

# **Peer Profile Configuration Mode Commands**

The Peer Profile Configuration Mode is used to configure the peer profiles for GGSN, P-GW, or S-GW service to allows flexible profile based configuration to accommodate growing requirements of customizable parameters with default values and actions for peer nodes of GGSN, P-GW, or S-GW.

Command Modes	Exec > Global Configuration > Peer Profile Configuration
	<pre>configure &gt; peer-profile service-type <service-type> {default   name peer_profile_name</service-type></pre>
	Entering the above command sequence results in the following prompt:
	[context_name]host_name(config-peer-profile-ggsn/pgw/sgw-access/nw)#
<b>(</b>	
Importan	The commands or keywords/variables that are available are dependent on platform type, product version, and installed license(s).
<b>(</b>	
Important	For information on common commands available in this configuration mode, refer to the Common Commands chapter.
	• arp-mapping, on page 1
	description , on page 2
	• gtpc, on page 3
	lawful-intercept, on page 4
	<ul> <li>no-qos-negotiation, on page 4</li> <li>upgrade-qos-supported, on page 5</li> </ul>
arp-mapp	ing
	Configures UMTS ARP to Gx ARP mapping for the specific peer profile.
Product	GGSN

 Product
 GGSN

 P-GW

 Privilege
 Security Administrator, Administrator

Command Modes	Exec > Global Configuration > Peer Profile Configuration
	<pre>configure &gt; peer-profile service-type <service-type> {default   name peer_profile_name</service-type></pre>
	Entering the above command sequence results in the following prompt:
	[context_name]host_name(config-peer-profile-ggsn/pgw/sgw-access/nw)#
Syntax Description	[ default ] arp-mapping priority-level high high_num medium med_num
	default
	Sets default values for the peer profile
	priority-level high <i>high_num</i> medium <i>high_num</i>
	Configures the high and medium values for peer profile. The <i>high_num</i> is an integer and ranges from 1 to 13 while the <i>high_num</i> also being an integer, ranges from 2 to 14.
Usage Guidelines	Use this command to configure UMTS ARP to Gx ARP mapping for GGSN peer profile configured through this mode.
	Example
	The following command sets the high priority level 4 and low priority level 9 for UMTS to Gx ARP mapping for a GGSN peer profile:

arp-mapping priority-level high 4 medium 9

## description

Sets a relevant descriptive string for the specific peer profile. By default it is blank.

Product	GGSN
	P-GW
	SAEGW
	S-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration > Peer Profile Configuration
	<pre>configure &gt; peer-profile service-type <service-type> {default   name peer_profile_name</service-type></pre>
	Entering the above command sequence results in the following prompt:
	[context_name]host_name(config-peer-profile-ggsn/pgw/sgw-access/nw)#
Syntax Description	description desc_string no description

	no
	Removes the set description for GGSN, P-GW, or S-GW service peer profile configured through this mode.
	desc_string
	Indicates the description for GGSN, P-GW, or S-GW service peer profile configured through this mode; must be an alphanumeric string from 1 through 64 characters.
Usage Guidelines	Use this command to set a relevant description for GGSN, P-GW, or S-GW peer profile configured through this mode.
	Example
	The following command sets the description ggsn_gtpc_SGSN_profile1 for a GGSN peer profile:
	description ggsn_gtpc_SGSN_profile1

### gtpc

	Configure the GTP-C parameters for this peer profile.
Product	GGSN
	P-GW
	SAEGW
	S-GW
Privilege	Administrator
Command Modes	Exec > Global Configuration > Peer Profile Configuration
	<pre>configure &gt; peer-profile service-type <service-type> {default   name peer_profile_name</service-type></pre>
	Entering the above command sequence results in the following prompt:
	[context_name]host_name(config-peer-profile-ggsn/pgw/sgw-access/nw)#
Syntax Description	<pre>gtpc { echo { interval inter_dur   retransmission-timeout echo_retrans_dur }</pre>
	default
	Resets the specified parameter to its default value.
	no
	Dischlar or removes the configured CTD C sole settings

Disables or removes the configured GTP-C echo settings.

	echo interval <i>inter_dur</i>
	Default: 60
	Configures the duration, in seconds, between the sending of echo request messages.
	inter_dur must be an integer from 60 through 3600.
	echo retransmission-timeout <i>echo_retrans_dur</i>
	Default: 3
	Configures the echo retransmission timeout, in seconds, for the this peer profile.
	echo_retrans_dur must be an integer ranging from 1 to 20.
	max-retransmissions retrans_num
	retransmission-timeout <i>retrans_dur</i>
Note	In 17.3 and later releases, this option has been deprecated. Use <b>retransmission-timeout-ms</b> .
	retransmission-timeout-ms retrans_dur
Usage Guidelines	Use this command to configure GTP-C parameters for GGSN, P-GW, or S-GW peer profile.
	Example
	The following command sets the GTP-C echo parameters to default values:
	default gtpc echo
	The following command sets the GTP-C retransmission timeout parameters to 4 seconds:

default gtpc retransmission-timeout-ms

## lawful-intercept

Refer to the Cisco ASR 5x00 Lawful Intercept Configuration Guide for a description of this command.

### no-qos-negotiation

Configures overriding of No-Qos-Negotiation flag in common flag IE received from peer node.

Product	GGSN
	P-GW
Privilege	Administrator

Command Modes	Exec > Global Configuration > Peer Profile Configuration
	<pre>configure &gt; peer-profile service-type <service-type> {default   name peer_profile_name</service-type></pre>
	Entering the above command sequence results in the following prompt:
	[ <i>context_name</i> ] <i>host_name</i> (config-peer-profile-ggsn/pgw/sgw-access/nw)#
Syntax Description	no-qos-negotiation { set-flag   unset-flag } [ no ] no-qos-negotiation
	no
	Disables or removes the configured overriding of No-Qos-Negotiation flag in common flag IE received from peer node.
	set-flag
	Sets flag value to 1 in common flag IE.
	unset-flag
	Sets flag value to 0 in common flag IE.
Usage Guidelines	Use this command to configure the overriding of no-qos-negotiation flag value in Common Flags IE received from the peer.
	Example
	The following command sets the flag value to true, i.e. 1, in Common Flags IE:
	no-qos-negotiation set-flag

## upgrade-qos-supported

Configures overriding of upgrade-Qos-supported flag in common flag IE received from peer node.

Product	GGSN
	P-GW
Privilege	Administrator
Command Modes	Exec > Global Configuration > Peer Profile Configuration
	<pre>configure &gt; peer-profile service-type <service-type> {default   name peer_profile_name</service-type></pre>
	Entering the above command sequence results in the following prompt:
	[context_name]host_name(config-peer-profile-ggsn/pgw/sgw-access/nw)#
Syntax Description	<pre>upgrade-Qos-supported { set-flag   unset-flag } [ no ] upgrade-Qos-supported</pre>

#### no

Disables or removes the configured overriding of upgrade-Qos-supported flag in common flag IE received from peer node.

#### set-flag

Sets flag value to 1 in common flag IE.

#### unset-flag

Sets flag value to 0 in common flag IE.

**Usage Guidelines** Use this command to configure the overriding of upgrade-Qos-supported flag value in Common Flags IE received from the peer.

#### Example

The following command sets the flag value to false, i.e. 0, in Common Flags IE:

upgrade-Qos-supported unset-flag
