

S-GW Event Reporting

This chapter describes the record content and trigger mechanisms for S-GW event reporting. When enabled the S-GW writes a record of session events and sends the resulting event files to an external file server for processing. Each event is sent to the server within 60 seconds of its occurrence.

Note The S-GW Event Reporting feature is applicable to S-GW and SAEGW (Pure-S calls).

This chapter includes the following topics:

- [S-GW Event Reporting, on page 1](#)

S-GW Event Reporting

This chapter describes the record content and trigger mechanisms for S-GW event reporting. When enabled the S-GW writes a record of session events and sends the resulting event files to an external file server for processing. Each event is sent to the server within 60 seconds of its occurrence.

Note The S-GW Event Reporting feature is applicable to S-GW and SAEGW (Pure-S calls).

This chapter includes the following topics:

Event Record Triggers

When properly configured, the S-GW creates and sends a record in CSV format as the session events listed below occur.

- ID 1: Session Creation
- ID 2: Session Deletion
- ID 3: Bearer Creation
- ID 4: Bearer Deletion
- ID 5: Bearer Modification
 - suppress intra-system handover
 - configurable enable active to idle transition event reporting

- ID 6: Bearer Update

The following guidelines apply to the above session events:

- A session refers to a PDN connection and the default bearer associated with it.
- Bearer events refer to dedicated bearers that have been created/deleted/updated/modified.
- Bearer modifications that are intra-S-GW and intra-MME are not be reported.
- Bearers and sessions that fail to setup are reported once in a session/bearer creation record with the result code set to failure.

Event Record Elements

Each event record includes the information documented in the table below in comma separated value (CSV) ASCII format. The elements are listed in the order in which they will appear. All record elements are not available for all event triggers. If a record element cannot be populated due to incomplete information, the element is omitted and the comma separation maintained.

The following guidelines apply to record elements:

- Byte/packet counters shall not be sent in session or bearer creation messages
- Byte/packet counters include packets and bytes sent or received since the last record created for that session or bearer.
- The S-GW will attempt to populate all record elements. Values that are unavailable will not be populated.

Table 1: S-GW Event Record Elements

| Event Number | Description | Format | Size (bytes) | Applicable Event Numbers |
|--------------|--|--|--------------|--------------------------|
| 1 | Event identity (ID 1 – ID 6) | Integer [1-6] | 1 | All |
| 2 | Event Result (3GPP 29.274 Cause Code) | Integer [1-255] | 3 | All |
| 3 | IMSI | Integer (15 digits) | 15 | All |
| 4 | IMEISV | Integer (16 digits) | 16 | All |
| 5 | Callid | Integer (0-500000000000) | 4 | All |
| 6 | Start Time (GMT) | MM/DD/YYYY-HH:MM:SS:_MS (millisecond accuracy) | 18 | All |
| 7 | End Time (GMT) | MM/DD/YYYY-HH:MM:SS:_MS (millisecond accuracy) | 18 | 2, 4 |
| 8 | Protocol (GTPv2) | String | 5 | All |
| 9 | Disconnect code (ASR 5500) | Integer [1-999] | 3 | All |
| 10 | Trigger Event (3GPP 29.274 request cause code) | Integer [1-15] | 3 | All |
| 11 | Hostname | IPv4 or IPv6 address | 255 | All |

| Event Number | Description | Format | Size (bytes) | Applicable Event Numbers |
|--------------|-------------------------------------|---------------------------|--------------|--------------------------|
| 12 | Origination Node | String (CLLI) | 10 | All |
| 13 | Origination Node Type | String (SGW HSGW PGW ...) | 3 | All |
| 14 | EPS Bearer ID(Default) | Integer [0-15] | 1 or 2 | All |
| 15 | APN Name | String | 34 to 255 | All |
| 16 | PGW IP Address | IPv4 or IPv6 address | 7 to 55 | All |
| 17 | UE IPv4 Address | IPv4 address | 7 to 15 | All |
| 18 | UE IPv6 Address | IPv6 address | 3 to 55 | All |
| 19 | Uplink AMBR | Integer (0-4000000000) | 1 to 10 | All |
| 20 | Downlink AMBR | Integer (0-4000000000) | 1 to 10 | All |
| 21 | TAI - MCC/MNC/TAC | String (MCC;MNC;TAC) | 14 | All |
| 22 | Cell ID (ECI) | String (28 bits) | 8 | All |
| 23 | EPS Bearer ID (dedicated) | Integer (0-15) | 1 or 2 | 21 |
| 24 | Result Code (success/fail) | 0=fail 1=success | 1 | All |
| 25 | QCI | Integer[1-255] | 1 to 3 | All |
| 26 | Uplink MBR (bps) | Integer (0-4000000000) | 1 to 10 | All |
| 27 | Downlink MBR (bps) | Integer (0-4000000000) | 1 to 10 | All |
| 28 | Uplink GBR (bps) | Integer (0-4000000000) | 1 to 10 | All |
| 29 | Downlink GBR (bps) | Integer (0-4000000000) | 1 to 10 | All |
| 30 | Downlink Packets Sent (interval) | Integer (0-4000000000) | 1 to 10 | 2, 4, 5, 6 |
| 31 | Downlink Bytes Sent (interval) | Integer (0-500000000000) | 1 to 12 | 2, 4, 5, 6 |
| 32 | Downlink Packets Dropped (interval) | Integer (0-500000000000) | 1 to 12 | 2, 4, 5, 6 |
| 33 | Uplink Packets Sent (interval) | Integer (0-500000000000) | 1 to 12 | 2, 4, 5, 6 |
| 34 | Uplink Bytes Sent (interval) | Integer (0-500000000000) | 1 to 12 | 2, 4, 5, 6 |
| 35 | Uplink Packets Dropped (interval) | Integer (0-4000000000) | 1 to 10 | 2, 4, 5, 6 |
| 36 | MME S11 IP Address | IPv4 or IPv6 address | 7 to 55 | All |

| Event Number | Description | Format | Size (bytes) | Applicable Event Numbers |
|--------------|--------------------------|----------------------|--------------|--------------------------|
| 37 | S1u IP Address of eNodeB | IPv4 or IPv6 address | 7 to 55 | All |

Active-to-Idle Transitions

This table below describes how active-to-idle transitions generate event records.

Table 2: Subscriber-initiated Attach (initial) Call Flow Description

| Step | Description |
|------|--|
| 1 | UE becomes Active (via UE or NW initiated service request) |
| 2 | Session becomes idle. |
| 3 | S-GW acknowledges idle session. |
| 4 | Bearer modification event record is created, with the following fields: <ul style="list-style-type: none"> • Start Time: Use the start time of the idle-to-active transition • End Time: Use the timestamp of the idle time • Bytes up/Bytes down: Amount of data sent between transitions • Packets up/Packets down: Number of packets sent between transitions |

3GPP 29.274 Cause Codes

Table 3: 3GPP 29.274 Cause Codes

| Cause Value | Meaning |
|----------------|---|
| Request | |
| 2 | Local Detach |
| 3 | Complete |
| 4 | RAT changed from 3GPP to Non-3GPP |
| 5 | ISR deactivation |
| 6 | Error Indication received from RNC/eNodeB |
| Accept | |
| 16 | Request accepted |
| 17 | Request accepted partially |

| Cause Value | Meaning |
|--------------------|--|
| 18 | New PDN type due to network preference |
| 19 | New PDN type due to single address bearer only |
| Reject | |
| 64 | Context Not Found |
| 65 | Invalid Message Format |
| 66 | Version not supported by next peer |
| 67 | Invalid length |
| 68 | Service not supported |
| 69 | Mandatory IE incorrect |
| 70 | Mandatory IE missing |
| 71 | Reserved |
| 72 | System failure |
| 73 | No resources available |
| 74 | Semantic error in the TFT operation |
| 75 | Syntactic error in the TFT operation |
| 76 | Semantic errors in packet filter(s) |
| 77 | Syntactic errors in packet filter(s) |
| 78 | Missing or unknown APN |
| 79 | Unexpected repeated IE |
| 80 | GRE key not found |
| 81 | Relocation failure |
| 82 | Denied in RAT |
| 83 | Preferred PDN type not supported |
| 84 | All dynamic addresses are occupied |
| 85 | UE context without TFT already activated |
| 86 | Protocol type not supported |
| 87 | UE not responding |
| 88 | UE refuses |

| Cause Value | Meaning |
|---------------------------------------|--|
| 89 | Service denied |
| 90 | Unable to page UE |
| 91 | No memory available |
| 92 | User authentication failed |
| 93 | APN access denied - no subscription |
| 94 | Request rejected |
| 95 | P-TMSI Signature mismatch |
| 96 | IMSI not known |
| 97 | Semantic error in the TAD operation |
| 98 | Syntactic error in the TAD operation |
| 99 | Reserved Message Value Received |
| 100 | Remote peer not responding |
| 101 | Collision with network initiated request |
| 102 | Unable to page UE due to Suspension |
| 103 | Conditional IE missing |
| 104 | APN Restriction type Incompatible with currently active PDN connection |
| 105 | Invalid overall length of the triggered response message and a piggybacked initial message |
| 106 | Data forwarding not supported |
| 107 | Invalid reply from remote peer |
| 116 to 239 | Spare. This value range is reserved for Cause values in rejection response message. |
| Sub-Causes | |
| NO_INFORMATION | |
| ABORTED_BY_SESSION_DELETION | |
| NO_RESPONSE_FROM_MME | |
| INTERNALLY_TRIGGERED | |
| BEARERS_IN_MULTIPLE_PDN_CONNECTIONS | |
| EXPECTED_BEARERS_MISSING_IN_MESSAGE | |
| UNEXPECTED_BEARERS_PRESENT_IN_MESSAGE | |
