CONF. This indicates to the CTI client that the CTI Server is off-line, and the CTI client resets the TCP connection.

## Session Termination

The CTI client may begin the graceful termination of a communication session by sending a CLOSE\_REQ message. The CTI Server responds with a CLOSE\_CONF message. Upon receipt of the CLOSE\_CONF message, the CTI client can reset the TCP connection. The CTI client should wait up to 5 seconds for the CLOSE\_CONF message before resetting the connection.

The CTI Server may indicate that it no longer wishes to communicate with the client through an unsolicited FAILURE\_EVENT message. The Status field in the message is set to E\_CTI\_CTI\_SERVER\_OFFLINE. Upon receipt of this message, the CTI client closes the session.

The CLOSE\_REQ message includes a status code that indicates the reason for closing the session. You can set the status code to one of the following:

- E\_CTI\_NO\_ERROR—If the CTI client began the request to end the session.
- E\_CTI\_CTI\_SERVER\_OFFLINE—If the CTI Server is no longer online.
- E\_CTI\_TIMEOUT—If the CTI Server does not respond to a request message within the time-out period.

The following figure describes the Session Termination Message Flow:

Figure 3: Session Termination Message Flow

This table defines the CLOSE\_REQ message:

Table 8: CLOSE\_REQ Message Format

Field Name	Value	Data Type	Byte Size
MessageHeader	Standard message header. MessageType = 7.	MHDR	8
InvokeID	An ID for this request message, returned in the corresponding confirm message.	UINT	4
Status	A status code indicating the reason for closing the session.	UINT	4

This table defines the CLOSE\_CONF message:

Table 9: CLOSE\_CONF Message Format

Field Name	Value	Data Type	Byte Size
MessageHeader	Standard message header. MessageType = 8.	MHDR	8
InvokeID	Set to the value of the InvokeID from the corresponding CLOSE_REQ message.	UINT	4
