GT-Format2 Configuration Mode Commands

Command Modes

The GT-Format2 configuration mode is a sub-mode for either the Global Title Translation Association configuration mode or the Global Title Translation Address-Map configuration mode. This sub-mode configures a set of rules used in the global title translation (GTT) process.

Exec > Global Configuration > GTT Association Configuration > GT-Format2 Configuration

configure > global title translation association instance *instance_number* **> gt-format** *format_number*

Entering the above command sequence results in the following prompt:

```
[local]host_name(config-gtt-instance-format2)#
```

☞

Important

The commands or keywords/variables that are available are dependent on platform type, product version, and installed license(s).

do show

Executes all **show** commands while in Configuration mode.

Product	All
Privilege	Security Administrator, Administrator
Syntax Description	**`do show`**

Usage Guidelines Use this command to run all Exec mode **show** commands while in Configuration mode. It is not necessary to exit the Config mode to run a **show** command.

The pipe character | is only available if the command is valid in the Exec mode.

⚠

Caution There are some Exec mode **show** commands which are too resource intensive to run from Config mode. These include: **do show support collection**, **do show support details**, **do show support record** and **do show support summary**. If there is a restriction on a specific **show** command, the following error message is displayed:

```
Failure: Cannot execute 'do show support' command from Config mode.
```

end

Exits the current configuration mode and returns to the Exec mode.

Product

All

Privilege

Security Administrator, Administrator

Syntax Description

`end`

Usage Guidelines

Use this command to return to the Exec mode.

exit

Exits the current mode and returns to the parent configuration mode.

Product	All
Privilege	Security Administrator, Administrator
Syntax Description	`exit`
Usage Guidelines	Use this command to return to the parent configuration mode.

translation-type

This command configures the translation type to be applied during the translation process.

Product	SGSN
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > GTT Association Configuration > GT-Format2 Configuration
	configure > global title translation association instance *instance_number* **> gt-format** *format_number*
	Entering the above command sequence results in the following prompt:
	`[local]host_name(config-gtt-instance-format2)#`
Syntax Description	**translation-type** *number*
	number
	Enter the translation type value as an integer from 0 to 255.
	Default: 0
Usage Guidelines	Use this command to configure the GTT translation type to be applied during the translation process.
	Example
	The following command configures the translation type with value set to *232*:
	translation-type 232
