Session Timeout

Timeout	Description	Range Values	Default Value
Idle Timeout	The time interval for which the session remains active without any activity.	5 minutes to 30 minutes.	30 minutes
Absolute Timeout	The maximum time interval for which the session remains active.	Maximum 1440 minutes (24 hours).	1440 minutes

Implementing Session Timeouts

Implement the session timeout configurations in the `Web.xml` file.

Step 1 Implement Idle Timeout using the session configuration:

```
<!-- Session Configuration -->
<session-config>
    <session-timeout>30</session-timeout>
</session-config>
```

Step 2 Implement Absolute Timeout using the session filter:

```
<filter>
    <filter-name>sessionFilter</filter-name>
    <filter-class>com.cisco.icm.websetup.filter.SessionFilter</filter-class>
    <init-param>
        <param-name>maxPeriod</param-name>
        <param-value>1440</param-value>
    </init-param>
</filter>
```
