What’s New in Cisco Jabber Softphone for VDI—Windows Release 12.8

Cisco Headset Support for 64-bit
We enhanced call control support for Cisco headsets, with 64-bit versions of Microsoft Windows.

Cisco Jabber Support
This release supports the following new Cisco Jabber for Windows Release 12.8 features:
• Audio Device Priority
• Call Park
• Cisco Headset Support
• Global Shortcut Key for Conversation Window
• Microsoft Office 2019 Support
• Multiline Per Line Ringtones

Attention
With N-1 or N-2 support, the lower version determines the available feature set.

Deprecated Parameter
We added the HeadsetPreference parameter to specify how Cisco Jabber handles new audio devices.
The new parameter replaces the now deprecated HeadsetPreferenceOnVDI parameter.

By default, when you connect a new audio device, Cisco Jabber adds it to the top of the priority list. The default behavior is a problem in some hot-desking environments. When a user moves their thin client and headset, the embedded microphone becomes the preferred device.

Modern meeting rooms are often equipped with a large wall mounted monitor with HDMI, which handles both audio and video. When a Cisco Jabber user connects to a monitor using HDMI, by default the monitor becomes the preferred device.

You can set this parameter to ensure that the user's headset remains the preferred device. Users can override this setting in their Audio preferences. For more information about the new parameter, see Parameters Reference Guide for Cisco Jabber Release 12.8.

Display Scaling

We added support for the Allow Display Scaling option, in VMware Horizon Client. With this feature, remote desktops and published applications use the thin client scaling setting. This is helpful for people with limited vision, and for those who have high-resolution screens, such as 4K monitors.

VMware Horizon Client saves the display scaling setting for each remote desktop separately. For published applications, the display scaling setting applies to all published applications that are available to the user. The Allow Display Scaling option appears, even if the scaling setting on the thin client is 100 percent.

Mute Notification Sounds During Calls or Meetings

Users in VDI deployments can now choose to mute notification sounds during their calls or meetings.

Presence Improvement

We improved how Cisco Jabber Softphone for VDI passes presence (status) information to the hosted virtual desktop. Now when a user locks their thin client, their presence updates to Away. If their connection drops, their presence updates to Offline.

We also added a new parameter that controls how Cisco Jabber for Windows handles presence status when users disconnect from their HVDs.

- True—When a user signs out or otherwise disconnects from their HVD, Cisco Jabber automatically signs out and presence status updates to Offline, within 10 seconds.
- False (default)—When a user signs out, or otherwise disconnects from their HVD, Cisco Jabber remains signed in, and their presence status shows as Available.

For more information about the new parameter, see the Parameters Reference Guide for Cisco Jabber 12.8.

Support for VMware Published Application

We added support for VMware shared application mode for Microsoft Windows-based thin clients.
Version Support Strategy

The Cisco Jabber for Windows and Cisco JVDI Agent versions must always match. However, the JVDI Client version can be the same, or up to two releases earlier (N-2 support). For example, the following version combinations are supported:

- Cisco Jabber for Windows Release 12.8, Cisco JVDI Agent Release 12.8, and Cisco JVDI Client Release 12.8
- Cisco Jabber for Windows Release 12.8, Cisco JVDI Agent Release 12.8, and Cisco JVDI Client Release 12.6

VDI Fallback Mode

Sometimes the Cisco JVDI Agent and the Cisco JVDI Client can't communicate. This issue occurs because of a network problem with the virtual channel, or because of a problem with the Cisco Jabber Softphone for VDI installation. If the JVDI Agent and the JVDI Client can't communicate, Cisco Jabber can't operate in VDI-optimized mode. For more information about troubleshooting, see Deployment and Installation Guide for Cisco Jabber Softphone for VDI Release 12.8.

This release introduces VDI Fallback mode, and a new parameter to enable this mode. Cisco Jabber Softphone for VDI checks the virtual channel every 10 seconds, to ensure that the JVDI Agent and the JVDI Client can communicate. If communication is down, for two consecutive checks, Cisco Jabber Softphone for VDI switches Cisco Jabber to VDI Fallback mode. For more information about the new EnableVDIFallback parameter, see Parameters Reference Guide for Cisco Jabber Release 12.8.

In VDI Fallback mode, users can make and receive calls, with audio traveling over the ICA channel. The connection status for Cisco Jabber changes from Softphone with VDI, to Softphone. Users can receive video; the ability to send video depends on the capabilities of your Citrix or VMware version. Audio and video quality depend on network conditions, and the capabilities of your Citrix or VMware version. When Cisco Jabber operates in VDI Fallback mode, users see a notification message at the start of each call.

When Cisco Jabber Softphone for VDI detects communication between the JVDI Agent and the JVDI Client, it automatically switches Cisco Jabber back to VDI-optimized mode.

---

Note
Cisco Jabber Softphone for VDI switches modes only between calls.

---

General Requirements

General requirements apply to all Cisco Jabber Softphone for VDI platforms.

---

Important
Only the components, versions, and minimum hardware requirements listed in this guide are supported. Use of unsupported components can result in a nonfunctional deployment.
Accessories

Ensure that all Jabra devices are running the latest firmware. You can use Jabra Direct to update the firmware.

Cisco Jabber for Windows

Cisco Jabber for Windows 12.8 running on the hosted virtual desktop (HVD).

For complete information about virtual environment compatibility, see the Cisco Jabber documentation for your release.

Cisco Unified Communications Manager

**Recommended:** CUCM Release 11.5(1)SU3 or later

**Minimum:** CUCM Release 10.5

Connection Broker—Installed on the Hosted Virtual Desktops

- Citrix Virtual Apps and Desktops (formerly XenApp and XenDesktop) versions 7.x and later, and 7.15 CU5 LTSR
  
  Shared Desktop is supported only in full-screen mode. Published Application is supported in full-screen mode for Cisco Jabber Softphone for VDI—Windows.

- VMware Horizon versions 6.x and later

A connection broker is software that creates connections to hosted virtual desktops. A connection broker performs a number of tasks including the following:

- Validating the username and providing a connection for the user.

- Allowing the user to connect to a specific virtual desktop.

Operating Systems—Installed on the Hosted Virtual Desktops

- Microsoft Windows 8 32–bit

- Microsoft Windows 8 64–bit

- Microsoft Windows 8.1 32–bit

- Microsoft Windows 8.1 64 64–bit

- Microsoft Windows 10 32–bit

- Microsoft Windows 10 64–bit

Server Operating Systems—Installed on the Hosted Virtual Desktops

- Microsoft Windows Server 2012 R2

- Microsoft Windows Server 2016 R2
Port Requirements

Cisco Jabber Softphone for VDI requires the same ports as Cisco Jabber does, and the following additional port range:

**Table 1: Port Usage**

<table>
<thead>
<tr>
<th>Port Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>16384–32767</td>
<td>UDP Inbound and outbound traffic for RTP (audio and video streams)</td>
</tr>
<tr>
<td></td>
<td>You can configure the Cisco Unified Communications Manager to reduce this</td>
</tr>
<tr>
<td></td>
<td>port range. Change the <strong>Start/Stop Media Port</strong> setting in the SIP Profile,</td>
</tr>
<tr>
<td></td>
<td>which is associated with the CSF device.</td>
</tr>
</tbody>
</table>

Supported Codecs

**Audio Codecs:**

- G.722
- G.722.1 (24 and 32k)
  
  G.722.1 is supported on Cisco Unified Communications Manager 8.6.1 or later.
- G.711 A-law
- G.711 u-law
- G.729a
- Opus
  
  Opus is supported on Cisco Unified Communications Manager 11.0 or later.

**Video Codec:** H.264/AVC

Requirements—Windows

---

**Important**

Only the components, versions, and minimum hardware requirements listed in this guide are supported. Use of unsupported components can result in a nonfunctional deployment.

**Microsoft Windows Thin Clients—Hardware**

The minimum system requirements for thin clients are as follows:

- Installed RAM 2 GB
- Free Physical Memory 1 GB
- Free Disk Space 256 MB
- CPU Mobile AMD Sempron Processor 3600+, 2-GHz Intel Core 2 CPU, or T7400 2.16 GHz
- DirectX 11 compatible GPU
• USB 2.0 for USB camera and audio devices

**Microsoft Windows—Installed on the Thin Clients**

• Microsoft Windows 8 32–bit
• Microsoft Windows 8 64–bit
• Microsoft Windows 8.1 32–bit
• Microsoft Windows 8.1 64–bit
• Microsoft Windows 10 32–bit
• Microsoft Windows 10 64–bit
• Windows Thin PC 32–bit

---

**Note**
Cisco Jabber Softphone for VDI for Windows does not require the Microsoft .NET Framework or any Java modules.

---

**Windows Embedded Standard Thin Clients—Hardware**

The minimum system requirements for thin clients are as follows:

• Installed RAM 2 GB
• Free Physical Memory 1 GB
• Free Disk Space 256 MB
• CPU performance affects the maximum video resolution. With Windows Embedded Standard thin clients, the expected resolution depends on the CPU:
  • Up to 720p with quad-core AMD GX-420CA SOC 2 GHz or similar
  • Up to 240p with dual-core AMD G-T56N 1.65 GHz or similar
  • Audio-only support with dual-core VIA Eden X2 U4200 1 GHz or similar

---

**Note**
These hardware specifications are only guidelines for the expected resolutions. Other factors can affect video resolution.

• DirectX 11 compatible GPU
• USB 2.0 for USB camera and audio devices

**Windows Embedded Standard—Installed on the Thin Clients**

• Windows Embedded Standard 8 64–bit
  Requires Update for Windows Embedded Standard 8 for 64–bit Systems (KB4019990)
• Windows 10 IoT Enterprise

**Citrix Workspace App or VMware Horizon Client—Installed on the Thin Clients**

• Citrix Receiver (ICA) for Windows 4.4 and later

• Citrix Workspace App (ICA) for Windows 1808 and later

---

**Important** Cisco Jabber Softphone for VDI does not support Citrix Workspace App downloaded from the Microsoft Store.

• VMware Horizon Client for Windows 4.1.0 and later
  (Versions 4.3 and 4.4 are not supported.)

The Citrix Workspace app or VMware Horizon Client provides a user interface for the corresponding connection broker.

---

**Important**

Before you install the Cisco JVDI Client, install the Citrix Receiver or VMware Horizon Client on the thin client.

If you change from a Citrix environment to a VMware environment (or from VMware to Citrix), reinstall the Cisco JVDI Client.

---

**Limitations and Restrictions**

**Accessory Call Control**

Accessory call control (adjust call volume, answer or end phone calls, and mute audio) is supported for compatible headsets. Some other headsets provide basic functionality, but the accessory call control features do not work with Cisco Jabber Softphone for VDI. For a complete list of compatible headsets and other accessories, see [https://www.cisco.com/c/en/us/products/unified-communications/uc_endpoints_accessories.html](https://www.cisco.com/c/en/us/products/unified-communications/uc_endpoints_accessories.html).

**Call Preservation Mode**

Cisco Jabber Softphone for VDI does not support Call Preservation, also known as “survivability”. If a network interruption occurs and Cisco Jabber goes into Call Preservation mode, the calls drop for VDI users.

**Changes to Your Connection Method**

You must always install Citrix or VMware before you install the JVDI Client. Therefore, you must reinstall the JVDI Client after one of the following changes:

• Upgrading Citrix or VMware

• Switching from Citrix to VMware, or from VMware to Citrix
Cisco Jabber Features

Cisco Jabber Softphone for VDI Release 12.8 supports all Cisco Jabber for Windows Release 12.8 features, except the following:

- Application Sharing
- Audio device selection from the Hub Menu
- Cisco Unified Survivable Remote Site Telephony (SRST)
- Custom Contacts for Team Messaging Mode
- Far End Camera Control (FECC)
- Federal Information Processing Standard, Publication 140-2 (FIPS 140-2) and Information Assurance (IA) Compliance
- H.264 High Profile Support
- IM-only Screen Sharing
- Improved Video Resolution
- Cisco Jabber to Jabber Call
- Cisco Jabber desk phone video (display of video on the desktop when the thin client is connected to the user's desk phone)
- Kerberos and Common Access Card (CAC) with Single Sign On (SSO)
  
  Cisco Jabber Softphone for VDI does not support CAC, and supports Kerberos only with SSO.
- PreferP2PDesktopShare (configuration parameter to prioritize person to person screen sharing over video sharing in the Cisco Jabber configuration file)
- Wireless Screen Sharing
- XMPP Federation for Team Messaging Mode

Cisco Media Services Interface and Dual VLAN

Cisco Media Services Interface (MSI) and Dual VLAN are not supported for this release.

HDX RealTime Webcam with Citrix

Cisco Jabber Softphone for VDI does not support HDX Plug-n-Play for cameras. Citrix recommends using HDX Webcam for camera interactions.

Remote Display Protocol Support

Cisco Jabber Softphone for VDI supports only the following protocols:

- Citrix: ICA
- VMware: PC-over-IP (PCoIP) and VMware Blast Extreme
SIP Profiles

When you create a Cisco Unified Client Services Framework (CSF) device, you specify a **SIP Profile** for the device. SIP profiles provide specific SIP information for the phone, such as registration and keepalive timers, media ports, and Do Not Disturb control.

---

**Important**

If you choose **Secure Phone Profile**, do not specify the Certificate Authority Proxy Function (CAPF) authentication mode **By Null string**. Use of this setting, with Cisco Jabber Softphone for VDI, causes Cisco Jabber registration with Cisco Unified Communications Manager to fail.

---

**USB Camera Redirection Not Supported with VMware View**

USB camera redirection is not supported with VMware View.

**Performance and Behavior Notes**

**Adjust Settings for Jabra Bluetooth Devices**

Most Jabra Bluetooth devices introduce a short delay in bringing up the audio path (about 1 to 3 seconds). For supported Jabra Bluetooth devices, you can eliminate the delay by changing the device settings in Jabra Direct. For more information, visit [http://www.jabra.com](http://www.jabra.com).

**Before you begin**

Jabra Direct must be installed.

**Procedure**

1. Open Jabra Direct.
2. Click the Jabra device for which you want to modify the settings.
3. Click **Settings**.
4. Click to expand **Softphone (PC)**.
5. From the **Preferred softphone** list, select **Cisco Jabber**.
6. Set **Open phone line** to On.
7. Set **PC audio** to Off.
8. Click **Apply**.

**Camera Hot Swap**

Cisco Jabber Softphone for VDI establishes video quality at the start of a call. If you start a call with one of the supported HD cameras, and then switch to a standard-definition camera, video quality is affected. We recommend that you switch cameras between calls.
Cisco Jabber Installed on the Thin Client

We recommend that you do not install Cisco Jabber on the thin clients. If you do install Cisco Jabber on the thin clients, ensure that users sign out of Cisco Jabber before they sign in to their hosted virtual desktops. Cisco Jabber Softphone for VDI works only with Cisco Jabber installed on the HVD.

Echo Cancellation

Echo cancellation is enabled only for audio calls.

GPU Passthrough

Cisco Jabber Softphone for VDI depends on the display adapter name to determine whether Cisco Jabber operates in VDI-optimized mode. Cisco Jabber Softphone for VDI supports only display adapter names that include the substring "Citrix" or "VMWare".

After you set up GPU passthrough to give the HVD direct access to the display adapter, the display adapter name doesn't include the required substring. Therefore, Cisco Jabber Softphone for VDI mistakenly identifies the deployment as non-VDI.

You can work around this issue by adding the following to the Windows registry on the HVDs:

[HKEY_CURRENT_USER\Software\Cisco Systems, Inc.\JVDI] "isVDIEnabled"="true"

After you edit the registry, restart Cisco Jabber.

Jabra Firmware

Ensure that all Jabra devices are running the latest firmware. You can use Jabra Direct to update the firmware. For more information visit: http://www.jabra.com.

Video Codec Performance

Software decoding relies heavily on the CPU. Estimated CPU usage for the Cisco JVDI Client with lower-end CPUs is as follows:

- 1.5Ghz, Dual core CPU—65% (55 to75%)
- 1.5Ghz, Quad core CPU—35% (25 to 45%)

Use of a camera with a built-in hardware decoder reduces the load on the CPU.

Caveats

Bug Severity Levels

Known defects, or bugs, have a severity level that indicates the priority of the defect. These release notes include the following bug types:

- All severity level 1 or 2 bugs
- Significant severity level 3 bugs
- All customer-found bugs except severity level 6 enhancement requests
### Severity Level

<table>
<thead>
<tr>
<th>Description</th>
<th>Severity Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reasonably common circumstances cause the entire system to fail, or a major subsystem to stop working, or other devices on the network to be disrupted. No workarounds exist.</td>
<td>1 Catastrophic</td>
</tr>
<tr>
<td>Important functions are unusable and workarounds do not exist. Other functions and the rest of the network is operating normally.</td>
<td>2 Severe</td>
</tr>
<tr>
<td>Failures occur in unusual circumstances, or minor features do not work at all, or other failures occur but low-impact workarounds exist. This is the highest level for documentation bugs.</td>
<td>3 Moderate</td>
</tr>
<tr>
<td>Failures occur under very unusual circumstances, but operation essentially recovers without intervention. Users do not need to install any workarounds and performance impact is tolerable.</td>
<td>4 Minor</td>
</tr>
<tr>
<td>Defects do not cause any detrimental effect on system functionality.</td>
<td>5 Cosmetic</td>
</tr>
<tr>
<td>Requests for new functionality or feature improvements.</td>
<td>6 Enhancement</td>
</tr>
</tbody>
</table>

---

### Search for Bugs

To search for bugs not listed here, use the Bug Search Tool.

**Procedure**

**Step 1** To access the Bug Search Tool, go to [https://tools.cisco.com/bugsearch/search](https://tools.cisco.com/bugsearch/search).

**Step 2** Sign in with your Cisco.com user ID and password.

**Step 3** To look for information about a specific problem, enter the bug ID number in the **Search for** field, then press **Enter**. Alternatively, you can search by product and release.

---

### Open Caveats in Release 12.8

<table>
<thead>
<tr>
