### Feature Summary and Revision History

#### Summary Data

|  |  |
|--|--|
| Applicable Product(s) or Functional Area | MME  |
| Applicable Platform(s)                   | <ul style="list-style-type: none"><li>• ASR 5500</li><li>• VPC-DI</li><li>• VPC-SI</li></ul> |
| Feature Default                          | Disabled - Configuration Required  |
| Related Changes in This Release          | Not Applicable   |
| Related Documentation                    | <i>Command Line Interface Reference</i>  |

#### Revision History

| Revision Details   | Release  |
|--|----------|
| In MME, handling of Duplicate eNodeB Path support is introduced. | 21.28.m0 |

### Feature Changes

**Previous Behavior:** When a duplicate eNodeB path is detected, **mmedemux** retains the old stale path and deletes the new path.

**New Behavior:** Enable the **delete-old-on-duplicate-enodeb-detection** CLI under mme-service to control the duplicate eNodeB path. When a duplicate eNodeB path is detected, **mmedemux** deletes the old stale path, and allows the new path to get established.

---

**Note** The **delete-old-on-duplicate-enodeb-detection** CLI is a critical parameter, which will restart the mme service and remove active sessions.

---

## Command Changes

Use the following commands to configure the MME to delete an old eNodeB path and retain a new eNodeB path while detecting duplicate eNodeB id.

```
configure
context context_name
    mme-service service_name
        [ no ] delete-old-on-duplicate-enodeb-detection
    exit
exit
```

### NOTES:

- **delete-old-on-duplicate-enodeb-detection:** The **mmedemux** deletes the old stale path and establishes a new path. By default it is disabled.

---

**Note** The **delete-old-on-duplicate-enodeb-detection** CLI is a critical parameter, which will restart the mme service and remove active sessions.

---

- **no:** The **mmedemux** retains the old eNodeB path.
