

SCCP Network Configuration Mode Commands

Signaling Connection Control Part (SCCP) is a routing protocol in the SS7 protocol suite in layer 4, which provides end-to-end routing for TCAP messages to their proper database.

The SCCP Network Configuration Mode is used to configure properties for Signaling Connection Control **Command Modes** Part (SCCP) services for SS7.

Exec > Global Configuration > SCCP Network Configuration

configure > sccp-network id number

Entering the above command sequence results in the following prompt:

[local]host name(config-sccp-network-sccp id) #

Important

The commands or keywords/variables that are available are dependent on platform type, product version, and installed license(s).

- associate, on page 1
- description, on page 2
- destination, on page 3
- do show, on page 5
- end, on page 5
- exit, on page 6
- global-title-translation, on page 6
- hop-count, on page 7
- self-point-code, on page 8
- timeout, on page 9

associate

Associates an SS7 routing domain with the SCCP network.

Important

In Release 20 and later, HNBGW is not supported. This command must not be used for HNBGW in Release 20 and later. For more information, contact your Cisco account representative.

I

Product	- SGSN
	HNB-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > SCCP Network Configuration
	<pre>configure > sccp-network id_number</pre>
	Entering the above command sequence results in the following prompt:
	<pre>[local]host_name(config-sccp-network-sccp_id)#</pre>
Syntax Description	associate ss7-routing-domain rd_id no associate
	no
	Removes the association with the SS7 routing domain from the system configuration.
	rd_id
	This number identifies an already defined SS7 routing domain.
	<i>rd_id:</i> enter an integer from 1 through 12.
Usage Guidelines	Use this command to associate SS7 routing domain configurations with SCCP network configurations.
	Example
	The following command associates the SCCP network with SS7 routing domain 2:
	associate ss7-routing-domain 2

description

This command defines a string that describes the SCCP network. The description is used for operator reference.

(
Importan	In Release 20 and later, HNBGW is not supported. This command must not be used for HNBGW in Release 20 and later. For more information, contact your Cisco account representative.
Product	SGSN HNB-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > SCCP Network Configuration configure > sccp-network id_number

	Entering the above command sequence results in the following prompt:
	<pre>[local]host_name(config-sccp-network-sccp_id)#</pre>
Syntax Description	description string no description
	string
	This is a string to describe the SCCP network.
	<i>string</i> must be an alphanumeric string from 1 through 127 characters in length. If there are spaces in the string the string must be enclosed in double-quotes. For example; "This is a Description".
	no
	Removes the description from the system configuration.
Usage Guidelines	Use this command to configure a description of this SCCP service for operator reference.
	Example
	The following command sets the description to "This is the SCCP Service Number 1":
	description "This is the SCCP Service Number 1."

destination

I

This command configures the SCCP network destination information. Use this command multiple times to set all of the destination information required.

(
Important	In Release 20 and later, HNBGW is not supported. This command must not be used for HNBGW in Release 20 and later. For more information, contact your Cisco account representative.
Product	SGSN
	HNB-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > SCCP Network Configuration
	<pre>configure > sccp-network id_number</pre>
	Entering the above command sequence results in the following prompt:
	<pre>[local]host_name(config-sccp-network-sccp_id) #</pre>
Syntax Description	<pre>destination dpc pt_code { name route_name next-hop pt_code [priority priority] ssn subsys_num version sccp_ver }</pre>

no destination dpc p_code [name route_name | ssn ssn_num | version sccp_ver
]

no

Deletes the specified destination information from the SCCP network configuration.

dpc *pt_code*

Specifies the SCCP destination point code.

pt code: Must be in SS7 point code dotted-decimal ###.#### format or decimal ######## format.

name route_name

The name of the SCCP destination route.

route_name: enter an alphanumeric string from 1 through 64 characters in length.

next-hop *pt_code* [priority *priority*

Associates the next destination defined in the SS7 routing domain and assigns the next-hop a priority for use. *pt_code:* Must be in SS7 point code dotted-decimal ###.### format or decimal ######## format. *priority:* Must be an integer from 0 to 15, with 0 setting the highest priority.

ssn subsys_num

The destination subsystem number. subsys num: enter an integer from 1 through 255.

version sccp_ver

sccp ver: enter one of the following to select the SCCP variant:

- ANSI88
- ANSI92
- ANSI96
- BELL05
- CHINA
- GSM0806
- ITU88
- ITU92
- ITU96

Usage Guidelines Use this command to configure the destination information for the SCCP network.

Example

The following commands set the name of the destination route to default_route, the subsystem number to 1, and the variant version to ITU96, all with a destination point code of 1:

```
destination dpc 1 name default_route
destination dpc 1 ssn 1
destination dpc version ITU96
```

do show

Executes all **show** commands while in Configuration mode.

	-
Product	- All
Privilege	Security Administrator, Administrator
Syntax Description	do show
Usage Guidelines	Use this command to run all Exec mode show commands while in Configuration mode. It is not necessary to exit the Config mode to run a show command.
	The pipe character is only available if the command is valid in the Exec mode.
Caution	There are some Exec mode show commands which are too resource intensive to run from Config mode. These include: do show support collection , do show support details , do show support record and do show support summary . If there is a restriction on a specific show command, the following error message is displayed:
	Failure: Cannot execute 'do show support' command from Config mode.
end	
	Exits the current configuration mode and returns to the Exec mode.
Product	- SGSN
	HNB-GW
Privilege	Security Administrator, Administrator
Syntax Description	end
Usage Guidelines	Return to the Exec mode.

exit

Exits the current configuration mode and returns to the global configuration mode.

Product	SGSN HNB-GW
Privilege	Security Administrator, Administrator
Syntax Description	exit
Usage Guidelines	Return to the global configuration mode.

global-title-translation

This command associates a GTT address-map with this SCCP network.

(
Important	In Release 20 and later, HNBGW is not supported. This command must not be used for HNBGW in Release 20 and later. For more information, contact your Cisco account representative.
Product	SGSN
	HNB-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > SCCP Network Configuration
	configure > sccp-network id_number
	Entering the above command sequence results in the following prompt:
	<pre>[local]host_name(config-sccp-network-sccp_id)#</pre>
Syntax Description	global-title-translation address-map instance instance no global-title-translation address-map instance instance
	по
	Deletes the GTT address-map instance associated with this SCCP network.
	instance
	This value uniquely identifies a specific previously defined instance of a GTT address-map.
	instance: enter an integer from 1 to 4096.
Usage Guidelines	Use this command to link a GTT address-map, configured with the GTT Address Map configuration mode, to a specific SCCP network configuration.

Example

global-title-translation address-map instance gtt-map1

hop-count

This command specifies the hop count for this SCCP network.

(
Important	In Release 20 and later, HNBGW is not supported. This command must not be used for HNBGW in Release 20 and later. For more information, contact your Cisco account representative.
Product	SGSN
	HNB-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > SCCP Network Configuration
	<pre>configure > sccp-network id_number</pre>
	Entering the above command sequence results in the following prompt:
	<pre>[local]host_name(config-sccp-network-sccp_id)#</pre>
Syntax Description	hop-count hop_cnt default hop-count
	default
	Resets the hop-count value to the system default of 5.
	hop_cnt
	The hop count to assign to this SCCP network.
	<i>hop_cnt:</i> enter an integer from 1 to 15.
Usage Guidelines	Use this command to define the hop count for this SCCP network.
	Example
	The following command sets the hop count to 3:
	hop-count 3

self-point-code

This command specifies the SS7 point code for this SCCP service.

(
Important	In Release 20 and later, HNBGW is not supported. This command must not be used for HNBGW in Release 20 and later. For more information, contact your Cisco account representative.
Product	SGSN
	HNB-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > SCCP Network Configuration
	configure > sccp-network id_number
	Entering the above command sequence results in the following prompt:
	[local]host_name(config-sccp-network-sccp_id)#
Syntax Description	<pre>self-point-code point_code no self-point-code</pre>
	ΠΟ
	Deletes the configured self point code.
	point_code
	Defines the point code to assign to this SCCP network service.
	<i>point_code:</i> value entered must adhere to the point code variant selected when the SCCP network instance was defined:
	• ITU Range 0.0.1 to 7.255.7
	• ANSI Range 0.0.1 to 255.255.255
	• TTC Range 0.0.1 to 15.31.255
	• a string of 1 to 11 combined digits ad period.
Usage Guidelines	Use this command to assign the self point code to use for this SCCP service.
	Example
	The following command sets an ITU-based point code for this SCCP service:
	self-pointcode 4.121.5
	The following command removes the configured self-point code:

no self-pointcode

timeout

This command configures the timeout parameters for this SCCP network.

(
Important	In Release 20 and later, HNBGW is not supported. This command must not be used for HNBGW in Release 20 and later. For more information, contact your Cisco account representative.
Product	SGSN
	HNB-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > SCCP Network Configuration
	configure > sccp-network id_number
	Entering the above command sequence results in the following prompt:
	<pre>[local]host_name(config-sccp-network-sccp_id)#</pre>
Syntax Description	<pre>timeout { attack-timer congestion-timer conn-est-timer crd-timer decay-timer iar-timer ias-timer interval-timer reassembly-timer release-timer repeat-release-timer reset-timer sst-timer } + default timeout no timeout timer</pre>
	attack-timer <i>time</i>
	Defines the time before the attack timer expires.
	time: enter an integer between 1 and 10.
	congestion-timer <i>time</i>
	Defines the time before the congestion timer expires.
	time: enter an integer between 1 and 10.
	conn-est-timer <i>time</i>
	Defines the time before the connection timer expires.
	time: enter an integer between 6 and 12.
	crd-timer <i>time</i>
	Defines the time before the coordinated-state-change timer expires.
	time: enter an integer between 60 and 120.

decay-timer time

Defines the time before the decay timer expires. *time:* enter an integer between 1 and 10.

iar-timer time

Defines the time before the inactivity-receive timer expires. *time:* enter an integer between 60 and 120.

ias-timer time

Defines the time before the inactivity-send timer expires. *time:* enter an integer between 30 and 60.

interval-timer time

Defines the time before the interval timer expires. *time:* enter an integer between 6 and 12

reassembly-timer time

Defines the time before the reassembly-timer expires. *time:* enter an integer between 10 and 20.

release-timer time

Defines the time before the release-assembly timer expires. *time:* enter an integer between 1 and 2.

repeat-release-timer time

Defines the time before repeat-release timer expires. *time:* enter an integer between 1 and 2

reset-timer time

Defines the amount of time before the reset timer expires. *time:* enter an integer between 1 and 2

sst-timer time

Defines the amount of time before the subsystem status test timer expires. *time:* enter an integer between 5 and 1200.

default

Resets the timeout parameter to the system default.

no

Deletes the specified timer configuration.

Usage Guidelines Use this command to assign timeout timers and timeout values for this SCCP service.

Example

timeout reset-timer 75

timeout
