Add External Contacts

Cisco Jabber lets you add external contacts.

Procedure

- Step 1** Select **Jabber > Contacts > Add Contact**.
 - Step 2** Enter the email address of your contact.
 - Step 3** (Optional) Check **This is an AOL contact**.
 - Step 4** Select a contact group.
 - Step 5** Select **Add**.
-

Contacts from Address Book

Dial contacts using Cisco Jabber directly from the Mac Address Book.

A known Apple defect in Mac OS X 10.7.4 (Lion) Address Book framework can cause Cisco Jabber to become unstable and quit unexpectedly. Cisco Jabber disables this feature by default for Mac OS X 10.7.4 and later versions. This defect does not affect the Address Book plug-in, which you can install separately to allow you to use Cisco Jabber to dial contacts directly from your Mac Address Book.

Install the Address Book plug-in.

Procedure

- Step 1** Select **Jabber** > **Install Mac Address Book Plug-in**.
- Step 2** Select **Jabber** > **Preferences** > **General** > **Enable "Mac Address Plug-in"**, restart the client for this to take effect.
-
