

Release Notes for Cisco Unified MeetingPlace Release 8.0

Revised: July 16, 2013 5:31 pm

These release notes describe all versions of Cisco Unified MeetingPlace Release 8.0.

To view the release notes for previous versions of Cisco Unified MeetingPlace, go to http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_release_notes_list.html.

To access the latest software upgrades for all versions of Cisco Unified MeetingPlace, go to <http://tools.cisco.com/support/downloads/pub/Redirect.x?mdfid=278785523>.

Americas Headquarters:
Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

Introduction

These release notes describe new features, requirements, restrictions, and caveats for Cisco Unified MeetingPlace Release 8.0. These release notes are updated for every maintenance release but not for patches or hot fixes. Before you install Cisco Unified MeetingPlace, we recommend that you review this document for information about issues that may affect your system.

System Requirements

See the *System Requirements for Cisco Unified MeetingPlace* in the following location:

http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_device_support_tables_list.html

Compatibility Matrix and Supported Upgrades

For compatibility information, see the *Compatibility Matrix for Cisco Unified MeetingPlace* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_device_support_tables_list.html.

For information about supported upgrades, see the *Installation and Upgrade Guide for Cisco Unified MeetingPlace* at

http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_installation_guides_list.html.

Finding Documentation

Provide the following URL to your users:

http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_user_guide_list.html

For a complete list of documents, see the *Documentation Guide for Cisco Unified MeetingPlace* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_documentation_roadmaps_list.html.

Tips for Searching Cisco Unified MeetingPlace Documentation

We recommend that you use our Google custom search utility to find information about Cisco Unified MeetingPlace:

<http://www.google.com/cse/home?cx=010241283619130371030:iqtuq7sdnhq&hl=en>

The search results include content from Cisco.com, DocWiki, and user forums, and you can filter your results by release number.

You can also access the Cisco Unified MeetingPlace documentation search utility by clicking **Search Documentation on Cisco.com** from any page of the Administration Center, Web Administration, or Administration Help.

New and Changed Information

- [New Features in Release 8.0, page 3](#)
- [Features that Have Changed from Release 7.0 to Release 8.0, page 6](#)
- [Features No Longer Supported in Release 8.0, page 15](#)

For information about all available features and benefits, see the data sheet for Cisco Unified MeetingPlace Release 8.0 at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_data_sheets_list.html.

New Features in Release 8.0

- [Express Media Server, page 3](#)
- [Ad-Hoc Conferencing, page 3](#)
- [Force Password Change, page 4](#)
- [Video Types and Preferences, page 4](#)
- [Daylight Saving Time and Time Zone Enhancements, page 4](#)
- [Accessibility Features in the Administration Center, page 5](#)
- [Transport Layer Security for SMTP Email Notifications, page 5](#)
- [Application Server Hostname and IP Address Checked in DNS Server, page 5](#)
- [Commands for Failover, page 5](#)

Express Media Server

You may choose to install Express Media Server software on the same Cisco MCS server as the Cisco Unified MeetingPlace Application Server to provide the audio and video conferencing that was previously only available through the Hardware Media Server.

To understand the differences between the Express Media Server and the Hardware Media Server, see the “Choosing Between the Hardware Media Server and the Express Media Server” section in the *Planning Guide for Cisco Unified MeetingPlace Release 8.0*.

Two troubleshooting and monitoring commands, **taccli** and **ccamon**, were introduced for the Express Media Server. For more information about these new commands, see the “Using the Command-Line Interface (CLI) on the Cisco Unified MeetingPlace Application Server” module in the *Reference Information for Cisco Unified MeetingPlace Release 8.0*.

Ad-Hoc Conferencing

By configuring the Cisco Unified MeetingPlace Express Media Server as a Cisco video conference bridge (IPVC-35xx) in Cisco Unified Communications Manager, you can provide ad-hoc conferencing for the these endpoints:

- All voice and video endpoints that support Cisco Unified Communications Manager meet-me and ad-hoc conferences—voice and video only.
- Cisco Unified Personal Communicator—voice, web, and video.

Users initiate ad-hoc meetings through the user interfaces of products other than Cisco Unified MeetingPlace. For example, users can initiate either a voice-only or a voice-and-video ad-hoc meeting by using the **Conf** or **Meet-Me** buttons on Cisco Unified IP Phones that are registered to Cisco Unified Communications Manager. Users can also add Cisco WebEx web conferencing or IBM Lotus Sametime Web Conferencing to conversations initiated through Cisco Unified Personal Communicator.

**Note**

Cisco Unified Communications Manager Release 8.5 has a known issue with Cisco Unified MeetingPlace Release 8.0 ad hoc conferencing. A fix will be available in Cisco Unified Communications Manager Release 8.6.

Force Password Change

Release 8.0 introduces fields which enable you to force users to change their user passwords or PINs:

- Sitewide, you can set the “New users must change passwords at first sign in” field on the Usage Configuration page of the Administration Center.
- In individual user profiles, you can set one or both of the following fields:
 - Force user password change at next sign-in
 - Force PIN change at next sign-in

Video Types and Preferences

Release 8.0 introduces the ability to configure video types, each of which specifies a particular mode or codec, a minimum bit rate, and a maximum bit rate for video calls. You can specify which video types are available to each user, and users can choose which video type (called “video format”) to use in meetings that they schedule. Video types enable you to provide higher-quality video to the users who need it most, and prevent other users from exhausting all media resources (video ports) on the system.

See also the [“Media Resource Planning and Configuration” section on page 7](#).

Daylight Saving Time and Time Zone Enhancements

Release 8.0 introduces a special attribute which is assigned to all scheduled meetings. This attribute is the time requested by the scheduler in their local time zone. When you perform a daylight saving or time zone (DST/TZ) update on the Application Server, meetings with this special attribute are automatically changed according to the new DST/TZ definition if the user profile of the scheduler specifies the time zone that had the DST/TZ update.

If, however, you upgrade to Release 8.0, then meetings that were scheduled *before* the upgrade do not have this attribute and are not automatically changed when you perform a DST/TZ update:

- For DST-impacted meetings that were originally scheduled from IBM Lotus Notes or Microsoft Outlook, the system sends email notifications to the schedulers, informing them that their meetings are affected by DST and that they need to delete and reschedule the affected meetings.
- For DST-impacted meetings that were originally scheduled from the Cisco Unified MeetingPlace web user portal or from MeetingPlace Conference Manager, the system sends update notifications to the scheduler and to all invitees.

A new, editable template, DSTChange, is used for the email notifications.

**Note**

- Do not use the default time zone setting of “Local time of Cisco Unified MeetingPlace server” in user profiles. The system does not update or send notifications for meetings that are scheduled by users whose profiles specify this default time zone setting.
- When a Daylight Saving Time rule changes, you need to update all time-dependent software products in your organization, such as Cisco Unified MeetingPlace, Microsoft Exchange, Microsoft Windows, and the Microsoft Outlook plug-in for Cisco Unified MeetingPlace.

Failure to do so may cause meetings to appear to be scheduled for different times in different user interfaces. For example, a meeting scheduled in Microsoft Outlook may display the correct time in Microsoft Outlook, but may appear from the Cisco Unified MeetingPlace web user portal to be scheduled for an hour earlier or later than the correct time.

Accessibility Features in the Administration Center

Administration Center menu items are readable by screen readers, and you may now enable keyboard control of the menu:

- Press **F12** to enable keyboard control.
- Use the **Up Arrow** and **Down Arrow** to navigate through the menus.
- Press **Enter** to view a submenu.

Also, graphical reports, such as the port utilization report, are now available in text format. After you create such a report, simply select **Create Textual Report** to convert the graph into text.

Transport Layer Security for SMTP Email Notifications

Release 8.0 introduces support for Transport Layer Security (TLS) for SMTP e-mail notifications.

Application Server Hostname and IP Address Checked in DNS Server

Starting with Release 8.0 MR1, the installation program checks the DNS servers to ensure the Cisco Unified MeetingPlace hostname and IP address have valid DNS entries.

Commands for Failover

Starting with Release 8.0 MR1, the commands for failover have changed syntax. The commands to initialize and start database replication are:

- For Release 8.0 MR1, to initialize database replication:

```
mp_replication init -n 2 -r <node1-eth0:0-hostname> [-v]
```

- For Release 8.0 FCS, to initialize database replication:

```
mp_replication init -s 1-n 2 -l node2-eth0:0 -r node1-eth0:0 -h
```

- For Release 8.0 MR1, to initialize and start database replication:

```
mp_replication init -n 1 -r <node2-eth0:0-hostname> [-v]
```

```
mp_replication switchON
```

- For Release 8.0 FCS, to initialize and start database replication

```
mp_replication init -s 1 -n 1 -l node1-eth0:0 -r node2-eth0:0 -h
```

```
mp_replication switchON -r node2-eth0:0
```

Features that Have Changed from Release 7.0 to Release 8.0

Note

- If you are upgrading your system, then also see the “Changes between Release 7.0 and Release 8.0” section in the *Installation and Upgrade Guide for Cisco Unified MeetingPlace* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_installation_guides_list.html.
- If you are upgrading from Release 7.0.1, then make sure that you are aware of changes that were introduced in Release 7.0.2, because these changes are also in Release 8.0. See the “New and Changed Information” section of the *Release Notes for Cisco Unified MeetingPlace Release 7.0* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_release_notes_list.html.

- [Supported Languages, page 7](#)
- [Media Resource Planning and Configuration, page 7](#)
- [Dial-Out Calls, page 7](#)
- [Media Parameters, page 8](#)

- [Email Notification Templates, page 13](#)
- [Port Utilization Report, page 14](#)
- [Log Level Configuration, page 14](#)
- [Google Custom Search Utility, page 14](#)
- [Terminology Changes, page 14](#)

Supported Languages

Release 8.0 introduces support for these languages:

- Chinese (Traditional)
- Chinese (Simplified)

Also see the [“Supported Languages for Cisco WebEx” section on page 9](#).

Additional supported languages which were introduced in earlier releases:

- English (UK)
- English (US)
- French
- French Canadian
- German
- Japanese
- Portuguese (Brazil)
- Russian (audio/video)—English for Cisco WebEx
- Spanish (Latin America)

Media Resource Planning and Configuration

The Administration Center parameters that control the audio and video capacity of your system were moved from the Meeting Configuration page to the new Media Resource Configuration page. The available fields and values depend on whether you set up your system to use the Hardware Media Server or the Express Media Server.

We also introduced the concept of system resource units (SRUs) to specify the system capacity, which is based on hardware such as the Cisco MCS type and the number and speed of the CPUs. For details, see the *Planning Guide for Cisco Unified MeetingPlace Release 8.0*.

Dial-Out Calls

- [Dial-Out Privileges, page 7](#)
- [Dialing Out to a Previously Disconnected Video Terminal, page 8](#)

Dial-Out Privileges

In Release 8.0, user dial-out privileges are configured as follows:

- Can dial out (does not apply to Cisco WebEx meetings)—This field appears in individual user profiles, but they do not apply to guest users or to profiled users in Cisco WebEx meetings.
- Can dial out—This field appears only in the preconfigured *guest* profile. Users who join the audio portion of a Cisco WebEx meeting via a dial-out call are always treated as guests on the phone, even if they were authenticated over the web.

Note To enable dial-out calls from Cisco WebEx meetings, you must set the “Can dial out” field to Yes in the preconfigured *guest* profile.

In Release 7.0, user dial-out privileges are configured as follows:

- Can call out from meetings—This field appears in *all* user profiles, including the preconfigured guest profile.
- *Anyone* may dial out from Cisco WebEx web meetings, regardless of the user profile settings.

Dialing Out to a Previously Disconnected Video Terminal

If the system dials out to a video terminal at the start of a meeting, and that video terminal is disconnected for any reason, then one of the following dial-out methods can be used to reconnect the video terminal to the meeting:

- A user with dial-out privileges can press **#31** on the phone to dial out to that specific video terminal.
- From a Cisco WebEx web meeting, the meeting host can dial out to the video terminal.

Previously, only the following options for reconnecting the video terminal were available:

- A user with dial-out privileges could press **#33** on the phone to dial out to *all missing invitees*.
(Cisco WebEx integration only) Because Cisco WebEx treats all audio meeting participants as guest users, using this option would result in *all* invitees receiving a dial-out call, even if they were already in the audio meeting.
- The video terminal user could dial *in* to Cisco Unified MeetingPlace, but the resulting call was likely to be audio only.

Media Parameters

- [Line Echo Cancellation, page 8](#)
- [RFC 2833 Payload Type, page 8](#)

Line Echo Cancellation

The default value changed from Yes to No for the “Enable LEC w. G.729?” field on the Media Parameters Page of the Administration Center.

If you upgrade your system, the value you set in your Release 7.0 system will be used in your Release 8.0 system.

The “Enable LEC w. G.729?” field appears only on systems that are configured to use the Hardware Media Server.

RFC 2833 Payload Type

You may now specify the RFC 2833 payload type on the Media Parameters page of the Administration Center.

Preconfigured Admin Profile Cannot Access the Web Administration

To prevent unauthorized access to the Cisco Unified MeetingPlace Web Server, the preconfigured *admin* profile cannot be used to sign in to the Web Administration. You need to add a user profile of type *system administrator* in order to sign in to the Web Administration.

Previously, the preconfigured *admin* profile could be used to sign in to the Web Administration. Such access did not meet the security requirements of some customers, especially those who need to install the Web Server in the DMZ.

Cisco WebEx Integration

- [Expanded Support for Cisco WebEx Centers, page 9](#)
- [Cisco WebEx Node for MCS, page 9](#)
- [Supported Languages for Cisco WebEx, page 9](#)
- [Disabling Name Recordings During Meeting Entry, page 9](#)
- [Cisco WebEx Meeting Recordings, page 10](#)
- [End-to-End Encryption, page 10](#)
- [Web Mute Overrides TUI Unmute, page 10](#)

Expanded Support for Cisco WebEx Centers

Cisco Unified MeetingPlace now supports WebEx Meeting Center, WebEx Training Center, WebEx Event Center, and WebEx Support Center when integrated with a hosted Cisco WebEx Enterprise Edition site. Previously, Cisco Unified MeetingPlace audio integration was available only for WebEx Meeting Center.

Note

- The Cisco WebEx Productivity Tools and web scheduling interface do not support recurrence patterns for WebEx Event Center. Both Meeting Center and Training Center support recurrence.
- You must use the Cisco WebEx scheduling interface when scheduling WebEx Event Center meetings.

Cisco WebEx Node for MCS

Release 8.0 introduces the on-premises Cisco WebEx Node, which does the following:

- Enables support for internal Cisco WebEx meetings. Previously, only external Cisco WebEx web meetings were supported.
- Receives meeting data from meeting presenters and distributes the data to the other meeting participants.
- Aggregates internally generated traffic to minimize traffic on Internet links to Cisco WebEx site.
- Handles recording.
- Handles meeting control functions.

Multiple Cisco WebEx Nodes may be provisioned to increase capacity and provide for redundancy.

Supported Languages for Cisco WebEx

Cisco Unified MeetingPlace Release 8.0 supports all languages that are supported in Cisco WebEx Release WBS 27. Previously, only U.S. English was supported on Cisco Unified MeetingPlace systems that were integrated with Cisco WebEx.

Disabling Name Recordings During Meeting Entry

You may now disable name recordings during meeting entry by setting the **Meeting entry mode** in user profiles to **Skip ID repeat and skip names**. By default, when a user joins the audio portion of a meeting, the user is prompted to record a name or location. If the user is signed in to Cisco Unified MeetingPlace

and has previously recorded a name, then the system uses the previously recorded name instead of prompting the user to record one. Dial-out calls from the Cisco WebEx site, however, will always prompt the user to record a name, unless you disable name recordings during meeting entry. This is because Cisco WebEx dial-out calls are not associated with individual Cisco Unified MeetingPlace user profiles, even when users are properly signed in over the web.

Previously, there was no available method for disabling name recordings during meeting entry.

Cisco WebEx Meeting Recordings

Recording access, storage, and general implementation depend on your integration deployment and whether the meeting is internal or external.

Due to the new integration deployment options and recording differences between Release 7.0 and Release 8.0, make sure that you read the *Integration Guide for Configuring Cisco WebEx with Cisco Unified MeetingPlace Release 8.0* to understand the recording information and restrictions for your specific deployment and meeting types.

End-to-End Encryption

If end-to-end encryption is enabled on the Cisco WebEx site, then the meeting owner (host) must join to start each meeting, even if the meeting does not use end-to-end encryption. Other users, including alternate hosts, cannot join a meeting before the host.

In Release 8.0, the Join Before Host feature can only be configured from by the Cisco WebEx administrator. Previously, you were able to configure the Join Before Host feature from the Cisco WebEx Site Administration.

Web Mute Overrides TUI Unmute

When users are muted from the Cisco WebEx web interface, those users cannot press #5 on the phone to unmute themselves. After such a user is unmuted from the web, however, the #5 mute and unmute TUI options become available to the user.

Previously, users could mute and unmute themselves from the TUI even after they were muted from the web. This was considered undesirable for situations when the host wants to mute everyone except the presenter.

Microsoft Outlook Back-End Integration

When a user schedules a meeting from the Cisco Unified MeetingPlace web user portal, the scheduler receives a notification from the Cisco Unified MeetingPlace–dedicated email account and mailbox on the Microsoft Exchange Server.

These notifications now include the AD DisplayName of the Cisco Unified MeetingPlace–dedicated mailbox in the “From” field, for example:

From: NYC-MeetingPlace [nyc-mp]

Previously, the “From” field of these notifications only included the email address of the Cisco Unified MeetingPlace–dedicated mailbox, for example:

From: nyc-mp@nycad.example.com

The notifications received by meeting invitees are not affected by this change. Such notifications will continue to appear to come from the meeting scheduler, not from the Cisco Unified MeetingPlace–dedicated email account on the Microsoft Exchange Server.

IBM Lotus Notes Integration

- [Supported Releases, page 11](#)
- [Dial-Out Calls for Cisco WebEx Meetings, page 11](#)
- [Meeting Password Removed from Subject Line, page 11](#)

Supported Releases

Release 8.0 introduces support for IBM Lotus Notes Release 8.5.

IBM Lotus Notes Release 6.0.4 is no longer supported.

To see which releases are supported, see the *System Requirements for Cisco Unified MeetingPlace* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_device_support_tables_list.html.

Dial-Out Calls for Cisco WebEx Meetings

If Cisco Unified MeetingPlace is integrated with Cisco WebEx, then users are not given the option to initiate dial-out calls from IBM Lotus Notes. Instead, users join the Cisco WebEx web meetings and then dial out from the web meeting.

If Cisco Unified MeetingPlace is *not* integrated with Cisco WebEx, then users can initiate dial-out calls from IBM Lotus Notes.

Previously, users were always allowed to initiate dial-out calls from IBM Lotus Notes (for audio, video, and web meetings).

Meeting Password Removed from Subject Line

For meetings scheduled from IBM Lotus Notes, the meeting password (if any) now appears only in the *body* of notifications and calendar entries.

Previously, meeting passwords also appeared in the *subject* line of notifications and calendar entries.

Password Complexity Checks

In Release 8.0, user password complexity checks are enforced from all Cisco Unified MeetingPlace user interfaces:

- web user portal (Web Server)
- Web Administration (Web Server)
- Administration Center (Application Server)
- MeetingPlace Conference Manager (Application Server)
- Cisco WebEx integration end-user interface (Application Server)

In Release 7.0, the user password complexity checks were enforced only from the Administration Center and the Cisco WebEx integration end-user interface on the Application Server.

Hardware Media Server Console Baud Rate

The baud rate of the video blade console port was changed from 9600 baud to 57600 baud, so now both audio blade and video blade console ports use the same baud rate of 57600 baud.

Maximum Ports per Meeting

Release 8.0 introduces a new field, “Maximum reserved ports per scheduled meeting,” to prevent users from reserving so many ports that other users can no longer schedule meetings due to the lack of available ports. Two related existing fields, “Maximum ports per reservationless meeting” and “Maximum ports per scheduled meeting,” determine how many endpoints can actually join meetings, regardless of how many ports were actually reserved. All three fields are on the Media Resource Configuration page of the Administration Center.

Previously, only the “Maximum ports per reservationless meeting” and “Maximum ports per scheduled meetings” fields were available, and they were on the Meeting Configuration page of the Administration Center.

Scheduling Recurring Meetings from the Web User Portal

The Cisco Unified MeetingPlace web user portal no longer allows the user to schedule (or reschedule) a recurring meeting that can only be partially scheduled. If *any* of the meeting occurrences cannot be scheduled (for example, due to resource availability or a meeting ID conflict), then the entire recurring meeting chain cannot be scheduled. This enhancement enables email notifications to provide the correct and expected information for recurring meetings, especially if they are ever rescheduled.

Previously, a user could choose to schedule (or reschedule) a recurring meeting for which only a subset of occurrences would be successfully scheduled. For example, suppose that only 7 of 10 requested occurrences could be scheduled for a recurring meeting. If someone later reschedules that recurring meeting, then the system attempts to reschedule all 10 occurrences. The resulting email notifications may confuse users, because they previously saw only 7 occurrences in their calendars.

Reservationless Single Number Access

Release 8.0 supports the following codecs with Reservationless Single Number Access (RSNA):

- Hardware Media Server: G.711 a-Law, G.711 μ -Law, G.722, G.729a, G.729b, iLBC.
- Express Media Server: G.711 a-Law, G.711 μ -Law, G.722, G.729a.

Previously, only the following codecs were supported: G.711 a-Law, G.711 μ -Law, and G.729.

User Database Replication for Two Sites

Typically used with Directory Service and RSNA, user database replication enables two Cisco Unified MeetingPlace sites to have synchronized user profiles and user groups.

In Release 8.0, all user profiles of all types are replicated between the two sites. The only exceptions are the preconfigured *admin*, *guest*, and *recorder* profiles. You can use the preconfigured admin profile only on the local Application Server, but you can create new administrator-level profiles as required to access servers in both sites.

Previously, only user profiles of type *end user* were replicated between the two sites. Therefore, if you upgrade from Release 7.0 to Release 8.0, then you need to remove duplicate user profiles of type *delegate*, *attendant*, or *system administrator* before you upgrade your Application Servers.

System Information Capture (Infocap)

The Cisco Security Agent (CSA) log is now included in the infocap.

Disk Space Maintenance

The maximum severity of the EX_MISC_SPACE alarm was changed from MINOR to MAJOR, and the processes that trigger this alarm now monitor the /var and /tmp directories, which store application log files and infocap log files.

Specifically for the /var and /tmp directories, the EX_MISC_SPACE exception is triggered as follows:

- WARN—85% disk space utilization
- MINOR—90% disk space utilization
- MAJOR—95% disk space utilization

Exception Name	Decimal Code	Hex Code	Description
EX_MISC_SPACE	1048681	0x100069	A disk partition is critically low on space.

Previously, if a Cisco Unified MeetingPlace system was allowed to accumulate numerous large log files in the /var and /tmp directories, then the system was at risk of running critically low on disk space. If this occurred, then the system stopped answering calls until someone deleted the log files and restarted the system.

For information about all Cisco Unified MeetingPlace alarms, see the *Alarm and Exception Code Reference for Cisco Unified MeetingPlace* at

http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_technical_reference_list.html.

Continuous Meetings

In Release 8.0, continuous meetings have no maximum meeting length.

In Release 7.0, a continuous meeting instance cannot exceed 24 hours, after which time the system drops all calls in the meeting. Afterwards, meeting participants may immediately rejoin to restart the meeting.

Email Notification Templates

Customized email notification templates are now preserved during upgrades, as long as the standard email notification templates remain the same between the two releases. Specifically, during an upgrade, the system compares the email template version information of the previous installation with the current installation.

- If the email template version information is the same, the system does not overwrite the customized email templates.
- If the email template version information is different, or if there is no version information from the previous installation, then the system overwrites all custom email notification templates and replaces them with the standard email notification templates for the later release.

The system copies all of the previous notification templates to a backup directory, from which you can recover your customizations: /opt/cisco/meetingplace/var.<version>/mail/res/email_templates, where <version> identifies the earlier Cisco Unified MeetingPlace release, for example, 7.0.2.14.

Previously, during upgrades, the system would *always* overwrite custom e-mail notification templates and replace them with the standard e-mail notification templates. You could still recover your customizations from the backup directory:

/opt/cisco/meetingplace/var.<version>/mail/res/email_templates.

Port Utilization Report

You can now run port utilization reports for a specified date range. Previously, the port utilization report provided data for only one specified day.

Log Level Configuration

You can define log levels for web applications and for the Hardware Media Server. The system collects messages for the specified log level and all the levels below it. The higher the log level you specify, the more information is collected. Debug is the highest log level.

Previously, you could only define log levels for the Media Server.

Google Custom Search Utility

You may now access the Cisco Unified MeetingPlace documentation search utility by clicking **Search Documentation on Cisco.com** from any page of the Administration Center, Web Administration, or Administration Help.

Previously, you could only access this search utility by going to the following URL:
<http://www.google.com/cse/home?cx=010241283619130371030:iqtuq7sdnhq&hl=en>

The search results include content from Cisco.com, DocWiki, and user forums, and you can filter your results by release number.

Terminology Changes

Terminology changes were made throughout the user interfaces and documentation to improve usability and consistency with other Cisco products.

Old Term	New Term
profile password	PIN
profile ID	profile number
outdial	dial call
purge	delete
moderator	host ¹
audience	attendee ¹
username	user ID
log in	sign in
log out	sign out

- For more information about this term, see the “[Differences Between Cisco Unified MeetingPlace Web Conferencing and Cisco WebEx Web Conferencing](#)” section on page 19

Features No Longer Supported in Release 8.0

- **Cisco Unified MeetingPlace Web Conferencing**—You can still use web conferencing with Cisco Unified MeetingPlace by integrating with Cisco WebEx or IBM Lotus Sametime Web Conferencing. Also, if you upgrade from Release 7.0 to Release 8.0, users can still play back the Cisco Unified MeetingPlace Web Conferencing meetings that were recorded on the Release 7.0 system.

If you switch from Cisco Unified MeetingPlace Web Conferencing to Cisco WebEx or IBM Lotus Sametime Web Conferencing, make sure that you train your users how to use the new web conferencing option. For Cisco WebEx, make sure you provide the relevant information in the “[Differences Between Cisco Unified MeetingPlace Web Conferencing and Cisco WebEx Web Conferencing](#)” section on page 19. Also, choose the relevant option from the following list to help your users get started:

- For Cisco WebEx integration where users schedule meetings from Cisco Unified MeetingPlace, have your users watch the Cisco WebEx video quick start guide, which is available from the Cisco Unified MeetingPlace web user portal.
- For Cisco WebEx integration where users schedule meetings from Cisco WebEx, have your users complete the user training provided by Cisco WebEx.
- For IBM Lotus Sametime Web Conferencing integration, have your users read the *Quick Start Guide: Using IBM Lotus Sametime Web Conferencing with Cisco Unified MeetingPlace Release 8.0*, which is available at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_user_guide_list.html.
- **Cisco Unified MeetingPlace for Microsoft Office Communicator**—The ability to escalate text-based instant-messaging sessions into voice meetings is still available for Cisco Unified MeetingPlace integrations with IBM Lotus Sametime Instant Messaging and Jabber Messenger.
- **Lecture-style meetings**—Q&A and webinar features are still available by integrating Cisco Unified MeetingPlace with Cisco WebEx. Specifically, you would use a Cisco WebEx–scheduling deployment with WebEx Event Center. However, the ability to “raise your hand” from the telephone user interface to ask a question is no longer supported. All users must be in the web conference to ask questions during a WebEx Event Center meeting by using the Q&A Panel or “Raise Hand” option on the Participant Panel.
- **Video port reservations**—Video resources will now be distributed on a first-come, first-serve basis as users join meetings. This change enables Cisco Unified MeetingPlace to support high-rate video and high-quality audio without unnecessarily preventing users from scheduling meetings due to the lack of available ports.
- **Recording resource reservations**—A recording resource is no longer used while Cisco Unified MeetingPlace records a meeting. Therefore, we removed the scheduling parameters that reserve recording resources.
- **Recording features available to end-users from the telephone**—Release 8.0 no longer supports the following end-user features from the telephone:
 - The ability to access meeting recordings
 - The ability to start or stop recordings
- **IBM Lotus Notes Release 6.0.4**—To see which releases are supported, see the *System Requirements for Cisco Unified MeetingPlace* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_device_support_tables_list.html.

Installation Notes

- [Upgrading to the Latest Maintenance Release, page 16](#)
- [Migrating to Release 8.0 from Cisco Unified MeetingPlace Express, page 16](#)

Upgrading to the Latest Maintenance Release

All maintenance releases for Cisco Unified MeetingPlace are available from the Cisco Software Download site at:

<http://www.cisco.com/cisco/software/navigator.html?mdfid=278785523&flowid=5383>

- You may be prompted to sign in with your Cisco.com username and password.
- For the Application Server, select **Cisco Unified MeetingPlace 8.0 > Unified MeetingPlace Application Server**
- For the web server, select **Cisco Unified MeetingPlace Web Conferencing** then navigate to your release.
- Make sure that you read any readme files associated with your download for the latest notes and warnings.

Note

There is an intermittent issue when upgrading from Cisco Unified MeetingPlace Release 8.0.1 to Release 8.0.2 (Maintenance Release 1) with the Express Media Server. The upgrade procedure completes successfully even when the issue is experienced. However, after the upgrade, a core dump file for the cca module remains on the disc. This does not invalidate the upgrade, and the newly installed system is fully functional.

Migrating to Release 8.0 from Cisco Unified MeetingPlace Express

If you migrate from Cisco Unified MeetingPlace Express to Cisco Unified MeetingPlace Release 8.0, then you need to install a patch after completing the migration process to avoid the issues described in CSCtf35957 and CSCtf42268.

Procedure

- Step 1** Go to <http://tools.cisco.com/support/downloads/pub/Redirect.x?mdfid=278785523>.
- Step 2** If prompted, sign in with your Cisco.com username and password.
- Step 3** Select **Cisco Unified MeetingPlace 8.0 > Unified MeetingPlace Application Server > CUMP v.8 > 8.0(1)_SR1**.
- Step 4** Select **Download Now**.
- Step 5** Download and install the patch per the instructions in the readme file.

For general step-by-step installation, upgrade, and migration instructions, see the *Installation and Upgrade Guide for Cisco Unified MeetingPlace* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_installation_guides_list.html.

Limitations and Restrictions

- [WebEx Call Back Feature Becomes Slow or Stops Working, page 17](#)
- [Closed Caveats, page 17](#)

WebEx Call Back Feature Becomes Slow or Stops Working

By design, Cisco Unified MeetingPlace Release 8.0 has a limited number of threads for processing Cisco WebEx requests. When the system is experiencing a heavy load, the thread pool can be exhausted and users can experience delays in processing requests.

Closed Caveats

These caveats have been closed, which means that Cisco acknowledges that there is a problem but chooses not to fix it. See the [“Using Bug Toolkit” section on page 23](#) for information about accessing these caveats.

- [Closed Caveats for Cisco Unified MeetingPlace Release 8.0.2](#)
- [Closed Caveats for Cisco Unified MeetingPlace Release 8.0.1](#)

Important Notes

- [Third-Party Software Policy, page 18](#)
- [How to Purchase and Deploy Cisco Unified MeetingPlace Release 8.0 with Cisco WebEx Meeting Center, page 18](#)
- [Differences Between Cisco Unified MeetingPlace Web Conferencing and Cisco WebEx Web Conferencing, page 19](#)
- [Microsoft Updates or Patches, page 23](#)

Third-Party Software Policy

Cisco Unified MeetingPlace is extensively tested in its supported hardware and software environment. Diverging from the supported hardware and software environment by adding third-party components may negatively impact Cisco Unified MeetingPlace functionality and may impose limitations to your Cisco support.

Cisco qualifies a fixed set of required third-party software, including remote-access and antivirus. This set is documented in the System Requirements document for each release. Any third-party components that are not explicitly listed in the System Requirements documentation are not supported.

How to Purchase and Deploy Cisco Unified MeetingPlace Release 8.0 with Cisco WebEx Meeting Center

-
- Step 1** Do the architecture design work around designing and integrating Cisco Unified MeetingPlace Release 8.0 and Cisco WebEx Meeting Center. For additional information, see the *Planning Guide for Cisco Unified MeetingPlace* and the *Cisco Unified Communications Solution Reference Network Design (SRND)* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_implementation_design_guides_list.html.
- Step 2** Purchase Cisco Unified MeetingPlace Release 8.0 with Cisco WebEx using one of the following options:
- To quote as part of CUWL-Pro, go to the Ordering Guide for Cisco Unified Workspace Licensing at http://www.cisco.com/web/partners/sell/technology/ipc/uc_tech_readiness.html.

- To quote as a Cisco Unified MeetingPlace Release 8.0 system, go to the Ordering Guide for Cisco Unified Communications Applications at http://www.cisco.com/web/partners/sell/technology/ipc/uc_tech_readiness.html.
- To migrate from an earlier version of Cisco Unified MeetingPlace please follow the instructions in the migration section in the Ordering Guide for Cisco Unified Communications Applications at http://www.cisco.com/web/partners/sell/technology/ipc/uc_tech_readiness.html.

Step 3 After you receive your software kit and have the necessary servers, do the following:

- a. Go to <http://www.cisco.com/go/license> and type in the Cisco Unified MeetingPlace Product Authorization Key (PAK) to obtain your Cisco Unified MeetingPlace license. You will need the MAC address of the Cisco Unified MeetingPlace Application Server. You will also be asked for partner and end customer information. The license will be emailed to you from licensing@cisco.com.
- b. Go to <http://www.cisco.com/go/license> and type in the Cisco WebEx Node for MCS Product Authorization Key (PAK) to start your Cisco WebEx account setup. You will be asked for partner and end customer information. This process verifies entitlement of the Cisco WebEx Node for MCS.
- c. Install the Cisco Unified MeetingPlace Release 8.0 software.

Step 4 At the end of the Cisco WebEx Node for MCS registration process, you will be instructed to complete a web form. Completion of this form is required to activate your Cisco WebEx subscription. You will also receive an email with the same registration link. The web site will require partner information, end customer information and Cisco Unified MeetingPlace Release 8.0 installation configuration information.

Note You MUST supply end customer information including the end customer web address as Cisco WebEx is connected directly into the end-customer network.

Step 5 Cisco WebEx will process the information that you provided for entitlement and registration. Cisco WebEx will send an email requesting the Cisco WebEx Node for MCS Serial numbers.

Step 6 Cisco WebEx will send you an email instructing you how to set up your Cisco WebEx conferencing account.

Step 7 If you wish to later purchase additional Cisco Unified Workspace Licensing users, go to the Ordering Guide for Cisco Unified Workspace Licensing at http://www.cisco.com/web/partners/sell/technology/ipc/uc_tech_readiness.html.

NOTE: Read carefully how the additional Cisco WebEx Node ports are added to your existing Cisco WebEx subscription.

Differences Between Cisco Unified MeetingPlace Web Conferencing and Cisco WebEx Web Conferencing

Note This topic applies only if you upgrade your Cisco Unified MeetingPlace system from a previous release with Cisco Unified MeetingPlace Web Conferencing to Release 8.0 with Cisco WebEx web conferencing.

If you switch from Cisco Unified MeetingPlace Web Conferencing to Cisco WebEx web conferencing, make sure you provide information about the relevant differences to your users.

Table 3 Comparing Cisco Unified MeetingPlace Web Conferencing and Cisco WebEx Web Conferencing

Feature	Cisco Unified MeetingPlace Web Conferencing (not supported in Release 8.0)	Cisco WebEx Web Conferencing
Permission model	<p>Participants are assigned permissions according to their status as profiled or guest users and the meeting template used.</p> <p>Moderator has full control of meeting including audio controls.</p> <p>Presenter can share at any time.</p> <p>Audience can speak, view only.</p> <p>Multiple moderators and presenters are allowed within a meeting.</p>	<p>The meeting host starts the meeting as the presenter by default. The host can then pass these permissions to another user.</p> <p>Host has full control of meeting including sharing and audio controls.</p> <p>Presenter can share when granted permission.</p> <p>Attendees can speak, view only.</p> <p>Only one host and one presenter are allowed at any time.</p>
Initial meeting entry	<p>Download Flash plug-in.</p> <p>Participants can join the web meeting before the moderator joins.</p>	<p>Install Cisco WebEx client.</p> <p>Participants can join the web meeting before the host joins.</p> <p>If, however, end-to-end (E2E) encryption is enabled on the Cisco WebEx site, then the host must join the web conference before others can join the web portion.</p>
General meeting entry	<p>Passwords are optional.</p>	<p>Passwords are highly recommended.</p> <p>When set, participants must use the password to enter both audio and web portions of the meeting.</p>
Meeting announcements	<p>Users can modify, enable, and disable various meeting announcements from the Cisco Unified MeetingPlace web user portal and the web meeting room.</p>	<p>Users cannot disable entry and exit announcements from the Cisco WebEx web meeting room.</p> <p>(Cisco Unified MeetingPlace scheduling only) Users can modify, enable, and disable various meeting announcements from the Cisco Unified MeetingPlace web user portal.</p>
Meeting attachments	<p>Users can attach meeting materials before, during, and after the meeting.</p>	<p>Meeting attachments are not supported.</p>
Sharing	<p>Moderators and presenters can share at any time</p> <p>Multiple people can share at the same time.</p> <p>Supports dual monitor setups.</p> <p>Supports sharing from Windows and Mac OS machines.</p> <p>Supports viewing from Linux & Unix machines.</p>	<p>Only the presenter can share. The host must pass the ball to another meeting participant in order for that person to share.</p> <p>If the host does not attend the meeting, an alternate host must be assigned when the meeting is scheduled or the alternate host must enter the alternate host key to start sharing.</p> <p>Only one person can share at any time.</p> <p>Supports single monitor only.</p> <p>Supports sharing from Windows, Mac OS, Linux & Unix machines.</p>

Table 3 Comparing Cisco Unified MeetingPlace Web Conferencing and Cisco WebEx Web Conferencing (continued)

Feature	Cisco Unified MeetingPlace Web Conferencing (not supported in Release 8.0)	Cisco WebEx Web Conferencing
Webinar	Moderated Q&A, Presenter only area available for Webinar meetings.	Webinar-equivalent meeting is available only in Cisco WebEx Event Center, which is supported only in Cisco WebEx–scheduling deployments.
In-session participant management	<p>Moderator can mute and unmute self and others.</p> <p>Individuals can mute and unmute themselves anytime.</p> <p>Unmute all is not available.</p> <p>Moderator can turn individual speaker ability on or off.</p> <p>Users can lock and unlock the meeting via both audio and web interfaces.</p> <p>Moderator can merge participants who dial in and sign in to the web separately.</p> <p>Moderator can move audience and listeners to the waiting room from the web.</p>	<p>Host can mute and unmute self and others.</p> <p>Once muted by the host, individuals cannot unmute themselves. Otherwise, attendees can mute and unmute themselves anytime.</p> <p>Host can unmute all.</p> <p>Host turns individual speaker ability on or off via the Unmute/Mute button.</p> <p>Lock meeting from web locks both web and audio.</p> <p>Lock meeting from audio locks only the audio meeting.</p> <p>No support for merging participants or moving participants to a waiting room.</p>
Breakout rooms	<p>Users have a choice between nine breakout rooms in which they can discuss topics before returning to the main meeting. Users can access breakout rooms from both the web meeting room and the phone.</p> <p>When users move to a breakout room, this is reflected in the Cisco Unified MeetingPlace web meeting room.</p>	<p>Users can move to breakout rooms by using the appropriate key sequence on the phone.</p> <p>Users cannot access breakout rooms from the web, and their presence in a breakout room is not reflected in the Cisco WebEx web meeting room.</p>
Participant names	<p>Caller ID is displayed for guests who dial in.</p> <p>Moderator can rename others on web participant list.</p>	<p>Guests who dial in will be identified as Call In User 1, Call In User 2, and so on.</p> <p>Users with appropriate permissions can rename themselves and other participants in the web meeting room. However, these changes are not visible to other users.</p>

Table 3 Comparing Cisco Unified MeetingPlace Web Conferencing and Cisco WebEx Web Conferencing (continued)

Feature	Cisco Unified MeetingPlace Web Conferencing (not supported in Release 8.0)	Cisco WebEx Web Conferencing
Meeting recordings	<p>The following are available:</p> <ul style="list-style-type: none"> • Audio-only recordings that are initiated from the phone. • Synchronized audio/web or audio/video recordings that are initiated from the web or a video endpoint are stored on the local web server by default. <p>Participants can retrieve recordings from web or audio.</p> <p>Recordings can be viewed directly from the web browser.</p> <p>Offline viewing of audio + web recordings is not available.</p> <p>Recording storage is limited by local and network storage space.</p>	<p>Depends on your deployment (Cisco Unified MeetingPlace scheduling or Cisco WebEx scheduling) and whether the meetings are internal or external.</p> <p>See the “Recording Information for Specific Cisco WebEx Integration Deployments” section in the “Configuring Recordings for Cisco Unified MeetingPlace–Cisco WebEx Integration” module of the <i>Integration Guide for Configuring Cisco WebEx with Cisco Unified MeetingPlace</i>.</p>
Layout management	<p>Flexible layouts; collaborative, presentation and Webinar templates are available.</p> <p>Users can create custom templates.</p> <p>Layout changes during the meeting affect all users (option to allow Full Screen button to affect individuals only).</p>	<p>Fixed layout, no changes allowed.</p> <p>Custom templates are not available.</p> <p>Full screen view can be driven by host, but individual can control display size.</p>
Video	<p>Video is shown in a separate window in the meeting room.</p> <p>Meeting participants can share video if they are using a standards-based H.323 or Cisco Unified Communications Manager Video Telephony endpoint (SCCP and SIP). H.320 ISDN Video is also supported via Cisco Unified Video 3500 ISDN Gateway.</p> <p>Users can dial out to standard video endpoints from the web.</p> <p>Users can pause or change video layouts (active speaker/continuous presence) from the web.</p> <p>Integrated webcam video is not available.</p>	<p>Video is shown directly in the web conferencing window.</p> <p>Meeting hosts can share video directly from web cameras on their computers.</p> <p>Webcam video is available, but does not interoperate with standard endpoints.</p> <p>Webcam video is available and allows video usage inside and outside the firewall.</p>

Table 3 Comparing Cisco Unified MeetingPlace Web Conferencing and Cisco WebEx Web Conferencing (continued)

Feature	Cisco Unified MeetingPlace Web Conferencing (not supported in Release 8.0)	Cisco WebEx Web Conferencing
Meeting termination	<p>Meeting automatically extends as long as two participants remain in the meeting. Moderator can join and leave the meeting at any time.</p> <p>Individuals can remain on audio even after they leave the web session.</p>	<p>Both audio and web portions of the meeting end when the host leaves, but the host may use one of these options to allow the meeting to continue:</p> <ul style="list-style-type: none"> • Host transfers the host permissions to another attendee before leaving. • While leaving, the host selects the option to continue the audio portion of the meeting after the host leaves. Individuals can then remain in the audio meeting even after leaving the web meeting.

Microsoft Updates or Patches

Do not apply operating system updates or patches directly from Microsoft on your Cisco MCS. Cisco qualifies such updates and patches for its applications and then makes them available to customers. Customers can sign up to be notified of available updates through the following URL:
<http://www.cisco.com/cisco/support/notifications.html>.

Caveats

- [Using Bug Toolkit, page 23](#)
- [Open Caveats, page 24](#)
- [Resolved Caveats, page 25](#)

Using Bug Toolkit

Known problems (bugs) are graded according to severity level. These release notes contain descriptions of the following:

- All severity level 1 or 2 bugs.
- Significant severity level 3 bugs.
- All customer-found bugs except severity level 6 enhancement requests.

You can search for problems by using the Cisco Software Bug Toolkit.

Before You Begin

To access Bug Toolkit, you need the following items:

- Internet connection
- Web browser
- Cisco.com user ID and password

Procedure

-
- Step 1** To access the Bug Toolkit, go to <http://tools.cisco.com/Support/BugToolkit/action.do?hdnAction=searchBugs>.
- Step 2** Log in with your Cisco.com user ID and password.
- Step 3** To look for information about a specific problem, enter the bug ID number in the “Search for Bug ID” field, then click **Go**.
-

For information about how to search for bugs, create saved searches, and create bug groups, click **Help** in the Bug Toolkit page.

Open Caveats

The following caveats describe possible unexpected behavior in the latest Cisco Unified MeetingPlace release. These caveats may also be open in previous releases. Bugs are listed in order of severity and then in alphanumeric order by bug identifier.

- [Open Caveats in Cisco Unified MeetingPlace Release 8.0.2](#)
- [Open Caveats in Cisco Unified MeetingPlace Release 8.0.1](#)

Table 4 *Open Caveats in Cisco Unified MeetingPlace Release 8.0.2*

Identifier	Severity	Component	Headline
CSCts88963	2	mp-server	Change user password on AD and turnoff AD and try outlook login
CSCtt07587	3	installer	MP8.0SR1->MP8.0MR1-some modules are down due to cma.logs
CSCtt17606	6	mp-server	New timezone rules

CSCte55384	6	mp-server	Invited guest participant cannot attend “invited only” meetings

Resolved Caveats

This section lists caveats that are resolved but that may have been open in previous releases.

Bugs are listed in order of severity and then in alphanumeric order by bug identifier. Because defect status continually changes, be aware that this document reflects a snapshot of the defects that were resolved at the time this report was compiled. For an updated view of resolved defects, access the Bug Toolkit (see the “Using Bug Toolkit” section on page 23).
