## Feature Summary and Revision History

### Summary Data

Applicable Product(s) or Functional Area	MME
Applicable Platform(s)	<ul style="list-style-type: none"><li>• ASR 5500</li><li>• VPC-DI</li><li>• VPC-SI</li></ul>
Feature Default	Disabled - Configuration Required
Related Changes in This Release	Not applicable
Related Documentation	<ul style="list-style-type: none"><li>• <i>Command Line Interface Reference</i></li><li>• <i>MME Administration Guide</i></li><li>• <i>Statistics and Counters Reference</i></li></ul>

### Revision History

Revision Details	Release
First introduced.	21.17

## Feature Description

MME supports path management status of MME (S10) and SGSN (Gn/Gp). MME sends and receives GTP V2 Echo Message for Peer Node status in S10 Interface and GTP V1 Echo Message for Peer node status in Gn/Gp Interface. MME sends and receives the Echo message for Configured peer Node in MME regardless of GTP session.

Path failure is detected when there is no response to Echo Request even after max retransmissions. Path failure detection is not done based on "Restart counter value change in echo response".

GTP V1 Echo Message is supported in compliance with the 3GPP 29.060 7.2 Path Management Messages operation and GTP V2 Echo Message is supported in compliance with the 3GPP 29.274, 7.1 Path Management Messages operation.

Existing traps SGSNGtpcPathFailure, SGSNGtpcPathFailureClear, EGTPCPathFail, and EGTPCPathFailClear are used by this feature.

## Configuring GTPV1/V2 Echo Support for Peer MME and SGSN

This section provides information on the CLI commands to configure GTPV1/V2 Echo Support for Peer MME and SGSN feature.

### Configuring Path Management for Peer MME

Use the following configuration to configure the path management for Peer MME.

```

configure
  context context_name
    mme-service mme_service_name
      peer-mme echo-params interval interval retransmission-timeout
retransmission_timeout max-retransmissions max-retransmissions reconnect-interval
reconnect_interval
      no peer-mme echo-params
    end

```

#### NOTES:

- **no**: Removes the path management configuration for peer MME with Gn/Gp capability
- **peer-mme** : Configures a Peer MME for inter-MME relocations.
- **echo-params** : Configures echo parameters for peer MME with GN/GP Capability.
- **interval interval**: Configures echo interval in seconds. *interval* must be an ineteger between 60 and 300.
- **retransmission-timeout retransmission\_timeout**: Configures echo retransmission timeout in seconds. *retransmission\_timeout* must be an ineteger between 1 and 20.
- **max-retransmissions max-retransmissions**: Configures maximum retries for echo request. *max-retransmissions* must be an ineteger between 0 and 15.

- **reconnect-interval** *reconnect\_interval*: Configures echo interval to be used once a peer node is detected to be unreachable. Retransmission is not applicable in this time. *reconnect\_interval* must be an ineteger between 60 and 86400.

## Configuring Path Management for Peer SGSN

Use the following configuration to configure the path management for Peer SGSN.

```
configure
  context context_name
    mme-service mme_service_name
      peer-sgsn echo-params interval interval retransmission-timeout
retransmission_timeout max-retransmissions max-retransmissions reconnect-interval
reconnect_interval
    no peer-sgsn echo-params
  end
```

### NOTES:

- **no**: Removes the path management configuration for peer SGSN with Gn/Gp capability
- **echo-params** : Configures echo parameters for peer SGSN with GN/GP Capability.
- **interval** *interval*: Configures echo interval in seconds. *interval* must be an ineteger between 60 and 300.
- **retransmission-timeout** *retransmission\_timeout*: Configures echo retransmission timeout in seconds. *retransmission\_timeout* must be an ineteger between 1 and 20.
- **max-retransmissions** *max-retransmissions*: Configures maximum retries for echo request. *max-retransmissions* must be an ineteger between 0 and 15.
- **reconnect-interval** *reconnect\_interval*: Configures echo interval to be used once a peer node is detected to be unreachable. Retransmission is not applicable in this time. *reconnect\_interval* must be an ineteger between 60 and 86400.

## Monitoring and Troubleshooting

This section provides information regarding show commands available to monitor this feature.

### Show Commands and Outputs

#### show mme-service all name

The output of this command includes the following fields:

- PEER MME Echo Parameters :
  - interval
  - retransmission timeout
  - max retransmissions

- reconnect interval
- PEER GN/GP SGSN Echo Parameters:
  - interval
  - retransmission timeout
  - max retransmissions
  - reconnect interval

### show egtpc statistics

The output of this command includes the following fields:

Path Management Messages:

PEER MME Echo Request

- Total TX
- Initial TX
- Retrans TX

PEER MME Echo Response:

- Total RX

### show egtpc peers mme

```
+----Status:   (D) - Dead   (A) - Alive
|
|+----IP Type:   (S) - Static (D) - Dynamic
|| Service
vv ID           Peer Address   Echo Req   Echo Req   Echo Rsp
                        Time of Creation   Sent      Retransmitted   Received
-----
```

Total Peers:

### Show sgtpc statistic

Path Management Messages:

Echo Request:

```
Total Echo-Req TX:      Total Echo-Req RX:
Initial Echo-Req TX:    Initial Echo-Req RX:
Retrans Echo-Req TX:
```

Echo Response:

```
Total Echo-Rsp TX:      Total Echo-Rsp RX:
```

### show sgtpc peers

```
Path      Service
Status   ID           Peer Address   Echo Req   Echo Req   Echo Rsp
                        Sent      Retransmitted   Received
```
