

Monitoring the SaMOG Gateway

This chapter provides information for monitoring the status and performance of the SaMOG (S2a Mobility Over GTP) Gateway using the **show** commands found in the CLI (Command Line Interface). These command have many related keywords that allow them to provide useful information on all aspects of the system ranging from current software configuration through call activity and status.

The selection of **show** commands listed in this chapter is intended to provided the most useful and in-depth information for monitoring the system. For additional information on these and other **show** commands and keywords, refer to the *Command Line Interface Reference*.

The system also supports the sending of Simple Network Management Protocol (SNMP) traps that indicate status and alarm conditions. See the *SNMP MIB Reference* for a detailed listing of these traps.

Clearing Statistics and Counters

It may be necessary to periodically clear statistics and counters in order to gather new information. The system provides the ability to clear statistics and counters based on their grouping.

Statistics and counters can be cleared using the CLI **clear** command. Refer to the *Command Line Interface Reference* for detailed information on using this command.
