

VLAN Configuration Mode Commands

| | The VLAN Configuration Mode is used to create and manage Virtual LANs and their bindings with contexts. |
|---------------|---|
| Command Modes | Exec > Global Configuration > Port Configuration > VLAN Configuration |
| | <pre>configure > port ethernet slot_number/port_number > vlan vlan_tag_id</pre> |
| | Entering the above command sequence results in the following prompt: |
| | [local] <i>host_name</i> (config-port- <i>slot_number/port_number-</i> vlan-vlan- <i>id</i>)# |
| (| |
| Important | Availabe commands or keywords/variables vary based on platform type, product version, and installed license(s). |
| | • bind interface, on page 2 |
| | do show, on page 3 end, on page 4 |
| | • exit, on page 5 |
| | • ingress-mode, on page 6 |
| | • priority, on page 7 |
| | • shutdown, on page 8 |
| | vilan man can naga 0 |

• vlan-map, on page 9

I

bind interface

| Associates a | VLA | Ν | interface | with | а | context. |
|--------------|-----|---|-----------|------|---|----------|
| | | | | | | |

| Product | - HA |
|--------------------|---|
| | HSGW |
| | PDSN |
| | P-GW |
| | SAEGW |
| | SGSN |
| Privilege | Security Administrator, Administrator |
| Command Modes | Exec > Global Configuration > Port Configuration > VLAN Configuration |
| | configure > port ethernet <i>slot_number/port_number</i> > vlan <i>vlan_tag_id</i> |
| | Entering the above command sequence results in the following prompt: |
| | <pre>[local]host_name(config-port-slot_number/port_number-vlan-vlan-id)#</pre> |
| Syntax Description | [no] bind interface interface_name context_name |
| | no |
| | Disasscoiates the VLAN interface from the context. |
| | interface_name context_name |
| | Specifies the name of the virtual interface and the context to which it will be bound. |
| | interface_name must be an alphanumeric string of 1 through 79 characters. |
| | <i>context_name</i> must refer to a previously configured context expressed as an alphanumeric string of 1 through 79 characters. |
| Usage Guidelines | Bind a VLAN interface to a context to suport VLAN service. |
| | Example |
| | bind interface sampleVirtual sampleContext |
| | ne bind interface completintual completents |

no bind interface sampleVirtual sampleContext

do show

| | | Executes all show commands while in Configuration mode. |
|--|----------|---|
| Product | | All |
| Privilege | | Security Administrator, Administrator |
| Syntax Desc | cription | do show |
| Use this command to run all Exec mode show commands while in Configuration mode. It is n exit the Config mode to run a show command. | | |
| | | The pipe character is only available if the command is valid in the Exec mode. |
| | Â | |
| | Caution | There are some Exec mode show commands which are too resource intensive to run from Config mode. These include: do show support collection , do show support details , do show support record and do show support summary . If there is a restriction on a specific show command, the following error message is displayed: |
| | | Failure: Cannot execute 'do show support' command from Config mode. |

end

Exits the current configuration mode and returns to the Exec mode.

| Product | - All |
|--------------------|--|
| Privilege | Security Administrator, Administrator |
| Syntax Description | end |
| Usage Guidelines | Use this command to return to the Exec mode. |

exit

Exits the current mode and returns to the parent configuration mode.

| Product | All |
|--------------------|--|
| Privilege | Security Administrator, Administrator |
| Syntax Description | exit |
| Usage Guidelines | Use this command to return to the parent configuration mode. |

ingress-mode

| | Enables or disables port ingress (incoming) mode for this VLAN ID on this port. |
|--------------------|---|
| Product | НА |
| | HSGW |
| | PDSN |
| | P-GW |
| | SAEGW |
| | SGSN |
| Privilege | Security Administrator, Administrator |
| Command Modes | Exec > Global Configuration > Port Configuration > VLAN Configuration |
| | <pre>configure > port ethernet slot_number/port_number > vlan_vlan_tag_id</pre> |
| | Entering the above command sequence results in the following prompt: |
| | <pre>[local]host_name(config-port-slot_number/port_number-vlan-vlan-id)#</pre> |
| Syntax Description | [no] ingress-mode |
| | no |
| | Disables the port ingress mode. |
| Usage Guidelines | Use this command to enable or disable the VLAN ingress mode for this port. |
| | Example |
| | ingress-mode |

priority

Sets the 802.1p VLAN priority bit.

| Product | All |
|--------------------|--|
| Privilege | Security Administrator, Administrator |
| Command Modes | Exec > Global Configuration > Port Configuration > VLAN Configuration |
| | <pre>configure > port ethernet slot_number/port_number > vlan vlan_tag_id</pre> |
| | Entering the above command sequence results in the following prompt: |
| | <pre>[local]host_name(config-port-slot_number/port_number-vlan-vlan-id)#</pre> |
| Syntax Description | priority value no priority |
| | по |
| | Disables the setting of the 802.1p priority bit. |
| | value |
| | Sets the value of the 802.1p priority bit as an integer from 0 through 7, with 7 being the highest priority. |
| Usage Guidelines | Set a value for the VLAN priority bit. |
| | Example |
| | To set a VLAN priority bit value, use the following command: |
| | priority 3 |
| | To disable the use of a VLAN priority bit, use the following command: |
| | no priority |

shutdown

| | Disables or enables traffic over this VLAN. |
|--------------------|--|
| Product | HA |
| | HSGW |
| | PDSN |
| | P-GW |
| | SAEGW |
| | SGSN |
| Privilege | Security Administrator, Administrator |
| Command Modes | Exec > Global Configuration > Port Configuration > VLAN Configuration |
| | <pre>configure > port ethernet slot_number/port_number > vlan vlan_tag_id</pre> |
| | Entering the above command sequence results in the following prompt: |
| | <pre>[local]host_name(config-port-slot_number/port_number-vlan-vlan-id)#</pre> |
| Syntax Description | [no] shutdown |
| | по |
| | Enables the VLAN. When omitted the VLAN is shutdown. |
| Usage Guidelines | Shut down a VLAN. |
| | To bring a VLAN into service, execute this command using the no keyword. |
| | Example |
| | To disable a VLAN from sending or receiving network traffic use the following command: |
| | shutdown |
| | To enable a VLAN use the following command: |
| | no shutdown |
| | |

vlan-map

| | Associates an IP interface having a VLAN ID with a context. |
|--------------------|--|
| Product | - HA |
| | HSGW |
| | PDSN |
| | P-GW |
| | SAEGW |
| | SGSN |
| Privilege | Security Administrator, Administrator |
| Command Modes | Exec > Global Configuration > Port Configuration > VLAN Configuration |
| | <pre>configure > port ethernet slot_number/port_number > vlan vlan_tag_id</pre> |
| | Entering the above command sequence results in the following prompt: |
| | <pre>[local]host_name(config-port-slot_number/port_number-vlan-vlan-id)#</pre> |
| Syntax Description | <pre>vlan-map interface if_name context_name</pre> |
| | interface if_name context_name |
| | Associates the specified VLAN interface with a context. |
| | if_name is an exisitng interface name specified as an alphanumeric string of 1 through 79 characters. |
| | context_name is an exisitng context name specified as an alphanumeric string of 1 through 79 characters. |
| Usage Guidelines | Use vlan-map to associate multiple VLAN interfaces with a single context. This feature is used in conjunction with nexthop forwarding and overlapping IP pools. |
| | Example |

vlan-map interface vlan234 ingress
