About Cisco Expressway Deployment on VM

Cisco Expressay (Expressway) software supports flexible deployment options and is available as a virtualized application for VMware. This lets enterprises run Expressway on the ‘company standard’ Virtual Machine (VM) hardware platform for ease of management and deployment in an existing data center. With a suitably specified VM platform, Expressway running on VMware performs identically to Expressway running on its appliance hardware.

Getting License Keys

If you use PAK-based licensing, option keys for licenses can be obtained after the Expressway VM is installed, using the Expressway VM serial number (available from the Option key page and in the footer of the Expressway web interface).
