debug arp

To enable debugging of ARP, use the **debug arp** command.

debug arp { **errors** | **events** | **packets** }

Syntax Description

errors Enable debugging of ARP errors

events Enable debugging of ARP events

packets Enable debugging of ARP Tx and Rx packets

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

Examples

The following example shows how to enable debugging of ARP errors:

```
cisco-wave2-ap# debug arp errors
```

debug ble

To enable debugging of Bluetooth Low Energy (BLE), use the **debug ble** command.

debug ble {critical |error |events |fastpath {rssi |scan |sync} |receive |transmit}

Syntax Description

| | |
|--------------------------------------|--|
| critical | Enables debugging of BLE critical events |
| error | Enables debugging of BLE error events |
| events | Enables debugging of BLE events |
| fastpath {rssi scan sync} | Shows data exported to CMX. The following options are available: <ul style="list-style-type: none"> • RSSI data • Scan data • Sync data |
| receive | Enables debugging of BLE packet received from BLE radio |
| transmit | Enables debugging of BLE packet transmitted to BLE radio |

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.7 This command was introduced.

Examples

The following example shows how to enable debugging of BLE critical events:

```
cisco-wave2-ap# debug ble critical
```

debug capwap client

To enable debugging of CAPWAP clients, use the **debug capwap client** command.

debug capwap client { **ble** | **detail** | **efficient-upgrade** | **error** | **events** | **flexconnect** | **info** | **keepalive** | **payload** | **pmtu** | **qos** | **reassembly** | **security** }

| Syntax Description | |
|--------------------------|--|
| ble | Enables debugging of CAPWAP BLE detail |
| detail | Enables debugging of CAPWAP detail |
| efficient-upgrade | Enables debugging of image predownload |
| error | Enables debugging of CAPWAP error |
| events | Enables debugging of CAPWAP events |
| flexconnect | Enables debugging of CAPWAP FlexConnect mode event |
| info | Enables debugging of CAPWAP information |
| keepalive | Enables debugging of CAPWAP keepalive |
| payload | Enables debugging of CAPWAP payload |
| pmtu | Enables debugging of CAPWAP path MTU |
| qos | Enables debugging of CAPWAP QoS |
| reassembly | Enables debugging of CAPWAP reassembly |
| security | Enables debugging of CAPWAP security |

Command Modes Privileged EXEC (#)

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of CAPWAP client detail:

```
cisco-wave2-ap# debug capwap client detail
```

debug capwap client avc

To enable debugging of CAPWAP client AVC, use the **debug capwap client avc** command.

debug capwap client avc {**all** | **detail** | **error** | **event** | **info** | **netflow** {**all** | **detail** | **error** | **event** | **packet**} | **numflows**}

Syntax Description

| | |
|-----------------------|---|
| all | Enables debugging of all CAPWAP client AVC |
| detail | Enables debugging of CAPWAP AVC detail |
| error | Enables debugging of CAPWAP AVC error |
| event | Enables debugging of CAPWAP AVC event |
| info | Enables debugging of CAPWAP AVC information |
| netflow | Enables debugging of CAPWAP client AVC NetFlow |
| netflow all | Enables debugging of all CAPWAP client AVC NetFlow |
| netflow detail | Enables debugging of CAPWAP client AVC NetFlow detail |
| netflow error | Enables debugging of CAPWAP client AVC NetFlow error |
| netflow event | Enables debugging of CAPWAP client AVC NetFlow event |
| netflow packet | Enables debugging of CAPWAP client AVC NetFlow packet |
| numflows | Enables debugging of CAPWAP client AVC numflows |

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

Examples

The following example shows how to enable debugging of all CAPWAP client AVC:

```
cisco-wave2-ap# debug capwap client avc all
```

debug cdp

To enable debugging of controller discovery protocol (CDP), use the **debug cdp** command.

debug cdp { **adjacency** | **events** | **ilp** | **packets** }

| Syntax Description | |
|--------------------|------------------------------------|
| adjacency | Enables debugging of CDP neighbors |
| events | Enables debugging of CDP events |
| ilp | Enables debugging of inline power |
| packets | Enables debugging of CDP packets |

Command Modes Privileged EXEC (#)

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of CDP events:

```
cisco-wave2-ap# debug cdp events
```

debug cleanair

To configure debugging of CleanAir, use the **debug cleanair** command.

```
debug cleanair {bringup | event | logdebuglow | major | nsi | offchan {0 | 1}}
```

Syntax Description

| | |
|----------------------|--|
| bringup | Enables debugging of CleanAir port or bringups |
| events | Enables debugging of normal CleanAir events |
| logdebug | Logs CleanAir debug output to a logfile |
| low | Enables debugging of hex dump of some messages |
| major | Enables debugging of major CleanAir events |
| nsi | Enables debugging of NSI messages |
| offchan 0 1 | Enables debugging of CleanAir MSMT requests. You have to specify the radio slot as either 0 or 1 |

Command Modes

Privileged EXEC (#)

Command History

| Release | Modification |
|-----------|------------------------------|
| 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of major CleanAir events:

```
cisco-wave2-ap# debug cleanair major
```

debug dhcp

To configure debugging of DHCP, use the **debug dhcp** command.

```
debug dhcp { errors | events | packets }
```

| Syntax Description | |
|--------------------|-----------------------------------|
| errors | Enables debugging of DHCP errors |
| events | Enables debugging of DHCP events |
| packets | Enables debugging of DHCP packets |

| Command Modes | |
|---------------|---------------------|
| | Privileged EXEC (#) |

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of DHCP errors:

```
cisco-wave2-ap# debug dhcp errors
```

debug dot11

To enable debugging of 802.11, use the **debug dot11** command.

debug dot11 { **critical** | **errors** | **events** | **info** }

| Syntax Description | |
|--------------------|--|
| critical | Enables 802.11 critical level debugging |
| errors | Enables 802.11 error level debugging |
| events | Enables 802.11 event level debugging |
| info | Enables 802.11 information level debugging |

Command Modes Privileged EXEC (#)

| Command History | Release Modification |
|-----------------|--|
| | 8.1.111.0 This command was introduced. |

Examples

The following example shows how to enable debugging of 802.11 error level:

```
cisco-wave2-ap# debug dot11 errors
```

debug dot11 client datapath

To enable debugging of 802.11 client datapath, use the **debug dot11 client datapath** command.

```
debug dot11 client datapath {{arp | dhcp | eapol} {addr {mac-addr1 | mac-addr2 | mac-addr3
| mac-addr4} | all}} | dns-acl}
```

| Syntax Description | | |
|---|--|--|
| arp | | Enables client datapath ARP debugging |
| dhcp | | Enables client datapath DHCP debugging |
| eapol | | Enables client datapath EAPOL debugging |
| { addr all } | | Option to specify MAC address of specific clients or all clients |
| { <i>mac-addr1</i> <i>mac-addr2</i> <i>mac-addr3</i> <i>mac-addr4</i> } | | MAC addresses of clients that you have to enter |
| dns-acl | | Enables client datapath DNS-ACL debugging |

Command Modes Privileged EXEC (#)

Command History **Release** **Modification**

8.1.111.0 This command was introduced.

Examples

The following example shows how to enable debugging of client datapath ARP:

```
cisco-wave2-ap# debug dot11 client datapath arp
```

debug dot11 client level

To enable 802.11 client debugging level, use the **debug dot11 client level** command.

```
debug dot11 client level {critical | errors | events | info} {addr {mac-addr1 | mac-addr2 |
mac-addr3 | mac-addr4} | all}
```

Syntax Description

| | |
|--|--|
| critical | Enables client critical level debugging |
| errors | Enables client error level debugging |
| events | Enables client event level debugging |
| info | Enables client information level debugging |
| {addr all} | Option to specify MAC address of specific clients or all clients |
| {mac-addr1 mac-addr2 mac-addr3 mac-addr4} | MAC addresses of clients that you have to enter |

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

Examples

The following example shows how to enable debugging of all clients at the event level:

```
cisco-wave2-ap# debug dot11 client level events all
```

debug dot11 driver slot

To enable debugging of 802.11 drivers, use the **debug dot11 driver slot** command.

```
debug dot11 driver slot {0 | 1} {all | {cac {info | metrics}} | chd | save-acnt-data |
save-on-failure [extended] | stop-on-failure | tsm | vim | type { all | assoc | auth |
dhcp | eap | icmp | probe }
```

| Syntax Description | slot {0 1} | Enables 802.11 driver debugs per radio |
|--------------------|---------------------------------|--|
| | all | Enables all 802.11 driver debugs |
| | cac | Enables 802.11 CAC debugs |
| | cac info | Enables 802.11 CAC info level debugs |
| | cac metrics | Enables debugging of 802.11 CAC metrics |
| | chd | Enables 802.11 CHD debugs |
| | save-acnt-data | Saves the radio accounting data |
| | save-on-failure | Saves the radio crash information upon radio failure |
| | save-on-failure extended | Saves extended information on radio failure |
| | stop-on-failure | Stops the AP from reboot on radio failure |
| | tsm | Enables 802.11 traffic stream metric debugs |
| | vim | Enables 802.11 video metric debugs |

Command Modes Privileged EXEC (#)

Command History

| Release | Modification |
|-----------|------------------------------|
| 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of CAC at the information level:

```
cisco-wave2-ap# debug dot11 driver slot cac info
```

debug dot11 sensor

To enable debugging of 802.11 sensors, use the **debug dot11 sensor** command.

```
debug dot11 sensor { dns | file-transfer | mail-server | ping | radius | ssh | telnet |
web-server }
```

Syntax Description

| | |
|----------------------|--|
| dns | Enables debugging of 802.11 sensor DNS |
| file-transfer | Enables debugging of 802.11 sensor file transfer |
| mail-server | Enables debugging of 802.11 sensor mail server |
| ping | Enables debugging of 802.11 sensor ping |
| radius | Enables debugging of 802.11 sensor radius |
| ssh | Enables debugging of 802.11 sensor SSH |
| telnet | Enables debugging of 802.11 sensor Telnet. |
| web-server | Enables debugging of 802.11 sensor web server |

Command Modes

Privileged EXEC (#)

Command History

| Release | Modification |
|-----------|------------------------------|
| 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of 802.11 sensor file transfer:

```
cisco-wave2-ap# debug dot11 sensor file-transfer
```

debug dtls client

To configure DTLS client error and event debugging, use the **debug dtls client** command.

```
debug dtls client {error | event [detail]}
```

| | | |
|---------------------------|-----------------------|--|
| Syntax Description | error | Configures debugging of DTLS client errors |
| | event [detail] | Configures debugging of DTLS client events |

| | |
|----------------------|---------------------|
| Command Modes | Privileged EXEC (#) |
|----------------------|---------------------|

| | | |
|------------------------|----------------|------------------------------|
| Command History | Release | Modification |
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of DTLS client events:

```
cisco-wave2-ap# debug dtls client event
```

debug ethernet

To configure Ethernet debugging, use the **debug ethernet** command.

debug ethernet *interface-number* {**both** | **rcv** | **xmt**}

Syntax Description

| | |
|-------------------------|--|
| <i>interface-number</i> | Interface number that you have to enter as either 0 or 1 |
| both | Enables debugging of both transmission and reception |
| rcv | Enables debugging of reception |
| xmt | Enables debugging of transmission |

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

Examples

The following example shows how to enable debugging of transmission for interface 0:

```
cisco-wave2-ap# debug ethernet 0 xmt
```

debug flexconnect

To debug FlexConnect features, use the **debug flexconnect** command.

```
debug flexconnect {acl | cckm | dot11r | event | multicast {igmp | traffic} | pmk |
proxy-arp | vsa | wlan-vlan | wsastats}
```

| Syntax Description | |
|--------------------------|--|
| acl | Configures debugging of FlexConnect ACL |
| cckm | Configures debugging of CCKM |
| dot11r | Configures debugging of 802.11r |
| event | Configures debugging of wireless control protocol (WCP) events |
| multicast igmp | Configures debugging of Multicast IGMP |
| multicast traffic | Configures debugging of Multicast traffic |
| pmk | Configures debugging of opportunistic key caching (OKC) or pairwise master key caching |
| vsa | Configures debugging of AAA vendor specific attributes (VSA) |
| wlan-vlan | Configures debugging of WLAN-VLAN mapping |
| wsastats | Configures debugging of RADIUS or DHCP wireless service assurance statistics |

Command Modes Privileged EXEC (#)

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of FlexConnect ACL:

```
cisco-wave2-ap# debug flexconnect acl
```

debug lldp

To debug LLDP, use the **debug lldp** command.

debug lldp { **errors** | **events** | **packet** }

| Syntax Description | |
|--------------------|---------------------|
| errors | Debugs LLDP errors |
| events | Debugs LLDP events |
| packet | Debugs LLDP packets |

| Command Modes | |
|---------------|---------------------|
| | Privileged EXEC (#) |

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of LLDP errors:

```
cisco-wave2-ap# debug lldp errors
```

debug memory

To debug memory, use the **debug memory** command.

debug memory { **clear** | **save** }

Syntax Description

clear Removes memory debug upon boot-up

save Saves current debug level and applies it upon following boots

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

Examples

The following example shows how to remove memory debug upon boot-up:

```
cisco-wave2-ap# debug memory clear
```

debug memory pool

To debug memory pool, use the **debug memory pool** command.

```
debug memory pool { diff | realtime interval 1-1000000-seconds | start }
```

| Syntax Description | | |
|---|--|--|
| diff | | Shows memory pool debug difference in detail |
| realtime interval <i>1-1000000-seconds</i> | | Configures realtime interval for the memory pool |
| start | | Starts the debug for the memory pool |

| Command Modes | |
|---------------|---------------------|
| | Privileged EXEC (#) |

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to configure realtime interval of 180 seconds for the memory pool:

```
cisco-wave2-ap# debug memory pool realtime interval 180
```

debug memory pool alloc

To debug memory pool allocation calls, use the **debug memory pool alloc** command.

```
debug memory pool alloc {all | name pool-name} {diff | realtime interval 1-1000000-seconds
| start}
```

| Syntax Description | | |
|---|--|---|
| all | | Configures debug for all memory pool allocation calls |
| name <i>pool-name</i> | | Configures debug for a specific memory pool's allocation call |
| diff | | Shows memory pool debug allocation call difference in detail |
| realtime interval <i>1-1000000-seconds</i> | | Configures realtime interval for the memory pool allocation calls |
| start | | Starts the debug for the memory pool allocation calls |

Command Modes Privileged EXEC (#)

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to configure the start of the debug for all memory pool allocation calls:

```
cisco-wave2-ap# debug memory pool alloc all start
```

debug memory pool free

To debug memory pool free calls, use the **debug memory pool free** command.

```
debug memory pool free {all | name pool-name} {diff | realtime interval 1-1000000-seconds | start}
```

Syntax Description

| | |
|---|---|
| all | Configures debug for all memory pool free calls |
| name <i>pool-name</i> | Configures debug for a specific memory pool's free call |
| diff | Shows memory pool debug free call difference in detail |
| realtime interval <i>1-1000000-seconds</i> | Configures realtime interval for the memory pool free calls |
| start | Starts the debug for the memory pool free calls |

Command Modes

Privileged EXEC (#)

Command History

| Release | Modification |
|-----------|------------------------------|
| 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to configure the start of the debugging of all memory pool free calls:

```
cisco-wave2-ap# debug memory pool free all start
```

debug mesh

To configure debugging of mesh networks, use the **debug mesh** command.

debug mesh {**channel** |**clear** |**convergence** |**events** |**forward-mcast** |**forward-packet** |**forward-table** |**linktest** |**path-control** |**port-control** |**security** |**trace**}

Syntax Description

| | |
|-----------------------|---|
| channel | Configures debugging of mesh channel |
| clear | Resets all mesh debugs |
| convergence | Configures debugging of mesh convergence |
| events | Configures debugging of mesh events |
| forward-mcast | Configures debugging of mesh forwarding Multicast |
| forward-packet | Configures debugging of mesh forwarding packets |
| forward-table | Configures debugging of mesh forwarding table |
| linktest | Configures debugging of mesh linktest |
| port-control | Configures debugging of mesh port control |
| security | Configures debugging of mesh security |
| trace | Configures debugging of mesh trace |

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

Examples

The following example shows how to enable debugging of mesh channel:

```
cisco-wave2-ap# debug mesh channel
```

debug mesh adjacency

To debug mesh adjacency, use the **debug mesh adjacency** command.

debug mesh adjacency { **child** | **clear** | **dfs** | **message** | **packet** | **parent** }

| Syntax Description | |
|--------------------|-------------------------------|
| adjacency | Debug mesh adjacency |
| child | Debug mesh adjacency child |
| clear | Debug clear mesh adjacency |
| dfs | Debug mesh DFS |
| message | Debug mesh adjacency messages |
| packet | Debug mesh adjacency packet |
| parent | Debug mesh adjacency parent |

Command Modes Privileged EXEC (#)

| Command History | Release Modification |
|-----------------|--|
| | 8.1.111.0 This command was introduced. |

Examples

The following example shows how to enable debugging of mesh adjacency parent:

```
cisco-wave2-ap# debug mesh adjacency parent
```

debug mesh path-control

To configure debugging of mesh path control, use the **debug mesh path-control** command.

```
debug mesh path-control {error |events |packets }
```

| Syntax Description | |
|--------------------|---|
| error | Configures debugging of mesh path control errors |
| events | Configures debugging of mesh path control events |
| packets | Configures debugging of mesh path control packets |

| Command Modes | |
|---------------|---------------------|
| | Privileged EXEC (#) |

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of mesh path control errors:

```
cisco-wave2-ap# debug mesh path-control error
```

debug rrm neighbor

To enable RRM neighbor debugging, use the **debug rrm neighbor** command.

debug rrm neighbor {**tx** | **rx** | **detail**}

| Syntax Description | |
|--------------------|--------------------------------------|
| tx | Enable RRM neighbor Tx debugging |
| rx | Enable RRM neighbor Rx debugging |
| detail | Enable RRM neighbor detail debugging |

Command Modes Privileged EXEC (#)

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of RRM neighbor transmissions:

```
cisco-wave2-ap# debug rrm neighbor tx
```

debug rrm reports

To enable RRM reports debugging, use the **debug rrm reports** command.

debug rrm reports

| | |
|---------------------------|---|
| Syntax Description | reports Enables RRM report debugging |
| Command Modes | Privileged EXEC (#) |
| Command History | Release Modification |
| | 8.1.111.0 This command was introduced. |

Examples

The following example shows how to enable debugging of RRM reports:

```
cisco-wave2-ap# debug rrm reports
```

debug sip

To enable session initiation protocol (SIP) debugging, use the **debug sip** command.

debug sip { **all** | **tx** | **rx** }

| | |
|---------------------------|--|
| Syntax Description | all Enabling SIP transmission and reception debugging |
| | tx Enabling SIP transmission debugging |
| | rx Enabling SIP reception debugging |

Command Modes Privileged EXEC (#)

| | |
|------------------------|--|
| Command History | Release Modification |
| | 8.1.111.0 This command was introduced. |

Examples

The following example shows how to enable debugging of SIP transmissions and reception:

```
cisco-wave2-ap# debug sip all
```

debug wips

To enable WIPS debugging, use the **debug wips** command.

```
debug wips {errors | events | critical}
```

| Syntax Description | |
|--------------------|--------------------------------------|
| errors | Enable WIPS error level debugging |
| events | Enable WIPS event level debugging |
| critical | Enable WIPS critical level debugging |

| Command Modes | |
|---------------|---------------------|
| | Privileged EXEC (#) |

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable WIPS error level debugging:

```
cisco-wave2-ap# debug wips errors
```

debug authentication interface

To enable FlexConnect radio interface debugging, use the **debug authentication interface** command.

debug authentication interface *interface-name* { **all** | **dot11** | **dot1x** | **driver** | **others** | **radius** | **wpa** }

Syntax Description

| | |
|-----------------------|---|
| <i>interface-name</i> | Name of the interface to debug |
| all | Enable all parts debugging |
| dot11 | Enable 802.11 module debugging |
| dot1x | Enable 802.1x module debugging |
| driver | Enable driver module debugging |
| others | Enable other non-module parts debugging |
| radius | Enable RADIUS module debugging |
| wpa | Enable WPA module debugging |

Command Modes

Privileged EXEC (#)

Command History

| Release | Modification |
|-----------|------------------------------|
| 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of WPA module:

```
cisco-wave2-ap# debug authentication interface management wpa
```

debug process memory

To process memory debugging, use the **debug process memory** command.

```
debug process memory {diff |realtime [interval interval-in-seconds ] |start}
```

| Syntax Description | |
|--------------------|---|
| diff | Process memory debug show diff |
| realtime | Process memory real time debug |
| <i>interval</i> | Update interval; valid range 1 to 1000000 seconds |
| start | Process memory debug start |

Command Modes Privileged EXEC (#)

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable the start of debugging of process memory:

```
cisco-wave2-ap# debug process memory start
```

debug traffic

To enable traffic debugging, use the **debug traffic** command.

```
debug traffic {host {icmpv6 | ip | ipv6 | tcp | udp { verbose}} | wired {ip | tcp | udp { verbose}}}
```

Syntax Description

| | |
|----------------|-----------------------------------|
| host | Enabling host traffic debugging |
| wired | Enabling wired traffic debugging |
| verbose | Display verbose output |
| icmpv6 | Enabling host ICMPv6 traffic dump |
| ip | Enabling host IP traffic dump |
| ipv6 | Enabling host IPv6 traffic dump |
| tcp | Enabling TCP traffic dump |
| udp | Enabling UDP traffic dump |

Command Modes

Privileged EXEC (#)

Command History

| Release | Modification |
|-----------|------------------------------|
| 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of host IP traffic dump:

```
cisco-wave2-ap# debug traffic host ip
```

debug tunnel

To configure debugging of tunnel, use the **debug tunnel** command.

debug tunnel eogre

| | |
|---------------------------|---|
| Syntax Description | eogre Configures debugging of EoGRE tunnel |
|---------------------------|---|

| | |
|----------------------|---------------------|
| Command Modes | Privileged EXEC (#) |
|----------------------|---------------------|

| Command History | Release | Modification |
|------------------------|----------------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable debugging of EoGRE tunnel:

```
cisco-wave2-ap# debug tunnel eogre
```

debug client trace

To enable client trace debugging, use the **debug client trace** command.

```
debug client trace {all |address mac-address |enable |filter { assoc | auth | dhcp | eap | icmp | mgmt | probe | proto } }
```

| Syntax Description | | |
|--------------------|--|---------------------------------------|
| all | | Configure all clients tracing |
| address | | Configure address(es) to trace |
| <i>mac-address</i> | | MAC address to trace |
| enable | | Enable tracing |
| filter | | Configure trace filter |
| assoc | | Trace Association packets |
| auth | | Trace Authentication packets |
| dhcp | | Trace DHCP packets |
| eap | | Trace EAP packets |
| icmp | | Trace ICMP packets |
| mgmt | | Trace probe, assoc, auth, EAP packets |
| probe | | Trace probe packets |
| proto | | Trace DHCP, ICMP packets |

Command Modes Privileged EXEC (#)

| Command History | Release | Modification |
|-----------------|-----------|------------------------------|
| | 8.1.111.0 | This command was introduced. |

Examples

The following example shows how to enable tracing of all clients:

```
cisco-wave2-ap# debug client trace all
```

no

To negate a command or set to its defaults, use the **no** command.

no

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

To negate a command or set to its defaults, use this command:

```
cisco-wave2-ap# no debug
```

tracert

To view the routes followed by packets traveling in the network, use the **tracert** command.

tracert *destination-address*

| Syntax Description | <i>destination-address</i> IP address of the destination of the packets | | | | |
|---------------------------|---|---------|--------------|-----------|------------------------------|
| Command Modes | Privileged EXEC (#) | | | | |
| Command History | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>8.1.111.0</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | 8.1.111.0 | This command was introduced. |
| Release | Modification | | | | |
| 8.1.111.0 | This command was introduced. | | | | |

Examples

The following example shows how to view the routes followed by packets traveling in the network, with a destination IP address specified:

```
cisco-wave2-ap# tracert 209.165.200.224
```

undebug

To disable debugging on the access point, use the **undebug** command.

undebug [all]

Syntax Description

a Disables all debugging messages.

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

Examples

The following example shows how to disable all debugging messages:

```
cisco-wave2-ap# undebug all
```
